Some minor details may be added, partly from the insight they afford into character, and in part for the *naïveté* with which they are recorded by the old writers. He was proud of his learning, and in the habit of saying that he considered an unlearned king as nothing better than a crowned ass. He was very fond of men of letters, and of wild beasts; and, to enjoy both, he often fixed his residence between them; or, in the words of one of the chroniclers, "He took chief pleasure to reside in his new palace, which himself built at Oxford, both for the delight he had in learned men—himself being very learned—and for the vicinity of his new park at Woodstock, which he had fraught with all kinds of strange beasts, wherein he much delighted, as lions, leopards, lynxes, camels, porcupines, and the like."* His love of letters, however, did not interfere with his revenge. In the last war in which he was personally engaged on the continent, Luke de Barré, a knightly poet, who had fought against him, was made prisoner, and barbarously sentenced to lose his eyes. Charles the Good, earl of Flanders, who was present, remonstrated against the punishment, urging, among other things, that it was not the custom to inflict bodily punishment on men of the rank of knights, who had done battle in the service of their immediate superior. Henry replied, "This is not the first time that Luke de Barré has borne arms against me; but he has been guilty of still worse things—for he has satirized me in his poems, and made me a laughing-stock to mine enemies. From his example, let other verse-makers learn what they have to expect when they offend the king of England." The cruel sentence was wholly or partly executed, and the poet, in a paroxysm of agony, burst from the savage hands of the executioners, and dashed out his brains against the wall.* The next anecdote is of a pleasanter kind, but it will not give an advantageous idea of the devotion of which Henry was accustomed to make frequent profession. Early in life, he chose his chaplain by the rapidity with which he got through a mass, saying, that no man could be so fit a mass-priest for soldiers as one who did his work with such dispatch. While serving under his brother William in Normandy, Henry chanced to enter this priest's church, as it lay on his road, near Caen. "And when the royal youth," says William of Newbury, "said, follow me, he adhered as closely to him as Peter did to his heavenly Lord, uttering a similar command; for Peter, leaving his vessel, followed the King of kings—he, leaving his church, followed the prince, and being appointed

* Rossus., quoted in Speed's Chron.

* Orderic.

chaplain to him and his troops, became a blind leader of the blind." In some worldly respects, at least, the censure was too severe. The speedy chaplain, who will re-appear under the reign of Stephen, and whose achievements in architecture will be noticed in the proper place, was Roger, afterwards the famous bishop of Sarum, and treasurer and favourite minister to Henry, who invariably made such elections from among the most able and quick-sighted of men.* Another anecdote which is told of him, displays at once Henry's malignity of disposition and his profound dissimulation. When Bloet, bishop of Lincoln, one of his principal judges, his steady friend for many years, and who was supposed to be at the moment in the greatest favour, was told that the king had spoken of him in terms of the warmest praise, he exclaimed, "Then I am a lost man—for I never knew him praise any one whom he had not resolved to ruin." The bishop *was* ruined very soon after, for having said that the monastery which he was building at Eynsham should be as fine an edifice as the abbey which Henry had built at Reading.

* During Henry's frequent and long absences from England, Roger seems almost invariably to have been lord-lieutenant or regent of the kingdom.

Stephen.

Great Seal of Stephen.

A.D. 1135. Henry Beauclerk was scarcely dead when events proved how fruitless were all his pains and precautions to secure the succession to his daughter, and how utterly valueless were *unanimous* oaths which were rather the offspring of fear than of inward conviction and good-will. Passing over the always questionable obligation of oaths of this nature, there were several capital obstacles to bar the avenues of the throne to Matilda. The first among these was her sex. Since the time of the ancient Britons England had never obeyed a female sovereign, and the Saxons for a long time had even a marked aversion to the name and dignity of queen when applied only to the reigning king's wife.* In the same manner the Normans had never known a female reign, the notion of which was most repugnant to the whole course of their habits and feelings. To hold their fiefs "under the distaff" (as it was called) was considered humiliating to a nobility whose business was war, and whose king, according to the feudal system, was little else than the first of many warriors,—a chief expected to be in the saddle and at the head of his chivalry whenever occasion demanded. We accordingly find that a loud and general cry was raised by the Anglo-Norman and Norman barons, that it would be most disgraceful for so many noble knights to obey the orders of a woman. In certain stages of society, and in all the earliest, the Salic law, or that portion of it excluding females from the throne, to which we have limited its name and meaning, is a natural law. These all but insurmountable objections would not hold good against her son Henry, but that prince was an infant not yet four years old, and regencies under a long minority were as incompatible with the spirit and condition of the times as a female reign. Queens governing in their own right and by themselves, and faithfully guarded minorities, are both the product of an age much more civilized and settled than the twelfth century, and the approach to them was slow and gradual. It was something, however, to have confined the right of succession to the legitimately born; for if the case had occurred a little earlier in England, the grown-up and experienced natural son of the king, standing in the position of Robert Earl of Gloucester, might possibly have been elected with-

* See ante, pp. 150, 153.

out scruple, as had happened to Edmund Ironside, Athelstane, and others of the Saxon line. This was a great step made by the clergy (through their enforcing the canons of the church) towards the establishment of that royal legitimacy which has been the idol of more modern times; but still it was only a step, and the system to which it tended was not completed and thoroughly established until long after.

No one was better acquainted with the spirit of the times and the obstacles raised against Matilda and Earl Robert than the ambitious Stephen, who had taken many measures beforehand, who was encouraged by the irregularity of the succession ever since the Conquest, and who would no doubt give the widest interpretation to whatever of elective character was held to belong to the English crown. His perjury, his ingratitude for the benefits received from Henry, belong to quite another view of the subject, and were precisely such as might be expected from his circumstances and the time in which he lived. Henry had indeed been unusually bountiful to this nephew. He married him to Maud, daughter and heir of Eustace Count of Boulogne, who brought him, in addition to the feudal sovereignty of Boulogne, immense estates in England, which had been conferred by the Conqueror on the family of the Count. By this marriage Stephen also acquired another close connexion with the royal family of England and a new hold upon the sympathies of the English, as his wife Maud was of the old Saxon stock, being the only child of Mary of Scotland, sister to David the reigning king, as also to the good Queen Maud, the first wife of Henry, and mother of the Empress Matilda. Still further to aggrandize this favourite nephew, Henry conferred upon him the great estate forfeited by Robert Mallet in England, and that forfeited by the Earl of Mortaigne in Normandy. He also brought over Stephen's younger brother Henry, who, being a churchman, was created Abbot of Glastonbury and Bishop of Winchester. Stephen had resided much in England, and had rendered himself exceedingly popular both to the Normans and the people of Saxon race. The barons and knights admired him for his undoubted bravery and activity,—the people for his generosity, the beauty of his person, and his affable, familiar manners. The king might not know it, but he was the popular favourite in the already important and fast-rising city of London before Henry's death. When that event happened, he was nearer England than Matilda, whose rights he had long determined to dispute. Taking advantage of his situation, he crossed the Channel immediately, and though the gates of Dover and Canterbury were shut against him, he was received in London with enthusiastic joy, the populace saluting him as king without waiting for the formalities of the election and consecration. The first step to the English throne in those days, as we have seen in the cases of Rufus and Henry, was to get possession of the royal treasury at Winchester. Stephen's own brother was Bishop of Winchester, and by his assistance he got the keys into his hands, but whether before or immediately after the election is not quite clear. The treasure consisted of 100,000*l.* in money, besides plate and jewels of great value. His episcopal brother was otherwise of the greatest use, being mainly instrumental in winning over Roger, Bishop of Sarum, then chief justiciary and regent of the kingdom, and William Corboil, Archbishop of Canterbury, without whose consent the coronation would have been informal. Bishop Roger, he who had been the speedy mass-priest of King Henry, was easily gained through his constant craving after money; but the primate was not assailable on that side, being a very conscientious though weak man: it was therefore thought necessary to practise a deception upon him, and Hugh Bigod, steward of the late household, made oath before him and other lords of the land, that the king on his death-bed had adopted and chosen his nephew Stephen to be his heir and successor, *because* his daughter the empress had grievously offended him by her recent conduct. This was a most disgraceful measure; and those men were more honest, and in every sense occupied better ground, who maintained that the great kingdom of England was not a descendible property, or a thing to be willed away by a dying king, without the consent and against the customs of the people. After hearing Bigod's oath, the Archbishop seems to have floated quietly with the current without offering either resistance or remonstrance. But there were other oaths to be considered, for the whole body of the clergy and nobility had repeatedly

STEPHEN.
Enlarged from a unique Silver Coin in the Collection of Sir Henry Ellis.

sworn fealty to Matilda. We have already shown how the oaths were considered by the mass; and now the all-prevalent Bishop of Sarum openly declared that those vows of allegiance were null and void, because, without the consent of the lords of the land, the empress was married out of the realm; whereas they took their oath to receive her as their queen upon the express condition that she should never be so married without their concurrence.* Some scruples may have remained, but no opposition was offered to his election, and on the 26th of December, being St. Stephen's day, Stephen was hallowed and crowned at Westminster by the primate, William Corboil. Immediately after his coronation he went to Reading to attend the burial of the body of his uncle, and from Reading Abbey he proceeded to Oxford, where he summoned a great council of the prelates, abbots, and lay-barons of the kingdom, that he might receive their oaths of allegiance and consult with them on the affairs of the state. When the assembly met he allowed the clergy to annex a condition, which, as they were sure to assume the right of interpretation, rendered their oaths less binding even than usual. They swore to obey him as their king so long as he should preserve their church liberties and the vigour of discipline, and no longer. This large concession, however, had the effect of conciliating the bishops and abbots, and the confirmation of the Pope soon followed. The letter of Innocent II., which ratified Stephen's title, was brief and clear: "We have learnt," said the pontiff, "that thou hast been elected by the common voice and unanimous consent as well of the lords as the people, and that thou hast been hallowed by the prelates of the kingdom. Considering that the suffrages of so great a number of men cannot have met in thy person without a special co-operation of the divine grace, and that thou, besides, art a near relation of the deceased king, we are well pleased with all that hath been done in thy favour, and adopt thee with paternal affection a son of the blessed apostle Peter and of the holy Roman church."†

Stephen weakened his right instead of strengthening it, by introducing a variety of titles into his charter, which, in imitation of his predecessor Henry, he issued at this time; but particular stress seems to have been laid on his election as king, "with the consent of the clergy and people," and on the confirmation granted him by the Pope. In this same charter he promised, as his uncle had done before him, to redress all grievances, and grant to the people all the good laws and good customs of Edward the Confessor. Whatever were his natural inclinations, (and we are inclined to believe they were not bad or ungenerous,) the circumstances in which he was placed, and the villanous instruments with which he had to work, from the beginning to the end of his troubled reign, put it wholly out of his power to keep the promises he had made, and the condition of the English people became infinitely worse under him than it had been under Henry or even under Rufus. A concession which he made to the lay barons contributed largely to the frightful anarchy which ensued. To secure their affections and to strengthen himself, as he thought, against the empress, he granted them all permission to fortify their castles and build new ones; and these, almost without an exception, became dens of thieves and cut-throats. At the same time he made large promises to the venal and rapacious nobles, to engage them the more in support of his title to the crown, and gave them strong assurances that they should enjoy more *privileges* and offices under him than they had possessed in the reigns of his Norman predecessors. The keeping of these engagements with the barons would of itself render nugatory his promises to the English people, whose greatest hardships arose out of the already extensive privileges of the nobles; and the non-performance of them was sure to bring down on Stephen's head the vengeance of a warlike body of men, who were almost everything in the nation, and far too much, when united, for any royal authority, however legitimately founded. At first, and probably on account of the large sum of money he had in hand to meet demands, all went on in great peace and harmony; and the court the new king held in London during the festival of Easter, in the first year of his reign, was more splendid, and better attended in every respect, than any that had yet been seen in England. The quantity of gold and silver and precious gems, and the costly dresses displayed at the royal banquets, are described as being most imposing.*

Nor were the prelates and barons in Normandy more averse to the succession of Stephen than their brethren in England. The old reasons for desiring a continuance of their union with our island were still in force with many of them; and there was an hereditary animosity between the nobles and people of Normandy and those of Anjou, so that when Geoffrey Plantagenet, Earl of Anjou, marched into the duchy to assert the rights of his wife Matilda, he and his Angevins met with a determined opposition, and he was, soon after, glad to conclude a peace or truce for two years with Stephen on condition of receiving during that time an annual pension of 5000 marks. When Stephen appeared on the continent he met with nothing to indicate that he was considered as an unlawful usurper: the Normans swore allegiance, and the French king (Louis VII.), with whom he had an interview, formed an alliance by contracting his young sister Constance with Eustace, Stephen's young son, and, as suzerain, granted the investiture of Normandy to Eustace, who was then a mere child.

During the first year of Stephen's reign England was disturbed only by the revolt of the Earl of Exeter, who was discontented with his share in the new king's liberalities; and by a Scottish incursion made

* Matt. Par.—Gesta Steph.

† Scrip. Rer. Franc. The letter of the Pope has been preserved by Richard of Hexham. It may be possible, though it appears scarcely probable, that the Pope knew nothing of the oaths previously taken to Matilda and her children.

* Henry Hunting.

into the northern counties in support of Matilda by her uncle King David,* who, however, was bought off, for the present, by the grant of the lordship of Huntingdon and the castle of Carlisle, with a few other concessions. Robert Earl of Gloucester, the late king's natural son, who had so vehemently disputed the question of precedence with Stephen, merged his own pretensions to the crown in those of his half-sister Matilda, whose cause he resolved to promote in England conjointly with his own immediate advantages. He was a soldier of good repute, though by no means so brilliant a one as Stephen; he was also a man of political ability and of consummate craft. Pretending to be reconciled to his rule, he came over from the continent (A.D. 1137) and took the oaths of fealty and homage to Stephen, by the performance of which ceremony he obtained instant possession of his vast estates in England, together with more power and opportunity of promoting the cause he had embraced than a more straightforward line of conduct or a conscientious exile would ever have afforded him. It is said that, in imitation of the clergy, he made his allegiance conditional, stating, when he took his oaths, that they were to be binding only as long as the king kept his engagements with him; but this, if true, will hardly excuse his conduct, for the first use he made of the advantages the oaths procured him, and before Stephen had time to break any part of his contract, was to intrigue with the nobles in favour of his half-sister, and lay the groundwork of plots against the king *de facto*. The happy calm in which England lay did not last long after the Earl of Gloucester's arrival. Several of the barons, alleging their services had not met with meet reward, began to seize, by force of arms, different parts of the royal demesne, which they said Stephen had promised them in fief, either at his coronation or at the council held at Oxford. Hugh Bigod, who had sworn that King Henry had appointed Stephen his successor, and who probably put a high price on his perjury, was foremost among the disaffected, and seized Norwich Castle. Other royal castles were besieged and taken, or were treacherously surrendered. They were nearly all soon retaken by the king, but the spirit of revolt was rife among the nobles, and the sedition, suppressed on one spot, burst forth on others. Stephen was lenient and merciful beyond all precedent to the vanquished; and if, on one occasion, in a moment of passion he ordered a baron who had instigated several revolts to be hanged, with a number of his associates, as felons (which they were), the sentence was only in part executed, and he repented of his purpose. It is some relief to humanity to find, amidst all the horrors perpetrated by others during his reign, no torturing and mutilating of prisoners performed by royal command; no tearing out of eyes, no lopping off of hands and feet, and none of those atrocities in which the vindictive spirit of his Norman predecessors had indulged.

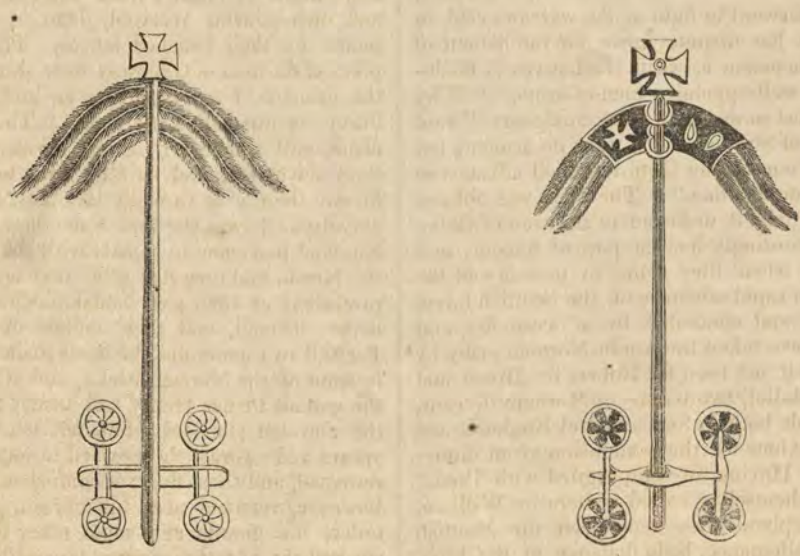
The earl of Gloucester having settled with his friends the plan of a most extensive insurrection, and induced the Scottish king to promise another invasion of England, withdrew beyond sea, and sent a letter of defiance to Stephen, in which he formally renounced his homage. Other great barons—all pleading that Stephen had not given them enough, nor extended their privileges as he had promised—fell from his side, and withdrew to their castles, which, by his permission, they had already strongly fortified. He was abandoned, like Shakspeare's Macbeth, but his soul was as high as that usurper's. "The traitors!" he cried, "they themselves made me a king, and now they fall from me; but, by God's birth, they shall never call me a deposed king!"* At this crisis of his fortunes he displayed extraordinary activity and valour; but having no other politic means of any efficacy with such men, who were all grasping for estates, honours, and employments, he trenched on the domains of the crown, and besides had again recourse to his old system of promising more than he could possibly perform to the nobles who remained faithful, or who came over to him without putting him to the trouble of besieging them in their castles. The history of those petty sieges, wherein Stephen was almost invariably successful, is singularly uninteresting; but the campaign against the Scots has some remarkable features. While he was engaged with the revolted barons in the south, King David, true to his promise, but badly supported by the earl of Gloucester and Matilda, who did not arrive in England to put themselves at the head of their party till a year later, gathered his forces together from every part of his dominions—from the Lowlands, the Highlands, and the Isles—from the great promontory of Galloway, the Cheviot Hills, and from that nursing-place of hardy, lawless men, the border-land between the two kingdoms—and crossing the Tweed (March, 1138), advanced boldly into Northumberland, riding with Prince Henry, his son and heir, at the head of as numerous, as mixed, and, in the main, as wild a host as ever trode this ground. These "Scottish ants," as an old writer calls them,† overran the whole of the country that lies between the Tweed and the Tees. "As for the king of Scots himself," says the anonymous author of *Gesta Stephani*, "he was a prince of a mild and merciful disposition; but the Scots were a barbarous and impure nation, and their king, leading hordes of them from the remotest parts of that land, was unable to restrain their wickedness." Another contemporary, Orderic Vital, whose powerful descriptions we have so often quoted, says, they exercised their barbarity in the manner of wild beasts, sparing neither age nor sex, nor so much as the child in the womb. We fear there is much truth in this frightful picture; but the national prejudices and animosity between the Scots and the English were old

* The Scottish king was equally uncle to Stephen's wife, but he probably remembered the oaths he had taken to the mother of Henry.

* Malmsb. † Matt. Par.

and confirmed feelings; and the chroniclers we refer to were Englishmen, not likely to give the most favourable account, while it seems certain that the Normans of the time purposely exaggerated the barbarous excesses, committed chiefly by the Gallowegians, the Highlanders, and the men of the Isles, in order to make the English fight more desperately on their side; for had they relied solely on their chivalry and the men-at-arms and mercenaries in the service of their northern barons, their case would have been hopeless. At the same time, they conciliated the English people of the north by a strong appeal to the local superstitions —they invoked the names of the saints of Saxon race whom they had been wont to treat with little respect; and the popular banners of St. Cuthbert of Durham (or, according to some, of St. Peter of York), St. John of Beverley, and St. Wilfrid of Ripon, which had long lain dust-covered in the churches, were reproduced in the army, as the pledges and means of victory. So rapid was the advance of King David, that Stephen had not time to reach the scene of hostilities; and the defence of the north was, in a great measure, left to Toustain, or Thurstan, archbishop of York, an infirm, decrepit old man, but whose warlike energies, address, and cunning were not affected by age and disease. It was he who mainly organized the army of defence which was got together in a hurry. He eloquently exhorted the men to fight to the last, for God and their country, telling them victory was certain, and Paradise the meed of all who should fall in battle against the Scots: he made them swear never to desert each other; he gave them his blessing and the remission of their sins; he sent forth all his clergy, bishops, and chaplains, and the curates, who led their parishioners "the bravest men of Yorkshire;" and though sickness prevented him from putting on his own coat of mail, he sent Raoul, or Ranulf, the bishop of Durham, to represent him on the field of battle. Each lay baron of the north headed his own vassals; but a more extensive command of divisions was entrusted by the archbishop to William Piperel, or Peverel, and Walter Espec of Nottinghamshire, and Gilbert de Lacy and his brother Walter, of Yorkshire. As the Scots were already upon the Tees, the Anglo-Norman army drew up between that river and the Humber, choosing their own battle-field at Elfer-tun, now Northallerton, about equidistant from York and Durham. This was the spot where the soldiers of the Conqueror, marching to avenge the catastrophe of Durham, were saint-struck or panic-seized; but now St. Cuthbert was on the Norman side. Here they erected a remarkable standard, from which the battle has taken its name. A car upon four wheels, which will remind the reader of Italian history of the *carroccio* of the people of Lombardy,* was drawn to the centre of the position; the mast of a vessel was strongly fastened in the car; at the top of the mast a large crucifix was displayed, having in its centre a silver box containing the consecrated wafer or sacrament; and, lower down, the mast was decorated with the banners of the three English saints. Around this sacred standard many of the English yeomanry and peasants from the plains,

* The carroccio, or great standard-car, is said to have been invented or first used by Eribert, archbishop of Milan, in the year 1035. It was a car upon four wheels, painted red, and so heavy that it was drawn by four pair of oxen. In the centre of the car was fixed a mast, which supported a golden ball, an image of our Saviour, and the banner of the republic. In front of the mast were placed a few of the most valiant warriors—in the rear of it a band of warlike music. Feelings of religion, of military glory, of local attachment, of patriotism, were all associated with the carroccio, the idea of which is supposed to have been derived from the Jewish ark of the covenant. It was from the platform of the car that the priest administered the offices of religion to the army. No disgrace was so intolerable among the free citizens of Lombardy as that entailed by the suffering an enemy to take the carroccio.



Standard of the English at the Battle of Northallerton. From Ailred de Bello Standardi, in Twisden's Scriptores Decem, p. 339.

wolds, and woodlands of Yorkshire, Nottingham, and Lincolnshire, gathered of their own accord. These men were all armed with large bows and arrows two cubits long: they had the fame of being excellent archers, and the Normans gladly assigned them posts in the foremost and most exposed ranks of the army.

The Scots, whose standard was a simple lance, with a sprig of the "blooming heather" wreathed round it, crossed the Tees in several divisions. Prince Henry commanded the first corps, which consisted of men from the Lowlands of Scotland, armed with cuirasses and long pikes; of archers from Teviotdale and Liddesdale, and all the valleys of the rivers that empty their waters into the Tweed or the Solway Frith; of troopers from the mountains of Cumberland and Westmoreland, mounted on small but strong and active horses; and of the fierce men of Galloway, who wore no defensive armour, and carried long thin pikes as their chief if not sole weapon of war. A body-guard of knights and men-at-arms under the command of Eustace Fitz-John, a nobleman of Norman descent, rode round the prince. The Highland clans and men of the Isles came next, carrying a small round shield, made of light wood covered with leather, as their only defensive armour, and the claymore or broad-sword as their only weapon: some of the island tribes, however, wielded the old Danish battle-axe instead of the claymore. After these marched the king, with a strong body of knights, who were all either of English or Norman extraction; and a mixed corps of men from the Moray Frith and various other parts of the land, brought up the rear. With the exception of the knights and men-at-arms who were clad in complete mail, and armed uniformly, the host of the Scottish king presented a disordered variety of weapons and dresses. The half-naked clans were, however, as forward to fight as the warriors clad in steel; and a hot dispute arose for the honour of beginning the action between the natives of Galloway and the well-appointed men-at-arms. "Why should we trust so much to these foreigners?" said Malise, earl of Strathern. "I wear no armour, but there is not one among them that will advance so far as I will do this day." The king was obliged to decide the dispute in favour of the men of Galloway, who accordingly had the post of honour, and led the van, when they came in presence of the enemy. The rapid advance of the Scottish forces was covered and concealed by a dense fog, and they would have taken the Anglo-Norman army by surprise, had it not been for Robert de Bruce and Bernard de Baliol, two barons of Norman descent, who held lands both in Scotland and England, and who were anxious for the conclusion of an immediate peace. Having in vain argued with David, and hearing themselves called traitors by William, the king's nephew, they renounced the Scottish part of their allegiance, bade defiance to the king, and putting spurs to their horses, galloped off to the camp at Northallerton, which they reached in good time to tell that the Scots were coming. At the sight and sound of their headlong and tumultuous approach, the bishop of Durham read the prayer of absolution from the standard-car, the Normans and the English kneeling on the ground the while, and rising to their feet and shouting "Amen," when it was finished. The representative of the energetic old Thurstain then delivered a speech for the further encouragement of the army: it was long, and seems to have been interrupted by the onslaught of the Scots; but the opening of it ought to be preserved: "Illustrious chiefs of England," said the bishop, "by blood and race Normans, before whom bold France trembles,—to whom fierce England has submitted,—under whom Apulia has been restored to her station,—and whose names are famous at Antioch and Jerusalem,—here are the Scots, who have done homage to you, undertaking to drive you from your estates."*

The Scots came on with the simple war-cry of "Alban! Alban!"† which was shouted at once by all the Celtic tribes from the Highlands. The desperate charge of the men of Galloway drove in the English infantry, and broke, for a moment, the Norman centre. "They burst the enemy's ranks," says old Brompton, "as if they had been but spiders' webs." Almost immediately after, both flanks of the Anglo-Normans were assailed by the mountaineers and the men of Teviotdale and Liddesdale; but these charges were not supported in time, and the Norman horse formed in an impenetrable mass round the standard-car, and repulsed the Scots in a fierce charge they made to penetrate there. During this fruitless effort of the enemy, the English bowmen rallied, and took up good positions on the two wings of the Anglo-Norman army; and when the Scots renewed their attack on the centre, they harassed them with a double-flank flight of arrows, while the Norman knights and men-at-arms received them in front on the points of their couched lances. The long thin pikes of the men of Galloway were shivered against the armour of the Normans, or broken by their heavy swords and battle-axes. The Highland clans, still shouting "Alban! Alban!" wielded their claymores, and fighting hand to hand, tried to cut their way through the mass of iron-cased chivalry. It was the first time these Normans of England had come in contact with the claymore of the North, and they had good reason to bless the protection of their well-bound shields, their hauberks of mail, and their cuisses of steel plate. For full two hours did the Scots maintain the fight in front of the Norman host; and at one moment the gallant Prince Henry had nearly penetrated to the elevated standard; but, at last, with broken spears and swords, they ceased to attack—paused, retreated, and then fled in confusion. The king, however, retained near his person, and in good order, his guards and some other troops, which covered the retreat, and gave several bloody checks to the Anglo-Normans who pursued. Three days

* Matt. Par. † Ibid.

after, he rallied within the walls of Carlisle, and employed himself in collecting his scattered troops, and organizing a new army. He is said to have lost 12,000 men at Northallerton. The Normans were not left in a situation in which they could pursue their advantages to any extent; and the Scots soon re-assumed the offensive, by laying siege to Wark Castle, which they reduced by famine. The famous battle of the Standard, which was fought on the 22nd of August, A.D. 1138, was, however, the great event of this Scottish war, which was concluded in the following year by a treaty of peace, brought about by the intercessions and prayers of Alberic, bishop of Ostia, the pope's legate in England, and Stephen's wife, Maud, who had an interview with her uncle King David at Durham. Though he left the Scots in possession of Cumberland and Westmoreland, and invested Prince Henry with the earldom of Northumberland, the issue of the war dispirited the malcontents all over England, and might have given some stability to Stephen's throne, had he not, in an evil moment, roused the powerful hostility of the church.

Roger, bishop of Sarum, though no longer treasurer and justiciary, as in the former and at the beginning of the present reign, still possessed great influence in the nation, both among clergy and laity, —an influence not wholly arising out of his great wealth and political abilities, but in part owing to the noble use he made of his money, to his taste and munificence, and the superior learning of his family and adherents. Among other works of the same kind he rebuilt the cathedral at Sarum, which had been injured by fire, and the storms to which its elevated position exposed it, and he beautified it so greatly that it yielded to none in England at that time; and some respect is still due to the memory of a man who greatly raised the architectural taste of this country, and whose genius affected the age in which he lived. "He erected splendid mansions on all his estates," says William of Malmsbury, "with unrivalled magnificence, in merely maintaining which his successors will toil in vain. His cathedral he dignified to the utmost with matchless adornments, and buildings in which no expense was spared. It was wonderful to behold in this man what abundant authority attended, and flowed, as it were, to his hand. He was sensible of his power, and somewhat more harshly than beseemed such a character abused the favour of Heaven." He was indeed little scrupulous about the manner in which he obtained his resources; and we learn from the same contemporary that, while he was in power, his hand was as grasping in one direction as it was open and liberal in another. "Was there anything adjacent to his possessions which he desired, he would obtain it either by treaty or purchase; and if that failed, by force." But other powerful barons, both ecclesiastical and lay, equalled his rapacity without having any of his taste and elevation of spirit; for he was in all things a most magnificent person, and one who extended his patronage to men of learning as well as to architects and other artists. He obtained the sees of Lincoln and Ely for his two nephews, Alexander and Nigel, who were men of noted learning and industry, and were said at the time to merit their promotion by virtue of the education which he had given them. Alexander, the bishop of Lincoln, who, though called his nephew, is significantly said to have been something nearer and dearer, had the same taste for raising splendid buildings; he nearly rebuilt the cathedral of Lincoln, and built the castle of Newark: but Nigel, on the contrary, is said to have wasted his wealth on hawks and hounds. Bishop Roger, next to his own brother, the bishop of Winchester, had contributed more than any churchman to his elevation, and Stephen's consequent liberality for a long time knew no stint. It should appear, however, that his gifts were not the free-offerings of gratitude, and that he treated the bishop as one does a sponge which is permitted to fill before it is squeezed. He is reported to have said more than once to his familiar companions,— "By God's birth, I would give him half England if he asked for it: till the time be ripe, he shall tire of asking before I tire of giving." Roger was one of the castle-builders of that turbulent period, being, as he thought, licensed therein by the permission granted by Stephen at his coronation: all his stately mansions were in fact strongly fortified places, well garrisoned, and provided with warlike stores. Besides Newark Castle, Alexander had built other houses, which were also fortified; and, when abroad, uncle and nephews were accustomed to make a great display of military force. The pomp and power of this family had long excited the envy of Stephen's favourites, who had no great difficulty in persuading their master that Bishop Roger was on the point of betraying him, and espousing the interests of Matilda. Stephen was threatened by an invasion from without, and no longer knew how to distinguish his friends from his foes within: his want of money, to pay the foreign mercenary troops he had engaged, and to satisfy his selfish nobles, now drove him into all kinds of irregular courses, and he probably considered that the bishop's time was *ripe*. The king was holding his court at Oxford: the town was crowded with prelates and barons, with their numerous and disorderly attendants; a quarrel, either accidental or preconcerted, arose between the bishop's retainers and those of the Earl of Brittany concerning quarters, and swords being drawn on both sides, many men were wounded, and one knight was killed.* Stephen took advantage of the circumstance, and ordered the arrest of the bishop and his nephews. Roger was seized in the king's own hall, and Alexander, the Bishop of Lincoln, at his lodging in the town; but Nigel, the Bishop

* It appears that Bishop Roger set out on his journey to Oxford with reluctance. "For," says William of Malmsbury, "I heard him speaking to the following purpose: 'By my lady St. Mary, I know not wherefore, but my heart revolts at this journey: this I am sure of, that I shall be of much the same service at court as a fool in battle!'"

of Ely, who had taken up his quarters in a house outside the town, escaped, and threw himself into Devizes, the strongest of all his uncle's castles. The two captives were confined in separate dungeons:—the first charge laid against them was a flagrant violation of the king's peace within the precincts of his court; and for this they were assured that Stephen would accept of no atonement less than the unconditional surrender to him of all their castles. They at first refused to part with their houses, and offered "a reasonable compensation" in money; but moved by the dreadful threats of their enemies and the entreaties of their friends, they at length surrendered the castles which Roger had built at Malmsbury and Sherborne, and that which he had enlarged and

REMAINS OF OLD SARUM. The site of the Castle is marked by the Bushes in the Central Mound.

strengthened at Sarum. Newark Castle, the work of the Bishop of Lincoln, seems also to have been given up. But the Castle of Devizes, the most important of them all, remained; and, relying on its strength, the warlike Bishop of Ely was prepared to bid defiance to the king. To overcome this opposition Stephen had recourse to a measure which was not at all inconsistent with the spirit of the times—he ordered Roger and the Bishop of Lincoln to be kept without food till the castle should be given up. In case of a less direct appeal the defenders of Devizes might have been obstinate, or incredulous of the fact that Stephen was starving two bishops; but Roger himself, already pale and emaciated, was made to state his own hard fate, in front of his own castle, to his own nephew, whom he implored to surrender, as the king had sworn most solemnly to keep his purpose of famishing him and the Bishop of Lincoln to death unless he submitted. Stephen, though far less cruel by nature than most of his contemporaries, was yet thought to be a man to keep his word in such a case as the present: this was felt by the Bishop of Ely, who, overcoming his own haughty spirit out of affection to his uncle, surrendered to save the lives of the captives, after they had been three whole days in a "fearful fast."*

At these violent proceedings the whole body of the dignified clergy, including even his own brother Henry, the Bishop of Winchester, who was now armed with the high powers and jurisdiction of Papal Legate for all England, turned against Stephen, accusing him of sacrilege in laying violent hands on prelates, whose persons were held to be holy, no matter what the tenor of their lives, and whose deeds were not to be subjected to a lay tribunal or the operations of kingly or civil law. The Legate Henry summoned his brother, the king, to appear and answer for his conduct before a synod of bishops assembled at Winchester. Stephen would not attend in person, but finding it absolutely necessary so to do, he sent Aubrey or Alberic de Vere as his counsel to plead for him. Alberic exaggerated the circumstances of the riot at Oxford, and laid all the blame of that disgraceful bloodshedding upon Roger and his insolent nephews, whom, moreover, he directly charged with a treasonable correspondence with the Empress Matilda. The legate answered that the three bishops, uncle and nephews,

* Malmsb.—Orderic.—Gesta Steph.

were ready to abide their trial before a *proper* tribunal; but demanded, as of right, and according to usage, that their houses and property should be previously restored to them. Alberic said that they had voluntarily surrendered their castles and treasures as an atonement for their offences; and it was insisted, moreover, on the same side, that the king had a right to take possession of all *fortified* places in his dominions whenever he considered, as circumstances now obliged him to do, that his throne was in danger. On the second day of the debate the Archbishop of Rouen, the only prelate that still adhered to the king, took a more apostolic and simple view of the case, and boldly affirmed that the three bishops were bound by their vows at consecration to live humbly and quietly according to the canons of the church, which prohibited them from all kinds of military pursuits whatsoever; that they could not claim the restitution of castles and places of war, which it was most unlawful for them, as churchmen, to build or to hold; and that, consequently, they had merited the greatest part of the punishment they had suffered. The points of canonical law thus laid down were undeniable; but the bishops there assembled were not accustomed to their practice, and every one of them *might* have said that, without making his house a castle, there was no living in it in those lawless times. As their temper was stern and uncompromising, Alberic de Vere appealed to the pope in the name of the king, and dissolved the council, the knights with him drawing their swords to enforce his orders if necessary.* The assembly broke up in wrath and confusion, and the effects of this confirmed rupture were soon made visible. But Bishop Roger did not live to see the humiliation of Stephen; he was heart-broken; and when, in the following month of December, as the horrors of a civil war were commencing, he died at an advanced age, his fate was ascribed, not to the fever and ague, from which, in Malmsbury's words, he escaped by the kindness of death, but to grief and indignation for the injuries he had suffered. The plate and money which had been saved from the king's rapacity he devoted to the completion of his church at Sarum, and he laid them upon the high altar, in the hope that Stephen might be restrained, by fear of sacrilege, from seizing them. But these were not times for delicate scruples, and they were carried off, by the orders of Stephen, even before the old man's death. Their value was estimated at forty thousand marks. Bishop Roger was the Cardinal Wolsey of the twelfth century, and his fate, not less tragic than the cardinal's, made a deep impression on the minds of his contemporaries, even in the midst of the many tragedies, domestic as well as public, by which they were constantly surrounded. "To me," says William of Malmsbury, "it seems that God exhibited him to the rich as an example of the instability of fortune, in order that men should not trust in uncertain riches. . . . . But the height of his calamity even I cannot help commiserating, that, wretched as he appeared to many men, there were very few who pitied him,—so much envy and hatred had his excessive power drawn on him, and undeservedly, too, from some of the very persons whom he had advanced to honour." It has been hinted that he must have regretted in his last hours that irreligious haste in saying mass, which gained him the favour of Henry Beauclerk: this is very probable even in a worldly view, and in his season of sickness and fallen greatness he may have thought that his life would have been, in all senses, a happier one, had he remained a quiet, devout curate in his little church near Caen. His nephew, or son, Alexander, Bishop of Lincoln, and his nephew Nigel, Bishop of Ely, having the advantage of a younger age, did not resign themselves to despair, but, intent on taking vengeance, they openly joined Matilda, and were soon up in arms against Stephen.

The synod of bishops held at Winchester was dissolved on the first day of September (A.D. 1139), and towards the end of the same month Matilda landed in England with her half-brother Robert, Earl of Gloucester, and one hundred and forty knights. Some Normans who went out to meet her, on finding she came with so insignificant a force, and brought no money, returned to the other side; and Stephen, by a rapid movement, presently surprised her in Arundel Castle, where Alice, or Adelais, the queen-widow of Henry I., gave her shelter and encouragement. Stephen had both these dames absolutely in his power, but refining on the chivalrous notions which were becoming more and more in vogue, and to which he was inclined by nature more perhaps than suited good policy, he left Queen Alice undisturbed in her castle, and gave Matilda permission to go free and join her half-brother Robert, who immediately after their landing had repaired by bye-roads, and with only twelve followers, to the west country, where, at the very moment of these generous concessions, he was collecting his friends to make war upon Stephen. The king's brother, Henry, Bishop of Winchester, escorted Matilda from Arundel Castle to Bristol, and delivered her safely to Earl Robert. It was soon seen that those who had declined joining Matilda on her first landing had taken a narrow view of the resources of her party, for most of the chiefs in the north and the west renounced their allegiance to Stephen, and took fresh oaths to the empress. There was a moment of wavering and hesitation, during which many of the barons in other parts of the kingdom weighed the chances of success, or tried both parties, to ascertain which would grant the more ample recompense to their venal swords. While this state of indecision lasted men knew not who were to be their friends or who their foes in the coming struggle;—"the neighbour could put no faith in his nearest neighbour, nor the friend in his friend, nor the brother in his own brother;"*

ARUNDEL CASTLE.

but at last the more active chiefs chose their sides, the game was made up, and the horrors of civil war, which were to decide it, were let loose upon the land. Still, however, many of the barons kept aloof, and strongly garrisoning their own castles, took the favourable opportunity of setting all laws at defiance, and despoiling, torturing, and murdering their weak neighbours. The whole war was conducted in a frightful manner; but the greatest of the atrocities seem to have been committed by these separationists, who cared neither for Stephen nor Matilda, and who rarely or never took the field for either party. They waged war against one another, and besieged castles, and racked farms, and seized the unprotected traveller, on their own account, and for their own private spite or advantage. There was scarcely a corner of the land exempt from these insupportable evils; for castles had been built everywhere, and nearly every castle was the scene of lawlessness and crime.

At first the fortune of the greater war inclined in favour of Stephen; for though he failed in an attempt to take Bristol, which had become the head-quarters of Matilda and Earl Robert, he gained many advantages over their adherents in the west, and defeated a formidable insurrection in the east, headed by Nigel, the bishop of Ely, who built a stone rampart among the bogs and fens of his diocese, on the very spot, it is said, where the brave Earl Hereward had raised his fortress of wood against the Conqueror. To reach the warlike and inveterate nephew of old Bishop Roger, Stephen had recourse to the same skilful measures which had been employed by the Conqueror at the same difficult place. Defeated at Ely, Nigel fled to Gloucester, whither Matilda had transferred her standard; and while Stephen was still on the eastern coast, the flames of war were rekindled in all the west, and the fugitive bishop distinguished himself among the men who were literally of the church militant. The Norman prelates had no scruples in taking an active part in these military operations; and the garrisons of their castles are said to have been as cruel to the defenceless rural population, as eager after plunder, and altogether as lawless as the retainers of the lay barons. The bishops themselves were seen, as at the time of the Conquest, mounted on war-horses, clad in armour, directing the siege or the attack, and drawing lots, with the rest, for the booty.* No exceptions are named; but we are inclined, in charity, to believe there were several, and that there were many churchmen who deplored, at the same time, the woful diminution of their peaceful revenues, and the miseries of the people, whose labours, in happier times, made their wealth and plenty.

The cause of Stephen was never injured by any want of personal courage and rapidity of movement. From the east he returned to the west, and from the west marched again to the county of fens,

* Gesta Steph.

on learning that Alexander, the bishop of Lincoln, had got together the scattered forces of the bishop of Ely in those parts, and, in alliance with the earls of Lincoln and Chester, was making himself very formidable. The castle of Lincoln was in the hands of his enemies; but the townspeople were devoted to Stephen, and assisted him in laying siege to the fortress. On the 2nd of February, A.D. 1141, as Stephen was prosecuting this siege, the earl of Gloucester, who had got together an army 10,000 strong, and who had hoped, by rapid marches, to take his adversary by surprise, swam across the Trent, and appeared in front of Lincoln. Stephen, however, was prepared to receive him; he had drawn out his forces in the best position, and, dismounting from his war-horse, he put himself at the head of his infantry. But his army was unequal in number, and contained many traitors: the whole of his cavalry deserted to the enemy, or fled at the first onset; and after he had fought most gallantly, and broken both his sword and battle-axe, Stephen was taken prisoner by the earl of Gloucester. Matilda was incapable of imitating his generosity; but her partisans lauded her mercy, because she only loaded him with chains, and threw him into a dungeon in Bristol Castle. Many of the time-serving nobles now made their submission to the empress, and she does not appear to have encountered much difficulty in persuading the bishop of Winchester wholly to abandon his unfortunate brother, and acknowledge her title. The price paid to the bishop was the promise, sealed by an oath, that he should have the chief direction of her affairs, and the disposal of all vacant bishoprics and abbacies. The scene of the bargain was on the downs, near Winchester, and the day on which it was concluded (the 2nd March) was dark and tempestuous, as if, says Malmsbury, the elements themselves portended the calamities that followed. The next day, accompanied by a great body of the clergy, the brother of Stephen conducted the empress in a sort of triumph to the cathedral of Winchester, within which he blessed all who should be obedient to her, and denounced a curse against all who refused to submit to her authority. As legate of the pope, this man's decision had the force of law with most of the clergy; and several bishops, and even Theobald, the new archbishop of Canterbury, followed his example.* It is said, in order to excuse the breach of their former oaths to Stephen, that they previously obtained a release from their allegiance from their captive king; but the very circumstance of his being a captive must deprive such a release of validity. At Winchester, Matilda took possession of the royal castle, the crown, with other regalia, and such treasure as Stephen had not exhausted. On the 7th of April, she, or the legate acting for her, convened an assembly of churchmen to ratify her accession.

* Malmsb.—Gesta Steph.—Gervase.

Lincoln.

The members of this synod were divided into three classes—the bishops, the abbots, and the archdeacons. The legate conferred with each class separately and in private, and his arguments prevailed with them all. On the following day they sat together, and the deliberations were public. William of Malmsbury, who tells us he was present, and heard the opening speech with great attention, professes to give the very words of the legate. The brother of Stephen began by contrasting the turbulent times they had just witnessed with the tranquillity and happiness enjoyed under the wise reign of Henry I.; he glanced slightly over the repeated vows made to Matilda, and said the absence of that lady, and the confusion into which the country was thrown, had compelled the prelates and lords to crown Stephen;—that he blushed to bear testimony against his own brother, but that Stephen had violated all his engagements, particularly those made to the church;—that hence God had pronounced judgment against him, and placed them again under the necessity of providing for the tranquillity of the kingdom by appointing some one to fill the throne. "And now," said the legate, in conclusion, "in order that the kingdom may not be without a ruler, we, the clergy of England, *to whom it chiefly belongs to elect kings and ordain them*, having yesterday deliberated on this great cause in private, and invoked, as is fitting, the direction of the Holy Spirit, did, and do, elect Matilda, the daughter of the pacific, rich, glorious, good, and incomparable king Henry, to be *sovereign lady* of England and Normandy." Many persons present listened in silence—but silence, as usual, was interpreted into consent; and the rest of the assembly hailed the conclusion of the speech with loud and repeated acclamations. It is curious to observe, that the citizens of London had risen to such importance, that, if not actually consulted in the disposal of the crown, they were called upon to confirm the election. We learn from Malmsbury, that they formed a body of great weight; that the members of the municipality were considered as barons, and that they also admitted barons into their body. The preceding deliberations of the synod, and the proclamation of Matilda, were hurried over before the deputation from the city of London could reach Winchester; but such was the respect they imposed, that it was deemed expedient to hold an adjourned session on the following morning. When the decision of the council was announced to them, the deputies said they did not come to debate, but to petition for the liberty of their king; that they had no powers to agree to the election of this new sovereign; and that the whole community of London, with all the barons lately admitted into it, earnestly desired of the legate, the archbishop, and all the clergy, the immediate liberation of Stephen. When they ended, Christian, the chaplain of Stephen's queen, rose to address the meeting. The legate endeavoured to impose silence on this new advocate; but, in defiance of his voice and authority, the chaplain read a letter from his royal mistress, in which she called upon the clergy, by the oaths of allegiance they had taken to him, to rescue her husband from the imprisonment in which he was kept by base and treacherous vassals. But Stephen's brother was not much moved by these measures: he repeated to the Londoners the arguments he had used the day before;—the deputies departed with a promise, in which there was probably little sincerity, to recommend his view of the case to their fellow-citizens; and the legate broke up the council with a sentence of excommunication on several persons who still adhered to his brother, not forgetting a certain William Martel, who had recently made free on the roads with a part of his (the legate's) baggage.

If popular opinion can be counted for anything in those days, and if the city of London, together with Lincoln and other large towns, may be taken as indexes of the popular will, we might be led to conclude that Stephen was still the sovereign of the people's choice, or, at least, that they preferred him to his competitor. The feelings of the citizens of London were indeed so decided, that it was not until some time had passed, and the Earl of Gloucester had soothed them with promises and flattering prospects, that Matilda ventured among them. She entered the city a few days before Midsummer, and made preparations for her immediate coronation at Westminster. But Matilda herself, who pretended to an indefeasible, sacred, hereditary right, would perform none of the promises made by her half-brother; on the contrary, she imposed a heavy tallage or tax on the Londoners as a punishment for their attachment to the usurper, and arrogantly and insolently rejected a petition they presented to her praying that the laws of Edward the Confessor might be restored, and the changes and usages introduced by the Normans abolished. Indeed, whatever slight restraint she had formerly put on her haughty, vindictive temper, was now entirely removed; and in a surprisingly short space of time she contrived not only to irritate her old opponents to the very utmost, but also to convert many of her best friends into bitter enemies. When the legate desired that Prince Eustace, his nephew and Stephen's eldest son, should be put in possession of the earldom of Boulogne and the other patrimonial rights of his father, she gave him a direct and insulting refusal. In dethroning his brother this prelate, who was perhaps the most extraordinary character of the period, had not bargained for the impoverishment of all his family, and an insult was what he never could brook. When Stephen's wife, who was her own cousin, and a kind-hearted, amiable woman, appeared before her, seconded by many of the nobility, to petition for the enlargement of her husband, she showed the malignancy and littleness of her soul by personal and most unwomanly upbraidings.

The acts of this tragedy, in which there was no small mixture of farce, passed almost as rapidly as those of a drama on the stage; and before the coro-

nation clothes could be got ready, and the bishops assembled, Matilda was driven from London without having time to take with her so much as a change of raiment. One fine summer's day, "nigh on to the feast of St. John the Baptist," and about noon-tide, the dinner hour of the court in those times, a body of horse bearing the banner of Queen Maud (the wife of Stephen), who had kept together many partisans in Kent and Surrey, appeared on the southern side of the river opposite the city: on a sudden all the church bells of London sounded the alarm, and the people ran to arms. From every house there went forth one man at least with whatever weapon he could lay his hand upon. They gathered in the streets, says a contemporary, like bees rushing from their hives.* Matilda saved herself from being made prisoner by rushing from table, mounting a horse, and galloping off with headlong speed. She had scarcely cleared the western suburb when some of the populace burst into her apartment, and pillaged or destroyed whatever they found in it. Such was her leave-taking of London, which she never saw again, and which remained unusually firm on the side of Stephen during the rest of the long and destructive contest. Some few of her friends accompanied her to Oxford, but others left her on the route, and fled singly by cross-country roads and unfrequented paths towards their respective castles.*

Matilda had not been long at Oxford when she conceived suspicions touching the fidelity of the bishop of Winchester, whom, in the insolence of success, she had offended beyond redress, and who had taken his measures accordingly, absenting himself from court, and manning the castles which he had built within his diocese,—as at Waltham, Farnham, and other places. He had also an interview with his sister-in-law, Maud, at the town of Guilford, where he probably arranged the plans in favour of his brother Stephen which were so soon carried into execution. Matilda sent him a rude order to appear before her forthwith. The cunning churchman told her messenger that he was "getting himself ready for her;" which was true enough. She then attempted to seize him at Winchester; but having well fortified his episcopal residence, and set up his brother's standard on its roofs, he rode out by one gate of the town as she entered at the other, and then proceeded to place himself at the head of his armed vassals and the friends who had engaged to join him. Matilda was admitted into the royal castle of Winchester, whither she immediately summoned the earls of Gloucester, Hereford, and Chester, and her uncle David, king of Scots, who had been for some time

Tower of Oxford Castle.

in England vainly endeavouring to make her follow mild and wise counsel. While these personages were with her she laid siege to the episcopal palace, which was in every essential a castle, and a strong one. The legate's garrison made a sortie, and set fire to all the neighbouring houses of the town that might have weakened their position, and then, being confident of succour, waited the event. The bishop did not make them wait long. Being reinforced by Queen Maud and the Londoners, who, to the number of a thousand citizens, took the field for Stephen, clad in coats of mail, and wearing steel casques, like noble men of war,* he turned rapidly back upon Winchester, and actually besieged the besiegers there. By the 1st of August he had invested the royal castle of Winchester, where, besides the empress-queen, there were shut up the king of Scotland, the Earls of Gloucester, Hereford, and Chester, and many other of the noblest of her partisans. Sallies were made by the besieged, *splendid* achievements in arms took place on either side, and, between them, the good people of Winchester were made very wretched, for nearly the whole of the town was plundered and burned at different times. When the siege had lasted six weeks all the provisions in the castle were exhausted, and a desperate attempt at flight was resolved upon. By tacit consent the belligerents of those times were accustomed to suspend their operations and relax their vigilance on the great festivals of the church. The 14th of September was a Sunday, and (what was then far more important) the festival of the Holy Rood or Cross. At a very early hour of the morning of that day Matilda mounted a swift horse, and accompanied by a strong and well-mounted escort, crept as secretly and quietly as was possible out of the castle: her half-brother, the Earl of Gloucester, followed at a short distance with a number of knights who had engaged to keep between her and her pursuers, and risk their own liberty for the sake of securing the queen's. These movements were so well timed and executed that they broke through the beleaguerers with little difficulty, and got upon the Devizes' road before the legate's adherents, who were thinking of their mass and prayers, could mount and follow them. Once in the saddle, however, they made hot pursuit, and at Stourbridge the Earl of Gloucester and his gallant knights were overtaken. To give Matilda, who was only a short distance in advance, time to escape, they formed in order of battle and offered an obstinate resistance. In the end they were nearly all made prisoners; but their self-devotion had the desired effect, for the queen, still pressing on her steed, reached the castle of Devizes in safety. That fortress, the work of Bishop Roger, was, we know, very strong, but it is said that, not finding herself in security even there, Matilda almost immediately resumed her journey, and, the better to avoid danger, feigned herself to be dead, and being placed on a bier like a corpse, caused herself to be drawn in a hearse from Devizes to Gloucester.* This part of the story, however, rests on a single authority, and is not alluded to by any other contemporary writer. Her adventures, so romantic in themselves, seem to require no exaggeration, and the probability is, that if she went from Devizes to Gloucester at all, she travelled in a horse-litter. Of all who formed her strong rear-guard on her flight from Winchester, the Earl of Hereford alone reached Gloucester castle, and he arrived in a wretched state, being almost naked. The other barons and knights who escaped from the field of Stourbridge threw away their arms, disguised themselves like peasants, and made for their own homes. Some of them, betrayed by their foreign accent, were seized by the English peasantry, who bound them with cords, and drove the proud Normans before them with whips, to deliver them up to their enemies. As this unhappy and uncivilized class suffered so cruelly in these wars between foreign lords and princes, it is not surprizing that they at times took a cruel vengeance on the persons chance threw in their way. Though, if anything, rather more inclined to Stephen than to his opponent, they seem in general to have been impartial in their spite, and to have killed or stripped both parties alike whenever the opportunity offered.† The king of the Scots, Matilda's uncle, got safely back to his own kingdom; but her half-brother, the Earl of Gloucester, who was by far the most important prisoner that could be taken, was conveyed to Stephen's queen, who secured him in Rochester Castle. According to one account, she 'caused him to be hardly handled' in retaliation for the earl's harsh treatment of her husband, who was still in a dungeon in his castle of Bristol;‡ but another statement, which is better authenticated and more in accordance with what we know of the amiable character of Maud, is, that she treated the earl generously, and so far from loading him with chains, granted him every indulgence compatible with captivity.§

Both parties were now, as it were, without a head, for Matilda was nothing in the field in the absence of her half-brother. A negotiation was therefore set on foot, and, on the 1st of November, it was finally agreed that the Earl of Gloucester should be exchanged for King Stephen. The interval had been filled up by unspeakable misery to the people; but, as far as the principals were concerned, the two parties now stood as they did previously to the battle of Lincoln. The clergy, and particularly the legate who had alternately sided with each, found themselves in an embarrassing position; but the brother of Stephen had an almost unprecedented strength of face and impudence, and seems never to have blushed at anything. He summoned a great ecclesiastical council, which met at Westminster on the 7th of December, and he

§ Malmsb.—Gesta Steph.—Dromp.

there produced a letter from the Pope, ordering him to do all in his power to effect the liberation of his brother. This letter was held as a sufficient justification of all the measures he had recently adopted; and the presence of Stephen, who was there to speak for himself, only showed how successfully the legate had obeyed the orders of his spiritual chief, who claimed the right of binding and loosening all mortal ties. Stephen then addressed the assembly, briefly and moderately complaining of the wrongs and hardships he had sustained from his vassals, unto whom he had never denied justice when they asked for it; and adding, that if it would please the nobles of the realm to aid him with men and money, he trusted so to work as to relieve them from the fear of a shameful submission to the yoke of a woman; a thing which at first they seemed much to mislike, and which now, to their great grief, they had by experience found to be intolerable. At last the legate himself rose to speak, and as he had with a very few exceptions the same audience as in the synod assembled at Winchester only nine months before, when he pronounced the dethronement of his own brother, and hurled the thunders of excommunication against his friends and adherents, his speech must have produced a singular effect. He pleaded that it was through force, and not out of conviction or good-will, that he had supported the cause of Matilda, who subsequently had broken all her engagements with him, and even made attempts against his liberty and life. He was thus, he maintained, freed from his oaths to the *Countess of Anjou*, for he no longer deigned to style her by a higher title. The judgment of heaven, he said, was visible in the punishment of her perfidy, and God himself now restored the rightful King Stephen to his throne. Though there were some jealousies already existing between him and the archbishop of Canterbury, the council went with the legate, and no objection was started save by a solitary voice, which boldly asserted, in the name of Matilda, that the legate himself had caused all the calamities which had happened,—that he had invited her into England,—that he had planned the expedition in which Stephen was taken,—and that it was by his advice that the empress had loaded his brother with chains. This orator concluded with prohibiting him, by the faith he had sworn to his queen, from publishing any decision against her rights and dignity. The imperturbable legate heard these open accusations, which contained some portion of truth, without any apparent emotion either of shame or anger, and with the greatest composure proceeded to excommunicate all those who remained attached to the party he had quitted. The curse and interdict were extended to all who should build new castles, or invade the rights and privileges of the church, and (a most idle provision!) to all who should wrong the poor and defenceless. *

No compromise between the contending parties was as yet thought of; the smouldering ashes of civil war were raked together, and England was tortured as if with a slow fire; for the flames were not brought to a head in any one place, and no decisive action was fought, but a succession of skirmishes and forays, petty sieges, and the burning of defenceless towns and villages kept people on the rack in nearly every part of the land at once. "All England," says a contemporary, "wore a face of woe and desolation. Multitudes abandoned their beloved country to wander in a foreign land: others, forsaking their own houses, built wretched huts in the churchyards, hoping that the sacredness of the place would afford them some protection."* This last miserable hope was generally vain, for the belligerents no more respected the houses of God than they did the abodes of humble men. They seized and fortified the best of the churches; and the belfry towers from which the sweet sounds of the church-bells were wont to proceed were converted into fortresses and furnished with engines of war:† they dug fosses in the very cemeteries, so that the bodies of the dead were brought again to light, and the miserable remains of mortality trampled upon and scattered all about. At an early period of the contest both parties had engaged foreign mercenaries, and, in the absence of regular pay and provision and of all discipline, bands of Brabanters and Flemings prowled through the land, satisfying all their appetites in the most brutal manner. So general was the discouragement of the suffering people, that whenever only two or three horsemen were seen approaching a village or open burgh, all the inhabitants fled to conceal themselves. So extreme were their sufferings that their complaints amounted to impiety, for, seeing all these crimes and atrocities going on without check or visible judgment, men said openly that Christ and his saints had fallen asleep.‡

(A. D. 1142.) During Stephen's captivity, Matilda's husband, Geoffrey of Anjou, reduced nearly the whole of Normandy, and prevailed upon the majority of the resident nobles to acknowledge Prince Henry (his son by Matilda) as their legitimate duke. The king's party thus lost all hope of aid and assistance from beyond sea; but, as they were masters of the coasts of the island, they were able to prevent the arrival of any considerable reinforcement to their adversaries. Matilda pressed her husband to come to her assistance with all the forces he could raise; but Geoffrey's dislike of his wife's society was more prevalent with him than ambition, and the past might have instructed him that such a war would not be without its dangers and costly sacrifices: he declined the invitation on the ground that he had not yet made himself sure

* Gervase.—Malmsb. The honest and judicious monk of Malmsbury says, "I cannot relate the transactions of this council with that exact veracity with which I did the former, *as I was not present at it.*" He tells us that the legate "commanded, therefore, on the part of God and the Pope, that they should strenuously assist the king, *anointed by the will of the nation and with the approbation of the Holy See*; and that such as disturbed the peace in favour of the *Countess of Anjou* should be excommunicated, with the exception of herself,—*who was sovereign of the Angevins.*

* Gesta Steph. † Id.

‡ Chron. Sax.

of Normandy, but he offered to send over Prince Henry. Even on this point he showed no great readiness, and several months were lost ere he would intrust his son to the care of the Earl of Gloucester, whom Matilda had sent into Normandy.

Meanwhile Stephen, who had recovered from a long and dangerous illness, marched in person to Oxford, where the empress had fixed her court, and invested that city, with a firm resolution of never moving thence until he had got his troublesome rival into his hands. At his first approach the garrison came out to meet him: these enemies he put to flight, and pursued them so hotly that he entered the city pell-mell with them. Matilda then retired into the castle, and the victor's troops set fire to the town. Stephen invested the citadel, and persevered in the operations of the siege or blockade through the horrors of a winter of extraordinary severity; and so intent was he on his purpose that he would not permit his attention to be distracted even when informed that the Earl of Gloucester and Prince Henry had landed in England. The castle was strong, but like all such places at the period, insufficiently stocked with provisions for a considerable force; a proof, perhaps, not merely of the thoughtlessness and improvidence of the two parties, but of the general poverty and actual distress of the country. When the siege had lasted some three months, Matilda again found herself in danger of starvation, to escape which she had recourse to another of her furtive flights. On the 20th of December, a little after midnight, she dressed herself in white, and accompanied by three knights in the same attire, stole out of the castle by a postern gate. The ground being covered with deep snow, the party passed unobserved, and the Thames being frozen over, afforded them a safe and direct passage. Matilda, who had the strength and courage of her male ancestors, pursued her course on foot as far as the town of Abingdon, where, finding horses, the party mounted, and she rode on to Wallingford, at or near to which place she was soon after joined by the Earl of Gloucester and her young son, who were at the head of a considerable force, though at their first landing many who had gone out to meet him, on finding the prince had stolen into the land with a very inconsiderable force and but little money, turned their backs upon him as they had done upon his mother under the same circumstances, and resumed their allegiance to King Stephen. The day after Matilda's flight Oxford Castle surrendered to the king; but the king himself was defeated by the Earl of Gloucester at Wilton in the following month of July, and, with his brother the legate, narrowly escaped being made prisoner.

After the affair of Wilton, no military operation deserving of notice occurred for three years, during which Stephen's party prevailed in all the east; Matilda's maintained their ground in the west; and the young prince was shut up for safety in the strong castle of Bristol, where, at his leisure moments, his uncle, the Earl of Gloucester, who enjoyed—like his father, Henry Beauclerk—the reputation of being a learned person, attended to his education. The presence of the boy in England was of no use whatever to his mother's or his own cause, and, about the feast of Whitsuntide, 1147, he returned to his father Geoffrey in Normandy. Gloucester died of a fever, "the natural consequence of an alternate succession of excess and privation," in the month of October; and thus deprived of son and brother, and depressed also by the loss of the Earl of Hereford and other staunch partisans, who fell the victims of disease, the masculine resolution of Matilda gave way, and, after a struggle of eight years, she quitted England and retired to Normandy. After her departure Stephen endeavoured to get possession of all the baronial castles, and to reduce the nobles to a proper degree of subordination; but the measures he adopted were, in some instances, characterized by craft if not treachery; and his too openly avowed purpose of curbing the power and license of the nobility was as unpalatable to his own adherents as to the friends of Matilda. At the same time he involved himself in a fresh quarrel with the church, and that too at a moment when his brother, the legate and bishop of Winchester, had lost his great authority through the death of the Pope who patronized him, and the election of another Pope, who took away his legatine office and espoused the quarrel of his declared enemy Theobald, Archbishop of Canterbury.

For attending the council of Rheims against the express orders of the king the archbishop was exiled. Caring little for this sentence, Theobald went (A.D. 1148) and put himself under the protection of Bigod earl of Norfolk, who was of the Angevin faction, and then published a sentence of interdict against Stephen's party and all that part of the kingdom that acknowledged the rule of the *usurper*. Instantly, in one half of the kingdom, all the churches were closed, and the priests and monks either withdrew, or refused to perform any of the offices of religion. From their conduct we might have expected the contrary; but this was a state of things which men could not bear, and Stephen was actually compelled to seek a reconciliation with the archbishop. About two years after this reconciliation a general council of the high clergy was held at London; and Stephen, who, in the interval, had endeavoured to win the hearts of the bishops and abbots with donations to the church, and promises of much greater things when the kingdom should be settled, required them to recognize and anoint his eldest son Eustace as his successor. This the Archbishop of Canterbury resolutely and most unceremoniously refused to do. He had consulted, he said, his spiritual master, and the pope had told him that Stephen was a usurper, and, therefore, could not, like a legitimate sovereign, transmit his crown to his posterity. It was quite natural, and perhaps excusable that Stephen, on thus hearing his rights called in question by a man who had sworn allegiance to him,

should be overcome by a momentary rage (and it was not more in effect), and order his guards to arrest the bishops and seize their temporalities; but putting aside the question of right, and however much they may have failed in the respect due to one who was their king at the time, the prelates, in acting as they did, indubitably took a most prudent and wise view of the case, and adopted a system which was calculated to narrow the limits of civil war.

As long as the contest lay between Stephen on the one side, and a woman and boy on the other, it was likely to be, on the whole, favourable to the former; but time had worked its changes;—Prince Henry was no longer a boy, but a handsome, gallant young man, capable of performing all the duties of a knight and soldier, and gifted with precocious abilities and political acumen. He had also become, by inheritance and marriage, one of the most powerful princes on the continent. When Henry Plantagenet left Bristol Castle he was about fourteen years of age. In A.D. 1149, having attained the military age of sixteen, he recrossed the seas, and landed in Scotland with a splendid retinue, in order to receive the honour of knighthood at the hands of his mother's uncle, king David. The ceremony was performed with great pomp in "merry Carlisle," where the Scottish king then kept his court: crowds of nobles from most parts of England, as well as from Scotland and Normandy, were present, and had the opportunity of remarking Henry's many eminent qualities; and as that prince had only been returned to the continent some twelve months when Stephen assembled the council for the anointing of his son, the impressions made by the fortunate Plantagenet were still fresh, and his character was naturally contrasted with that of Prince Eustace, who was about his own age, but who does not appear to have had one of his high endowments. Shortly after his return from Carlisle Henry was put in full possession of the government of Normandy: by the death of his father Geoffrey, who died in the course of the same year (1150), he succeeded to the earldom of Anjou; and in 1152, together with the hand of Eleanor, the divorced queen of Louis VII. of France, he acquired her rights over the earldom of Poictou and the vast duchy of Guyenne, or Aquitaine, which had descended to her from her father. The Plantagenet party in England, which had been for some time in a state of depression, recovered their spirits at the prospect of this sudden aggrandizement, and, thinking no more of the mother, they determined to call in the son to reign in his own right. The Earl of Chester passed over to Normandy, to express what he called the unanimous will of the nation; but the king of France, becoming jealous of the great power of Henry, formed an alliance with King Stephen, Theobald Earl of Blois, and Geoffrey of Anjou, Henry's younger brother, who had good reason to be dissatisfied, and marched a French army to the confines of Normandy. This attempt occasioned some delay; but as soon as Henry had convinced the French king that his design of overrunning the duchy was hopeless, he obtained a truce, and forth-

The Thames at Wallingford

with sailed for England with a small fleet. The army he brought over with him did not exceed 140 knights and 3000 foot; but it was well appointed and disciplined; and as soon as he landed in England most of the old friends of his family flocked to join his standard. It was unexpectedly found, however, that Stephen was still strong in the affections and devotion of a large party. The armies of the competitors came in sight of each other at Wallingford; that of Stephen, who had marched from London, occupying the left bank of the Thames, and that of Henry, who had advanced from Marlborough, the right. They lay facing each other during two whole days, and were hourly expecting a sanguinary engagement; but the pause had given time for salutary reflection; and the Earl of Arundel had the boldness to say, that it was an unreasonable thing to prolong the calamities of a whole nation on account of the ambition of two princes.* Many lords of both parties, who were of the same opinion, or wearied at length with a struggle which had already lasted fifteen years, laboured to persuade both princes to come to an amicable arrangement. The two chiefs consented; and in a short conversation which they carried on with one another across a narrow part of the Thames, Stephen and Henry agreed to a truce, during which each expressed his readiness to negotiate a lasting peace. On this, Prince Eustace, who was probably well aware that the first article of the treaty would seal his exclusion from the throne, burst away from his father in a paroxysm of rage, and went into Cambridgeshire to get up a war on his own account. The rash young man took forcible possession of the abbey of St. Edmundsbury, and laid waste or plundered the country round about, not excepting even the lands of the abbot. His licentious career was very brief; for as he was sitting down to a riotous banquet, he was suddenly seized with a frenzy, of which he soon died.

It has been supposed that this sudden frenzy and decease were in all likelihood owing to an inflammation of the brain, the fruit of habitual intemperance and of frantic passions. According to the monks, his fate was a sudden judgment of the Almighty, provoked by his impiety in ravaging the sanctuary of the blessed St. Edmund; and as this was one of the capital favourites in their hagiology, the English people seem generally to have accounted for his death in this way. We nowhere find it hinted that he died of poison, though the circumstances which made his death most desirable, and the apposite moment at which it took place, tend almost to excite a suspicion.† The principal obstacle to concession from Stephen was thus removed, for though he had another legitimate son, Prince William, he was but a boy, and was docile and unambitious. The principal negociators, who with great ability and address reconciled the conflicting interests of the two factions, were Theobald, the archbishop of Canterbury, and Henry, bishop of Winchester, Stephen's brother, who played so many parts in this long and chequered drama. On the 7th of November, 1153, a great council of the kingdom was held at Winchester, where a peace was finally adjusted on the following conditions:—Stephen, who was to retain undisturbed possession of the crown during his life, *adopted* Henry as his son, appointed him his successor, and *gave* the kingdom, after his own death, to Henry and his heirs for ever. In return, Henry did present homage, and swore fealty to Stephen. Henry received the homage of the king's surviving son William, and, in return, gave that young prince all the estates and honours, whether in England or on the continent, which his father Stephen had enjoyed before he ascended the throne; and Henry promised, as a testimonial of his own affection, the honour of Pevensey, together with some manors in Kent. There then followed a mighty interchange and duplication of oaths among the earls, barons, bishops, and abbots of both factions; all swearing present allegiance to Stephen and future fealty to Henry. A clause, for which there were several precedents under former reigns, was introduced, and the earls and barons swore that if either of the two princes broke his engagements they would instantly abandon him, and support the cause of the other. It is curious, and a consoling proof of the advance made by the popular body, notwithstanding the horrors of this reign, to observe that the different boroughs of England were taken into account, and swore fealty to Henry in the same terms as those employed by the great nobles. In a minor article the officers of Stephen who held the Tower of London, and the castles of Winchester, Windsor, Oxford, Lincoln, and Southampton, gave hostages to Henry for the immediate surrender to him of those fortresses in the event of Stephen's death. The whole arrangement was narrated and drawn up in the form of a charter, which purported to be *octroyé*, or granted, by King Stephen, and witnessed by the prelates and barons.*

When the time came in which he incurred no danger or risk in so doing, Henry treated his adoption by Stephen with scorn; and while some of his partisans, in relating his history, impudently omitted the fact altogether, others considered it as an idle form, giving no right, and others again maintained that King Stephen himself, and the whole nation, were fain to acknowledge the personal claims of Matilda's son, who consequently was called to reign through a legitimate, hereditary right. The treaty, however, stands recorded as we have given it above, and remains an incontrovertible evidence of the real nature of the transaction.

Stephen did not long survive the arrangement by which he renounced all hope of keeping the royal crown in his lineage. After signing the treaty he and Henry visited together the cities of

* Gesta Steph.—Gervase.

† Writers of a later period introduced some confusion in this matter by accounting for his death in different ways. Some of them said Eustace was drowned,

* Rymer's Fœdera.

Winchester, London, and Oxford, in which places solemn processions were made, and both princes were received with acclamations by the people. At the end of Lent they parted with expressions of mutual friendship.

Henry returned to the continent, and on the following 25th of October (1154) Stephen died at Dover, in the fiftieth year of his age. He was buried by the side of his wife Maud, who died three years before him, at the monastery of Faversham, in the pleasant county of Kent, which she had loved so much while living.*

"In this king's time," says the Saxon chronicler, "all was dissension, and evil, and rapine. The great men soon rose against him. They had sworn oaths, but maintained no truth. They built castles, which they held out against him. They cruelly oppressed the wretched people of the land with this castle work. They filled their castles with devils and evil men. They seized those whom they supposed to have any goods, and threw them into prison for their gold and silver, and inflicted on them unutterable tortures. Some they hanged up by the feet, and smoked with foul smoke; some by the thumbs or by the beard, and hung coats of heavy mail on their feet. They threw them into dungeons with adders, and snakes, and toads. . . . . They made many thousands perish with hunger. They laid tribute after tribute upon towns and cities, and this in their language they called *tenserie*.* When the townsmen had nothing more to give, they set fire to all the towns. Thou mightest go a whole day's journey and not find a man sitting in a town, nor an acre of land tilled. The poor died of hunger, and those who had been men well to do begged for bread. Never was more mischief done by heathen invaders. . . . To till the ground was to plough the sands of the sea. This lasted the nineteen years that Stephen was king, and it grew continually worse and worse."

* At the general suppression of abbeys, under Henry VIII., Stephen's tomb was rifled, and his bones were cast into the sea.

* *Tenser*, or *Tanser*, is a verb in old French equivalent to the modern *châtier*—to chastise or punish. The Saxon Chronicle contains a long description of the tortures in use. Men of rank employed their inventive faculties in this direction; and Philip Gay, a relation of the Earl of Gloucester, had the merit of inventing one of the most horrid of the instruments of torment, called a *sachentage*.

Henry II.—Surnamed Plantagenet.

Great Seal of Henry II.

A.D. 1154.—When Henry Plantagenet received the news of Stephen's death he was engaged in the siege of a castle on the frontiers of Normandy. Relying on the situation of affairs in England, and the disposition of men's minds in his favour, he prosecuted the siege to a successful close, and reduced some turbulent continental vassals to obedience, before he went to the coast to embark for his new kingdom. He was detained some time at Barfleur by storms and contrary winds; and it was not till six weeks after the death of Stephen that he landed in England, where he was received with enthusiastic joy. He brought with him a splendid retinue, and Eleanor, his wife, whose inheritance had made him so powerful on the continent, and whose stern character was to influence so many events of his reign. This marriage proved, that if the young Henry had the gallantry of his age and all the knightly accomplishments then in vogue, he was not less distinguished by a cool, calculating head, and the faculty of sacrificing romantic or delicate feelings for political advantages. The lady he espoused was many years older than himself, and the repudiated wife of another.

Eleanor, familiarly called in her own country Aanor, was daughter and heiress of William IX.,* Earl of Poictou and Duke of Aquitaine; that is to say, of the sovereign chief of all the western coast

* This Duke William was a troubadour of high renown, and the most ancient of that class of poets whose works have been preserved.

of France, from the mouth of the Loire to the foot of the Pyrenees. She was married in 1137 to Louis VII., king of France, who was not less enchanted with her beauty than with the fine provinces she brought him. When the union had lasted some years, and the queen had given birth to two daughters, the princesses Marie and Alix, Louis resolved to make a pilgrimage to the Holy Land, and to take along with him his wife, whose uncle, Haymond, or Raymond, was duke of Antioch. The general morality of the royal and noble crusaders and pilgrims is represented in no very favourable light by contemporary writers; and it is easily understood how camps and marches, and a close and constant association with soldiers, should not be favourable to female virtue. Suspicion soon fell upon Eleanor, who, according to her least unfavourable judges, was guilty of great coquetry and freedom of manners; and her conduct in the gay and dissolute court of Antioch at last awakened the indignation of her devout husband. She was very generally accused of an intrigue with a young and handsome Turk, named Saladin;* and though, in the notions of the age, it made an immense difference in the weight of her guilt, we should now scarcely waste time in considering whether her paramour was converted and baptized, as asserted by some, or was an unredeemed Mahomedan, as maintained by others. In 1152, about a year after their return from the Holy Land, Louis summoned a council of prelates at Baugenci-sur-Loire, for the express purpose of divorcing him from a woman who had publicly dishonoured him. The Bishop of Langres, pleading for the king, gravely announced that his royal master "no longer placed faith in his wife, and could never be sure of the legitimacy of her progeny"—(she had not borne him an heir male)—and grounded his claim to a divorce on facts proving her flagitiousness. But the Archbishop of Bordeaux, desirous that the separation should be effected in a less scandalous manner, proposed to treat the whole question on very different grounds—namely, on the consanguinity of the parties, which might have been objected by the canonical law as an insuperable barrier to the marriage when it was contracted fifteen years before, but which now seemed to be remembered by the clergy somewhat tardily. This course, however, relieved them from a delicate dilemma, in which they were placed by the rules of the church, which, if fairly interpreted, rendered divorce on any other ground most difficult, and by their anxious desire to avoid going to the extremity of proof against a royal personage; and as Eleanor, who considered Louis to be "rather a monk than a king,"† voluntarily and readily agreed to the dissolution of the marriage, the council dissolved it accordingly—on the pretext that the consciences of the parties reproached them for living as man and wife when they were cousins within the prohibited degree. This decent colouring, however, deceived nobody; but the good, simple Louis wonderfully deceived himself, when he thought that no prince of the time—no, not a private gentleman,—would be so wanting in delicacy, and regardless of his own honour, as to marry a divorced wife of so defamed a reputation. According to a contemporary authority, Eleanor's only difficulty was in making a choice, and escaping the too forcible addresses of some of her suitors. Immediately after the dissolution of her marriage, she set off for the capital of her own hereditary states, and on the way met with the following adventures, if we are to give credit to the chronicler. At the city of Blois, Thibaud, or Theobald, earl of Blois, and brother to King Stephen of England, "more from ambition than love," made her the offer of his hand, and not tolerating her refusal, secretly resolved to make her a prisoner in his castle, and marry her by force. Suspecting his design, she stole out of the castle by night, and descended the Loire in a boat to the city of Tours, which was then included in the duchy of Anjou. Here Henry's younger brother, Geoffrey of Anjou, conceived the same sort of project which had been entertained by Theobald of Blois, and lay in ambush to intercept her and seize her person; but Eleanor being "warned by her good angel," suddenly took a different road, and escaped to Poictiers, where the more courteous and more fortunate Henry soon presented himself, and, "with more policy than delicacy," wooed and won, and married her too, within six weeks of her divorce.* King Louis's conduct was directly the opposite of Henry's; for he had been more delicate than politic; and, however honourable to him individually, his delicacy was a great misfortune to France, for it dissevered states which had been united by the marriage,—retarded that fusion and integration which alone could render the French kingdom respectable, and threw the finest territories of France into the hands of his most dangerous enemies. If he could have freed himself of his wife, without resigning her states, the good would have been unmixed; but this was impossible; and though he retained the two daughters Eleanor had borne him, and who were by these measures deprived of their appanages and fortune on the mother's side, he found himself obliged to withdraw all the troops he had in the fortresses of Guyenne, or Aquitaine, and Poictou, and resign those countries wholly and immediately to his discarded wife, who seems to have been dear to the people, in spite of her irregularities, and to have encountered little or no difficulty in inducing them to admit the garrisons of her new husband, the young and popular Henry. When it was too late, Louis saw the great error in policy he had committed, and made what efforts he could to prevent the by him most unexpected marriage. He prohibited Henry, as his vassal for Normandy and Anjou, to contract any such union without the

* Some old writers confound this Saladin with the Great Saladin, the heroic opponent of Eleanor's son, Richard; but this is a great mistake, involving an anachronism.

† Mézerai. Hist. de France.

* Script. Rer. Franc.

consent and authority of his suzerain lord, the king of France; but the obligations of the vassal or liege-man towards the suzerain, even where the parties had expressly contracted and avowed them, were little binding between two princes of equal power; and Henry, who was soon by far the more powerful of the two, cared little for the prohibition, and Louis, in the end, was obliged to content himself with receiving the empty oaths of allegiance which the fortunate Plantagenet tendered for Guyenne and Poictou, in addition to those he had already pledged for Anjou and Normandy. The old French historians, who cannot relate these transactions without losing their temper, give it as their opinion that they would not have happened had those two wise statesmen, the Abbot Suger and the Count de Vermandois, been alive to counsel and direct the king; but the abbot and the count had both died the preceding year; and Louis, who had depended so entirely on them (particularly on Suger), that he was scarcely capable of thinking or acting for himself, was bewildered, like a man who had lost his guide in a wild and unknown country, and stumbled on the divorce which cost France so dear.*

The sacrifice was indeed immense. The French kingdom almost ceased to figure as a maritime state on the Atlantic; and when Eleanor's possessions were added to those Henry already possessed on the continent, that prince occupied the whole coast-line from Dieppe to Bayonne, with the exception only of the great promontory of Brittany, where a race of semi-independent princes were established that had sometimes supported the interests of the French kings, and at others allied themselves with the Anglo-Norman sovereigns.† Henry, in fact, was master of one-fifth of the territories now

* *Ce qui nous couta bon.* Brantome. Mezerai and Larrey (*Héretière de Guienne*) agree in attributing Louis's error to the want of the wise counsels of Suger. Larrey and Bouchet (*Annales d'Aquitaine*), with some other writers, natives of Aquitaine, or Poictou, maintained that Eleanor was unjustly calumniated; but the weight of contemporary evidence is on the other side.

† Charles the Simple appears to have granted to Rollo, the founder of the duchy of Normandy, whatever supremacy the kings of France claimed over the country of the Bretons; so that the princes of Brittany were considered as immediate vassals of the Norman dukes, and only through them feudally connected with the French crown.

Henry II. Drawn from the Tomb at Fontevraud.

included in the kingdom of France, and, deducting other separate and independent sovereignties, Louis, driven back from the Atlantic and cooped up between the Loire, the Saone, and the Meuse, did not possess half so much land as his rival, even leaving out of the account the kingdom of England, to which he succeeded about two years after his marriage. Eleanor was soon as jealous of Henry as Louis had been of her. The Plantagenet had not married with a view to domestic happiness, but he was probably far from expecting the wretchedness to which the union would condemn his latter days. At their first arrival in England, however, everything wore a bright aspect. The queen rode by the king's side into the royal city of Winchester, where they both received the homage of the nobility; and when, on the 19th of December, Henry took his coronation oaths, and was crowned at Westminster by Theobald, archbishop of Canterbury, Eleanor was crowned with him, amidst the acclamations of the people. Not a shadow of opposition was offered: the English, still enamoured of

their old dynasty or traditions, dwelt with complacency on the Saxon blood, which from his mother's side (a bad Saxon herself!) flowed in the veins of the youthful, the handsome, and brave Henry; and all classes seemed to overlook the past history of the queen in her grandeur and magnificence, and present attachment to their king. The court pageantries were splendid, and accompanied by the spontaneous rejoicings of the citizens. Henry did not permit his attention to be long occupied by these pleasures and flattering demonstrations, but proceeded to business almost as soon as the crown was on his head, thus giving his subjects assurance of the busy, active reign they had to expect. He assembled a great council, appointed the crown officers, issued a decree promising his subjects all the rights and liberties they had enjoyed under his grandfather, Henry I., whose reign, however tyrannical, was a blessed state compared to the anarchy which had followed; and he made his barons and bishops swear fealty to his infant children, his wife Eleanor having already made him the happy father of two sons.*

Henry then turned his attention to the correcting of those abuses which had rendered the reign of Stephen a long agony to himself and a curse to the nation. His reforms were not completed for several years, and many events of a foreign nature intervened during their progress; but it will render the narrative clearer to condense our account of these transactions in one general statement.

Henry appointed the Earl of Leicester grand justiciary of the kingdom, and feeling that the office had hitherto been insufficiently supported by the crown, he attached to it more ample powers, and provided the means of enforcing its decisions. As happened in all seasons of trouble and distress in those ages, the coin had been alloyed and tampered with under Stephen; and now Henry issued an entirely new coinage of standard weight and purity. The foreign mercenaries and companies of adventure that came over to England during the long civil war between Stephen and Matilda had done incalculable mischief. Many of these adventurers had got possession of the castles and estates of the Anglo-Norman nobles who adhered to Matilda, and had been created earls and barons by Stephen; but, treating all these as acts of usurpation, Henry determined to drive every one of them from the land, and their expulsion seems to have afforded almost as much joy to the Saxon population as to the Normans, who raised a shout of triumph on the occasion. "We saw them," says a contemporary, "we saw these Brabançons and Flemings cross the sea, to return from the camp to the plough-tail, and become again serfs, after having been lords."† They were, in fact, all commanded to quit the kingdom by a certain day, under penalty of death, and it is not likely that the Normans allowed them to carry much away with them. Up to this point the operations were easy, and the king, unopposed by the conflicting interest of any important party in the state, or by claims on his own gratitude, was carried forward on the high tide of popular opinion; but in what there still remained to do there were great and obvious difficulties, and feelings of a private nature, which might have overcome a less determined and politic prince, for, in the impartial execution of his measures he had to despoil those who fought his mother's battles and supported his own cause when he was a helpless infant. The generous, romantic virtues natural to youth might have been fatal to him; but Henry's heart in some respects seems never to have been young, and his head was cool and calculating. In a treaty made at Winchester, shortly after his pacification with Stephen, it was stipulated that the king (Stephen) should resume all such royal castles and lands as had been alienated to the nobles or usurped by them, with the exceptions only of what Stephen had granted to his son William, or had bestowed on the church; the two last classes of donations to remain to their possessors. Among the resumable gifts were many made by Matilda; for she, too, acting as a sovereign, had followed Stephen's example in alienating parts of the demesne of the crown to reward her adherents. Stephen, poor as he was, had neglected this resumption, or made no progress in it during the few months that he survived the treaty. But Henry was determined not to be a pauper king, or to tolerate that widely-stretched aristocratic power which at once ground the people and bade fair to reduce royalty to an empty shadow. In the absence of other fixed revenues the sovereigns of that time depended almost entirely on the produce of the crown lands, and Stephen had allowed so much of these to slip from him, that there remained not sufficient for a decent maintenance of royal dignity. Besides the numerous castles which had been built by the turbulent nobles, royal fortresses and even royal cities had been granted away; and these could hardly be permitted to remain in the hands of the feudal lords without endangering the peace of the kingdom. Law was brought in to the aid of policy, and it was established as a legal axiom that the ancient demesne of the crown was of so sacred and inalienable a nature that no length of time, tenure, and enjoyment could give a right of prescription to any other possessors, even by virtue of grants from the crown, against the claim of succeeding princes, who might (it was laid down) at any time resume possession of what had formerly been alienated.*

Foreseeing, however, that this step would create much discontent in those who were to be affected by it, and who (counting both of the old parties) were numerous and powerful, Henry was cautious not to act without a high sanction; and he therefore summoned a great council of the nobles, who, after hearing the urgency of his necessities, concurred pretty generally in the justice of his immediately

resuming all that had been held by his grandfather Henry I., with the exception of the alienations or grants to Stephen's son and the church, as already mentioned. The cause assigned for these resumptions was not any inherent defect in the title of the grantor, nor any unworthiness in the grantee, but the indispensable necessity of providing for the crown. As soon as he was armed with this sanction the young king put himself at the head of a formidable army, knowing right well that there were many who would not consider themselves bound by the voices of the assembly of nobles, and who would only cede their castles and lands by force. In some instances the castles, on being closely beleaguered, surrendered without bloodshed; in others, they were taken by storm or reduced by famine. In nearly all cases they were levelled to the ground, and about 1100 of these "dens of thieves," as they are usually called, were blotted out from the fair land they defaced, to the inexpressible relief and contentment of the poor people. At the siege of the castle of Bridgenorth, in Shropshire, which Hugh de Mortimer held out against the king, Henry's life was preserved by the affection and self-devotion of one of his followers. He was commanding in person, and occupying an exposed position, when his faithful vassal Hubert de St. Clair, seeing one of Mortimer's archers aiming point-blank at him, threw himself before his person and received the arrow in his own breast. The wound proved mortal, and St. Clair expired in Henry's arms, recommending his daughter, an only child and an infant, to the care of his prince, who, to his honour, did the duty of a father to the orphan. After many arduous toils, and not a few checks and delays, Henry completed his purpose: he drove the Earl of Nottingham and some other dangerous nobles out of the kingdom; he levelled with the ground the six strong castles of Stephen's brother, the famous Bishop of Winchester, who, placing no confidence in the new king whom he had helped to make, fled with his treasures to Clugny: he reduced the Earl of Albemarle, who had long reigned like an independent sovereign in Yorkshire, to the proper state of vassalage and allegiance; and he finally obliged Malcolm, king of Scots, to resign the three northern counties of Northumberland, Cumberland, and Westmoreland, for the *bonâ fide* possession of the earldom of Huntingdon, which the Scottish princes claimed as descendants of Earl Waltheof. In driving the nobles from the royal lands and houses they held, no distinction was made between the grants of Stephen and Matilda, for Henry was not less eager to recover everything than wisely anxious to avoid the appearance of acting from motives of party revenge; and by his equal and impartial proceeding, he left the adherents of Stephen no more reason to complain than his mother's or his own partisans. Among the latter were several who lost their all by these resumptions; but, steady to his purpose, the king would make no exceptions, not even in favour of those who had succoured his mother in the hour of need and made the greatest sacrifices for his family. He evaded the most earnest applications by a courtesy of demeanour, and a prodigality of promises for the future, which seldom lay heavy on his conscience; and whenever craft or subterfuge could avail him, he did not scruple to employ them.

Before these measures were completed Henry's active and ambitious mind was occupied by the affairs of the continent, for his younger brother Geoffrey, advancing a title to Anjou and Maine, had invaded those provinces. A short time after his marriage, which made him Duke of Aquitaine and Earl of Poictou, Henry became Earl of Anjou by the death of his father, but under the express condition, it is said, of resigning that earldom to his younger brother if he ever should become king of England. It is even added that the dying Geoffrey had exacted an oath from the barons and bishops who attended him, that they would not suffer his body to be buried till his son Henry should solemnly swear to fulfil the dispositions of his will. Henry hesitated; but the nobles and prelates, firm to their vow, kept the corpse above ground until, ashamed of preventing the Christian interment, he took the oath required in a most solemn manner, swearing over the dead body of his father, which was then committed to the grave. The king of England, however, showed no disposition to relinquish the earldom of Anjou; and, it is said, he solicited the Pope to absolve him from his oath, and that the Pope complied on the ground that he had been made to swear under improper influences.* This story, though scarcely more romantic than others of the same period, has generally been condemned as fabulous, and it does not rest on the authority of any contemporary narrator writing on the continent, or in the scene of the events. Henry, it is true, sent three bishops to Rome, but the ostensible reason was probably the true one, and should seem to be motive sufficient in itself for such a mission. Nicholas Breakspear, the only Englishman that ever wore the tiara, had just been elected, and the three bishops were said to be sent to congratulate the new Pope in the name of the king and the people of England. The king's father, however, may have wished to leave some proper provision for his younger son, and may even have made a will to that effect; and Geoffrey, seeing his brother in possession of so many states, would naturally consider it most unjust that he himself should have none. That young prince, moreover, was encouraged by the French court, which was still smarting under the injuries received from Henry's marriage; and he seems to have had a strong party in his favour in the provinces of Maine and Anjou.

The king of England crossed the seas in 1156, and again did homage to Louis VII., for Normandy, Aquitaine, Poictou, Auvergne, the Limousin, Anjou, Touraine, and a long train of dependent territories; and by this and other means, the nature of which is not explained, he induced the French king to

* W. Newbr.

abandon the cause of his younger brother. He then threw himself into the disputed territory, at the head of an army consisting almost entirely of native English, who soon reduced Chinon, Loudon, Mirabeau, and the other castles which held for his brother. The people returned to their allegiance to Henry, and Geoffrey was soon obliged to resign all his claims for a pension of 1000 English and 2000 Angevin pounds. Having triumphed over every opposition, as much by policy as by force of arms, he made a magnificent progress through Aquitaine and the other dominions he had obtained by his marriage, and received the fealty of his chief vassals in a great council held in the city of Bordeaux. Wherever he appeared he commanded respect, and no sovereign of the time in Europe could equal the power and splendour of this young king.

On his return to England, in 1157, he engaged in hostilities with the Welsh, who still fought furiously for their independence. Feeling overconfident in the number and quality of his army, he crossed Flintshire, and threw himself among the mountains. The Welsh let him penetrate as far as the difficult country about Coleshill Forest, when, issuing from their concealment, and pouring down in torrents from the uplands, they attacked Henry in a narrow defile where his troops could not form.

The slaughter was prodigious. Eustace Fitz-John and Robert de Courcy, men of great honour and reputation, together with several other nobles, were dismounted and cut to pieces; the king himself was in the greatest danger, and a rumour was raised that he had fallen. Henry, Earl of Essex, the hereditary standard-bearer, threw down the royal standard and fled. The panic was now universal; but the king rushed among the fugitives, showed them he was unhurt, rallied them, and finally fought his way through the mountain-pass. The serious loss he suffered made him cautious, and instead of following Owen Gwynned, who artfully tried to draw him into the defiles of Snowdon, he changed his route, and gaining the open sea-coast, marched along the shore closely attended by a fleet. He cut down some forests, or opened roads through them, and built several castles in advantageous situations. There was no second battle of any note, and, after a few months, the Welsh were glad to purchase peace by resigning such portions of their native territory as they had retaken from Stephen, and giving hostages and doing feudal homage for what they retained. The homage cost them little: the giving of hostages did not prevent them from renewing hostilities whenever times and circumstances seemed favourable to them, and the hardy mountaineers gave many a subsequent check to the Anglo-Norman chivalry. Six years after the battle of Coleshill, the Earl of Essex was publicly accused of cowardice and treason by Robert de Montfort. The standard-bearer appealed to the trial of arms, and was vanquished in the lists by his accuser. By the law of the times, death should have followed, but the king, qualifying the rigour of the judgment, granted him his life, appointing him to be a shorn monk in Reading Abbey, and taking the earl's possessions into his hands as forfeited to the crown.*

Geoffrey did not live long to exact payment of his annuities from his brother. Soon after concluding the treaty with Henry, which left him without any territory, the citizens of Nantes, in Lower Brittany, spontaneously offered him the government of their city, just as the people of Domfront had done by Henry Beauclerk when under similar circumstances. Lower Brittany was then occupied in unequal proportions by two populations of different races, the one speaking the ancient Armoric, the other the language of France and Normandy. The latter were the more civilized, and had the greater weight in the towns and cities, some of which, like Nantes, were exclusively occupied by them. There was a constant enmity between the two races, and the chiefs of the country, the counts or dukes, were sure to be unpopular with one party in proportion to their popularity with the other. The people of Nantes, which with its dependent territory formed the most opulent part of the great promontory of Brittany, thought to detach their fortunes from those of the native race by electing young Geoffrey Plantagenet; and during his short life they maintained a separate administration, and a government almost wholly independent of the Armorican princes. But Geoffrey died in 1158, and the citizens of Nantes, returning to their old connexion with the rest of the country, were governed by Conan, who was Earl of Richmond in England, as well as the hereditary Count or Duke of Brittany. To the surprise of everybody, King Henry, setting forth the most novel and groundless pretensions, claimed the free city of Nantes as hereditary property, devolved to him by his brother's death. It was in vain the citizens represented that they had not, by choosing Geoffrey to be their governor, resigned their independence or converted themselves into a property to be descendible in his family. Henry wanted to fill up the only great gap in his continental territories, and, careless of right or appearances, he resolved to seize Nantes, hoping that if once he gained a firm footing there he should soon extend his absolute dominion over the rest of Brittany. The stake indeed was most tempting, and Henry was seldom very scrupulous as to the game he played. He affected to treat the men of Nantes as rebels, and Conan as an usurper of his rights; he confiscated his earldom of Richmond, in Yorkshire, and crossing the Channel with a formidable army, spread such terror that the people submitted, and, renouncing Conan, admitted his garrison within the walls of Nantes.† He then quietly took possession of the whole of the country between the Loire and the Vilaine, relying on his art and address for

* Diceto.
† Newbrig.—Script. Rer. Franc.

quieting the alarms these encroachments could not fail to create in the French court. He dispatched Thomas à Becket, then the most skilful and accommodating of all his ministers, to Paris, the volatile inhabitants of which capital were dazzled and delighted by the ambassador's magnificence. Henry soon followed in person, and, between them, these two adroit negotiators completely won over the obtuse French king. The price paid for his neutrality was, Henry's affiancing his eldest son to Margaret, an infant daughter Louis had had by his wife Constance of Castile, who succeeded Eleanor. The young lady was delivered over to one of Henry's Norman barons; and her dower, consisting of three castles in the Vexin, was consigned to the keeping of the illustrious order of the Knights of the Temple, who were to deliver up their charge to Henry's son when the marriage should be completed, or restore it to King Louis in case of the affair being broken off by death or other accidents. Henry then prosecuted his views on the rest of Brittany, and concluded with Conan, whom he had driven from Nantes, a compact which threatened the independence of the whole country, whether occupied by the wild original population or the burghers and nobles of the other race. He affianced his then youngest son Geoffrey to Constantia, an infant daughter of Conan, the latter engaging to bequeath to his daughter all his rights in Brittany at his death, and Henry engaging to support him in his present power during his life, taking up arms for him against his turbulent subjects, and all others that might attack him, whenever called upon so to do.*

If this treaty was kept secret for a time from King Louis, Henry's ambition hurried him into other schemes, which interrupted their good understanding before it had lasted a year. Not satisfied with the tranquil enjoyment of the states he had procured by his marriage, he advanced fresh claims, in right of his wife, to territories which neither she nor her father had ever enjoyed, and, by obtaining the great earldom of Toulouse, he hoped to spread his power across the whole of the broad isthmus that joins France to Spain, and to range along the French coast on the Mediterranean as he already did along the whole Atlantic seaboard. William, Duke of Aquitaine, grandfather of Queen Eleanor, Henry's wife, and a contemporary of the Conqueror, married Philippa, the only child of William, the fourth Earl of Toulouse. As a female succession was contrary to the laws or usages of the country, the Earl William, Philippa's father, conveyed the principality, by a contract of sale, to his brother Raymond de St. Gilles, who succeeded at his death, and transmitted it to his posterity in the male line, who had held it many years, not without cavil on the part of the house of Aquitaine, but without any successful challenge of their title. Eleanor conveyed her rights, such as they were, and which she was determined not to leave dormant, to Louis VII. by her first marriage; and during their union the French king sent forth an army for the conquest and occupation of Toulouse. But the expedition ended in a treaty, and Raymond de St. Gilles, the grandson of the first earl of that name, was confirmed in possession of the country, and released from all claims to it, whether on the part of the French king or his wife Eleanor, by marrying Constance, the sister of Louis. Henry now urged, that by her subsequent divorce from Louis, Eleanor was restored to her original rights; and after some curious correspondence and ransacking of dusty archives, he demanded the instant surrender of the earldom of Toulouse upon the same grounds as Louis had done before him. The Earl Raymond raised his banner of war and applied for aid to his brother-in-law of France. By most of the historians the will of the people is passed over as a point of no importance, but that will was decidedly against Henry, and there were free institutions in Toulouse at the time to give legitimate weight and effect to the popular inclination. "The common council of the city and suburbs," for such was the title borne by the municipal government of Toulouse,* seconded Raymond's negotiations with the French court, and raised their banner as a free and incorporated community. On this occasion Louis broke through the fine meshes of Henry's and Becket's diplomacy, and roused himself to a formidable exertion in order to check the new encroachment. Perceiving that the struggle would be serious, and that success could only be obtained by the keeping on foot a large army very different in its constitution and terms of service from his feudal forces, Henry resolved, by the advice of Becket, to commute the personal services of his vassals for an aid in money,† with which he trusted to procure troops that would serve like modern soldiers for their daily pay, obey his orders directly without the often troublesome intermission of feudal lords, and have no objection either to the distance of the scene of hostilities or the length of time they were detained from their homes. The term of forty days, to which the services of the vassals was limited, would have been in good part consumed in the march alone from England and the north of France to Toulouse. He began by levying a sum of money in lieu of their presence and services upon his vassals in Normandy, and other provinces remote from the seat of action: the commutation was agreeable to most of them; and when it was proposed in England it was still more acceptable on account of the greater distance, and the laudable anxiety of many of the nobles to take care of their estates, which had suffered so much during the intestine wars of the preceding reign. The *scutage*, as it is called, was levied at the rate of three pounds in England, and of forty Angevin shillings in the continental dominions, for every knight's fee. There were 60,000 knight's fees in England alone, which

† This seems to have been the first introduction of a practice which tended gradually to the overthrow of the whole feudal system.

would produce 180,000*l.*—a sum so prodigious in those days, that doubts are entertained as to the correctness of the account, though it is given by a contemporary. But, whatever was the sum, it sufficed Henry for the raising of a strong mercenary force, consisting chiefly of bodies of the famous infantry of the Low Countries. With these marched Malcolm, king of Scotland, who courted the close alliance of Henry; Raymond, king of Arragon (to whose infant daughter Henry had affianced his infant son Richard); one of the Welsh princes, and many English and foreign barons who voluntarily engaged to follow the king to Toulouse. Thomas à Becket, now Chancellor of England, and the inseparable companion of his royal master, attended in this war, and none went in more warlike guise. He marched at the head of 700 knights and men-at-arms, whom he had raised at his own expense; and, when they reached the scene of action, he distinguished himself by his activity and gallantry, not permitting the circumstance of his being in holy orders to prevent him from charging with the chivalry or mounting the deadly breach. After taking the town of Cahors, Henry marched upon the city of Toulouse. But the French king, crossing Berry, which belonged to him in good part, and the Limousin, which granted him a free passage, threw himself with reinforcements into the threatened city, where he was received with extreme joy by Earl Raymond and the citizens. The latter meeting in solemn assembly, voted Louis a letter of thanks, in which they expressed their obligations for his having succoured them "like a father,"*—a touching expression of gratitude, which did not imply any civil or feudal submission on the part of the citizens. The force which Louis brought with him was small, and the energetic Becket advised Henry to make an immediate assault, in which the churchman judged he could hardly fail of reducing the town and taking prisoner the French king, whose captivity might be turned to incalculable advantage. But Henry was cool and cautious even in the midst of his greatest successes: he did not wish to drive the French nation to extremities,—he was so woven up in the complicated feudal system, and so dependent himself on the faithful observance of its nice gradations, that he wished to avoid outraging the great principles on which it rested; and being himself vassal to Louis, and, in his quality of Earl of Anjou, hereditary Seneschal of France, he declared he could not show such disrespect to his superior lord as to besiege him. While he hesitated a French army marched to the relief of their king. Henry then transferred the war to another part of the earldom, and soon after, leaving the supreme command to Becket, returned with part of his army to Normandy. The clerical Chancellor continued to appear as if in his proper element: he fortified Cahors, took three castles which had been deemed impregnable, and tilted with a French knight, whose horse he carried away as the proof of his victory. But Henry could not do without his favourite; and a French force having made a diversion on the side of Normandy, Becket also returned thither, leaving only a few insignificant garrisons on the banks of the Garonne and pleasant hills of Languedoc. The political condition, however, of that favoured region declined from that hour. The habit of imploring the protection of one king against another became a cause of dependence; and with the epoch when the King of England, as Duke of Aquitaine and Earl of Poictou, obtained an influence over the affairs of the south of France, commenced the decline and misery of a most interesting population. Thenceforward, placed between two great powers, the rivals of each other, and both equally ambitious and encroaching, they sought the protection, now of the one, and now of the other, according to circumstances, and were alternately supported and abandoned, betrayed and sold, by both. Their only chance was when the kings of France and England were engaged in open war elsewhere; and the Troubadours were accustomed to sing the joys that arose when the truce between the Stirlings and the Tornes (the Easterlings and the people of Touraine), as they called the French and English, was broken.* They had the advantages of an earlier civilization, but state policy and worldly wisdom seem to have been incompatible with the character of a people so devoted to pleasure and the pursuits of poetry and romance. There was also wanting a good substratum of national morals; for the code of love and gallantry, which was almost the only one in vogue, did not make the best of citizens. They were turbulent, restless, and passionately fond of change. They were divided by a thousand rivalries; not merely one province being jealous of another, but town of town, and village of village. They were brave, and passionately fond of war; but they loved it rather for its excitement, and its poetical and picturesque accompaniments, than from any noble impulse of patriotism. They were always more ready to run at the word of a fair lady to the wars of Palestine, or some other distant and romantic enterprise, than to keep steady watch and ward for the defence of their own fair land. They were a people of a light character and lively imagination; they had a taste for the arts and all delicate enjoyments; they were ingenious and industrious, and their soil was rich and glowing. Nature had given them everything except steadiness of character, political prudence, and the spirit of union; and from the want of these they lost their independence, their riches, their civilization, their poetry, and even their beautiful language,—the first that spread the melody of recreated verse through Europe. Our Plantagenet race of kings contributed to all this ruin, and a short digression may be excused in favour of an

Poesie des Troubadours.

intellectual people, to whom our early literature had great obligations.

In the brief war which ensued after the expedition to Toulouse, on the frontiers of Normandy, Becket maintained 1200 knights, with no fewer than 4000 attendants and foot soldiers; and when the King of France was induced to treat, the eloquent and versatile churchman was charged with the negotiations on the part of his friend and master. A truce was concluded at the end of the year, and a few months after, when the rival kings had an interview, the truce was converted into a formal peace (A. D. 1160), Henry's eldest son doing homage to Louis for the duchy of Normandy, and Henry being permitted to retain the few places he had conquered in the earldom of Toulouse. This precious peace did not last quite one month. Constance, the French queen, died without leaving any male issue; and Louis, anxious for an heir, as his daughters could not succeed, in about a fortnight after her decease married Adelais, niece of the late English king Stephen, and sister of the three earls of Blois, Champagne, and Sancerre. This union with the old enemies of his family greatly troubled Henry, who, foreseeing a disposition in the French court to break off the alliance with him, which might give his progeny a hold upon France, secretly secured a dispensation from the Pope, and solemnized the contract of marriage between his son Henry, who was seven years old, and the daughter of Louis, the Princess Margaret, who had been placed in his power at the conclusion of the original treaty, and who had attained the matronly age of three years. Becket, the prime mover in all things, brought the royal infant to London, where this strange ceremony was performed. As soon as it was finished, Henry claimed the infant's dower, according to the express terms of the treaty, and the Knights Templars, without objecting to the irregular manner in which he had precipitated the marriage, delivered up to him the three castles and towns. Louis instantly raised his banner of war, and exiled the Templars. It was said at the time that Henry had bribed the grand master; and this disservice to the French crown was probably not forgotten a hundred and fifty years after, when the order was suppressed in France with unexampled cruelties. The French king, however, was no match for the powerful and politic English monarch; and as Henry was averse to hazardous enterprises likely to be accompanied by great cost and little solid advantage, the war presented nothing more important than the shivering of a few lances and the besieging of a few castles, and another peace was soon concluded through the mediation of the Pope.

At this time, as at several other periods in the middle ages, there were two popes, each calling the other anti-pope and anti-christ. Victor IV. was established at Rome under the patronage of the Emperor Frederick Barbarossa; and Alexander III., whose election is generally recognised as more legal and canonical, was a fugitive and an exile north of the Alps, where both Louis and Henry bowed to his spiritual authority, and rivalled each other in their offers of an asylum and succour, and in their reverential demeanour. When the two kings met him in person at *Courcy sur Loire*, they both dismounted, and holding each of them one of the bridle-reins of his mule, walked on foot by his side, and conducted him to the castle.*

A short period of happy tranquillity both in England and Henry's continental dominions followed this reconciliation; and when it was disturbed, the storm proceeded from a most unexpected quarter—from Thomas à Becket, the king's bosom friend. Further particulars of the history of this extraordinary man, and of the ecclesiastical quarrel which troubled the reign and embittered ten years of the life of Henry, will be given in the next chapter, and we shall here merely handle a few of the great connecting links of the narrative. Becket was born at London, in, or about, the year 1117. His father was a citizen and trader, of the Saxon race—circumstances which seemed to exclude the son from the career of ambition. The boy, however, was gifted with an extraordinary intelligence, a handsome person, and most engaging manners; and his father gave him all the advantages of education that were within his reach. He studied successively at Merton Abbey, London, Oxford, and Paris, in which last city he applied to civil law, and acquired as perfect a mastery and as pure a pronunciation of the French language as any, the best educated of the Norman nobles and officers. While yet a young man, he was employed as an under-clerk in the office of the sheriff of London, where he attracted the attention of Theobald, archbishop of Canterbury, who sent him to complete his study of the civil law to the then famous school of Bologna. After profiting by the lessons of the learned Gratian, Becket recrossed the Alps, and staid some time at Auxerre, in Burgundy, to attend the lectures of another celebrated law professor. On his return to London, he took deacon's orders,† and his powerful patron, the archbishop, gave him some valuable church preferment, which neither necessitated a residence, nor the performance of any church duties; and he soon afterwards sent him, as the best qualified person he knew, to conduct some important negotiations at the court of Rome. The young diplomatist (for he was then only thirty-two years old) acquitted himself with great ability and complete success, obtaining from the pope a prohibition that defeated the design of crowning Prince Eustace, the son of Stephen—an important service, which secured the favour of the Empress Matilda and the house of Plantagenet. On Henry's accession, Archbishop Theobald had all the authority of prime-minister, and being old and infirm, he delegated the most of it to the active Becket, who was made Chancellor of the kingdom two years after, being the first Englishman since the Con

* Newbrig.—Chron. Norm.

† He never took the major orders till he became archbishop.

quest that had reached any eminent office. As if to empty the lap of royal bounty, Henry at the same time appointed him preceptor of the heir to the crown, and gave him the wardenship of the Tower of London, the castle of Berkhamstead, and the honour of Eye, with 340 knights' fees. His revenue, flowing in from many sources, was immense; and no man ever spent more freely or magnificently. His house was a palace, both in dimensions and appointments. It was stocked with vessels of gold and silver, and constantly frequented by numberless guests of all goodly ranks, from barons and earls to knights and pages, and simple retainers—of which he had several hundreds, who acknowledged themselves his immediate vassals. His tables were spread with the choicest viands; the best of wines were poured out with an unsparing hand; the richest dresses allotted to his pages and serving-men; but with all this costly magnificence, there were certain capital wants of comfort, which show the imperfect civilization of the age; and his biographer relates, among other things, that as the number of guests was often greater than could find place at table, Becket ordered that the floor should be every day covered with fresh hay or straw, in order that those who sat upon it might not soil their dresses.* The chancellor's out-door appearance was still more splendid, and on great public occasions was carried to an extremity of pomp and magnificence; though here again there are circumstances that would seem discordant and grotesque to a modern eye. When he went on his embassy to Paris, he was attended by two hundred knights, besides many barons and nobles, and a complete host of domestics, all richly armed and attired, the chancellor himself having four-and-twenty changes of apparel. As he travelled through France, his train of waggons and sumpter-horses, his hounds and hawks, his huntsmen and falconers, seemed to announce the presence of a more than king. Whenever he entered a town, the ambassadorial procession was led by 250 boys singing national songs; then followed his hounds, led in couples; and these were succeeded by eight waggons, each with five large horses, and five drivers in new frocks. Every waggon was covered with skins, and guarded by two men and a fierce mastiff. Two of the waggons were loaded with ale, to be distributed to the people; one carried the vessels and furniture of his chapel, another of his bed-chamber; a fifth was loaded with his kitchen apparatus; a sixth carried his abundant plate and wardrobe; and the other two were devoted to the use of his household servants. After the waggons came twelve sumpter-horses, *a monkey riding on each, with a groom behind on his knees.* Then came the esquires, carrying the shields, and leading the war-horses of their respective knights; then other esquires (youths of gentle birth), falconers, officers of the household, knights and priests; and last of all appeared the great chancellor himself with his familiar friends. As Becket passed in this guise, the French were heard to exclaim, "What manner of man must the king of England be, when his chancellor travels in such state!"* Henry encouraged all this pomp and magnificence, and seems to have taken a lively enjoyment in the spectacle, though he sometimes twitted the chancellor on the finery of his attire. All such offices of government as were not performed by the ready and indefatigable king himself were left to Becket, who had no competitor in authority. Secret enemies he had in abundance, but never even a momentary rival in the royal favour. The minister and king lived together like brothers; and according to a contemporary, † who knew more of Henry than any other that has written concerning him, it was notorious to all men that they were *cor unum et animam unam* (of one heart and one mind in all things). With his chancellor Henry gave free scope to a facetious frolicsome humour, which was natural to him, though no prince could assume more dignity and sternness when necessary. The amusing biographer of Becket tells the following well-known story. One day as the king and his chancellor were riding together through the streets of London in cold and stormy weather, the king saw coming towards them a poor old man in a thin coat worn to tatters. "Would it not be very praiseworthy to give that poor man a good warm cloak?" said the king. "It would, surely," replied the chancellor; "and you do well, Sir, in turning your eyes and thoughts to such objects." While they were thus talking, they came near to the poor man, and the king, turning to the chancellor, said, "You shall have the merit of this good deed of charity:" then suddenly laying hold of Becket's fine new cloak, which was of scarlet cloth, lined with ermine, he tried to pull it from his shoulders. The chancellor defended himself for some time, and pulling and tugging at one another, they had both of them like to have fallen off their horses in the street; but, in the end, Becket let go his cloak, which the king gave to the beggar, who went his way not less pleased than surprised; while the courtiers in the royal train laughed, like good courtiers, at the passing pleasantry of their master. The chancellor was an admirable horseman, and expert in hunting and hawking, and all the sports of the field. These accomplishments, and a never-failing wit and vivacity, made him the constant companion of the king's leisure hours, and the sharer (it is hinted) in less innocent pleasures—for Henry was a very inconstant husband, and had much of the Norman licentiousness. At the same time Becket was an able minister, and his administration was not only advantageous to the interests of his master, but, on the whole, extremely beneficial to the nation. Most of the useful measures which distinguished the early part of the

† Petrus Blesensis, or Peter of Blois. See his Letters.

king's reign have been attributed to his advice, his discriminating genius, and good intentions. Such were the restoration of internal tranquillity, the curbing of the baronial power, the better appointment of judges, the reform in the currency, and the encouragement given to trade, the protection of which in foreign countries now became an object of great attention to the government. He certainly could not be accused of entertaining a low notion of the royal prerogative, or of any lukewarmness in exacting the rights of the king. He humbled the lay aristocracy whenever he could, and more than once attacked the extravagant privileges, immunities, and exemptions claimed by the aristocracy of the church. He insisted that the bishops and abbots should pay the scutage for the war of Toulouse like the lay vassals of the crown, and this drew upon him the violent invectives of many of the hierarchy, Gilbert Foliot, the Bishop of Hereford, among others, accusing him of plunging the sword into the bosom of Mother Church, and threatening him with excommunication. One day in his synod, when some bishops exalted the independence of the church at the expense of the royal authority, the chancellor openly contradicted their pretensions, and reminded them in a tone of severity that they, as men of the church, were bound to the king by the same oath as the men of the sword,—by the oath to preserve him in life, limbs, dignity, and honours.* All this tended to convince Henry that Becket was the proper person to name primate, as one who had already given proofs of a spirit greatly averse to ecclesiastical encroachments, and of an affection and devotion to his own interests that promised to be of the greatest service to him in a project which, in common with other European sovereigns, he had much at heart, namely, to check the growing power of Rome and curtail the privileges of the priesthood. Although his conduct had not been very priest-like, he was popular: the king's favour and intentions were well known, and accordingly, in 1161, when his old patron Theobald, Archbishop of Canterbury, died, the public voice designated Becket as the man who must inevitably succeed him; and after a vacancy of about thirteen months, during which Henry drew the revenues, he was appointed Primate of all England.

From that moment Becket was an altered man: the soldier, statesman, hunter, courtier, man of the world, and man of pleasure, became a rigid and ascetic monk, renouncing even the innocent enjoyments of life, together with the service of his more friend than master, and resolving to perish by a slow martyrdom rather than suffer the king to invade the smallest privilege of the church. Although he then retained, and afterwards showed a somewhat inconsistent anxiety to preserve, certain other worldly honours and places of trust, he resigned the chancellorship in spite of the wishes of the king,—he discarded all his former companions and magnificent retinue,—he threw off his splendid attire,—he discharged his choice cooks and his cup-bearers, to surround himself with monks and beggars (whose feet he daily washed), to clothe himself in sackcloth, to eat the coarsest food, and drink water, rendered bitter by the mixture of unsavoury herbs. The rest of his penitence, his prayers, his works of charity in hospitals and pest-houses, which soon caused his name to be revered as that of a saint, and his person to be followed by the prayers and acclamations of the people, would lead us from our present purpose. With the views the king was known to entertain in church matters, the collision was inevitable, yet it certainly was the archbishop who began the contest, and it is most unfair to attempt to conceal or slur over this fact. In 1163, about a year after his elevation, Becket raised a loud complaint on the usurpations by the king and laity of the rights and property of the church. He claimed houses and lands which, if they ever had been included in the endowments of the see of Canterbury, had been for generations in the possession of lay families. It is curious to see castles and places of war figuring in his list. From the king himself he demanded the strong, and then most important, castle of Rochester, which he said was his, as Archbishop of Canterbury. From the Earl of Clare, whose family had possessed them in fief ever since the Conquest, he demanded the strong castle and the barony of Tunbridge; and from other barons, possessions of a like nature. But to complete the indignation of Henry, who had laid it down as an indispensable and unchangeable rule of government, that no vassal who held *in capite* of the crown should be excommunicated without his previous knowledge and consent, he hurled the thunders of the church at the head of William de Eynsford, a military tenant of the crown, for forcibly ejecting a priest collated to the rectory of that manor by the archbishop, and for pretending, as lord of the manor, to a right over that living. When Henry ordered him to revoke the sentence, Becket told him that it was not for the king to inform him whom he should absolve and whom excommunicate—a right and faculty appertaining solely to the church. The king then resorted from remonstrances to threats of vengeance; and Becket, bending for awhile before the storm, absolved the knight, but reluctantly and with a bad grace.* In the course of the following year, the king matured his project for subjecting the clergy to the authority of the civil courts for murder, felony, and other crimes; and to this reform, in a council held at Westminster, he formally demanded the assent of the archbishop and the other prelates. The leniency of the ecclesiastical courts to offenders in holy orders seemed almost to give an immunity to crime, and a recent case, in which a clergyman had been but slightly punished for the most atrocious of offences, called aloud for a change of court and practice, and lent unanswerable arguments to the

* Gervase of Canterbury.—Diceto.—Fitz-Steph. Epist. St. Thom. —Hist. Quad.

ministers and advocates of the king. The bishops, however, with one voice, rejected the proposed innovations, upon which Henry asked them if they would merely promise to observe the ancient customs of the realm. Becket and his brethren, with the exception only of Hilary, Bishop of Chichester, answered that they would observe them, "saving their order." On this the king immediately deprived the archbishop of the manor of Eye and the castle of Berkhampstead, which he had hitherto been allowed to retain. Finding, however, that the bishops fell from his side instead of supporting his quarrel, and being on one side menaced by the king and lay nobles, and on the other, it is said, advised to submit by the Pope himself, Becket shortly afterwards, at a great council held at Clarendon, in Wiltshire (25th January, 1164), consented to sign a series of enactments embodying the several points insisted upon by the king, and hence called the 'Constitutions of Clarendon;' but he refused to put his seal to them, and immediately after withdrew from the court, and even from the service of the altar, to subject himself to the harshest penance for having acted contrary to his inward conviction. Subsequently the Pope rejected the 'Constitutions of Clarendon,' with the exception only of six articles of minor importance; and the archbishop was then encouraged to persist by the only superior he acknowledged in this world.

The king being now determined to keep no measures, nor restrict himself to a purely legal course, assembled a great council in the town of Northampton, and summoned the archbishop to appear before it. He was charged, in the first place, with a breach of allegiance and acts of contempt against the king. He offered a plea in excuse, but Henry swore, "by God's eyes,"* that he would have justice in its full extent, and the court condemned Becket to forfeit all his goods and chattels; but this forfeiture was immediately commuted for a fine of 500*l.* The next day the king required him to refund 300*l.* which he had received as Warden of Eye and Berkhampstead, and 500*l.* which he (the king) had given him before the walls of Toulouse; and, on the third day, he was required to render an account of all his receipts from vacant abbeys and bishoprics during his chancellorship, the balance due thereon to the crown being set down at the enormous sum of 44,000 marks. Becket now perceived that the king was bent on his utter ruin. For a moment he was overpowered; but, recovering his firmness and self-possession, which never forsook him for long intervals, he said he was not bound to plead on that count, seeing that, at his consecration as archbishop, he had been publicly released by the king from all such claims. He demanded a conference with the bishops; but these dignitaries had already declared for the court, and the majority of them now advised him to resign the primacy as the only step which could restore peace to the church and nation. His health gave way under these troubles, and he was confined to a sick-bed for the two following days. His indomitable mind, however, yielded none of its firmness and (we must add) its pride. He considered the bishops as cowards and time-servers, and resolved to retain that post from which, having once been placed in it, it was held, by all law and custom, he could never be deposed by the temporal power, or by any authority except that of the Pope. It is said that he thought of going barefoot to the palace, and throwing himself at the king's feet, to appeal to his pity and the remembrance of their old and dear friendship,—a course which would probably have effected a reconciliation, for the king was not of a harsh or unforgiving disposition, and *his* pride would have been conciliated by the outward semblance of submission. But, in the end, Becket adopted a line of conduct much more natural to his character, resolving to deny the authority of the court and brave the king in his wrath. On the morning of the decisive day (October 18th, 1164), he celebrated the mass of St. Stephen, the first Martyr, the office of which begins with these words:—"Sederunt principes et adversum me loquebantur," (Princes also did sit and speak against me. Ps. cxix. 23). After the mass, he set out for the court, arrayed as he was in his pontifical robes. He went on horseback, bearing the archiepiscopal cross in his right hand, and holding the reins in his left. When he dismounted at the palace, one of his suffragans would have borne the cross before him in the usual manner, but he would not let it go out of his hands, saying, "It is most reason I should bear the cross myself; under the defence thereof I may remain in safety; and, beholding this ensign, I need not doubt under what prince I serve."—"But," said the Archbishop of York, an old rival and enemy of Becket, "it is defying the king our lord to come in this fashion to his court;—but the king has a sword, the point of which is sharper than that of thy pastoral staff." As the primate entered, the king, enraged at his unexpected manner of presenting himself, rose from his seat and withdrew to an inner apartment, whither the barons and bishops soon followed him, leaving Becket alone in the vast hall, or attended only by a few of his clerks or the inferior clergy, the whole body of which, unlike the dignitaries of the church, inclined to his person and cause. These poor clerks trembled and were sore dismayed; but not so Becket, who seated himself on a bench, and still holding his cross erect, calmly awaited the event. He was not made to wait long: the Bishop of Exeter, terrified at the excessive exasperation of the sovereign, came forth from the inner apartment, and throwing himself on his knees, implored the primate to have pity on himself and his brethren the bishops, for the king had vowed to slay the first of them that should attempt to excuse his conduct. "Thou fearest," replied Becket; "flee then! thou canst not understand the

* This was Henry's usual oath when much excited. The oaths of all these kings would make a curious collection of blasphemy. The chroniclers have been careful to preserve them, and, according to their records, nearly every king had his distinctive oath.

things that are of God!" Soon afterwards, the rest of the bishops appeared in a body, and Hilary of Chichester, speaking in the name of all, said, "Thou wast our primate, but now we disavow thee, because, after having promised faith to the king, our common lord, and sworn to maintain his royal customs, thou hast endeavoured to destroy them, and hast broken thine oath. We proclaim thee, then, a traitor, and tell thee we will no longer obey a perjured archbishop, but place ourselves and our cause under the protection of our lord the Pope, and summon thee to answer us before him."—"I hear," said Becket, and he deigned no further reply.

According to Roger of Hoveden, the archbishop was accused in the council chamber of the impossible crime of magic; and the barons pronounced a sentence of imprisonment against him. The door of that chamber soon opened, and Robert, Earl of Leicester, followed by the barons, stepped forth into the hall to read the sentence, beginning in the usual old Norman French form,—"Oyez-ci." The archbishop rose, and, interrupting him, said, "Son and earl, hear me first. Thou knowest with how much faith I served the king,—with how much reluctance, and only to please him, I accepted my present charge, and in what manner I was declared free from all secular claims whatsoever. Touching the things which happened before my consecration, I ought not to answer, nor will I answer. You, moreover, are all my children in God, and neither law nor reason permits you to sit in judgment upon your father. I forbid you therefore to judge me;—I decline your tribunal, and refer my quarrel to the decision of the Pope. To him I appeal: and now, under the holy protection of the Catholic church and the apostolic see, I depart in peace." After this counter-appeal to the power which his adversaries had been the first to invoke, Becket slowly strode through the crowd towards the door of the hall. When near the threshold, the spirit of the soldier, which was not yet extinguished by the aspirations of the saint, blazed forth in a withering look and a few hasty but impassioned words. Some of the courtiers and attendants of the king threw at him straw or rushes, which they gathered from the floor, and called him traitor and false perjurer. Turning round and drawing himself up to his full height, he cried, "If my holy calling did not forbid it, I would make my answer with my sword to those cowards who call me traitor."* He then mounted his horse amidst the acclamations of the lower clergy and common people, and rode in a sort of triumph to his lodgings, the populace shouting, "Blessed be God who hath delivered his servant from the hands of his enemies." The strength of Becket's party was in the popular body; and it has been supposed, with some reason, that his English birth and Saxon descent contributed, no less than his sudden sanctity, to endear him to the people, who had never before seen one of their race elevated to such dignities. He seems, indeed, to have been very popular, even when nothing more than a profane chancellor, and at this critical moment he resorted to means that could hardly fail of giving enthusiasm to the feelings of the multitude. The stately bishops, as we have said, had fallen from his side,—the lordly abbots remained aloof in their houses,—the mass of his own clerical followers had forsaken him,—the lay nobles of the land were almost to a man his declared enemies: his house was empty, and in a spirit of imitation which some will deem presumptuous, he determined to fill it with the paupers of the town and the lowly wayfarers from the road-side. "Suffer," said he, "all the poor people to come into the place, that we may make merry together in the Lord." "And having thus spoken, the people had free entrance, so that all the hall and all the chambers of the house being furnished with tables and stools, they were conveniently placed, and served with meat and drink to the full,"* the archbishop supping with them and doing the honours of the feast. In the course of the evening he sent to the king to ask leave to retire beyond sea, and he was told that he should receive an answer on the following morning. The modern historians, who take the most unfavourable view of the king's conduct in these particulars, intimate more or less broadly that a design was on foot for preventing the archbishop from ever seeing that morrow; but the circumstances of time and place, and the character of Henry, are opposed to the belief that secret assassination was contemplated; nor does any contemporary writer give reasonable grounds for entertaining such a belief, or indeed say more than that the archbishop's friends were sorely frightened, and thought such a tragical termination of the quarrel a highly probable event. Becket, however, took his departure as if he himself feared violence. He stole out of the town of Northampton at the dead of night, disguised as a simple monk, and calling himself Brother Dearman; and being followed only by two clerks and a domestic servant, he hastened towards the coast, hiding by day and pursuing his journey by night. The season was far advanced, and the stormy winds of November swept the waters of the Channel when he reached the coast; but Becket embarked in a small boat, and after many perils and fatigues, landed at Gravelines, in Flanders, on the fifteenth day after his departure from Northampton.

From the sea-port of Gravelines he and his companions walked on foot, and in very bad condition, to the monastery of St. Bertin, near to Namur, where he waited a short time the success of his applications to the King of France, and the Pope Alexander III., who had fixed his residence for a time in the city of Sens. Their answers were most favourable; for, fortunately for Becket, the

* Fitz.-Steph.—Gervase, Grym.—Diceto.—Diceto, we know, was at this meeting, and, what gives singular interest to the accounts of it is, that it is probable the other three chroniclers, who were all closely connected with Becket, were also present.

* Holingshed.

jealousy and disunion between the kings of France and England disposed Louis to protect the obnoxious exile, in order to vex and weaken Henry; and the Pope, turning a deaf ear to a magnificent embassy dispatched to him by the English sovereign, determined to support the cause of the primate as that of truth, of justice, and the church. The splendid abbey of Pontigny, in Burgundy, was assigned to him as an honourable and secure asylum; and the Pope reinvested him with his archiepiscopal dignity, which he had surrendered into his hands, notwithstanding the urgent wish of some of the cardinals that Alexander would keep his resignation, which would allow of a new primate being appointed for England, and so put an end to a dangerous controversy. Encouraged by the countenance he thus received from the Pope, Becket now declared that Christ was again tried in his case before a lay tribunal, and crucified afresh in the person of himself, the servant of Christ.

As soon as Henry was informed of these particulars he issued writs to the sheriffs of England, commanding them to seize all rents and possessions of the primate within their jurisdictions, and to detain all bearers of appeals to the Pope till the king's pleasure should be made known to them. He also commanded the justices of the kingdom to detain in like manner all bearers of papers, whether from the Pope or Becket, that purported to pronounce excommunication or interdict on the realm, —all persons, whether lay or ecclesiastic, who should adhere to such sentence of interdict,—and all clerks attempting to leave the kingdom without a passport from the king. The primate's name was struck out of the Liturgy, and the revenues of every clergyman who had either followed him into France, or had sent him aid and money, were seized by the crown. If Henry's vengeance had stopped here it might have been excused, if not justified; but, irritated to madness by the tone of defiance his enemy assumed in a foreign country, he proceeded to further vindictive and most disgraceful measures, issuing one common sentence of banishment against all who were connected with Becket, either by the ties of relationship or those of friendship. The list of proscription contained four hundred names, for the wives and children of Becket's friends were included; and it is said that they were all bound by an oath to show themselves in their miserable exile to the cause of their ruin, that his heart might be wrung by the sight of the misery he had brought down upon the heads of all those who were most dear to him. It is added that his cell at Pontigny was accordingly beset by these exiles, but that he finally succeeded in relieving their immediate wants by interesting the King of France, the Queen of Sicily, and the Pope, in their favour.

In 1165, the year after Becket's flight, Henry sustained no small disgrace from the result of a campaign, in which he personally commanded, against the Welsh. That hardy people had risen once more in arms in 1163, but had been defeated by an Anglo-Norman army, which subsequently plundered and wasted with fire the county of Carmarthen. Somewhat more than a year later a nephew of Rees-ap-Gryffiths, prince or king of South Wales, was found dead in his bed, and the uncle asserting he had been assassinated by the secret emissaries of a neighbouring Norman baron, collected the mountaineers of the south, and began a fierce and successful warfare, in which he was presently joined by his old allies, Gwynned, the prince of North Wales, and Owen Cyvelioch, the leader of the clans of Powisland. One Norman castle fell after another, and, when hostilities had continued for some time, the Welsh pushed their incursions forward into the level country. The king, turning at length his attention from the church quarrel, which had absorbed it, drew together an army "as well of Englishmen as strangers," and hastened to the Welsh marches. At his approach the mountaineers withdrew "to their starting holes," their woods, and strait passages. Henry, without regard to difficulties and dangers, followed them, and a general action was fought on the banks of the Cieroc. The Welsh were defeated, and fled to their uplands. Henry, still following them, penetrated as far as the lofty Berwin, at the foot of which he encamped. A sudden storm of rain set in, and continued until all the streams and torrents were fearfully swollen, and the valley was deluged. Meanwhile the natives gathered on the ridges of the mountain of Berwin; but it appears to have been more from the war of the elements than of man that the king's army retreated in great disorder and with some loss. Henry had hitherto showed himself remarkably free from the cruelty of his age, but his mind was now embittered, and in a hasty moment he resolved to take a barbarous vengeance on the persons of the hostages whom the Welsh princes had placed in his hands, seven years before, as pledges for their tranquillity and allegiance. The eyes of the males were picked out of their heads, and the noses and ears of the females were cut off. The old chroniclers hardly increase our horror (which they intended to do) when they tell us that the victims belonged to the noblest families of Wales.*

This reverse in England was soon followed by successes on the continent. A formidable insurrection broke out in Brittany against Henry's subservient ally Conan, who applied to him for succour according to the terms of the treaty of alliance subsisting between them. The troops of the king entered by the frontier of Normandy, under pretext of defending the legitimate earl of the Bretons against his revolted subjects. Henry soon made himself master of Dol and several other towns, which he kept and garrisoned with his own soldiers. Conan had shown himself utterly incapable of managing the fierce Breton nobles, by whose excesses and cruelties the poor people, who were the victims of them, were ground to the dust. Henry's power

* Gervase.—Newbrig.—Girald. Camb. Itin.—Diceto.

and abilities were well known to the suffering Bretons, and a considerable party, including the priests of the country, rallied round him, and hailed him as a deliverer.* Submitting in part to the force of circumstances and the wishes of Henry, and in part, perhaps, following his own indolent inclinations, Conan resigned the remnant of his authority into the hands of his protector, who governed the state in the name of his son Geoffrey and Conan's heiress Constantia, the espousals of these two children being prematurely solemnized. Another insurrection ensued; but, though the disaffected barons of Brittany formed a life and death league with the dissatisfied people of Maine, and were assisted, at first secretly and then openly, by the King of France, they could never make head against the power of Henry, who, in the end, levelled most of their castles, and disarmed and disheartened the turbulent Bretons. In the course of this petty war Henry is accused by more than one French chronicler of making a jest of the virtue of his female prisoners and hostages; but it is fair to remark that, though this is touching one of his known vices, these accounts are from a prejudiced source; and it is acknowledged, even by the same writers, that he gave to Brittany tranquillity, regular courts of law, and prosperity,—blessings which were certainly worth more to the mass of the people than the stormy national independence they had before enjoyed. In the month of December, 1166, Henry kept his court in the famed old castle on Mount St. Michael, whence his eye could range over the long and extending land of Brittany, and there he was visited by William the Lion, who had recently ascended the Scottish throne, on the death of his brother, Malcolm IV.

While still abroad he ordered a tax to be levied on all his subjects, whether English or foreign, for the support of the war in the Holy Land, which was taking a turn more and more unfavourable to the Christians; but at the very time his peace was broken by his own war with the church and the unremitting hostility of Becket. In the month of May the banished archbishop went from Pontigny to Vezeley, near Auxerre, and encouraged by the Pope, who intimated that he might proceed without any fear of giving offence to the see of Rome, he repaired to the church on the great festival of the Ascension, when it was most crowded with people, and mounting the pulpit there, "with book, bell, and candle," solemnly cursed and pronounced the sentence of excommunication against the defenders of the Constitutions of Clarendon, the detainers of the sequestrated property of the church of Canterbury, and those who imprisoned or persecuted either laymen or clergy on his account. This done, he more particularly excommunicated by name Richard de Lucy, Joycelin Baliol, and four other of Henry's courtiers and prime favourites.† The king was at Chinon, in Anjou, when he was startled by this new sign of life given by his adversary. Though in general a great master of his feelings and passions, Henry was subject to excesses of ungovernable fury, and on this occasion he seems fairly to have taken leave of his senses. He cried out that they wanted to kill him body and soul—that he was wretched in being surrounded by cowards and traitors, not one of whom thought of delivering him from the insupportable vexations caused him by a single man. He took off his cap and dashed it to the ground, undid his girdle, threw his clothes about the room, tore off the silk coverlet from his bed and rolled upon it, and gnawed the straw and rushes,—for it appears that this mighty and splendid monarch had no better bed.* His resentment did not pass away with this paroxysm, and after writing to the Pope and the King of France, he threatened that, if Becket should return and continue to be sheltered at the Abbey of Pontigny, which belonged to the Cistercians, he would seize all the estates appertaining to that order within his numerous dominions. The threat was an alarming one to the monks, and we find Becket removing out of Burgundy to the town of Sens, where a new asylum was appointed him by Louis, who continued to support him for his own views, but who was unable or unwilling to make any great sacrifice for him. A paltry war was begun and ended by a truce all within a few months: it was followed the next year by another war equally short and still more inglorious for the French king; for, although he had excited fresh disturbances in Brittany and Maine, and leagued himself with some of Henry's revolted barons of Poictou and Aquitaine, he gained no advantage whatever for himself, was the cause of ruin to most of his allies, and was compelled to conclude a peace at the beginning of the year 1169. Nothing but an empty pride could have been gratified by a series of feudal oaths; but the designations given to his sons on this occasion by the English king contributed to fatal consequences which happened four years later. Prince Henry of England, his eldest son, did homage to his father-in-law, the King of France, for Anjou and Maine, as he had formerly done for Normandy; Prince Richard, his second son, did homage for Aquitaine; and Geoffrey, his third son, for Brittany: and it was afterwards assumed that these ceremonies constituted the boys sovereigns and absolute masters of the several dominions named. At the same time the two kings agreed upon a marriage between Prince Richard of England and Alice, another daughter of the King of France, the previous treaty of matrimony with the King of Arragon being set aside. Sixteen months before these events Henry lost his mother, the Empress Matilda, who died at Rouen, and was buried in the celebrated Abbey of Bec, which she had enriched with the donations of her piety and penitence. Her adventurous, busy, restless life ceased with the accession of her able

* Script. Rer. Franc. Henry seems to have acted in this mad way on more than one occasion.

son to the throne of England; but from the honoured retirement of Normandy, to which he wisely condemned her, she continued to take a lively interest in the affairs of courts and governments, and it is said of her that she foresaw Becket's character, and highly disapproved of his elevation to the primacy. To that extraordinary man we must now return, for his fate is so interwoven with that of Henry that it is difficult to separate them for any length of time until the grave closes over the priest; and then his ashes, his name, and writings, will be found exercising an influence not only over this king but over his successors.

About this time Henry was prevailed upon by the Pope, the King of France, and by some of his own friends, to assent to the return of Becket and his party. The kings of France and England met at Montmirail, in Perche, and Becket was admitted to a conference. Henry insisted on qualifying his agreement to the proposed terms of accommodation by the addition of the words, "saving the honour of his kingdom,"—a salvo which Becket met by another on his part, saying that he was willing to be reconciled to the king, and obey him in all things, "saving the honour of God and the church." Upon this, Henry, turning to the King of France, said,—"Do you know what would happen if I were to admit this reservation? That man would interpret everything displeasing to himself as being contrary to the honour of God, and would so invade all my rights: but to show that I do not withstand God's honour, I will here offer him a concession;—what the greatest and holiest of his predecessors did unto the least of mine, that let him do unto me, and I am contented therewith." All present exclaimed that this was enough—that the king had humbled himself enough. But Becket still insisted on his salvo; upon which the King of France said, he seemed to wish to be "greater than the saints, and better than St. Peter;" and the nobles present murmured at his unbending pride, and said he no longer merited an asylum in France. The two kings mounted their horses and rode away without saluting Becket, who retired much cast down. No one any longer offered him food and lodging in the name of Louis, and on his journey back to Sens he was reduced to live on the charity of the common people.*

In another conference the obnoxious clauses on either side were omitted. The business now seemed in fair train; but when Becket asked from the king the kiss of peace,† which was the usual termination to such quarrels, Henry's irritated feelings prevented him from granting it, and he excused himself by saying it was only a solemn oath taken formerly, in a moment of passion, never to kiss Becket, that hindered him from giving this sign of perfect reconciliation. The primate must have known kings too well to attach much value to their kisses, but he was resolute to wave no privilege and no ceremony, and this conference was also broken off in anger. Another brief quarrel between the two kings, and an impotent raising of banners on the part of Louis, which threatened at first to retard the reconciliation between Henry and his primate, were in fact the cause of hastening that event; for hostilities dwindled into a truce, the truce led to another conference between the sovereigns, and the conference to another peace, at which Henry, who was apprehensive that the Pope would finally consent to Becket's ardent wishes, and permit him to excommunicate his king by name, and pronounce an interdict against the whole kingdom, slowly and reluctantly pledged his word to be reconciled forthwith to the dangerous exile. On the 22nd of July, 1170, a solemn congress was held in a spacious and most pleasant meadow,* between Freteval and La Ferté-Bernard, on the borders of Touraine. The king was there before the archbishop, and as soon as Becket appeared, riding leisurely towards the tent, he spurred his horse to meet him, and saluted him cap in hand. They then rode apart into the field, and discoursed together for some time in the same familiar manner as in by-gone times. Then returning to his attendants, Henry said that he found the archbishop in the best possible disposition, and that it would be sinful in him to nourish rancour any longer. The quarrel had been still further complicated by the coronation of Henry's eldest son, a ceremony which had been performed in the preceding month of June by the Archbishop of York, in defiance of the rights of Becket as primate. But Henry softened his rancour on this account in the course of his private conversation with him.

The primate came up accompanied by the Archbishop of Sens and other priests, and the forms of reconciliation were completed; always, however, excepting the kiss of peace, which, according to some, Henry promised he would give in England, where they would soon meet.† The king, however, condescended to hold Becket's stirrup when he mounted. By their agreement Becket was to love, honour, and serve the king, in as far as an archbishop could "render in the Lord" service to his sovereign; and Henry was to restore immediately all the lands, and livings, and privileges of the church of Canterbury, and to furnish Becket with funds to discharge his debts and make the journey into England. These terms were certainly not kept: the lands were not released for four months; and, after many vexatious delays, Becket was obliged to borrow money for his journey. While tarrying on the French coast he was several times warned that danger awaited him on the opposite shore. This was not improbable, as many resolute men had been suddenly driven from the church lands, on which they had fattened for

years, and as he was known to carry about his person letters of excommunication from the Pope against the Archbishop of York and the Bishops of London and Salisbury, whom he held to be his chief enemies, and who were men likely to adopt strong measures to prevent his promulgating the terrible sentence. He was even assured that Ranulf de Broc, a knight of a family who all hated him to the death, and who had himself boasted that he would not let the archbishop live to eat a single loaf of bread in England, was lying with a body of soldiers, between Canterbury and Dover, in order to intercept him. But nothing could move Becket, who said seven years of absence were long enough both for the shepherd and his flock, and that he would not stop though he were sure to be cut to pieces as soon as he landed on the opposite coast. The only use he made of the warnings he received was, to confide the letters of excommunication to a skilful and devoted messenger, who, preceding him some short time, stole into England without being suspected, and actually delivered them publicly to the three bishops, who were as much startled as if a thunderbolt had fallen at their feet. This last measure seems to have had as much to do with Becket's death as any anger of the king's. As he was on the point of embarking, a vessel arrived from England. The sailors were asked what were the feelings of the good English people towards their archbishop? They replied, that the people would hail his return with transports of joy. This was a good omen, and he no doubt relied much more on the popular favour than on the protection of John of Oxford, one of the royal chaplains, and some others whom Henry had sent to accompany him. He sailed from France in the same gloomy month of the year on which he had begun his exile, and, avoiding Dover, landed at Sandwich, on the 1st of December. At the news of his arrival, the mariners, the peasants, the working people generally, and the English burgesses flocked to meet him; but none of the rich and powerful welcomed him; and the first persons of rank he saw presented themselves in a menacing attitude. These latter were a sheriff of Kent, Reginald de Warenne, Ranulf de Broc (who had ridden across the country from Dover), and some relatives and allies of the three excommunicated bishops, who carried swords under their tunics, and drew them when they approached the primate. John of Oxford conjured them to be quiet, lest they should make their king pass for a traitor; but it is probable that the determined countenance of the English multitude made more impression on them than his peaceful words. They retired to their castles, and spread a report among their feudal compeers that Becket was liberating the serfs of the country, who were marching in his train drunk with joy and hopes of vengeance. At Canterbury the primate was received with acclamations; but still it was only the poor and lowly that welcomed him. A few days after, he set out for Woodstock, to visit the king's eldest son, Prince Henry, who had formerly been his pupil. Becket counted much on his influence over the young prince; but the party opposed to him succeeded in preventing his having an opportunity to exert that influence. A royal messenger met him on his journey, and ordered him, in the name of the prince, not to enter any of the royal towns or castles, but to return and remain within his own diocese. The primate obeyed, and, returning, spent some days at Harrow-on-the-Hill, which belonged to the church of Canterbury a considerable time before the Norman conquest. During his stay at Harrow, Becket kept great hospitality; but this virtue was probably exercised in regard to persons of a condition resembling those whom he had bidden to his memorable feast at Northampton; and the only ecclesiastic of rank mentioned as doing him honour was the abbot of the neighbouring monastery of St. Alban's. Two of his own clergy, Nigellus de Sackville, who was called "the usurping rector of Harrow," and Robert de Broc, the vicar, a relation of his determined foe, Ranulf de Broc, treated him with great disrespect, and when he was departing maimed the horse which carried his provisions—an offence which was not forgotten by one who presumed to hurl the thunderbolts of damnation. Becket returned to Canterbury escorted by a host of poor people armed with rustic targets and rusty lances. On Christmas day he ascended the pulpit in the great cathedral church, and delivered an eloquent sermon on the words, *Venio ad vos mori inter vos* (I come to you to die among you). He told his congregation that one of their archbishops had been a martyr, and that they would probably soon see another; "but," he added, "before I depart hence, I will avenge some of the wrongs my church has suffered during the last seven years;" and he forthwith excommunicated Ranulf and Robert de Broc, and Nigellus, the rector of Harrow.* This was Becket's last public act. As soon as his messengers had delivered his letters, the three bishops excommunicated by them hastened to Prince Henry, to complain of his insatiate thirst of revenge, and to accuse him of a fixed plan of violating all the royal privileges and the customs of the land; and almost immediately after they crossed over to the continent, to demand redress from the king. "We implore it," said they, "both for the sake of royalty and the clergy —for your own repose as well as ours. There is a man who sets England on fire; he marches with troops of horse and armed foot, prowling round the fortresses, and trying to get himself received within them."† The exaggeration was not needed; Henry was seized with one of his most violent fits of fury. "How," cried he, "a fellow that hath eaten my bread,—a beggar that first came to my court on a lame horse, dares insult his king and the royal family, and tread upon the whole king-

* Fitz-Steph.—Vita S. Thom.—Gervase.—Rog. Hove.—Matt. Paris.

† Script. Rer. Franc.

dom, and not one of the cowards I nourish at my table—not one will deliver me from this turbulent priest."* There were four knights present, who had probably injuries of their own to avenge, and who took this outburst of temper as a sufficient death-warrant, and, without communicating their sudden determination to the king (or, at least, there is no evidence that they did), hurried over to England. Their names were Reginald Fitzurse, William Tracy, Hugh de Morville, and Richard Brito; and they are described by a contemporary as being barons, and servants of the king's bedchamber. Their intention was not suspected, nor was their absence noticed; and while they were riding with loose rein towards the coast, the king was closeted with his council of barons, who after some discussion, which seems to have occupied more than one day, appointed three commissioners to go and seize, according to the forms of law, the person of Thomas à Becket, on the charge of high treason. But the conspirators, who had bound themselves together by an oath, left the commissioners nothing to do. Three days after Christmas day they arrived secretly at Saltwood, in the neighbourhood of Canterbury, where the De Broc family had a house; and here, under the cover of night, they arranged their plans—for precautions were necessary, in proceeding against the object of the people's veneration. On the 29th of December, having collected a number of adherents to quell the resistance of Becket's attendants and the citizens, in case any should be offered, they proceeded to the monastery of St. Augustine's, at Canterbury, the abbot of which, like nearly all the superior churchmen, was of the king's party. From St. Augustine's, they went to the archbishop's palace, and entering his apartment abruptly, about two hours after noon, seated themselves on the floor without saluting him, or offering any sign of respect. There was a dead pause—the knights not knowing how to begin, and neither of them liking to speak first. At length, Becket asked what they wanted; but still they sat gazing at him with haggard eyes. There were twelve men of the party, besides the four knights. Reginald Fitzurse, feigning a commission from the king, at last spoke. "We come," said he, "that you may absolve the bishops you have excommunicated; re-establish the bishops whom you have suspended; and answer for your own offences against the king." Becket replied with boldness and with great warmth, not sparing taunts and invectives. He said, that he had published the papal letters of excommunication with the king's consent; that he could not absolve the archbishop of York, whose heinous case was reserved for the pope alone, but that he would remove the censures from the two other bishops, if they would swear to submit to the decisions of Rome." "But of whom, then," demanded Reginald, "do you hold your archbishopric—of the king or the pope?" "I owe the spiritual rights to God and the pope, and the temporal rights to the king." "How, is it not the king that hath given you all?" Becket's decided negative was received with murmurs, and the knights furiously twisted their long gloves. Three out of the four cavaliers had followed Becket in the days of his prosperity and vain glory, and vowed themselves his liege men. He reminded them of this, and observed, it was not for such as they to threaten him in his own house; adding also, that if he were threatened by all the swords in England, he would not yield. "We will do more than threaten," replied the knights, and then departed. When they were gone, his attendants loudly expressed their alarm, and blamed him for the rough and provoking tone by which he had inflamed, instead of pacifying his enemies; but the prelate silenced the latter part of their discourse by telling them he had no need of their advice, and knew what he ought to do. The Barons, with their accomplices, who seem to have wished, if they could, to avoid bloodshed, finding that threats were ineffectual, put on their coats of mail, and taking each a sword in his hand, returned to the palace, but found the gate had been shut and barred by the terrified servants. Fitzurse tried to break it open, and the sounds of his ponderous axe rang through the building. The gate might have offered some considerable resistance, but Robert de Broc showed them the way in at a window. The people about Becket had in vain urged him to take refuge in the church; but at this moment the voices of the monks singing vespers in the choir striking his ear, he said he would go, as his duty now called him thither; and, making his cross-bearer precede him with the crucifix elevated, he traversed the cloister with slow and measured steps, and entered the church. His servants would have closed and fastened the doors, but he forbade them, saying that the house of God was not to be barricaded like a castle. He had passed through the north transept, and was ascending the steps which lead to the choir, when Reginald Fitzurse appeared at the other end of the church, waving his sword, and shouting, "Follow me, loyal servants of the king." The other conspirators followed him closely, armed like himself from head to foot, and brandishing their swords. The shades of evening had fallen, and in the obscurity of the vast church, which was only broken here and there by a lamp glimmering before a shrine, Becket might easily have hid himself in the dark and intricate crypts under ground, or beneath the roof of the old church. Each of these courses was suggested by his attendants, but he rejected them both, and turned boldly to meet the intruders, followed or preceded by his cross-bearer, the faithful Edward Gryme, the only one who did not flee. A voice shouted, "Where is the traitor?" Becket answered not; but when Reginald Fitzurse said, "Where is the archbishop?" he replied, "Here am I, an archbishop, but no traitor, ready to suffer in my Saviour's name." Tracy pulled him by the sleeve, saying, "Come hither, thou art a prisoner." He pulled

* Vita Quadripart.

back his arm in so violent a manner, that he made Tracy stagger forward. They advised him to flee, or to go with them; and, on a candid consideration, it seems to us that the conspirators are entitled to a doubt as to whether they really intended a murder, or were not rather hurried into it by his obstinacy and provoking language. Addressing Fitzurse, he said, "I have done thee many pleasures; why comest thou with armed men into my church?" They told him that he must instantly absolve the bishops. "Never, until they have offered satisfaction," was his answer; and he applied a foul vituperative term to Fitzurse. "Then die," exclaimed the latter, striking at his head. The faithful Gryme interposed his arm to save his master; the arm was broken, or nearly cut off, and the stroke descended on the primate's head, and slightly wounded him. Then another voice cried, "Fly, or thou diest;" but still Becket moved not, but, with the blood running down his face, he clasped his hands, and bowing his head, exclaimed, "To God, to St. Mary, to the holy patrons of this church, and to St. Denis, I commend my soul and the church's cause." A second stroke brought him to the ground, close to the foot of St. Bennet's altar; a third, given with such force that the sword was broken against the stone pavement, cleft his skull, and his brains were scattered all about: one of the conspirators put his foot on his neck, and cried, "Thus perishes a traitor!"* The conspirators then withdrew, without encountering any hindrance or molestation; but when the fearful news spread through Canterbury and the neighbouring country, the excitement was prodigious; and the then inevitable inference was drawn that Becket was a martyr, and miracles would be wrought at his tomb. For some time, however, the superior orders rejected this faith,

Murder of Becket. From an ancient Painting hung at the head of the Tomb of Henry IV., in Canterbury Cathedral. Engraved and described in Carter's Ancient Sculptures and Paintings.

and made efforts to suppress the veneration of the common people. An edict was published, prohibiting all men from preaching in the churches or reporting in the public places that Becket was a martyr. His old foe, the Archbishop of York, ascended the pulpit to announce his death as an infliction of divine vengeance, saying that he had perished in his guilt and pride, like Pharaoh.* Other ecclesiastics preached that the body of the traitor ought not to be allowed to rest in consecrated ground, but thrown into a ditch, or hung on a gibbet. An attempt was even made to seize the body, but the monks, who received timely warning, concealed it, and hastily buried it in the subterranean vaults of the cathedral. But it was soon found that the public voice, echoed, for its own purposes, by the court of France, was too loud to be drowned in this manner. Louis, whom Henry had so often humbled, wrote to the pope, imploring him to draw the sword of St. Peter against that horrible persecutor of God, who surpassed Nero in cruelty, Julian in apostasy, and Judas in treachery. He chose to believe, and the French bishops believed with him, that Henry had ordered the murder.

Attempts have been made in modern times to lower the character of a faulty man, but who was one of the greatest of our sovereigns, and to revive this belief, which is certainly unsupported by any good evidence of contemporary history. If Henry had been addicted to cruelty and assassination—which he certainly was not—his consummate prudence and foresight would have prevented his ordering such a deed; for he must have felt what would be the inevitable effect of it, and have known that Becket, so disposed of, would be a greater thorn in his side, when dead, than he had ever been while living. On receiving the intelligence, he expressed the greatest grief and horror, shut himself up in his room, and refused to receive either food or consolation for three days; and if he took care to have a touching detail of his distressed feelings transmitted to the pope, in which he declared his innocence in the strongest terms, and entreated that censure might be suspended till the facts of the case were examined, such a measure is not to be taken, in itself, as indicating the insincerity

* Epist. Joan. Sarisb.

PENANCE OF HENRY II. before the Shrine of Becket, at Canterbury. From an ancient Painting on Glass. Engraved and described in Carter's Ancient Sculptures and Paintings of England.

of his grief and horror. Tenderness for Becket he could scarcely feel, yet as he was not formed of harsh materials, he may have been greatly shocked at the manner of death of one who had been his bosom friend, and he would grieve sincerely for the foul suspicions cast upon him, and the incalculable mischief the event might do to himself and his family. The extremity of his penance at the tomb of Becket three years and a half later, has been attributed to his remorse—to his consciousness of being guilty of the murder; but he might well feel remorse at the hasty words he uttered, and which were supposed to have led to the deed, although he had used expressions equally violent on former occasions, without their being taken at the letter, or producing any evil consequences. It should be remembered, too, that at the time of his pilgrimage to Becket's shrine, Henry had to overcome a mighty prejudice which had been carefully nourished, and spread by his enemies, and that he was depressed and troubled in spirit by the rebellion of his own children. Like his bishops, who found it much easier to venerate a dead martyr than obey a living and rigid archbishop,* he may have entered into the view of Becket's sanctity, in spite of his familiarity with his frailties in the flesh; and the suddenness of Becket's conversion was in accordance with the spirit of the times, and not to be set down unhesitatingly as a piece of hypocrisy. We have reasoned here as if admitting Henry's sincerity, which is doubted altogether by many writers.

When Henry's envoys first appeared at Rome—for the pope was no longer a dependent exile—they were coldly received, and everything seemed to threaten that an interdict would be laid upon the kingdom, and the king excommunicated by name. In the end, however, Alexander rested satisfied with an excommunication in general terms of the murderers and the abettors of the crime. It is said that Henry's gold was not idle on this occasion; but the employment of it is rather a proof of the notorious rapacity of the cardinals, than of his having a bad cause to plead. In the month of May, 1172, in a council held at Avranches, at which two legates of the pope attended, Henry swore, on the holy gospels and sacred relics—a great concourse of the clergy and people being present—that he had neither ordered nor desired the murder of the archbishop. This oath was not demanded from him, but taken of his own free will. As, however, he could not deny that the assassins might have been moved to the deed by his wrathful words, he consented to maintain two hundred knights during a year, for the defence of the Holy Land; and to serve himself, if the pope should require it, for three years against the infidels, either the Saracens in Palastine or the Moors in Spain, as the church should appoint. At the same time, he engaged to restore all the lands and possessions belonging to the friends of the late archbishop; to permit appeals to be made to the pope in good faith, and without fraud, reserving to himself, however, the right of obliging such appellants as he suspected of evil intentions to give security that they would attempt nothing abroad to the detriment of him or his kingdom. To these conditions he made an addition too vague to have any practical effect—that he would relinquish such customs against the church as had been introduced in his time. The legates then fully absolved the king; and thus terminated this quarrel, less to Henry's disadvantage than might have been expected.*

In the short interval he had added a kingdom to his dominions. The year that followed the death of Becket was made memorable by the conquest of Ireland.

In the preceding Book, the sketch of Irish history was brought down to the reign of Turlogh, the commencement of which is assigned to the year 1064. Turlogh, however, like his uncle Donchad, whom he had succeeded, and Donchad's father, the great Brien, is scarcely acknowledged by the old annalists as having been a legitimate king, not being of the blood of the O'Niells of Ulster, in which line the supreme sceptre had been transmitted, with scarcely any interruption till its seizure by Brien, from the time of O'Niell, or Nial, of the Nine Hostages, who flourished in the beginning of the fifth century. The long acquiescence of the other provincial regal houses in the superiority thus assumed by that of Ulster was broken by the usurpation of the Munster O'Briens, and we shall find that ere long both the O'Connors of Connaught and the MacMurroghs of Leinster make their appearance on the scene as competitors for the prize of the chief dominion along with the other two families. The whole history of the country from this date is merely the history of these contests for the crown, the course of which will be made sufficiently intelligible by a few sentences of explanation taken along with the tabular view of the succession at the head of the present Chapter.

Turlogh, who kept his court in the palace of his ancestors, the kings of Munster, at Kinkora, in Clare, died there in July, 1086. His second son, Murtach, or Murkertach, soon after acquired the sole possession of the throne of Munster by the death of one of his two brothers and the banishment of the other; but his attempt to retain the supreme monarchy in his family was resisted by the other provincial kings, who united in supporting, against his claims, those of Domnal MacLochlin, or Donald MacLachlan, the head of the ancient royal house of O'Niell. At last, after much fighting, it was arranged, at a solemn convention held in 1094, that the island should be

* We learn, from the letters of Peter of Blois, how Becket was considered by churchmen previously to his tragical death. He says in one of his letters, written after Becket's canonization, "*We fools counted his life folly*, &c.; and whatever he did was then misinterpreted, and turned to matter of hatred and envy. If, therefore, the bishop elect did, at one time, *as was the case with us all*, hold the blessed martyr in derision, it ought not to be charged against him," &c. &c.

* Rog. Hove.—Epist. S. Thomæ.—Epist. Joan. Sarisb.—Gervase.

divided between the two competitors, the southern half, called Leath Mogh, or Mogh's Half, remaining subject to Murtach, and the northern, called Leath Cuinn, or Conn's Half, being resigned to the dominion of MacLochlin. This was a well-known ancient division, which in former times, even when the nominal sovereignty of the whole country was conceded to the kings of Ulster, had often left those of Munster in possession not only of actual independence but of a share of the supremacy over both Connaught and Leinster; for the line of partition was drawn right across the island from the neighbourhood of the town of Galway to Dublin, and consequently cut through each of these provinces. With this real equality in extent of dominion and authority between the two houses, one circumstance chiefly had for a long period held in check the rising fortunes of that of Munster, the law or custom, namely, of the succession to the crown in that province, which was divided into two principalities, Desmond or South Munster, and Thomond or North Munster, the reigning families of which, by an arrangement somewhat similar to that which has been already described as anciently subsisting in the Scottish monarchy,* enjoyed the supreme sovereignty alternately. The two lines of princes derived this right of equal participation from the will of their common ancestor Olill Ollum; those of Desmond, which comprehended the present counties of Kerry, Cork, and Waterford, being descended from that king's eldest son Eogan, whence the people of that principality were called Eoganacths, or Eugenians; while the princes of Thomond, which consisted of Clare, Limerick, and the greater part of Tipperary, were sprung from his second son Cormac Cas, whence their subjects took the name of Dalgais, or Dalcassians. But Brien Boru, himself of the Dalcassian family, had begun his course of inroad upon the ancient institutions of his country by setting at defiance the rights of his Eugenian kindred, and had possessed himself, by usurpation, of the provincial throne of Munster before he seized, by a like violation of the law, upon the supreme power. The Munster kings had ever since continued to be of his race.

The compact between MacLochlin and Murtach did not put an end to their contention. Several more battles were fought between them, till at length, in 1103, Murtach sustained a defeat at Cobha, in Tyrone, which so greatly weakened his power as to prevent him from ever after giving his adversary any serious annoyance. They continued to reign, however, MacLochlin at Aileach or Alichia, in Donegal, Murtach at Cashel, till the death of the latter, in 1119, after he had spent the last three or four years of his life in a monastery, the management of affairs having been meanwhile left in the hands of his brother Dermot. From the date of the death of Murtach, MacLochlin is regarded as having been sole monarch; but he also died in 1121.

Fifteen years of confusion followed, during which a contest between various competitors for the supreme authority spread war and devastation over every part of the country. At last, in 1136, Turlogh, or Tordelvac, O'Connor, King of Connaught, was acknowledged monarch of all Ireland; the ancient sceptre of the O'Niells thus passing a second time into a new house. O'Connor, however, had to maintain himself on the throne he had thus acquired by a great deal of hard fighting with his neighbours and rivals. Connor O'Brien, the king of Munster, who had vigorously opposed his elevation, and his successor Turlogh O'Brien, did not cease to dispute his power, till the overthrow of the latter at the great battle of Moinmor, fought in 1151, placed Munster for the moment completely under the tread of the victor. O'Brien was driven from his kingdom, and the territory was again divided into two principalities, over which O'Connor set two princes of the Eugenian House that had some time before joined him in his contest with the Dalcassians. A few years after, however, the expelled king was restored by the interference of Murtogh O'Lochlin, or Murtach Mac Lachlan, O'Niell, the king of Ulster, and the legitimate heir of the ancient monarchs of Ireland, who now also took arms to recover for himself the throne of his ancestors. With this new rival, O'Connor, for whom his martial reign has procured from the annalists the title of The Great, continued at war during the remainder of his life; and at his death, in 1156, O'Lochlin was acknowledged supreme king. Some opposition was made to his accession by Roderick O'Connor, the son of the late king, and his successor in the provincial throne of Connaught; but he also, at last, as well as the princes of Munster and Leinster, acquiesced in the restoration of the old sovereign house, and submitted to O'Niell.

The rule of Murtogh O'Lochlin was distinguished by vigour and ability; but its close was unfortunate. He was killed, along with many of his nobility, in 1166, in a battle with some insurgent chiefs of his own province of Ulster, to whom he had given abundant cause for taking up arms against him, if it be true that, after having been professedly reconciled to one of them with whom he had had a quarrel, and sealing the compact by the acceptance of hostages, he had suddenly seized the unfortunate chief, together with three of his friends, and caused his eyes to be put out, and them to be put to death. On his decease the sovereignty of Ireland devolved upon his rival, Roderick O'Connor, of Connaught, the son of its former possessor, O'Connor the Great.

Up to this time, almost the only connexion between England and Ireland was that of the commerce carried on between some of the opposite ports; scarcely any political intercourse had ever taken place between the two countries. Her church, indeed, attached Ireland to the rest of Christendom; and some correspondence is still preserved, that passed between her kings and prelates and the English archbishops Lanfranc and Anselm, relating chiefly to certain points in which

* See pp. 219, 220.

the latter conceived the ecclesiastical discipline of the neighbouring island to stand in need of reformation. One of Lanfranc's letters is addressed to O'Connor the Great, under the designation of "Tirdelvac, the Magnificent King of Hibernia." The bishops also of the Danish towns in Ireland appear to have been usually consecrated by the Archbishop of Canterbury. But almost the single well-authenticated instance of any interference by the one nation in the civil affairs of the other since the Norman Conquest, was in the rebellion of Robert de Belesme, in the beginning of the reign of Henry I., when that nobleman's brother, Arnulph de Montgomery, is said by some of the Welsh chroniclers to have passed over to Ireland, and to have there obtained from King Murtach O'Brien, both supplies for the war and the hand of his daughter for himself. It is said, indeed, that both the Conqueror and Henry I. had meditated the subjugation of Ireland; and Malmsbury affirms that the latter English king had Murtach and his successors so entirely at his devotion, that they wrote nothing but adulation of him, nor did any thing but what he ordered. But no facts are specified in support of these vague assertions. It is, at all events, certain that no actual attempt had yet been made by any of the Anglo-Norman kings to extend their dominion over Ireland.

It would appear, however, that such a project had been entertained by Henry II., from the very commencement of his reign. The same year in which he came to the throne, witnessed the elevation to the popedom of the only Englishman that ever wore the triple crown—Nicholas Breakspear, who assumed the name of Adrian IV. Very soon after his coronation, Henry sent an embassy to Rome, at the head of which was the learned John of Salisbury, ostensibly to congratulate Adrian on his accession, but really to solicit the new pope for his sanction to the scheme of the conquest of Ireland. Adrian granted a bull, in the terms or to the effect desired—declaring that inasmuch as all islands which had received the light of the gospel of Christ undoubtedly appertained of right to St. Peter and the holy Roman church, he gave full permission to the English king to make a descent upon Ireland, and charged the people of that land to receive him and submit to him as their sovereign lord. Before the end of the same year, the matter was submitted by Henry to a great council of his barons; but the undertaking was opposed by many of those present, and especially by his mother, the empress; and in consequence it was for the present given up. The pope's bull appears to have been laid aside without having been promulgated.

Henry's attention was not recalled to the subject till many years after. The course of the story now carries us back again to Ireland, and to another of the provincial kings of that country of whom we have yet said nothing, Dermond MacMurrogh, or Dermot Mac Murchad, king of Lagenia, or Leinster. This prince had early signalized himself by his sanguinary ferocity, even on a scene where all the actors were men of blood and violence. So far back as the year 1140, he had, in order to break the power of his nobility, seventeen of the chief of them seized at once, all of whom that he did not put to death he deprived of their eyes. His most noted exploit, however, was of a different character. Dervorgilla, a lady of great beauty, was the wife of Tiernan O'Ruarc, the lord of Breffny, a district in Leinster, and the old enemy of MacMurrogh. The sworn foe of her husband, however, was the object of Dervorgilla's guilty passion; and, at her own suggestion, it is said, when her husband was absent on a military expedition, the King of Leinster came and carried her off from an island in Meath, where she had been left. This happened in the year 1153, when the supreme sovereignty was in the possession of Turlogh O'Connor. To him O'Ruarc applied for the means of avenging his wrong, and received from him such effective assistance as to be enabled to recover both his wife and the property she had carried off with her. But from this time, as may well be supposed, Mac Murrogh and O'Ruarc, that had little love for each other before, were worse friends than ever. They kept up a spiteful contest, with alternating fortunes, for many years. So long as Turlogh lived O'Ruarc had a steady ally in the common sovereign, and the king of Leinster was effectually kept in check by their united power. The succeeding reign of O'Loghlin, on the other hand, was, for the whole of the ten years that it lasted, a period of triumphant revenge to MacMurrogh. But the recovery of the supremacy, on O'Loghlin's death, by the House of O'Connor, at last put an end to the long and bitter strife. A general combination was now formed against the King of Leinster; King Roderick, the lord of Breffny, and his father-in-law, the Prince of Meath, united their forces for the avowed purpose of driving him from his kingdom; they were joined by many of his own subjects, both Irish and Danish, to whom his tyranny had rendered him odious; and O'Ruarc put himself at the head of the whole. MacMurrogh made some effort to defend himself, but fortune was now against him; he could not long keep his ground against his old enemy thus formidably supported; his few remaining adherents gradually fell away from him; and at last, finding himself deserted by all, he sought safety in flight, and left his kingdom for the present to the disposal of his conquerors. They set another prince of his own family on the vacant throne. Meanwhile the deposed and fugitive king had embarked for England.

This is the account of the Irish chroniclers, who have in general taken part very strongly against MacMurrogh, and painted his character in the darkest colours. The story of the conquest of Ireland, however, has been most fully told by an English writer, Gerald Barry, commonly called Giraldus Cambrensis (that is, Gerald the Welshman), who was not only nearly related to some of the chief actors in it, but was in Ireland during a

considerable part of the time that the events he relates were passing in that country. His narrative, though he may have fallen into some mistakes, is likely to be as unprejudiced as that of any native annalist, at least in the view it gives us of some of the most remarkable of the personages that figure on the scene. Against MacMurrogh, in particular, his countrymen may be supposed to have had some prejudices from which the Welshman would be free. Of the affair of O'Ruarc's wife, Giraldus gives substantially the common version, only that he is very emphatic in pointing out that the lady was herself the principal mover in the business; she yielded herself to be carried off, he says, because she would be carried off; "for, by her own procurement and enticings, she became and would needs be a prey unto the preyer;" "such," he ungallantly adds, "is the variable and fickle nature of a woman, by whom all mischiefs in the world (for the most part) do happen and come."* He acknowledges, too, that MacMurrogh, "from his very youth and first entry into his kingdom, was a great oppressor of his gentlemen, and a cruel tyrant over his nobles, which bred unto him great hatred and malice." But the full-length picture that he draws of him in another place, though rather sombre upon the whole, is not entirely unrelieved:—"Dermond MacMurrogh was a tall man of stature, and of a large and great body,—a valiant and bold warrior in his nation; and by reason of his continual hallooing and crying, his voice was hoarse; he rather chose and desired to be feared than to be loved; a great oppressor of his nobility, but a great advancer of the poor and weak. To his own people he was rough and grievous, and hateful unto strangers; he would be against all men, and all men against him." MacMurrogh, we may add, had been a great founder of churches and religious houses, however indifferently it may be thought some other parts of his conduct would sort with such show of piety.

His purpose in setting sail for England was to seek the aid of King Henry, to enable him to recover his kingdom, in return for which he was ready to acknowledge himself the vassal of the English monarch. On landing at Bristol, some time in the summer of 1167, he found that Henry was on the continent, and thither he immediately proceeded. Henry, when he came to him in Aquitaine, was "busied," says Giraldus, "in great and weighty affairs, yet most courteously he received him and liberally rewarded him. And the king, having at large and orderly heard the causes of his exile, and of his repair unto him, he took his oath of allegiance and swore him to be his true vassal and subject, and thereupon granted and gave him his letters patent in manner and form as followeth: 'Henry, king of England, Duke of Normandy and Aquitaine, and Earl of Anjou, unto all his subjects, Englishmen, Normans, Scots, and all other nations and people being his subjects, sendeth greeting. Whensoever these our letters shall come unto you, know ye that we have received Dermond, Prince of Leinster, into our protection, grace, and favour; wherefore, whosoever within our jurisdiction will aid and help him, our trusty subject, for the recovery of his land, let him be assured of our favour and license in that behalf."

It would scarcely appear, from the tenor of these merely permissive letters, that Henry, in granting them, looked forward to the application of MacMurrogh leading to any result so important as the conquest of Ireland; the other "great and weighty affairs" in which he had been engaged, had long withdrawn his thoughts from that project; and embarrassed both by his war with the French king, and his more serious contest with Becket at home, he was at present as little as ever in a condition to resume the serious consideration of it. MacMurrogh, however, returned to England well satisfied with what he had got. "And by his daily journeying," proceeds Giraldus, "he came at length unto the noble town of Bristow (Bristol), where, because ships and boats did daily repair, and come from out of Ireland, he, very desirous to hear of the state of his people and country, did, for a time, sojourn and make his abode; and whilst he was there, he would oftentimes cause the king's letters to be openly read, and did then offer great entertainment and promised liberal wages to all such as would help or serve him; but it served not." At length, however, he chanced to meet Richard de Clare, Earl of Pembroke, surnamed Strongbow (sometimes also called Earl of Chepstow, or of Strighul, from a castle belonging to his family in the neighbourhood of that town), with whom he soon came to an agreement. Strongbow, on the promise of the hand of Dermond's eldest daughter, Eva, and the succession to the throne of Leinster, engaged to come over to Ireland with a sufficient military force to effect the deposed king's restoration in the following spring. A short time after this, Dermond having gone to the town of St. David's, to re-embark for his native country, there made another engagement with two young noblemen, Maurice Fitzgerald and Robert Fitzstephen, both sons of the Lady Nesta, a daughter of one of the Welsh princes, who, after having been mistress to Henry I., married Gerald, governor of Pembroke Castle, and Lord of Carew, and finally became mistress to Stephen de Marisco, or Maurice, constable of the castle of Cardigan: Fitzgerald was her son by her marriage, and Fitzstephen by her last-mentioned connexion. To these two half-brothers, in consideration of their coming over to him with a certain force at the same time with Strongbow, Dermond engaged to grant the town of Wexford, with two cantreds (or hundreds) of land adjoining, in fee for ever. These arrangements being completed, "Dermond," continues the historian, "being weary of his exiled life and distressed estate, and therefore the more desirous to draw homewards for the recovery of his own, and for which he had so long travelled and sought abroad, he first went to the church of St. David's to make his orisons and prayers, and then, the

* Translation by Hooker, 1587.

weather being fair and wind good, he adventured the seas about the middle of August, and having a merry passage, he shortly landed in his ungrateful country; and, with a very impatient mind, hazarded himself among and through the middle of his enemies; and coming safely to Ferns, he was very honourably received of the clergy there, who after their ability did refresh and succour him. But he for a time dissembling his princely estate, continued as a private man all that winter following among them." It would appear, however, that he was rash enough to come out of his concealment and show himself in arms in the beginning of the year 1169, before any of his promised English succours had arrived; and the result of this premature attempt was, that he was again easily reduced by King Roderick and O'Ruarc, who, however, now consented to allow him to retain ten cantreds of his former territory on condition of his holding the land as the immediate vassal of Roderick. He accepted these terms, of course, with no intention of observing them.

His allies in England meanwhile did not forget him. Robert Fitz-Stephen was the first to set out about the beginning of May, accompanied with thirty gentlemen of his own kindred, sixty men in coats-of-mail, and three hundred picked archers; they shipped themselves in three small vessels, and sailing right across from St. David's Head, landed at a creek now called the Bann, about twelve miles to the south of the city of Wexford. Along with them also came the paternal uncle of Strongbow, Hervey de Montemarisco, or Mountmaurice, "a man," according to Giraldus, "unfortunate, unarmed, and without all furniture," and intended to act rather as a commissioned agent for his nephew than as a soldier. On the day following, two more vessels arrived at the same place, bearing Maurice of Prendergast, "a lusty and a hardy man, born about Milford, in West Wales," with ten more gentlemen and sixty archers. It seems to have been immediately spread abroad that the armed foreigners were come to aid MacMurrogh. He himself was not long in hearing of their arrival, on which he instantly sent 500 men to join them under his illegitimate son Donald, and "very shortly after he himself also followed with great joy and gladness."

It was now determined, without further delay, to march upon the town of Wexford. "When they of the town," proceeds the narrative, "heard thereof, they being a fierce and unruly people, but yet much trusting to their wonted fortune, came forth about 2000 of them, and were determined to wage and give battle." On beholding the imposing armour and array of the English, however, they drew back, and, setting the suburbs on fire, took refuge within the walls of the town. For that day all the efforts of the assailants to effect an entrance were vain; as they crowded into the ditches and endeavoured to mount the walls, great pieces of timber and stones were thrown down upon them, and many of them having been wounded, they at length retired to the sea-shore, and satisfied themselves in the meantime with setting fire to such ships and boats as they found lying there. Among them, Giraldus mentions, was "one merchant-ship lately come out of England laden with wines and corn." The next morning, after the solemn celebration of masses through the whole camp, they made ready to renew the assault upon the town; but the besieged, seeing this, lost heart, and saved them further trouble by offering to surrender. Four of the chief inhabitants were given up to MacMurrogh as pledges for the fidelity of their fellow-citizens; and he, on his part, immediately performed his promise to his English friends by making over to Fitz-Stephen and Fitz-Gerald the town that had thus fallen into his hands, with the territories thereunto adjoining and appertaining. To Hervey of Mountmaurice he also gave two cantreds, lying along the sea-side between Wexford and Waterford.

This first successful exploit was followed up by an incursion into the district of Ossory, the prince of which had well earned the enmity of MacMurrogh by having some years before, on some suspicions he had formed against the young man, seized his eldest son, and put out his eyes. The Ossorians at first boldly stood their ground, and as long as they kept to their bogs and woods, the invading force, though now increased by an accession from the town of Wexford to about 3000 men, made little impression upon them; but at last, in a moment of precipitation, they were imprudent enough to allow themselves to be drawn into the open country, when Robert Fitzstephen immediately fell upon them with a body of horse, and threw down the ill-armed and unprotected multitude, or scattered them in all directions: those that were thrown to the ground the foot-soldiers straight dispatched, cutting off their heads with their battle-axes. Three hundred bleeding heads were brought and laid at the feet of MacMurrogh, "who, turning every of them, one by one, to know them, did then for joy hold up both his hands, and with a loud voice thanked God most highly. Among these there was the head of one whom especially and above all the rest he mortally hated; and he, taking up that by the hair and ears, with his teeth most horribly and cruelly bit away his nose and lips!" So nearly in some respects did an Irish king of the twelfth century resemble a modern savage chief of New Zealand. After this disaster, the people of Ossory made no further resistance; they suffered their invaders to march across the whole breadth of their country, murdering, spoiling, burning, and laying waste wherever they passed; and at last their prince sued for peace, and was glad to be allowed to swear fealty to the king of Leinster, and to acknowledge him for his lawful and true lord.

All this had taken place before anything was heard of a movement on the part of MacMurrogh's old enemies, King Roderick and O'Ruarc, whom surprise and alarm seem to have deprived at first of the power of action. But news was now brought

that the monarch was at last levying an army, and also that the princes and nobility of the land were, at his call, about to meet in a great council at the ancient royal seat of Tara, in Meath. On receiving this intelligence, MacMurrogh and his English friends, withdrawing from Ossory, took up a position of great natural strength in the midst of the hills and bogs in the neighbourhood of Ferns, and after having made it still more secure by the addition of such artificial defences as the time and circumstances permitted, there awaited what might happen. Their small force was speedily surrounded by the numerous army of King Roderick, and it would seem that, if they could not have been attacked in their inaccessible stronghold, they might have been starved into a surrender, at no great expense of patience on the part of those who had them thus imprisoned. But notwithstanding the inferiority of their numbers, Roderick appears to have been a good deal more afraid of them than they were of him: it is said that disunion had broken out in the council, which, after assembling at Tara, had adjourned to Dublin; and the Irish king had probably reason to fear that, if he could not in some way or other bring the affair to a speedy termination, he would soon be left in no condition to keep the field at all.

In this feeling he first attempted, by presents and promises, to seduce Fitzstephen; failing in that, he next tried to persuade MacMurrogh to come over and make common cause with his countrymen against the foreigners; at last, when there was reason to apprehend that the enemy, encouraged by these manifestations of timidity or conscious weakness, were about to come out and attack him, he actually sent messengers to sue for peace; on which, after some negotiation, it was agreed that Mac Murrogh should be reinstated in his kingdom, which should be secured to him and his heirs, on condition only of his consenting, like the other provincial kings, to acknowledge the general sovereignty of Roderick, and giving his son as a hostage for the performance of his engagements. Roderick also promised to give him his daughter in marriage.

It does not appear what terms MacMurrogh professed to make in his treaty for his English allies. It is affirmed, indeed, that it was agreed between him and Roderick by a secret article, that he should send them all home as soon as he had restored his kingdom to order, and in the mean time should procure no more of them to come over. But whatever was the intention with which the King of Leinster made these new engagements, he was too far involved in the consequences of those of another kind he had previously made, to have it in his power to abide by them, even if such had been his wish. His English confederates, whose valour and exertions had replaced him on his throne, would not, we may be sure, after such a service, and such assurance of their importance, be so easily shaken off as both his countrymen and he himself may have desired. This was soon proved by the arrival at Wexford of two more ships, bringing over Maurice Fitzgerald, with an additional force of ten gentlemen, thirty horsemen, and about a hundred archers and foot soldiers. On receiving this accession of strength, Mac Murrogh immediately cast his recent engagements and oaths to the winds. His first movement was to march with his new auxiliaries against the city of Dublin, which had not fully returned to its submission: he soon compelled the citizens to sue for peace, to swear fealty to him, and to give hostages. He then sent a party of his English friends to assist his son-in-law, the Prince of Limerick, whose territory had been attacked by King Roderick; and the royal forces were in consequence speedily defeated, and forced to return home.

From this time MacMurrogh and the English adventurers, encouraged by the uniform and extraordinary success that had hitherto attended them, seem to have raised their hopes to nothing short of the conquest of the whole country. The supreme sovereignty had already been enjoyed successively by the kings of Ulster, of Munster, and of Connaught; and the King of Leinster might naturally enough think that the turn of his own house was now come. To whatever extent his foreign associates may have sympathized with him in this ambition, they professed, when he opened his mind to them, to enter into his views. By their advice, he dispatched messengers to England to urge the Earl of Pembroke to come over with his force immediately. His letter, if we must suppose it to have run in the words given by Giraldus, was a somewhat highflown composition. "We have already," he wrote, "seen the storks and swallows, as also the summer birds are come, and with the westerly winds are gone again; we have long looked and wished for your coming, and albeit the winds have been at east and easterly, yet hitherto you are not come unto us; wherefore now linger no longer,"&c. All Leinster, it was added, was already completely reduced, and there could be no doubt that the earl's presence, with the force he had engaged to bring with him, would soon add the other provinces to that.

Strongbow still deemed it prudent, before he took any decided step, to inform King Henry of the proposal that had been made to him, and to ask his leave to engage in the enterprise. Henry, with his usual caution and deep policy, would only answer his request evasively; but the earl ventured to understand him in a favourable sense, and returned home with his mind made up to make the venture. As soon as the winter was over, accordingly, he sent to Ireland, as the first portion of his force, ten gentlemen and seventy archers, under the command of his relation, Raymond Fitzwilliam, surnamed, from his corpulency, Le Gros, or the Gross, an epithet which afterwards, in the disguised form of Grace, became the distinguished family name of his numerous descendants. Raymond Le Gros was the nephew of Fitzgerald and Fitzstephen, being the son of William, lord of

Carew, the elder brother of the former. He and his company landed at a rock about four miles east from the city of Waterford, then called Dundonolf, afterwards the site of the castle of Dundorogh, in the beginning of May, 1170. They had scarcely time to cast a trench and to build themselves a temporary fort of turf and twigs, when they were attacked by a body of 3000 of the citizens of Waterford; but this mob, although, at first, they made their assault with such fierceness as to compel the handful of foreigners to retire to their fort, took to flight as soon as Raymond and his men, having gained their entrenchments, turned round upon them, and were then pursued and scattered with frightful slaughter. Five hundred of them were cut down in the pursuit; and then, as Giraldus asserts, the victors being weary with killing, cast a great number of those whom they had taken prisoners headlong from the rocks into the seas and so drowned them." A still more disgraceful atrocity—because done with more deliberation, and in colder blood, as well as with additional circumstances of cruelty—followed this. In the general destruction of their prisoners they had saved seventy of the principal citizens of Waterford, for the sake of what they might receive for their ransom; and Raymond himself, on considerations of humanity, as well as of policy, strenuously advised that they should be given up; but Harvey of Mountmaurice, who with three of his comrades had joined them, opposing this counsel, his arguments were at last unanimously acquiesced in; "whereupon," says the historian, "the captives, as men condemned, were brought to the rocks, and after their limbs were broken, they were cast headlong into the seas, and so drowned."

The Earl of Pembroke did not set sail till the beginning of September. He then embarked at Milford Haven with a force of two hundred gentlemen and a thousand inferior fighting men, and on the vigil of St. Bartholomew landed in the neighbourhood of the city of Waterford, which still remained unreduced. On the following day, Raymond le Gros came with great joy to welcome him, attended by forty of his company. "And on the morrow, upon St. Bartholomew's day, being Tuesday, they displayed their banners, and in good array they marched to the walls of the city, being fully bent and determined to give the assault." The citizens, however, defended themselves with great spirit; their resolution to die rather than surrender, was, no doubt, strengthened and made sterner by the experience they had already had of the merciless character of their enemy, and the memory of the fate of their friends and relations a few months before so barbarously butchered; and the assailants were twice driven back from the walls. But Raymond, who, by the consent of all, had been appointed to the command, now "having espied," continues the narrative, "a little house of timber standing half upon posts without the walls, called his men together, and encouraged them to give a new assault at that place; and having hewed down the posts whereupon the house stood, the same fell down, together with a piece of the town wall; and then, a way being thus opened, they entered into the city, and killed the people in the streets without pity or mercy, leaving them lying in great heaps; and thus, with bloody hands, they obtained a bloody victory." MacMurrogh arrived along with Fitzgerald and Fitzstephen while the work of plunder and carnage was still proceeding; and it was in the midst of the desolation, misnamed the restoration of quiet and order, which followed the sacking of the miserable city, that, in fulfilment of his compact with Strongbow, the marriage ceremony was solemnized between his daughter Eva, whom he had brought with him, and that nobleman.

Immediately after this they again spread their banners, and set out on their march for Dublin. The inhabitants of that city, who were mostly of Danish race, had taken the precaution of stationing troops at different points along the common road from Waterford, so as to make it impassable to a hostile force; but MacMurrogh led his followers by another way among the mountains, and to the consternation of the citizens made his appearance before the walls ere they were aware that he had left Waterford. A negotiation was attempted, but, while it was still going on, Raymond and his friend Miles, or Milo, de Cogan, "more desirous," as Giraldus after his fashion expresses it, "to fight under Mars in the field than to sit in council under Jupiter, and more willing to purchase honour in the wars than gain it in peace, with a company of lusty young gentlemen suddenly ran to the walls, and giving the assault, brake in, entered the city, and obtained the victory, making no small slaughter of their enemies." These Norman knights seem to have held themselves entitled in the contest they were now waging to lay aside not only all the courtesies of civilized warfare, but even all honour and fair play; they treated the people whom they had come to rob of their country as at once a race to whom no mercy was to be shown, and with whom no faith was to be kept. Leaving Dublin in charge of Milo de Cogan, Strongbow next proceeded, on the instigation of MacMurrogh, to invade the district of Meath, anciently considered the fifth province of Ireland, and set apart as the peculiar territory of the supreme sovereign, but which King Roderick had lately made over to his friend O'Ruarc. The English chief, although he seems to have met with no resistance from the inhabitants, now laid it waste from one end to the other with fire and sword. While all this was going on, the only effort in behalf of his crown or his country that Roderick is recorded to have made, was the sending a rhetorical message to MacMurrogh, commanding him to return to his allegiance and dismiss his foreign allies, if he did not wish that the life of his son, whom he had left in pledge, should be sacrificed. To this threat MacMurrogh at once replied that he never would desist from his enterprise until he had not only subdued

ceeded in joining Rawdon, who then went in pursuit of Greene, who was encamped behind Twenty-five-mile Creek. Greene was warned of his approach, and retreated to a greater distance and to a much stronger position, where Rawdon could not attack him. About the middle of May his lordship stationed himself at Monk's Corner, considerably nearer to Charlestown than was his old post at Camden; for the garrison of the capital of South Carolina was numerically weak, more than half of the inhabitants of the neighbourhood were again taking up arms against the British, and it was necessary to cover and protect the part of the country from which alone forage and supplies could be drawn. In consequence of this retreat several small forts on the rivers were reduced by Colonel Lee, Sumter, and Marion. Extending his operations, Greene detached a considerable part of his army to lay siege to Augusta in Upper Georgia, and marched himself with the rest to reduce Ninety-six. The British in Augusta were commanded by Lieutenant-Colonel Brown, who had already stood one siege in the place, and repulsed his assailants. But this time the besiegers resorted to a mode of attack which they had tried before at Fort Watson: they constructed works sufficiently high to overlook the fort, and sufficiently near for the fire of rifles; and, placing their best riflemen on the top of them, they opened a most galling fire. Colonel Brown had none of those projectiles which might have dislodged these "dead shots" in a trice, and he seems to have been almost destitute of common artillery. The riflemen from their advantageous post took a deliberate aim and hit nearly every British soldier that showed himself in the place; and on the 5th of June Brown was obliged to capitulate. But General Greene was not so successful at Ninety-six, where the garrison under Lieutenant-Colonel Cruger made very extraordinary exertions, building block-houses in the village, making traverses, stockades, &c., fortifying the county prison, and improving a small star fort which had been erected the preceding year. Cruger's whole force consisted only of about 150 regulars and 200 Loyal Jersey volunteers; but the inhabitants of Ninety-six were decided royalists, and about 200 of them as militia joined the garrison.* On the evening of the 21st of May, General Greene encamped in a wood within cannon-shot of the village, and in the course of the night some of his people threw up two works, in a very bold but very slovenly manner, within seventy paces of the fortifications. They despised the garrison; but they had soon reason to repent. By eleven o'clock of the following morning a platform was prepared in one of the salient angles of the star fort, right opposite to the American works, three pieces of artillery were put upon it, and under cover of their steady fire, and peals of musketry from the parapet, a party of only thirty men sallied from the star, entered the American works, and bayoneted every one they found in them. This sortie was immediately followed by another party from the Loyal Militia, who demolished the works and loaded several negroes with the entrenching tools of the enemy. Greene put his whole army in motion; but the work was done so expeditiously that both detachments were back in the fortifications before any of the Americans could reach the spot. On the night of the 23rd of May, Greene's people again broke ground; but this time at the respectful distance of 400 yards, and behind a ravine. Although frequently interrupted by sharp sallies, they completed their second parallel by the 3rd of June, and, after summoning Cruger, they opened a heavy cross fire, pushed on a mine against the star, and continued to advance their batteries, one of which was raised forty feet high, so as to overlook the works of the garrison and afford a post to the rifles. On the 8th of June, Colonel Lee arrived at Greene's camp with some of the British prisoners that he had made at Augusta. These prisoners he marched in full view of the garrison, with martial music and a British standard reversed. The insult, instead of discouraging, gave fresh vigour and animosity to, the besieged. On the night of the 9th of June, they made a sortie in two strong parties, entered the American entrenchments, discovered the mouth of the mine, put a number of the Americans to the bayonet, and still more to flight, and then returned again with hardly any loss. On the 12th, Lee, in a fury, endeavoured to set fire to the abattis of the stockade on the left, by means of combustibles ingeniously prepared; but every man he sent on that duty was killed by the garrison, who had riflemen and marksmen as good as those of the besiegers. A few days after this Lee received an addition to his artillery; and on the 17th the stockade was abandoned, but without loss. The greatest sufferings of the garrison arose from want of water, which was only to be procured, in very scanty supplies, by sending out negroes in the night to a rivulet within pistol shot of the enemy. But Colonel Cruger knew the gallantry and activity of Lord Rawdon, and confidently relied on a prompt relief; and, at a critical moment, an American royalist, in open day, and under the fire of the besiegers, galloped through their pickets, reached the village, and delivered a verbal message from his lordship that he had passed Orangeburg and was in full march to raise the siege. The opportune arrival of three regiments from Ireland had enabled Rawdon to strengthen the garrison of Charlestown and his own little army; and he was coming on, with all the expedition that the intense heat of the weather would permit, with about 1800 foot and 150 horse. General Greene, who had very early notice of his movements, determined not to wait his arrival, unless he could carry Ninety-six by assault previously. Abandoning, therefore, the scheme of regular approaches, he, on the morn-

* The regulars had been raised in the northern provinces, so that nearly the whole force in Ninety-six *were native Americans*. But most of them had been under arms for four or five years, had been thoroughly trained and disciplined, and had seen a good deal of service.

ing of the 18th of June, began a heavy cannonade, and at noon sent out two parties to make a lodgment in the ditch and storm the works. But both these parties were repulsed with dreadful loss, the besieged sallying forth and bayoneting them in the ditch. After this failure Greene, who had already sent off his baggage, and who knew that Lord Rawdon must be near, abandoned the siege and retreated with great expedition towards the river Saluda. He had lost more than 150 men, besides militia, in his fruitless attempt upon Ninety-six, where the garrison had 27 killed and 58 wounded. Rawdon arrived early in the morning of the 21st of June, and, finding Greene gone, he resolved to pursue him in spite of the scorching heat, and the fatigue he had already gone through in his rapid advance to Ninety-six; and that same evening the trumpet sounded boot and saddle, and the small cavalry corps set off and was closely followed by the infantry. His lordship conducted them as far as the river Ennora, but he could not overtake any part of Greene's army. He then returned to Ninety-six and ordered the evacuation of that post, as being too remote to be supported. The American royalists of the place and neighbourhood, who had behaved with so much steadiness and bravery, were told that every possible care should be taken for removing them and their families within the new lines his lordship was seeking to establish; and to a man they agreed to follow the army as the only means of escaping from the fury of their republican brethren, who had felt the effects of their rifles in the late siege. They immediately began to collect all their moveable property; and Lord Rawdon, leaving more than half his force to give them a valid escort when they should be ready to begin their journey, marched himself with 800 foot and 60 horse towards the Congaree River. His generous attention to the unhoused and unhomed royalists was well nigh costing him very dearly; for Greene no sooner learned that his lordship was dividing his forces than he left off retreating, and hurried across the country to the Congaree. Rawdon had just arrived on that river when one of his foraging parties was surprised by Colonel Lee's legion, and about 40 of the 60 men who composed his cavalry were surrounded and captured. Rawdon then retired from the Congaree and fell back upon Orangeburg, where he expected to find a reinforcement from Charlestown. But Colonel Lee with his legion had got between the Congaree and Orangeburg, and, with the main division of Greene's army pressing on his rear, Rawdon had to fight his way and to cross a creek in face of Lee, and at broad noonday. But his lordship nevertheless reached the place of destination with very little loss, scattering Lee's legion, and making a few prisoners; and the day after his arrival he was joined by the 3rd regiment from Charlestown under the command of Colonel Stuart. But Greene, who, besides Lee's legion, had some 1200 or 1300 men with him, was joined on the Congaree by Sumter and Marion with 1000 more men; and on the 11th of July he advanced towards Orangeburg with the intention of attacking the British in that place. But the American general halted five miles short of the town, and having reconnoitred Rawdon's position, and probably having received intelligence that Colonel Cruger was advancing to join his lordship with the half of the army which had been left at Ninety-six, he decamped in the night, fell back upon the Congaree, and even recrossed that river to take up a position on the high hills of Santee, to refresh his heat-exhausted troops, and to await the arrival of fresh reinforcements. Greene, however, detached Sumter, Marion, and Lee, to threaten the lower posts of the British at Monk's Corner and Dorchester. Dorchester was abandoned before their approach; but Monk's Corner, which Lord Rawdon intended to maintain as a part of his new line of posts, was gallantly defended by Colonel Coates, and Lee was there foiled and defeated. Great discontent broke out among the men composing these flying columns, and many of Marion's and Sumter's people deserted them and returned to their homes sick and thoroughly worn out by fatigue and the still increasing heat. In that sultry climate, war, as we have seen, is suspended by summer heat, as in other climates by winter cold. It was now the middle of July, and neither army could any longer support active operations. Moreover Lord Rawdon's own health seemed seriously affected; and in this interval of inactivity he availed himself of a permission obtained some time before to embark for Europe. At his departure the command of the small army in the field fell to Colonel Stuart, who had only recently arrived in the country with the 3rd regiment, called the Buffs.* During the rest of the month of July, and the whole of the scorching month of August, nothing was done or attempted by the regular army; but there was no cessation to the fierce hostilities carried on between the inhabitants, who were waging war in its most savage forms, and really making it a war of extermination. "The whole country," said General Greene, "is one continued scene of blood and slaughter." It was in vain that that commander attempted to put a stop to these atrocities on the part of the republican party, and equally vain were Colonel Stuart's endeavours to calm the American royalists. Orders of the day and all other commands and prayers were set at defiance by men whose passions were inflamed, and whose hearts had become insensible to mercy. Colonel Grierson, of the royal militia, was shot, while a prisoner of war, by some unknown marksmen; and although a reward of a hundred guineas was offered to any person who would give information, the assassins were never discovered. When Augusta surrendered to Lee, the American legion and the militia were bent upon cutting the throats of Colonel Brown and of all the Americans with him; and

* Gordon.—Stedman.—Marshall.—View of the Campaign of 1781, in the Carolinas, by Colonel Lee.—Johnson, Life of General Greene.

these unfortunate prisoners of war were only saved by having a strong guard placed over them. Nor were they *all* saved, the capitulation being afterwards infringed by private malice and spite. At this moment the British authorities of Charlestown resolved to proceed against one Colonel Hayne, who, after subscribing a declaration of allegiance, and accepting British protection, had taken up arms as soon as there was a chance of so doing with success; had penetrated within seven miles of Charlestown, and had captured one Williamson, a colonel of loyal militia. This Hayne had been overtaken by some British cavalry, with Williamson as his prisoner and with arms in his hands, and he had been carried into Charlestown and consigned to the provost-marshal for having resumed his arms after accepting British protection. On the morning of the 26th of July he was informed by letter from the town-major "that a council of general officers would assemble next day at ten o'clock to try him." In the evening of the same day he received another letter from the same officer, acquainting him, "that, instead of a council of general officers, a court of inquiry would sit at the hour above mentioned, for the purpose of determining under what point of view he ought to be considered." In the same letter it was added, "that pen, ink, and paper would immediately be allowed him; and that any person he chose to appoint might attend him as counsel." On Sunday, the 29th, a memorandum was delivered to him by the adjutant, informing him "that, in consequence of the court of inquiry held the day before on his account, the commandant had resolved upon his execution on the Tuesday following, for having been found under arms, and employed in raising a regiment to oppose the British government, though he had become a subject, and had accepted the protection of that government after the reduction of Charlestown." Upon this Hayne represented that he had been taken by surprise; that when he appeared before the court of inquiry he imagined it was for no other purpose than to determine whether he ought to be looked on as a British subject or as an American; that he had not been able to find counsel; that he had neglected to summon any witnesses, which he might easily have done if he had known that the trial he was then upon was to be final. Upon all these grounds he demanded a new and regular trial, begging, if that could not be granted him, for a respite of the sentence of execution. But the court maintained that, having been taken in arms, he was liable to be hanged *instanter*, without any other form of trial than what was necessary to identify his person. The royal Lieutenant-governor Bull and a great number of the inhabitants of Charlestown, royalists as well as republicans, interceded in his favour; the ladies of Charlestown, generally, signed a petition; and the prisoner's children, accompanied by some near relatives, implored on their knees for their father's life; but all the mercy that could be obtained was a respite for forty-eight hours. Hayne then petitioned to be shot as a soldier, instead of being hanged; but it was determined to refuse to him a last prayer which had not been granted to the unfortunate André. On the 4th of August he was led forth to the gallows with his arms pinioned behind him. He walked to the place of execution, outside the town, with a firm step; and he is said to have died with as much manliness and composure as the gallant young English officer had done before him. As soon as General Greene received intelligence of the execution, he issued a proclamation, representing it as a cruel and unjustifiable murder, and threatening to retaliate on the persons of British officers in his power. But the republican party in the Carolinas had set the example of these executions; and the British officers at Charlestown had been impelled, by their feelings on the execution of André, and by the friends and relations of the royalists who had been hanged by dozens, to proceed in a summary way against Hayne. Lord Rawdon, whose whole character and disposition was generous, humane, and chivalrous, was held up to execration, not merely by the republicans in America, but also by the leaders of the opposition in England, for having permitted the hanging of Hayne; but his lordship, in a letter addressed to Colonel Lee, upon the publication of that American officer's book,* exonerated himself by showing that he was at the moment about to sail for Europe; that Lieutenant-colonel Balfour commanded at the time in Charlestown; and that he (Lord Rawdon) had really been desirous of saving Hayne's life.†

During the intense heats nothing took place but a few skirmishes between the cavalry who met by accident in their foraging excursions. The two armies were within sixteen miles of each other; for Lieutenant-colonel Stuart had again advanced the British to the Congaree, and had encamped them near the point where that river joins the Wateree. As the cooler season approached Greene prepared to recommence active operations; and at the beginning of September he broke up his camp on the high hills of Santee, crossed the Wateree near Camden, and marched towards Friday's Ferry. On this advance Lieutenant-colonel Stuart retired to Eutaw, about forty miles from the Congaree, to meet a convoy of provisions and some slight reinforcements that were on the road from Charlestown. Greene followed the British towards Eutaw, but by very slow marches, in order to give time to Marion, who was returning from one of his flying expeditions, to rejoin him. Marion came up on the 7th of September, when Greene was only seven miles from Stuart. It was instantly determined to risk a battle; and at four o'clock on the following morning Greene began to march with his whole force upon the British positions at Eutaw. The legion of Lee and the regular troops of South Carolina formed the advance;

* View of the Campaign in the Carolinas.

† Gordon.—Stedman.—Ann. Register.—Marshall, Life of Washington.—Marshall seems to admit that Lord Rawdon's letter was unanswerable.

the militia moved next, and were followed by the regulars which Greene had brought with him from the north and middle states; the cavalry of Colonel Washington brought up the rear, and the artillery moved between the columns. At six o'clock in the morning two deserters from Greene's army carried the news of his approach into the British camp; but, unfortunately, their report was not credited, or was not believed in time to call in a very large party, which, without arms, and with merely a small guard to cover them, had been sent in search of roots and vegetables upon the very road by which Greene was advancing. Nearly the whole of these men, who are said to have amounted at the least to a third part of Colonel Stuart's entire force, were surprised, cut to pieces, or made prisoners; and the few straggling horsemen that escaped told the British commander that the enemy was really approaching. Stuart now drew up his men across a road on the heights near the Eutaw springs, having a rivulet on his right, and a very thick hedge on his left. A small detachment of infantry was pushed somewhat forward on the road with two small pieces of artillery. Greene came on rather rapidly, having two three-pounders in his front and two six-pounders with his second line. The attack was commenced against the British advance on the road, which, after a sharp struggle, fell back upon their main body. Greene then endeavoured to turn the left of the British; and his attack in that direction was so hot that the "Buffs," who had so recently arrived from Ireland, and who were all new troops, gave way; but the remains of those veteran corps, the 63rd and 64th regiments, who had served the whole of the war, met their assailants with fixed bayonets, and did not move an inch until they were borne back by an immense superiority of numbers. In other parts of the line the American militia were beaten and driven back with considerable slaughter—for on this occasion they did not take to their heels quite so soon as usual. The British pursued the militia till they came in front of Greene's regulars, who bravely advanced to meet them with the bayonet, while Lee with his legion out-flanked the British, turned their left, and poured in a destructive fire. The British who had advanced were thus compelled to retire; and nearly the whole of their left retreated through their encampment to a large brick house, surrounded with stables, offices, and strong garden enclosures, into which Major Sheridan had previously thrown himself with the Loyal Volunteers of New York. While Greene prepared to follow in this direction, Colonel Washington with his cavalry charged the British right flank; but he was received by a murderous fire from a small but steady band; he was wounded, his horse was killed under him, and he was made a prisoner; after which his people fled, leaving the ground strewed with dead and wounded. Nearly every officer that had accompanied Washington in this attack was killed. Greene now no longer counted, as he had done at the beginning of the action, upon a sure and easy victory; but he, nevertheless, threw forward his columns in the direction of the house. They were met by incessant peals of musketry and rifles from the windows of the house and offices, and from behind the garden enclosures. Greene next ordered up his artillery to batter the house; but his guns were too light to do much execution, and, having been brought within range of the fire from the house, every man serving them, or attempting to serve them, was brought down by the good marksmen at the windows; and two of the guns were finally abandoned to the British in the midst of a heap of killed and wounded. In the mean time Colonel Stuart had again formed his broken line by uniting himself with the left; and he presently renewed the engagement at various points with great spirit. Greene made a movement as if he intended to concentrate his entire force to try one more desperate effort upon the house and the garden and the British left; but his people had suffered too much in that quarter to return to it with any alacrity; and after a few minutes of hesitation he wheeled round and retreated into some woods in his rear, leaving behind him, even according to his own reckoning, 139 killed and about 60 prisoners. It appears that the total loss of the Americans, including the missing with the wounded, exceeded 650 men. The loss of the British was stated at 85 killed, 351 wounded, and 257 missing. The missing consisted almost entirely of the unarmed party that were surprised while collecting roots and vegetables. The Americans endeavoured to show that in this affair their number did not greatly exceed that of the British; but the proportions appear to have been as two to one; and an important part of Colonel Stuart's force was lost or ruined, through the doubt of the veracity of the American deserters, before the battle properly began. Greene himself was compelled to pay a tribute to the valour of the British troops engaged. "They really fought," said he, "with courage *worthy a better cause.*" Both parties claimed the victory: Greene founded his pretensions on the retreat of the British line, and his pursuing it to the house which was a little in their rear: Colonel Stuart rested his claim upon the broad facts—that, though a temporary advantage had been obtained over a part of his line, which rendered a retreat necessary, yet the troops who had thus retreated formed again, and renewed the battle with so much spirit that the Americans were compelled to quit the field and retire to a strong position seven miles in their rear. If a battle is to be judged of by successes obtained at the beginning or middle of it, half of the great victories upon record must be turned into defeats. The Americans also made a great deal of the capture of a three-pounder; but they left in the hands of the British two six-pounders. In the course of the action the artillery on both sides was taken and retaken more than once. The British remained upon the ground the night after the action and all

the following day without any attempt being made to molest them.* The battle of Eutaw was their farewell greeting to the Americans, for no other considerable contest took place between the two armies during this war. It proved, at least, that the spirit of our troops was as high and as good as ever; and in this light only was it of any importance. Congress, however, proclaimed the affair as a great and glorious victory, and they passed a resolution for presenting to Greene a British standard and a golden medal. When Colonel Stuart retired towards Monk's Corner, Greene merely advanced to Eutaw; and when Stuart was joined by Major Mac Arthur with a detachment from Charlestown, the Americans again recrossed the Congaree and took up their old quarters on the high hills of Santee. They had suffered so much that they were in no condition to undertake more fighting; and it is said that the ravages of disease were added to the loss they had sustained at Eutaw. But as no efforts were made to sustain Colonel Stuart, as the mass of the population of both Carolinas were again up in arms, and as the surrender of Lord Cornwallis spread discouragement through all parts of the British army, Greene, about the middle of November, quitted his strong position on the hills of Santee with reinforcements, and, leaving his main body to be conducted by Colonel Williams, he proceeded at the head of his cavalry and about 200 picked infantry towards the British posts at Dorchester, contemplating a surprise. But all he could do for the present was to burn some stores. Greene then returned to a place called the Round O, where he took up quarters with his whole army to await the arrival of the reinforcements which were coming by land from the Chesapeake, under the command of General St. Clair. While at the Round O he was much disquieted by false rumours that large reinforcements from Ireland and New York were expected in Charlestown; and he addressed a letter to the republican governor of South Carolina, recommending, as a very useful or very necessary measure, *that his free army should be recruited from the negro slaves*. This proposition was laid before the republican legislature of that state; but, as no reinforcements arrived at Charlestown, it was not deemed necessary to enrol the negroes.†

Farther to the south, beyond the limits of the Carolinas and of Georgia, the Spaniards, after suffering some tremendous losses, had succeeded in destroying the British dominion in Florida. At the beginning of the year Don Bernardo Galvez arrived in the Gulf of Mexico, with a considerable squadron and a land force of 8000 men. But before he could reach Pensacola he was overtaken by a hurricane, and was obliged to run back to the Havanna. Four of his principal ships were lost in the storm, with 2000 men on board. But the chief admiral, Solano, had arrived at the Havanna, and more ships and troops were supplied to Galvez, who again put to sea. This time he arrived safely at Pensacola, the last of the British fortresses, and commenced his attack both by sea and land. General Campbell, who had a motley garrison of negroes, red Indians, foreign adventurers, and a few British regulars, gallantly defended the place during two entire months; but, on the 9th of May, after his principal powder-magazine had been blown up, he found himself under the necessity of capitulating. And thus Florida, which, next to Canada, was the principal acquisition made during the last war by the British, remained to the Spaniards—an uneasy possession which was speedily coveted, and eventually secured, by the United States. Such were the main events of the year on the American continent, whence we proceed to the islands of the West Indies.

Early in the year Admiral Rodney, with a land force commanded by General Vaughan, made an attempt to recover the island of St. Vincent, which had been taken by the French the year before. This was not attended with success; but almost immediately afterwards they captured the Dutch island of St. Eustatius, which, though small, and by nature unfertile, was a place of great wealth and commercial importance, being a free port and general depôt of West Indian and American produce, the property of different nations, neutrals as well as belligerents. The Dutch governor, who was as yet uninformed of the breaking out of hostilities between Great Britain and Holland, was unprepared and unable to offer the slightest resistance. The value of the capture was immense; the goods and merchandise of all descriptions were estimated at more than 3,000,000*l.* sterling; and about 250 vessels, many of them with rich cargoes on board, were taken in the port. Moreover, two ships of the line and a frigate, which Rodney detached in pursuit of a fleet of thirty Dutch West Indiamen that had just left the island for Europe under convoy of one ship of the line, overtook and captured every vessel of them. General Vaughan kept the Dutch colours flying at St. Eustatius, and thus decoyed into the harbour a considerable number of Dutch, French, and American vessels, traders or privateers, who were all taken without any trouble. The small neighbouring islands of St. Martin and Saba were also captured, and the Dutch settlements on the rivers of Demerara and Essequibo, in Guiana, after losing all their shipping and most of their property, submitted to the governor of Barbadoes. The conquerors exercised the right of seizure and confiscation with unusual rigour; property both private and public was sold by public auction for the benefit of the captors; and the Dutch trade and prosperity in those parts received a mortal blow. From the nature of St. Eustatius as a free port and place of deposit for so many nations, there inevitably arose many disputes and long litigations as to the proper owners of the goods and merchandise seized, of which no inconsiderable portion was

* Marshall.—American Memoirs of General Greene.—Stedman.—Gordon.

† Marshall.

said to have belonged to British merchants. In order to check Count de Grasse, whose arrival in the Chesapeake had been attended with such serious consequences, Rodney detached Hood and Drake from St. Eustatius with seventeen sail of the line; but this force, after a partial action, retreated in the night from de Grasse's twenty sail of the line; and, while the count pursued his course, the Marquis de Bouillé suddenly appeared off the island of St. Lucie, and landed some troops. In this attempt the marquis failed; but he was fully successful in an expedition against Tobago, which, though bravely and ably defended by Governor Ferguson, capitulated in the month of July.*

In another direction the Dutch suffered somewhat severely, though far less than had been anticipated by the British cabinet, who already aimed at dispossessing them of the Cape of Good Hope. Commodore Johnstone, with five ships of the line, some frigates, and smaller vessels, having on board three new regiments, under the command of General Meadows, sailed for the Cape in the month of March, and was accompanied by some outward-bound East Indiamen. On the 16th of April Johnstone was overtaken among the Cape de Verd islands by the French admiral Suffrein, who was bound for the East Indies, with a numerous convoy and a force in fighting-ships somewhat inferior to that of Johnstone. A loose and indecisive action took place; some spars and rigging were cut to pieces, but no ship was lost on either side.† The French admiral had, however, the advantage of getting first to the Cape, where he arrived on the 21st of June, and landed some French troops for the defence of Cape Town. In following him, Commodore Johnstone captured a Dutch East Indiaman of great value, having on board stores and provisions for their settlements at Ceylon, and about 40,000*l.* sterling in money. From this prize Johnstone learnt that Suffrein had arrived at the Cape; that Cape Town was put in a defensive state; but that several Dutch East India ships were lying in Saldanha Bay, with rich cargoes on board, and with nothing to protect them except their own guns. Hereupon it was resolved to give up the attempt upon Cape Town, and to make direct for Saldanha Bay. On the 21st of July the British squadron got sight of the Dutch ships lying quietly at anchor; but the Dutchmen instantly cut their cables, ran ashore, set fire to, and then abandoned their vessels. Lured by the rich prize, the British seamen manned their boats, boarded the burning ships, and extinguished the fire in four of them: but in the fifth the flames were too far advanced to be subdued or checked, and as they reached the powder-magazine that ship blew up. The others were secured with their rich cargoes undamaged; and with these prizes Johnstone returned towards England, leaving a part of his squadron to continue to convoy the British East Indiamen to the place of their destination. Captain Christie, who remained with this latter force, captured a fine French frigate; but Suffrein, after strengthening the Dutch at Cape Town, had been allowed to sail away for Pondicherry without molestation, while Johnstone had been busying himself with his Dutch prizes in Saldanha Bay. The active French admiral, however, could not prevent the triumph of British arms, or serious losses both to French and Dutch, on the coast of Coromandel and the island of Sumatra. In the course of the autumn of this year Negapatnam, Pedang, and other places, chiefly Dutch, surrendered to the British.*

In Europe the Spaniards not only continued—at times with a glimmering of success—their siege of Gibraltar, but also undertook the reduction of the island of Minorca. This island had recently been offered as a bait to the Empress of Russia, to secure her friendship to Great Britain, and induce her to become mediatrix for a peace on the basis of the last treaty of Paris, or Fontainebleau. Spain, France, Holland, England, were all to restore whatever conquests they had made during the war, or were to satisfy each other by exchanges of territory, &c.; the French were to withdraw all assistance from the Americans, who were not to be permitted to treat with Great Britain through the medium of any foreign power; the Spaniards, who had not yet concluded any treaty with the Americans, and who were already greatly alarmed by symptoms of disaffection and insurrection in their own colonies in America, were quite ready to leave the United States to themselves, and were not to be troubled by any express stipulations on this account; Russia was to unite her fleet to those of England, and British ships of war or merchant vessels were to continue to be received in the harbours of Minorca, as if that island were still a possession of the British crown. The lure was sufficiently fascinating in the eyes of Catherine; the Russian court had long and most anxiously wished for a good port and settlement in the Mediterranean, which would tend to protect their commerce and their growing navy, and to facilitate their designs, through Greece, upon the Ottoman empire. Potemkin, the minister and lover of the czarina, who is said to have been the original author of the scheme, was bent heart and soul upon the acquisition, and was the more impatient for the conclusion of the bargain, as the British negotiators had promised that the compensation money to be allowed by Russia for the stores and artillery at Port Mahon and other forts in Minorca, valued at 2,000,000*l.* sterling, should be put into his pocket. Catherine, however, was led to believe that the British government exacted terms

* Ann. Regist.—Schomberg, Nav. Chron.—General Mundy, Life of Lord Rodney.

† The 'Hinchinbroke,' East Indiaman, was boarded and carried out to sea, but she was retaken next day by the British. The 'Infernal' fireship was taken after the battle, but was also recaptured; not, however, until the French had removed her captain and most of her crew. Some of the East Indiamen fought gallantly in the action. Captain Evelyn Sutton, of his majesty's ship 'Isis,' was brought to a court-martial for his conduct, by Commodore Johnstone, but was honourably acquitted.

* Ann. Regist.—Schomberg.

THE BAY AND STRAITS OF GIBRALTAR.

too high, or that the fortunes of the nation had fallen so low that it must be ruined or dismembered,—that more was to be gotten in the great scramble for the division of the spoils of the British empire than from any bargain or close alliance with it; and the fantastical head of her lover was turned by offers and brilliant prospects, artfully presented by Frederick of Prussia and the French court; he was induced to hope for possession, in sovereignty, of the duchy of Courland, nay even for the crown of Poland, which, dishonoured as it was, and though nothing but a crown of thorns, captivated his imagination, and made him regard with contempt the magnificent bonus of 2,000,000*l.* sterling.* It is just possible that Potemkin fancied that that compensation money would never be paid by his mistress. This secret negotiation, however, was detected by Florida Blanca, and became a pressing motive for an immediate attack on Minorca. The court of Versailles, though not with very good will, consented to co-operate, and the Duke of Crillon, a Frenchman, was appointed to the chief command of the expedition, which was prepared with great skill and caution, in order to take the British garrison by surprise. Instead of the usual and near points of embarkation on the coasts of Catalonia and Murcia, the preparations were made far off; not in the Mediterranean at all, but beyond the Straits, at Cadiz, as if intended against the British Islands in the West Indies, or as a reinforcement to the besiegers of Gibraltar. At the same time secret agents were employed throughout the island of Minorca to gain over the principal inhabitants, who, as devout Catholics, had no great affection for the English, and who, from the force of habit and old connexions, both family and politic, were desirous of returning to their former masters, the Spaniards. On the 22nd of July the grand united fleets of France and Spain sailed out of Cadiz Bay, and, while the mass of this great force stretched out into the ocean as if with the intention of making a descent upon England, two ships of the line, several frigates, and a swarm of transports with 8000 land troops on board, and with stores and ordnance, hurried through the Straits and appeared unexpectedly on the coast of Minorca. Florida Blanca afterwards said, with no vain boast, that nothing but the delay occasioned by summer calms and baffling winds prevented the surprise of Port Mahon itself. On the 19th of August the troops, favoured and openly assisted by the islanders and unopposed by the British, effected their landing, occupied all the posts round Port Mahon, and compelled General Murray, with his weak garrison of two British and two Hanoverian regiments, to retire into Fort St. Philip, the principal defence of Minorca. The Duke of Crillon, in pursuance of instructions from the court of Madrid, impudently offered General Murray a bribe of 100,000*l.* sterling, and rank and employment in the French or Spanish service, if he would surrender the fort and save him the loss, labour, and delay of a siege or blockade. The high-minded Scotsman indignantly replied—"When your brave ancestor was desired by his sovereign to assassinate the Duke of Guise, he returned the answer which you should have done when the King of Spain charged you to assassinate

* Archdeacon Coxe, Memoirs of Spanish Kings of House of Bourbon.

the character of a man whose birth is as illustrious as your own or that of the Duke of Guise. I can have no other communication with you but in arms. If you have any humanity, pray send clothing to your unfortunate prisoners in my possession; leave it at a distance, to be taken up for them; because I will admit of no contact for the future, but such as is hostile in the most inveterate degree." The French duke, though young, volatile, thoughtless, and dissipated, after the fashion of the ancient régime, was a man of honour, and capable of appreciating that quality in others: to Murray's noble reproof he replied like a soldier—"Your letter places us each in our proper stations. It confirms me in the esteem I have always had for you. I accept, with pleasure, your last proposition." Crillon soon found that his men and materials were insufficient for the reduction of Fort St. Philip; but in the course of the autumn he was reinforced by 4000 French troops dispatched from Toulon with good artillery and engineer officers, more ordnance, and other requisites for the siege. Yet, notwithstanding this great accession to the strength of the besiegers, and notwithstanding the breaking out of diseases, which thinned the originally weak ranks of the besieged, General Murray held out most manfully, and the year ended without seeing the Spanish flag hoisted on Fort St. Philip.*

In the mean while the grand combined fleets which had come out of Cadiz Bay, and which consisted of thirty Spanish ships of the line, commanded by Cordova and Gaston, and nineteen French ships of the line, commanded by de Guichen, de Beausset, and de la Motte Piquet, accompanied by a number of frigates and smaller vessels both French and Spanish, had continued their course to the English coast, and occupied the mouth of the Channel. Admiral Darby had sailed from Spithead on a cruise to the westward with the Channel fleet about a month before the arrival of the French and Spaniards; but on the 26th of August he returned, and got safely into Torbay, while the enemy were chiefly engaged in picking up prizes and capturing a number of the English ships that were bringing home part of the money and property seized at St. Eustatius. Darby had only twenty-three sail of the line, twelve frigates, and six fireships, yet the French and Spaniards would not venture to attack him in the bay. De la Motte Piquet, with six sail of the line, returned to Brest with the prizes which had been made in the Channel, and sickness and dissension again broke out in the rest of the ships of the combined fleets; and they all returned to port in a short time without performing any deed worthy of notice. But there had been harder fighting between the English and the Dutch, who had never met at sea without a stern contest. On Sunday, the 5th of August, Rear-Admiral Sir Hyde Parker, returning from the Baltic with a convoy of merchant vessels, fell in with Admiral Zouttman, with a convoy of Dutch traders, off the Dogger Bank. This action, though upon a small scale, was conducted and fought in such a manner as to recall afresh to the memory those dreadful sea-fights between England and Holland which had been witnessed in the last century.* The British fleet having the advantage of the weather-gage, Sir Hyde Parker made the signal for the merchant ships to keep their wind, and with the men-of-war, six ships of the line, five frigates, and a cutter, bore down on the enemy, who had eight two-decked ships and four frigates, and who had formed in line of battle with the frigates intermixed in their line.† An awful silence prevailed; and not a single gun was fired on either side until within half-musket shot. The 'Fortitude,' Sir Hyde Parker's ship, being then abreast of the 'de Ruyter,' Admiral Zouttman's ship, the action began with a deadly steadiness, which was never relaxed during three hours and forty minutes. At the end of that time the two fleets fell asunder in a most shattered condition, and lay to for a considerable time in order to refit. They were close to each other, and Parker expected a renewal of the action; but, as soon as his ships were made manageable, Zouttman wore round and with all the sail he could carry bore away for the Texel. Parker could not pursue him with any hope of success; but the next day his frigates discovered the 'Hollandia,' a 68-gun ship, which had been ruined in the battle, sunk in twenty-two fathoms water, with her top-gallant masts above the surface, and her pendant still flying; and the rest of the fleet were with difficulty kept above water till they reached the near port. In this dreadful action the English had 111 killed, and 318 wounded; the Dutch 116 killed, and 382 wounded; and it is said that most of the crew of the 'Hollandia' sunk with her when she went down. On each side many officers were wounded, and Captain Macartney, of the 'Princess Amelia,' and Count Bentinck, who bravely fought the 'Batavia,' were killed. "All my officers and men," said Zouttman, "fought like lions." Sir Hyde Parker, in a brief note, desired the captains of his majesty's ships who were in the line on the 5th of August, to accept for themselves, and communicate to the officers and seamen of the ships they commanded, his thanks and perfect approbation of their good conduct and bravery shown on that day. On his arrival at the Nore he was visited by the king and the Prince of Wales, and every captain that had been in the action was presented to his majesty on board the 'Fortitude.' Sir Hyde, however, resigned the command of the fleet in the North Sea; and his son, Sir Peter Parker, whom we have seen

* Coxe.—Florida Blanca's Representation, as quoted by Coxe.—Ann. Regist.—Gentleman's Mag.

* Schomberg.—Nav. Chron.

† Counting all the guns on both sides, the English had 616, the Dutch 576; but, as there was not a man killed or wounded on board of any of them, it appears that the English frigates did not go into action. This would make a deduction of 170 guns from the English force. But then, as the four Dutch frigates had no killed or wounded, we must, on the same supposition, deduct their guns (140 in all) from Zouttman's force. This would leave to the English 446, and to the Dutch 436 guns.

serving in America, was appointed to the command of a squadron of frigates to block up the Dutch ports.*

Several inconsiderable actions took place with various success between our cruisers and privateers and the cruisers and privateers of Holland, France, and Spain; and a very large amount of property changed hands on the high seas. On the 14th of August the 'Cameleon' sloop-of-war of fourteen guns engaged a large Dutch lugger, mounting eighteen guns and some swivels. After a close and desperate action for about half an hour the Dutchman blew up, so close to the English sloop, and with so terrible a shock, that the people on board the 'Cameleon' were thrown off their legs; and when the smoke cleared away her topsails were observed to be on fire, and many of the limbs and mangled bodies of the Dutch were seen upon her deck or sticking in her rigging. As soon as Captain Drury had cut away his topsails from their yards to save his own ship and people from the same horrid fate, he put out his boats in search of any of the unfortunate crew that might have escaped destruction; but not a soul was found alive either upon the fragments of the wreck or in the water.† On the 14th of October Admiral Darby, whose fleet had been reinforced to twenty-three sail of the line, besides frigates, sailed from Torbay to cruise for the protection of the homeward-bound convoys; and towards the end of November Rear-Admiral Kempenfelt, with thirteen sail of the line and four frigates, left the coast in the hope of intercepting the French and East India trade, sailing from Brest under the escort of the Count de Guichen. On the 12th of December, at day-break, about thirty-five leagues to the westward of Ushant, he discovered the vast fleet much dispersed, their ships of war being at a considerable distance to leeward of the convoy. He instantly profited of their situation, and before evening he captured about twenty sail of large transports and merchant vessels. As it became dark and squally, he discontinued his easy operations of capture, collected all his ships, and lay to till the morning. But that morning's light showed a force greatly superior to his own, de Guichen having in line of battle to leeward nineteen ships of the line of a size superior to his, and two large ships armed *en flute*; and therefore Kempenfelt thought it prudent to avoid an action, and content himself with the prizes he had made. The ships he had taken contained provisions, naval and military stores, and a body of land troops and seamen, that must have given the French a decided superiority in the East and West Indies, if they had been allowed to complete their voyage. A few days afterwards five more of this French convoy were captured.‡ The story of two of our frigates was so remarkable as to demand a brief notice. The 'Flora,' commanded by Captain Williams, and the 'Crescent,' commanded by the Honourable Thomas Pakenham, were on their way from Port Mahon to Gibraltar in the month of May, and, after escaping the pursuit of a Spanish squadron of eight ships when off the coast of Barbary, nearly opposite to Gibraltar, they fell in with two Dutch frigates and brought them to action. After fighting at the closest quarters for more than two hours, the 'Castor' frigate of Rotterdam, with her decks strewed with killed and wounded, struck her colours to the 'Flora.' But nearly at the same minute the other Dutch frigate the 'Brille,' by some lucky shots, carried away the main and mizen masts of her opponent the 'Crescent,' and the whole of the wreck falling within board rendered all the guns useless, and the ship unmanageable. In this situation Captain Pakenham struck to the 'Brille,' as the 'Castor' had struck to the 'Flora.' But in another minute or two Captain Williams in the last-named frigate came down upon the 'Brille,' before she could take possession, and compelled her to sheer off. The 'Brille' escaped, but the 'Castor' remained a prize. The 'Crescent' and 'Castor' had both suffered so much in the action that it was with great difficulty they could be kept afloat, and it was five days before they could pass the Straits of Gibraltar and shape their course homeward. On the 19th of June, as the crippled ships were slowly labouring through the water, two large frigates, tempted by their crippled appearance and their quaking jury-masts, bore down upon them. To fight was impossible, and to fly seemed hopeless: the three frigates separated, each pursuing a different course; Captain Williams in the 'Flora' escaped, but the Dutch frigate, his prize, and the 'Crescent' were both taken. Captain Pakenham was afterwards tried by a court-martial, for having struck his colours to the 'Brille;' but he was honourably acquitted, with expressions of admiration of the skill, conduct, and bravery he had displayed.*

Having failed in their overtures of negotiation with Spain, Lord North's cabinet endeavoured to purchase the friendship of the Emperor Joseph II., by offering to open to him the navigation of the Scheldt, and to secure to him other advantages, commercial and political. But Joseph, who had paid another visit to Paris, conceived different notions as to the strength of France, or the weakness of England; he consented to enter into several views and projects of the French cabinet, and, forgetting his former answer to those who urged him to acknowledge the independence of the United States—"I am a royalist by profession,"—he began to testify a desire for the triumph of the Americans, and, after some subterfuges and affected concealments, he openly declared his accession to the Armed Neutrality. After this no reliance could be placed on his mediation, which he continued to offer even while binding himself to the most active enemies of Great Britain. Thus

* Schomberg.—Ann. Regist.

negotiation and war seemed equally hopeless, and the ministry falling to pieces, when parliament re-assembled on the 27th of November.* The speech from the throne, however, was in the same determined language as at the close of the last session. The continuance of the war was ascribed to that restless ambition which first excited our enemies to commence it; and his majesty was made to declare that he should not answer the trust committed to the sovereign of a free people, nor make a suitable return to his subjects for their constant, zealous, and affectionate attachment to his person, family, and government, if he consented to sacrifice, even to his own desire of peace, or to their temporary ease and relief, those essential rights and permanent privileges upon the preservation of which the strength and security of the country depended. He spoke of the favourable appearance of our affairs in the East Indies and of the safe arrival of the numerous commercial fleets of his kingdoms; but he added, that in the course of the year his assiduous endeavours to guard the extensive dominions of his crown had not been invariably attended with success; that the events of war had been very unfortunate in Virginia, having ended in the loss of his forces in that province. Nevertheless, the speech called for further exertion in that quarter, and it ended, as usual, with expressions of confidence in the protection of divine providence. The opposition vehemently opposed the address; and Mr. Fox expressed his horror and astonishment at the audacity of ministers in attempting to prolong a war which they had all along grossly mismanaged. "He would not say that he believed they were paid by France; it was not possible for him to prove the fact; but he would venture to say that they deserved to be paid by the Grand Monarque, for they had served him more faithfully, and more successfully, than ever ministers served a master." He blamed them all and every one, but Lord Sandwich, as first lord of the Admiralty, most of all. He ascribed to the negligence and incapacity of that minister, and to the weak insufficient state of the navy, the loss of the brave army under Lord Cornwallis. He declared that in every quarter of the globe the inferiority of the British fleet had been made manifest; that there was no hope of better things until the whole cabinet was changed: and he moved, as an amendment, a clause binding the House to apply themselves with united hearts to propose and adjust such counsels as might in this crisis excite the efforts, point the arms, and, by a total change of system, command the confidence of all his majesty's subjects. Lord North, in replying to Fox, expressed great indignation at the insinuation that ministers were in the pay of France. He said that there was no man in the kingdom, whether in the House or out of it, that believed an absurdity so monstrous. He urged that the American war was prosecuted not to aggrandize the crown, not to make the subjects slaves, but to preserve entire our empire and our venerable constitution; and he again told the House that the American quarrel had been begun, not by the king, but by the parliament,—not under the present ministry, but under the administration of his adversaries. "A melancholy disaster," said he "has, indeed, occurred in Virginia, but are we, therefore, to lie down and die? No, it ought rather to impel, to urge, to animate; for by bold and united exertions everything may be saved; by dejection and despair everything must be lost." The war, he said, had been unfortunate, but was not unjust; it was founded in right and dictated by necessity: such had always been his conviction, and, if the share he had taken in maintaining our empire and constitution should lead him to the scaffold, his opinion would still be the same. Burke replied to his lordship with a studied but tremendous philippic. He called his speech not only imprudent, but audacious—a speech which froze his blood and harrowed up his soul. He said that the war was not to be called unfortunate, but disgraceful; and that the king's speech was the greatest calamity of all, as it showed the disposition of ministers not to retreat an inch, but to plunge deeper in disgrace, and augment the unhappiness of the nation. "Good God!" he exclaimed, "are we yet to be told of the rights for which we went to war? Oh, excellent rights! Oh, valuable rights! Valuable you should be, for we have paid dear at parting with you. Oh, valuable rights! that have cost Britain thirteen provinces, four islands, 100,000 men, and more than 70,000,000 of money! Oh, wonderful rights! that have lost to Great Britain her empire on the ocean, her boasted, grand, and substantial superiority, which made the world bend before her! Oh, inestimable rights! that have taken from us our rank among nations, our importance abroad, and our happiness at home; that have taken from us our trade, our manufactures, and our commerce; that

* The official intelligence of Lord Cornwallis's surrender had reached the cabinet on Sunday, the 25th, at noon. It is said that Lord North's firmness gave way for a short time under the awful disaster. "I asked Lord George Germaine afterwards," says his friend Wraxall, "how he took the communication?" "As he would have taken a cannon-ball in his breast," replied Lord George; "for he opened his arms, exclaiming wildly as he paced up and down the apartment during a few minutes, 'Oh! God, it is all over!'—words which he repeated many times, under emotions of the deepest consternation and distress." Lord George Germaine, as secretary for the American department, sent off a dispatch to the king, who was then at Kew. In reply to the dismal intelligence, his majesty wrote in his usual calm, sedate manner; but Lord George remarked one little circumstance which seemed to betray unusual emotion:—he had omitted to mark the hour and the minute of his writing, which he was always accustomed to do with scrupulous precision. "The billet," says Wraxall, who was dining with Lord George when it came to hand, "ran nearly to this effect:—'I have received, with sentiments of the deepest concern, the communication which Lord George Germaine has made me, of the unfortunate result of the operations in Virginia. I particularly lament it, on account of the consequences connected with it, and the difficulties which it may produce in carrying on the public business, or in repairing such a misfortune. But I trust that neither Lord George Germaine nor any member of the cabinet will suppose that it makes the smallest alteration in those principles of my conduct which have directed me in past time, and which will always continue to animate me, under every event, in the prosecution of the present contest.' Not a sentiment of despondency or of despair was to be found in the letter; the very handwriting of which indicated composure of mind. Whatever opinion we may entertain relative to the practicability of reducing America to obedience by force of arms at the end of 1781, we must admit, that no sovereign could manifest more calmness, dignity, or self command, than George III. displayed in this reply."—*Sir N. W. Wraxall, Historical Memoirs of his Own Time.*

have reduced us from the most flourishing empire in the world, to be one of the most compact, unenviable powers on the face of the globe! Oh, wonderful rights! that are likely to take from us all that yet remains!" *Mr. Fox's amendment was nevertheless rejected by 218 against 129; and a similar motion made in the House of Lords by the Earl of Shelburne was rejected by 75 against 31. On the following day, when the address was reported, there was another and equally warm debate in the Commons, in the course of which Mr. William Pitt delivered a very remarkable speech, which drew down great applause from both sides of the House. Pitt protested against the House pledging itself by the address to persevere in this ruinous American war, and he asked how ministers, who had no confidence in one another, could expect the confidence of parliament. "I am convinced," said the young orator, "I am satisfied in my soul, that were I to go from one end of the Treasury bench to the other, and ask every man there if he could trust his neighbour, they would all answer in the negative." And, indeed, something very like this was actually the case in the ministerial camp; and symptoms of distrust of one another, and of wide disagreement, were plainly shown in these very debates, while the town was filled with stories of their quarrels and mutual accusations. Pitt denied that the war was either just or necessary: he spoke with horror of Lord Cornwallis's capitulation, by which he said all the American royalists were left to destruction at the hands of their enraged countrymen; and he hoped that ministers would be overtaken, if they persevered in their present course, by a fate equally severe. Burke followed Pitt in these denunciations, and said that a prince of the blood, who was then serving in the navy on the American station,† could not sail along those coasts without beholding the faithful adherents of his father hanging in quarters or gibbeted on every headland. He declared that the blood of all the Americans who were sacrificed by the capitulation at York Town rested on the head of Lord Cornwallis and the ministry, and he called the address the most hypocritical, infamous, lying paper ever presented to that House! Apparently no one was there to prove that Lord Cornwallis had shown the most tender attention to the royalists with him, and had provided for the safety of all those that were most obnoxious to the ruling powers in America, by securing their passage in the unsearched sloop of war. The headlands of America were decorated with gibbets long before his lordship set his foot in Virginia; and from the beginning of the contest no mercy had been shown to the royalists. One member, however, indignantly resented the aspersions cast upon Lord Cornwallis, and the comparison drawn by Burke between the capitulation at York Town and the surrender at Saratoga. Cornwallis, he said, had fallen not ignobly, by the united arms of France and America, and his chains were wreathed with laurels—he was an honour to his profession, and entitled to the highest dignities that could be conferred upon him by a discerning sovereign. Upon a division the report was received by 131 against 54. A few days after—on the 4th of December—Burke, who, in the latter part of the preceding session, had moved for an inquiry into the conduct of the captors of the island of St. Eustatius, moved for a committee of the whole House "to inquire into the confiscation of the effects, wares, and merchandize belonging to his majesty's new subjects of St. Eustatius, and further to inquire into the sale and distribution of a great part of the said effects to the islands belonging to France, and to other parts of the dominions of his majesty's enemies." He maintained that, by means of the effects and stores which had been sold at St. Eustatius, the French and Americans had been supplied with what they could not otherwise have obtained; and that, while Admiral Rodney and General Vaughan were loitering at St. Eustatius attending auction sales and looking after their own interests as captors, the French had been allowed to reinforce their fleet and take the island of Tobago. Rodney and Vaughan were both in the House, and they both spoke in their own defence. The admiral drew a curious, and we believe a perfectly true, picture of the residents who called themselves Englishmen, but who had been in the constant habit of supplying the enemies of England with warlike stores. He said that these men, chiefly Jews of the worst kind, were unworthy of favour, and that therefore he had determined to show them none. He affirmed that he had taken every care to see the stores found at St. Eustatius safely conveyed to his majesty's store-houses at Antigua; and that he had, in circumstances when his attention was distracted by many hostile movements in different directions, made the best possible use of the inferior fleet at his disposal. Burke's motion was negatived by 163 against 89. On the 5th of December Lord Lisburne having moved that 100,000 seamen should be granted for the service of the ensuing year, Mr. Hussey, a member of opposition, offered an amendment substituting 110,000. This brought on a long and stormy debate on the state of the navy; in the course of which ministers confessed that, owing to the great losses we had sustained, the ships of the line now in commission were fewer by six than they were at the beginning of the year; adding, however, that they expected fourteen sail at the least to be ready early in the ensuing year. The opposition taunted them with delay and neglect, and said that, as the want of money was the only plea they could allege in excuse for not having more ships ready, so now, if they refused the additional supply offered, they must be suspected of some dark and sinister design. The amendment was rejected by 143 against 77. On the 30th of November, in the debate on the army estimates, the opposition had adopted the bold measure, not resorted to since the revolution of 1688, of moving that no supplies whatsoever should

* It was in this speech that Burke called the attempt to tax America an attempt to shear the wolf!

† Prince William, Duke of Clarence.

be granted until the ministry had given the people some proof of their repentance and amendment—which meant, some pledge that the American war should go no farther. In this extreme measure they had been defeated by a majority of considerably more than two to one. But, on the 12th of December, Sir James Lowther, in an uncommonly crowded house, moved two resolutions:—"1. To declare, that the war carried on in the colonies and plantations of North America had been ineffectual to the purposes for which it had been undertaken, of affording protection to his majesty's loyal subjects there, and of defeating the hostile intentions of our confederated enemies; 2. That it was the opinion of the House, that all farther attempts to reduce the Americans to obedience by force would be ineffectual and injurious to the true interests of this country, by weakening her powers to resist her ancient and confederated enemies." The motion was seconded by Mr. Powys in a long and eloquent speech. Some twenty or thirty ministerial members spoke or voted with the opposition on this occasion. Dundas, the Lord Advocate of Scotland, who sniffed a change in the wind, and who had already a foresight of the greatness and preponderance of William Pitt, called upon Lord North to state in his place the difference of opinion which was presumed to exist in the cabinet; and even the old retainer Rigby, that servant of all work to the ministry, pursued the same course as Dundas. Lord North, avoiding any direct answer to these demands, declared that it would neither be wise nor right to *prosecute the war in America on a continental plan; that is by sending fresh armies to march through the colonies.* Hence it appears that light had at length broke in upon the royal mind, and that George III. had become sensible of the value of the advice which had been offered by Lord Barrington, and rejected by his majesty seven years before.* Lord North, however, urged that the posts we held in America must be defended—that the British trade must be protected against American privateers—that to adopt Sir James Lowther's resolutions would be to advertise all our enemies of our weakness, and to encourage the Americans beyond measure; and his lordship moved the order of the day, to get rid of the motion altogether. Then, according to a member present, wearied out and attacked no less by his friends than by his foes, the first minister quitted the treasury bench, and withdrew to one of the seats behind it, leaving Lord George Germaine alone, exposed to the attacks of the opposition.† Lord George, who, next to the king, had been the main manager of the war with the colonies, declared that if the House adopted a motion which went to give up our sovereignty in America, he would instantly retire from office, as he could not but consider the independence of America as another word for the ruin of Great Britain. Nor was this opinion confined to the stanch Tories and personal friends of the king; even now it was held by nearly the whole of the Shelburne section of the Whig opposition, and Dunning, one of the leaders of the Shelburne party, though approving of Sir James Lowther's motion, declared it to be his opinion that the man who should dare propose the recognition of American independence would be guilty of a crime little short of high treason!* Nor did even the Rockingham party consider that recognition otherwise than as a terrible though unavoidable calamity—a sure beginning of the end of the might, wealth, and glory of their country! At a very late hour Lord North's motion for the order of the day was carried, but by a majority of only 41; the numbers being 220 to 179.†

On the 14th of December Mr. Pitt again reviewed the whole of the American war, and again directed attention to the disagreements among ministers. He said that they were only agreed in one thing, and that was to destroy the empire. No invective could be more bitter; but unlike Fox, and unlike his own eloquent father, Pitt, in attacking ministers, always spared the king. On the present occasion he put up a prayer to God that the punishment of ministers might not be so long delayed as to involve a great and innocent family, who, though they could have had no share in the guilt, might, and most probably would, suffer the consequences. This debate was intended to delay the supplies; but the opposition only counted 84 against 166.

Early in the session Burke called the attention of the House to the case of the American envoy Laurens, who was still in the Tower, and reprehended ministers for their harsh treatment of that "distinguished person." Ministers denied that Laurens had been treated with any undue severity, and Burke proposed that the lieutenant of the Tower should be examined on the subject at the bar of the House. This being refused, Burke drew a very poetical picture of the duresse of the ex-president, and read a correspondence which had passed between himself and Dr. Franklin on the subject of Laurens's imprisonment. Lord George Germaine read a letter from Laurens himself, in which he thanked ministers for the indulgences he received in the Tower.* On the 20th of December Burke presented a petition to the House from the prisoner, written by him with a black lead pencil on the blank leaf of a book, as Laurens had thought proper to refuse the indulgence offered to him of the use of pen and ink, from which he had been debarred at his first commitment. Three days before, Burke had given notice of his intention to move, soon after the Christmas recess, for leave to bring in a bill to regulate the mode of exchanging prisoners with America, and in so doing he spoke as if the British authorities alone were blameable for the impediments raised to such arrangements. But

* Ann. Regist.

† Id.—It is said by Wraxall, that after this debate Lord George Germaine advised Lord North to open negotiations with Lord Shelburne for a coalition with that party, who were not objectionable to the king, inasmuch as they still so strenuously opposed American independence; and to give him (Lord George) his dismissal: and also that Lord George retired for two or three weeks to his seat in Northamptonshire to allow North time to select a successor to the American department.

the business ended here, as government liberated Laurens upon bail, and soon afterwards exchanged him for General Burgoyne, who, though at large in England, and constantly debating in the House on the side of the opposition, was still held as a prisoner upon parole. An attempt was made in the Commons to postpone the prorogation, and the opposition reminded the House that four years before an adjournment of six weeks had cost the nation thirteen provinces, and that during this recess they might lose all the West India islands. After a warm debate, in which Lord Sandwich was severely attacked for having sent Admiral Kempenfelt to sea with a fleet insufficient to cope with de Guichen, ministers agreed to take ten days from the recess, and to meet on the 21st instead of the 31st of January; and the House adjourned on the 20th of December.

A.D. 1782.—During the recess bad news came flowing in from all quarters, and soon after the reassembling of parliament intelligence was received of the entire loss of Minorca. After cutting off all supplies from Fort St. Philip, the French and Spanish commanders, impatient at the long resistance made by General Murray, began to assail the works with numerous batteries. Several spirited sorties were attempted by the garrison, and one of them was so successful that Crillon's head-quarters were penetrated, and for a short time kept by the British. But their numbers were insufficient, and, for want of vegetables, that dreadful disease the scurvy added its horrors to those of dysentery and putrid fevers, until the garrison was reduced so greatly that it could no longer furnish the ordinary guards. On the dawn of the 6th of January, the birthday of the Dauphin (the unfortunate child of a hapless father), the Duke of Crillon had opened a tremendous fire on the works from 150 pieces of heavy artillery. Yet General Murray held out till the 5th of February, when he capitulated upon honourable terms. "Perhaps," said that brave commander, in a letter written a few days after, "a more noble or a more tragical scene was never exhibited, than that of the march of the garrison of St. Philip's through the Spanish and French armies. It consisted of no more than 600 old decrepit soldiers, 200 seamen, 125 of the royal artillery, 20 Corsicans, and 25 Greeks, Turks, Moors, Jews, &c. The two armies were drawn up in two lines, the battalions fronting each other, forming a way for us to march through; they consisted of 14,000 men, and reached from the glacis to George Town, where our battalions laid down their arms, declaring they had surrendered them to God alone, having the consolation to know the victors could not plume themselves in taking an hospital. Such were the distressing features of our men, that many of the Spanish and French troops shed tears as they passed them." Crillon behaved with great honour and humanity; both the French and Spanish surgeons attended the diseased; and every possible comfort was afforded to all classes of the prisoners, who, but for the scurvy and the fever, might have held out for another term of six months.*

To this discouraging circumstance were added rumours of the greatly increased danger of Gibraltar, and certain intelligence that St. Eustatius, the island which had caused so much commotion in the House of Commons, had been taken from the English, not by its old masters the Dutch, but by the French. Moreover every letter from the West Indies spoke of the great superiority of the French forces, and of the imminent peril of all the British possessions in that part of the world. Even before all these things were known, great popular meetings had been held in London and Westminster, in Surrey, and in other towns and counties, to deprecate the continuance of the war, and to draw up petitions and remonstrances. The West India planters resident in London drew up a particularly strong petition, representing their total ruin as inevitable if an end were not speedily put to hostilities. And it appears that the mass of the people, as usual, had grown weary of a war which had been exceedingly popular in its commencement, and that the more thinking part of those who conceived that the war ought to be continued were by this time thoroughly convinced that the present administration were incapable of conducting it with spirit and with honour to the nation. There still, however, indisputably remained, in all classes of society, multitudes of men who shared in the sturdy, unyielding sentiments of the king, holding with him, that it was better to bear the worst burthens of war than to submit to a dishonourable peace, and that the independence of the American colonies was a thing to be resisted even at the hazard of every other calamity.

When parliament re-assembled after the holidays Lord George Germaine, who had vainly requested permission to resign, attended in his place in the Commons; but the tide of opposition flowed past him to overwhelm Lord Sandwich. Fox moved for an inquiry into the causes of the constant ill success of the naval forces, and in so doing he heaped coals of fire upon the head of the first lord of the admiralty. Captain John Luttrell allowed that there had been abundant errors in the conduct of the navy; but he thought that this was more owing to factions, party animosities, and jealousies among the officers and commanders, than to any misconduct in the admiralty. Lord Mulgrave, who himself occupied a place at that board, and who, as the Honourable Captain Phipps, had obtained reputation by his services at sea and a voyage towards the North Pole, strenuously defended the conduct of Sandwich. Mr. Fitzherbert very rationally imputed the slow progress in building ships of war to the want of shipwrights, who would not work in the royal yards for the paltry pay fixed for them, when they could get far higher wages from private builders. He said that the King of France had 3000 shipwrights at Brest

* Papers cited by Archdeacon Coxe.—Ann. Regist.—Remembrancer.

alone, whilst the King of England had only 800 at Portsmouth. Some years ago the shipwrights had petitioned for an increase of pay, and Chatham had ardently wished them success; but their application had been disregarded. Lord North declared that Lord Sandwich and he himself would cheerfully concur in the inquiry; and Fox's motion was agreed to without a division; but there followed some violent discussions as to the papers and evidence which should be furnished. On the 7th of February, after the reading of the papers which ministers consented to produce, Fox made another eloquent attack upon Sandwich, and moved a resolution, affirming that, during the year 1781, naval affairs had been *grossly mismanaged*. Lord Mulgrave again undertook the defence of the first lord of the admiralty, whom he described as an old and faithful servant of the crown, who had always been vigilant, active, and intelligent, and altogether incapable of the treachery of which Fox very openly accused him. But Lord Howe, a greater naval authority than Mulgrave, and whose opinions and words produced the more effect, as he rarely obtruded them, made a long speech concurring in most things with Mr. Fox, and contending, as that great orator had done, that Brest ought to have been constantly watched by frigates; that the Texel ought to have been blockaded at the commencement of hostilities with the Dutch; that Admiral Kempenfelt ought to have been sent to sea with a greater force, &c. Upon a division Fox's resolution was rejected, but only by a majority of *twenty-two*, the numbers being 205 against 183. Several divisions and a few discussions, enlivened by some fine harangues from Burke, took place on the ordnance estimates and some contracts connected with them; but the ministerial majority here varied from *thirty* to *fifty-three*. In the House of Lords the Duke of Richmond moved an inquiry into the execution at Charlestown of Colonel Hayne, and with other lords in opposition he commented very severely on the conduct of Colonel Balfour and Lord Rawdon. His grace was outvoted by 73 against 25; and at the instance of Lord Rawdon and his friends he was afterwards induced to retract some of his hard words. In the same House the Duke of Chandos demanded an inquiry into the causes which had led to Lord Cornwallis's surrender, and called for copies of all the correspondence which had taken place between ministers and Sir Henry Clinton in the course of the year 1781. Both these propositions were agreed to, but they led to nothing.

Lord North, or rather the king, at last reluctantly consented to accept the resignation of Lord George Germaine. Undeterred by his great unpopularity and by the indelible stigma of the court-martial in his grandfather's time, his majesty, who was well pleased with his services, or, at the least, with his community of sentiment on the grand question of American independence, determined—and his determinations when once formed were unchangeable—to gratify Lord George with the peerage; and, as his lordship was desirous of being more than a baron, he created him Viscount Sackville. On the 7th of February, before the completion of the processes which are necessary to constitute a peer, the Marquess of Carmarthen brought the subject before the House of Lords, and moved a resolution, that it was derogatory to the honour of that House that any person labouring under the censure of a court-martial should be recommended to the crown to be raised to the dignity of the peerage. The marquess read at full length the sentence of the court-martial and the public orders issued upon it by George II. The resolution was strongly objected to as a violent encroachment on the prerogative of the crown; and the question of adjournment being moved, was carried by 75 against 28. A few days after, on the 18th of February, when the new Lord Viscount Sackville had taken his seat among the peers, the Marquess of Carmarthen returned to the charge, and repeated his motion in nearly the same words as before. He was supported by Lord Abingdon, who said that this new peer had been forced into the House in defiance of common sense and common decency. The Lord Chancellor Thurlow said it was now time to meet the question on its own proper merits, and to give it a direct negative; and the new peer himself stood forward the first in his own defence. He said that he was bound in duty to defend the rights of the crown, by which he had obtained the high privilege of a voice among the peers; that to bestow honours was the peculiar and indisputable prerogative of the crown; that the sentence of a court-martial could not amount to a legal disqualification—for that would be making the sword superior to the law; that his sentence had passed three-and-twenty years ago, under circumstances not very favourable to impartiality; that, five years after that sentence, he had been called to a seat in the privy council, and had held office with some of the party who were now so hostile to him. He objected to Lord Carmarthen's reading the orders or comments which George II. had tacked to the sentence of the court-martial: to the sentence itself, he said, he was bound by military law to submit, and he had submitted; but no one could contend that he ought to be judged by the arbitrary comment which the executive power had taken upon itself to superadd, and which was far more severe than the sentence itself. He affirmed that Lord North had had nothing to do with his elevation to the peerage, which arose solely out of the will and goodness of his sovereign. The Duke of Richmond, who had been present at the battle of Minden, though he had not been examined on the court-martial, justified the sentence of that court, by declaring, of his own knowledge, that Lord George had shown a long and culpable backwardness in the field; and Lord Southampton, who had been one of the witnesses on the trial, protested that *he* had not been actuated by party animosities. On the other side, Chancellor Thur-

low declared that George II. had been ill advised in issuing the orders or comments which fixed a stigma on the noble lord deeper than the sentence warranted. Lord Walsingham, who, as Mr. de Grey, had been for some time under secretary of state in Lord George's office, defended his character and his elevation, as did also Lord Stormont and other peers. Upon a division in what was a very full House for the Peers,* Carmarthen's motion was negatived by a majority of 65, the numbers being 93 against 28. The Marquess of Carmarthen, the Duke of Rutland, the Earls of Pembroke, Craven, Chatham, Derby, and Egremont, the Duke of Devonshire, and the Earl of Abingdon, subscribed a protest, stating that they held the elevation of Lord Viscount Sackville to be fatal to the interests and glory of the crown, and dignity of parliament; an insult to the memory of the late sovereign, and to every surviving branch of the illustrious House of Brunswick. It is said by a friend of the new viscount† that he was only restrained by the prayers and advice of Lord Amherst from calling Carmarthen to account with sword or pistol for his double attack. The important post which Sackville had held was conferred upon old Welbore Ellis, who had been drudging for so many years in inferior but profitable offices, who had no weight and consideration to bring to the cabinet, and whose appointment is said to have given satisfaction only to the enemies of the ministry, who exulted in it as a proof that they no longer knew where to look for support.

But, in reality, Lord North was now only looking to a quiet retreat for himself, his greatest affliction—and that did not prevent him from growing fatter and fatter—being, that the king was still most anxious to keep him in his service as a broad bulwark against the Whig chiefs, particularly the Rockinghamites, most of whom his majesty considered in the light of personal enemies. In the words of a recent writer who has had access to numerous private letters written by the king to the minister, "He was only kept at his post by constant entreaties, by monthly expostulations, by the most vehement protestations of the misguided prince against a proceeding which must leave him helpless in the hands of his implacable enemies, and even by promises, always renewed, to let him go, would he but remain for a few weeks until some other arrangement could be made. It is fit that this certain and important fact should be stated; and we have before us the proofs of it under the hand of the royal suitor to his reluctant servant's grace and favour, whose apparently fixed purpose of retirement he uses all these expedients to defeat, or at least to obstruct and retard, if he cannot frustrate. This importunity, working upon the feelings of a well-natured person like Lord North, might easily be expected to produce its intended effect; and the unavoidable difficulty of retreating from a post which, while he held it, had become one of peril as well as embarrassment, doubtless increased the difficulty of abandoning it while the danger lasted."* But at the crisis at which he was now arrived Lord North felt that the spirit and proceedings of the House of Commons and the dereliction of so many of his old followers must oblige the sovereign to consent to his retreat; and his only objects seem to have been to assist a little while longer in the defence of his colleagues, and to gain time for the king to make new ministerial arrangements the least painful to him that might be. His speeches became shorter and more languid; but, down to the very last moment, he retained his most enviable good humour and exercised his ready wit.

On the 20th of February Fox renewed his attack upon Lord Sandwich, making a motion similar to that which he had already lost in committee. He extended his censure to the whole board of admiralty, and was warmly seconded by William Pitt. He was again outvoted, but this time by a majority of only *nineteen*. At the very next sitting—on the 22nd of February—General Conway moved an address to implore his majesty "to listen to the advice of his Commons, that the war in America might no longer be pursued for the impracticable purpose of reducing the inhabitants of that country to obedience by force; and to express their hopes that his majesty's desire to restore the public tranquillity might be forwarded, and made effectual, by a happy reconciliation with the revolted colonies." Upon a division, at two hours after midnight, ministers had still a majority, but this time it was a majority of only *one*—the votes being 194 to 193. This night's debate may fairly be said to have terminated the American war. When it was over, Fox called upon the minister to open the budget, which was considered as the only business to be done before the entire change of administration. Lord North calmly promised to do that work on the 25th, but said not a word about resigning—an omission for which he was virulently abused by Colonel Barré. On the promised day North opened the budget, and proposed a new loan, speaking as if he were still determined to continue in office. Fox and Burke joined their eloquence, as they had done on a former occasion, to condemn the conditions of the loan, and to prove the minister guilty of making corrupt bargains. On the 27th of February General Conway moved—"That the further prosecution of offensive hostilities for the purpose of reducing the revolted colonies to obedience by force would weaken the efforts of Great Britain against her European enemies, increase the mutual enmity so fatal both to Great Britain and America, and, by preventing a happy reconciliation with that country, frustrate the desire expressed by his majesty of restoring the blessings of peace and tranquillity." Upon this occasion Lord North could scarcely obtain a hearing from the impatient and triumphant oppo-

* The House of Lords then consisted of only 187 members.
† Sir N. W. Wraxall, Memoirs.

* Lord Brougham, Statesmen of the Time of George III.; art. Lord North.

sition, who had ascertained their strength and felt confident of a majority. His lordship, however, after objecting to the motion as dangerous on account of the information it would convey to our enemies, and as tending to retard rather than to advance the attainment of peace, which he said was now the great object on *both sides* of the House, intimated that, if the House should show that they had wholly withdrawn their confidence from him, it would be his duty to wait upon his sovereign and deliver up his seals of office. He also told them that, rather than pursue the present measure, they ought to address the crown to remove the whole administration and appoint another. The attorney-general observed that there were many obstacles to be removed before any government could treat of a peace with America; that several acts of parliament in existence must prove great bars to such an attempt; and he recommended, as the first necessary step, a truce between the two countries. He further declared his intention of bringing in a bill for this purpose; and he moved that the present debate should be adjourned until the 13th of March. Upon this proposition, at about two o'clock in the morning, the House divided, when ministers were defeated by a majority of *nineteen*, the numbers being 234 against 215. The original question and an address to the king, founded upon the resolution, were then carried without a division; and it was ordered that the address should be presented by the whole House. On the Monday following his majesty's answer to the address was reported to the House. It stated that, in pursuance of their advice, he would take such measures as should appear to him to be most conducive to the restoration of harmony between Great Britain and the revolted colonies; and that his efforts should be directed against our European enemies, till such a peace could be obtained as should consist with the interest and permanent welfare of his kingdoms. This was sufficiently vague, and seemed to show that the royal aversion to the independence of America was as deep-rooted as ever. The House, however, unanimously voted thanks to the king for his gracious answer. But as soon as this compliment was paid General Conway rose again, and moved a resolution—"That the House would consider as enemies to his majesty and the country all those who should advise, or by any means attempt, the further prosecution of offensive war on the continent of North America." Neither Lord North nor any other member of the shattered administration offered any great resistance, and the resolution was allowed to be carried without a division. On the very next day—the 5th of March—the attorney-general introduced his plan of a truce with America. Fox, who, in common with the whole opposition, whether Shelburnites or Rockinghamites, was astonished and exasperated at North's still remaining on the treasury bench, declared that the scheme was a farce; that ministers had no wish for peace, and that nothing but force and punishment would ever make them renounce their old policy. He asserted that there were persons in Europe* fully authorized by congress to conclude a peace between Great Britain and America, but that those persons would not treat or negotiate with the present administration. He even boasted that he could himself bring those negotiations to a proper issue, and he said that he was willing to undertake the task, though merely as a government clerk or messenger. But he was anxious to impress the House and the country with the notion that the horror he felt at Lord North's government would for ever prevent him from rendering any service to, or connecting himself in any way with, that ministry. If, he said, he ever made any terms with any of them, he would rest satisfied to be called *the most infamous of mankind:* he could not for an instant think of *a coalition* with men who, in every public and private transaction as ministers, had shown themselves *void of every principle of honour and honesty!* Lord North told Fox that he would not quit office to gratify his impatience; that he remained to prevent confusion, and the introduction of mischievous, unconstitutional principles; that he would not resign until it pleased the king to order him, or until the House clearly proved that he must retire. Fox said that the House had already given sufficient proof. The attorney-general's motion was, however, agreed to without a division. In the House of Lords the ministerial majority had apparently lost little of its strength, and on the following day a motion by the Duke of Chandos, to declare that the immediate cause of the capture of Lord Cornwallis was the want of a sufficient naval force, was negatived by a majority of very nearly two to one. On the 8th of March, North found a small majority even in the Commons. On that day Lord John Cavendish moved the following resolutions:—That since the year 1775 more than 100,000,000*l.* of money had been expended on a fruitless war; that during that period we had lost the thirteen colonies of America, except the posts of New York, Charlestown, and Savannah, our newly-acquired colony of Florida, many West India islands, &c.; that we were at present engaged in an expensive war with America, France, Spain, and Holland, without a single ally; and that it appeared to the House that the chief cause of all these misfortunes had been the want of foresight and ability in his majesty's ministers. The debate lasted till past two o'clock in the morning, when the House divided on the order of the day, which had been moved by ministers, and which was carried by 226 against 216. During the debate Dundas appears to have created some uneasiness among the opposition, by speaking as if government intended to try the effects of a dissolution and new election, and by alluding to the innumerable differences and jealousies which were known to divide the parties of Rockingham and Shelburne. The in-

* He meant more particularly Franklin, with whom several members of opposition were maintaining a correspondence.

of the Earl of Salisbury, and succeeded to the high titles and immense estates of that baron: the second was the still better known Geoffrey, who was born about the time when Henry became king, and who was made bishop of Lincoln at a very early age. He had much of Henry's spirit and ability, and, if an indifferent prelate, he was a bold and successful warrior in his *nonage*, when (during the first insurrection promoted by his father's legitimate sons) he gained in the north some signal advantages for the king, to whom he and his brother William Longsword were ever faithful and affectionate. Geoffrey was subsequently made Chancellor, when, like Becket in the same capacity, he constantly accompanied the king. In his dying moments, Henry expressed a hope or a wish that he might be made Archbishop of York, a promotion which, as we shall find, he afterwards obtained.

The history of their mother, the 'Fair Rosamond,' has been enveloped in romantic traditions which have scarcely any foundation in truth, but which have taken so firm a hold on the popular mind, and have been identified with so much poetry, that it is neither an easy nor a pleasant task to dissipate the fanciful illusion, and unpeople the "bower" in the sylvan shades of Woodstock. Rosamond de Clifford was the daughter of a baron of Herefordshire, the beautiful site of whose antique castle, in the valley of the Wye, is pointed out to the traveller between the town of the Welsh Hay and the city of Hereford, at a point where the most romantic of rivers, after foaming through its rocky, narrow bed in Wales, sweeps freely and tranquilly through an open English valley of surpassing loveliness. Henry became enamoured of her in his youth, before he was king, and the connexion continued for many years; but long before his death, and even long before his quarrel with his wife and legitimate sons (with which, it appears, she had nothing to do), Rosamond retired, to lead a religious and penitent life, into the "little nunnery" of Godestow, in the "rich meadows of Evenlod, near unto Oxford."

As Henry still preserved gentle and generous feelings towards the object of his youthful and ardent passion, he made many donations to the "little nunnery," on her account; and when she died (some time, at least, before the first rebellion) the nuns, in gratitude to one who had been both directly and indirectly their benefactress, buried her in their choir, hung a silken pall over her tomb, and kept tapers constantly burning around it. These few lines, we believe, comprise all that is really known of the Fair Rosamond. The legend, so familiar to the childhood of all of us, was of later and gradual growth, not being the product of one imagination. The chronicler Brompton, who wrote in the time of Edward III., or more than a century and a half after the event, gave the first description we possess of the secret bower of Rosamond. He says, that in order that she might not

RUINS OF THE ANCIENT ROYAL MANOR-HOUSE OF WOODSTOCK, as they appeared before their removal in 1714.

be "easily taken unawares by the queen" (ne forsan a regina *facile* deprehenderetur) Henry constructed, near "Wodestoke," a bower for this "most sightly maiden" (puellæ spectatissimæ), of wonderful contrivance, and not unlike the Dædalean labyrinth; but he speaks only of a device against surprise, and intimates, in clear terms, that Rosamond died a natural death. The clue of silk, and the poison-bowl forced on her fair and gentle rival by the jealous and revengeful Eleanor, were additions of a still more modern date.

The adventures of the amiable frail one's unoffending bones are better authenticated. A rigid bishop caused them to be cast out of the church, and interred in the common cemetery, observing to the nuns, that the tomb of a harlot was no fit object for a choir of virgins to contemplate, and that religion made no distinction between the mistress of a king and the mistress of any other man. But gratitude rebelled against this salutary doctrine, and the virgin sisterhood of Godestow gathered up the remains, perfumed the dry bones, laid them again in their church, under a fair, large gravestone, and set up a cross hard by, with an inscription, imploring requiem or rest for Rosamond.

Richard I.—Surnamed Cœur de Lion.

Great Seal of Richard I.

A. D. 1189. As soon as his father was buried, Richard laid hands on Stephen of Tours, the seneschal of Anjou and treasurer to Henry II. This unfortunate officer was loaded with chains, and thrown into a dungeon, from which he was not released until he delivered up, not only the funds of the late king, but his own money also, to the last penny he possessed.* Letters were sent over to England for the immediate enlargement of the queen dowager; and, on quitting her prison, Eleanor was invested, for a short time, with the office of regent, and especially charged to have an eye on the monies in England. Her misfortunes seem for awhile to have had a beneficial effect on her imperious character; for, during her brief authority, she relieved the people by many works of mercy; releasing those who were arbitrarily detained in prison, pardoning offences against the crown, moderating the severity of the forest-laws, and reversing several attainders. She also distributed bountiful alms to the poor, that they might pray for the soul of the husband whom she, more than any one, had contrived to send with sorrow to the grave. She hastened to Winchester, where the royal treasure was deposited, and having made sure of that city, summoned thither the barons and prelates of the realm, that they might recognise and receive their new sovereign. The state of affairs, however, detained Richard on the continent for nearly two months. At last, when he had made the necessary arrangements, he crossed the channel, accompanied by his brother John, and landed at Portsmouth, whence he repaired to Winchester. Henry had left in his treasury there a large sum in gold and silver, besides plate, jewels, and precious stones. All these Richard caused to be weighed and examined in his presence, and had an inventory of them drawn up. His soul was occupied by an enterprise that was likely to absorb all the money he could possibly procure; and, to find means for a most lavish expenditure, he resorted to the cares and expedients that more properly characterize avarice. It was this enterprise,

PORTRAIT OF RICHARD I. From the Tomb at Fontevraud.

however, that gave him the benefit of an undisputed succession to all his father's dominions; for John, expecting to be left in full authority by the immediate departure of his brother for Palestine, and hoping that he would never return alive from the perils of the Holy War, submitted to what he considered would be a very brief arrangement, and made no effort to dispute Richard's right. But for these circumstances it is very clear, from the character of the crafty and ambitious John, that the old story of a disputed succession would have been repeated, and that that prince would have raised his banner of war either in England or in some one of the continental states. As it was, it was wiser for him to wait awhile for the chance of getting peaceful possession of the whole, than to risk life or failure for a part. The confidence reposed in him may excite some surprise, and the more, perhaps, because one of Richard's first acts as a sovereign was to discard and persecute all those who had plotted against his father, not excepting even his own most familiar friends who had plotted for his own advantage; thus reading a good lesson to those who embark their fortunes in the family quarrels of princes. On the 3rd of September the coronation festival was held at Westminster with unusual magnificence; the abbots, and bishops, and most of the lay barons attending on the occasion. The crown was intrusted to the Earl of Albemarle, who carried it before Richard, over whose head was a rich canopy of silk stretched on four lances, each of which was held by a great baron. Two prelates—the bishops of Durham and Bath—walked on either side the king, whose path, up to the high altar, was spread with cloth of the Tyrian die. On the steps of the altar he was received by Baldwin, archbishop of Canterbury, who administered to him the usual oath:—1. That all the days of his life he would bear peace, honour, and reverence to God and holy church, and the ordinances thereof. 2. That he would exercise right, justice, and law, on the people unto him committed. 3. That he would abrogate wicked laws and perverse customs, if any such should be brought into his kingdom; and would enact good laws, and the same in good faith keep without mental reservation. The king then cast off his upper garment, put sandals or buskins of gold on his feet, and was anointed from the ampulla of holy oil on the head, breast, and shoulders: he then received the cap, tunic, dalmatica, sword, spurs, and mantle, each being presented by the proper officer in due order of succession. The unction over, and the king thus royally arrayed, he was led up to the altar, where the archbishop adjured him, in the name of Almighty God, not to assume the royal dignity unless he fully proposed to keep the oaths he had sworn. Richard repeated his solemn promises, and with his own hands taking the ponderous crown from off the altar, "in signification that he held it only from God," he delivered it to the archbishop, who instantly put it on his head, and so completed all the ceremonies of coronation.* "Which act," says old Speed, with a cold-bloodedness less excusable than

* Hoveden and Diceto, who were both present. At the coronation feast, which immediately followed, the citizens of London were the king's butlers, and the citizens of Winchester served up the meats.

his superstition, "was accidentally hanselled and auspicated by the blood of many Jews (though utterly against the king's will), who, in a tumult raised by the multitude, were furiously murdered, which, though it were afterwards punished by the laws, might seem a presage, that this lion-hearted king should be a special destroyer of the enemies of our Saviour." The modern historian cannot permit these atrocities to pass off so easily. We have mentioned the Jews under the preceding reign, and our cursory allusion to them has shown that they were already in possession of great wealth in England, where they were persecuted by the government, though most useful, and, indeed, essential to it, and hated by the whole nation, though nearly all the comforts, and, without exception, all the ornaments and luxuries of civilized life, brought from foreign markets, were introduced by their commercial enterprise. Their wealth seems to have had as much to do in rendering them odious as the religious faith to which they heroically adhered, and the advance they had made in the rate of interest on their loans to men who were about departing on the dangerous expeditions to the Holy Land—though the necessary consequence of the great and sudden demand for money, and of the augmented risk incurred by the lenders—had recently had the effect of exasperating the minds of many of the noble but needy crusaders, and had increased that rancour against them which was always a prevalent feeling among the superstitious and ignorant populace—if the populace deserve these distinguishing epithets when ignorance and superstition were so prevalent among all classes. At the accession of Philip to the throne of France, all the Jews had been banished that kingdom, their property confiscated, the obligations of their numerous debtors annulled; and though Henry II. had declined taking this iniquitous course, it was expected by many that Richard, on coming to the throne of England, would follow the example of his friend Philip. The Jews probably expected something of the sort: they assembled in London from all parts of the kingdom, "meaning to honour the coronation with their presence, and to present to the king some honourable gift, whereby they might declare themselves glad for his advancement, and procure his friendship towards themselves, for the confirming of their privileges and liberties, according to the grants and charters made to them by the former king."* On the day before the coronation, Richard being "of a zealous mind to Christ's religion, abhorring their nation, and doubting some sorcery by them to be practised, issued a proclamation forbidding Jews *and women* to be present at Westminster, either within the church when he should receive the crown, or within the hall whilst he was at dinner."† A few, however, persevering in a custom sanctioned by remote antiquity among all Oriental people, ventured, on this day of general grace and joy, to lay their offerings at the king's feet. Their humble suit was heard,—their rich presents were accepted, "gladly enough;" but a Christian raised an outcry, and struck a Jew that was trying to enter the gate with the rest of the crowd. The courtiers and king's servants, catching the contagion of the quarrel, then fell on the wealthy Jews who had obtained admittance, and drove them out of the hall. A report spread among the multitude gathered outside the palace that the king had commanded the destruction of the unbelievers, and therefore, following up an example already set them by their superiors, the people cruelly beat the Jews and drove them with "staves, bats, and stones, to their houses and lodgings." This violence being left unchecked, and the rumour of the king's intention still spreading, fresh crowds of fanatic rioters collected, and after barbarously murdering every Jew they found in the streets, they assaulted the houses they occupied and in which they had barricaded themselves. As many of these houses were strongly built, they set fire to them, and burned men, women, and children, with everything they contained. In some cases they forced their way into the apartments, and hurled their victims, not excepting even the aged, the sick, and bed-ridden, out of the windows into fires which they had kindled below. The king, alarmed at length by the riot, sent Ranulf de Glanville, the Lord Justiciary, and other officers to appease it; but the authority of these high functionaries was despised, their own lives were threatened, and in the end they were obliged to fly back to Westminster Hall, where the banquet still continued. When night set in, the "rude sort" were lighted in their horrid work of plunder and murder by the flames that rose from the Jewish houses, and that, at one time, threatened a general conflagration of the town. The magazines and shops of the Jews were plundered and ransacked; the defenceless wretches who attempted to escape from their forced, or burning dwellings, "were received upon the points of spears, bills, swords, and gleaves of their adversaries, that watched for them very diligently." These atrocities continued from about the hour of noon on one day till two o'clock in the afternoon of the next, when the infuriated populace seem to have ceased plundering and butchering out of sheer weariness. One or two days after, Richard hanged three men, not because they had robbed and murdered the Jews, but because (at least so it was declared in the public sentence) they had burned the houses of Christians, some of which were indeed unintentionally consumed by the spreading of the flames. He then issued a proclamation in which, after stating that he took the Jews under his own immediate protection, he commanded that no man should personally harm them or rob them of their goods and chattels; and these were the only judicial measures that followed the terrific outrage. * All that the new king could think of at this moment was how he should go to Palestine with a splendid army, and leave the

* Holinshed. † Id.

* Hoved.—Diceto.—Newbr.—Hemingford.

care of his kingdom and of all his subjects to others. To raise money he had recourse to expedients similar to those which ruined Stephen and the nation under him. He alienated the demesne lands, publicly selling, by a sort of auction, royal castles, fortresses, and towns,—and, together with estates that were his own, not a few that were the property of other men. When some friends ventured to remonstrate, he swore he would sell London itself if he could only find a purchaser for it.* Thus most of those royal lands which his father with so much prudence and address had recovered out of powerful private hands, and re-annexed to the crown, were again detached from it. In the same way places of trust and honour,—the highest offices in the kingdom,—were publicly sold to the highest bidder.

"Richard's presence chamber," says a recent writer, "was a market overt, in which all that the king could bestow,—all that could be derived from the bounty of the crown or imparted by the royal prerogative,—was disposed of to the best chapman. Hugh Pudsey, the Bishop of Durham, purchased the earldom of Northumberland, together with the lordship of Sadburgh. For the chief justiciarship he paid, at the same time, the sum of 1000 marks. In the bargain was included a dispensation to the bishop,—or at least such dispensation as the king could grant,—from his vow or promise of joining in the crusade."† There are circumstances attending the sale of the justiciarship which throw at least an odious suspicion on the king. At the period when Richard succeeded to the throne, the celebrated Ranulf de Glanville filled the high office of "rector regni," or regent of the kingdom, and that of "procurator regni," or justiciary; and under these designations he is enumerated amongst the great barons who figured at the coronation. There was not a better or wiser man among the ministers of the crown, nor was there any man more cherished by the late king, whose obligations to him were immense, for Glanville had served him with wonderful success as well on the field of battle as in the council chamber and the infant courts of law, and he it was that had taken prisoner the Scottish king near Alnwick Castle. In every sense the crown, as well as the nation, was deeply indebted to this extraordinary and excellent man. According to one contemporary authority he was at the time sinking under bodily infirmity, and being disgusted by the impolicy of the young monarch, he became anxious to free himself from the burden of offices which he could no longer discharge to his satisfaction and the benefit of the country. By this single account, therefore, it appears that Glanville resigned his office of his own free will, and departed as a crusader to the Holy Land,—that his strong intellect became enfeebled by anxiety and vexation,—that he died shortly after, leaving only female issue, and that not an individual remained to continue his honoured name. Several other authorities, who were also contemporaries, inform us, however, that Glanville was forcibly and rudely deprived of the justiciarship by the rapacious king, who at the same time removed the sheriffs and their officers throughout the kingdom, exacting from each the ransom for his release from imprisonment to the very last farthing; and that Glanville himself, in spite of his reproachful grey head and long services, was cast into prison, and detained there until he submitted to pay a fine of three thousand pounds. "The latter account," says Palgrave, "is not destitute of plausibility. Cœur de Lion's avarice was equalled only by his extravagance; and, by creating a vacancy in this or any other office, he obtained the means of raising money by its sale."*

Richard hastily filled all the vacant bishoprics and abbacies, exacting a heavy fee from each prelate and abbot he appointed. In consideration of twenty thousand marks received from the Scottish king, he granted to him a release from all the obligations which had been extorted from him and from his subjects during his captivity, and gave back to him all the charters and documents of his servitude, with this proviso, that he should nevertheless duly and fully perform all the services which his brother Malcolm had performed, or ought of right to have performed, to Richard's predecessors.† For the sum of three thousand marks he granted his peace to his half-brother Geoffrey, who had been elected Archbishop of York, according to the wish expressed by his father Henry on his death-bed; and other sums of money were obtained by means much less justifiable.

It was now necessary to nominate a regency. At this step Prince John saw his hopes disappointed; but he remained perfectly quiet, being anxious, no doubt, that nothing should occur to prevent or delay his formidable brother's departure. A great council was held at the monastery of Pipwell, in Northamptonshire. Here the king formally announced the appointment of Hugh Pudsey, the Bishop of Durham, to be Rector Regni and Procurator Regni; but he included with him in the commission of justiciarship William de Mandeville, Earl of Albemarle. This great earl, however, quitted England soon after, leaving the bishop in the full possession of the high office; but he did not retain it long, for his authority was first of all weakened and subdivided by Richard before he began his journey, and finally during the king's absence, but while he was yet in Normandy, wrenched from him altogether by the much abler hands of Longchamp, Bishop of Ely and Chancellor of England. In part of his bargain with the king, poor Pudsey had paid a deal of money for nothing; but Richard seldom scrupled to break his contracts, or revoke and annul the grants which he

had made. To satisfy his brother John he gave him, besides the earldom of Moreton or Moretain, in Normandy, the earldoms of Cornwall, Dorset, Somerset, Gloucester, Nottingham, Derby, and Lancaster, in England, forming together not less than a third part of the whole kingdom. To gratify his mother he added to the estates she already possessed all the lands that had been enjoyed by Matilda, the Saxon wife of Henry I., or by Alice, the French widow of the same monarch. She was also to be consulted in sundry matters of government; and at a subsequent period, during Richard's confinement in Germany, Eleanor exercised considerable authority with the consent of the king, though whatever power in the state his brother John acquired was usurped and against his will.

Richard had proceeded with a most arbitrary haste; but Philip of France being ready before him, and doubting he might delay, sent messengers to remind him that the time of departure for the Holy Land was unchangeably fixed at the coming festival of Easter. At the arrival of these messengers Richard, with a vast number of the earls, barons, and knights, who had taken the cross with him, swore he would be ready by the time appointed, and Philip's envoys took a like oath on behalf of themselves. The form of these oaths was somewhat unusual, the Frenchmen swearing by the soul of the King of France, the Englishmen by the soul of the King of England. By this time Richard had got all the money he could on this side of the Channel, and towards the end of the year, and a little more than three months after his coronation, he left his fair kingdom to its fate, and crossed over to his continental dominions, to see what money he could raise and extort there.

A.D. 1190. In the month of February following Richard held a great council in Normandy, which was attended by the Queen Dowager, by his brother John, and by various bishops, who are stated to have crossed the Channel by the king's command. At this meeting there was an abundant pledging of oaths which were but indifferently kept, and many arrangements for the government of the states on both sides the sea were made, most of which were defeated by ambition and intrigue in the sequel. Soon after the two kings made a compact of alliance and fraternity of arms, swearing that each would defend the life and honour of the other,—that neither would desert the other in his danger,—that the king of France would cherish and protect the rights of the king of England, even as he would protect his own city of Paris, and that the king of England would do the like by his majesty of France, even as he would protect his own city—of *Rouen*.*

Owing to the death of Philip's young queen their departure was postponed from the feast of Easter till Midsummer. At last they met in the plains of Vezelai, each accompanied by a gallant and a numerous army, for their forces, when united, are said to have amounted to one hundred thousand men. They marched in company from Vezelai to Lyons, and the people, though much distressed by the passage of such a host, confidently predicted that the Paynim could never withstand them, and that the city of the Lord, with the whole of Palestine, would be recovered by their swords and lances. At Lyons the two kings separated, with the mutual understanding that they should meet again in the port of Messina, in Sicily. Philip, with his forces, took the nearest road to Genoa, for he had no fleet of his own, and that flourishing commercial republic had agreed with him for the furnishing of transports and some ships of war. Although it appears that the two kings went on, thus far, amicably together, great inconveniences to the crusaders as well as to the people among whom they travelled would result from their keeping one line of march: but it was not this consideration, as assumed by some old historians, but the necessity Philip was under of contracting for a Genoese fleet, that caused the two armies to part company. From the time of his expedition to Ireland, Henry II. had paid great attention to maritime affairs, and an English *royal* navy had gradually grown up. We do not possess much information on this interesting subject, but we learn from the chroniclers that he had some vessels which would be considered, even now, of a large size, and that one of the "chiefest and newest" of his ships was capable of carrying 400 persons. Some time before his death he began to build vessels expressly for the voyage to Palestine; and when his son succeeded, he found these preparations so far advanced, that he was soon able to launch or equip fifty galleys of three banks of oars, and many other armed galleys inferior in size to them, but superior to those generally in use at the period. He had also selected transports from the shipping of all his ports; and perhaps there is not much danger in assuming, that in size and strength of ships, this was the most formidable naval armament that had as yet appeared in modern Europe.* Having thus a fleet of his own, Richard was not dependent, like Philip, on arrangements with the maritime Italians, and, instead of crossing the Alps, he kept his course by the beautiful valley of the Rhone towards Marseilles—a free trading city, belonging neither to the English nor the French king,† where he had ordered that his ships should meet him, to convey him and his army thence across the Mediterranean to Sicily, and then to Palestine.

When Richard reached the coast, he found his fleet had not arrived. After passing eight impatient days at Marseilles, he hired twenty galleys and ten great busses or barks there, and proceeded coastwise with some of his forces to Genoa, where he again met the French king. His English ships, for which he left orders at Marseilles to follow him

* Southey, Nav. Hist.

† Marseilles was not even nominally under Philip, but acknowledged the suzerainty of the King of Arragon. The same appears to have been the case with all the French ports on the Mediterranean, from the Pyrenees to the maritime Alps.

to Sicily, had met with some strange adventures, even before reaching the straits of Gibraltar and entering the Mediterranean. In his absence, discipline was at a low ebb among the forces embarked, in spite of the severe, and, in some respects, singular scale of punishment he had drawn up for the preservation of order. He had enacted:—1. That if any man killed another, he should suffer immediate death; if the crime were committed at sea, the murderer was to be lashed to the dead body of his victim, and so thrown overboard; if in port, or on shore, the murderer was to be bound to the corpse and buried alive with it. 2. That if any man drew a knife against another, or struck another, so as to draw blood, he should lose his hand, and that every gentler blow, causing no bloodshed, should be punished by ducking the offender three several times over head and ears. 3. That cursing and swearing and abusive language should be punished by a fine of an ounce of silver for each offence. 4. Any man convicted of theft or "pickerie" was to have his head shaved, and hot pitch poured upon his bare pate, and over the pitch the feathers of some pillow or cushion were to be shaken, as a mark whereby he might be known as a thief. This appears to be the earliest mention of the punishment called, in modern times, "tarring and feathering." But this process did not finish the penalty incurred by theft, for the offender was to be turned ashore on the first land the ship might reach, and there abandoned to his fate, without any hope of returning to his comrades.* "These," says Holinshed, "were the statutes which this famous prince did enact, at the first, for his navy; which, since that time, have been very much enlarged." Two prelates, Gerard, archbishop of Aix, and Bernard, bishop of Bayeux, and three knights, Robert de Saville, Richard de Camville, and William de Fortz, were intrusted with the command of the fleet, with the title of "constables;" and all men were ordered to be obedient unto them as deputies and lieutenants of the king.

The ships sailed from Dartmouth with a gallant display of banners and painted shields; but in crossing the Bay of Biscay they encountered a storm which scattered them in all directions. One of them which belonged to London suffered more than the rest, and was well nigh foundering; but, according to the superstitious chroniclers, there were a hundred pious men on board, who cried aloud to St. Thomas of Canterbury; and Becket not only came himself, with crozier and pall, but also brought with him Edmund, the Saxon king, saint, and martyr, and St. Nicholas, the protector of distressed seamen, and told the crew that God and our lady had instructed him and his beatified companions to watch King Richard's fleet, and see it safe.† This same ship, however, or another belonging to the port of London, did not go far on her voyage; after beating off the coast of Spain and Portugal, and doubling Cape St. Vincent, she arrived at Sylves in a deplorable state. The inhabitants of that town, who were menaced with a siege by the African Mahomedans, easily persuaded the Englishmen to let their vessel be broken up to form barricades with its timber, and to assist themselves in defending the town against the Moors, who were as great infidels as any they would meet in Palestine. The townspeople, however, promised them a liberal reward, together with a vessel as large as that they sacrificed, with which they might continue their voyage when the Moors should be defeated. Nine others of the scattered ships put into the Tagus, where the crews, or the crusaders on board, were in like manner entreated to join the Portuguese in a war against the Mahomedans. The King of Portugal was at Santarem, expecting an immediate attack from the Moors. Five hundred of the English crusaders landed from the ships, and, marching rapidly to his assistance, compelled the enemy to retreat. The king then marched down to Lisbon, where he found more crusaders than he wished for, as sixty-three of Richard's ships had by this time found their way into the Tagus, and landed their passengers in his capital. Although two of the constables, De Saville and De Camville, were with this portion of the fleet, they could not "so govern their people, but that some naughty fellows amongst them fell to breaking and robbing of orchards, and some also, on entering into the city, behaved themselves very disorderly."* The king, mindful of his recent obligations, would resort to none but courteous measures; and, for the time, these, with the exertions of the two constables, seemed to suffice. In three days, however, fresh riots broke out: the people of Lisbon took up arms for the defence of their wives and their property, and, as almost invariably happened, whenever these holy warriors staid any time at a foreign town, a considerable quantity of Christian blood was shed. The king then ordered the gates of Lisbon to be shut, and committed all the crusaders found within the walls to prison. The English retaliated by making prisoners outside the walls. Sancho, the reigning king, was moderate and prudent, and he readily consented to a friendly accommodation. The prisoners were released on both sides; the English engaged to maintain peace and friendship with the king; and the Portuguese, glad to be rid of such visitors, promised to aid and succour all future pilgrims bound for the Holy War that might put into their ports.† The crusaders then sailed from Lisbon. At the mouth of the Tagus they were joined by thirty-three vessels; and, with a fleet now amounting to 106 sail, they steered for the Straits of Gibraltar. Passing those straits, and hugging the coasts of Spain and southern France, they reached, in less than four weeks from the

* Hoved.—Rymer.

† Robert de Brunne.—Hearne's Peter Langtoft. Old Robert tells the story in rhymes, some of which are sufficiently impressive.

* Holinshed.

† The accounts of these transactions given by the old Portuguese historians differ in a few particulars. Dr. Southey remarks that, to the honour of the Portuguese, they relate the story in the manner the least discreditable to the English.

time they had quitted Lisbon, the prosperous city of Marseilles, where they found their impatient king was gone. According to his orders, the fleet took on board the mass of the army which he had left behind at that port, and made sail again with all expedition for Messina, which city it reached several days before either the French or English king.*

Richard, in the mean while, had had several adventures of his own. After coasting the Riviera of Genoa and a part of Tuscany, he entered the river Arno, and visited the splendid city of Pisa. Continuing his voyage along the coast from the mouth of the Arno, he came to the desolate spot where the Tiber pours his brown waters into the sea. His galley required some repairs, and he brought her to anchor in the famous river where the galleys of the Cæsars had once lain. He was there within a few miles of Rome; but though a liberal curiosity, and devotion, would alike have suggested a pilgrimage to the eternal city, he did not go thither. The cardinal bishop of Ostia, a town close to the mouth of the Tiber, went to welcome him to the patrimony of St. Peter; but, availing himself of the opportunity, he pressed the irascible Richard for the payment of certain fees due to the see of Rome. Instead of money, Richard gave this prince of the church abuse, reproaching the papal court with simony, rapacity, and gross corruption; and for this reason it is said he refused to visit Rome.† When his galley was repaired, he made his way to Naples, where he again landed, and whence he determined to continue his journey to the straits of Messina by land—his active body and restless mind being, no doubt, alike wearied with the close confinement of shipboard, and the slow progress made in the dead calms of summer in the Mediterranean. While at Naples, he visited the sanctuary of St. Januarius, the protector of that city, and told his orisons in a crypt, where the bodies of the dead stood up in niches, dry, and shrivelled, but arrayed in their usual dresses, and otherwise looking as if they were still alive. The beauties of Naples or some other inducements made him loiter several days in that city; but he then mounted his horse, and taking the beautiful pass of the Apennines, which leads by Nocera, the Benedictine abbey of La Cava, and Vietri, he went to Salerno, then celebrated for its School of Medicine, the foundation of which had been laid by the Arabs as early as the eighth century, and which had been carried to its height of fame (by orientals, or by persons who had travelled and studied in the East) under the reign and by the liberal patronage of Robert Guiscard, the Norman conqueror of the south of Italy. But the city of Salerno, which the lances of the Normans had won from the Saracen invaders, and which the bold Guiscard had made for a time his capital, was redundant with Norman glory, and crowded with objects to interest Richard. The Normans had built the cathedral in the plain, and rebuilt the noble castle on the hill. Princes, descended, like himself, from the first Duke Rollo, slept in sculptured tombs in the great church, and goodly epitaphs, with many a Leonine (or rhyming Latin) verse—that favourite measure of the Normans—recorded their praise.* Every castle that met his eye on the flanks and crests of the neighbouring mountains was occupied by the descendant of some Norman knight; for the time, though approaching, was not yet come, when the dynasty of Suabia made a fresh distribution, and introduced a new race of northern lords into the most glowing regions of the south. Salerno, too, then one of the most civilized, as always one of the most beautifully situated towns of Italy, had other schools besides that of medicine; though it was held not unworthy of a king, and a fitting accomplishment in a true knight, to know something of the healing art. Moral and natural philosophy, such as they were, geometry, astronomy, dialectics, rhetoric, and poetry, were all cultivated, and Richard himself was a professed poet, being one of the troubadours.† After staying at this interesting spot several days, during which, the galleys he had hired at Marseilles came round to him from Naples, he mounted his horse, and left Salerno on the 13th of September. He rode across the Pæstan plain, and through the luxuriant district of Cilento, into Calabria, his galleys following along shore, from which his own path was seldom very distant. Roads there were none; and, as it was the commencement of the rainy season, he must have encountered great difficulties in crossing the mountain-streams; for he did not reach Mileto till the 21st. From that town he spurred on with only one knight to accompany him. On passing through a village, he was told that a peasant there had a very fine hawk. For a man in his condition to keep that noble bird was contrary to the customs and the written laws of aristocratic Europe; and Richard, who wanted some sport, to beguile the tedium of the way, went into the poor man's house, and seized the hawk. The peasant ran after him, demanding his property; but the king kept the bird on his wrist, and would not restore it. The poor man's neighbours took up his quarrel, and the Calabrians being then, as now, a proud and fiery race, they presently attacked the robber with sticks and stones, and one of them drew his long knife against him. Richard struck this fellow with the flat of his sword; the sword broke in his hand, and then matters looked so

* The English fleet sailed from Marseilles on the 30th of August, and entered the port of Messina on the 14th of September, without having lost a single vessel in the Mediterranean. The French fleet from Genoa arrived on the 16th, having lost several ships.

† Baronius speaks at some length, and with great emphasis, of this singular interview on the Tiber.—Annal. Eccles.

* Dr. Lingard is in error, in saying that the celebrated medical poem in Leonine verse, by the professors of Salerno, was dedicated to Richard. It was first published (nearly eighty years before his visit) in 1100, and dedicated to Duke Robert (the unfortunate Curthose), who was then in Italy, on his way home from Jerusalem, and who was, by right of birth and treaty at least, king of England, through the recent death of Rufus.

† He was born a poet—if not in the sense of Horace, at least genealogically—for his mother Eleanor, as well as his maternal grandfather, were troubadours, and the rank was made hereditary in some families. He merited it by his compositions.

serious, that the hero took fairly to flight. The enraged rustics followed him with their sticks and stones, and if a priory had not been close at hand, to afford him a refuge, it is probable the Lion-heart would have perished in this ignoble brawl.* At last, he reached the shore of the narrow strait, commonly called the Faro, which separates Calabria from Sicily, and passed the night in a tent hard by the famed rocks and caverns of Scylla. The next morning (September 23rd), being either advised by signal, or by some one of the Marseilles galleys, the mass of his fleet crossed over from the island to receive him. He embarked, and scorning, or being ignorant of, the Homeric dangers of Scylla and Charybdis, was presently wafted over to the noble harbour of Messina, which he entered with so much splendour and majesty, and such a clangour of horns and trumpets and other warlike instruments, that he astonished and alarmed the Sicilians, and the French also, who had reached that port with a shattered fleet a week before him. The first feelings of the allies and confederates in the Holy War towards each other were not of an amicable nature; and Philip, foreseeing, it is said, that dissensions would be inevitable if the two armies passed much time together in inactivity, got ready his fleet as soon as he could, and set sail for the East. But contrary winds and storms drove him back to Messina; and it was then resolved, for the misfortune of the country, that the two kings should winter there together, and find supplies for their armies as best they could.

The kingdom of Sicily, which then comprised Calabria and Apulia, and all those parts of lower Italy now included in the Neapolitan realm, was in a weak and distracted state. A few years before, under the reign of William I., or of his heroic father, Ruggiero, when the kingdom was united, and their powerful fleets of galleys gave the law in both seas (the Tyrrhenian and the Adriatic), the Sicilians might have been able to defend themselves against the insolent crusaders, numerous as they were; but Richard, who had a private account to settle with their king, well knew their present weakness, and determined to take advantage of it. The king of Sicily, who had scarcely been *ten months on the throne*, and who reigned by a disputed title, was Tancred, a prince of the Norman line, of great valour and ability. Richard's sister, Joan, who had been wedded when a mere child, had borne her husband no children; and, after nine years' marriage with her, King William II., commonly called "The Good," became uneasy about the succession, and resorted to curious measures in order to keep it in the legitimate line. The only legitimate member of the family living was an aunt about the same age as himself—a posthumous child of his grandfather, the great Ruggiero. The princess Constance had been brought up from her infancy in religious retirement, and was living in a convent—some writers say she had taken the veil and the vows of a nun long before—when her nephew, the king, fixed his eyes upon her for his successor. Notwithstanding her acknowledged legitimacy, William the Good knew it would be worse than useless to propose a single woman to his warlike barons as their queen. It was the same everywhere, and for the same reasons; but, if anything, the objection to a female reign was stronger in Sicily than elsewhere. By the old laws of the country, as of all Italy (and the laws were not changed in Sicily until after the accession of Frederick II., the son of this very Constance), the deaf, the dumb, the blind, and *women*, were excluded from the succession to feudal estates, or fiefs, held of the crown on condition of military service—a condition which applied to nearly all property, except that belonging to the church. And though the old laws expressly excluding women from the throne had been abrogated since the Norman conquest, the feelings and prejudices of the people, and the usage of the nobles in the inferior class of successions, survived the destruction of the theory, and all tended to make a female reign odious or impracticable in idea. William, therefore, looked abroad for a powerful husband that might assert her rights; or, considering the age of the parties, he might reasonably have hoped to live to see a son of his aunt's grow up before he died. He, therefore, negotiated a marriage with Henry, the son and heir of the Emperor Frederick Barbarossa. Considering the country and climate, and the juvenile age at which royal ladies were then given in marriage, Constance was rather in advanced life—for she was thirty-two years old! The dower and the hope of succession were, however, brilliant and tempting; and Henry espoused her with great pomp and magnificence, in 1186, in the city of Milan. In the month of November, 1189—little more than three years after this marriage, and between nine and ten months before the arrival of the crusaders at Messina, William died at Palermo, in the *thirty*-sixth year of his age, leaving his childless widow, Joan, the sister of Richard, who was only in her twenty-fourth year, to the care of his successor. This successor was declared by his will to be his aunt Constance, to whom, and to her husband Henry, some time before his decease, he had, according to the practice of the age, made the barons of the kingdom, on both sides the Faro, take an anticipatory oath of allegiance, at the town of Troja, in Apulia. But he was no sooner dead than his will and the oaths he had exacted were alike disregarded. The prejudice against a female succession was as strong as ever; and it was not prejudice, but laudable policy, in the people of the south to be adverse to the rule of the German emperors, who were already formidable in the north of Italy, which they had deluged with blood, and who threatened the independence of the whole peninsula. By the insular portions of the kingdom, or in Sicily proper, the notion of being governed by Henry, a foreign prince, was

* Hoved.

held in abhorrence. Constance and Henry were both far away at the time, and, encouraged by these feelings and circumstances, several of the great barons more or less closely connected with the royal family, advanced claims to the crown. It was difficult, and in part impossible, to reconcile these pretensions; but at length the mass of the people and a large majority of the nobles agreed to elect Tancred, count of Lecce, cousin to the deceased king, William the Good, but reputed of illegitimate birth, though avowedly born of a lady of the noblest rank.* In Sicily, as in England, the church had made great advances in the establishment of the rights of legitimacy; but these rights were, as yet, far from being imperative or sacred in the eyes of the people, who, in all circumstances, would have preferred a bastard to a woman, and whose choice on the present occasion fell on a prince of ripe manhood and mature experience, who had many qualities to recommend him, besides that of his descent from the great Ruggiero, the founder of the dynasty. Tancred was, therefore, hailed king by public acclamation,† and solemnly crowned at Palermo, in the beginning of the year 1190. His election by the nobles and people, or his right, was acknowledged by the court of Rome, just as that of Stephen had been in England, and the reigning Pope (Clement III.) sent him the usual bulls of investiture and the benediction. Though acceptable and dear to the people, Tancred's throne was immediately disturbed by his disappointed competitors, and by Archbishop Walter and some of the Apulian barons, who declared for Constance, and armed in her cause. In the island of Sicily this insurrection was defeated by the unanimity of the people; and, passing over to the continent in person, Tancred presently reduced most of the Apulian barons to his obedience. But the civil war had weakened him—plots and conspiracies were forming against him, and Henry of Suabia, now emperor, by the death of his father, Barbarossa, was on his march to the south with a powerful army, to claim the throne for Constance, when Richard, received as a guest, commenced his course of aggressions.‡

The question of Tancred's legitimacy was not, in itself, likely to claim much of the Lion-heart's attention; his quarrel had a more private ground. When the late king, William the Good, married his sister Joan, in the first impulse of love and generosity, he gave her a magnificent dower—the cities of Monte-Sant' Angelo and Vesti, the towns and tenements of Ischitella, Peschici, Vico, Caprino, Castel Pagano, and others, with their several castles; Lesina and Varano, with their lakes and the forests adjoining; two stately monasteries, with their pastures, woods, and vineyards—in short, in one extensive and solid mass, the whole of the beautiful country comprised in the great promontory of Monte Gargano, between the provinces of Apulia and the Abruzzi, was allotted to the fair daughter of our Henry II. Tancred, on his accession, had withheld this splendid dower, and had even, it was said, deprived the young queen-dowager of her personal liberty.* Richard's first demand was for the enlargement of his sister; and, whether she had been a prisoner or not, it is quite certain that Tancred sent her immediately to her brother, from Palermo to Messina, escorted by the royal galleys. The impetuous king of England then demanded her dower, which, under circumstances, it would not have been easy for Tancred to put her in possession of, as the territories lay in the very heart of the great fiefs of the continental barons, who were again in revolt. Without waiting the result of peaceful negotiations, into which Tancred readily entered, Richard, embarking part of his army, crossed the straits of Messina, and took possession, by force of arms, of the town and castle of Bagnara, on the opposite coast of Calabria. Leaving his sister Joan, with a good garrison, in this castle, he returned to Messina, to commit another act of aggression. There was a monastery on the sea-shore (a little beyond the port of Messina) that covered one of the flanks of his army, which was encamped outside the town. The place was capable of being strongly fortified, and was otherwise well suited to his purpose; so he drove the monks out of it, and, garrisoning it for himself, converted it into a place of arms and military store-house. Whether the poor Sicilians loved these monks † or not, the honour of their wives and daughters was dear to them, and they were probably as jealous as at the time of the "Vespers," a century later; and when Richard's disorderly soldiers of the cross, the very day after this seizure of the monastery, "strolled licentiously through the city, with much lasciviousness,"‡ the townspeople, no longer able to contain their indignation, set upon them in the streets, killed several of them, and then closed the gates of the town. On this, the whole camp armed, and English, Normans, Angevins, Poictevins, with the rest that followed Richard's standard, rushed to the walls, and would have scaled them then, had not their king ridden among them, and commanded them to desist, beating them the while with his truncheon as hard as he could.§ He then went to the quarters of the king of France, whither the magistrates of the town soon repaired. After mutual complaints, promises of redress were made on

* In most of our histories Tancred is called the illegitimate *brother* of William II., which is decidedly incorrect. He was son of Ruggiero, the elder brother of William I., who was father to William the Good. Count Ruggiero died before his father, the great Ruggiero, and first king of Sicily; the lady of his love was the beautiful daughter of Robert, count of Lecce, whose titles and inheritance were subsequently given to his grandson, Tancred. According to some Italian writers, Count Ruggiero and the young lady were lawfully married.

† Giannone says, "Tancredi adunque non altro titolo più plausabile poteva allegar per sè, se non la volontà de' Popoli." This great writer, no doubt, thought the "will of the people" one of the best of rights, but he durst not say so, *when* and *where* he wrote.

‡ Angelo di Costanza.—Giannone.—Fazello.—Muratori.

* This fact is not admitted by the oldest Sicilian historians.

† From some accounts it appears that the monastery was occupied by Greek monks. If that were the case, they were not likely to be very dear to the Messinese.

‡ Fazello.—Ist. de Sic.

§ Hoved.—Vinesauf.

both sides, and the king drew off his men to their tents and ships. On the following morning a solemn meeting was held, with a view of providing for future tranquillity and concord among all parties; for Richard's men and the followers of the French king regarded each other with evil eyes, and had already shed some blood in brawls. The prelates and chief barons of the two nations, and the principal men of Messina, went with Philip to the quarters of Richard. While they were deliberating a troop of incensed Sicilians gathered on the hills above the English camp, with the intention, it is said, of attacking the king. A Norman knight was wounded by these people, and so great an uproar arose, that Richard rushed from the conference, and called all his men to arms. The English and Normans rushed up the hill-side, but the French did not move, and Philip at one moment seemed inclined to take part with the Sicilians. Richard drove the multitude from the hill, and followed them with the sword in their loins to the city. Some of the English entered pell-mell with the fugitives, but the gates were then closed, and the citizens prepared to defend their walls. Five knights and twenty men-at-arms were killed before the walls, but Richard, having brought up nearly the whole of his force, took the town by storm, and planted his banner on its loftiest tower, as if it had been his own town, or one taken in regular warfare. At this exhibition Philip was greatly incensed, but an open rupture between the two sworn brothers in arms was avoided for the present, by Richard's consenting to lower his banner, and commit the city to the keeping of the Knights Hospitallers and Templars, till his demands upon Tancred should be satisfied.

Soon after this altercation the kings of France and England solemnly renewed their vows of friendship and brotherhood, and, by the advice of the prelates embarked in the crusade, and took measures for repressing the excesses of the pilgrim-soldiers. The vice of gaming, it appears, had become very prevalent. Playing for money was now prohibited, with the following exceptions: the two kings might play themselves, and *command* their followers to do so in their presence; but these nobles were bound not to lose more than twenty shillings in one day and night; knights and priests might play to the same amount, but were to forfeit four times twenty shillings every time they lost more than the sum appointed in one day and night; and the servants of archbishops, bishops, earls, and barons might, in like manner, play by their masters' command; but if any servants were detected in playing without such license, then they were to be whipped round the camp naked on three successive days. If any mariners played they were to be ducked three times in the sea; and any others of the crusaders of like mean degree, being neither knights nor priests, so offending, were to be whipped as varlets. In all cases, however, the punishment was redeemable by payment of a fine in money, which was to go towards the expenses of rescuing the tomb of Christ.* Other laws were enacted at the same time, to prevent any pilgrims or crusaders that might chance to die from remitting their property to their family or friends at home.

Two of Tancred's nobles and prime favourites—his admiral and another—commanded at Messina at the time of Richard's arrival. Seeing that resistance was vain, and feeling that their dignity was committed by remaining in a town where a foreign prince gave the law, they both retired with their families and movable property; upon which, Richard seized their houses, galleys, and whatever else they had not been able to carry off with them. He made a complete castle of the monastery on the sea-side, digging a broad and deep ditch round it, and he built a new fort on the hills above the town.† These, and other proceedings, in which he consulted no one, but acted as if he were absolute master of the island, again excited the envy and disgust of Philip; but they probably hastened the conclusion of a treaty with Tancred, who, in the difficulties under which he was labouring, could hardly contend with so fierce and powerful a disputant. Richard demanded for his sister all the territories before mentioned, together with a golden chair, a golden table, twelve feet long, and a foot and a half broad, two golden tressels for supporting the same, twenty-four silver cups, and as many silver dishes—to all which, it appears, she as queen was, by the custom of that kingdom, entitled. After all this, he demanded for himself, as representative and heir of his father, a tent of silk, large enough to accommodate 200 knights sitting at meals, 60,000 measures of wheat, and 60,000 of barley, with 100 armed galleys equipped and provisioned for two years.‡ This voluminous donation, which, as it has been judiciously remarked, was not merely a mark of friendship, but meant as a pious contribution to the Holy War, had been left in his will by William the Good to his father-in-law, Henry of England, who was bound for the Holy Land, but who died before the death of his son-in-law gave validity to the testamentary bequest; and Richard must have exercised ingenuity as well as impudence in attempting to prove the legality of this part of his demand. In the end, Richard either proposed or agreed to a compensation in money. Twenty thousand golden oncie§ were paid in satisfaction of all Joan's demands, and twenty thousand more were paid to Richard himself, but not in satisfaction for his claim, which he waived (caring little, probably, on what ground he obtained the money, so long as he got it), but on a treaty of marriage which he concluded.‖ He affianced his young nephew Arthur, who was his

* Hoved. We have translated "solidos" by shillings.

† This castle, called Mattagriffone, after having been enlarged and repaired at different periods, still frowns over Messina.

§ An *oncia* is a Sicilian gold coin; the present value is about ten shillings English.

‖ The Sicilian historians mention only one payment of 20,000 *oncie*, and this they put down to the account of the dota, or dower of Tancred's daughter.

heir presumptive,* to an infant daughter of Tancred, and engaged, in case the marriage should be prevented by the death of either of the parties, that he or his heirs would repay to Tancred or his heirs the twenty thousand oncie then received by him, as the dower of the infant. But the treaty went further than this; for Richard guaranteed to Tancred the possession of Apulia, which was partly in revolt, and of the important city of Capua, which had never submitted to the new king. He, indeed, contracted with him what we now call an alliance offensive and defensive—a league he had cause to regret when his evil fortune threw him into the power of Tancred's competitor, the Emperor Henry. The treaty was sent to Rome, to be placed in the hands of the Pope, who was invited, both by Richard and by Tancred, to enforce its observance, should any want of faith be shown by either of the contracting parties in the sequel. The money obtained was lavished by Richard in a manner which appeared thoughtless and wild; but his liberality had the effect of increasing his popularity with the crusading host; for he made the followers of the French king, and the king himself, share his bounty with his own followers, who highly lauded him, "for that he gave away as much in largesses in one month as his father Henry would do in a whole year." Such a multitude of men collected on one point had greatly raised the price of provisions; and Richard's treasure, and his table too, were open to the crossed knights of all countries, who complained of the expensiveness of their sojourn at Messina. On the feast of Christmas he gave a splendid banquet, to which he invited every man of the rank of a knight or gentleman, in both armies; and when the dinner was over, he made a present in money to each, the amount being more or less, according to the rank of the parties. A little army of troubadours and minstrels, who had followed him from Aquitaine and the rest of the south of France, constantly sang his praises. This display of superior wealth, and the popularity he obtained by his liberality, seem to have increased the envy and malevolence of Philip, who, however, must have had, all along, a standing cause of complaint, which we shall presently refer to. Part of the winter months were spent in repairing the ships, that were much worm-eaten, in the port of Messina, and in preparing catapults, manginalls, and other warlike engines, wherewith to batter the walls of the infidel towns in Syria and Palestine, the timber for which was cut on the mountains of Sicily and in the extensive forests of Calabria. But in spite of these and other occupations, time hung heavily on the hands of the impatient Richard. In a period of inactivity he was seized with a fit of devotion and penitence. He called all the prelates together that were then with his host at Messina, into the chapel of Reginald de Moiac, in whose house he then resided; and there, in presence of them all, falling down upon his knees, he confessed his sins and the profligate life which he had hitherto led, humbly received the penance enjoined him by the bishops; "and so," adds an old historian, who did not sufficiently bear in mind the deeds of his after life, "he became a new man, fearing God, and delighting to live after his laws."*

At this time Christian Europe was filled with the fame of Giovacchino, or Joachim, the Calabrese, a Cistercian monk and abbot of Curacio, who was commonly reputed a prophet, and who had lashed the vices of the court of Rome in an infinitude of books and treatises, all bearing the most extravagant titles. Richard being anxious to converse with this seer, King Tancred sent for him into Calabria; and the monk, probably flattered by such an invitation, came over to Messina, where the lion-hearted soldier had a grand field-day of theology and vaticination. Giovacchino had no difficulty in interpreting, in his own way, the whole of the Apocalypse. He told his majesty of England that Antichrist was born, and then actually living in Rome. Saladin, against whom Richard was to fight, was one of the heads of the beast in the Revelations; and for every other symbol or type the fervid imagination of the Calabrian monk found an existing reality in some public character of the time, Christian or Pagan. He foretold the year in which Jerusalem would be recovered by the crusaders; and to every doubt he would reply—"but is it not written in the book?" The bishops and learned clerks, however, in Richard's train would not permit the abbot to have it all his own way, and a fierce controversy ensued, in which English lungs (they would have had no chance but for the disparity of numbers) were tried against the stentorian lungs of Calabria.† According to Giannone, Richard at once set the prophet down as an idle babbler;‡ but people must have been better qualified to give a decided opinion on this head some years later, when every one of the Abbot Giovacchino's prophecies about Jerusalem and the holy war was falsified by the event. §

A short time after these theological conferences Richard mounted his horse, and rode to the flanks of the towering and smoking Mount Etna, which had recently been in active eruption. At the city of Catania he was met by appointment—and it appears for the first time—by Tancred. The two kings embraced, and, walking in splendid procession to the cathedral church (another work of the Normans), prayed, kneeling side by side, be-

* In the treaty, Richard styled him his "most dear nephew and heir," mentioning, however, the condition of his dying without children—"*Si fortè sine prole nos obire contingeret.*"—Recueil des Historiens de France.—Daru, Hist. de la Bretagne. The unfortunate Arthur was little more than two years old at the time of this contract.

* Holinshed. † Hoved. ‡ "Cianciatore."

§ Dante, however, did not hesitate to place the astute Calabrian in Paradise. The abbot probably owed this elevation to his enmity to the popes, whom Dante hated even more than he:—

"Raban è quivi, e lucemi da lato,
Il Calavrese Abate Giovacchino
Di spirito profetico dotato."—*Paradiso*, canto xii.

Raban is here; and at my side there shines

fore the shrine of St. Agatha. They lived in great cordiality, and each seemed to entertain a high respect for the valour and character of the other. Like the heroes of Homer, they exchanged presents, Tancred giving Richard a ring, and Richard giving Tancred a sword, reputed to be the enchanted blade Excalebar, or Caliburn, of the British king Arthur. But his Sicilian majesty also gave, as a contribution to the holy war, four large ships and fifteen galleys. On his return to Messina, he accompanied his guest for many miles, even as far as the town of Taormina; and before they parted there, it is said, he gave to Richard a letter wherein the French king declared his majesty of England to be a traitor, who meant to break the peace and treaty he had concluded with the king of Sicily, and offered to assist Tancred to drive him and his English out of the island. Cœur de Lion, after a furious explosion, and many oaths that he never had been, and never would be, false to Tancred, collected his ideas, and then expressed a doubt that Philip, his liege and sworn comrade in that pilgrimage, could be guilty of so much baseness. Tancred declared that the letter had really been delivered to him, as from the King of France, by the Duke of Burgundy; and he vowed that, if the duke should deny having so delivered it, he would make good his charge upon him, in the lists, by one of his barons.* When he arrived at the camp Richard met Philip with a clouded brow, and a day or two after, in the course of one of their many altercations, he produced the letter, and asked the French king if he knew it? Philip pronounced it to be a vile forgery, and, changing defence into attack, accused Richard of seeking a pretext for breaking off his marriage with the French princess. This was touching at once on the grievance that must long have made all friendship on the part of Philip a mere simulation. All the clamour Richard had raised for his affianced bride, in the last months of his father's reign, was merely for political purposes: as soon as Henry died he dropped all mention of the Lady Alice; and at this very moment, as Philip no doubt well knew, he had contracted a very different alliance, and was every day expecting another wife. "I see what it is," said Philip; "you seek a quarrel with me, in order not to marry my sister, whom, by oath, you are bound to marry; but of this be sure, that if you abandon her, and take another, I will be all my life the mortal enemy of you and yours." Richard replied that he could not and never would marry the princess, as it was of public notoriety that his own father Henry had had a child by her; and, according to the minute relater of these curious passages, he produced many witnesses to prove to Philip the dishonour and shame of his own sister. True or false, this exposure was a cruel and degrading blow, not likely ever to be forgotten or forgiven.* For the present, however, Philip bartered his sister's honour for a pension, agreeing to release Richard from his previous matrimonial contract, and permit him to marry whatsoever wife he chose, for two thousand marks a-year, to be paid for the term of five years. Besides promising this money, Richard engaged to restore the Princess Alice, together with the fortresses received as her marriage portion, as soon as he should return from the Holy Land.—[Eventually the lady was not restored till some years after that event, when she espoused the Count of Ponthieu.]—This precious arrangement, and the settlement of other differences,† were confirmed on both sides by fresh oaths, for, in these days, princes seem never to have tired of swearing, or to have felt that the continually recurring rupture of their oaths made them nothing but a solemn mockery. Philip then got ready for sea, and, after receiving some vessels and stores bountifully given him by Richard, he set sail on the 30th of March, 1199, for Acre. Richard, with a few of his most splendid galleys, accompanied him down the straits of Messina, and returning the same evening to Reggio, on the Calabrian coast, took on board his new bride, who had been for some time in the neighbourhood, waiting only for the departure of the French king, and then carried her over to the city of Messina. This lady was Berengaria, the beautiful daughter of the King of Navarre: Richard had seen her in her own country a year or two before his father's death, and was passionately enamoured of her at the moment when, to annoy Henry, he was raising such a clamour for the Princess Alice. His passion was romantic and disinterested, for he gained no territories by the union, and seems to have stipulated for no political advantages, when he despatched his mother Eleanor to ask the hand of Berengaria. It is said that the fair maiden partook of his generous passion, and that, without being deterred by the many dangers and privations to which she exposed herself, she joyfully consented to travel with her mother-in-law from the Pyrenees to the Alps and Apennines, and thence to follow her husband beyond sea to the land of the Paynim. Leaving Navarre with a suitable escort of barons, knights, and priests, the young Berengaria and Eleanor, whose activity was not destroyed by age, travelled by land to Naples, and from the gay city of Naples they travelled on through the passes of Monteforte and Bovino, and across the vast Apulian plain to the ancient city of Brindisi, there to wait until the French king should be out of the

* There are several versions of this mysterious story; we have chosen that which appears most natural. If there was any deceit about the letter it was practised by Tancred. It is said that before Richard's arrival the Sicilian prince had offered one of his daughters to Philip for his infant son, and that the French king had rejected the alliance. But, again, it is said that, a few hours after Richard had left him at Taormina, Tancred met Philip at the same town and passed the night with him in a friendly manner. The native historians are provokingly silent on nearly all the transactions of the crusaders in Sicily.

* According to an old French writer the insult was "a nail stuck in and driven through the heart of Philip."—De Serres, Inventaire Général de l'Hist. de France.

Roger of Hoveden gives the fullest account of this quarrel. See also Diceto.—Iter. Hiero.

† With reference to young Arthur, Philip consented that Brittany should continue to acknowledge the direct feudal supremacy of the Norman dukes or English kings, who should do homage for it to the crown of France.

way. As the expedition of Richard was so nearly ready for sea when the royal travellers arrived, it was not thought proper to delay its sailing, and, as the penitential season of Lent was not quite over, the marriage was not celebrated at Messina; and the queen-mother, having placed the bride under the matronly care of her own daughter Joan, the dowager-queen of Sicily, embarked for England four days after. Eleanor, it will be remembered, had already made the "great passage," as it was called, with her first husband, Louis of France, and it is probable that certain recollections of that crusade contributed more than her advanced years in preventing her from revisiting Palestine. According to a quaint old rhyming writer, "Dame Joan held her sister Berengaria very dear, and the two ladies lived together like two birds in one cage."* They did not embark in the same ship with Richard, but a separate galley was delicately allotted to them.

The day after Eleanor's departure for England the whole fleet set sail for Acre. As a rapid current carried it through the straits of Messina it presented a beautiful and imposing appearance, that called forth the involuntary admiration of the people of either shore,—the Sicilians saying that so gallant an armament had never before been seen there, and never would be seen again. The size and beauty of the ships seem to have excited this admiration not less than their number. The flag of England floated over fifty-three galleys, thirteen dromones, "mighty great ships with triple sails,"† one hundred carikes or busses, and many smaller craft. Thirty busses from England had arrived just before, bringing out fresh stores and men. The mariners of England, however, were not then what centuries of struggle and experience have made them; and when a great tempest arose, soon after leaving the Sicilian sea, the whole navy was "sore tossed and turmoiled," and scattered in all directions, not a few of the ships being foundered or cast on shore.‡ After a narrow escape himself on the coast of Candia or Crete, Richard got safely into Rhodes; but the ship which bore his sister and his bride was not with him, and he passed several days in distressing anxiety as to their fate. At Rhodes he fell sick, and was detained there several days. Incapable of taking the sea himself, he despatched some of his swiftest vessels to look after the ladies and collect the scattered fleet. This storm blew more mischief to the petty tyrant of Cyprus than to any one else. One of the English scouts returned to Rhodes with the information that two of his ships had been cast ashore on the island of Cyprus, and that the people of the country had barbarously plundered the wrecks and cast the mariners and crusaders into prison. Vowing vengeance,—and of these vows he was always very tenacious,—Richard embarked, and, departing immediately with all of the fleet that had joined him at Rhodes, made way, with press of oars and sails, for the devoted island. Off Limisso, or Limasol, then the principal seaport town of Cyprus, he found the galley of his bride and sister. Either the Cypriots had refused the royal ship the entrance of the port, or (which is more probable) the ladies, knowing how they had treated the two wrecks, feared putting themselves in their power, and had refused their invitation to land. The island of Cyprus was occupied by Greeks, a people who, from a difference in some dogmas of faith and from other reasons, had never been able to agree with the crusaders of the West. The islanders had probably learned the overbearing conduct of Richard in Sicily, where there were many Greek colonies; and general experience had proved that the holy warriors were most turbulent and dangerous guests. Hence, the Cypriots might have been induced to give them so bad a welcome; but, considering the circumstances of the English who were thrown on their coast, the conduct they pursued was odious and exasperating. The sovereign of the island was one Isaac, a prince of the imperial race of the Comneni, who pompously styled himself "Emperor of Cyprus." When harshly called upon for satisfaction, he put himself in a posture of defence, throwing out some armed galleys to the mouth of the harbour of Limasol, and drawing up his troops along shore. These troops were ill calculated to contend with the steel-clad warriors of Richard, for, with the exception of a body-guard which was splendidly armed and appointed, they had no defensive armour, but were half naked, and the mass of them had no better weapons than clubs and stones. Richard boarded and took the galleys, dispersed the troops, and made himself master of the city, with little difficulty. The inhabitants fled, but had not time to carry off their property, which the crusaders made prize of. They found an abundance of provisions of all kinds, and when Queen Joan and Berengaria landed at Limasol they were welcomed with a feast. Having rallied, to make another impotent attempt at resistance, the Cypriots were surprised the next morning, and "killed like beasts," their "Emperor" saving his life by flying "bare in serke and breke."* Isaac, who had now learned to his cost the might and fury of the enemy he had provoked, sent from his capital of Leikosia, or Nicosia, situated in the centre of the island, to sue for a conference of peace. Richard, gaily mounted on a Spanish charger, and splendidly attired in silk and gold, met the humbled Greek in a plain near Limasol. The terms he imposed were sufficiently hard; but the "Emperor" agreed to pay an indemnity in gold for the wrong he had done the galleys, to resign all his castles, to do homage to the king of England, and to follow him to the holy

* Robert of Brunne.

† By this is meant that they were three-masted.

‡ It is said, however, by one who was on board the fleet, that the sailors did everything that it was possible for human skill to do; but old Vinesauf was a landsman, and not a good judge, and people then allowed very narrow limits to the extent of human skill in many things.

* Robert of Brunne. From Vinesauf and Hoveden it appears that Isaac, betrayed by the Cypriots, was surprised before he was out of bed, and fled without armour or clothes.

war with 500 well-armed infantry, 400 light horse, and 100 knights. Isaac was to place his daughter and heiress as an hostage in Richard's hands, and Richard was to restore her, with all the castles, on their return from Palestine, on the delicate condition, however, that the Emperor's conduct in the holy war should give the king entire satisfaction. That very night the Greek fled to make another vain effort at resistance; but Richard had no great right to complain of this, seeing that he treated Isaac, not as a reconciled enemy and ally, but as a prisoner of war, having actually placed guards over him, whose brute force the Greek defeated by a very excusable exercise of cunning. Despatching part of his army by land into the interior of the country, Richard embarked with the rest, and, sailing round the island, took all the maritime towns, and cut off Isaac's flight by sea, for he seized every ship, and even every boat, though of the smallest dimensions. Isaac fought another battle; but the contest was in every way unequal, for the people, whom he had governed harshly and corruptly, instead of fighting for him, by connivance, if not actively, assisted the invaders. Nicosia, the capital, surrendered, and Isaac's beautiful daughter fell into the hands of Richard, who gave her as a companion to Berengaria. Isaac, who doated on his child, lost all heart in losing her, and quitting a strong castle or fortified monastery in which he had taken refuge, he again sought the presence of the conqueror, and threw himself at his feet, imploring only for the restoration of his child and for the preservation of his own life and limbs. The conqueror would not restore his fair captive, and he sent her father away to be confined in a strong castle at Tripoli in Syria. The unfortunate captive was loaded with chains; but it is said that, in consideration of his rank, Richard ordered that his fetters should be forged of silver instead of rude iron.* If the Cypriots had been discontented with their old master, they had little reason to be satisfied with their new one. Richard's first act of government was to tax them to the dreadful amount of half of their movable property, after which he gave them an empty confirmation of the rights and privileges which they had enjoyed in former times under the emperors of Constantinople. The amount of provisions and stores of all kinds which he carried off was so considerable that it enabled the crusaders to carry on their operations with much greater vigour and success than they could otherwise have done. Having conquered, and in a manner settled, the island, he returned to Limasol, and at length celebrated his marriage with the Lady Berengaria, who was anointed and crowned by the Bishop of Evreux. All these important operations did not occupy more than a month, and, granting the present government of the island to Richard de Camville, one of the constables of the fleet, and Robert de Turnham,† Richard embarked with his fleet for Acre. Sailing between Cyprus and the Syrian coast, he fell in with a dromond, or ship of the largest size, which was carrying troops and stores to the great Saladin. He attacked her with his usual impetuosity, threatening to crucify all his sailors if they suffered her to escape She was taken after a gallant action, in which the superior height of her board, and an abundant use of the Greek fire, to which Richard's followers were as yet unaccustomed, gave her for some time a decided advantage. There were on board seven Emirs, or Saracens of the highest rank, and 650—some say 1500—picked men. Thirty-five individuals only were saved, the rest were either massacred or drowned, the great ship sinking before the crusaders could remove much of her cargo.*

On the 8th of June an astounding clangour of trumpets and drums, and every instrument of war in the Christian camp, hailed the somewhat tardy arrival of Richard and his host in the roadstead of Acre. The welcome was sincere, for their aid was indispensable. The French king had arrived some time before, but had done nothing, and the affairs of the crusaders were in a deplorable condition, for, after prosecuting the seige of Acre the best part of two years, they were not only still outside the walls, but actually pressed and hemmed in, and almost besieged themselves by Saladin, who occupied Mount Carmel and all the neighbouring heights with an immense army. The loss of human life was fearful. The sword and the plague had swept away six archbishops, twelve bishops, forty earls, and five hundred barons, whose names are recorded in history, and 150,000 of "the meaner sort," who went to their graves without any such record.† This heavy draft upon population had been supplied by fresh and continuous arrivals from all parts of Christendom, for, like a modern conqueror, Europe then believed that the fate of Syria and the East lay within the narrow circuit of Acre. The operations of the besieged, which had languished for some weeks, were vigorously renewed on Richard's arrival; but the kings of France and England quarrelled again almost as soon as they had met: the besiegers became again inactive, and then threw away some thousands of lives from mere pique and jealousy of each other. The French and the English soldiery took a full share in the animosities of their respective leaders; and of the other bodies of crusaders, some sided with Philip, and some with Richard. The Genoese and Templars espoused the quarrel of France, the Pisans and Hospitallers stood for England; and, on the whole, it appears that Richard's more brilliant valour, and superior command of money and other means, rendered the English faction the stronger of the two. The French tried to take the town by an assault without any assistance from the English, and then the English, wishing to have all the

* Isaac died a prisoner four years after.

† Several of the Italian historians say he sold the government of Cyprus to the Order of the Templars, but this does not appear very probable.

* Vinesauf.—Hove.—Bohadin, the Arab historian.

† We have taken the very lowest estimate. Vinesauf, who was present part of the time, calculates that 300,000 Christians perished during the long siege. Bohadin, and other Arabic writers, carry the number to 500,000 or 600,000!

Ramparts of Acre.

honours to themselves, repeated the like experiment without the French, and with the like ill success. These two fatal attempts showed the necessity of co-operation, and another brief reconciliation was effected between the rivals.

Richard's personal exertions * attracted universal admiration in the camp, and gave rise to fresh jealousies in the breast of Philip, of whom it has been well said, that, though brave, he had more of the statesman than the warrior in his character. At length, being disappointed of aid from Cairo, and seeing that Saladin could no longer penetrate the Christian lines to throw in provisions, the brave Mussulman garrison offered to capitulate. After some negotiation, during which Philip and Richard once more disagreed, it was finally stipulated that the city should be surrendered to the crusaders, and that the Saracens, as a ransom for their lives (for their property, even to their arms, was forfeited), should restore the wood of the holy cross, set at liberty 1500 Christian captives, and pay 200,000 pieces of gold. Some thousands of Saracens were detained as hostages in the fortress for the performance of these conditions. Immediately afterwards,—it was on the 12th of June, 1191,—the crusaders entered Acre, and Saladin, evacuating all his positions, retired a short distance into the interior. The banners of the two kings were raised with equal honours on the ramparts; but it appears that Richard took the best house in the place for the accommodation of himself and family, leaving Philip to take up his lodgings with the Templars. Scarcely, however, had they entered this terrible town ere the French king expressed his determination to return to Europe. The cause he alleged for his departure was the bad state of his health;* but this probably was not the true one —it certainly was not the only cause. Though Jerusalem was in the hands of the Mussulmans, there was a disputed succession to the throne among the Christians:—Guy of Lusignan had worn the crown in right of his wife, a descendant of the great Godfrey of Bouillon, the first Christian king of Jerusalem; but Sybilla was dead, and Conrad, Marquis of Monferrat and Prince of Tyre, who had married her sister, contended that the sole right of Guy of Lusignan was extinct by the demise of his wife, and that the crown devolved to himself as the husband of the legitimate heiress. The dispute was referred to the English and French monarchs, and it was not likely that they, who from the commencement of the crusade had never agreed in anything, should act with concord in this important matter. As soon as Philip reached Acre, without waiting for the opinion of Richard, he declared in favour of the claims of Conrad, who, without reference to the doubtful right of legitimacy, seems to have been much better qualified for a throne that was to be won and maintained by the sword than

* He worked like a common soldier at the heavy battering engines. When sick, he caused himself to be carried to the entrenchments on a silk pallet or mattrass.

* Philip had been sick. Some of the French chroniclers accuse Richard of having given him poison!

but Thomas Pitt met him by moving the order of the day. Lord North supported Thomas Pitt, and Fox was left in the small minority of 46 against 219. On the 23rd, the House adjourned for the Christmas holidays, the opinion of no very inconsiderable part of it still being, that the negotiations with France, Spain, and Holland would fall to the ground, and that a general peace was a distant event. But during the recess, the negotiations came to a pacific end. Numerous and strong indications of the revived spirit of the English nation are said to have hastened the march of diplomacy. In the autumn the gentlemen of the county of Suffolk proposed building a ship of the line at their own expense; their example was followed in other counties, contributions poured in rapidly, and in a short time the fund in hand exceeded 200,000*l.* At the same time, the wealthy Sir James Lowther offered the king a first-rate ship completely manned, victualled, and armed at his own and sole expense. The French court, which had been led to believe, by opposition orations, and other means, that any idea of prolonging the war was odious to all classes of Englishmen, and that the country was, to the last degree, impoverished and reduced, were greatly struck with these demonstrations, to which, probably, they attributed more importance than they were entitled to. Mr. Fitzherbert, then negotiating at Paris, compared the striking effect to that which would have been produced by a great naval victory on our part. The Spanish ambassador, the Count d'Aranda, at the opening of the negotiations at Paris, had urged the pretensions of his court with great violence, for he was distinguished by his antipathy to England. Dr. Franklin strongly supported the count, and put arguments into his mouth for proving that Gibraltar ought to be ceded to Spain as one of the prices of peace. As an equivalent, d'Aranda offered Oran, and then Oran and Porto Rico; but his propositions were met with determined negatives, his tone was soon lowered, and he acquiesced in the conditions of a treaty which the French court had determined to accept.

A.D. 1783.—On the 20th of January the preliminaries of peace were signed at Paris.*

By these arrangements his Britannic majesty acknowledged the United States to be free, sovereign, and independent, relinquishing all claims to the government, propriety, and territorial rights of the same; the boundaries were settled very liberally for the Americans; and they were secured in full liberty to take fish of every kind on the grand bank and on all other banks of Newfoundland, as also in the Gulf of St. Lawrence and all other places in the sea where they had formerly been accustomed to fish. His majesty agreed, with all convenient speed, without causing any destruction or *carrying away any negroes or other property of the Americans*, to withdraw all his armies, garrisons, and fleets from the United States. The navigation of the river Mississippi from its source to the ocean was for ever to remain free and open to the *subjects* of Great Britain and the *citizens* of the United States equally. Franklin, Jay, and all the American commissioners had sternly opposed any compensation to the American royalists, that unfortunate class of men who had strong claims on the British government; and Franklin had even declared that they would rather risk a war by themselves alone, than consent to any indemnification for the enemies of, and *traitors* to, their country. A clause was, however, agreed to and inserted in the treaty—certainly with the intention that it should, and with the fore-knowledge that it would, remain a dead letter on the other side of the Atlantic—that congress should *earnestly recommend* it to the legislatures of the respective States, to provide for the restitution of all estates, rights, and properties which had been confiscated, belonging to real British subjects; and also the estates, rights, and properties of persons resident in districts in possession of his majesty's arms, and who had not borne arms against the United States; and that persons of *any other descriptions* should have free liberty to go to any part of the States, and therein remain twelve months unmolested in their endeavours to obtain the restitution of such of their estates, &c., as had been confiscated; and that congress should also *earnestly recommend* a reconsideration and revision of all acts or laws regarding these matters, so as to render them perfectly consistent, not only with justice and equity, *but with that spirit of conciliation which, on the return of the blessings of peace, should universally prevail*; and that congress should also *earnestly recommend* that the estates, &c., should be restored to them, they refunding to any persons who might be now in possession the *bonâ fide* price (*where any had been given*) which such persons might have paid on purchasing any of the said lands, rights, or properties, since the confiscation. It was, however, expressly agreed, that all persons whatsoever who had any interest in confiscated lands, either by debts, marriage settlements, or otherwise, should meet with no impediments in the prosecution of their rights; that there should be no future confiscations made, or any prosecutions commenced against any person for the part which he might have taken in the present war—that no person should, on that account, suffer any further loss or damage, either in person or property, and that all those who might be in confinement on such charges at the time of the ratification of the treaty in America should be immediately set at liberty.

The conditions of the treaty which regarded France were—that she should have the right of fishing at Newfoundland, and in the Gulf of St. Lawrence, on the same footing as at the last peace—only, to prevent future disputes, the limits were more accurately defined and restricted; that she should again be put in possession of the small islands

* The American signatures were—John Adams. B. Franklin, John Jay, Henry Laurens. Before signing, Franklin is said to have put on triumphantly the dress suit which he had never worn since the day of Wedderburn's attack in the British privy council.

of St. Pierre and Miquelon on the Newfoundland coast; that in the West Indies she should keep Tobago, and have St. Lucie restored to her, she, on her part, restoring to Great Britain, Grenada, St. Vincent's, Dominica, St. Christopher's, Nevis, and Montserrat; that on the African coast she should keep Senegal and Goree, Great Britain retaining Fort James and the River Gambia; that in the East Indies she should have back Pondicherry and all that she had lost, together with liberty to carry on her accustomed commerce, and also to fortify Chandernagore; and finally, all the stipulations against fortifying Dunkirk, and making it a great port—stipulations which, to very little purpose, had been inserted in so many successive treaties—were omitted and renounced.

Spain procured better terms than she had ever obtained since the peace of St. Quintin. The two Floridas and Minorca were ceded to her, she renouncing all claim to the Bahama islands, which had been recaptured by the British before the execution of the treaty. In the Bay of Mexico, the British were to be strictly confined to the district between the rivers Honda and Wallace, and, while allowed to cut logwood in the Bay of Honduras, they were on no account to erect any forts or block-houses, without the protection of which they had always found it impossible to carry on their trade.

The Dutch agreed to a truce, with the understanding that there was to be a mutual restoration of conquests between them and Great Britain; but the preliminaries were not arranged till nearly eight months after.

No notice whatever was taken in the treaty of the principles of the Armed Neutrality, which no British minister could have ventured to admit.

Parliament re-assembled at the time appointed, and was occupied for a day or two on the affairs of Ireland. But, on the 24th of January, when the preliminaries of peace were laid before both Houses, ministers were attacked with the utmost violence, and the nation was astonished by a close coalition between those old adversaries, Lord North and Mr. Fox. Nearly the whole Rockingham party had followed Fox, and it was evident that their strange union with North's friends and the great body of the Tories would drive Shelburne from his post. Fox, with all his abilities, could hardly have succeeded in obtaining better terms of peace; and he had expressed or implied a readiness to yield quite as much as Shelburne had done in order to put an end to the horror and expenses of the war; his party had repeatedly declared that a high price must of necessity be paid for the inestimable blessing; but this hindered neither him nor them from going into an extreme condemnation of the whole treaty. In the Commons, the address of thanks to his majesty for ordering the preliminary articles of peace to be laid before the House was moved on the 17th of February by Mr. Thomas Pitt, and seconded by Mr. Wilberforce, at this period the bosom-friend of William Pitt. It was opposed by the entire strength of the coalition, the antagonists in so many fierce debates acting together as if they had always had one will and one principle, and as if Fox and Burke had not a hundred times threatened Lord North with the block for persevering in the war. The first amendment, "to reserve to the House the power of disapproving the conditions of the treaty," was moved by Lord John Cavendish; and Lord North moved the second, which was "to express the regard of the British Parliament for the unfortunate American royalists." It was admitted, however, on all hands, "that the preliminary articles for which the public faith was pledged should be kept inviolate." Ministers urged that a peace was the great desire of parliament and of the country, and that the only thing to be considered was, whether the peace they had been enabled to procure were not preferable to the war which they found raging when they accepted office. In defending their conduct they only made use of arguments which had been worn threadbare by the Rockingham party, such as the hopelessness of the struggle, the total want of any allies, the rapidly increasing national debt, &c. They held that the sacrifices they had made were neither numerous, nor, in reality, important; and that better terms could not possibly have been procured without prolonging the war at an enormous cost. They declared that even one year of hostilities would have cost the country from sixteen to twenty millions. On the other hand, the coalesced opposition proclaimed that a worse peace could not have been concluded—that the treaty was replete with infamy and ignominious sacrifices, dismembering the British empire everywhere, and introducing disunion in the most valuable parts of it. Fox challenged ministers to produce the treaty which he had sketched a few months before, and which, he said, would prove how far he had been from yielding things which they had yielded. The course of events in that part of the world, more than any preconceived scheme, had led Lord North to fix an attentive and hopeful eye on the East Indies, and to promise himself there something more than a compensation for our loss of dominion in other parts. He saw with unaffected anxiety that the treaty, by giving the French a fresh footing on the coast of Coromandel, might shake our rising empire and re-introduce all the anarchy of the old system. In his speech he dwelt with great ability upon this point, predicting hostile leagues between the French and the native princes, and the speedy interruption of our valuable commerce. He condemned nearly every concession made, but more emphatically the boundaries allowed to the United States, the liberty given to the French and Americans to fish on the banks of Newfoundland, and the surrender to Spain of the Floridas and Minorca. He severely censured the abandonment of the unfortunate American royalists to the fury of their revengeful countrymen, and the degrading notion of the British

government sending prayers and petitions to congress in favour of those victims. Mr. Powys distinguished himself among the many who condemned as infamous and monstrous the coalition between men so different as Lord North and Mr. Fox. He said that this was indeed a season of strange confederacies — arbitrary despots were figuring as the protectors of an infant republic, and in that House the lofty assertors of the power and prerogative of the king were uniting in close alliance with the humble worshippers of the majesty of the people. Burke said there was nothing so monstrous in such an alliance, if any such had been formed—which he had yet to learn. Fox seemed fully to admit the formation of the alliance, and he undertook its defence most eloquently. One of the best arguments he could have used would have been to declare that orators in opposition always say a great deal more than they mean, or more than they know to be true; and that the best of oratory is often little more than an acting for effect. He reminded the House that he had often paid a tribute to the private worth of Lord North; and that now that the American war, which had caused the hostility between Lord North and him, had ceased, their animosity also ought to end. He declared that he had ever found Lord North open and sincere as a friend, and honourable and manly as an enemy, above practising subterfuges, tricks, and stratagems. And no man could utter with greater truth than Fox, whose very vices were better or more generous things than some men's virtues, the words which he added—"It is not in my nature to bear malice, or live in ill-will; my friendships are perpetual, my enmities not so: *amicitiæ sempiternæ, inimicitiæ placabiles.*" This most animated debate was prolonged till half-past seven in the morning, when both the coalition amendments were carried by a majority of sixteen—the numbers being 224 to 208. In the House of Lords an amendment similar to that of Lord North was moved by the Earl of Carlisle, and rejected by a majority of thirteen, or by 72 to 59. Four days after— on the 21st of February— the coalition followed up their victory in the Commons; and Lord John Cavendish moved a series of resolutions condemning the recent treaty, though still pledging the house to preserve the peace inviolate. Lord John, forgetting how very recently he and his friends had pursued the same course, reprehended men who, with un-English minds, could permit their gloomy imaginations to brood perpetually over our own losses, debts, and disgraces, without looking at the actual state of our enemies. He said, and with perfect truth, that France and Spain were almost ruined by the war; that Holland was in a reduced and helpless condition; and that, in America, most of the people had refused to pay the taxes ordered by congress for continuing the contest. Fox made a brilliant display, and Pitt, though ill and suffering, rose to reply to him: he spoke from one o'clock till four o'clock in the morning, defending the treaty, article by article, and vehemently reproaching the coalition, which he called an "ill-omened and baneful alliance." He pronounced a high eulogium on the eminent abilities, character, and patriotism of Lord Shelburne, and expressed his own indifference to the loss of power and the want of fortune.* Other hot attacks were made on the coalition, which was now defended by Lord John Cavendish and by Lord North, as well as by Fox, who said that it had arisen only from the imperative necessity of times and circumstances, and that it was intended to preserve the constitutional vigour of the state. Lord John compared it to the coalition of parties in 1757, which had brought Pitt's father into office, with his old antagonist the Duke of Newcastle, and which had ended in a successful and glorious administration. His lordship declared that he took pride in being one of the authors of the coalition, which might yet save the country. Lord North applauded the amiable and upright character of Lord John Cavendish, and paid a longer and a warmer tribute to the abilities, eloquence, genius, and generous nature of Fox. "While I admire the vast extent of his understanding," said North, "I can rely on the goodness of his heart. As an enemy I always found him formidable, but in proportion as I had reason to dread him while our principles were adverse, I anticipate greater prospect of success now that we unite with one mind and one heart in the cause of our country." He allowed that in the heat of debate that great orator had delivered many bitter things against him, but it should be remembered that he had never charged him with any want of integrity. There was more said in the debate upon the coalition than about the treaty; but, after four in the morning, Lord John Cavendish's resolutions were carried by a majority of seventeen, the numbers being 207 to 190.

Immediately after this second defeat Lord Shelburne resigned, but the rest of the administration remained, and Pitt even continued in office five weeks after the first lord of the treasury had retired, a circumstance which was considered as unprecedented. According to one who was in his closest intimacy, Pitt, on, or even before, the 24th of February, was sent for by the king, who made him the "very surprising proposition" to form a cabinet of his own.† On the 25th Dundas moved an adjournment for three days, to afford time for the forming of a new cabinet. This motion was readily agreed to; but the three days passed without anything being settled, and when the House met again (on the 28th) neither Dundas nor any one else on that side said a word about the matter. It appears that in the course of that day Thomas

* "Pitt," says Wilberforce, "spoke three hours; till four in the morning; stomach disordered, and actually holding Solomon's Porch (a portico behind the old House of Commons) door open with one hand, while vomiting during Fox's speech, to whom he was to reply."—*MS. Mem. in Life of Wilberforce by his Sons.*

† Wilberforce; Diary, in Life by his Sons. At this time Pitt and Wilberforce were almost inseparable; Pitt, Bankes, and Pepper Arden dining and sleeping several days in the week at Wilberforce's villa at Wimbledon.

Townshend had been sent to persuade Pitt to accede to the king's wishes, but all in vain.* Day after day elapsed, and still all was undecided. On the 2nd or 3rd of March the king sent for Lord North, having previously seen his father, the Earl of Guildford. His majesty insisted that Fox should be given up and excluded; North refused, and they parted on bad terms. On the 5th the king saw Lord North a second time, but he could not prevail upon him to break the coalition.† On the 12th his majesty sent for North a third time, and then commissioned him to desire the Duke of Portland, who had succeeded to the great party influence of the Marquess of Rockingham, to form an administration. But fresh difficulties arose: the Duke of Portland would in no way break the league which had been formed between his party and the party of Lord North; the king still tried to exclude Fox, his animosity to whom was certainly not moderated by any Christian charity or by any constitutional deference; and Fox, and some of his friends, could not agree as to the admission into the cabinet of Lord Stormont, whom they had rejected before; and on the 24th of March it was currently reported that all negotiation between the king and the coalition was broken off.‡ On that evening Mr. Coke, the popular member for Norfolk, moved an address requesting his majesty "to consider the distracted and unsettled state of the empire, and comply with the wishes of the House, by forming an administration entitled to the confidence of the people, and such as might tend to terminate the unfortunate divisions and distractions of the country." The debate which ensued was rendered remarkable by Lord North's solemn denial of having ever found, while in office, any secret influence behind the throne—for that cry was again revived and was now applied, not to Lord Bute, who had almost disappeared from the public eye, but to Mr. Jenkinson, afterwards Earl of Liverpool. Coke's motion was carried in a very full House with only four dissentient voices. His majesty replied to this address, that it was his "earnest desire to do everything in his power to comply with the wishes of his faithful Commons." But, though more than a month had passed since the resignation of Lord Shelburne, nothing was done. On the 31st of March Lord Surrey moved another and stronger address, "to assure his majesty that all delays in a matter of this moment have an inevitable tendency to weaken the authority of his government; and most humbly to entreat that he would take such measures as might quiet the anxiety and apprehension of his faithful subjects." But, as it was intimated by Mr. Pitt that he had that day resigned as chancellor of the exchequer, the motion was ultimately withdrawn. Two days after this the king surrendered at discretion to the coalition, and an end was put to this long ministerial interregnum, which, however, was not so long by six weeks as the ministerial hiatus in the year 1757. The Duke of Portland became first lord of the treasury, Lord North secretary for home affairs, and Mr. Fox secretary for foreign affairs; the Earl of Carlisle got the privy seal; Lord John Cavendish was reappointed chancellor of the exchequer; and Admiral Lord Keppel, who had quitted the Shelburne party, and resigned in January on account of the treaty of peace, was again placed at the head of the admiralty. The wishes of the king were complied with as regarded Lord Stormont, who became president of the council; but that other king's man, Lord Chancellor Thurlow, who had been admitted before at the formation of the Rockingham cabinet, when Stormont had been excluded, was now, in his turn, barred and put to the ban: the great seal was given in commission to Lord Loughborough, Mr. Justice Ashhurst, and Mr. Baron Hotham; and the aged Lord Mansfield accepted the temporary office of speaker of the House of Lords; Lord Townshend became master-general of the ordnance, Colonel Fitzpatrick secretary at war, Burke again paymaster of the forces, and Charles Townshend treasurer of the navy. These seven—Portland, North, Fox, Cavendish, Carlisle, Keppel, and Stormont—formed the new cabinet. Lord Sandwich, who still enjoyed the protection of North, and whose poverty was notorious, was gratified with the rangership of St. James's and Hyde Parks; and his son, Lord Hinchinbroke, was made master of the buckhounds; Mr. Wallace and Mr. Lee took again the places of attorney and solicitor general; Sheridan, whose poverty and eloquence were equally conspicuous, became secretary to the treasury, having for his colleague Burke's brother Richard; Lord North's son (Colonel North) and the Honourable Mr. St. John were appointed under secretaries of state; the Earl of Northington was made lord-lieutenant of Ireland, and Mr. William Windham secretary for that kingdom. Among other household changes the Earl of Jersey was appointed captain of the band of pensioners. No pains were taken at court to conceal the dislike to all these changes; and, as the coalition, in spite of all the eloquence employed to defend it, was at first startling and then odious to the country, it was presently seen that this administration would not last longer than Lord Shelburne's. Fox, who was the real head of it, saw that his popularity was declining, and the king's aversion to him increasing every day; and that, of all experiments in politics, coalitions are apt to prove the most dangerous.

One of the first measures which the new cabinet were obliged to propose, was a loan of twelve millions; and a stamp-duty on receipts soon followed. As the loan presently bore a high premium, it was attacked by the present opposition precisely in the same way in which Fox and his friends had attacked Lord North's loan in 1781. The defence, also, was much the same as on that occasion, with the additional strong argument that Lord Shelburne's ministry had left an empty trea-

† Id. Id. ‡ Id. Id.

sury. The stamp-duty, also, was furiously assailed by the opposition, and warmly defended by the new administration as an excellent mode of raising revenue. Pitt, while chancellor of the exchequer, had been importuned to reproduce his scheme of parliamentary reform; but he declined the undertaking till the cabinet was changed. On the 7th of May he moved three resolutions:—1. That it was necessary to adopt measures for preventing bribery and expense at elections. 2. That, when the majority of voters in any borough should be convicted of corruption, the borough should be disfranchised, and the minority, not convicted, entitled to vote for the county. 3. That an addition should be made to the number of county members, and of representatives of the metropolis. Varying upon that point, as his father had done before him, Pitt now defended the rotten boroughs, as necessary deformities, which might disfigure the constitution, but which could not be removed without risking a terrible catastrophe. As Chatham had once done, he maintained that increasing the number of county members would give new life and vigour to the constitution. He would not fix the specific number, but he gave it as his opinion, that, including the new members for the metropolis, not less than one hundred representatives ought to be added to the House. After a long debate, and a very remarkable speech from Lord North, who ridiculed the project, the motion was rejected by 293 to 149. Some very important debates took place on the modes of arranging our commercial intercourse with the United States, the importance of whose trade was ably explained by Gibbon's friend, Holroyd (now Lord Sheffield), both in speeches in parliament and in publications. A bill was passed for repealing the restraining act, and other obstacles were removed by a temporary bill, vesting in the crown the power of making future regulations. The fate of the American royalists was also discussed, and with much good feeling on all sides. Scarcely any one believed that congress, or the several state governments, would pay much attention to the recommendations of England; or that the unfortunate partisans would be allowed to recover their property, or had any other chance of compensation than what might be found in the generosity of Great Britain. An act was passed appointing commissioners to inquire into their losses and services; and a committee of supply agreed to allow half-pay to all the American officers who had borne arms for the king, though only in volunteer corps. A host of these royalists soon found themselves compelled to quit their native country for ever. Counting all classes and conditions, they subsequently received, in various parliamentary grants, somewhat more than twelve millions of money.

On the 17th of June a remarkable petition—the first of so many—was presented to parliament by the Quakers for the total abolition of the slave trade. It was considered as little more than a romantic aspiration of the amiable enthusiasts who had sent it up, and after a very short debate it was ordered to lie upon the table. It was not until Clarkson and Wilberforce had entered upon their high mission, and had persevered in it for some years, that the feelings of the nation were awakened and excited by this great question. On the 23rd of June a message was delivered from the king to the House of Commons, recommending to their consideration the forming of a separate establishment for the Prince of Wales, who had now attained his twenty-first year, and whose debts and extravagance were already the talk of the town. As the prince was exceedingly intimate with Mr. Fox, and linked with the coalition ministry, which still commanded a great majority in the Commons, there was no risk of parliamentary parsimony. But the king, who was very anxious to break the connexion between his heir and his present ministers, had put his decided negative upon the Duke of Portland's plan for allowing the prince a *hundred* thousand a-year, saying that he could not think of burthening his people by so large a grant, and encouraging the prince in his habits of expense; and, though Portland and his colleagues had bound themselves to the prince to procure him the larger amount, they were obliged to submit to the king's will, which was that *fifty* thousand a-year should be allotted by himself out of the civil list, and that Parliament should merely grant *sixty* thousand pounds as an out-fit. A vote to this effect was carried with the full knowledge that the House would soon be called upon again to pay the debts accumulated on the civil list. The prince, fully aware that the limitation of his income proceeded from his father alone, continued his close intimacy with Fox, whom his father abhorred, and gave all the countenance he could—which was little enough at this moment—to the coalition. On the 16th of July Parliament was prorogued. Mr. Pitt went over to France with Mr. Wilberforce and Mr. Elliot to improve his French, and to take a glance at the court. The king remained groaning under the ministry which had been imposed upon him.

On the 2nd of September preliminary articles of peace with the Dutch were signed at Paris, Great Britain obtaining the cession of Negapatam, and restoring Trincomalee and all her other conquests. On the very next day the definitive treaties with France, Spain, and America were signed at the same place. Shortly after, when Adams arrived as envoy from the United States, the king said to him, at his first audience—"I was the last man in the kingdom, Sir, to consent to the independence of America; but, now it is granted, I shall be the last man in the world to sanction a violation of it." Adams, it is said, was much affected with the interview, and retired from it with altered sentiments as to the real character of George III. Jay, also, who had written so considerable a part of the American manifestos and revolutionary documents, in which the king was described as an unfeeling and savage tyrant,

thirsting for the blood of his subjects, was constrained to confess, a year or two later, when he was brought personally in contact with him, that he had overcharged his picture, that the king had many virtues and no inconsiderable share of ability, and that, instead of being hated, he was much beloved by the English people.* Of all the public men whom the revolution had produced, and who afterwards visited England, Jefferson appears to have been the least susceptible of a return to friendly feeling, and the most disposed to underrate, not merely the character of the sovereign, but also the character of the people, and the beauty and productiveness of the country.†

When parliament re-assembled—on the 11th of November—the Prince of Wales took his seat in the House of Peers as Duke of Cornwall; and Fox produced his famous India Bills, which became the immediate cause of the dismissal of the coalition ministry. The first of these bills was for "vesting the affairs of the East India Company in the hands of certain commissioners, for the benefit of the proprietors and the public." Fox proposed that these directors should be seven in number, to be nominated, *in the first instance by parliament*, and afterwards by the crown, to act for four years; but there were to be added nine assistant-directors, to be chosen in open election by a majority of the proprietors of East India stock. The seven directors were to be intrusted with the entire management of the territorial possessions and revenues of the company; and the nine assistant-directors acting under them were to manage the commercial concerns of the company; and both classes were to be removeable by the king, *on address of either House of Parliament*. The second bill,—"for the better government of the territorial possessions and dependencies in India"—related chiefly to the powers to be granted to the governor-general and council in India, and to the conduct to be observed towards the natives. It contained much that was good and admirable, and was decidedly calculated to attain the end proposed by Fox—to annihilate tyranny and oppression, and improve the political and social, the moral and physical, condition of thirty millions of people. But it was opposed as a most dangerous measure on grounds altogether distinct from that of its fitness or unfitness for securing a good government to the people of India. According to a rumour current at the time, the cabinet-excluded Lord Thurlow, who had frequent access to the king, early availed himself of his opportunities to prejudice the royal mind by representing the whole scheme as calculated to render ministers, who, in fact, would have the appointment of the seven great directors, independent of the crown, through the mighty India influence they would acquire; and as containing many clauses that must injure, and that might even subvert, the British constitution. Fox, however, encountered no opposition till the first of the two bills had been once read—on the 20th of November—and it was moved that it should be read a second time that day week. This motion was opposed by Mr. W. W. Grenville (afterwards Lord Grenville), who denounced the plan as one of the most alarming nature, involving the most daring violation of the chartered rights of the company, and putting an extent of patronage into the hands of ministers which would enable them to defy both the parliament and the crown. Grenville moved that the second reading should be postponed till after the Christmas recess; and he was supported by his relative, Pitt, by Dundas, Jenkinson, and other members, including Mr. John Scott, afterwards Lord Chancellor Eldon, who on this night spoke in parliament for the first time, as did also, but on the other side of the House, Mr. (afterwards Lord Chancellor) Erskine. Fox exerted himself greatly; but Lord North was absent on account of indisposition. Grenville, contented with having made a beginning, did not press his motion to a division. The second reading, therefore, came on on the 27th, and then there arose one of the longest and most animated of debates. Pitt moved the adjournment of the debate till the next day, on the pretext that members ought to have time allowed them to study certain papers and statements of figures on which ministers grounded some of their arguments. Fox, who protested against any delay at this stage, again exerted himself with wonderful eloquence and ability; and at half-past four in the morning Pitt's motion was rejected by 229 against 120. The bill was accordingly read a second time. On the 1st of December another great struggle took place on the motion for going into committee. Burke, who is said to have been even more than Fox the real author of the India scheme, was the principal orator on this occasion, and delivered a speech which has never been exceeded in the British parliament, equally full of minute information and eloquence—for Burke had long and laboriously studied the complicated affairs of India. Lord North, though still unwell, took a warm part in this night's debate, defending the bill. Pitt pledged himself that, if the House would throw out the present bill, he would bring forward another, which would answer the exigencies of the case, without the violence or danger of the measure then before them. Again it was half-past four in the morning before a division took place; but then the motion for going into committee was carried by 217 against 103. On the 8th of December the third reading was carried by 208 against 102. These were great and triumphant majorities, and Fox, it appears, thought he had reason to hope for the concurrence of the Lords, although the king had resolutely opposed a new and copious creation of Whig peers. On the very next day, the 9th of December, the bill was carried up to the Lords by Mr. Fox, attended by a great body of the Commons. Though allowed, as a matter of course, a first reading, it was at once

* Life and Opinions of Jay, by his Son.
† See Jefferson's own Letters in Tucker's Life.

reprobated by the Duke of Richmond, by Lord Thurlow, and by Lord Temple, who since his recall from the lord-lieutenancy of Ireland had risen greatly in court favour, and had had repeated interviews with the king to concert measures for relieving him from the coalition. Temple described the whole bill as *infamous*. Thurlow, bending his heavy brows, making up his most solemn face, and looking full in the face of the Prince of Wales, who was attending the debate as a peer, to vote for it, proclaimed, with his sonorous voice, that, if the bill passed, the crown of England would no longer be worth a man of honour's wearing. "The king," he added, "will, in fact, take the diadem from his own head and place it on the head of Mr. Fox!" The second reading was fixed for the 15th. On that day the Duke of Portland, the nominal premier, said he must mention a matter that materially concerned the constitution of the country:—a rumour had prevailed for the last three days that had given him very great alarm; and in that rumour the name of the most sacred character in the kingdom had been aspersed, and the name of one of their lordships, he hoped, abused. The report alluded to, and which appears to have been substantially true, was, that the king, in a private audience, had given Lord Temple a note, written in his own hand, stating "that his majesty would deem those who voted for the bill not only not his friends, but his enemies; and that, if Lord Temple could put this in still stronger words, he had full authority to do so." After a few words from the Duke of Richmond, who read a newspaper paragraph in which Earl Temple was mentioned by name, the latter noble lord rose and said that his defence must be unparliamentary, as the attack and the mention of his name had been, but that he must insist upon being heard. He called upon the noble duke at the head of the treasury to make a specific charge, which he would meet directly: he allowed that his majesty had recently honoured him with a conference, and that he had given his advice; what that advice had been he would not then say; but he would tell their lordships negatively what it was not:—it was not friendly to the principle and object of the bill! Earl Fitzwilliam professed to receive this as a satisfactory explanation, and to understand that Lord Temple had totally denied the alarming rumour, which was therefore to be regarded as the idle breath of calumny,—the miserable artifice of the day. But Temple immediately begged that the noble earl would not give to his words an interpretation which they did not bear. He had said that the rumour, whatever it was, affected not him, while flung out in a loose and vague manner. What the newspaper reports might be, he knew not and cared not. If the noble duke at the head of the treasury had spoken out, and said clearly what he had alluded to, he should have known what to reply. He begged it to be clearly understood that he had explained no tittle of the conference which he had held with his majesty in the closet: he had neither said what was the advice he had given, nor what the result of the conference; but that he never should be ashamed to avow the advice, nor would he hesitate to publish what he was empowered to communicate when he was properly called upon to do so. The real effect of the advice and of the king's billet was seen upon a division. After the bill had been read a second time, the opposition moved for an adjournment till the following day, in order to give a further opportunity for hearing evidence and counsel in defence of the rights of the East India Company, who had petitioned against the bill; and this motion was carried against ministers by a majority of eight, the numbers being 87 against 79. Several lords, chiefly such as were of the king's household, had a few hours before withdrawn their proxies which they had entrusted to ministers; and the Prince of Wales did not vote at all. On the very same evening the Commons, on the motion of Mr. Baker, took into consideration the rumour about Lord Temple and the king's strong note, and voted the two following resolutions:—1. "That it is now necessary to declare that, to report any opinion, or pretended opinion, of his majesty, upon any bill, or other proceeding, depending in either House of Parliament, with a view to influence the votes of the members, is a high crime and misdemeanor, derogatory to the honour of the crown, a breach of the fundamental privileges of parliament, and subversive of the constitution of this country. 2. That this House will, on Monday next, resolve itself into a committee of the whole House, to consider the state of the nation." The majority which carried these resolutions was nearly two to one, the numbers being 153 against 80. In the course of the debate Fox declared, among other things, that the rumour did not rest upon mere newspaper reports or verbal gossip. "There is," said he, "a written record to be produced. This letter is not to be put in the balance with the lie of the day." And he pulled from his pocket and read a copy of the note which the king was said to have given to Temple. When Fox had sat down, after a long speech, W. Grenville stated that, having taken down the words read as the king's note, he had shown them to his noble relation (Temple), and his lordship had authorised him to say that such words had never been made use of by him. Fox, in reply, said that, if Mr. Grenville had authority to say no more than what he had said, he had authority to say nothing to the purpose; and he asked if the honourable gentleman or any other person would affirm that the noble earl had not made use of some words to the same effect as those which he had read—words calculated to influence the minds of men by the use of the royal name. It appears that no answer was given to this direct question. Fox followed up a tremendous diatribe against back-stairs' lords and bedchamber politicians, and closet conferences, by the declaration that he was willing and ready

to forego all such underhand influence—that he would not even be the minister of a great and free people on any condition derogatory to his honour and independence as a private gentleman. In the debate Pitt, with the cold, sarcastic manner which was natural to him even in his early days, said that ministers ought instantly to resign; as it was evident, even from their own confessions, that they had lost the confidence of the sovereign. The reply of Fox to this argument was tremendous; and in it Pitt's "usual consequence and triumph" were not overlooked. He spoke of his own glorious and independent majority in the Commons, and of the private cabal consequently convened elsewhere. "It was natural," said he, "to expect that I, for one, would not be backward to spurn at such an interference. This circumstance affords all the advantage they wished. I could not be easy in my situation under the discovery of such an insult; and this critical moment is eagerly embraced to goad me from office, to upbraid me with the meanness of not taking the hint, to remind me in public of the fate which I owe to secret advice. When that hour comes—and it may not be very distant—that shall dismiss me from the service of the public, the honourable gentleman's example of lingering in office after the voice of the nation was that he should quit it shall not be mine. Although I did not come in by the fiat of majesty, by that fiat I am not unwilling to go out." He added, however, that it was necessary to act with caution as well as spirit. "We have been repeatedly reminded," said he, "of our disagreeable situation; but the chief fact to which we owe this inconveniency was only *not* foreseen from an idle opinion that no man could be base and servile enough to undertake it! But now our eyes are open to transactions of which ocular demonstration only could have convinced us. We only beg that, when the revolution which it is supposed may be effected in the royal breast is authentically announced, we may be allowed to judge for ourselves. I will apprize gentlemen, however, that the situation of ministers is at present extremely delicate. They stand pledged to the public, and a very honourable majority of this House, not to relinquish the affairs of the state while in so much anarchy and distraction. . . . . I accepted of office at the obvious inclination of this House; I shall not hold it a moment after the least hint from them to resume a private station." As a dissolution of parliament was apprehended, Mr. Erskine, as an addition to the resolutions already carried, moved another, pledging the House to pursue, with unremitting attention, the consideration of a suitable remedy for the abuses in the government of India; and concluding with the words—"that this House will consider as an enemy to this country any person who shall presume to advise his majesty to prevent or in any manner interrupt the discharge of this important duty." All strangers were excluded; but it appears that in the debate the motion was warmly attacked as an invasion of the king's prerogative. The entire resolution was, nevertheless, carried by 147 against 73.

All this passed on Wednesday, the 17th. The next day was employed by the king in making dispositions for the formation of a new cabinet; and at twelve o'clock at night on Thursday, the 18th, a messenger delivered to Mr. Fox and Lord North his majesty's orders, "that they should deliver up the seals of their offices, and send them by the under-secretaries, Mr. Frazer and Mr. Nepean, as a personal interview on the occasion would be disagreeable to him." Fox, who had not the habit of early hours, complied immediately; but Lord North was a-bed and asleep, and when he woke he could not lay his hand on his seal, which he had entrusted to the keeping of Colonel North, his son, and one of his under-secretaries. At last, however, the colonel was found, and the precious symbol was sent to St. James's. The king then delivered both seals into the hands of Lord Temple, and returned to the queen's house. On the following day—the 19th of December—Temple sent letters of dismission to all the other members of the coalition cabinet. At the same time, Pitt, though only in his twenty-fifth year, was appointed first lord of the treasury and chancellor of the exchequer; Earl Gower, president of the council; and Temple, one of the secretaries of state. In the afternoon, when the Commons assembled, Lord North confirmed the reports in circulation, by taking his place on the opposition bench. He was presently followed by Fox, who sat down by his side, and then by Burke, General Conway, General Burgoyne, Lord John Cavendish, Lord Surrey, and other conspicuous members; and, the House beginning to fill soon after, a most formidable body appeared on the opposition side, while the benches on the treasury side were very thinly occupied. The first thing done was the moving a new writ for the borough of Appleby, for which Pitt had sat. Mr. Dundas then moved that, in order to carry the land-tax bill through the House in time to meet large payments that were to be made by the treasury on the 5th of January, the House should meet on the next day—a Saturday—instead of being adjourned, as usual, till the Monday. As the expelled party thought that the court meant to hurry over the voting of the supplies, that it might immediately proceed to a dissolution, Mr. Fox rose and opposed this motion, which was rejected without a division. In his speech, Fox averred that a dissolution would draw down dreadful calamities upon the nation; he declared that he meant not to question the prerogative of the crown, but must hold ministers answerable for any wanton or imprudent exercise of that prerogative; that no one could say that such a prerogative ought to be exercised merely to suit the convenience of *an ambitious young man;* and that if a dissolution should take place without solid and substantial reasons being assigned for it, he would in the next parliament move a very serious inquiry into the

business, and bring the advisers of it to account. Earl Temple, the active agent in the overthrow of the coalition, now resigned on the 22nd the place which he had accepted on the 18th; upon which Viscount Sydney was appointed secretary of state for the home, and the Marquess of Carmarthen for the foreign department. At the same time, the new cabinet was completed by the additional appointments of the Duke of Rutland as lord privy seal, of Earl Howe as first lord of the admiralty, and of Lord Thurlow as chancellor. A few weeks afterwards, however, the Duke of Rutland was transferred to the government of Ireland, on which Earl Gower took the privy seal, and was succeeded as president of the council by Lord Camden. The Duke of Richmond was made master-general of the ordnance without a seat in the cabinet; Mr. William W. Grenville and Lord Mulgrave became joint paymasters of the forces; Mr. Dundas, treasurer of the navy; Mr. (afterwards Sir) George Rose and Mr. Thomas Steelé, secretaries of the treasury; Mr. Lloyd (afterwards Lord) Kenyon, attorney-general; and Mr. R. P. Arden, solicitor-general.

The very large majority by which the ministers found themselves opposed in the House of Commons permitted the land-tax to pass; but on the very same day—the 22nd—Mr. Erskine moved an address to his majesty not to dissolve the present parliament, but to be graciously pleased to hearken to the advice of his faithful Commons, and not to the secret advices of particular persons, who might have private interests of their own, separate from the true interests of his majesty and his people. Pitt had not yet been re-elected, but his friend Mr. Bankes, of Corfe Castle, declared that he was authorised to state that he had no intention whatever to advise either a dissolution or a prorogation; and that, if either of these measures were resorted to, Mr. Pitt would unquestionably resign! Erskine's motion was, nevertheless, pressed, and was finally agreed to without a division. During this debate Lord North eulogised Fox as the best and the most honourable of men and statesmen. Some one spoke of Mr. Fox as having resigned. "No," said North, "my right honourable friend did not resign; *he was turned out; I was turned out; we were all turned out.*" The king's answer to the address moved by Erskine was reported to the House on the 24th (Christmas-eve), and it contained an assurance that his majesty would not interrupt their meeting by any exercise of his prerogative either by prorogation or dissolution. Fox immediately remarked that this was merely a promise that they should not be prevented from meeting again after the Christmas recess; and he suggested that in the present circumstances that recess ought to be a very short one. He said he knew that the present ministers could not stand long, and he spoke of the youth of some of them as the only possible excuse for their rashness in accepting office at all. It was resolved to adjourn only till the 12th of January.*

A.D. 1784.—When the House reassembled, Pitt and the other members of the government who had been re-elected appeared in their places. Fox immediately moved the resumption of the committee on the state of the nation. After a debate which lasted till two o'clock in the morning the motion was carried against Pitt; but by a majority of no more than thirty-nine—or, by 232 against 193. Imputations were thrown out that the ministerial minority had been raised by unfair methods and influences; but Erskine nevertheless described the youthful premier as about to be hurled from his eminence in a few hours. In this fierce contention men thought not of rest. The House immediately resolved itself into committee, and Fox moved a resolution declaring "the payment of any public money for services voted in the present session, after parliament should be prorogued or dissolved, if such events should take place before an act should have passed appropriating the supplies to such services, to be a high crime and misdemeanor." This was carried, after a short debate, without a division. Fox then moved another resolution, deferring the second reading of the Mutiny Bill till the 23rd of February; and this was carried in the same manner. Lord Surrey then stood forward, and moved, "That, in the opinion of the committee, it was peculiarly necessary, that in the present situation of his majesty's dominions, there should be an administration which has the confidence of this House and the public;" and, after an attempted amendment by Dundas, this resolution too was agreed to without a division. Lord Surrey next moved, "That it was the opinion of the committee that the late changes in his majesty's councils were immediately preceded by dangerous and universal reports, that his majesty's sacred name had been unconstitutionally abused to affect the deliberations of parliament, and that the appointments made were accompanied by circumstances new and extraordinary, and such as did not conciliate or engage the confidence of the House." A warm debate followed, and when it was past six in the morning Dundas moved an adjournment. Upon this question the House divided, and the new ministers were left in a minority of *fifty-four*, the numbers being 196 to 142. In the course of this debate, Pitt declared that he had taken upon himself the government of the country upon one single, plain, intelligible principle, by which he desired to stand or fall with the people, namely, to save the country from the India bill, which threatened destruction to its liberties. The House at last adjourned at half-past *seven* o'clock in the morning. It did not re-assemble till Wednesday, the 14th, when Pitt moved for leave to bring in a new bill, the provisions of which he explained at great length, for the better government and management of the affairs of the East India Company. Fox criticised the proposed measure with great severity; but no opposition was

* Parl. Hist.—Ann. Regist.—Changes of Administration and History of Parties, in Companion to Newspaper.—Wraxall's Memoirs.—Nicholls, Recollections and Reflections.

made to the motion, and the House diverged to charges and counter-charges of corruption and of attempts to purchase votes. On the 16th, Pitt's India bill was read a first time with very little debate; and, the committee on the state of the nation being then resumed, Lord Charles Spencer moved a resolution, declaring, "that, after the expressed opinion of the House, the continuance of the present ministers in office was contrary to constitutional principles, and injurious to the interests of his majesty and his people." This was carried by a majority of *twenty-one*, the numbers being 206 to 185. During the debate, Mr. Powys alluded to the possibility of an accommodation between the two contending parties, or a coalition between Fox and Pitt. Fox spoke as if the thing were feasible, but Pitt carefully avoided committing himself on that delicate subject. When the House met again on the 20th, Pitt found himself obliged to take notice of the recommendation of the respectable and independent country gentlemen; but he repeated the declaration made on the previous evening by Fox, that a union not founded on principle would be fallacious and dangerous. On Friday, the 23rd, the new India bill was read a second time without opposition; but a long debate took place upon the motion for committing the bill, which, on a division, was negatived, and the bill consequently thrown out, by 222 against 214. Upon this, Fox moved for, and obtained, leave to bring in a new bill of his own on the same subject. As the opposition apprehended that these triumphs, thus carried by constantly diminishing numbers, would only hasten the dissolution, they endeavoured to extract from the young premier his interpretation of the precise meaning of the royal promise on that head; but Pitt preserved an obstinate silence, and the House, at two o'clock in the morning, adjourned to the next or rather the same day, Saturday, at twelve. When they met again the same question was put, and the same silence preserved by the young and haughty minister, as to the king's intention of dissolving them. On Monday, the 26th, Mr. Eden moved a resolution, declaring the firm reliance of the House, that they should not be interrupted either by a prorogation or a dissolution from considering of proper measures for the regulation of the affairs of the East India Company, and for supporting the public credit. Mr. Pitt then rose and said, that he did not see how the royal word could be considered pledged to the extent of the motion; but he added, that, in the present situation of affairs, he thought a dissolution could not but be attended with great detriment and disadvantage, and therefore he would not advise any such exercise of the prerogative. Mr. Eden's resolution was agreed to without a division, and the House adjourned to the 30th. The three days that intervened were employed in anxious but useless efforts to bring about a coalition. Mr. Grosvenor, member for Chester, called a meeting of the members of the two parties, and about seventy gentlemen met at the St. Alban's tavern, where an address was agreed upon, and transmitted to the Duke of Portland and Mr. Pitt, entreating them to communicate with each other, and expressing a hope that, by a liberal and unreserved confidence, every impediment to their cordial co-operation might be removed. The Duke of Portland insisted that, before he met Mr. Pitt, the latter should resign; and this Pitt declined doing. The negotiation was suspended at this point when the house reassembled on the 29th, to be again adjourned—on the motion of Fox—till the 2nd of February. In the course of a short conversation, Fox spoke openly of the St. Alban's tavern negotiation, and said he trusted that those well-meant endeavours might yet produce something like a union; adding, however, that, while the present ministry retained their situations, every effort of that kind must prove unavailing. Pitt said a few words, that were not at all conciliatory.

On the 2nd of February, when the House met again, Mr. Grosvenor, who had been chairman of the St. Alban's tavern meeting, moved, that it was the opinion of the House that the critical situation of public affairs required the exertions of a fair, sufficient, extended, united administration, entitled to the confidence of the people, and such as might have a tendency to put an end to the unfortunate divisions and distractions of this country. Pitt now said that nothing but evil would come from the resignation of ministers; that neither his principles nor his feelings inclined him to resign; but that, if he could see any prospect of a strong and well-connected government ready to succeed him, he would cheerfully retire; without any desire to form a part of such government. Mr. Grosvenor's motion was unanimously agreed to; and then Mr. Coke, of Norfolk, moved that it was the opinion of the House that the continuance of the present ministers in their offices was an obstacle to the formation of such an administration as might enjoy the confidence of the House, &c. This motion was carried by 223 against 204. On the following day, after expressing his disappointment at seeing Pitt still in his place, Mr. Coke moved that the two resolutions should be laid before his majesty by those members who were of the privy council; and this motion was carried by 211 against 187. The Lords had hitherto been quiet in the struggle; but Pitt, that great maker of peers, had already made several, including his uncle, Thomas Pitt;* and on the 4th of March the eloquence, or zeal, of the new lords was brought into play. Lord Howard of Effingham, an old lord, but a new convert, moved two resolutions, directly levelled at those which had recently been passed by the Commons: the first, declaring that an attempt in any one branch of the legislature to suspend the course of the law was unconstitutional; and the second asserting the undoubted authority of appointing to the great offices of the executive government to be solely vested in the sovereign. There was a long debate, but both resolutions were carried by 100 against 53. On

* The first Lord Camelford.

the very next day, in the Commons, a series of resolutions, asserting that that House had not assumed any right to suspend the execution of law, or done anything else that was unconstitutional, was carried by 187 against 157. On the 11th of February the proposed union of parties was once more discussed in the Commons, and Fox made what was considered a conciliatory and even complimentary speech. In replying to Fox, Pitt said that, whatever might be his disposition to coalesce with that gentleman, there were other persons of the same party with whom he would never act. Lord North,* who considered himself more particularly pointed at, immediately rose, and declared, with great frankness, that he would never be the man to stand in the way of the formation of such a stable, united, and extended administration as the present exigencies of the country required. The St. Alban's tavern association now succeeded in prevailing upon Mr. Pitt to agree that a message should be sent in the king's name to the Duke of Portland, expressing his majesty's earnest desire that his grace should hold a conference with Mr. Pitt, for the purpose of forming an administration "on a wide basis, and on fair and equal terms." But the duke insisted upon being permitted to construe this message as a virtual resignation on the part of Pitt; and requested to know what was meant by fair and equal terms, and also to have the honour of receiving his majesty's commands relative to the conference from the sovereign in person. It is affirmed by a member of the House of Commons that the Duke of Portland herein acted under the advice of Burke alone, and that Fox's absence at St. Ann's Hill overthrew a negotiation which otherwise, at this point, was not without promise of success.* We are inclined, however, to believe with another member of the same parliament, that Pitt, whose ambition impelled him to govern alone, was mortally averse to the coalition, and was all along supported by the king's known hatred of Fox.† The Duke of Portland immediately received a flat negative, both to the proposed assumption of Pitt's virtual resignation, and to the personal audience with the king; and thus the negotiation terminated. When afterwards called upon in the House to explain, Pitt said that he had taken it for granted that the Duke of Portland and his friends intended that the arrangements should *not* be made on "fair and equal terms." On the 18th of February, on the order of the day being read for going into the consideration of the supplies, he intimated that his majesty had not thought proper to dismiss his present ministers in compliance with the resolution of that House, and that ministers had not resigned. Fox, after declaring that such language had not been heard in the House since the Revolution, or, at least, since the accession of the House of Hanover, moved that the report of the committee of supply should be received, not now, but on Friday, the 20th; and the motion was carried by the narrow majority of *twelve*, the numbers being 208 against 196. On the 20th, Mr. Powys moved a mild resolution, implying that the House relied on his majesty's royal wisdom, and hoped that he would take such measures as might tend to give effect to the wishes of his faithful Commons, which had already been humbly represented to his majesty. In the debate which followed, Fox complained bitterly of the efforts which had been made to load him and his friends with unpopularity and public odium, particularly by representing their late vote for a short postponement of the supplies as a fatal blow given to the national credit. He also endeavoured to explain and defend his strong objections to a recurrence to the voice of the people through a new election; he declared that the people at the present moment were labouring under deception and delusion—were running to their own ruin—and that, therefore, it became an act of duty to resist them! Powys's motion was carried by 197 against 177; and then, though it was near two o'clock in the morning, Fox proposed an address to his majesty founded upon the resolution. After a stormy debate, this, too, was carried by 177 against 156; and then, at half-past five, the House adjourned.

In reply to the address, which was not presented till the 25th, the king said that unsuccessful efforts had been made to arrange a united administration, for which he was very desirous; but that he could not see how it would in any degree be advanced by the dismission of his present ministers, against whom no charge had been made, while numbers of his subjects had expressed to him in the warmest manner their satisfaction in the late changes. "Under these circumstances," added his majesty, "I trust my faithful Commons will not wish that the essential offices of executive government should be vacated until I see a prospect that such a plan of union as I have called for, and they have pointed out, may be carried into effect." When this answer was reported—on the 27th—Lord Beaumont moved, first, that it should be taken into consideration on Monday, the 1st of March, and then, that the House should adjourn to that day. Pitt offered no objection to the first motion, which was accordingly agreed to; but, as the object of the second was to delay the supplies, he opposed it with all his might. It was, however, carried against him by 175 to 168. On the 1st of March, when the House reassembled, Fox moved a second address to the throne, to be carried up, like the former, by the whole House. This address was much stronger than the last, and contained a direct prayer for the removal of ministers. It was carried by 201 against 189. On Thursday, the 4th of March, the Commons went up to St. James's, and were told by his majesty that he remained in the same sentiments he had formerly expressed. Upon the motion of Fox it was agreed that this answer should not be taken into consideration before the

* Nicholls, Recollections and Reflections.
† Sir N. W. Wraxall, Memoirs.

following Monday. On the next day—Friday, the 5th—Fox moved that the committee on the Mutiny Bill, which stood for that day, should also be adjourned to Monday. This motion, too, he carried, but by a majority of only *nine*, the numbers being 171 against 162. On the great Monday—the 8th of March—the House was crowded to excess, strangers going down to take their places in the gallery as early as ten o'clock in the morning. But just as the important debate was about to begin, Sir James Lowther, complaining that he had not been able to find room for his friend, the brother of the member for St. Alban's, and saying that he had reason to believe that there might be strangers in the gallery not introduced by members, insisted upon carrying into force the standing order of the House for excluding all strangers whatsoever; and the gallery was accordingly cleared. Fox moved another address to the throne, repeating at greater length the prayer for the removal of ministers, and vindicating the loyalty of the Commons, who were declared to be incapable of any wish to lessen the prerogative. Pitt took little or no part in the debate, but his place was ably supplied by Dundas. About midnight, the House, in the midst of uncommon anxiety and impatience on both sides, prepared to divide. In a few minutes Fox was found to have the majority, but this time only by *one* solitary vote, the numbers being 191 against 190. Tremendous cheers were raised on the ministerial benches; and the coalition felt that the fight was over, and that nothing was left but a dignified retreat. The majority of *one* stuck in their throats, and they tried no more divisions. The Mutiny Bill was voted, the supplies were voted to the extent demanded by Pitt, and the appropriation act was left to sleep. On the morrow there was some angry conversation. Mr. Powys lamented, that, though a century had not elapsed since a vote of the Commons could bestow a crown, their repeated votes were not able now to procure the dismission of a minister! He further accused Pitt of great duplicity in his negotiations with the Duke of Portland, declaring that in reality all concession had been on one side, the minister refusing any frank explanation, or the smallest advance to conciliation. To these charges Pitt made an animated reply, but neither his words nor his manner carried conviction. Nearly everybody now knew that both the king and the minister had entered into the St. Alban's tavern propositions merely to gain time and to amuse the House while they were preparing for the great event of a dissolution. Yet even after the knowledge of this fact, and of the rapidly declining strength of opposition, had become universal, the young premier continued to preserve his mystery and silence. On the 23rd, after several members had tried to force some words from the dumb oracle, Lord North said that the report that they were at the point of death was in everybody's mouth; that it would be treating the House with unparalleled insult and contempt to dissolve parliament without waiting for a bill of appropriation; and that he had hoped the minister would have condescended to utter a single syllable by way of satisfaction. Pitt coldly replied that gentlemen might ask as many questions as they pleased, and attribute to him what motives they chose for his not answering them; that he did not conceive that he was bound to answer one way or another; and that he should pursue the line of conduct he thought right. On the very next day—the 24th—the king went down to the House of Lords, and put an end to the session by a prorogation; declaring, however, in his speech, that he felt it to be a duty which he owed to the constitution and the country, under its actual circumstances, to recur as speedily as possible to the sense of his people by convoking a new parliament. And the next day the sentence of dissolution appeared in the Gazette.*

As it was indispensable to procure an appropriation bill as soon as possible, the elections were commenced almost immediately, and the new parliament was convoked for the 18th of May. Pitt felt that his danger was over and his majority certain. The coalition had made a wreck of the wonderful popularity of his rival, and the India bill had arrayed against Fox the immense weight and influence of the company, and nearly the whole city interest. No method had been neglected to heap odium on the coalition and the heads of Fox and North. Extracts of former speeches, lampoons, satires in prose and verse, were printed daily, and scattered through every town and village in the kingdom. The pencil and etching-needle of the caricaturist were brought into the service, and furnished with subjects out of the recent history of parliament. In one print Fox, under the character of a "Political Sampson," appeared carrying away on his shoulders the whole East India House: in another, called "The Triumphal Entry of Carlo Khan into Delhi," the queer, fat, good-humoured face of Lord North was stuck upon the body of an elephant, and Charles Fox, in the splendid costume of a Mogul emperor, was seated triumphantly on the elephant's back; while Burke, as a trumpeter, walked before, proclaiming the successes of Tamerlane and Aurungzebe. The youth of Pitt, and the bold stand he had made against numbers, told greatly in his favour; and, while he was represented to one party as a staunch defender of the prerogative, he was held up to the admiration of the other as the champion of parliamentary reform and the declared antagonist of aristocratic influence. The king, too, who had become popular in the midst of reverses, was pitied and admired, even in the quarters whence the great storms proceeded which had troubled the early part of the reign. Addresses and petitions, imploring his majesty to support Mr. Pitt, had from the commencement of the contest been pouring in to St. James's from all parts, from the city of London down to

* Changes of Administration and Hist. of Parties.—Ann. Regist.—Wraxall, Memoirs.

the memorable borough of New Sarum, which then, as at a later period, consisted of one solitary farm-house.* Middlesex, Southwark, and even Westminster, had abandoned Fox, and had congratulated the throne on the dismission of the coalition ministry. Worcester, Exeter, York, Edinburgh, and many other towns had followed the example. It is not to be supposed that all these demonstrations were spontaneous; for three months, while the opposition in the House of Commons, confident in their numerical strength, were striving to prevent a dissolution, Pitt had been preparing for the new election, and every influence a government can command had been employed in his favour. In many counties and towns the oldest and best established interests were completely undermined, and the Pitt candidates returned by triumphant majorities. Not less than 160 members, friends of the coalition ministers, lost their elections, and were sent back to private life with the name of "Fox's Martyrs." The result of the whole was a complete establishment of the political supremacy of Pitt.

The new parliament assembled on the day appointed—the 18th of May—when the king, with a joyful countenance, descanted in his speech on the declared sense of his people and the demerits of Fox's India bill. The addresses from both Houses expressed thanks and gratitude to the king for having dissolved the late parliament, the opposition amendments having been rejected by large majorities. On the 21st of June Pitt moved several resolutions for stopping smuggling by reducing the duty upon tea from 50 to 12½ per cent.; and for raising the window-tax in proportion. These resolutions, which were the basis of his "Commutation Act," were passed, though not without much debate. After some financial arrangements he introduced his new constitution for the East India Company, materially altered from his first draught. It left the directors of the company to be elected, as they had always been, by the proprietors; but it associated with them in the government of India what is called the Board of Control, the members of which are appointed by the crown, and come in and go out with the ministry of which they form a part, just like the members of the Board of Trade or of the Treasury. The bill, which will be described more at length in our view of Indian affairs, in the next Book, was carried through both Houses by large majorities.

On the 30th of June the premier produced his budget, which included a loan of six millions. He gave all his support to a humane and liberal bill, moved by his friend Dundas, ex-lord advocate of Scotland, and now treasurer to the navy, for restoring the Scottish estates forfeited on account of the Rebellion of 1745. The measure encountered no opposition whatever in the Commons; but in the Lords the restored Chancellor Thurlow ventured some splenetic comments upon it. The bill was, however, carried, and received the royal assent. On the 20th of August, after the appropriation bill and all other indispensable measures had been carried by jubilant ministerial majorities, the king prorogued parliament, with the satisfactory conviction that he had established a ministry to his own mind, and had nothing more to fear from the once formidable coalition which had for months deprived him of his rest. From this period, for seventeen long and eventful years, we shall find the councils of Great Britain directed by William Pitt.

* The precious borough was then the property of Pitt's uncle, Thomas, (now Lord Camelford.)

CHAPTER II.

THE HISTORY OF RELIGION.

THE alliance of Church and State may be regarded as a sort of matrimony, in which the state stands in most respects in the position of the husband, and the church in that of the wife. Altogether, indeed, the nature of the latter is essentially feminine. All power may in a certain sense be said to be founded upon opinion; but ecclesiastical power rests upon and is upheld by no other support. A political tyranny may hedge itself round with material defences which shall long set opinion at defiance; a church can no more wield the sword than a woman can. Like a woman, deprived of its reputation, or of the influence over us which our own feelings or imaginations confer upon it, it is deprived of every thing. In that airy panoply resides its whole strength. And, as its strength is feminine, so are its instincts and passions. Of course, in its deficiency of material force, it is as averse from as it is unfit for those struggles and conflicts which must be waged and decided principally by arms or violence. A church literally militant is the phenomenon only of a rude, unformed condition of society, just as even women sometimes go out to battle among savage tribes; a church in a civilized age, above all, an established church, is of all organizations the most unwarlike. It shrinks from whatever is likely to lead to the arbitrement of blows. Its dominant habit, in truth, is thoroughly quiescent and conservative. It is inclined in this direction not only by its constitutional timidity, and by the fragility or delicacy of its natural means of defence, but also by some things in the very essence and definition of a church and a religion. A political system may acknowledge the principle of progression as one of its elements; a system of religion cannot, without proclaiming by the very admission that it is not a religion at all. The profession of everything calling itself a religion necessarily is a perfect freedom from all error, from anything either requiring or allowing of amendment. Where advancement is impossible, innovation, or change, or movement of any kind must be held to be a folly or a crime. Thus, to let what is alone, to maintain things as they are, is for a church the policy both of prudence and of principle. It is true that both in England and in other countries the church has frequently broken through, or seemed to break through, what from the considerations that have been stated may be held to be its proper bounds, as they are undeniably also those within which it has usually confined itself. Among ourselves, in the early part of the seventeenth and again in the beginning of the eighteenth century, it may be thought to have exchanged its stationary and merely defensive attitude for a rather violently aggressive course; and indeed it may appear to have frequently manifested the same tendency pretty strongly in earlier periods of its history. But perhaps it might be found after all, on a full and fair view of the whole case, that in none of the instances referred to—whether the old contests about the rights of investiture and the authority of the ecclesiastical courts, or the more modern attempts of Laud in the reign of Charles I., and of the majority of the convocation in that of Anne—was the church really aspiring to occupy any new ground, or to do more than retain what it actually held, at most to recover what it had indisputably once possessed. No doubt there must have been a time when it possessed nothing—when it had all its temporal powers and privileges yet to acquire. But it did originally acquire them all not by force, of which it never had any to wield, but by the willing concession of both government and people, of the same parties that afterwards refused (naturally enough too, in the changed circumstances of society) to submit to the authority, or to acknowledge the rights, which they had themselves created. No wonder that the church should have kicked and struggled in the first instance against such spoliation, and also made some attempts subsequently to regain what it had lost, when a tempting opportunity presented itself. Nor ought we to be surprised that such movements should sometimes have been characterised by a fair share of female impetuosity and recklessness. Whatever of this temper may have shown itself on extraordinary occasions has been more than compensated for by the female regard for decorum which has generally regulated the demeanour of Mother Church—by the quiet and, as we have said, conservative spirit which is natural to her when nothing has occurred to throw her into a state of excitement. Treated by the state with the indulgence, as well as respect and honour, due to a wife by a husband, who, according to the well-known rule, besides being very

kind to her virtues, should be a little blind to her faults, she has proved upon the whole, it must be admitted, a tolerable helpmate, and has been brought at last to submit gracefully enough even to a curtailment of her ancient power and splendour which may be compared to the declension or bedimment experienced in most other cases, as well as in this, by the haughty beauty who has passed from the station of mistress simply to that of mistress of a family. For in truth those were as yet only the days of courtship and adoration, when the church carried it with so high a hand, and was allowed to have its own way in everything, the state sitting suppliant at its feet, and counting it honour and happiness enough to receive its commands; the more equal condition and sober bliss of matrimony cannot properly be said to have come till a later date—till a little before the time when we find the two parties beginning to wrangle with one another about their respective rights, and to evince that, in becoming one flesh, they had, somehow or other, ceased to be, quite so much as formerly, one spirit.

Before the accession of George III., the Church of England had been pretty well broken in to the duties of its position, and had come to bear the conjugal yoke without needlessly tormenting itself with unavailing recollections of its old days of freedom or supremacy. To all appearance the last battle in support of its ancient pretensions had been fought and lost; and it seemed to have wisely made up its mind to waste no more of its strength in endeavours to regain what no efforts could bring back, but to accept the tranquillity, security, and other conveniences of its modern condition as a full equivalent for any absolute right of dominion over the national faith, or other airy prerogative, it might have enjoyed in a former age. This pleasant sunshine was at all events something better than the stormy contention of latter times, when the old claims of the ecclesiastical estate had been urged with so much vehemence, but with so little effect, unless it were to strengthen the barriers, and to exasperate the spirit of resistance, by which their recognition was now seemingly rendered for ever impossible. It is therefore not to be wondered at, that what are called low-church principles, which had held the ascendancy on the episcopal bench ever since the Revolution, should, almost from the accession of the House of Hanover have begun to acquire a similar prevalence among the body of the clergy.

Indeed, notwithstanding a very flourishing outward appearance which it presented at the time of the accession of George III., the progress of legislation and of events between the Revolution and that date had probably, upon the whole, tended to lower the position and power of the established church as much as its principles. It is true that the reigns of William, of Anne, and of George I., had produced a long series of new and severe penal enactments against popery both in England and Ireland;*

* See Pictorial History of England, iv. 634—636.

but that these laws conferred any new security or strength upon the establishment may be more than questioned. With the exception perhaps of the short reign of James II., the established church had been in no danger from popery since the reign of James I., or of Elizabeth. Nor was the hatred of popery, which had mainly produced both the Revolution and the penal laws, so much a feeling of the church, as of the Puritans and Dissenters, with whose outcry about the matter the church chimed in rather from policy than out of any real or very ardent sympathy. Ever since the rise and spread of dissent, popery had been naturally rather the reserved auxiliary of the established church than a hostile force. If the church had not a greater affinity in spirit with popery than with dissent, popery was at least separated by much stronger antipathies from dissent than from the church, and that would have equally determined the arrangement of parties in any new struggle that might arise. It never, therefore, could really have been an object with the church to depress popery beyond a certain point: that, in so far as it was done, was the doing of the dissenters, and was a victory gained by them at the expense of the establishment. But, at any rate, the persecution of the Roman Catholics, whether good for the church or the reverse, had for some time past been going out of fashion; no new penal laws had been placed on the statute-book for the last forty-five years; and of those that had been previously enacted the most severe were now rarely, if ever, enforced. So that, if it really had been for the interest of the church to have popery kept down, the position of the church would have been weakened rather than strengthened in that respect between 1715 and 1760. Then, besides the Act of Toleration, passed immediately after the Revolution, which had for the first time taken from the established church by legal declaration the absolute control of the national faith, dissenters had been since raised to a still nearer equality of civil rights with churchmen by the annual Indemnity Acts, which had been regularly passed by parliament ever since the accession of George II.,* and were now universally held to be as much a part of the constitution as the Habeas Corpus Act or the Bill of Rights. On the other hand, the meetings of the convocation had been prevented ever since the beginning of the reign of George I.; and that ancient ecclesiastical parliament—the only representation of the body of the clergy,—their only public or common arena for debate, for consultation, for legislation, for the examination and exposure of grievances—might now be regarded as to all intents and purposes abolished.† Add to all this the continued growth of dissent, both by the rise of new sects and by the increasing numbers of the principal old denominations of separatists. Finally, add also the extended and extending spirit of division within the church, which low-church and high-church

* See Pictorial History of England, iv. 637.

† Ibid. p. 648.

principles, no longer making only a fracture in one of the corners of the edifice, now separated, by a rent reaching from its summit to its base, almost into two churches as mutually adverse as any two dissenting communities.

The numerical preponderance, however, was still decidedly with the high-church party, or at least with the section of the clergy whose principles or sentiments were most of that complexion; for this creed had no doubt been considerably softened down in the course of the last forty or fifty years, having under the same influences undergone much the same change with the system of political doctrine of which it was the counterpart, and with which it was generally associated.* As Jacobitism had now for the most part subsided into mere Toryism, so the high-churchism of the middle of the eighteenth century was, on the whole, but a cold and dim lunar reflection of that of the middle or even of that of the latter end of the seventeenth—of the high-churchism either of Laud or of Sancroft. Nor did this relaxation and enlargement of the bonds that held them together, while it extended the numbers of the high-church party, prove, at least for the present, detrimental to their union and combined efficiency: the points about which they might have differed among themselves were little if at all brought into discussion by the politics or circumstances of the time; as to all questions that were not obsolete, or in abeyance, they were sufficiently at one, and presented a firm and unbroken front to their adversaries. The latter, on the other hand, were kept together in one flock rather by their common opposition to high-church principles than by any other principles in which they agreed among themselves; and their differences chiefly respected the very points that were most agitated in the controversies of the day. Among them, those whose views were comparatively moderate were in truth much farther separated from those of their own party who held extreme opinions than from the great body of their nominal opponents, and, whatever might have been the style of their ordinary professions, would probably in any circumstances calling for action that might have arisen have found themselves compelled to join the former rather than the latter. In the grand fundamental question, especially, of movement and resistance, the mass of the low-church clergy might be said to be, if not theoretically, yet practically, of the same politics with their high-church brethren—that is to say, thoroughly conservative. Such, indeed, as we have said, are the natural politics of every established church.

During the reigns of the two first princes of the House of Hanover the patronage of the court and the government gave for a season more than its natural strength to the low-church party; but with the Toryism which after the accession of George III. obtained the ascendency in the state, high-church principles, brought down, indeed, somewhat from the true ancient standard, and accommodated, like Toryism itself, to the circumstances of the time, also rose into favour and power. On the whole, this revolution proved highly advantageous, not only to the high-church party, but to the stability and general interests of the entire establishment. The support which had formerly propped up the essential weakness of the low-church party was no longer wasted in merely producing something like a balance between that party and its opponents, but was now bestowed where in every way it was calculated to tell with the most effect—upon that section of the church which was both by far the strongest in itself, and the best fitted by principle, or natural bias, to profit by the aid thus accorded to it. Even the change, or modification, of the original character of high churchism, which was one of the results, was probably fortunate for the temporal welfare of the establishment; inasmuch as it substituted opinions and ways of thinking more in harmony with existing circumstances for a creed with which there was now very little of a general disposition to sympathise. Taking along with all this the additional security arising both from its own longer establishment, and from the more confirmed tenure of the civil government and the whole political system with which it was connected, we may consider the church as having probably from this epoch more than recovered whatever it might have lost in stability and power by the Indemnity Acts, the suppression of the convocation, the spread of dissent, and any other adverse circumstances that had come into operation in the course of the preceding seventy years.

Archbishop Wake. From a Print by Vander Gucht.

It might or might not be another piece of good fortune for the church at this period, that for some time it had not been disturbed either by active hostilities with the dissenters or by any serious controversy among its own members. In the beginning

* See Pictorial History of England, iv. 638.

would have sufficed for the disturbance of peace. In Brittany the rule or paramount authority of the English king was most unpopular, and the same was the case in Aquitaine, where Bertrand de Born, who had so often intrigued with Richard against his father Henry, was now intriguing with the French king against Richard. In both these states some of the most powerful of Richard's vassals raised the banner of war, and, at times separately, at times united with French troops, they fought with the view of emancipating their country from the Plantagenets, not heeding the obvious danger of only changing masters and bearing the yoke of Philip. The Earl of Toulouse also declared war in the south, and, changing from an ally into an enemy, the Earl of Flanders in the north at one time menaced Richard with his dangerous attacks. Though surprised and defeated by the Bretons at Carhaix, and beaten again by the Bretons united with some troops of France near Aumale, Richard, on the whole, maintained his usual superiority in the field of battle. The Earl of Toulouse was reconciled by a treaty of family alliance, Richard bestowing on him the hand of his sister Joan, the queen-dowager of Sicily.*

The most memorable incident of this campaign was the capture of the Bishop of Beauvais, a near connexion to the French king, and one of the most bitter of Richard's enemies. He was taken, fighting in complete armour, by Marchadee, the leader of the Brabanters in Richard's service. The king ordered him to be loaded with irons, and cast into a dungeon in Rouen Castle. Two of his chaplains waited on Richard to implore for milder treatment. "You yourselves shall judge whether I am not justified," said Richard. "This man has done me many wrongs. Much I could forget, but not this. When in the hands of the emperor, and when, in consideration of my royal character, they were beginning to treat me more gently and with some marks of respect, your master arrived, and I soon experienced the effect of his visit: over-night he spoke with the emperor, and the next morning a chain was put upon me such as a horse could hardly bear. What he now merits at my hands declare yourselves, and be just." The chaplains, it is said, were silent, and withdrew. The bishop then addressed the pope, imploring him to intercede. Celestine rated him severely on his flagrant departure from the canons of the church; and told him that though he might ask mercy as a friend, he could not interfere in such a case as pope. Soon after this the pontiff wrote to Richard imploring him to pity "his son;" the bishop. Richard, who, like most of his Norman predecessors, was not wanting in a rude wit or caustic humour, replied to the pope by sending him the bishop of Beauvais' coat of mail, which was besmeared with blood, and had the following scroll attached to it,—an apposite quotation from the Old Testament,—"This have we found: know now whether it be thy son's coat or no." Though, as usual, sorely in want of money, Richard refused ten thousand marks which were offered as a ransom, and the bishop of Beauvais occupied his dungeon and wore his chains till Richard went to the grave.*

In the month of September of this same year disease, misfortune, remorse, and a premature decay did the English king justice on another of his foes. The Emperor Henry died at Messina, after suffering an extremity of humiliation at the hands of his Sicilian wife; and in his dying moments he confessed his shameful injustice to Richard, and ordered that the money he had extorted as his ransom should be restored. Though a bishop was charged with a message to Richard, and though the clause was solemnly inserted in the emperor's will, the money was never repaid. As the war again waxed languid, and the powerful vassals of both potentates showed again that they were actuated by other motives and interests than those of their masters, the two kings again spoke of peace, and meeting at Andely, on the Seine, finally "concluded upon an abstinence of war, to endure from the Feast of St. Hilary for one whole year." These paltry details vex and tire the narrator, but it is impossible to convey a just notion of the course of events and the spirit of the times without them.

A.D. 1198.—When the truce expired, hostilities were again renewed, and with greater ferocity than ever, both princes burning and utterly desolating the territories they invaded, and tearing out the eyes of many of their prisoners. Near Gisors, Richard gained another victory, and Philip in his flight was nearly drowned in the river Epte, a bridge he had to cross breaking down under the weight of the fugitives. In his triumphant bulletin, Richard said, "This day I have made the king of France drink deep of the waters of the Epte!" As for himself, he had unhorsed three knights at a single charge, and made them prisoners. It was *Cœur de Lion's* last fight. A truce was concluded, and early in the following year, through the mediation of Peter of Capua, the pope's legate, it was prolonged and solemnly declared to be binding for five years. A fresh ground of quarrel arose almost immediately after, but the differences were made up, and, marching from Normandy, Richard repaired to Aquitaine to look after his intriguing and ever-turbulent vassals in that quarter. A strange ballad had for some time been current in Normandy. Its burden purported, that in the Limousin the arrow was making by which the tyrant would die. The learned writer† who has collected all the discrepancies and contradictions respecting the circumstances by which Richard's death was attended, will not venture to decide whether these shadows cast before

* We have mentioned that Queen Berengaria and the two other ladies reached Sicily safely from Acre. From Sicily they went to Rome, where the Pope entertained them some months, and then caused them to be conducted to Aquitaine.

* Hoved.—Brompt.—Matt. Par.—Newbrig.

† Sir Francis Palgrave, Introduct. Rot. Cur. Reg.

the event arose out of the wishes of the people or indicated any organized conspiracy. We are inclined to believe ourselves that there was no conspiracy beyond the old, dark brooding, the settled hatred and vindictive spirit of his vassals of the south. Those fiery men, it will be remembered, had attempted the life of his father Henry more than once by shooting arrows at him. There are many contradictions which throw doubt upon parts of the commonly received story of the death of Richard, but all accounts agree in stating that the heroic Lion-heart fell before an obscure castle, and in consequence of a wound received either from an arrow or a quarrel. The usual narrative, which has almost a prescriptive right to insertion, is to this effect:—arriving from Normandy in the south, Richard learned that Vidomar, Viscount of Limoges, his vassal, had found a treasure in his domains. This, as superior lord, he demanded; and when the viscount offered only half of it, and refused to give more, Richard, determined to have the whole, besieged him in his castle of Chaluz. The want of provisions reduced the garrison to the greatest straits, and they offered to surrender at the king's mercy, their lives only being spared. Richard refused the terms, telling them he would take the place by storm, and hang every man of them upon the battlements. The garrison of the castle were driven to despair. The king, with Marchadee, the leader of his mercenaries, then surveyed the walls to see where the assault should be made, when a youth, by name Bertrand de Gurdun, having recognised him from the ramparts, praying God to speed it well, discharged an arrow, and hit the king in the left shoulder. Soon after the castle was taken by assault, and all the men in it were butchered, with the exception of Bertrand. The wound was not in itself dangerous, but it was made mortal by the unskilfulness of the surgeon in extracting the arrow-head, which had been broken off in the shoulder. Feeling his end approach, Richard summoned Bertrand de Gurdun into his presence. "Wretch!" he exclaimed, "what have I done unto thee that thou shouldest seek my life?" The chained youth replied firmly,—"My father and my two brothers hast thou slain with thine own hand, and myself thou wouldest hang! Let me die now, in cruel torture if thou wilt; I am content if thou diest, and the world be freed of an oppressor!" "Youth, I forgive thee!" cried Richard: "loose his chains, and give him a hundred shillings!" But Marchadee* would not let him go, and after the king's death he flayed him alive, and hanged him. Richard expired in anguish and contrition, on Tuesday, the 6th of April, 1199, a date in which all the contemporary writers of best note seem to be agreed. He had reigned nearly ten years, not one of which was passed in England, but which had all been wasted in incessant wars, or in preparations for war. He was only forty-two years old, and he left no children to succeed him. By his will he directed that his heart should be carried to his faithful city of Rouen for interment in the cathedral, that his bowels, "as his ignoble parts," should be left among the rebellious Poictevins, and that his body should be buried at the feet of his father at Fontevraud.

* Here there is a varying account. The MS. chronicle of Winchester says that Marchadee surrendered the prisoner to Richard's sister Joan, and that *she* plucked out his eyes, and caused him to suffer other horrible mutilations and tortures, under which he expired.

John.—surnamed Sans-Terre, or Lackland.*

Great Seal of King John.

* A nickname, according to Brompton, given him by his father, who in a will which he made at Domfront in 1170 left John no lands, but only recommended him to be provided for by his eldest brother.

PORTRAIT OF KING JOHN. From his Tomb at Worcester.

A.D. 1199.—Earl John was in Normandy when his brother died. As soon as he received the intelligence, he sent to retain the foreign mercenaries who had been in Richard's pay, promising them large gifts and increased salaries. Dispatching Hubert Walter, the archbishop of Canterbury, and William Mareschall into England, to overawe the barons there, he himself hastened to Chinon to seize his brother's treasure, which was deposited in that castle. Chinon, with several other castles in the neighbourhood, voluntarily received him; but, in the meanwhile, the barons of Touraine, Maine, Anjou, and Brittany, proclaimed his nephew, the young Arthur, as their lawful sovereign. John, in assertion of his claim, proceeded to chastise the citizens of Mans for the support they afforded his nephew, and then, returning to Normandy, he was received at Rouen without opposition, and, on Sunday the 25th of April, he was there inaugurated, being girt with the sword of the duchy, and having the golden coronal put upon his head. News, whether good or bad, travelled but slowly in those days. A vague report of Richard's death was spread in England, but nothing certain was known, and the friends of John seem purposely to have concealed the fact for many days. When the archbishop of Canterbury and his companion arrived, they required all the lieges in the cities and burghs throughout the kingdom, and all the earls, barons, and freeholders, to be in the fealty, and keep the peace of John Duke of Normandy, son of King Henry, son of the Empress Matilda.* But John had never been popular in the nation, and the more powerful classes seemed disposed to resist his accession. Bishops, earls, and barons,—most of those who had castles,—filled them with armed men and stocked them with provisions. The poorer classes committed great devastations, for in those times a king's death was the signal for the general disorganization of society. The primate and his associate acted with great alacrity and vigour, seeing that nothing less would save the country from a frightful anarchy. They convened a great council at Northampton, and there, by secret gifts and open promises of justice and good government on the part of John, they induced the assembled prelates and barons to swear fealty and faithful service to the "Duke of Normandy," as the pretender was carefully called, until his coronation at Westminster. John did not arrive until the 25th of May, when he landed at Shoreham. On the 27th he repaired to the church of St. Peter at Westminster to claim the crown. He well knew that many preferred the right of his nephew, the son of an elder brother, who had repeatedly been declared his heir by the late king; and now John professed to be in possession of a will, drawn up in his last hours, by which Richard revoked former wills, and appointed him his successor. But this testament, whether true or false, seems to have carried no weight with it, and to have been altogether disregarded on this solemn occasion. The fact that the crown was not considered heritable property was stated in the broadest terms, and never was the elective character of the monarchy so forcibly put by such high authority. The Archbishop

* Hoved.—Matt. Par.—Palgrave, Rot. Cur. Reg.

Hubert, having announced to the audience that the Duke of Normandy had been elected king at Northampton, laid it down as a known principle that no one could be entitled by any previous circumstances to succeed to the crown unless he were chosen to be king by the body of the nation,—"ab universitate regni electus." Matthew Paris pretends to give the words of the archbishop: their substance is as follows:—"Hear, all ye people;—it is well known that no one can have a right to the crown of this kingdom, unless for his excellent virtues he be elected to it, and then anointed king, as was the case with Saul, the son of no king, nor even royally connected; such a man also was David. And thus it was ordained, to the end that he whose merits are pre-eminent be chosen the lord of all the people. If indeed of the family of the deceased monarch there be one thus super-eminently endowed, he should have our preference. This I say touching the noble Duke John, here present, brother of our late excellent King Richard, who had no heir proceeding of his body. He possesses the same worthiness of qualities, and is also of the same blood as King Richard was of, and for these qualities, having invoked the Holy Spirit, we elect him our king." According to Matthew Paris, John assented without starting the question either of his inherent right by birth, or of his right by will; and when he had taken the usual oaths to protect the church and govern justly, all present hailed him with, "Long live the king!"* On the following day, the prelates and barons did homage to him, immediately after which he repaired to St. Albans to pray before the shrine of the martyr.

John was at this time thirty-two years old,—a manly age,—which gave him many advantages over kings commencing their reigns in youth. He was robust, healthy, and, like most of his race, handsome; but his evil passions distorted his countenance, and gave him a treacherous and cruel expression. He was already hated by the people, and his reign opened inauspiciously. Many of the nobles in England immediately showed disaffection: the king of Scotland, William the Lion, who had quarrelled with him on account of the provinces of Northumberland and Cumberland, threatened him with invasion; and on the continent, with the exception of those in Normandy, all the great vassals were up in arms for his nephew, and in close alliance with the French king, who had renewed the war, and was promising himself every success, well knowing the difference between the warlike Richard and the cowardly John, as also the weakness that must arise out of a disputed succession, for the election at London and the inauguration at Rouen had no legal effect in those provinces which had declared for Arthur.† Leaving William de Stuteville to keep in check the Scots, John crossed over to Normandy, where the Earl of Flanders and other great lords who had confederated with Richard brought in their forces. Philip demanded and obtained a truce for six weeks, at the end of which term he met John to propose a definitive peace. His demands led to an instant renewal of war, for he not only required the surrender by the English king of all his French possessions (Normandy excepted) to Arthur, but the cession also of a considerable part of Normandy itself to the French crown.

The only being engaged in this game of ambition that can at all interest the feelings was the innocent Arthur, who was too young and helpless to play his own part in it. The greatest of our poets has thrown all the intensity both of pathos and horror around the last days of this prince; but all the days of his brief life were marked with touching vicissitudes. Like William of Normandy, the hapless son of Duke Robert, Arthur was the child of sorrow from his cradle upwards. His misfortunes, indeed, began before he came into the world; his father Geoffrey was killed in a tournament eight months prior to his birth, and Brittany, to which he had an hereditary right through his mother, was divided into factions, fierce yet changeable, destructive of present prosperity and unproductive of future good; for the national independence, their main object, was an empty dream, in the neighbourhood of such powerful and ambitious monarchs as the Plantagenets of England and the Capetians of France. The people of Brittany, however, hailed the birth of the posthumous child of Geoffrey with transports of patriotic joy. In spite of his grandfather Henry, who wished to give the child his own name, they insisted on giving him the name of Arthur. That mysterious hero was as dear to the people of Brittany as to their kindred of our own island: tradition painted him as the companion in arms of their "King Hoel the Great;" and though he had been dead some centuries, they still expected his coming as the restorer of their old independence. Merlin had predicted this, and Merlin was still revered as a prophet in Brittany as well as in Wales. Popular credulity thus attached ideas of national glory to the cherished name of Arthur; and, as the child was handsome and promising, the Bretons looked forward to the day when he should rule them without the control of French or English.* His mother Constance, a vain and weak woman, could spare little time from her amours and intrigues to devote to her son, and, at the moment when his uncle John threatened him with destruction, she was occupied by her passion for a third husband, whom she had recently married, her second husband being still living. During the lifetime of Richard, she had bandied her son between that sovereign and the French king as circumstances and her caprice varied; and now when, awakened to a sense of his danger, the only course she could pursue was to carry him to Paris, and place him under the protection of the astute and selfish Philip,

* The claims of young Arthur do not appear to have been mentioned. It was, however, only by stretching a point, and declaring the crown elective, that the boy could be set aside. If they had gone on legitimacy and the rights of primogeniture, they must have awarded the crown to him,—and this sufficiently accounts for the mode of proceeding adopted by John and his partizans.

† Daru, Hist. de la Bretagne.—Matt. Par.—Hoved.

* Daru, Hist. de la Bretagne.

to whom she offered the direct vassalage not only of Brittany, which Arthur was to inherit through her, but also of Normandy, Anjou, Aquitaine, and the other states he claimed as heir to his father. The troops of John, composed almost entirely of mercenaries, fell with savage fury upon Brittany, burning and destroying the houses and fields, and selling the inhabitants as slaves. Philip assisted William Desroches, the commander of the small Breton army, and took several castles on the frontiers of Brittany and France from the English. But as soon as he gained these fortresses he destroyed them, in order evidently to leave the road open to himself when he should throw off the mask and invade the country on his own account. Desroches, incensed at these proceedings, withdrew Arthur and his mother from the French court, and they would both have sought his peace, and delivered themselves up to John, had they not been scared away by the report that he intended the murder of his nephew. After this, young Arthur returned to Philip, who knighted him, notwithstanding his tender age, and promised to give him his daughter Mary in marriage. But Philip only intended to make a tool of the unfortunate boy; and when some troublesome disputes, in which he was engaged with the pope, induced him to treat with John, he sacrificed all his interests without any remorse. By the treaty of peace which was concluded between the two kings, in the spring of 1200, John was to remain in possession of *all* the states his brother Richard had occupied; and thus Arthur was completely disinherited, with the connivance and participation of the French king; for it is said, that by a secret article of the treaty, Philip was to inherit his continental dominions, if John died without children. Circumstances and the unruly passions of John soon nullified the whole of this treaty, and made Philip again the slippery friend of young Arthur; but nothing could efface the French king's perfidy, or reinspire confidence in him, in reasonable men. In the summer of this same year, the second of his reign, John made a royal progress into Aquitaine, to receive the homage of the barons of that province. He delighted the lively people of the south with his magnificence and parade; he captivated some of the volatile and factious nobles with a display of a familiar and festive humour; but these feelings were but momentary; for neither with the people nor their chiefs could he keep up the favourable impression he had made. Though a skilful actor, his capability was confined to a single scene or two; it could never extend itself over a whole act: his passions, which seem to have partaken of insanity, were sure to baffle his hypocrisy on anything like a lengthened intercourse. He had thus shown his true character, and disgusted many of the nobles of Poictou and Aquitaine, when his lawless passion for the young wife of one of them completed their irritation and disgust. Isabella, the daughter of the Count of Angoulême, was one of the most celebrated beauties of her time: she had been recently married to the Count of la Marche, a powerful noble; and John had been married ten years to Avisa, a daughter of the Earl of Gloucester, a fair and virtuous woman, who had brought him an immense dower. In spite of these obstacles, John got possession of the person of Isabella, and married her at Angoulême, the archbishop of Bordeaux performing the ceremony. In the autumn, he brought his new wife to England, and caused her to be crowned at Westminster. He himself was recrowned at the same time, the archbishop of Canterbury officiating. He then gave himself up to idleness and luxurious enjoyment. But in the following spring he was disturbed by the vengeance of the Count of la Marche, whom he had robbed of his wife. That nobleman, with his brother, the Earl of Eu, and several other barons, took up arms in Poictou and Aquitaine. When summoned to attend their liege lord, many of the English vassals refused, declaring that it was too insignificant and dishonourable a warfare for them to embark in. They afterwards said that they would sail with him if he would restore their rights and liberties. For the present, John so far triumphed over their opposition as to make the refractory barons give him hostages, and pay scutage in lieu of their personal attendance. Their resistance was not yet organized; but as John's insolence, rapacity, and lawless lust had provoked lay and clergy, and as he had engaged in a personal quarrel with one of the most powerful of the monastic orders, a regular and an extensive opposition was in due process of formation. John, accompanied by Isabella, went through Normandy to Paris, where he was courteously entertained by Philip, a much greater master in deceit, who was, at the very moment, in league with the Count of la Marche, in Aquitaine, and preparing a fresh insurrection against his guest in Brittany. From Paris, John marched without his wife into Aquitaine, but not to fight, and, after a paltry parade through the safe part of the country, he marched back again to his pleasures, leaving the insurgents in greater power and confidence than ever.

A. D. 1202. The moment had now arrived for the decision of the question at issue—whether the Plantagenets or the Capetians should be lords of France. The superiority of the former race had been established by the wisdom of Henry II., and pretty well maintained by the valour of Richard; but under the unwise and pusillanimous John it had no longer a chance. Having settled his disputes with the pope, and freed himself from other troubles, Philip now broke the peace, by openly succouring the insurgents in Aquitaine, and by reviving and again espousing the claims of young Arthur. The poor orphan—his mother had died the preceding year—was living under the protection of the French king, because, says a chronicler, he was in constant fear of treachery on the part of John. "You know your rights," said Philip to the youth; "and would you not be a king?" "That truly would I," replied Arthur. "Here,

then," said Philip, "are 200 knights; march with them, and take possession of the provinces which are yours, while I make an inroad on Normandy." In the treaty drawn up between these most unequal allies, Arthur was made to agree that the French king should keep all that he pleased of the territories in Normandy which he had taken, or might henceforth take, with God's aid; and he agreed to do homage for the rest of the continental dominions.* Arthur then raised his banner of war; the Bretons sent him 500 knights and 4000 foot soldiers; the barons of Touraine and Poictou 110 men-at-arms; and this, with the insignificant contingent supplied by Philip, was all the force at his disposal. His friends had counted on a force of 30,000 men; but it was not the plan of his treacherous ally to make him powerful. Philip only wanted a diversion in his own favour, while he followed up his successes in Normandy. The young orphan—for, even now, Arthur was only in his fifteenth year—was of course devoid of all military experience, and dependent on the guidance of others. Some of his friends—or they may have been his concealed enemies—advised him, as his first trial in arms, to march against the town of Mirebeau, about six miles from Poictiers, because his grandmother, Eleanor, who had always been the bitter enemy of his mother, was residing there; and because (it was reasoned) if he got possession of her person, he would be enabled to bring his uncle to terms. He marched, and took the town, but not his grandmother. The veteran Amazon, though surprised, had time to throw herself into a strong tower, which served as a citadel. Arthur and his small army established themselves in the town, and laid siege to the tower where the "Ate"—the stirrer "to blood and strife," stoutly defended herself. John, with an activity of which he was not deemed capable, marched to her rescue; and his troops were before Mirebeau, and had invested that town, ere his nephew was aware of his departure from Normandy. The unnatural discords of the Norman and Plantagenet race had already and repeatedly presented the spectacle of son warring against father, brother against brother, but here was a boy of fifteen besieging his grandmother of eighty, and an uncle besieging his nephew—all at one point. On the night between the 31st of July and the 1st of August the savage John, by means of treachery, got possession of the town. Arthur was taken in his bed, as were also most of the nobles who had followed him on that dismal expedition. The Count of le Marche, Isabella's husband, on whom he had inflicted the most insupportable of wrongs, and whom John considered as his bitterest enemy, the Viscounts of Limoges, Lusignan, and Thouars, were among the distinguished captives, who amounted in all to 200 noble knights. The captor revelled in base vengeance; he caused them to be loaded with irons, tied in open carts, drawn by bullocks, and afterwards to be thrown into dungeons in Normandy and England. Of those whose confinement fell in our island, twenty-two noblemen are said to have been starved to death in Corfe Castle—a mode of destruction, indeed, "worthy of a being of unmingled malignity."* Young Arthur was carried to Falaise, and from Falaise he was removed to the castle of Rouen,

* Guil. Armoric.—Matt. Par.

* Mackintosh.—Rigord. Gest. Phil. Aug.—Matt. Par.—Guil. Armoric.

Castle of Falaise.

where all positive traces of him are lost. Such damnable deeds are not done in the light of day, or in the presence of witnesses, and some obscurity and mystery must always rest upon their horrors. The version of Shakspeare has made an impression which no time and no scepticism will ever efface; and, after all, it is probably not far from being the true one. Of the contemporary writers who mention the disappearance of Arthur, Matthew Paris is the one who expresses himself in the most measured terms; yet his words convey a fearful meaning. He says, John went to his nephew at Falaise, and besought him with gentleness to trust his uncle. Arthur replied, indignantly, "Give me mine inheritance—restore to me my kingdom of England." Much provoked, John immediately sent him to Rouen, with orders that he should be more closely guarded. "Not long after," proceeds Mackintosh, "he suddenly disappeared; I trust not in the way that malignant rumour alleges. It was suspected by all that John murdered his nephew with his own hand, and he became the object of the blackest hatred. The monks of Margan tell us, in their brief yearly notes, 'that John being at Rouen in the week before Easter, 1203, after he had finished his dinner, instigated by drunkenness and malignant fiends, literally imbrued his hands in the blood of his defenceless nephew, and caused his body to be thrown into the Seine, with heavy stones fastened to his feet; that the body was notwithstanding cast on shore, and buried at the abbey of Bec secretly, for fear of the tyrant.'"

According to the popular traditions of the Bretons, John, pretending to be reconciled with his nephew, took Arthur from his dungeon, in the castle of Rouen, and proceeded with him towards Cherbourg, travelling on horseback, and keeping

HUBERT AND PRINCE ARTHUR. Northcote.

near the coast. Late one evening, when the king and his nephew had outridden the rest of the party, John stopped on a high cliff which overhung the sea: after looking down the precipice he drew his sword, and, riding suddenly at the young prince, ran him through the body. Arthur fell to the ground and begged for mercy, but the murderer dragged him to the brink of the precipice, and hurled him, yet breathing, into the waves below.* But Ralph, the abbot of Coggeshall, who tells the pitiable tale most minutely, is probably the most correct of all. His account is as follows:—Some of the king's councillors (we believe John needed no council save from his own depraved heart), representing how many slaughters and seditions the Bretons were committing for their lord Arthur, and maintaining that they would never be quiet so long as that prince lived in a sound state, suggested that he should deprive the noble youth of his eyes, and so render him incapable of government. Some wretches were sent to his prison at Falaise to execute this detestable deed: they found Arthur loaded with chains, and were so moved with his tears and prayers that they staid their bloody hands. The compassion of his guards, and the probity of Hubert de Burgh,—the kind Hubert of Shakspeare,—saved him for this time. Hubert, who was warden of the castle, took upon him to suspend the cruelties till the king should be further consulted. This merciful appeal only produced his removal from Falaise to Rouen. On the 3rd of April, in the year of mercy 1203, the helpless orphan was startled from his sleep and invited to descend to the foot of the tower, which was washed by the peaceful waters of the Seine. At the portal he found a boat, and in it his uncle, attended by Peter de Maulac, his esquire. The lonely spot, the dark hour, and the darker countenance of his uncle, told the youth his hour was come. Making a vain and last appeal, he threw himself on his knees and begged that his life at least might be spared. But John gave the sign, and Arthur was murdered. Some say that Peter de Maulac shrunk from the deed, and that John seized his nephew by the hair, stabbed him with his own hands, and threw his body into the river. Hemingford and Knyghton, who wrote near the time, say that the squire was the executioner, and this statement is confirmed by the circumstance which they mention, and which is otherwise established, of John having bestowed on De Maulac, the heiress of the barony of Mulgref in marriage, as the reward of his iniquity. In the essential parts of the crime all writers agree. "The small number of English writers," says a recent historian, "who do not speak of the murder, are equally silent respecting the notorious fact of the disappearance of Arthur, which they could have no reason for being afraid to relate, but their conviction of the guilt of John. In all who have dared to speak we can evidently perceive a sort of rivalship in expressing the horror felt by their contemporaries, which more than outweighs in the scales of evidence any mistakes or exaggerations into which these honest feelings may have betrayed them."*

The rumour of the murder, which was certainly spread in the month of April of this year, excited a universal cry of horror and indignation. The Bretons, among whom the young prince had been born and brought up, and who had looked to him with the fondest hopes, were the loudest of all: their rage amounted to an absolute frenzy; and even when cooler moments came they unanimously swore to revenge their prince's death. The Maid of Brittany,—the fair and unfortunate Eleanor, Arthur's eldest sister,—was in John's hands, and closely confined in a monastery or prison at Bristol, where she consumed forty years of her life; but the enthusiastic people rallied round Alice, an infant half-sister of the prince, and appointed her father, Guy de Thouars, the last husband of their duchess Constance, their regent and general of their confederacy. At a meeting of the estates of the province, held at Vannes, it was determined that Guy, with a deputation, should forthwith carry their complaints before the French king, "their suzerain lord," and demand justice.† He listened to their petition, and summoned John to a trial before his peers, as a vassal of the French crown. The process was in the regular order of feudal justice. But the accused monarch did not appear; on which, with the concurrence of the barons, this sentence was pronounced on him:—"That John, Duke of Normandy, unmindful of his oath to Philip, his lord, had murdered his elder brother's son, a homager to the crown of France, within the seignory of that realm; whereon he is judged a traitor; and, as an enemy to the crown of France, to forfeit all his dominions which he held by homage; and that re-entry be made by force of arms."

Philip, who had been obliged to retreat from Normandy after the capture of Prince Arthur and the barons at Mirebeau in the preceding year, was now on the frontier of Poictou, where a general insurrection took place, and most of the nobles joined him against the murderer John. They surrendered to Philip most of the strong places, and then marched with him to Normandy. Here the enraged Bretons were before him, having invaded and occupied all the territory near their own frontiers: they took the strong castle of Mount St. Michael by assault, made themselves masters of Avranches, and then advancing, burnt all the towns between that city and Caen. There was the national wildness and ferocity in their vengeance, but it appears that not a few of the Normans joined them. These movements facilitated the progress of the French king, who, being joined by John's subjects of Anjou and Maine, advanced by Andely, Evreux, Domfront, and Lisieux, all of which places he took, and then effected his junction with the army of the Bretons at Caen. While tower and

* Argentré, Hist. de Bretagne.—Dumoulin, Hist. de Normandie.

* Mackintosh. † Daru.

town thus fell before the invaders, John was passing his time in a voluptuous indolence at Rouen, surrounded by women and effeminate courtiers, who feasted and played, sang and danced, without a thought of the morrow. He wished to remain ignorant of the loss of his towns, the miseries of his people, his own shame; and, when obliged to listen to some dismal news, he was accustomed to say, in the fulness of his infatuation, "Let them go on; let these French and this rabble of Bretons go on; I will recover in a single day all that they are taking from me with so much pains." At last his enemies appeared at Radepont, in the neighbourhood of Rouen, and then (in the month of December) he fled over to England to demand succour.*

We are not sufficiently acquainted with the history of the noble families of the time, and the transmission or division of their estates; but it appears that the Norman barons of England had no longer that property at stake in Normandy which on all former occasions had made them resolute to prevent the separation of the two countries. There were no doubt other causes for their apathy; but, in spite of John's demerits, we cannot but believe that they would have made great exertions if they had been in the same position as formerly, when the same barons held great estates in Normandy as well as in England. Now they would make no strenuous effort; and we find John complaining on this occasion, as a little later, when his other continental provinces were occupied by the French king, that his English nobles had forsaken him, and thereby put it out of his power to resist his enemies.

A.D. 1204. Unable to meet Philip with the sword, John attempted to stop his progress with the spiritual weapons of Rome: he applied to the pope, imploring him to interfere. Innocent despatched two legates to plead in the recreant's favour; but, in the high tide of his success, the French king, made the bolder by the universal odium John had fallen into, turned a deaf ear to their representations and menaces, and the legates departed without producing any apparent effect.

When John fled nothing remained to him save Rouen, Verneuil, and Château-Gaillard. The last was a strong castle, the pride of the late king, who took extraordinary pains in its construction, and it was held for John by a brave warrior who was true to his trust. In Rouen, the people, animated by an hereditary hatred of the French, determined to defend themselves; but when pressed by a vigorous siege, they applied for aid to their sovereign, the king of England. John had no aid to give. It was in vain he punished his lukewarm barons of England by fines and forfeitures,—it was in vain that he collected a considerable army at Portsmouth,—the nobles resolutely told him that they would not follow his standard out of England. Thus abandoned to themselves, and suffering from famine, the citizens of Rouen surrendered to the French king. Verneuil was taken about the same time, and Château-Gaillard fell after nobly sustaining a siege of seven months. Thus, John had no longer an inch of ground in Normandy, which duchy, after a separation of two hundred and ninety-two years, was finally re-annexed to the French kingdom. Within this year Brittany, Anjou, Maine, Touraine, and Poictou equally acknowledged the authority of Philip, and John had nothing left in those wide provinces except a few castles. Aquitaine, or Guienne, retained its connexion with the English crown, but there the authority of the king was limited and uncertain.

A.D. 1206. Philip soon found that it was much easier to incite the people against the detested John than to keep them obedient to himself. The men of Brittany, who indulged in their old dream of national independence, were soon disgusted by seeing their country treated as a mere province of France; and discontents also broke out in Anjou and Poictou. John contrived to land an English army at Rochelle, and even to take the strong castle of Montauban; then marching to the Loire, he took and burned Angers, committing many cruelties. He then reposed on his laurels, and gave himself up to feasting and debauchery. When again aroused, he descended the Loire, and laid siege to Nantes. This siege he raised, to offer battle to Philip. As the battle was about to commence he proposed a negotiation, and as the proposal was under discussion he ran away to England, loaded with new infamy. Philip, who had nothing more to do, as it was not convenient for him to attack Guienne, and an invasion of England was as yet a thing not to be contemplated, listened to another legate from the pope, who induced him to consent to a truce with John for two years.

A.D. 1207. The next step of the degraded but still arrogant John was to quarrel with the pope, and provoke to the utmost—and by deeds which gave an odious colouring to his cause, even where he was wholly or partially in the right—the enduring enmity of that power which had shaken the throne of his great and wise father. The dispute arose out of the conflicting claims of the crown and the church in the appointment of bishops; while John insisted that his favourite minister, John de Gray, Bishop of Norwich, should be elevated to the see of Canterbury, the pope *canonically* appointed Stephen Langton,—and the monks of Canterbury would receive no other archbishop. Never was time, never was place so ill chosen for an attack on the church; but John, blinded by passion, despatched two knights with an armed band to drive the monks of Canterbury from the land. The ministers of his vengeance entered with drawn swords into the cloisters which had alike witnessed the slaughter of Becket and the subsequent humiliation of his sovereign. "In the king's name," exclaimed the knights, "we command you, as traitors, to quit the realm; begone in a moment, or we will set fire to these

* Matt. Par.—Annal. de Margan.

walls, and burn you with your convent." All the monks who were not bed-ridden departed forthwith, and going into Flanders, were there received and hospitably entertained in different religious houses. John seized their effects: but as no one would labour upon them for the king, the lands of the archbishopric and of the convent of Canterbury lay without culture.* When Innocent, in a gentle but most decided tone asked for redress, John braved his authority; and thus an open struggle began between one of the ablest priests that ever wore the tiara, and the meanest and basest king that ever disgraced the English throne. While John amused himself with terrible but impotent threats against the monks, the pope wrote to the already disaffected English barons, ordering them to do all they could with the arms of the flesh to save their king and kingdom from perdition; and he called upon the prelates and abbots of the kingdom to fight with their spiritual weapons for Langton and the liberties of the church. He then sent orders to the bishops of London, Ely, and Worcester to wait upon the king in his name, and, if they found him still refractory, to threaten him with the interdict. John at last received these prelates: when they came to the threat he grew pale with rage, and his lips quivered and frothed. "By God's teeth," he cried, "if you, or any of your body, dare to lay my states under interdict, I will send you and all your clergy to Rome, and confiscate your property. As for the Roman shavelings, if I find any in my dominions, I will tear out their eyes and cut off their noses, and so send them to the pope, that the nations may witness their infamy." The bishops trembled and withdrew: but these were not times when personal fear stopped the triumphant march of Rome. A few weeks after, on Monday, the 23rd of March, 1208, in passion week, they pronounced the sentence of interdict against all John's dominions, and then fled for safety to the continent. To secure himself at this moment of danger, the king obliged as many of his nobles as he could to place their children in his hands as securities for their allegiance; a measure which created fresh disgust. When his commissioners went to the castle of William de Braouse, that nobleman's lady exclaimed, "My son shall not go near him; he murdered his own nephew, whom he should have cherished." "Thou hast spoken like a foolish woman," said her husband; and then turning to the officers, the baron added, "If I have done anything against my sovereign, let a day and place be named, for I am ready, and ever shall be, to make him satisfaction, without hostages, according to the judgment of his court and of my peers." John gave secret orders to seize the whole family: they were warned in time, and escaped safely into Ireland, but soon after perished in a miserable manner, the victims of the tyrant's insatiable vengeance.†

In the mean time the nation was plunged in mourning by the interdict,—the churches were instantly closed,—the priests ceased their functions, refusing to administer any of the usual sacred rites, except baptism to infants, and the sacrament to the dying. The dead were buried, without prayers, in unconsecrated ground,—the relics of the saints were taken from their places and laid upon ashes in the silent church,—their statues and pictures were covered with veils of black cloth,—the chime of church bells no longer floated on the air, and everything was so arranged under an interdict as to give a most lugubrious aspect to the whole country upon which it had fallen. When this had lasted a year, the pope followed up the sentence of interdict by a bull of excommunication against John. Although by narrowly watching the ports, he prevented the entrance of the Roman envoy and the official publication of the latter bull, the king was seriously alarmed, for he knew that excommunication would be followed by a sentence of dethronement, and that Philip was making ready to invade England with a banner that would be blessed by the pope. He also saw that the disaffection of his barons was still increasing, and that there was no part of Christian Europe to which he could apply for succour or alliance. At this critical moment, if we are to believe a curious story picturesquely told by Matthew Paris, he applied for aid to the Mahommedans of Spain. The Emir al Nassir was in the full career of conquest, and, by crossing the Pyrenees, he could at any time fall upon the dependencies and states of Philip in the south, and so make an important diversion in favour of John. Sovereigns much more scrupulous than this false-hearted tyrant have had recourse to such infidel alliances, even when pressed by much less danger than John, who, it is reported, intrusted a secret negotiation to Thomas Hardington and Ralph Fitz-Nicholas, knights, and a priest called "Robert of London." These envoys being led through several apartments, lined with Moorish guards with turbans on their heads and cimeters in their girdles, were presented to the emir, "a man of moderate size and grave aspect," who kept his eyes fixed on a book which lay open before him. The Englishmen presented their king's letter, which was translated to the emir by an interpreter. According to the report which was afterwards spread, John offered to hold the English crown of the emir, and to embrace the faith of Mahommed. This looks like exaggeration, but John may have set no limits whatever to promises which he never intended to keep, and was quite capable of offering even more than this to serve his purpose in such an emergency. The Moorish chief questioned the envoys as to the population and strength of England, and the age and personal character of the king, and then dismissed them with vague expressions of friendship which signified nothing. He, however, recalled "Robert of London," the priest, and adjured him, by his respect for the faith of Christ, on which he trusted for salvation, to tell him what manner of man his

* Matt. Par.—Annal. de Marg. † Ibid.

master really was. Thus pressed, Robert replied that John was a tyrant that would soon feel his own subjects' wrath. This terminated the business. On his return, Robert received the custody of the abbey of St. Albans, and there Matthew of Paris, who was a monk of that house, heard him tell the curious story to his companions.

The effect of the interdict upon the laity of England must have been weaker than was anticipated, or probably the expedient had lost its efficiency by time and use, for, as it has been justly remarked, John's strength was so little lessened that the only two successful expeditions of his reign, those against Ireland and Wales, occurred during the time that he lay under the proscription of the Roman see.

A.D. 1210.—John employed the spring of this year in raising money by the most arbitrary means: all classes suffered, but none like the unfortunate Jews, who were seized, imprisoned, and tortured all over the kingdom. A great sum is said to have been collected, and with this he levied an army, pretending that he would go and drive Philip out of Normandy. When all was ready, he sailed for Ireland, where the English nobles had for some time defied his authority. On the 6th of June he landed on the Irish coast and proceeded to Dublin, where more than twenty of the native chieftains repaired to do him homage and offer tribute. He then marched into the province of Connaught, reduced the castles of some of the revolted English nobles, and drove Hugh de Lacy, Earl of Ulster, and his brother Walter de Lacy, Earl of Meath, out of the island. He divided such parts of the island as were subjected to England into counties, established English laws, and appointed sheriffs and other officers. He also ordered, for the convenience of traffic, that the same monies should be equally current in both countries; and then, intrusting the government of Ireland to his favourite the bishop of Norwich, whom he had not been able to make archbishop of Canterbury, he returned to England after an absence of twelve weeks, during which he had enjoyed the pleasures of an easy triumph, for no one offered resistance. In the following year he determined to show his prowess in Wales. Money was again wanted: he summoned all the abbots and lady-abbesses,—all the heads of monastic houses, whether male or female, to meet him in London; he urged his wants in a manner which was not to be resisted, and, having got what he could from these servants and hand-maidens of Christ, he again racked the unbelieving Jews, putting them to torture and throwing them into dungeons, where they were kept until they paid enormous fines to the king. Among other Jews thus treated was one of Bristol, a very wealthy man, but who would not consent to pay 10,000 marks for his deliverance. "Whereupon," says an old historian, "by the king's commandment he was put into this penance, that every day till he would agree to give those 10,000 marks that he was seized [assessed] at, he should have one of his teeth plucked out of his head."* The Jew braved the pain to save his money. John's executioner began with the double teeth, and, in the course of as many days, pulled out seven. On the eighth day this torture had its effect, and the Jew gave security for the money.† With the sums obtained in part by such flagitious means John raised a mighty army, and penetrated into Wales, as far as the foot of Snowdon. He was not a man to do more than his great and warlike predecessors, and he marched back again immediately, having, however, forced the Welsh to pay him a tribute in cattle and horses, and to give him twenty-eight hostages, youths of the best families. Whenever John had a glimpse of success, he increased his arbitrary proceedings against his English subjects: on a former occasion he gave new rigour to the barbarous forest laws, and now he levied scutage-money in an unjust manner. In the following year the Welsh again were up in arms to assert their independence. John savagely hanged the twenty-eight hostages, and was preparing for a fresh invasion when he was terrified by a report that many of his own barons were conspiring against him. He shut himself up in the castle of Nottingham for fifteen days, seeing no one but the personal attendants on whom he most relied. He then marched to Chester, still collecting troops, and vowing to exterminate the Welsh; but from Chester he turned suddenly back to London, where he kept strong bodies of foreign mercenaries constantly about him, and seldom showed himself to his people. His enemies increased every day, and the crowd of English exiles were incessantly urging the pope to take vengeance on their king.

A.D. 1213.—At last Innocent hurled his deadliest thunderbolt at the head of John: he pronounced his deposition, absolved his vassals from their oaths of allegiance, and called upon all Christian princes and barons to take part in the meritorious act of dethroning an impious tyrant. He then sent Stephen Langton, the exiled archbishop of Canterbury, with other English and some Italian prelates, to the French court, there to convoke a solemn meeting, and declare to the king and the whole nation that the pope authorized an immediate invasion of England. The worldly temptation was so great, that Philip probably required none other; but the pope promised him *the remission of his sins* if he executed this pious purpose, and drove John from his throne. About the middle of March, Philip collected a great army in Normandy, and prepared a fleet of 1700 vessels of all sizes at Boulogne and the other ports on the Channel. John, being well informed of these preparations, took for once a bold step: he summoned every man capable of bearing arms to be ready to march to the coasts of Kent and Sussex, and he collected every vessel in his dominions capable of carrying six or more horses. When the ships were ready, he anticipated Philip's attack: the English mariners crossed the Channel, took a French squadron at the mouth of the Seine,

* Holinshed. † Matt. Par.

destroyed the ships in the harbour of Fecamp, and burned Dieppe to the ground. They swept the whole coast of Normandy, and returned in triumph, the main division of the French fleet at Boulogne not hazarding an attack. On Barham Downs 60,000 landsmen stood as yet firm around the standard of John; but he dreaded these his own brave subjects, and he was always spiritless and unmanly. It was soon seen, after all his vain boasting, and his threats against the church of Rome, that he would lower himself to the dirt before that incensed enemy,—that he would do anything rather than fight. The pope's legate, Pandulph, well knew his dastardly character, and now skilfully took advantage of it. Two knights of the Temple (travelled men and crafty diplomatists) landed at Dover and proceeded to the English camp. "We come," said they, with great respect, "from Pandulph, the sub-deacon and servant of our lord the pope: for your advantage and for that of the realm of England, he asks to see you in private."—"Let him come forthwith," said John. Pandulph came and drew so formidable a picture of the French army of invasion, and represented the general and just disaffection of the great barons of England in such forcible, and, on the whole, true colours, that the paltry despot's heart died away within him. What added to his fears, was the prediction of a certain Peter, called "the Hermit," that, before the Feast of the Ascension should be passed (it was distant only three days) John would be unknighted. As he trembled before the astute churchman, Pandulph bade him repent, and remember that the pontiff was a merciful master, who would require nothing which was not absolutely necessary either to the honour of the church or to the security of the king himself. After a little wavering, John gave way, and subscribed an instrument which, in itself, was not *very* objectionable, and which had been offered him some time before, when, by accepting it, he might have avoided his present excessive debasement. It was agreed, on the 13th day of May, that John should obey the pope in all things for which he had been excommunicated,—that he should receive into favour the exiled bishops and others, particularly Stephen Langton and the prior and monks of Canterbury,—that he should make full satisfaction to the clergy and laity for the damages they had suffered at his hands, or otherwise, on account of the interdict, and that he should pay down, in part of restitution, the sum of 8000*l*. John further agreed not to prosecute any person for any matter relating to the late disagreement; and, on his part, Pandulph promised that, on the performance of these conditions, the sentences of interdict should be recalled, and that the bishops and other proscribed churchmen, on their return, should swear to be true and faithful to the king. John set his seal to the instrument, and four of his greatest barons, William Earl of Salisbury, Reginald Earl of Boulogne, and the Earls of Warren and Ferrers, swore, "on the soul of the king," that he would keep this compact inviolate. The dastardly spirit of John, the over-reaching policy and ambition of the pope, and the address of the envoy Pandulph, can alone account for the consummation of ignominy which followed. On the 14th of May, the following day, John was closeted with the Italian in secret consultation, and when seen for a moment abroad, his countenance was sadly dejected. Though depraved in morals and notoriously irreligious, he was a prey to superstition, and he was now thinking more of the prediction of a hair-brained recluse than of his kingdom, for he fancied that Peter the Hermit's prophecy betokened he must die.

On the 15th of May, at an early hour of the morning, John repaired to the church of the Templars at Dover, and there, surrounded by bishops, barons, and knights, took, on his knees, before Pandulph, an oath of fealty to the pope,—the same oath which vassals took to their lords. At the same time he put into the envoy's hands a charter, testifying that he, the king of England and lord of Ireland, in atonement for his offences against God and the church, not compelled by the interdict or by any fear or force, but of his own free will and with the general consent of his barons, surrendered to our lord the Pope Innocent, and Innocent's successors for ever, the kingdom of England and the lordship of Ireland, which were henceforth to be held as fiefs of the holy see, John and his successors paying for them an annual tribute of 700 marks of silver for England and 300 marks for Ireland. He then offered some money as an earnest of his subjection, but Pandulph trampled it under his feet,—an act which called forth an angry remonstrance from the bishop or archbishop of Dublin. Pandulph, it is said, meant to signify that the church of Rome scorned worldly riches; but it is hinted by some old writers that he afterwards stooped down to gather up the money. The next day was the fatal term, the Feast of the Ascension, during which John watched the progress of the sun with an anxious eye: it set, and he died not,—it rose on the morrow, and he was still alive: instantly, in punishment for the vile terror he had suffered, he ordered Peter and his son to be dragged at the tails of horses and hanged on gibbets. The people contended that Peter, after all, was no false prophet, and that John, by laying his crown at the feet of a foreign priest, had verified the prediction.*

Five or six days after these transactions, Pandulph went over to France, and, to the astonishment and great wrath of Philip, announced to him that he must no longer molest a penitent son and a faithful vassal of the church, nor presume to invade a kingdom which was now part of the patrimony of St. Peter. "But," said Philip, "I have already expended enormous sums of money on this expedition, which I undertook at the pontiff's express commands, *and for the remission of my sins.*" The nuncio repeated his inhibition and withdrew.

* Matt. Par. Matthew Westminster, or Florilegus. W. Heming.—Chron. Mailros.—Annal. Waver.—Chron. T. Wykes.

The French king, however, who was already on the road, continued his march to the coast. It appears, indeed, that Philip, who inveighed publicly against the selfish and treacherous policy of the pope, would not have been prevented from attempting the invasion by the dread of the thunders of the church which again rumbled over his head.* But other circumstances of a more worldly nature interfered: Ferrand, the new Earl of Flanders, demanded that certain towns which had lately been annexed to the French crown should be restored to him. Philip refused; and now when he proposed to his great vassals that they should continue the enterprise against England, the Earl of Flanders, the most powerful of them all, said that his conscience would not permit him to follow his lord in such an unjust attempt; and so saying, he suddenly withdrew with all his forces. Philip, vowing he would make Flanders a mere province of France, marched after him, and, taking several of the Earl's best towns on his way, sat down with his army before the strong city of Ghent. Fortunately for both parties, Ferrand had already a secret understanding with John, and now he applied to that king for help. John's fleet lay ready in the harbour of Portsmouth. Seven hundred knights, with a large force of infantry, embarked in 500 vessels, under the command of William Earl of Holland, and William Longspear, Earl of Salisbury, one of the sons of Fair Rosamond, and immediately made sail for the coast of Flanders. They found the French fleet at anchor at Damme, which was at that time the port of Bruges: it was three times more numerous than the English fleet; but most of the sailors and land-troops embarked with them were on shore plundering the neighbouring country, and committing all sorts of ravages in a district which, through the blessings of peace and commerce, had made a wonderfully rapid progress in civilization and the arts that adorn life. This was the first fleet that the French kings of the Capetian line had ever put to sea,—this was the first naval engagement between the two nations whose unfortunate enmity has since then animated so many sanguinary encounters in all the quarters of the globe. It was an unfortunate beginning for the French: their navy was annihilated. We quote the account of the battle as Southey has abridged it from Holinshed:—"The English, as they neared the coast, espied many ships lying without the haven, which, capacious as it was, was not large enough to contain them all; many, therefore, were riding at anchor without the haven's mouth, and along the coast. Shallops were presently sent out to espy whether they were friends or enemies; and if enemies, what their strength, and in what order they lay. These espials," approaching as if they had been fishermen, "came near enough to ascertain that the ships were left without sufficient hands to defend them, and, hastening back, told the commanders that the victory was in their hands if they would only make good speed. No time was lost: they made sail towards the enemy, and won the 'tall ships,' which were riding at anchor, with little difficulty, the men on board only requesting that their lives might be spared. The smaller ones, which were left dry when the tide was low, they spoiled of whatever was useful and set on fire, the sailors escaping to the shore. This done, they set upon those that lay in the harbour, within the haven; and 'here was hard hold for a while,' because of the narrowness of the place allowing no advantage for numbers or for skill. 'And those Frenchmen,' says the chronicler, 'that were gone abroad into the country, perceiving that the enemies were come by the running away of the mariners, returned with all speed to their ships to aid their fellows, and so made valiant resistance for a time, till the Englishmen, getting on land, and ranging themselves on either side of the haven, beat the Frenchmen so on the sides, and, the ships grappling together in front, that they fought as it had been in a pitched field, till that, finally, the Frenchmen were not able to sustain the force of the Englishmen, but were constrained, after long fight and great slaughter, to yield themselves prisoners.' The first act of the conquerors was to give thanks to God for their victory. They then manned three hundred of the prizes, which were laden with corn, wine, oil, and other provisions, and with military stores, and sent them to England—the first fruits of that maritime superiority for which the church bells of this glorious island have so often pealed with joy. An hundred more were burnt, because they were drawn up so far upon the sands that they could not be got off without more hands and cost of time than could be spared for them. There still remained a great part of the enemy's fleet higher up the harbour, and protected by the town, in which Philip had left a sufficient force to protect the stores which he had left there, and the money for the payment of his troops. The English landed; the Earl of Flanders joined them, and they proceeded to attack the place; but by this there had been sufficient time for the French king to hasten, with an overpowering force, from the siege of Ghent. The English and their allies sustained a sharp action, and were compelled to retreat to their ships, with a loss computed by the French at two thousand men. But they retreated no farther than to the near shores of the Isle of Walcheren; and Philip saw the impossibility of saving the remainder of his fleet, considering the unskilfulness of his own seamen, as well as other things. He set fire to them, therefore, himself, that they might not fall into the enemy's hands."* The French king thus lost the means of supporting his army in Flanders or of transporting it to the English coast: half famished and overcome with vexation, he hurried across his

* Philip had been excommunicated, and his kingdom had been laid under an interdict, a few years before, by the reigning pope, Innocent III.

* Naval History, i. 187, 188.

own frontiers, leaving Earl Ferrand to recover with ease all that he had lost.

This first great naval victory transported the English people with joy; but with joy was mingled a malicious confidence and presumption in the heart of John, who now betrayed a determination to break the best part of his recent oaths. Being determined to carry the war into France, he summoned his vassals to meet him at Portsmouth. The barons went armed and appointed, as if ready to sail; but, when ordered to embark, they resolutely refused unless the king recalled the exiles, as he had promised to do. After some tergiversation John granted a reluctant consent, and Archbishop Langton, the bishops of London, Ely, Hereford, Lincoln, and Bath, the monks of Canterbury, all with their companions and numerous dependants returned. John and the archbishop met and kissed each other at Winchester; and there, in the porch of the cathedral church, Langton gave full absolution to the king, who again swore to govern justly and maintain his fealty to the pope. It was, however, clear to all men that Langton placed no confidence in the king; and that the king, who considered him as the chief cause of all his troubles, regarded Langton with all the deadly hatred which his dark character was capable of. John now set sail with a few ships, but his barons were in no hurry to follow him, being far more eager to secure their own liberties than to recover the king's dominions on the continent. They said that the time of their feudal service was expired, and they withdrew to a great council at St Albans, where Fitz-Peter, one of the king's justiciaries, presided, and where they published resolves, in the form of royal proclamations, ordering the observance of old laws, and denouncing the punishment of death against the sheriffs, foresters, or other officers of the king who should exceed their proper and legal authority. John got as far as the island of Jersey, when, finding that none followed him, he turned back with vows of vengeance. He landed, and marched with a band of mercenaries to the north, where the barons were most contumacious. Burning and destroying, he advanced as far as Northampton. Here Langton overtook him. "These barbarous measures," said the prelate, "are in violation of your oaths; your vassals must stand to the judgment of their peers, and not be wantonly harassed by arms." "Mind you your church," roared the furious king, "and leave me to govern the state." He continued his march to Nottingham, where Langton, who was not a man to be intimidated, again presented himself, and threatened to excommunicate all the ministers and officers that followed him in his lawless course. John then gave way, and, to save appearances, summoned the barons to meet him or his justices. Langton hastened to London, and there, at a second meeting of the barons, he read the liberal charter which Henry the First had granted on his accession; and after inducing them to embrace its provisions, he made them swear to be true to each other, and to conquer or to die in support of their liberties. This was on the 25th of August. On the 29th of September a new legate from the pope, cardinal Nicholas, arrived in England to settle the indemnity due to the exiles, and to take off the interdict. John renewed his oath of fealty to Innocent, knelt in homage before the legate, paid fifteen thousand marks, and promised forty thousand more to the bishops. The interdict was removed; and from this moment the court of Rome changed sides, and, abandoning the cause of liberty and the barons, stood for the king. This abandonment, however, did not discourage the nobles, nor did it even detach Archbishop Langton from the cause for which they had confederated.

A.D. 1214. A formidable league was now formed against the French king, and John was enabled to join it with some vigour. Ferrand, Earl of Flanders, Reynaud, Earl of Boulogne, and Otho, the new emperor of Germany, nephew to John, determined to invade France and divide that kingdom among them, giving the English king all the country beyond the Loire for his share. Ferrand was to have Paris with all the Isle of France, Reynaud the country of Vermandois, and the emperor all the rest. John sent some English forces under the command of his half-brother, the Earl of Salisbury, to Valenciennes, where the confederates established their head-quarters, and then sailed himself to the coast of Poictou, where several of his former vassals joined him, and enabled him to advance to Angers. This diversion was well planned: it obliged Philip to divide his forces, and while he himself marched towards the frontiers of Flanders, he sent his son Louis into Brittany, whither the English king now advanced. John was kept in check, or lost his opportunity through cowardice and indolence, while his allies were thoroughly defeated at the battle of Bouvines,—one of the most memorable battles of the middle ages, in which the emperor was completely ruined, and the Earl of Flanders, the Earl of Boulogne, and the Earl of Salisbury were taken prisoners, with an immense number of inferior lords and knights. Salisbury, the gallant Longsword, was captured by the Bishop of Beauvais, the very individual whom King Richard had loaded with chains, and upon whose coat of mail that king had been so facetious. This prelate, however, had become more prudent or more circumspect,—he no longer wielded the sword, but fought with a heavy club, thus knocking people on the head without shedding blood, which was contrary to the canons of the church. He was not the only prelate in this fierce *melée*. Philip was chiefly indebted for his success to Guerin, bishop-elect of Senlis, who had also some scruples of conscience, for he would not use a sword, but marshalled the French host and directed the slaughter with a wand. This battle certainly gave lustre to the French arms; but the French writers grossly exaggerate the disparity of numbers. It was fought on the 27th of

July, near an obscure village called Bouvines, between Lisle and Tournay. On the 19th of October following John begged a truce, and obtained one for five years, on condition of abandoning all the towns and castles he had taken on the continent. He arrived in England on the 20th of October in a humour more ferocious than ever. As if he would take vengeance on his English subjects for the reverses and shame he had suffered, he again let loose his foreign mercenaries on the land, and began to violate all his most solemn promises. Fitz-Peter, his justiciary, the only one of his ministers that could moderate his fury, had now been dead some months. John, who feared him, rejoiced at his death. "It is well," cried he, laughing as they told him the news; "in hell he may again shake hands with Hubert, our late primate, for surely he will find him there. By God's teeth, now for the first time I am king and lord of England."* But there were men at work resolute and skilful. Immediately after his arrival the barons met to talk of the league they had formed with Langton. "The time," they said, "is favourable; the feast of St. Edmund approaches; amidst the multitudes that resort to his shrine we may assemble without suspicion." On the 20th of November, the saint's day, they met in crowds at St. Edmunds-Bury, where they finally determined to demand their rights, in a body, in the royal court at the festival of Christmas. The spirit of freedom was awakened, not soon to sleep again: they advanced one by one, according to seniority, to the high altar, and, laying their hands on it, they solemnly swore that, if the king refused the rights they claimed, they would withdraw their fealty and make war upon him, till, by a charter under his own seal, he should confirm their just petitions. They then parted to meet again at the Feast of the Nativity. When that solemn but festive season arrived John found himself at Worcester, and almost alone, for none of his great vassals came as usual to congratulate him, and the countenances of his own attendants seemed gloomy and unquiet. He suddenly departed, and riding to London, there shut himself up in the strong house of the Knights Templars. The barons followed close on the coward's steps, and on the Feast of the Epiphany (at every move they chose some day consecrated by religion) they presented themselves in such force that he was obliged to admit them to an audience. At first he attempted to browbeat the nobles. One bishop and two barons were recreants, and consented to recede from their claims, and never trouble him again, but all the rest were firm to their purpose. John turned pale, and trembled. He then changed his tone, and cajoled instead of threatening. "Your petition," he said, "contains matter weighty and arduous. You must grant me time till Easter, that, with due deliberation, I may be able to do justice to myself and satisfy the dignity of my crown." Many of the barons, knowing the use he would make of it, would not have granted this delay, but the majority consented, on condition that Cardinal Langton, the bishop of Ely, and William, Earl of Pembroke, should be the king's sureties that he would give them the satisfaction they demanded on the appointed day. The confederated nobles then retired to their homes. They were no sooner gone than

* Matt. Par.

ST. EDMUNDS-BURY.—1745.

John adopted measures which he fondly hoped would frustrate all their plans, and bring them bound hand and feet within the verge of his revenge. He began by courting the church, and formally renounced the important prerogative that had been hitherto so zealously contended for by himself and his great ancestors, touching the election of bishops and abbots. Having thus, as he thought, bound the clergy to his service, he turned his attention to the body of the people, whose progress had been slow, but pretty steady, and whose importance was now immense. He ordered his sheriffs to assemble all the free men of their several counties, and tender to them a new oath of allegiance. His next step was to send an agent to Rome, to appeal to the pope against what he termed the treasonable violence of his vassals. The barons, too, despatched an envoy to the eternal city; but it was soon made more than ever evident that Innocent would support the king through right and wrong. He wrote a startling letter to Cardinal Langton; but that extraordinary priest was deaf to the voice of his spiritual chief where the interests of his country were concerned. To make himself still surer, John took the cross on the 2nd of February, solemnly swearing that he would lead an army to the Holy Land. This taking of the cross, by which the debtor was exempted from the pursuit of his creditor,—by which the persons, goods, and estates of the crusaders were placed under the immediate protection of the church till their return from Palestine,—seemed to John the best of all defences.

On the appointed day in Easter week the barons met at Stamford with great military pomp, being followed by two thousand knights and a host of retainers. The king was at Oxford. The barons marched to Brackley, within a few miles of that city, where they were met by a deputation from the sovereign, composed of Cardinal Langton, the Earl of Pembroke, and the Earl of Warenne. The confederates delivered the schedule containing the chief articles of their petition. "These are our claims," they said, "and, if they are not instantly granted, our arms shall do us justice." When the deputies returned, and Langton expounded the contents of the parchment he held in his hand, John exclaimed, in a fury, "And why do they not demand my crown also? By God's teeth I will not grant them liberties which will make me a slave." He then made some evasive offers which the barons understood, and rejected. Pandulph, who was with the king, now contended that the cardinal-primate ought to excommunicate the confederates; but Langton said he knew the pope's real intentions had not been signified, and that unless the king dismissed the foreign mercenaries, whom he had brought into the kingdom for its ruin, he would presently excommunicate them. The barons now proclaimed themselves "the army of God and of holy church," and unanimously elected Robert Fitz-Walter to be their general. They then marched against the castle of Northampton, but they had no battering engines; the walls were lofty and strong; the garrison, composed of foreigners, stood out for the king; and their first warlike attempt proved a failure. After fifteen days they gave up the siege, and marched to Bedford with anxious minds. On whichever side the free burghers of England threw their substantial weight that party must prevail, and, as yet, no declaration had been made in favour of the confederates. But now anxiety vanished,—the people of Bedford threw open their gates; and soon after messengers arrived from the capital with secret advice that the principal citizens of London were devoted to their cause, and would receive them with joy. Losing no time, they marched to Ware, and, not stopping to rest for the night, pursued their course to London, which they reached in the morning. It was the 24th of May, and a Sunday: the gates were open,—the people hearing mass in their churches,—when the army of God entered the city in excellent order and profound silence. On the following day the barons issued proclamations requiring all such earls, barons, and knights, as had hitherto remained neutral, to join them against the perjured John, unless they wished to be treated as enemies of their country. In all parts of the kingdom the lords and knights quitted their castles to join the national standard at London. It is needless, say the old chroniclers, to enumerate the barons who composed the army of God and of holy church: they were the whole nobility of England. The heart of the dastard John again turned to water: he saw himself almost entirely deserted, only seven knights remaining near his person. Recovering, however, from his first stupefaction, he resorted to his old arts; he assumed a cheerful countenance; said what his lieges had done was well done; and from Odiham, in Hampshire, where he was staying, he despatched the Earl of Pembroke to London, to assure the barons that, for the good of peace, and the exaltation of his reign, he was ready freely to grant all the rights and liberties; and only wished them to name a day and place of meeting. "Let the day," replied the barons, "be the 15th of June,—the place, Runny-mead."*

On the morning of the appointed day, the king moving from Windsor Castle, and the barons from the town of Staines, the parties met on the green meadow, close by the Thames, which the barons had named. With John came eight bishops, Pandulph, Almeric, the Master of the English Templars, the Earl of Pembroke, and thirteen other gentlemen; but the majority of this party, though they attended him as friends and advisers, were known to be in their hearts favourable to the cause of the barons. On the other side stood Fitz-Walter and the whole nobility of England. With scarcely an attempt to modify any of its clauses, and with a facility that might justly have raised suspicion, the king signed the scroll presented to him. This was Magna Charta,—the

* Matt. Par.

RUNNY-MEAD.

GREAT CHARTER,—a most noble commencement and foundation for the future liberties of England. As the profound duplicity and immorality of John were well known, the barons exacted securities. They required that he should disband and send out of the kingdom all his foreign officers, with their families and followers; that for the two ensuing months the barons should keep possession of the city, and Langton of the Tower of London; and that they should be allowed to choose twenty-five members from their own body to be guardians or conservators of the liberties of the kingdom, with power, in case of any breach of the charter,—such breach not being redressed immediately,—to make war on the king; to distrain and distress him by seizing his castles, lands, possessions, and in any other manner they could, till the grievance should be redressed; always, however, saving harmless the person of the said lord the king, the person of the queen, and the persons of their royal children. This last article, which invested a council of twenty-five with the real sovereignty of the realm, has been viewed by some as an unwarrantable invasion of the royal prerogative; but a strong barrier was indispensable against the tyrannical and faithless character of the monarch, and without extreme securities the charter drawn from his reluctant hand would have been utterly valueless. It is true that no limits were set to the authority of the barons either in extent or duration; but, under the circumstances, it was necessary that their power should be dictatorial, and the only bound as to time which could have been introduced was the death of John,—a clause which could not be decently inserted.

As soon as the great assembly dispersed, and John found himself in Windsor Castle safe from the observing eyes of his subjects, he called a few foreign adventurers around him, and gave vent to rage and curses against the charter. According to the chroniclers his behaviour was that of a frantic madman; for, besides swearing, he gnashed his teeth, rolled his eyes, and gnawed sticks and straws. The creatures, who would be ruined and expelled by the charter, roused him by appealing to his passion of revenge, and he forthwith despatched two of them to the continent to procure him the means of undoing all that he had been obliged to do. One of these adventurers went to Flanders, Poictou, Aquitaine, and Gascony, to hire other adventurers to come to England and fight against the barons; the other went to Rome, to implore the aid of Innocent. John then sent messengers to such governors of his castles as were foreigners or men devoted to him, commanding them to lay in provisions and put themselves in a state of defence; "doing all this without noise and with caution, lest the barons should be alarmed." He caused the alarm himself, by instantly evading some of the clauses of the charter. On their departure from Runny-mead, the barons, in the joy of their hearts, appointed a great

tournament to be held at Stamford on the 2nd of July. John, during their absence, formed a plot to surprise London, where the main strength of the party lay; but, being warned in time, the nobles put off the celebration of the tournament to a more distant day, and named a place for it nearer to London. The king now withdrew to Winchester, where, alarmed at the whole course of his conduct, a deputation waited on him on the 27th of June. He laughed at their suspicions,—swore, with his usual volubility, that they were unfounded, and that he was ready to do all those things to which he was pledged. He issued a few writs required of him, and then withdrew still further to the Isle of Wight, where he would mix with no society save that of the fishermen of the place and the mariners of the neighbouring ports, whom he tried to captivate by adopting their manners. Here he remained about three weeks (not months, as stated by Matthew Paris); for it appears from public instruments, still extant, that he was at Oxford on the 21st of July, where he appointed a conference which he did not attend, posting away to Dover, where he staid during the whole of September, anxiously awaiting the arrival of his mercenary recruits from the continent. When the barons learned that troops of Brabanters and others were stealing into the land in small parties, they despatched William d'Albiney, at the head of a chosen band, to take possession of the royal castle of Rochester. D'Albiney had scarcely entered the castle, which he found almost destitute of stores and engines of defence, when John found himself sufficiently strong to venture from Dover. The un-English despot, followed by Poictevins, Gascons, Flemings, Brabanters, and others,—the outcasts and freebooters of Europe,—laid siege to Rochester Castle at the beginning of October. The barons, knowing the insufficient means of defence within the castle, marched from London to its relief, but they were obliged to retreat before the superior force of the foreigners, who, day after day, were joined by fresh adventurers from the other side of the Channel. Fortunately for England, one Hugh de Boves and a vast horde of marauders perished in a tempest on their way from Calais to Dover. John bewailed this loss like a maniac, but he pressed the siege of Rochester Castle, and still prevented the barons from relieving it. After a gallant resistance of eight weeks, when the outer walls were thrown down, an angle of the keep shattered, and the last mouthful of provision consumed, D'Albiney surrendered. John, with his usual ferocity, ordered him to be hanged, with his whole garrison; but Savaric de Manleon, the leader of one of the foreign bands, opposed this barbarous mandate, because he feared the English might retaliate on his own followers, if any should fall into their hands. The tyrant was, therefore, contented to butcher the inferior prisoners, while all the knights were sent to the castles of Corfe and Nottingham.

The loss of Rochester Castle was a serious blow to the cause of the barons, who were soon after excommunicated by the pope; for the king's application to Rome had met with full success, notwithstanding a counter appeal made by the English nation. Innocent declared that the barons were worse than Saracens for molesting a vassal of the holy see—a religious king who had taken the cross. Thus emboldened, John marched from Kent to St. Alban's, accompanied by "Falco, without bowels," "Manleon, the bloody," "Walter Buch, the murderer," "Sottim, the merciless," "Godeschal, the iron-hearted," and a most mixed and savage host. It was thought at one time he would turn upon London, but the attitude of the capital struck him with terror; and leaving a strong division to manœuvre round it, and devastate the south-eastern counties, he moved towards Nottingham, marking his progress with flames and blood. Alexander, the young king of Scotland, had entered into an alliance with the English barons, and, having crossed the borders, was investing the castle of Norham. The whole northern country, moreover, was especially obnoxious to John, and thither he determined to carry his vengeance. A few days after the feast of Christmas, when the ground was covered with deep snow, he marched from Nottingham into Yorkshire, still burning and slaying, and becoming more savage the farther he advanced and the less he was opposed. Every hamlet, every house on the road, felt the fury of his execrable host,—he himself giving the example, and setting fire with his own hands in the morning to the house in which he had rested the preceding night. His foreign soldiery put his native subjects to the torture to make them confess where they had concealed their money. The tortures inflicted were worthy of fiends, and too horrible to bear description. All the castles and towns they could take were given to the flames; and the people of Yorkshire and Northumberland were reminded of the expedition of William the Conqueror, which their local traditions faithfully painted as the extremity of human barbarity on the one side, and of human misery on the other. The Scottish king retired before a superior force, and John, vowing he would "unkennel the young fox," followed him as far as Edinburgh. Here, meeting with opposition, he paused, and then—never having any valour but when unopposed—he turned back to England, burning Haddington, Dunbar, and Berwick on his way. Near the borders, Morpeth, Mitford, Alnwick, Wark, and Roxburgh had been consumed already.

In the mean time the division left in the south, which seems to have been reinforced by fresh arrivals of mercenaries from the continent, committed equal atrocities; and wherever the castle of a noble was taken, it was given, with the adjoining estate, to some hungry adventurer,—John thus renewing the early scenes of the Conquest. On the 16th of December another sentence of excommunication was promulgated by the abbot of Abingdon and two other ecclesiastics: in this bull Robert

Fitz-Walter, the general of the confederacy, and all the principal barons, were mentioned by name; and the city of London was laid under an interdict. This measure excited some fear and wavering in the country, but the citizens of London had the boldness to despise it. According to Matthew Paris they asserted that the pontiff had no right to interfere in worldly concerns; and, spite of the interdict, they kept open their churches, rang their bells, and celebrated their Christmas with unusual festivity.

But the barons, who were confined in London by the force that continually increased around them,—who saw their property the prey to new invaders,—and who knew the full extent of the danger to which the nation was exposed (the effect of the excommunication on the villains in the country not being the least of these), were sorely disquieted, and knew not what measures to adopt. Many meetings were held, and a variety of plans debated; but at last they unanimously resolved, in a moment of desperation, upon the very equivocal and perilous expedient of calling in foreign aid. They sent to offer the crown to Philip's eldest son, Prince Louis, who was connected with the reigning family by his marriage with Blanche of Castile, John's own niece; believing that, should he land amongst them, the mercenaries now with John, who were chiefly subjects of France, would join his standard, or at least refuse to bear arms against him. Philip and Louis eagerly grasped at this offer; but the wary old king moderated the impatience of his son, and would not permit him to venture into England until twenty-four hostages, sons of the noblest of the English, were sent into France. Then a fleet, with a small army, was sent up the Thames: it arrived at London at the end of February, and the commander assured the barons that Louis himself would be there with a proper force by the feast of Easter. Innocent in the meanwhile was not inactive in John's, or rather in his own, cause; he despatched a new legate to England; and Gualo, on his journey, reached France in time to witness and to endeavour to prevent the preparations making for invasion. He boldly asked both king and prince how they dared attack the patrimony of the church, and threatened them with instant excommunication. To the astonishment of the churchman, Louis advanced a claim to the English throne through right of his wife, and departed for Calais, where his army was collecting. At the appointed time, he set sail from Calais with a numerous and well-appointed army, embarked on board 680 vessels. His passage was stormy: the mariners of the Cinque Ports, who adhered to the English king, cut off and took some of his ships; but on the 30th of May, he landed safely at Sandwich. John, who had come round to Dover with a numerous army, fled before the French landed, and, burning and ravaging the country, he went to Guildford, then to Winchester, and then to Bristol, where Gualo, the pope's legate, soon joined him. Leaving Dover Castle in his rear, Louis besieged and took the Castle of Rochester. He then marched to the capital, where, on the 2nd of June, A.D. 1216, he was joyfully received by the barons and citizens, who conducted him, with a magnificent procession, to St. Paul's. After he had offered up his prayers, the nobles and citizens did homage, and swore fealty to him. And then he, with his hand on the Gospels, also swore to restore to all orders their good laws, and to each individual the estates and property of which he had been robbed. Soon after, Louis published a manifesto, addressed to the king of Scotland and all the nobles not present in London. An immense effect was presently seen: nearly every one of the few nobles who had followed John now left him and repaired to London; all the men of the north, from Lincolnshire to the borders, rose up in arms against him; the Scottish king made ready to march to the south; and, at first in small troops, and then in masses, all the foreign mercenaries, with the exception of those of Gascony and Poictou, deserted the standard of the tyrant, and either returned to their homes or took service under Louis and the barons, who were now enabled to retake many of their castles. Gualo, the legate, did all he could to keep up the drooping, abject spirit of John; but, at the very moment of crisis, on the 16th of July, the pope himself, the mighty Innocent, died, and left the church to be wholly occupied for some time by the election of a new pontiff.

Louis marched to Dover, and laid siege to the castle, which was most bravely defended for the king by Hubert de Burgh; and, at the same time, some of the barons attacked Windsor Castle, which was equally well defended. Philip sent his son a famous military engine, called the *malvoisine*, or bad neighbour, with which to batter the walls of Dover Castle; but when the siege had lasted several weeks, Louis found himself obliged to convert it into a blockade. Withdrawing his army beyond reach of the arrows of the garrison, he swore that he would reduce the place by famine and then hang all its defenders. The barons raised the siege of Windsor Castle entirely, in order to repel John, who, after running from place to place, had at last made his appearance near them, and was pillaging the estates of some of those nobles. At their approach he fell back, and eluding their pursuit by skill, or, more probably, by hard running, he reached the town of Stamford. The barons wheeled round, and joined Louis at Dover, where much valuable time was lost in inactivity, for that prince would neither assault the castle nor move from it. Other circumstances at the same time caused discontent: Louis treated the English with disrespect, and began to make grants of estates and titles in England to his French followers. But jealousy and apprehension were excited to the very utmost by an event which happened, or at least was said to have happened. The Viscount de Melun, who had come over with the prince, being suddenly seized by a mortal malady in London, earnestly implored to see such of the

English nobles as had remained in that city. The barons went at the summons of the dying man. "Your fate grieves me," said De Melun; "the prince and sixteen of his army have bound themselves by oath, when the realm shall be conquered and he be crowned, to banish for ever those who have joined his standard as traitors not to be trusted. Their whole offspring will be beggared or exterminated. Doubt not my words; I, who here lie dying before you, was one of the conspirators: look to your safety!" and so saying, the Viscount died. This dramatic scene, which possibly originated in the invention of some of John's partisans, was whispered everywhere, and believed by many. Several barons and knights withdrew from Dover, and though few would trust John, all began to doubt whether they had not committed a fatal mistake in calling in the aid of a foreign prince. As these doubts prevailed more and more, and as the gloom thickened round the camp at Dover, where Louis had now lost nearly three months, the cause of John brightened in proportion. Soon after eluding the pursuit of the barons, he had made himself master of Lincoln, where he established his head-quarters for some time, making, however, predatory incursions on all sides. Associations were formed in his favour in several of the maritime counties; and the English cruisers frequently captured the supplies from the continent destined for Louis. At the beginning of October, marching through Peterborough, he entered the district of Croyland, and plundered and burnt the farm-houses belonging to that celebrated abbey: he then proceeded to the town of Lynn, where he had a depôt of provisions and other stores. Here, turning his face again towards the north, he marched to Wisbeach, and from Wisbeach he proceeded to a place called the Cross Keys, on the southern side of the Wash. It is not clear why he took that dangerous route, but he resolved to cross the Wash by the sands. At low water this estuary is passable; but it is subject to sudden rises of the tide. John and his army had nearly reached the opposite shore, called the Fossdike, when the returning tide began to roar. Pressing forward in haste and terror, they escaped; but, on looking back, John beheld the carriages and sumpter-horses which carried his money overtaken by the waters; the surge broke furiously over them, and they presently disappeared,—carriages, horses, treasures, and men being swallowed up in a whirlpool caused by the impetuous ascent of the tide and the descending current of the river Welhand. In a mournful silence, only broken by curses and useless complaints, John travelled on to the Cistercian abbey of Swineshead, where he rested for the night. Here he eat gluttonously of some peaches or pears, and drank new cider immoderately. The popular story of his being poisoned by a monk may be true or false; but it is told in two ways, and was never told at all by any writer living at the time or within half a century of it, and the excess already mentioned, acting upon an irritated mind and fevered body, seems to be cause enough for what followed. He passed the night sleepless, restless, and in horror. At an early hour on the following morning, the 15th of October, he mounted his horse to pursue his march, but he was soon compelled, by a burning fever and acute pain, to dismount. His attendants then brought up a horse-litter, in which they laid him, and so conveyed him to the castle of Sleaford. Here he rested for the night, which brought him no repose, but an increase of his disorder. The next day they carried him with great difficulty to the castle of Newark, on the Trent, and there he sent

Tomb of King John, at Worcester.

for a confessor, and laid himself down to die. The Abbot of Croxton, a religious house in the neighbourhood, who, it appears, was equally skilled in medicine and divinity, attended him in his last hours, and witnessed his anguish and tardy repentance. He named his eldest son Henry his successor, and dictated a letter to the recently elected pope, Honorius III., imploring the protection of the church for his young and helpless children. He made all the knights who were with him swear fealty to Henry; and he sent orders to the sheriffs of counties and the governors of castles to be faithful to the prince. Messengers arrived from some of the barons, who were disgusted with Louis, and proposed returning to their allegiance. This gleam of hope came too late,—the "tyrant fever" had destroyed the tyrant. The Abbot of Croxton asked him where he would have his body buried? John groaned, "I commit my soul to God, and my body to St. Wulstan!" and soon after he expired, on the 18th October, in the forty-ninth year of his age and the seventeenth of his wretched reign. They carried his body to Worcester and interred it in the cathedral church there, of which St. Wulstan was the patron saint.*

During the whole of the period through which we have now passed, the three states of Albin, Pictland, and Strathclyde, which had formerly divided the northern part of the island, were consolidated into the single kingdom of Scotland, of which, however, the southern limits varied considerably at different times; for the proper Scotland lay all beyond the Forth and the Clyde; and the territory to the south of these rivers was not accounted as strictly forming part either of Scotland or England till some ages after the Norman Conquest. At the time of that event the Scottish king was Malcolm III., surnamed Canmore, or Great Head, whose reign commenced in 1057.† His dominions undoubtedly included the ancient kingdom of Strathclyde, or the district now forming the south-western part of Scotland, which had been conquered by Kenneth III. in the latter part of the preceding century;‡ and the district of Cumbria, lying on the same side of the island, but within what is now called England, was also at this time an appanage of the Scottish crown, having been made over to Malcolm I. by the Saxon king, Edmund I., in 946,§ and held from that date, either by the occupant of the throne or by the person next in succession, as an English fief or lordship. With regard to the south-eastern portion of modern Scotland, or the district then known by the name of Lodonia or Lothian (now confined to a part of it), the state of the case is not so clear. The people appear to have been chiefly or exclusively Angles, mixed in later times with Danes; and the territory undoubtedly at one period formed part of the Anglo-Saxon kingdom of Northumbria. From the defeat, however, of the Northumbrian king, Egfrid, by the Picts in 685,* it may be considered as having been withdrawn from the actual dominion of its former masters, although perhaps their claim to its sovereignty was never abandoned, and it may have been for short periods wholly or partially re-subjected by the English. "Situated between the Scotch or Pictish and the Northumbrian kingdoms," observes a writer to whom we owe the latest as well as the most acute and learned discussion of this obscure matter, "it is impossible to say to which it usually or rightfully belonged. It seems to have been a debateable land, subject, as they alternately preponderated, to the strongest."† Mr. Allen, however, is inclined to accept the account given by Wallingford (who, although he wrote in the twelfth or thirteenth century, appears, as it is observed, "to have possessed original materials which are now lost,") of the manner in which what he calls the old quarrel, respecting Lothian, was at last determined. Wallingford's statement is, that in the reign of the English Edgar, Kenneth IV., King of Scotland, having come to London, and represented that Lothian properly belonged by hereditary right to the Scottish kings, Edgar laid the affair before his nobles, who, seeing that it was, from its remoteness, difficult to protect, and little profitable to England, agreed to resign the territory to Kenneth; but only on condition that he should hold it, as they maintained his predecessors had done, or at least ought to have done, by doing homage for it to the English crown. To these terms Kenneth assented, promising, while he did his homage, that he would allow the people to keep their ancient customs, and that they should continue English in name and in language;‡ all which, adds the historian, remains firmly established to this day. This transaction appears to have taken place in the year 971. It is probable, from the account, that Lothian was already in the actual possession of the Scottish kings; and they appear from this time to have continued in the undisturbed occupation of it till the defeat of Malcolm II., in 1005, by the Earl of the Northumbrians; in consequence of which, Mr. Allen thinks, the whole or part of the district was re-annexed to the Northumbrian earldom. Some years after, however, the Northumbrians were in their turn defeated by the same Malcolm at the battle of Carrum, near Werk, and eventually, in 1020, a final cession of Lothian to the Scottish king was formally made by the Northumbrian earl Eadulf.§ It is probable that the English kings did not consider their ancient claim to the paramount dominion of the district to be affected by this last cession; but there is no record of any subsequent assertion of the claim till after the Norman conquest. Malcolm Canmore

may therefore be regarded as reigning in full sovereignty over Lothian, as well as over all the rest of the country now included under the name of Scotland.

It is only necessary further to mention, that the south-western angle of Scotland, formerly called Galloway, and now forming the counties of Wigton and Kirkcudbright, received various bodies of colonists from Ireland in the course of the ninth, tenth, and eleventh centuries. "They appear," says Mr. Allen, "at all times to have owed subjection to the Scottish kings, but they long retained the barbarous habits and ferocious manners which the ravages of the Northmen had impressed on the country they had quitted. In the twelfth century, they are called Picts, or Galwegians; and as late as the fourteenth century, they are distinguished by the appellation of the Wild Scots of Galloway." In fact, the name of Galloway, which is first mentioned in the early part of the twelfth century, was derived from this Irish or Gaelic population.

Malcolm had passed about fifteen years at the court of the Confessor before he became king; and in his long exile he must have formed various English connexions, as well as become habituated to the manners of the sister country. He may therefore be supposed to have, from the first, kept up a more intimate intercourse with England than had been customary with his predecessors. The chief of his English friends, in the beginning of his reign, appears to have been Harold's notorious brother Tostig, who obtained the earldom of Northumberland about the same time that Malcolm ascended the throne of Scotland. Simeon of Durham says they were so much attached to each other that they were commonly called the sworn brothers. Accordingly, when Tostig was driven off from the English coast, on his first invasion after the accession of Harold,* he took refuge in the first instance with Malcolm. The Scottish king, however, seems to have taken no part in the new attempt made by his friend in the close of the same year; and he did not therefore share in the decisive defeat of Staneford Bridge, in which both Tostig and his ally, Hardrada of Norway, lost their lives.

The principal events that make up the subsequent history of the reign of Malcolm arose out of his connexion with another English fugitive, the unfortunate Edgar Atheling. Edgar fled to Scotland,† according to the most probable account, with his mother and his two sisters, in the beginning of 1068; and soon after, Malcolm espoused Edgar's elder sister Margaret, at Dunfermline. From some cause, which is not distinctly explained, Malcolm did not arrive with his forces in time to support the insurrection of the people of Northumbria,‡ in conjunction with the Danes and the friends of Edgar, in the following year: and it was not till after the complete suppression of that attempt, and the whole of the east coast, from the Humber to the Tyne, had been made a desert by the remorseless vengeance of the Norman, that the Scottish king, in 1070, entered England, through Cumberland, and spread nearly as great devastation in the western parts of York and Durham as William had done in the east. He commanded his soldiers to spare only the young men and women; and they were driven into Scotland to be made slaves. A writer of the following century* says that Scotland was in consequence so fully supplied with male and female slaves of English race that, in his own days, not a village, and scarcely even a house, could be found without them. Great numbers of the people of the east coast also now fled to Scotland, and there sold themselves into slavery, to escape from the sword of the conqueror, or from perishing by hunger in the desolation it had left.

It was not till 1072 that William found leisure to chastise Malcolm for this inroad. He then advanced into Scotland, and wasted the country as far as the Tay, though the inhabitants, after the plan which they had been accustomed to pursue in such cases from the days of Galgacus, and which they continued to follow occasionally to a much later age, destroyed or removed everything of value as the invader advanced, so that, as the Saxon chronicler expresses it, "he nothing found of that which to him the better was." In the end, however, Malcolm came to him at Abernethy,† when, according to the Saxon Chronicle, a peace was arranged between the two kings, on Malcolm agreeing to give hostages, and to do homage to William as his liege lord. William then returned home with his army.

This transaction makes a principal figure in the controversy which was formerly carried on with so much unnecessary heat, and which still continues to divide historical inquirers, respecting the alleged dependence in ancient times of the kingdom of Scotland upon the English crown. The position taken by the asserters of this dependence appears to be that, from a date long before the Norman Conquest of England, the Anglo-Saxon kings of that country had in some way or other obtained possession of the sovereignty of the whole island, and the kings of Scotland, as well as the princes of Wales, had become their acknowledged vassals. We may say without hesitation that this notion is directly opposed to the whole course of the history of the two countries.

Upon what could the Anglo-Saxon kings possibly found any pretension to the sovereignty of Scotland? The country was never conquered by any of them, nor is there a vestige of evidence that even an attempt was ever made by them to settle in it, or to wrest it from the possession of the people of another lineage that occupied it before the Saxons and Angles ever set foot in the island. The Northumbrian kings were occasionally en-

* Simeon of Durham.

† This seems to be really the place meant by the "Abernithi" of Ingulphus, the "Abernithici" of Florence of Worcester, the "Abernitici" of R. de Diceto, and the "Abrenitici" of Walsingham, although Lord Hailes, Pinkerton, and other writers have contended that it was more probably some place on the river Nith. Mr. Allen conceives that no doubt can exist as to its being Abernethy on the Tay.—Vindication, &c. p. 47.

gaged in wars with those of the Scots and Picts; but no one of these wars, as far as any account of it has been preserved, ever terminated in anything like the conquest of the one country by the other, or even took the shape of a contest having that object; and the supposition that it did, would be as contrary to all the probabilities of the case, as it is wholly unsupported by the testimony of historians or records. The quarrel between the two contending parties appears to have been exclusively for the possession of Lothian; and, on the whole, the course of the contest went rather against the English, who, as we have just seen, were at a very early period driven from the disputed territory, and eventually consented to relinquish all claims to its occupation and actual government, on receiving from the Scottish kings at most an empty acknowledgment of their merely titular sovereignty. But at any rate there is no evidence whatever to show that any attempt was ever made by a Northumbrian or other Anglo-Saxon king to conquer the territory to the north of the Forth, which alone originally and properly constituted the country called Scotland; to suppose that any such attempt was ever successfully made, would be an assumption in the face of all evidence.

Notwithstanding this state of the fact, it appears to be clear, on the other hand, that certain of the Anglo-Saxon kings did assume the title of monarch or emperor of all Britain—of Scotland as well as of England. This is proved, not only by the testimony of the monkish chroniclers, but by the charters of the kings themselves. It is unnecessary for our present purpose to dispute the genuineness of these charters; their evidence may be at once admitted—for it proves nothing. The dispute is not, as to whether the vaunting titles in question were assumed by some of the Anglo-Saxon kings, but as to whether they ever actually possessed that right of dominion over the whole island which they thus arrogantly claimed. The whole course of the history of the two countries shows that they never could have acquired any such dominion; their asserted sovereignty over Scotland could only have been founded upon a conquest of that country, of which there is no more evidence than there is of their conquest of France or of Spain. As little good evidence is there of any acknowledgment of this pretended sovereignty by the Scottish kings: To prove what is, in itself, so grossly improbable, as that any country would, without being compelled by force, relinquish its independence, and place itself in subjection to another country, which had always been its rival, and often its enemy, would demand the very strongest evidence. But here all the evidence that we have consists of a few vague expressions by writers for the most part extremely credulous and ill-informed, neither agreeing in this particular matter one with another, nor even each with himself, and, especially, all having their testimony, meagre and unsatisfactory as it is, rendered suspicious by their national connexion and partialities, and for the most part by a manifest anxiety to flatter or magnify the renown of the particular kings to whom they attribute this fancied supremacy over the whole island. Against all this, we have, in an age of writing and of charters, the absence of any authentic instrument in which any of the Scottish kings acknowledges his subjection, and a crowd of undisputed historical facts, proving that, in the general government of their dominions at least, all of these Scottish kings acted in every respect as independent sovereigns.

The titles of basileus, or emperor of Britain, and king of England, Scotland, and Ireland, assumed by Edgar and some of the other Anglo-Saxon princes, are really no better evidence of their possession of this extensive dominion either in fact or in right, than was the long-continued assumption of the title of king of France by our modern English kings a proof that they really were sovereigns of that country in any sense whatever. The fact, indeed, seems to be merely that the principal Saxon king, after having reduced to subjection the other states of the heptarchy, and thus made himself king of all England, not unnaturally chose to consider himself as in some sort the legitimate successor of Carausius, and Maximus, and the other rulers over a similar extent of territory, who, in the old Roman times, had boasted with as little truth of possessing the empire of Britain. We have nearly a parallel case in the pretensions of the emperors of Germany, who, on the ground that they were the successors of the Roman emperors, long claimed a sort of sovereignty over all the other kings of Europe, and were strenuously supported in this vain assumption by a crowd both of churchmen and of lawyers.* It may be conceded that the English king in Britain, like the emperor in Europe, was considered the chief among the several crowned heads; the others may have generally "confessed the pre-eminence of his rank and dignity;" but the deference that may thus have been paid to him is altogether a different thing from any acknowledgment of his paramount dominion, or any surrender by those who yielded it of the independence of their own kingdoms.

The only subjection or homage which either the Scottish kings rendered, or the English crown claimed from them, before the Norman conquest, appears to have been not for the kingdom of Scotland, but for territories annexed to that kingdom or otherwise held by them, situated or conceived to be situated in England. Such was the lordship of Cumbria, or Cumbraland, after the donation of

* "Nor was the supremacy of the emperor," says Gibbon, "confined to Germany alone: the hereditary monarchs of Europe confessed the pre-eminence of his rank and dignity; he was the first of the Christian princes, the temporal head of the great republic of the west; to his person the title of majesty was long appropriated; and he disputed with the pope the sublime prerogative of creating kings and assembling councils. The oracle of the civil law, the learned Bartolus, was a pensioner of Charles IV.; and his school resounded with the doctrine that the Roman emperor was the rightful sovereign of the earth, from the rising to the setting sun. The contrary opinion was condemned, not as an error, but as a heresy; since even the gospel had pronounced, 'And there went forth a decree from Cæsar Augustus, that *all the world* should be taxed.'"—Dec. and Fall of Rom. Empire, ch. 49.

it by the English king Edmund to Malcolm I., in 946. Lothian, or a part of it,* may be considered to have been similarly circumstanced after the agreement between Kenneth IV. and Edgar, in 971. There is reason to believe, also, that the Scottish kings were anciently possessed of other lands clearly within the realm of England, besides the county of Cumberland. For these possessions of course they did homage to the English king, and acknowledged him as their liege lord, exactly in the same manner as the Norman kings of England acknowledged themselves the vassals of the crown of France for their possessions on the continent.

When Malcolm III., however, on the seizure of the English crown by the Duke of Normandy, espoused the cause of Edgar Atheling, he necessarily at the same time refused to do homage for his English lands to the Norman invader, whom by that very proceeding he declared that he did not acknowledge as the rightful king of England. William, on the other hand, took measures to maintain his authority and to compel the obedience of his rebellious vassal; and these objects he completely attained by the submission of Malcolm at Abernethy. The latter now consented to make that acknowledgment of William's title, and of his own vassalage for the lordship of Cumberland and his other English possessions, which he had hitherto refused; he gave hostages to the English king, as the Saxon chronicler expresses it, and became his man.

After this Malcolm appears to have remained quiet for some years. He did not, however, finally abandon the cause of his brother-in-law, the Atheling; and in 1079, choosing his opportunity when the English king was engaged in war with his son Robert on the continent, he again took up arms, and made another destructive inroad into Northumberland. The following year, after the reconcilement of William and his son, the latter was sent at the head of an army against Scotland; but he soon returned without effecting anything. It was immediately after this expedition that the fortress bearing the name of the Castellum Novum, on the Tyne, which gave origin to the town of Newcastle, was erected as a protection against the invasions of the Scots.

When Rufus succeeded to the English throne the two countries appear to have been at peace. But in the summer of 1091 we find Malcolm again invading Northumberland. Rufus immediately made preparations to attack Scotland both by sea and land; and, although his ships were destroyed in a storm, he advanced to the north with his army before the close of the year. We have

* Lord Hailes has endeavoured to show that the district anciently called Lothian, and perhaps considered as part of England, by no means included the whole of the south east of Scotland, but only the counties of Berwick and East Lothian, and the part of Mid Lothian lying to the east of Edinburgh. And, he adds, "only a small part of that territory could be considered as feudally dependent on England. Great part of those territories was the patrimony of St. Cuthbert."—Remarks on the Hist. of Scotland (Edin. 1772), chap. 2.

Castle of Newcastle upon-Tyne.

already related* the course and issue of this new war. After being suspended for a short time by a treaty made, according to the Saxon chronicle, "at Lothian in England," whither Malcolm came "out of Scotland," and awaited the approach of the enemy, it was renewed by the refusal of the Scottish king to do the English king right, that is, to afford him satisfaction about the matter in dispute between them, anywhere except at the usual place,—namely, on the frontiers, and in presence of the chief men of both kingdoms. William required that Malcolm should make his appearance before the English barons alone, assembled at Gloucester, and submit the case to their judgment. "It is obvious on feudal principles," as Mr. Allen observes, "that if Malcolm had done homage for Scotland to the king of England, the Scotch nobles must have been rere-vassals of the latter, and could not have sat in court with the tenants in chief of the English crown." Yet it is evident that the nobility of both kingdoms had been wont on former occasions to meet and form one court for adjudication on such demands as that now made by the English king. The hostilities that followed, however, were fatal to Malcolm. He was slain in a sudden attack made upon him while besieging the castle of Alnwick, on the 13th of November, 1093.

The reign of Malcolm was one of the most memorable and important in the early history of Scotland. It was in his time, and in consequence, in great part, of his personal fortunes, that the first foundations of that intimate connexion were laid which afterwards enabled the country to draw so largely upon the superior civilization of England, and in that way eventually revolutionized the whole of its social condition. From the time of Malcolm Canmore, Scotland ceased to be a Celtic kingdom. He himself spoke the language of his forefathers as well as Saxon; but it may be doubted if any of his children understood Gaelic, any more than their English mother. All his six sons, as it has been remarked, as well as his two daughters, received English names, apparently after their mother's relations. His marriage with the sister of Edgar Atheling exercised a powerful influence both over the personal conduct of Malcolm and over public affairs. There is still extant a Latin Life of Queen Margaret by her Confessor Turgot, which is on various accounts one of the most interesting records of those times. Margaret was very learned and eloquent, as well as pious, and she exercised her gifts not only in the instruction of her husband, but also in controversy with the Scottish clergy, whose various errors of doctrine and discipline she took great pains to reform. One of the subjects upon which she held a solemn conference with them was the proper season for celebrating Lent. On this occasion, "three days," says Turgot, "did she employ the sword of the Spirit in combating their errors. She seemed another St. Helena, out of the Scriptures convincing the Jews." Turgot has preserved the heads of the debate, in which Malcolm acted as interpreter between his wife and the clergy, and which ended in the acquiescence of the latter in the queen's arguments. Her affections, however, were not all set upon the beauty of spiritual things. She encouraged merchants, we are told by Turgot, to come from various parts of the world, with many precious commodities which had never before been seen in that country, among which are especially mentioned vestments ornamented with various colours, which, when the people bought, adds the chronicler, and were induced by the persuasions of the queen to put on, they might almost be believed to have become new beings, so fine did they appear. She was also, to adopt the summary of the monk's account given by Lord Hailes, "magnificent in her own attire; she increased the number of attendants on the person of the king, augmented the parade of his public appearances, and caused him to be served at table in gold and silver plate. At least (says the honest historian) the dishes and vessels were gilt or silvered over."

Malcolm is traditionally said to have, with the advice of his nobility, made various important innovations in the Constitution of the kingdom, or the administration of public affairs. He appears to have restored the rule of law and order, which had been banished from the country by the civil wars that preceded his accession; and it is probable that in the measures he adopted to accomplish this end, he imitated, as far as he could, the forms and usages of England. There is neither proof nor probability, however, for the statement which has been often repeated, that he introduced feudalism in a systematic form into Scotland. That state of things appears rather to have grown up gradually under the influence of various causes, and its complete establishment must be referred to a period considerably later than the reign of this king. The modern titles of Earl and Baron, however, are traced nearly to his time, and seem then, or very soon after, to have begun to supplant the older Celtic Marmor and Saxon Thane. Surnames also began to be used in this or the next reign. But, on the whole, it was probably not so much by any new laws which were enacted by Malcolm Canmore (the collection in Latin which has been attributed to him is admitted to be spurious), or by any new institutions which he established, that Scotland was in a manner transformed into a new country in his days, as by his English education and marriage, the English manners which were thus introduced at his court, and the numbers of English of all ranks whom the political events of the time drove to take refuge in the northern kingdom. Much of the change, therefore, was really the effect of the Norman Conquest of England, which in nearly the same degree that it made Saxon England Norman, made Celtic Scotland Saxon.

The disastrous close of the reign of Malcolm, whose own death was followed in a few days by that of

* See ante, p. 398.

his excellent queen, worn out, it is said, by her vigils and fastings, and other pious exercises, afforded an opportunity to his brother Donald Bane (or the Fair) to seize the throne. Malcolm's eldest son, Edward, had fallen with his father at Alnwick; his second, Ethelred, was a churchman; but he left four other legitimate sons, although they were all as yet under age. Donald is said to have remained till now in the Western Islands, where he had taken refuge, on the death of his father Duncan, more than fifty years before.* He now invaded Scotland with a fleet fitted out in the Western Islands, and, with the aid of the faction which had all along been opposed to the English innovations of Malcolm, carried everything before him. The children of the late king were hastily conveyed to England by their uncle Edgar Atheling; and Donald, as soon as he mounted the throne, expelled all the foreigners that had taken refuge at his brother's court.

He had reigned only a few months, however, when another claimant of the crown appeared in the person of Duncan, according to the common account, an illegitimate son of Malcolm Canmore. He had been sent, it seems, by his father as a hostage to England; and by now offering to swear fealty to Rufus, he obtained his permission to raise a force for the invasion of Scotland. He succeeded in driving Donald from the throne and mounting it himself in May, 1094.

But after a reign of only about a year and a half, Duncan was, at the instigation of Donald Bane, assassinated by Malpedir, Earl of Mearns, and Donald again became king about the end of the year 1095. After his restoration, he proceeded in his former course of policy—the expulsion of the foreign settlers, and the abolition, as far as possible, of all the recent innovations upon the old national manners and usages, being now prosecuted with greater zeal and vigour than ever.

Affairs proceeded in this train for about two years; but at length, in 1097, Edgar Atheling raised an army, with the approbation of the English king, and marching with it into Scotland, after an obstinate contest, overcame Donald, in the beginning of the following year, and obtained the crown for his nephew Edgar, the son of Malcolm Canmore. "Edgar, like Duncan," observes Mr. Allen, "appears to have held his kingdom in fealty to William. These two cases, and the extorted submission of William the Lion, during his captivity (to be presently mentioned), are the only instances I have found since the Conquest of any king of Scotland rendering fealty to England for his crown. Both occurrences took place after a disputed succession in Scotland, terminated by the arms and assistance of the English. Duncan was speedily punished for his sacrifice of the honour and dignity of the sceptre he unworthily held. Edgar appears to have repented of his weakness, and to have retracted before his death the disgraceful submission he had made in order to obtain his crown. One of his coins is said to bear the impress of 'Eadgarus Scottorum Basileus,' a title which, like Imperator, implied that the holder acknowledged no superior upon earth."

On his second deposition, Donald Bane was deprived of the power of giving further disturbance by being detained in prison and having his eyes put out. Edgar retained the throne till his death, on the 8th of January, 1107; and during his reign the country appears to have enjoyed both internal tranquillity and freedom from foreign war. The accession of Henry I. to the throne of England, which took place in 1100, and his marriage the same year with Edgar's sister Maud, had the effect of maintaining peace between the two countries for a long course of years from this date. This favourable tendency of circumstances was not opposed by the disposition of Edgar, whom a contemporary chronicler describes as "a sweet-tempered, amiable man, in all things resembling Edward the Confessor; mild in his administration, equitable and beneficent."* Like Edward, the Scottish king appears to have been a favourite of the clergy, to whom he probably showed both liberality and deference.

Edgar, dying without issue, was succeeded by his next brother, Alexander I. Soon after his accession, Alexander strengthened his connexion with the English king by a marriage with one of Henry's numerous illegitimate daughters, the Lady Sibilla, or, as she is called by other authorities, Elizabeth, whose mother was a sister of Walleran, Earl of Mellent. A dismemberment, however, of the Scottish kingdom, as it had existed for some reigns preceding, now took place, by the separation of Cumberland, which Edgar on his death-bed had bequeathed to his younger brother David. Alexander at first disputed the validity of this bequest; but, the English barons taking the part of David, he found himself obliged to submit. By this arrangement, the king of Scotland would for the present (putting aside the doubtful case of Lothian) cease to be an English baron; and accordingly it appears that Alexander never attended at the English court. Nearly the whole history of his reign that has been preserved is made up of a long contest in which he was engaged with the English archbishops on the subject of their assumed authority over the Scottish church. Turgot, the confessor of the late Queen Margaret, had been appointed to the bishopric of St. Andrew's soon after the accession of Alexander; but his consecration was delayed for two years in consequence of a two-fold dispute about the right of performing the ceremony, the archbishops of Canterbury and York

* See ante, p. 222. It must be confessed that the great length of the interval—fifty-four years—between the dates assigned to the death of Duncan and that of Malcolm, throws some suspicion upon the common statement that the one was the son of the other. All that we know of the age of Malcolm is, that he was married about 1069 or 1070, that he reigned thirty-six or thirty-seven years, and that at his death he left several children under age. As he fell in battle, however, it seems improbable that he was very old when he died. Pinkerton (who, by-the-by, places his accession on the authority of the Chronicle of Melrose, in 1056, not in 1057) strongly insists that he must have been ,not the son, but the grandson of Duncan.—Inquiry, ii, 203, 204.

* Aldred. Rival.

severally laying claim to it, while the king and clergy of Scotland denied that it lay with either. In the latter form this ecclesiastical dispute was closely connected with the question respecting the independence of the Scottish crown; and Alexander the Fierce, as he was surnamed, fought the battle with apparently a full sense of its importance. Turgot was at length consecrated on the 30th July, 1109, by the archbishop of York, but only after an agreement between the two kings that the necessary ceremony should be so performed, "saving the authority of either church." Turgot, however, died in 1115; and then the former difficulty recurred. For some years no new bishop was nominated; but at last, in 1120, Alexander wrote to Anselm, the archbishop of Canterbury, requesting him to set at liberty Eadmer, one of the monks of that church, that he might be placed in the vacant episcopal throne. Eadmer was accordingly sent to Scotland, and elected to the bishopric, as he has himself told us, by the clergy and people of the country, with the consent of the king. On the following day, however, Alexander called the new bishop to a secret conference, and surprised him by intimating the strongest aversion to his receiving consecration from the archbishop of Canterbury. On Eadmer remarking that the church of Canterbury had by ancient right a pre-eminence over all Britain, Alexander started up with much emotion and left the apartment. It was not till after a month, during which time the person who had presided in the bishopric since the demise of Turgot had by the royal command resumed his functions, that Eadmer was again sent for. A compromise was now arranged, and it was agreed that the bishop should in the mean time assume the charge of his diocese without consecration, on receiving the ring from the hands of the king, and taking the pastoral staff from the altar. Eadmer, however, soon found that, in the peculiar circumstances in which he was placed, his situation was not a very comfortable one, and he resolved, therefore, to repair to Canterbury for advice. But Alexander at first peremptorily refused to allow him to leave the kingdom. "I received you altogether free from Canterbury," he said, in a warm altercation they had together; "while I live I will not permit the bishop of St. Andrews to be subjected to that see." "For your whole kingdom," answered Eadmer, "I would not renounce the dignity of a monk of Canterbury." "Then," replied the king passionately, "I have done nothing in seeking a bishop out of Canterbury." In a letter written some time after to Anselm, Alexander affirmed that the bishop had refused to accommodate himself to the usages of the country and the manners of its inhabitants, as the exigencies of the times required; but Eadmer himself denies that there was any ground for this charge. Perhaps, however, he may have needed the advice which it appears he received from an English friend, named Nicolas, who, in a long letter which he wrote to him, urged upon him with especial earnestness, as the best course he could take for softening the barbarity of the Scots, promoting sound doctrine, and establishing ecclesiastical discipline, the keeping of a plentiful and hospitable table! Nicolas, who seems to have been a sort of agent or solicitor in ecclesiastical causes, strongly advised Eadmer to obtain consecration from the pope himself; and he requested him to inform Alexander that he should himself be happy to undertake the defence of the independence and freedom of the Scottish church at the papal court. In making this offer he probably had an eye to his own interests fully as much as to those of the bishop. It was followed up by a strange request —"I entreat you," the letter concluded, "to let me have as many of the fairest pearls as you can procure: in particular, I desire four of the largest sort. If you cannot procure them otherwise, ask them as a present from the king, who is the richest of all men in this sort of treasure." Eadmer at last was obliged, in order to obtain permission to take his departure, to resign his bishopric, and to engage not to reclaim it during the life of Alexander, unless by the advice of the pope, his convent, and the king of England. Yet, soon after he had returned to Canterbury, he wrote a long letter to Alexander requesting leave to return and resume his office. "I mean not," he said, "in any particular to derogate from the freedom and independence of the kingdom of Scotland. Should you continue in your former sentiments I will desist from my opposition; for, with respect to the King of England, the archbishop of Canterbury, and the sacerdotal benediction, I had notions which, as I have since learned, were erroneous. They will not separate me from the service of God and your favour. In those things I will act according to your inclinations, if you only permit me to enjoy the other rights belonging to the see of St. Andrews." Alexander, however, would not listen to his petition; and in January, 1124, a new bishop of St. Andrews was appointed in the person of Robert, prior of Scone. The archbishop of York again insisted upon his right of consecration; "but the Scots," says Simon of Durham, "with foolish prating, asserted that his claim had no foundation either in right or usage."

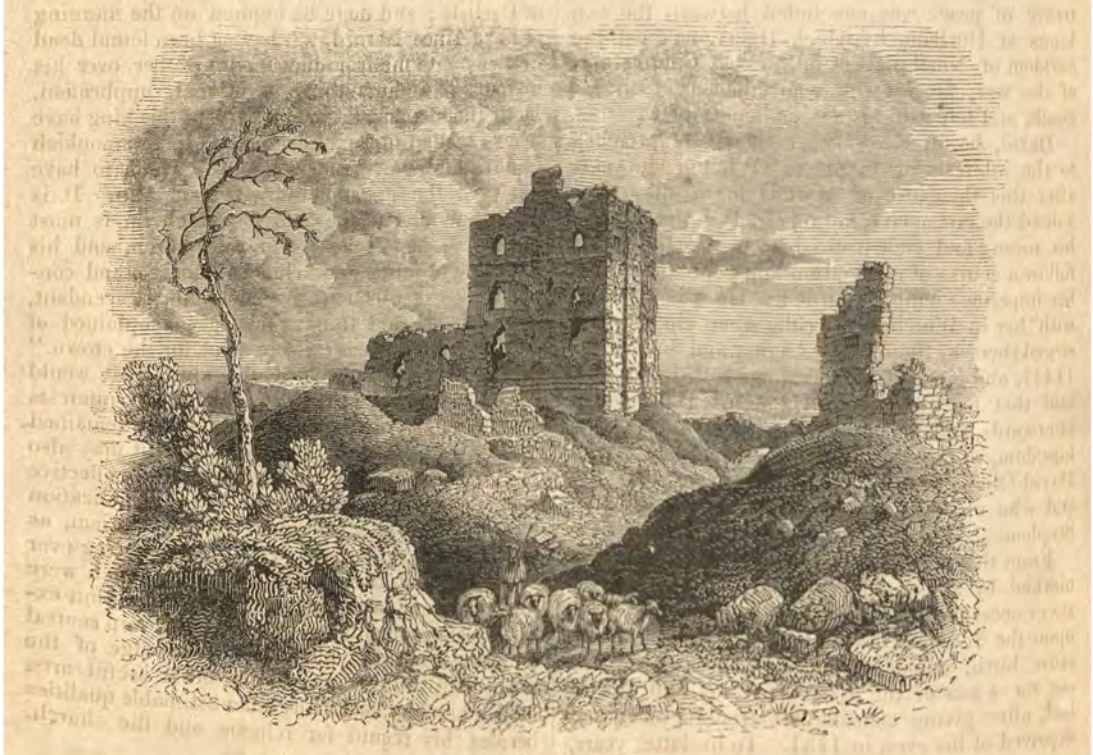
Alexander did not long survive the settlement of this affair. He had about two years before lost his queen, who had brought him no offspring; and his own death took place on the 27th of April, 1124. The quality for which this king is most celebrated by the old historians is his personal valour, of which various remarkable instances are related, although some contests with revolted portions of his own subjects, of which there are obscure notices, seem to have been the only opportunities he had of displaying military talent. But he sufficiently proved his intrepidity and firmness of character, in the manner in which he defended and maintained the independence of his kingdom, in the only point in which it was attacked in his time. In the stand which he made here, he ap-

pears to have had with him the great body of the national clergy, and they and he were always on the best terms. Aldred describes him as "humble and courteous to the clergy; but to the rest of his subjects, terrible beyond measure; high-spirited, always endeavouring to compass things beyond his power; not ignorant of letters; zealous in establishing churches, collecting relics, and providing vestments and books for the clergy; liberal, even to profusion, and taking delight in the offices of charity to the poor."

David, Earl of Cumberland, the youngest of the sons of Malcolm Canmore, now became king. Having lived from his childhood in England, his manners, says Malmsbury, were polished from the rust of Scottish barbarity. He had also, before he came to the throne, married an English wife, Matilda, or Maud, the daughter (and eventually heiress) of Waltheof, Earl of Northumberland, and the widow of Simon de St. Liz, Earl of Northampton. The King of Scotland was now again an English baron, by his tenure of the earldom of Cumberland; and accordingly, when Henry I., in 1127, called together the prelates and nobles of the realm, to swear that they would after his decease support the right of his daughter Matilda to the inheritance of the English crown,* David was one of those that attended, and was the first who took the oath. In observance of this engagement, the Scottish king, on the usurpation of Stephen, led an army into England, and compelled the northern barons to swear fealty to Matilda. "What the King of Scots," said Stephen, when this news was brought to him, "has gained by stealth, I will manfully recover." He immediately collected a powerful force, and advanced at its head against David. They met at Newcastle; but no engagement took place; a compromise was effected (February, 1136), and David consented to withdraw his troops, on Stephen engaging to confer on his eldest son, Henry, the earldom of Huntingdon, with the towns of Carlisle and Doncaster, and promising to take into consideration his claims, in right of his mother, to the earldom of Northumberland. Earl Henry did homage to Stephen for the new English honour he was thus to receive; but David himself still refused to do so, although he appears to have retained the earldom of Cumberland in his own hands.

The war was, however, renewed before the end of the same year by David, on the pretence that Stephen delayed to put his son in possession of the county of Northumberland, but, in reality, in consequence of a confederacy into which he had entered with the Earl of Gloucester and the other partizans of the Empress Matilda, who were now making preparations for a grand effort to drive her rival from the throne. With the same impetuosity he had shown on the former occasion, David was again first in the field. A truce, negotiated by Archbishop Thurstan of York, gained a short space for Stephen; but in 1137 David entered Northumberland, and ravaged that unfortunate

* See ante, page 416.



Ruins of Norham Castle.

district for some time, without mercy and without check. In the beginning of the following year, however, he deemed it advisable to fall back upon Roxburgh at the approach of Stephen, who followed him across the Tweed, and made requital by wasting the Scottish border for part of the injury his own subjects had sustained. But the English king was soon recalled by other enemies to the south, and then David (in March 1138) reentered Northumberland, sending forward at the same time William, a son of the late King Duncan, into the west, where he and his wild Galwegians (on the 9th of June) gave a signal discomfiture to a party of English at Clitherow. Meanwhile, Norham castle, erected in the preceding reign by Bishop Flambard on the south bank of the Tweed, to guard the main access from Scotland, surrendered to the Scottish king after a short siege; and from this point he marched forward, through Northumberland and Durham, to Northallerton in Yorkshire, without opposition. Here, however, his barbarous host was met by an English force, collected chiefly by the efforts of the aged archbishop of York. At the great battle of the Standard, fought on the 22nd of August,* the Scots sustained a complete defeat. The victors, however, were not in a condition to pursue their advantage. King David retired to Carlisle, and soon after laid siege to the castle of Werk, which having reduced, he razed it to the ground, and then, to adopt the expression of Lord Hailes, "returned into Scotland more like a conqueror, than like one whose army had been routed." The next year a treaty of peace was concluded between the two kings at Durham, by which David obtained the earldom of Northumberland, the ostensible object of the war, for his son, who enjoyed it till his death, and left it to his descendants.

David, however, was never cordially attached to the interests of Stephen. When a few years after this the cause of Matilda for a short time gained the ascendant, he repaired to the court of his niece, and endeavoured to persuade her to follow a course of moderation and policy, at which her imperious temper spurned. He was shut up with her in Winchester castle, when she was besieged there by Stephen, in August and September, 1141†, and escaped thence along with her. It is said that he was indebted for his concealment afterwards, and his conveyance home to his own kingdom, to the exertions of a young man, named David Oliphant, to whom he had been godfather, and who chanced to be serving in the army of Stephen.

From this period the reign of David is scarcely marked by any events, if we except the disturbances occasioned by some piratical descents made upon the Scottish coasts by an adventurer of obscure birth, named Wimund, who gave himself out for a son of the Earl of Moray, but was at last, after giving considerable trouble, taken and deprived of his eyes, in 1151. In his latter years, however, David, relieved from foreign wars, applied himself assiduously to the internal improvement of his country, by the encouragement of agriculture, commerce, and manufactures, the establishment of towns, the erection of churches, monasteries, and other public buildings, and the reform of the law and its administration. Many of the statutes enacted by him are still preserved.

When the son of the Empress Matilda, afterwards Henry II., came over from the continent, in 1149, to assert in person his claim to the English crown, he was met by the Scottish king at Carlisle,* and after receiving from him the honour of knighthood, bound himself, when he should become King of England, to make over to David the town of Newcastle, and the whole territory between the Tweed and the Tyne. David and his son, Henry, immediately invaded England, and advanced as far as Lancaster; but on the approach of Stephen, the Scottish army retired without risking a battle.

David did not live to witness the issue of the contest between Stephen and Henry. His death was probably hastened by that of his son, Henry, which took place on the 12th of June, 1152, to the great grief of his countrymen, whom his amiable character had filled with the anticipation of a continuation of the same prosperity and happiness under his rule which they enjoyed under that of his father. Aldred, who knew him, says that he resembled his father in all things, except that he was in manner somewhat more gentle. Soon after this stroke, David fixed his residence at Carlisle; and there he expired on the morning of the 24th of May, 1153, having been found dead in bed, with his hands joined together over his breast in the posture of devotional supplication. Both the virtues and the capacity of this king have been extolled in the highest terms by the monkish chroniclers; but he seems on the whole to have deserved the praises bestowed upon him. It is true that among the acts for which he is most eulogized, his donations to the church, and his founding of numerous religious houses stand conspicuous—in allusion to which, his descendant, James I., is said to have feelingly complained of him as having been "a sore saint for the crown." But we may reasonably doubt whether it would have been for the advantage of the public interests that the funds thus expended should have remained in the possession of the crown; and it may also be questioned whether anything more effective could have been done to promote the civilization of a country just emerging from barbarism, as Scotland was at this period, than the planting over all parts of it these establishments, which were not only seminaries of piety and letters, but examples of ornamental architecture, and even central fountain-heads for diffusing a knowledge of the art of cultivating the civil, and other useful arts. David, however, had many other estimable qualities besides his regard for religion and the church.

* See ante, p. 436.

He was always, Aldred tells us, accessible to his subjects, from the highest to the lowest; and on certain days of every week he sat at the gate of his palace, hearing and deciding upon the causes brought before him by the poor. He took great pains also, it is added, to make them understand the reasons, and to convince them of the justice of his decisions—allowing them freely to argue the matter with him when they were not satisfied. His custom was to dismiss all his attendants at sunset, and to retire for solitary meditation; at daybreak he reappeared in public. One of the favourite occupations of his leisure hours was gardening, and the planting and engrafting of trees. Hunting also he used as an exercise; but "I have seen him," says Aldred, "quit his horse, and dismiss his hunting equipage, when any of the meanest of his subjects implored an audience."

The late Earl Henry's eldest son, though as yet only in his twelfth year, succeeded his grandfather, under the name of Malcolm IV. The notices we have of the events of his reign in the contemporary chroniclers are scarcely sufficient to furnish a continuous or intelligible narrative—and in the lack of recorded facts the writers of later date appear to have filled up the story by drawing on their invention with even more than their usual liberality. With a king of such tender age, the government must have been for some years in the hands of a regency; but there is no account of any such arrangement. This was the first example of the Scottish throne having been occupied by a boy, and it may be regarded as having for the first time established the principle of hereditary succession as the rule of the monarchy in all circumstances. As might have been expected, however, the sceptre was not allowed to pass into the hands of so mere a pageant of a king without dispute. A few months only after Malcolm's accession, the public tranquillity was disturbed by what appears to have been more properly an invasion than an insurrection, being an attack made with the avowed object of effecting the conquest of the kingdom by Somerled, the Thane of Argyle, whose daughter had married the adventurer Wimund. The provinces, it may be observed, of Argyle, Moray, Ross, and Galloway, seem still to have remained so many principalities, usually indeed acknowledging a sort of feudal dependence upon the Scottish crown, but scarcely considered as forming parts of the kingdom of Scotland, any more than the vassal dukedoms and earldoms of the crown of France were held to be integral parts of that kingdom. They had each its own chief, and in all respects its own government, with which that of the supreme sovereign rarely if ever interfered. Their princes indeed were legally bound to follow his banner in war; but even this was an obligation which was only attended to when the vassal chose, or did not feel himself strong enough to disregard it. In the present case the Thane of Argyle made war upon his sovereign just as any independent potentate might have made war upon another. All that we know of the events of the war is, that it lasted for some years; and then in 1157 the king of Scotland appears to have made peace with the Thane of Argyle, just as he might have done with any other sovereign as independent as himself. To this date also is assigned Malcolm's first transaction with the English king. At an interview held at Chester he was induced not only to give up his claim to the territory to the north of the Tyne, promised to his father David, but also to abandon Cumberland, and whatever other lands and honours he possessed in England, with the exception only of the earldom of Huntingdon, which Henry either confirmed to him, or conferred upon him, taking it from his youngest brother David, to whom it appears to have been left by the late king. Malcolm at the same time is stated to have done homage to Henry in the same manner as his grandfather had to Henry's grandfather, that is to say with the reservation of all his dignities. The accounts given of the whole of this affair by the old chroniclers are confused and obscure; but it is asserted by Fordun that Henry succeeded in effecting the agreement by bribing the advisers of the Scottish king, and taking advantage of his youth and inexperience, and that it produced a deep and settled hatred against Malcolm among all classes of his own subjects. Nor does his facility appear to have gained for him much gratitude or consideration from Henry. He repaired the following year to Carlisle to obtain the honour of knighthood from the English king; but this interview ended in a quarrel, and Malcolm returned home in disgust, and without his knighthood. When Henry, however, set forth on his expedition for the recovery of Toulouse in 1159,* Malcolm went with him to France, and was knighted by him there. But he had followed Henry's banner on this occasion in opposition to the judgment of the Scottish nobility, and after a few months a solemn deputation was sent to him to urge his immediate return to his dominions. The people of Scotland, the deputies were commanded to tell him, would not have Henry to rule over them. Malcolm felt it necessary to obey this call; but the faction opposed to the connexion with England was not, it appears, to be satisfied with having succeeded in merely bringing him home. While he was holding a great council at Perth, Ferquhard, Earl of Strathearn, and five other noblemen, made an attempt to seize his person, and openly assaulted a tower in which he was lodged. The movement threatened to lead to a general popular insurrection, when an accommodation was brought about by the intervention of the clergy. Immediately after this, Malcolm with judicious policy applied himself to the reduction of those districts of his kingdom which, inhabited for the most part by races of foreign extraction, had never yet been completely brought under subjection to the general

* See ante, p. 445.

government, and in which revolts or disturbances were constantly breaking out. He found occupation for his restless nobility by leading them first against the wild Irish of Galloway, and then against the people of Moray, who seem to have been principally of Danish lineage. In his two first expeditions against Galloway he was repulsed; but in a third attempt, he compelled Fergus, the lord of the country, to sue for peace and to make complete submission. In regard to the province of Moray (at that time certainly not confined to the modern county of the same name, but comprehending apparently the whole or the greater part of what is now called Inverness), where rebellions had been incessant, Malcolm is asserted to have adopted the strong measure of removing the old inhabitants altogether to other parts of the kingdom, and replacing them with new colonies. We may presume, however, that any such transference of population could have been only very partially carried into effect. The subjugation of Galloway and Moray was followed in 1164 by another contest with Somerled, who had again risen in arms, and landed at Renfrew on the Clyde with a numerous force, which he had collected both from his own territories and from Ireland. The Thane of Argyle probably sympathised with the Lords of Galloway and Moray, or regarded their fate as of evil omen to himself. The issue of his present attempt, however, was eminently disastrous; his army was scattered with great slaughter in its first encounter with the king's forces, and both himself and his son were left among the slain.

It thus appears that Malcolm IV. was at least as successful as any of his predecessors in the maintenance of his proper authority as sovereign of Scotland, and that he probably indeed very considerably extended the real sway of the sceptre which they had left him in the country beyond the Tweed. His relinquishment, however, of the possessions which had been held by his grandfather in the south, and the partiality he evinced for a connexion with England, seem to have been in the highest degree distasteful to the generality of his subjects. At the head of the party which this feeling raised against him was his next brother William, for whom his grandfather is said to have intended the earldom of Northumberland, and who accordingly considered himself to be deprived of his inheritance by the agreement with Henry which Malcolm had made in the commencement of his reign. Meanwhile Malcolm is recorded to have, on the 1st of July, 1163, at Woodstock, renewed his homage to Henry, and also to have taken an oath of fealty to his infant son as heir apparent, and the relations between the two kings appear to have become more intimate than ever. The next notice that we have of the course of events in Scotland represents Malcolm as deprived of the government, and his brother William at the head of affairs as Regent. Even the fact of this revolution, however, is involved in considerable doubt, and various accounts are given of the causes that led to it. One story is, that Malcolm incurred the displeasure of his subjects by neglecting the administration of affairs, and giving himself up wholly to devotion; and that, moreover, he had bound himself by a vow of chastity, from which no intreaties of nobles or prelates could prevail upon him to depart. Boyce gives at full length a singular harangue, which he says was addressed to the king upon this subject by the bishop of St. Andrews, at a great council held for its especial consideration at Scone. But the legend of Malcolm's vow of chastity appears to be most probably an invention, founded upon his surname of the Maiden, which it is likely was intended to designate him only as young and of an effeminate countenance; for it is known from one of his own charters that he had a natural son. Nor would the history of his reign and actions denote him to have been in any respect a person of monkish tendencies. His devotion, indeed, may have come on in his last days. Be this as it may, another account (by no means irreconcileable with the last) makes him to have been obliged to give up the management of affairs in consequence of an attack of illness. It is certain that he died at Jedburgh on the 9th of December, 1165, on which his brother William was raised to the throne.

Notwithstanding the part he had hitherto taken, William appears to have begun his reign by courting the alliance of the English king. He passed over to the continent to Henry, while he was employed in reducing the revolted Bretons in 1166, and, as already mentioned, was with him while he kept court in the castle on Mount St. Michael in the close of that year.* The Chronicle of Melrose (which is written throughout in an English spirit) says that William followed Henry to France "to do the business of his lord." It is probable that he expected to succeed by this conduct in his favourite object of recovering possession of Northumberland. Henry seems to have kept up his hopes by fair promises for some years: when his eldest son Henry was solemnly crowned at London on the 14th of June, 1170, both William and his younger brother David were present at the ceremony, and both did homage to the heir apparent along with the other English barons; but in 1173, when the quarrel broke out between the English king and his son, William, tired of fruitless solicitation, changed his course, and, joining in confederacy with the "junior king," from whom he obtained a grant of the earldom of Northumberland for himself, and of that of Cambridge for his brother, he raised an army and entered England as an enemy. But after merely ravaging part of the northern counties, he consented to a truce, which was eventually prolonged to the end of Lent in the following year. In 1174, however, he again invaded Northumberland. As before, his troops spread devastation wherever

* See ante, p. 452.

they appeared; but their destructive course was soon stopped. William, as has been already related,* was on the 12th of July suddenly fallen upon at Alnwick by a party of Yorkshire barons, headed by Ranulf de Glanville, and made prisoner, with all his attendants. The Scottish king and his sixty knights, however, were not taken captive without resistance. As soon as William perceived who the enemy were, which was not till they were close upon him, for at first he had taken them for a returning party of his own stragglers, he cried out, "Now it will be seen who are true knights," and instantly advanced to the charge. But the numbers of the English (there were four hundred horsemen with Glanville) made this gallantry wholly unavailing. The king was quickly overpowered and unhorsed, and was then carried that same night to Newcastle, his attendants voluntarily sharing the fate of their sovereign. He was at first confined in the castle of Richmond, in Yorkshire; but after a few weeks Henry carried him across the seas to Falaise, in Normandy. In this strong fortress he remained shut up till the conclusion of the treaty of Falaise, in December following, by which William, with the consent of his barons and clergy, became the liegeman of Henry for Scotland and all his other territories. He was then liberated and allowed to return home, on delivering up to the English king the castles of Edinburgh, Stirling, Roxburgh, Berwick, and Jedburgh, and giving his brother David and many of his chief nobility as hostages for his adherence to the treaty.

The next event requiring to be noticed in the reign of William is a remarkable contest in which he was engaged with the court of Rome. It began in 1178, when, on the death of Richard, bishop of St. Andrews, the chapter elected as his successor John Scot, an Englishman of distinguished learning. The nomination of a bishop by the chapter, without the royal consent, was a stretch of ecclesiastical authority which had never been quietly submitted to either in England or Scotland, although any actual conflict between the claims of the spiritual and the temporal powers had usually been avoided by the king and the chapter uniting in the election of the same person. But in the present case William had a particular motive for making a stand against the clerical encroachment, having destined the see for Hugh, his chaplain. "By the arm of St. James," he passionately exclaimed, when he heard of the election made by the chapter, "while I live John Scot shall never be bishop of St. Andrews." He immediately seized the revenues of the see, and, disregarding the appeal of John to Rome, made Hugh be consecrated, and put him in possession. When the Pope, Alexander III., cancelled this appointment, and John was the following year consecrated in obedience to the papal mandate, William instantly banished him from the kingdom. The pope on this resorted to the strongest measures; he laid the diocese of St. Andrews under an interdict; he commanded the Scottish clergy within eight days to instal John; soon after he ordered them to excommunicate Hugh; and, finally, he granted legatine powers over Scotland to the archbishop of York, and authorised that prelate and the bishop of Durham to excommunicate the king of Scotland, and to lay the whole kingdom under an interdict if the king did not forthwith put John in peaceable possession of the see. Still William was inflexible on the main point. He offered to make John chancellor, and to give him any other bishopric which should become vacant: but this was the only concession he would make. When the archbishop of York and the bishop of Durham called upon the clergy of the diocese of St. Andrews to yield obedience to John under pain of suspension, he banished all who complied with that summons. At last the two prelates went to the full extent of their tremendous powers, and actually pronounced sentence of excommunication against William, and laid the kingdom of Scotland under an interdict. But at this point the death of Alexander (in August, 1181) prevented further consequences. William lost no time in making application to the new Pope, Lucius III., who, with the customary regard of each sovereign pontiff for the decrees of his predecessor, consented to reverse the sentence of excommunication, and to recal the interdict. The affair was ended by the pope himself nominating Hugh to the bishopric of St. Andrews, and John to that of Dunkeld, and so, to use the words of Lord Hailes, "making *that* his *deed* which was the king's *will*." Lord Hailes observes that William, in the obstinate stand he made on this occasion against Pope Alexander, "seems to have been proud of opposing to the uttermost that pontiff, before whom his conqueror Henry had bowed."

Notwithstanding the success which is attributed to the measures taken by the preceding king for reducing to a real obedience the various provinces that had before only acknowledged, at the utmost, a qualified dependence upon the Scottish crown, we find insurrections in these districts still disturbing the present reign. In 1171 the old annalists record another revolt of the people of Moray: in 1179 William was obliged to march with an army to Ross, to compose some commotions there; a state of anarchy and confusion which had lasted for more than ten years in Galloway was only put an end to in 1186; and in 1187 Ross and Moray were invaded by Donald Bane, or Mac-William, a grandson of the late king, Duncan, whose attempt, however, was soon put down, and himself slain.

In 1186, William, on the proposal of the English king, married Ermengarde, the daughter of Richard, Viscount Beaumont, and the descendant of an illegitimate daughter of Henry I.; on which, as part of the dower of his *cousin*, Henry restored the castle of Edinburgh. Two years afterwards he also offered to give up the castles of

* See ante, p. 471.

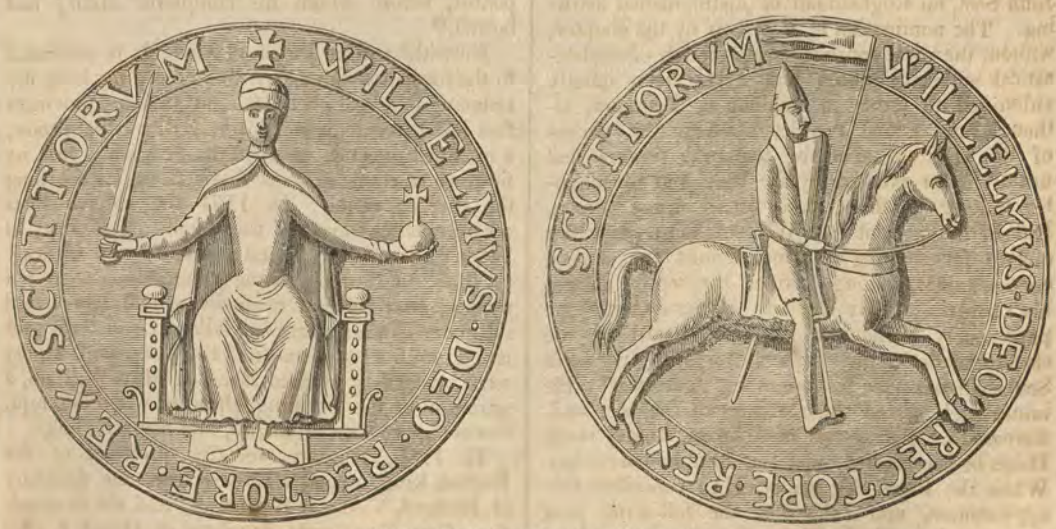
Roxburgh and Berwick, if William would pay the tenths of his kingdom for the holy war; but the Scottish barons and clergy made answer, "That *they* would not, although *both* kings should have sworn to levy them."

The accession of Richard I. to the English throne was followed, in a few months, by the release of William from the obligations which Henry, in the words of the charter of acquittance (dated December 5th, 1189), "had extorted from him by new instruments, in consequence of his captivity;" with the proviso, only, that he should in future perform whatever homage had of right been performed, or had been of right due, by his brother Malcolm. There seems to be no pretence for denying that this was a full renunciation by Richard, at least of whatever new rights of sovereignty over Scotland had been created by the treaty of Falaise. "There is no clause, it must be owned," observes Mr. Allen, "in the charter of Richard, which recognises in express terms the independence of the Scottish crown. . . . . The charter merely replaces the two kingdoms on their ancient footing, and leaves it open to discussion what were the lands and possessions for which homage and fealty were due to the English crown. But from one of the most full and accurate of our contemporary chroniclers, it is apparent that the independence of Scotland was understood at the time to be the effect and purport of the treaty. Benedictus Abbas, in his account of the transaction, informs us that William did homage to Richard for his English dignities; and that Richard, on the part of himself and his successors, granted to the Scotch king, and to his heirs for ever, an acquittance from all allegiance and subjection for the kingdom of Scotland." For this acquittance, and the restitution of the castles of Roxburgh and Berwick, William agreed to pay ten thousand marks sterling.

William lived many years after this, but scarcely any events of importance mark the remainder of his reign. Some disturbances in Caithness, in 1196 and the following year, compelled him to march an army into that province, where he seized Harold, the Earl of Orkney and Caithness, who was at the head of the insurrection, and detained him in captivity until his son Torfin surrendered himself as a hostage. This was, perhaps, the earliest actual assertion by any Scottish king of his authority in that remote district; the earls of which, if they acknowledged any limitation of their independence, had probably been wont to consider themselves subject rather to the Danish than to the Scottish crown.

After the accession of John to the throne of England, William did homage to him (November 22nd, 1200) at Lincoln, "saving his own rights." A few years afterwards a misunderstanding arose between the two kings respecting a fort which John attempted to erect at Tweedmouth, and which William repeatedly demolished as soon as it was built. A war at last threatened to arise out of this quarrel; and, in 1209, the English king advanced to Norham, and the Scottish to Berwick, each at the head of an army. But no encounter took place; a treaty of peace was concluded by the intervention of the barons of both nations, by which William became bound to pay to John fifteen thousand marks, as a compensation, it is supposed, for his demolition of the fort, which John, on his part, is said to have undertaken not to rebuild. William also delivered his two daughters to John, that they might be provided by him with suitable matches.

William died, after a long illness, at Stirling, on



SEAL OF WILLIAM THE LION, OF SCOTLAND.

[This is the only Seal of William the Lion that has been engraved. But it is believed, on the authority of Alexander Nisbet, the herald, that there was, in the charter-chest of the Setons, Earls of Winton, a Charter of William with a seal appended to it, in which the lion rampant appeared on the shield, as it does in the seal of his son and successor, Alexander II.—See Anderson's Diplomata, p. 54, note *k*.]

the 4th of December, 1214, in the seventy-second year of his age, and forty-ninth of his reign. He was surnamed *The Lion* on account, says Boyce, of his singular justice,—which seems a strange reason. It is more probable that he took this title from the lion rampant, the coat armorial of the Scottish kings, which he appears to have been the first to introduce. The statutes attributed to him consist of thirty-nine chapters; but a few of them are believed to be interpolations of a later period. He left many natural children; but, besides his two daughters, mentioned above, only one son by his wife Ermengarde de Beaumont, a youth in his seventeenth year, who succeeded his father, and was crowned at Scone on the 10th of December, 1214, by the name of Alexander II. The part taken by the new king of Scots, in conjunction with the English barons in their contest with John, has been related above.

We have now merely to add a notice of the few leading events, of subsequent date to Henry's expedition, which occur in the history of Ireland before it becomes mixed in one stream with that of England. The appearances of entire submission which had been exhibited during Henry's stay in the island were not long preserved after he left its shores. Before the close of the year 1172 the people had risen against the English domination in various districts; and, for the next three years, De Lacy, Strongbow, and their associates, were kept in constant activity by the active or passive resistance of one part of the country or another. In 1175, Henry, in the hope that it might have some effect in subduing this rebellious temper, produced, for the first time, the bull which he had procured from Pope Adrian twenty-four years before, along with a brief confirming it, which he had received in the interval from Alexander III. William Fitz-Aldelm, and Nicholas, prior of Wallingford, were sent over to Ireland with the two instruments; and they were publicly read in a synod of bishops which these commissioners summoned on their arrival. In this same year, also, a formal treaty was concluded between Henry and Roderick O'Connor, by which the former granted to the latter, who was styled his liegeman, that so long as he continued faithfully to serve him, he should be king of the country under him, and enjoy his hereditary territories in peace, on payment of the annual tribute of a merchantable hide for every tenth head of cattle killed in Ireland. For some years after this one chief governor rapidly succeeded another, as each either incurred the displeasure of the king by the untoward events of his administration, or, as it happened in some cases, awakened his jealousy by seeming to have become too popular or too powerful. But Henry never himself returned to Ireland. At length, in 1185, he determined to place at the head of the government his youngest son, John, then only in his nineteenth year; the lordship of Ireland, it is said, being the portion of his dominions which he had always intended that John should inherit. But this experiment succeeded worse than any other he had tried. The same evil dispositions which were afterwards more conspicuously displayed on the throne, showed themselves in John's conduct almost from the first day he began to exercise his delegated authority; by his insulting behaviour he converted into enemies those of the Irish chieftains who had hitherto been the most attached friends of the English interest; and he met with nothing but loss and disgrace in every military encounter with the natives. He was hastily recalled by Henry after having been only a few months in the country. The government was then put into the hands of John de Courcy, who had some years before penetrated into Ulster, and established the English power for the first time in that province. De Courcy remained governor to the end of the reign of Henry; and from this date the history of Ireland may be considered as merged in the history of England.

CHAPTER II.

THE HISTORY OF RELIGION.

THE first act by which the Conqueror expressed the joy of his heart for the victory of Hastings was in accordance with the spirit in which he had professed to conduct his enterprise from its commencement, and betrayed none of that jealousy of the church which he showed at a later period. Up to this time the countenance of the pope and the church had been one of his main stays, and he had still to look to that quarter for much important aid in establishing his power. In these circumstances, and in the hour of triumph, when he gave orders for building the abbey of Battle, he was naturally liberal to profusion, both in the privileges which he granted to the new establishment and the revenues with which he proposed to endow it. On being told, after the foundation was dug, that there was a scarcity of water in the place, in consequence of which it would be advisable to choose another site for the building;—"Work! work on!" cried the elated victor. "If God gives me life, there shall be more wine for the monks of the abbey to drink than there is now clear water in the best convent in Christendom."*

Although many of the higher churchmen, however, had, during a great part of the reign of the Confessor, been in the Norman interest, and continued among the firmest friends of William after his seizure of the throne, the great body of the clergy were strongly attached to the national cause. Some of them had even taken arms and fought on the side of Harold at Hastings; and, in the course of the protracted contest which followed before the country was finally subjugated, the English in their resistance to the foreigners had been on several occasions animated and led on by their priests. Hence it soon became a leading principle in the policy of William to depress the ecclesiastical power; while on the other hand the church, thus selected as a chief object of attack, rose on that account in the affections of the country, and grew every day to be more and more regarded as the strength and best representative of the patriotic cause.

Among the higher ecclesiastics who stood by what was considered as the English faction, the most conspicuous had all along been the Primate Stigand. He had refused, as we have already related, to put the crown on the head of the Conqueror, who was thereupon obliged to apply to Aldred of York to perform that office. Stigand, besides, lay under the displeasure of the court of Rome on other grounds. William therefore, when he judged that the proper time had come, found no difficulty in effecting the removal of the obnoxious prelate; he was deposed by the papal legates at a council held at Winchester in the early part of the year 1070. The person appointed by the king, with the consent of the barons, to be his successor, was the celebrated Lanfranc. Lanfranc had been a professor of laws in his native city of Pavia; but he had afterwards removed to Normandy, and opened a school at Avranches. Here he acquired great celebrity, and his seminary became the source from which the surrounding country was gradually provided with a lettered clergy. Of such importance were his services thought to be, that having, on the advance of old age, given up his public employment and retired to the monastery of Bec, he was after a few years induced, much against his own wish, to resume his occupation of schoolmaster or lecturer, and he continued to perform its duties with undiminished reputation till he was past the age of eighty, when William made him abbot of his new monastery of St. Stephen at Caen. He had nearly reached his ninetieth year when he was invited to the archbishopric of Canterbury. At first he sought an apology for refusing the offered dignity in his ignorance of the language and manners of the English *barbarians*,—for such they still appeared to an Italian ecclesiastic. The request of William, however, backed by the earnest exhortations of the pope, at length overcame his scruples.

Having once assumed his high office, Lanfranc showed himself determined to neglect neither its duties nor its rights. The first thing to which he applied himself was to recover for his church of Canterbury the numerous ancient possessions of which it had been deprived in the confusions or by the arbitrary proceedings of the last few years. In pursuing this object, obliged as he was to contend with

* Dugdale's Monasticon, iii. 241.

haughty barons, whom their liege lord could scarcely control, his intrepidity and perseverance enabled him to succeed in many instances. Even the powerful Odo, uterine brother to the king, was thus compelled to restore twenty-five manors which had formerly belonged to the see of Canterbury. The wealth thus recovered for the church was applied by Lanfranc to the promotion of its interests. He rebuilt the cathedral of Canterbury with Norman stone, repaired the sacred edifices in a style of comfort and elegance hitherto unknown to the Saxons, and erected churches and monastic establishments where they were considered most necessary. He also caused the bishops to remove their seats from the villages, in which many of them resided, to the larger towns: he is said to have introduced certain reforms into the monastic institutions; and he established schools in various parts of the kingdom. Lanfranc at the same time cordially co-operated with William in that particular point of ecclesiastical reformation which the latter no doubt had most at heart, the general substitution of a foreign for a native clergy. Very good reasons were easily found for the displacement of many of the English priests, on the ground both of ignorance and immorality; and, on the whole, it is probable that the result of their ejection was the settlement in the country of a more instructed body of pastors than it had previously possessed.

We must suppose that, whatever may have been the motives of another kind that principally actuated William, this was the end which Lanfranc kept in view, and by which he justified to himself the measures of severity in which he took part. His own elevation, indeed, had been one of the commencing moves of the royal scheme of reform; for it was at the council at which Stigand was deposed, held by the papal legates in 1070, that the removal of the native clergy and the introduction of foreigners were begun. For some years after this, the course which had been thus entered upon was vigorously pursued, till the conversion of the spiritual estate to a community of interest and feeling with the civil government was pretty completely effected. In many instances, the crime of being an Englishman, or inability to speak the Norman tongue, was reckoned sufficient for clerical deposition in the absence of more substantial charges. Even the saints of the Saxon calendar shared in the fate of their worshippers. Their sanctity was denied, and their worship ridiculed. Of the unfortunate clergy, some endeavoured to make terms with a power they had no means of resisting, by consenting to descend to a humbler station in the church: others fled to Scotland. Their necessities, or the hope of vengeance, drove many to the forests, where they joined the bands of outlaws, and sanctioned with the rites of religion the wild struggle of independence which was there long maintained by the sparks of the popular spirit that were last in being trodden out, and also the deeds of rapine and cruelty with which it was doubtless plentifully deformed. Some even of the deposed prelates are said to have taken this course.

It appears that in most instances the higher church benefices were filled by William with men of learning and virtue; but it was impossible for him, whatever his wishes may have been, to prevent the intrusion of many unworthy persons into the inferior appointments. He had hired adventurers to his standard by promises of ecclesiastical as well as political preferment. The powerful barons, whose swords had hewn out his way to the throne, and now maintained him upon it, had kinsmen and retainers of the clerical order, whose demands could not be refused; and thus, though vacancies were rapidly made, they were still insufficient for a throng of greedy expectants, the gratification of whose demands, on the other hand, only deepened the miseries of the land and the hatred of the unhappy people.

Amidst the acts of deposition that took place during this reign, an attempt was made to eject the venerable Wulstan from the see of Winchester. This bishop, though illiterate, surpassed the generality of his brethren of English birth in purity of character and a blameless life. But, on the charge that he was unacquainted with the French language, the resignation of his episcopal staff was required of him, in a synod held in Westminster Abbey, at which Lanfranc presided. At this demand, Wulstan arose, and, grasping the crozier with a firmer hand, thus addressed the primate: "I am aware, my Lord Archbishop, that I am neither worthy of this dignity, nor equal to its duties: this I knew when the clergy elected,—when the prelates compelled,—when my master called me to fill it. By the authority of the holy see he laid this burden upon me, and with this staff he commanded me to receive the rank of a bishop. You now demand of me the pastoral staff which you did not present, and the office which you did not bestow. Aware of my insufficiency, and obedient to this holy synod, I now resign them—not, however, to you, but to him by whose authority I received them." He then advanced to the tomb of Edward the Confessor, and thus solemnly invoked the dead king: "Master, thou knowest how reluctantly I assumed this charge, at thy instigation. It was thy command that, more than the wish of the people, the voice of the prelates, and the desire of the nobles, compelled me. Now we have a new king, a new primate, and new enactments. Thee they accuse of error, in having so commanded, and me of presumption because I obeyed. Formerly, indeed, thou mightest err, because thou wert mortal; but now thou art with God, and canst err no longer. Not to them, therefore, who recall what they did not give, and who may deceive, and be deceived, but to thee who gave them, and art now raised above all error, I resign my staff, and surrender my flock." He then laid his crozier upon the tomb, and took his seat among the monks as a simple brother of their order. The synod did

not dare to accept of a resignation so tendered. The staff remained untouched; and, to justify the continuance of Wulstan in his see, a miracle was invented. It was alleged that the crozier was so firmly imbedded in the stone, that it could not be removed. At the death of the Conqueror, Wulstan was the only English bishop who retained his office.*

But while William was thus exercising the privileges of a victor in the church as well as the state, he was surprised by finding himself threatened with vassalage in turn. The subtle and imperious Hildebrand, now Pope, by the title of Gregory VII., declaring that kings and princes were but the vassals of St. Peter and his successors, summoned William to do homage for the possession of England. The answer of the proud Norman was brief and decisive. The tax of Peter's-pence, discontinued of late years in England, and now required by the Pope, he declared that he would regularly pay; but the homage he peremptorily refused, alleging that it had never been promised by himself, nor rendered by any of his predecessors. With this answer to his demand, Gregory was obliged to remain satisfied for the present; he probably, indeed, expected no other, and only announced his claims with a view to their enforcement in more favourable circumstances, and that no future English king might be able to profess astonishment at their being advanced, seeing that they had first been pressed upon the Conqueror. William, in the mean time, taking advantage of the contest which arose between the pope and the emperor, and of his own remoteness from Rome, which enabled him to act with the more independence, commenced a vigorous warfare against the papal encroachments. He ordered, first, that no pontiff should be acknowledged in his dominions without his previous sanction, and that papal letters, before they were published, should be submitted to his inspection; secondly, that no decision, either of national or provincial synods, should be carried into execution without his permission; and, thirdly, that the clerical courts should neither implead nor excommunicate any tenant holding of the crown *in capite*, until the offence had been certified to himself.†

During the latter period of William's reign an event occurred, arising out of the disorders of the conquest, but from which an important benefit resulted to religion. No uniformity was observed in the public worship—the prayers and their mode of recital frequently depending upon the caprices of the officiating priest. In order to enforce a favourite liturgy among the Saxon monks of Glastonbury, Thurston, their Norman abbot, entered the church with a band of archers and spearmen. The monks withstood even this armed demonstration; a desperate conflict commenced round the altar, and behind the great crucifix, which was soon stuck thick with arrows, while benches, candlesticks, and crosses were wielded in their defence by the brethren, several of whom were slain. This incident suggested the necessity of a form established by authority; and Oswald, bishop of Salisbury, composed a church-service that became universal throughout the realm.*

Lanfranc did not long survive the accession of Rufus, for whom he materially assisted in securing the throne, and whose chief counsellor he continued to be while he lived. The archbishop, it is recorded, did not fail to press upon the new king the fulfilment of the oaths he had taken to observe the laws; but Rufus, now that he had obtained his end, was little inclined to give heed to these exhortations. "What man," he impatiently replied, "is able to perform all that he has promised?"† The primate, however, maintained a considerable ascendancy over the irregular spirit of the king, by which his excesses were frequently restrained; and, with longer time, Lanfranc might perhaps have been also enabled to develop some of those better qualities, the elements of which Rufus undoubtedly possessed. But the archbishop, being nearly a hundred years old, died in 1089, about two years after the commencement of the reign.‡

Lanfranc was succeeded in his office of the king's chief adviser by the notorious Ralph Flambard. One of the chief sources to which the new minister, among his plans of extortion, looked for the supply of the royal coffers, was the plunder of the church. At his instigation Rufus took to himself the revenues of all vacant bishoprics and abbacies, and in many cases kept the most important offices in the church unfilled for years, drawing the profits all the while into his own exchequer. In these cases the ecclesiastical estates were farmed out to those who offered the highest terms for the uncertain tenure, and who of course employed, without scruple, all the means at their command to repay themselves, and to make the most of their temporary occupation. The tenants under this system were ground to the earth by the most merciless exactions; and when, at last, an occupant was appointed to the benefice, he was usually required to pay a heavy premium for his promotion, which, again, he could only raise by a continuation of the same methods which had already produced so much suffering, and gone so far to exhaust the resources of the benefice. Hence, also, the intrusion into the church of a swarm of hirelings, who were regarded by their people rather as slave-merchants, by whom they were bought and sold, than as pastors by whom they were to be benefitted. §

This oppressive course of the king had continued for about four years, when, in 1093, he was seized with a dangerous sickness, and, under the agonies of terror and remorse, he became anxious

§ Eadmer.—W. Malmsb.

to repair the wrongs he had done the church. Since the death of Lanfranc he had kept the see of Canterbury vacant, swearing that it should have no archbishop but himself; but now, impetuous in repentance as in guilt, he insisted that Anselm, the successor of Lanfranc in the abbacy of Bec, and whom that prelate had before his death expressed his wish to have also for his successor in the primacy, should forthwith be appointed archbishop. Anselm happening to be at the time in England, he was hurried to the bed-side of the king. A crozier was presented to him, but he refused to touch it, till the royal attendants unclenched his fingers, and forced the sacred staff into his struggling hand, when all with one accord burst forth into a *Te deum* for the primate whom heaven had sent them, while the helpless monk in vain protested against the whole proceeding. It would perhaps be wrong to assume that the resistance of Anselm was hypocritical. Independently of his love of studious retirement, he may be supposed to have foreseen that the primacy, from the temper of the king and the state of the country, would be no enviable elevation. "What are you doing?" was his language to his friends who were most importunate for his consent: "the church of England should be drawn by two animals of equal strength: but you are yoking to the plough a feeble old sheep with a mad young bull that will tear its companion through every obstacle, and finally drag it to death."

Anselm had not done justice to his own character when he likened himself to the most gentle of animals. Although unequally yoked with the fiery spirit of Rufus, yet upon occasion he could display an unbending obstinacy that even matched the fierceness of the king. The seeds of future dissension were sown between them at the commencement of their connexion. Anselm, upon accepting the primacy, had stipulated for the restoration of all the church lands belonging to his see, and the implicit obedience of the king to his advice in all matters of religion; and to these demands William had evasively replied that the archbishop's reasonable expectations would be fulfilled. But the penitence of the king vanished with his fit of illness, and he rose from his sick bed with fresh vigour to resume the plunder of the church. His first quarrel with the primate was on the subject of the price to be paid by the latter for his promotion. As Rufus had not been accustomed to confer the higher benefices without a valuable consideration, Anselm was willing to comply with the usage; but, pleading his previous poverty and the impoverished condition of the see, he offered only the sum of five hundred pounds. Rufus eyed the money with disdain, and refused it, on which the primate bestowed it upon the poor. Afterwards he was given to understand that a thousand pounds would be a more welcome offering, but he declared that he was unable to raise such a sum from his exhausted revenues.* When this answer was reported to the king it filled him with fury. "As I hated him yesterday," he exclaimed, "so I hate him more to-day; and tell him that I shall hate him more bitterly the longer I live. I shall never acknowledge him for my archbishop."*

A ground of open quarrel was soon found. About seven months after his forced acceptance of the see, the primate proposed, after the custom of his predecessors, to proceed to Rome, to receive the pall from the hands of the sovereign pontiff; but there were at present two rival popes, between whom Rufus had not yet made his election. When Anselm, therefore, presented himself to request permission to set out on his journey, Rufus asked him, in real or affected surprise, to what pope he meant to go? Anselm at once answered that he should go to Urban II. Indignant at this arbitrary decision, the king instantly exclaimed, "As well tear the crown from my head as dispossess me of a right which is the peculiar prerogative of the English kings!" The archbishop, nevertheless, did not hesitate to announce that he intended to proceed on his journey, even without the leave of the king. In these circumstances a council of the nobility and prelates was forthwith assembled at Rockingham to decide upon the case. The bishops acknowledged the illegality of the primate's conduct; but when the king demanded his deposition, they declared that that could only be effected by the authority of the pope. They agreed, however, to unite in endeavouring to persuade him to retract his decision in favour of Urban, and to forego his journey; but Anselm would make no such concessions. The affair was thus fast advancing to a crisis, when the difficulty was solved by Rufus finding it expedient to acknowledge the claims of Urban, and by the pope, on the other hand, by way of returning the favour, dispensing with the personal attendance of Anselm, and transmitting the pall to England.

As Rufus, however, still persisted in keeping many of the chief offices of the church vacant, while Anselm felt it his duty to urge that proper persons should be appointed to the abbacies and other preferments which the king thus retained in his own hands, the quarrel between them was not long in breaking out again with all its former violence. "Are not the abbeys mine?" exclaimed the Red King, when the archbishop pressed his unwelcome solicitations;—"Do what you please with the farms of your archbishopric, but leave me the same liberty with my abbeys!" Anselm eventually determined to go to Rome, and lay the matter before the pope, deterred neither by the steady refusal of Rufus to grant him permission to leave the kingdom, nor by the confiscation and banishment which he was assured would follow his unauthorized departure. He set out on his journey in the spring of 1098, on foot, as a humble pilgrim, with a staff and wallet; and in this guise

* Rufus exacted the same sum from his favourite Flambard, on presenting him with the bishopric of Durham. It is likely, however, that this able financier found no great difficulty in raising the money.

* Ead. p. 21—25.

he reached Dover, where he underwent the indignity of a strict search from the king's officers, that he might carry no money out of England. He arrived, however, in safety at Rome, where he was greeted by the pope with the most distinguished welcome. Urban, addressing him in a long speech before his whole court, called him the pope of another world, while all the English in the city were commanded to kiss his toe.* The pontiff soon after sent a letter to Rufus, requiring the restitution of Anselm's property, which had been confiscated at his departure; but when the king understood that the bearer was a servant of the archbishop, he swore that he would tear out his eyes unless he instantly quitted the kingdom.

Before, however, it was known what reception the pope's application had met with, an ecclesiastical council which was held at Rome in the close of this year, and at which Anselm was present, declared that the king of England deserved excommunication for his treatment of that prelate; but at Anselm's request, made upon his knees, the pope refrained from actually pronouncing the sentence for the present. But this council is especially memorable in the history of the church, for the decision to which it came upon the great question of investiture, which had now become the main point in the contest between the pretensions of the spiritual and of the temporal power in every part of Christendom. The matter in dispute was simply, whether ecclesiastical persons, on being inducted into bishoprics and abbeys, should be permitted to receive the ring and crozier, by which the temporalities of the benefice were understood to be conveyed, from the hands of the prince. It is evident, however, that this ceremony involved the whole question of, whether, in every country, the clergy should be under the dominion of the king or of the pope. Its observance accordingly had been for a long time as strongly protested against by the court of Rome, as it had been usually insisted upon by every temporal sovereign. The present council denounced excommunication both against all laymen who should presume to grant investiture of any ecclesiastical benefice, and against every priest who should accept of such investiture. It was alleged, with a daring freedom of language, to be too horrible for hands that created the Creator himself—a power not granted even to the angels—and that offered him to the Father as a sacrifice for the world's redemption, to be placed in fealty between the hands of one who might be stained and polluted with every excess.†

Soon after this arrived the answer of Rufus to the pope's letter. "I am astonished," he wrote, "how it could enter your mind, to intercede for the restoration of Anselm. If you ask wherefore, this is the cause:—when he wished to go away, he was plainly warned that the whole revenues of his see would be confiscated at his departure. Since, therefore, he would needs go, I have done what I threatened; and I think I have done right." Anselm was not recalled so long as Rufus lived.

When Henry Beauclerc succeeded, his defective title required the sanction of the church, and he, therefore, politically recalled Anselm from banishment, at the commencement of his reign. He also promised neither to farm nor sell the ecclesiastical benefices, as his brother had done, and to restore to the church all its former immunities; and he threw into prison the obnoxious Flambard, the agent of the late oppressions. The friendship and aid of the church in the matter both of his establishment on the throne, and of his marriage shortly after with Matilda, notwithstanding her apparent dedication as a nun, rewarded this show of regard.

It was not long, however, before the quarrel respecting investiture was renewed, by the demand of Henry, that Anselm should do homage for his archbishopric. To this demand, the latter returned a decided negative. In consequence, the vexatious subject was again referred to Rome, and, as might have been expected, the decision pronounced by Pascal II., who was now pope, was in favour of the church. Henry, notwithstanding, still commanded Anselm either to do homage, or leave the kingdom; but the archbishop would do neither. He declared that he would abide in his province, and he defied any one to injure him there. A second deputation was thereupon sent to Rome, to intimate, in the name of the king and nobles, that unless the right of investiture was conceded, they would banish Anselm, dissolve their connexion with the papal see, and withhold the usual payments.

Thus pressed, if we may believe the account given by Anselm's biographer, Eadmer, the court of Rome had recourse to a very strange and clumsy stratagem. Three bishops had brought the message of the king, and two monks had also arrived to plead the cause of the archbishop. To the bishops, it is affirmed, the pope verbally conceded the right of investiture as claimed by the king, but excused himself from committing the permission to writing, lest other sovereigns should demand the same privileges, and despise his authority; while by the monks he sent letters to Anselm, exhorting him to resist all royal investitures, and hold out to the uttermost. The deputies of both parties returned to London, and, at a great council held there (A.D. 1102), after the bishops had rehearsed their verbal commission, the monks produced their letters. The pope afterwards declared the statement of the bishops to be false, and even excommunicated them as liars; but still Henry stood out. At length it was arranged that the archbishop should himself repair to Rome to obtain a positive decision; and he set out on his journey, accordingly, on the 29th of April, 1103.

Some years of further negotiation followed, during which Anselm remained abroad. At last a compromise was effected by the pope consenting that, provided the king would abstain from insisting

* W. Malmsb. p. 127.

† The proceedings of this council are very minutely related by Eadmer, the companion of Anselm in his flight and banishment.

upon the investiture with ring and crozier, the bishops and abbots should do homage, in the same manner with the lay tenants in chief of the crown, for the temporalities of their sees. On the tedious controversy being thus brought to a close, Anselm returned to England in August, 1106.

Two years after this act of pacification, a council was held at London, to enforce the obligation of clerical celibacy, a rule which both Anselm and his predecessor Lanfranc had always shown great zeal in promoting, although the subject had been partially lost sight of during the late controversies. Ten canons were now passed on this head more rigid than any that had been hitherto promulgated. All married priests of whatever degree were commanded instantly to put away their wives,—not to suffer them to live on any lands belonging to the church,—and never to see them or converse with them except in urgent cases, and in the presence of witnesses. As a punishment for their crime in marrying, they were to abstain from saying mass for a certain period, and to undergo several penances. Those who refused to banish their wives were to be deposed and excommunicated; their goods were to be confiscated, and their wives, as adulteresses, to be made slaves to the bishop of the diocese.*

Anselm ended his troubled career in 1109, in the seventy-sixth year of his age and sixteenth of his primacy. His writings, which still remain, prove that he possessed a large share both of literary knowledge and metaphysical acuteness; and it deserves to be remembered, as one of his chief merits, that he zealously followed up, and even extended, the plans of his predecessor Lanfranc, for the establishment of schools and the diffusion of learning in the country of his adoption. Whatever may be thought, also, of the course which he took in defence of what he conceived to be the rights of his station and of his order, or of some of his measures for the reform of the church over which he presided, it is evident that the contest he so perseveringly waged was for no merely personal or selfish objects. To his honour, it is recorded that the English loved him as if he had been one of themselves.* To the favour which he thus enjoyed with the conquered race, and the predilection for them on his part by which it may be supposed to have been acquired, it is probable that he owed part of that royal aversion by which his primacy was embittered. After his death, Henry was in no haste to fill the see of Canterbury, and he kept it vacant for the space of five years.

The ecclesiastical history of the remainder of the reign of Henry offers no events that require to be related. The conduct of the leading clergy in the contention between Stephen and Matilda has been detailed at sufficient length in the preceding chapter. The defective nature of Stephen's title afforded a favourable opportunity, which the ecclesiastical interest did not neglect, of extorting from the crown an acknowledgment of its haughtiest and heretofore most strenuously-disputed pretensions. Exemption from the royal investiture, and the right of carrying ecclesiastical causes by appeal to Rome, were conceded by Stephen, or usurped in spite of him, by a church that was daily improving in the art of profiting by every political emergency. It is not till the reign of Henry II., however, that the contest re-assumes much interest or distinctness; and to that period we will now therefore at once proceed.

The principal figure here is Becket. The legend of the origin of this celebrated personage is sufficiently romantic. Gilbert Beck, or Becket, a Saxon yeoman, followed to the crusades the

Baptism of the Mother of Becket. From the Royal MS. 2 B vii.

From this it may be seen that entire or partial immersion was part of the old mode of baptism; immersion, indeed, continued to be practiced in the English Church till after the Reformation.

pennon of his Norman lord, but being taken prisoner by an emir of the Saracens, he was thrown into a dungeon. The daughter of the infidel prince saw and loved the humble captive, and by her aid he effected his escape and reached his native country. Pining at his absence, the maiden afterwards conceived the wild idea of following his steps, though she knew no more of his language than his name and that of the city in which he dwelt. She hastened to a seaport, and making her wishes known by repeating the word "London," she obtained a passage in a ship bound for England. Having reached the English capital, she went from street to street calling upon "Gilbert," until the invocation met the ear of the lost object of her affection. Having abjured her native faith, and been baptized, the foreign maiden became the wife of Becket, now a citizen of London. From this union was born Thomas, the future Archbishop of Canterbury, a man whose remarkable life was destined to be a fit sequel to this singular history.*

His education, his introduction at court by the patronage of Archbishop Theobald, the rapid progress which he made in the royal favour, his elevation to the chancellorship, and his subsequent appointment to the primacy, with the extraordinary transformation which his mode of life and his whole character underwent upon the last-mentioned event, have been already related. There can be little doubt as to what Henry's design was in thus

* Brompton, in X Scriptores. The story is told by this author at great length and with considerable pathos.

placing at the head of the church the man who had hitherto been the most compliant as well as the most active and dexterous of his ministers in civil affairs. When the intention of making him primate was first intimated to Becket he frankly declared to his friends that, in accepting the new dignity, he was aware that he must forfeit the favour either of God or the king. He expressed the same sentiment to Henry himself, but in such an equivocal manner that his remark seemed rather intended for a jest. When the king informed him that he had fixed upon him for archbishop, he lifted up a corner of his gay robe, and laughingly said, "A fine saint you have chosen for so holy an office!" At first, also, men wondered when the news became public, as if a miracle had been announced.* Many persons, also, professed to be not a little shocked as well as astonished; but perhaps the indignant feelings of the Norman part of the community were as much excited by Becket's Saxon lineage as by the daring profanation, at which they affected to be scandalized.

During the space of twelve months that the measure waited its accomplishment, the chancellor gave no indication of that decided change of sentiment and conduct which he afterwards exhibited. It was not till after the appointment was completed, and made irrevocable, that he suddenly underwent that metamorphosis at which the whole realm was astounded. The effect, however, produced throughout the nation by so complete a disappointment of the expectations that all men had formed, was great and instantaneous. Unclerical as the archbishop's former life had been, and notwithstanding his obnoxious promotion, the bishops as well as the clergy generally were at first delighted with such a primate; and the Saxon population, while they were charmed with his affability and humbleness of demeanour, had their exultation and affection heightened in regarding him as belonging to their own race.

The circumstances which led to the first breach between the king and the archbishop have already been stated. The whole course, indeed, of the contest between Henry and Becket is so interwoven with the general history of the kingdom, that a sketch of it from its commencement to its close has been necessarily given in relating the civil transactions of the period, and we have only now to fill up certain parts of that outline by a few additional details in regard to points belonging more especially to the subject of the present chapter.

The various matters in dispute between the two parties, it will be remembered, were all submitted to the great council of prelates and barons which met at Clarendon in January, 1164. A short review of what took place upon that occasion, and of the history of the decrees, or "constitutions," as they were called, passed by the council, will best explain the conflicting claims of the king on the one hand and the archbishop on the other, and the relative positions in which the church and the state were left by the issue of the controversy.

The particular question which originated what eventually became a general contest about their respective rights between the crown and the spiritual estate, appears to have been—whether the clergy, when accused of crimes, should be tried and punished by the ecclesiastical or the civil courts. Filled as many of the lower offices in the church were, with persons of little education, and whose emoluments were not such as to raise them above the habits and temptations of the lowest poverty, it is no wonder that, in an age of such general rudeness and disorder, some of the most serious offences, including even acts of violence and blood, should occasionally be committed by

* Stephan.—Vita Quadripart.

churchmen. It was alleged, however, with apparent reason, that the temptations to the commission of crime in the case of a priest were greatly augmented by the peculiar sort of trial and punishment to which it subjected him. During the Saxon times, the clergy and laity were alike amenable to the courts of common law; but the Conqueror withdrew the bishops from the civil tribunals, and, in imitation of the order of things already existing in all the other countries of Christendom, placed them at the head of other courts of their own. The extent of the ecclesiastical jurisdiction thus established had, from the first, been a subject of uncertainty and dispute; but latterly the church courts had asserted the right of alone taking cognizance of all offences whatever committed by the clergy. One strong ground on which this claim was objected to by the civil authorities, was the inadequacy of the punishments which the ecclesiastical judges were considered to have the power of inflicting; for they were held to be restricted by the canons from pronouncing sentence of death; and, in consequence, for the most heinous offence committed by a priest, the heaviest retribution was stripes and degradation from his sacred office. It was also alleged that a natural partiality for their order induced those who presided in the church courts to treat the offenders that were brought before them with dangerous lenity, and sometimes, perhaps, made them shut their eyes altogether to the proofs of a churchman's guilt.

The Constitutions of Clarendon, as finally digested, were sixteen in number. They were presented for the acceptance of the council by the king, as a restoration or recognition of the ancient customs of the realm, or, as it was more specifically declared in the preamble, of the usages, liberties, and dignities which had prevailed and been maintained in the days of his grandfather and the other kings his predecessors. It must be admitted that this title was not a correct description as applied to all the articles. The instrument comprehended, as has been already observed, the entire scheme of reformation by which Henry proposed to bring the church under subjection to the civil authorities; and, however necessary certain of the clauses might be for this end, or however just and proper, they were undoubtedly innovations upon the laws and practice that had subsisted ever since the Conquest. The substance of the principal enactments was—that all cases, whether civil or criminal, in which a clergyman was concerned, should be tried and determined in the king's court; that appeals should lie from the archbishop to the king; and that no cause should be carried further than the archbishop's court (in other words, to Rome) without the king's consent; that no archbishop, bishop, or dignified clergyman, should depart from the kingdom without the king's leave; that no tenant in chief of the crown, and no officer of the royal household or demesne, should be excommunicated, or his lands put under an interdict, until application had been made to the king or the grand justiciary; that churches in the king's gift should not be filled without his consent; that when an archbishopric, bishopric, abbacy, or priory became vacant, it should remain in the custody of the king, who should receive all its rents and revenues; that the election of a new incumbent should be made upon the king's writ, in the royal chapel, and with the assent of the king; and that the person elected should do homage and fealty to the king before being consecrated.

To these propositions Becket, at an interview with the king some time before the meeting of the council, had, although with much reluctance, promised that he would give his assent; and all the other bishops had also expressed their readiness to acquiesce in them. But now the archbishop, on being formally asked by the king to fulfil his promise, to the surprise of all present, peremptorily refused to give any other answer than that he would render obedience to the said ancient customs of the realm, saving the rights of his order. Terrified at the rage into which the king broke out at this unexpected opposition, Becket's brethren vehemently implored him to yield. Meanwhile the door of the antechamber being thrown open, discovered a band of knights standing clad in armour, and with their swords drawn. In these alarming circumstances Becket's firmness was at last shaken; and he promised that if the meeting should be adjourned for the purpose of having the enactments digested into a regular form, he would then do what was required of him. But when he retired into solitude he was confounded at the thought of his weakness. Filled with remorse, he resolved even yet to draw back, to whatever of reproach or danger he might, by so doing, expose himself. When, therefore, the meeting re-assembled on the following day, and copies of the Constitutions were produced, he peremptorily refused his signature. Neither entreaties nor threats could now move him. Retiring from the council, he wrote to the pope an account of all that had taken place, soliciting absolution for the momentary lapse of which he had been guilty; and, as a penance for the same crime, he condemned himself to an abstinence of forty days from the service of the altar.*

The Constitutions of Clarendon, however, as assented to by the barons and the other prelates, became for the present the law of the land, notwithstanding the dissent and opposition of the archbishop.

The rest of Becket's memorable story,—his condemnation a few months after this by the council of Northampton,—his flight to the continent,—his reconciliation with the king and return to England after an absence of nearly six years,—and, finally, his barbarous murder, has been already told. It is only necessary to add, here, that Henry, on his reconciliation with the pope in 1172, only obtained absolution on solemnly promising to abolish all laws and customs hostile to the clergy that might

* Gervase, 1388.

have been introduced in his kingdom since the beginning of his reign,—to reinstate the church of Canterbury in all the possessions it had held a year previous to Becket's departure,—and to make restitution to all the friends of the late primate who had been deprived of their property. To these, it is said, were added some other engagements which were not committed to writing; and one version of the oath taken by Henry makes him acknowledge the kingdom of England to be held by him in feudal subjection to the pope. This article, however, has generally been held to be a forgery; and while on the one hand the evidence of its authenticity is very defective, its inherent improbability on the other is certainly strong. We cannot agree with a modern writer * in thinking it likely that this acknowledgment of vassalage on the part of Henry may be what is alluded to in some of the accounts as one of the king's promises or engagements which it was held expedient to keep secret. It is much more probable that what is thus alluded to was a payment of money to the sovereign pontiff. It is expressly stated that these secret engagements were not committed to writing, so that they would not be found in any copy of the oath. It is unnecessary to remark how irreconcileable with the character of Henry is the supposition that he could in any circumstances have made such an acknowledgment as this. If the oath, it may also be asked, existed with his signature in the form in which it has been published by Baronius and Muratori, how came it never afterwards to be brought forward, even when, as in the reign of John, it might have been produced with so much advantage in support of the pretensions of the papal court?

Notwithstanding Henry's promise to abolish the customs that infringed upon the rights of the clergy, the Constitutions of Clarendon remained unrepealed for some years after this time. But if they were still nominally law, they were little better than a dead letter. All effective opposition to the cause of which Becket had been the great champion, was for the present put down by his martyrdom, and by the wonders that were believed to have followed that event. The spirit of the murdered archbishop seemed still to walk through the land, to animate his friends and confound his enemies. While his mangled body lay in the choir of the church, the right hand, it was affirmed, had solemnly raised itself, and made the sign of the

Becket's Crown, a Chapel in Canterbury Cathedral, situated immediately behind the chapel of the Holy Trinity, in which stood the shrine of the martyr. Becket's Crown, probably so called from the form of the ribs of the arched roof, appears to have been in course of erection at the Reformation, and was only finished about the middle of the last century, at the expense of a private citizen of Canterbury.

cross in benediction of the collected multitude.* His eyes also, which had been dislodged by the blows of the murderers, were averred to have been replaced by two others smaller in size, and, that the miracle might be incontestible, of different colours.† After the interment of the body, crowds of the afflicted repaired to the spot, where the lame recovered the action of their limbs, the blind received sight, and the sick were healed.‡ Every day added to the number of the pilgrims and the miracles, and consequently to the spread and fervour of the delusion. The court, perplexed and paralyzed, looked on in silence; the prelates, who had opposed the martyr while he lived, had still their own peace to make with the pope, and might be uncertain how far their interference would be welcome; and perhaps among both parties there might be a lurking dread that miracles so numerous and so well attested might be true. The enthusiasm became general, and messenger after messenger was despatched to Rome with fresh tidings of prodigies, and supplications that Becket might be made a tutelary saint for the blessing and protection of England. This favour was at last granted by the pope; and the 29th of December, the day on which the saint was assassinated, was assigned to him in the calendar.§

It was not, however, till the year 1176 that, at a great council held at Northampton, the repeal, or rather the modification, of the Constitutions of Clarendon was formally effected. It was there agreed, though not without much opposition from many of the barons,—first, that the clergy should not be brought to trial before the temporal courts on any charges except for offences against the forest laws; and, secondly, that no bishopric or abbey should be kept in the king's hands longer than a year, except in circumstances which might make it impossible to have the vacancy filled up in that time. In this state the law continued during the remainder of the period now under review.

Before dismissing this reign, an event remains to be mentioned, which although otherwise insignificant, is memorable as the first instance on record of any opposition being made to the common faith, and as such may be regarded as the earliest harbinger of the Reformation in England. About the beginning of the year 1166, a synod was held at Oxford in the presence of the king, for the arraignment of certain foreigners accused of heresy. It appears that five years before, several Germans, to the number of thirty men and women, had arrived in England, and began to disseminate their religious opinions; but as they had hitherto only converted one woman of low rank, and as their demeanour had been peaceful, they had been allowed to live unmolested. Attention, however, was at last called to the circumstance that their principles differed from the established creed, on which they were thrown into prison, and now brought for trial before the king. To the question of what was their belief, Gerard their leader answered that they were Christians, and venerated the doctrines of the apostles. But it is alleged that, when they were examined upon particulars, they spoke impiously of the eucharist, baptism, and marriage, and when urged with texts of scripture, refused all discussion, declaring that they believed as they were taught, and would not dispute about their faith. When they were exhorted to recant, they received the admonition with scorn; and when threatened with punishment, they answered, with a smile, "Blessed are they who suffer for righteousness' sake, for theirs is the kingdom of heaven." As heresy was new in England, the judges were at a loss how to act; but canons had already been enacted by the council of Tours against the Albigenses, and sentence was pronounced in conformity with these. The accused were condemned to be branded in the forehead with a hot iron, and to be publicly whipped and expelled out of Oxford, while the king's subjects were forbidden by proclamation to shelter or relieve them. The enthusiasts went to their punishment in triumph, singing, "Blessed are ye when men shall hate you and persecute you." Their garments were cut off by the waist, their brows were seared, and their backs torn with scourges; and thus bleeding, and almost naked, in the depth of winter, they wandered about unsheltered among the fields, until they died. Such is the obscure account delivered by the contemporary writers, in whose eyes dissent in belief from the church of Rome was an incomprehensible anomaly. It is probable that these strangers, from the notions ascribed to them on the institution of of marriage and the sacraments, were Cathari, or Albigenses.

The history of ecclesiastical affairs in England during the reign of Richard I. is almost a blank; every feeling was absorbed in the great subject of the Crusades, and the clergy, who had already gained all for which they had contended at home, found ample scope for their belligerent propensities in the fields of Palestine, to which many of them repaired in warlike array notwithstanding the canons that had been enacted against their bearing arms. During the reign, the power of the popedom, which had been exerted in favour of Richard in the negotiations for his release, was also directed effectually against him when he showed symptoms of opposition to Rome. Hubert, the primate, jealous of the monks of Canterbury, and desirous to abridge their privileges, had determined to raise up against them a rival body, in the form of an establishment of canons regular, for whom he proceeded to erect a splendid edifice at Lambeth, with the approbation of Richard. But the monks of Canterbury, alarmed for their rights, and suspecting that the gainful relics of Becket would be transferred to the new house, fiercely opposed the project, and appealed to the Pope, Innocent III., who warmly espoused their cause, and directed a bull to the Archbishop, in 1198, commanding him

‡ Gervase, p. 1417.—Mat. Par. 125.
§ Baron. Annal. 1173.

in a very imperious style to desist immediately from his proceedings. "It is not fit," he said, "that any man should have any authority who does not reverence and obey the apostolic see." He afterwards addressed another bull to Richard, whom he threatened for his contumacy in abetting the archbishop; warning him that if he persevered he should soon find in his punishment how hard it was to kick against the pricks. By a subsequent mandate also addressed to the king, Innocent declared that he would not endure the least contempt of himself or of God, whose place he held upon earth. "We will take care," he says, "so to punish both persons and lands without distinction that oppose our measures, as to show our determination to proceed prudently, and in a *royal* manner." The lion-hearted king and the rebellious archbishop were equally dismayed at these menaces, and the obnoxious building was destroyed.*

The history of the church in the reign of King John is principally a continuation of the same great contest respecting the appointment to the higher ecclesiastical offices between the clergy, or the pope, on the one side, and the crown on the other, which had been carried on throughout the greater part of the preceding century; and the events that arose out of which, exercising as they did an important influence on the course of public affairs, have necessarily been related in the preceding chapter. In the earliest ages of the Christian church, the election of bishops was by the voice of the clergy and the people of the diocese. After the establishment, however, of the feudal system in the different kingdoms of Europe, and the annexation to bishoprics of high political power and large landed possessions, the king naturally claimed the right of being at least a party in the nomination to an office which gave to its possessor so much weight in the state. The claim to a veto upon the election, was as naturally extended to that of an absolute right of appointment, as soon as the crown found that it could not otherwise secure the office for its own nominee. Accordingly, this was substantially the position which the crown at last assumed, although the form in which it asserted its claim varied with circumstances. When it found itself obliged, for instance, to relinquish the absolute nomination of the bishop, it stood out for the right of granting

or refusing to the individual elected that investiture, without which he certainly could not draw the revenues of the see, even if he could exercise any of the spiritual powers of his office. The course taken by the church, on the other hand, equally varied in conformity to the course of events. In the first place, at a very early period, the interference of the laity was first reduced to a mere form, and then got rid of altogether. Subsequently the claim of the general body of the clergy of the diocese to a voice in the election was disputed, and the right of voting was asserted to reside solely in the chapter. As the chapter in many cases consisted of the monks of some religious house to which the cathedrals were held to belong, the natural enmity between the regular and the secular clergy here interfered materially to inflame the quarrel. This was the case, for instance, at Canterbury, where the chapter consisted of the monks of the great monastery of St. Augustine, who thus claimed the sole right of electing the Primate of all England. The regular clergy, (that is, those living under a monastic rule,) were always, it may be observed, regarded by the court of Rome as the main support of its authority, and it usually took their side against the secular (so called, as living at large in the world). What the popes therefore endeavoured to effect in regard to the nomination of bishops, was to retain that power either in their own hands or in those of the chapters. Against the claim of the king to present in the first instance they constantly protested, and this was a point which they would never concede. In many cases, however, the chapters submitted to present the person named to them by the king, and when the affair was arranged in that manner, the compromise of course prevented for the present any collision between the adverse claims of the church and the crown. Even in this case, however, the question of investiture, as we have already seen, created a serious difficulty to be got over after the nomination had been settled. But the particular point upon which the dispute between John and Innocent III. hinged, was the power claimed by the papal court of appointing to a bishopric vacated by the irregularity of the election, or by the unfitness of the person elected, the right being also assumed by it of deciding upon the irregularity or unfitness. On the death of Archbishop Hubert, the monks of Canterbury had, in the first instance, elected Reginald, their subprior, to the vacant see, but had subsequently, in their apprehension of the king's displeasure, proceeded to a new election, and nominated the royal candidate, John de Gray, the Bishop of Norwich. The pope decided that, although the right of election was in the monks, the appointment of the Bishop of Norwich was invalid, as having been made without the previous election of Reginald being legally annulled; and thereupon he took the nomination into his own hands, and appointed Stephen Langton, who happened to be then at Rome. John's resistance to this appointment, the consequences that followed to himself and the kingdom, and the issue of the contest, have been already related.

Little or no change took place in the internal constitution of the English church in consequence of the Norman Conquest; and its establishment remained through the whole of the period now under review nearly the same as it was before that event. The principal alteration was that made by the creation of two new sees—of Ely in 1109, and of Carlisle in 1133, in addition to the fifteen (including the two archbishoprics) that had existed in the Saxon times, being the same that still exist, with the exception of Oxford, Peterborough, Gloucester, Chester, and Ripon.

Before the Conquest the only order of monks known in England was that of the Benedictines, or observers of the rule of St. Benedict, instituted in the early part of the sixth century, which some conceive to have been brought over by Augustine, but which was most probably unknown in the country till a considerably later period, and certainly was first generally established by St. Dunstan in the tenth century. Nor perhaps was the rule of St. Benedict ever strictly observed by the English monks till after the Conquest. In the course of the twelfth century two new orders were introduced, the Cistercians, or Bernardines, in 1128, and the Carthusians in 1180. Both these indeed may be considered as branches of the Benedictines, only distinguished by subjection to a discipline of still greater severity. The order of the Carthusians especially (founded at Chartreux, in France, by St. Bruno in 1080, whence their establishments in England were corruptly called Charter-houses) was the strictest of all the monastic orders, the members never being allowed to taste flesh, and being restricted on one day of every week to bread, water, and salt. The Carthusians never became numerous in England. The order of the Cistercians (instituted at Cisteaux, in Latin Cistertium, in Burgundy, in 1098, and afterwards greatly patronized by the celebrated St. Bernard) was chiefly distinguished by having its houses situated for the most part at a distance from all other habitations. There were a considerable number of them both in England and in Scotland. The habits of the monks of these three orders were distinguished from each other by some minor peculiarities; but they all consisted of an under garment of white, with a long loose black cloak or gown over it, which latter, however, seems to have been only occasionally worn. The Cistercians, and, according to some representations, the Carthusians also, when in church, wore a cloak of white.

The most common form, however, which enthusiastic devotion assumed in the eleventh and twelfth centuries, was that of going on pilgrimage to some spot supposed to be of peculiar sanctity, either within the kingdom or abroad. After the martyrdom and canonization of Becket, his shrine at Canterbury became, and for ages continued to be, the favourite resort of the pious when they did

A Benedictine.

A Carthusian.

A Cistercian.

not extend their penitential journey beyond the limits of their own country. Abroad, Rome, Loretto, but especially Jerusalem, Mount Sinai, and the other parts of the Holy Land now attracted crowds of palmers,* "beyond the example of former times," to use the words of Gibbon, "and the roads were covered with multitudes of either sex, and of every rank, who professed their contempt of life, so soon as they should have kissed the tomb of their Redeemer. Princes and prelates abandoned the care of their dominions; and the members of these pious caravans were a prelude to the armies which marched in the ensuing age under the banner of the Cross." Out of this practice of pilgrimage grew the Crusades, in which the spirit of devotion formed a strange alliance with the military spirit, each communicating something of its peculiar colour and character to the

* Pilgrims to foreign parts were properly called Palmers, from the branches of the palm-tree, the emblem of victory, which they used to bear in their hands. In token of having crossed the seas, or of their intention of doing so, they were wont to put cockle, or scallop, shells in their hats—according to Ophelia's song in Hamlet,

"How should I your true-love know
From another one?
By his cockle-hat and staff,
And by his sandal shoon."

other. Four of these extraordinary expeditions belong to the present period, of which the first (the consequence of which was the establishment of the kingdom of Jerusalem) set out in 1097, the second in 1147, the third (that in which Cœur de Lion took so distinguished a part) in 1189, and the fourth (which resulted in the conquest of Constantinople from the Greeks) in 1203. The Crusades, however, though professedly religious enterprises, produced less effect upon the religion of the age in which they were undertaken than upon most of the other great constituents of its social condition. Among the phenomena that sprung out of the Crusades none presented a more

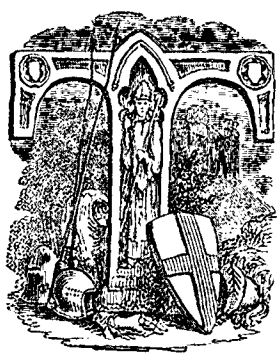
TEMPLAR IN HIS MANTLE.

expressive type of their character than the religious orders of knighthood. The two earliest and most distinguished of these, the Knights Hospitallers of St. John, and the Knights Templars, both acquired establishments and extensive possessions in this country soon after their institution; the principal seat of the former having been established at St. John's Hospital in Clerkenwell, London, that of the latter at the Temple, (to which they had removed from a previous residence in Holborn,) many years before the close of the twelfth century.

ODO, BISHOP OF BAYEUX, PRONOUNCING A PASTORAL BLESSING. From Kerrick's Collection in the British Museum, Additional MSS No. 6728. Here may be observed the intermediate form assumed by the crosier, or pastoral staff, in its passage from the cross to the crook.

CHAPTER III.

HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.



THE essential character of the Norman Conquest of England, as distinguished from the conquests of the northern nations who overran the Roman empire (for example, from those of the Saxons in Britain and of the Franks in Gaul), was this: it was not an old enervated community overrun by a band of men much inferior to it in civilization and much superior in energy and courage, but a semi-barbarous and warlike people invaded and subdued by another people in the same state nearly as regarded these points, but better organized, and led by an able chief whose power was sufficiently established and concentrated to ensure order and discipline. The Normans would appear to have been the most widely successful warriors of the middle ages; comparatively a mere handful of men, they filled Europe and Asia with their victories and their renown. They were victorious wherever they went; in Italy and the East, under Robert Guiscard, no less than in England under William the Bastard,—and again, be it added, in France, strongly backed, however, by Anglo-Saxon aid, under the banner of the Anglo-Norman Plantagenets, the Henrys and the Edwards. Their victorious course is no less striking and no less distinctly marked if we turn our eyes to Scotland and Ireland. Like the huge image of Nebuchadnezzar's dream, which was broken by the shock of the stone cut from the mountain rock, horde after horde, nation after nation, sank beneath the desperate onset of the Norman chivalry,—was shivered to pieces by the fierce yet firm and compact charge of the Norman lances. It was mainly by the help of the Anglo-Norman nobility, whom they attached to their country by the offer of broad domains, that the kings of a part of the eastern coast of North Britain became "kings of broad Scotland." The Bruces and Baliols had about as much Norman blood in their veins as the Plantagenets or Abrincis. The battle of the Harlaw was as decisive in establishing a Scoto-Norman aristocracy in the northern extremity of the island as that of Hastings had been in establishing an Anglo-Norman aristocracy in the south.

After the Conquest, the Norman feudal aristocracy, encamped as it were in the midst of a hostile people, who had possessed independence, and who might therefore be supposed to have the will, as they had a considerable portion of the power, to regain it, would necessarily be firmly united. On the other hand, their common sufferings united the Saxons. Those dissensions which, before the Norman invasion, had rent the kingdom in pieces, disappeared. While the Normans, too, found an instrument of union in the feudal organization which they had possessed in Normandy, the Saxons found one in their ancient customs and laws, which they now cherished the more as being associated with the remembrance of their independence and their prosperity. It was for this reason, probably, as much as for anything peculiarly and eminently good in them, that they constantly demanded with such earnestness the restitution of the laws of Edward the Confessor.

In order to comprehend the constitution of society during this period of our history, it will be necessary to enter into a short examination of the feudal system. We have already touched upon this subject when treating of the Anglo-Saxon tenures, but it will now be necessary to go into it somewhat more fully. For although, under the Saxons, feudalism existed in *parts*, it was with the Normans that it came in as a *system*.

The formation of the feudal system was not, as sometimes conceived and described, sudden and referrible to one point of time, but progressive, and the work of several centuries.

In the fifth century, when the northern hordes overran and took possession of the Roman empire, the leaders portioned out among them the lands in full and unconditional ownership. They called these *alod*, a term, according to some etymologists, properly signifying allotted possessions; according to others, full, independent property. It is probable that, from the very first, the portions which they gave to their followers were held on a different tenure, as we find them very early called *beneficia* and *precaria*. The former term is still retained in English, and its signification will elucidate our subject. A clergyman receives his *benefice* upon condition of performing certain services. Similarly a soldier received his *benefice*. The word was borrowed from the mode of rewarding the Roman soldiers, and applied to the same purposes. The conquests having been made by a great number of separate and independent bands of warriors, the leaders of each of which would of course have a larger portion of land than those they led,

Europe, or at least the greater part of it, was divided into a very great number of independent properties, we might almost say small independent sovereignties, for, according to the nature of allodial property, the smallest landholder was as little dependent on any one else as the largest. Now in the state of war and insecurity which then prevailed, the small landholders would of course have a much less sure existence, and much less secure tenure of their land, than the large ones. Whence it came to pass in time, that most of the smaller allodial holders of land gave up to some large holder the absolute dominion over their land which they before possessed, receiving in its stead a conditional dominion; the condition being, that they should help the large proprietor when he required their assistance, and likewise, when they required it, receive help from him. *Beneficium* was the word made use of, from the fifth to the ninth century, to denote this sort of tenure, and is proved* to have designated the same thing which, towards the end of the ninth century, received the name of *feodum*, the origin of our *feud*. The etymology of the latter word is uncertain; some deriving it from the Latin, others from the German.

According to M. Guizot; the principal facts, the essential elements of the feudal system, are reducible to three—

1. The particular nature of the territorial property.

2. The combination of sovereignty with property; that is to say, the assignment to the owner of the soil over all the inhabitants of that soil, of all or nearly all the rights which constitute what we call sovereignty, and are now possessed by the government.

3. The system of political, that is of legislative, judicial, and military institutions, which bound together the owners of fiefs, and formed them into a general society.

We have already, in the section on the Anglo-Saxon Government, said as much as is necessary on the first of the above-named subjects. Of the history of the other two, into which M. Guizot enters at considerable length, our limits will not permit us to give more than his conclusions. That fusion, then, of sovereignty with property was not altogether, as by some supposed, the result of conquest. An analogous fact existed in Germany. In the German tribe, the head of a family was sovereign within his domains. *There* also existed the fusion of sovereignty and property. But in Germany this fusion took place from the influence of two principles;—from the family or clannish spirit on the one hand, on the other from conquest—from force. Whatever might have been the proportions in which these two elements existed together in Germany, it is certain that in Gaul the patriarchal or clannish proportion was greatly diminished; while, on the other hand, the other element, that of conquest—of force, became the principal, if not the only, certainly the predominating element of that fusion.

With regard to the third leading fact:—Immediately after the establishment of the Germanic nations in the provinces of the Roman empire, three principles of social organization, three systems of institutions, are found co-existing among them: 1. The system of free institutions. 2. The system of aristocratical institutions. 3. The system of monarchical institutions. Of these the system of free institutions had its origin—1. In Germany, in the general assembly of the heads of families of the tribe, and in the common deliberation and personal independence of the warriors who formed the band. 2. In Gaul, in the remains of the municipal regime in the cities. The system of aristocratical institutions originated—1. In Germany, in the domestic sovereignty of the heads of families, and in the patronage of the leader of a band over his companions. 2. In Gaul, in the very unequal division of landed property, and in the reduction of the great mass of the population to the condition of villains or of slaves. The system of monarchical institutions originated—1. In Germany, in the military and religious royalty of the people. 2. In Gaul, in the traditions of the Roman empire and the doctrines of the Christian church. Now, while the system of free and that of monarchical institutions went on declining, the system of aristocratical institutions acquired greater strength, so that towards the end of the tenth century it was the predominating one in Europe.

Towards the end of the tenth century the feudal society was fully formed. It is therefore, then, in a state fit to be studied, to be analyzed,—in a state such that its dissection will make known to us its component elements.

The fundamental element of the feudal system, the "primitive feudal molecule," to use the words of M. Guizot, is the simple domain possessed in fief or fee by a lord who has over the inhabitants the sovereignty inherent, as we have seen, in property. This contains—1. The feudal castle and its proprietor. 2. The feudal village and its inhabitants.

After learning the relations between the owner of a fief and the inhabitants of that fief, it will be necessary to inquire into those subsisting as between the owners of fiefs themselves. And, even then, to approximate to a complete view of the subject, it would be also requisite to inquire how the feudal system was acted upon or affected by two other elements, which, though co-existent, never thoroughly amalgamated with it, and at last destroyed it,—we mean *royalty* and the *towns*, or municipal institutions.

The feudal castle, then, usually built in an elevated and isolated situation, and rendered as strong as nature and the art of the time could make it, is inhabited by the owner of the fief, his wife and children: in addition to these, perhaps by a few freemen who have not become proprietors, and, being attached to his person, continue to live with

* M. Guizot refers to a charter of the Emperor Frederic I., of date 1162, in which *feodum* and *beneficium* are employed indifferently.

him. Without, close under the walls, is grouped a small population of *coloni*, or cultivators of the soil. Before the German invasion nothing of this kind existed in the Roman empire. The rich either lived in the cities or in fine houses agreeably situated near the cities, in rich plains, or on the banks of rivers. Throughout the country were scattered the *villæ*, properly a sort of farm buildings, where lived the slaves or coloni, who tilled the soil —hence called villani, villains. Of these we shall speak presently.

One of the first features that strikes us in the condition of this feudal lord is its isolation. Take any other form of human society with which history has made us acquainted,—the purely savage, —the nomadic,—the Greek and Roman,—in all you will find man brought into constant contact and co-operation with his equals. Not so here. The feudal lord is like Robinson Crusoe in the desert island,—"monarch of all he surveys;" for the human beings about the former are as much subjected to his will as the brutes around the latter.

To this feature was joined another—idleness, want of occupation, almost unexampled in any other human society. For although the feudal baron is compelled, from time to time, to make great, to make desperate exertions to retain his place in that wild, almost anarchical society in which he lives, yet these exertions are called for at such long and irregular intervals, that they provide him with nothing whatever of the nature of regular occupation. He becomes, therefore, a prey to *ennui*—an *ennui* so intolerable, that, cost what it may, he must find an escape from it. And what is the refuge he seeks? The documents that have come down to us from these wild times sufficiently show the nature of it. It consisted in that long series of hunting-matches, robberies, and wars, which characterise the middle ages. The crusades may be considered as one valve by which the pent-up energy escaped—by which the *ennui* was sought to be dispelled.

Two consequences of the above-mentioned features are—1. The strange and savage energy with which individual character is developed, as in the case when man lives alone, given up to the caprices of his imagination and the original tendencies of his nature. 2. The very slow progress of civilization—slower than under any other circumstances when a similar previous advance had been made.

Yet, at the same time, there existed within those rude and gloomy feudal fortresses a principle of civilization which has exerted a most powerful influence in modern society. It is well known that the domestic life and the condition of women have attained a much higher degree of importance in modern Europe than anywhere else. Of the causes of the importance of women in modern Europe, the life of the feudal lord in his solitary castle must be considered as one of the principal.

In the other nations that have made most advances in civilization—the Greeks and Romans,—as well as in those that more resembled in their mode of life the feudal society—the men were too much occupied to devote much time and attention to their wives and children:—

> Sword, gown, gain, glory, offer'd in exchange,
> Pride, fame, ambition to fill up the heart.

Here, on the other hand, the sword was the only, and that not a constant occupation,—and, indeed, rather an amusement than an occupation. When the feudal baron returned from any of his wild adventures to his castle, he always found his wife and children there to receive him—almost his only equals, his only intimates. When he left his home, too, in search of adventures, his wife remained mistress of the castle, the representative of her husband, charged in his absence with the services and the defence of the fief. Hence the examples of displays of courage and dignity which we meet with in women of this period to a greater degree than anywhere else.

Out of this state of things arose the order and spirit of chivalry; the latter of which has long outlived the former, and has certainly performed no mean or unimportant part in the drama of European civilization. But into this our limits do not permit us to enter in any detail. We shall content ourselves with stating M. Guizot's opinion on the subject—which is, that chivalry was not the result of any regular design, but sprung up spontaneously in the interior of the feudal castles—a consequence, on the one hand, of the ancient German customs—on the other, of the relations subsisting between the *suzerain* and his vassals.

Leaving the lordly fortress, let us pause for a moment among the population inhabiting the cluster of huts that are closely huddled together under its walls, or at the foot of the rock or hill on which it is built. It is a common opinion that the deplorable condition of the agricultural population in the times of which we are writing, dates from the destruction of the Roman empire; that the progressive development of the feudal system plunged them into the state in which we find them from the sixth to the twelfth century. Von Savigny, and after him M. Guizot, have completely demonstrated the erroneousness of this opinion. By numerous passages which they have quoted from the Theodosian Code, from the code and novels of Justinian, and from the Constitutions of Justinian and succeeding emperors, they have shown that, at least during the latter periods of the Roman rule, the condition of the tillers of the soil, of the *coloni*, was almost precisely the same as it was afterwards under the feudal system; that the husbandman, or peasant, occupied a sort of intermediate position between that of the freeman and that of the personal slave, corresponding exactly to that of the class in the feudal times described in the language of the English law as *villains regardant*, that is, annexed to the manor or land; and intermediate between freemen and the class described in English law language as *villains in gross*, who were annexed to the per-

son of the lord, and transferable by deed from one owner to another.* There was, however, this difference between the condition of the Roman *colonus* and that of the feudal *villain*. The rent which the Roman *colonus* paid to the proprietor of the soil was a fixed sum; but the tax which he paid to the State was a variable one. When the northern nations came into the Roman possessions, they left the *coloni* pretty much as they were; but from the union of property and sovereignty, which we have already adverted to as a characteristic feature of the feudal system, the State and the owner of the soil became to the tiller of the soil identical. Consequently, the variable sum which was before in the power of the State, passed to that of the owner; and hence the peculiar relations long subsisting between the feudal lord and the feudal villain. On the one side, unchecked oppression, insolence, rapacity—on the other, helpless, hopeless toil, degradation, and suffering.

The priest, another portion of this little society, was not likely, M. Guizot thinks, to be able to exercise much influence between the lord and his villains, although the church exercised a very great influence upon European civilization, but in a general manner.

We now pass to the wider feudal society, exhibiting the relations of the fief owners with one another. We have already mentioned the feudal obligations of service on the one side, of protection on the other. An attempt was made to raise up rights corresponding to these obligations, and to establish institutions that might protect those rights. Thus there were certain jurisdictions appointed to decide disputes and administer justice among the owners of fiefs. And thus every feudal lord of some consequence assembled his vassals in a parliament, to treat with them of the affairs in which he required their concurrence. It is to be understood that we speak now rather of what was the case in France than of any state of things that ever existed in England either before or after the coming in of the Normans; but, in order to have a correct idea of feudalism, we must study it in its pure state, and it never was precisely pure in England; and this, too, is necessary, in order to understand the state in which it existed in England, inasmuch as to know anything in a modified, it should first be studied and known in a simple form.

But, to give efficacy to the rights and obligations which feudalism professed to recognise, one indispensable element was wanting,—a sovereign, a supreme power. Consequently, whenever any member of the feudal body disliked the sentence of the court, he refused to comply with it, and, taking refuge in his feudal fastness, set it at defiance. Sometimes the other members of the confederacy, by uniting their force against the delinquent, carried their point, but that was a work of time and difficulty; and sometimes they failed, and the obnoxious member of their body succeeded in defying them. The histories of France and of Scotland abound in examples of this. Why that of England does not equally abound in them, why, there, the suzerain became really the sovereign, we will now endeavour to explain.

Any of the great feudatories in France was much more powerful, in relation to any one of his own immediate vassals, than the king of France was in relation to him. Thus, the duke of Normandy, for example, had much more of the substance of sovereignty in Normandy than the king of France had throughout France. This power the duke of Normandy retained in full: afterwards, by obtaining possession of England, the field of his *suzeraineté* became greatly enlarged. The general of a victorious army, if in addition to his military he possesses political talent, may make his power almost co-extensive with his will. This was the case with William the Norman, who, to the character of an able military leader, united that of a cold, hard, far-sighted statesman. The consequence was, that he was able to retain as much of the feudal system, then established in France, as tended to support his power, and to set aside or alter much of it which was calculated to weaken that power. For example, it was a principle of that system that fealty was due from the vassal to the lord of whom he immediately held his land, and to no other. But William received the fealty of all landholders in England, both those who held *in capite* or in chief, and their tenants or vassals. This was one powerful blow struck against the great feudatories. Moreover, the fiefs of the Anglo-Norman barons were not only much smaller than those of France, but they were dispersed over various counties.* These two circumstances, taken along with the preceding, must have had a powerful effect in preventing any one of the vassals of the crown from making head against it.

Again, there were certain feudal services which, though everywhere due to feudal royalty, were, from the very nature of feudalism, as explained above, often incapable of being enforced by the feudal kings of the continent, but which the early Anglo-Norman kings were in a condition to enforce. Their vassals, for instance, were bound to attend them to the wars for forty days in every year, if called upon. Then there were the pecuniary payments due from the vassal to his lord; and the various profits arising from wardship, marriage, and other rights, the nature of which will be explained when we come to speak of the royal revenue. Besides all this, William secured, as his own share of the conquest, 1422 manors, and the principal towns of the kingdom. The forfeitures of the insurgent Saxons were constantly adding to these acquisitions. All these sources of revenue, together with the sale of public offices, and of the royal protection and justice, and the grievous imposition upon the inferior subjects, called tallages, secured to the king an independent power—a power against which any of

* Blackstone, Com. b. ii. c. 6. The word "serf," often confounded with "villain regardant," or "colonus," means the same as "villain in gross."

* Dugdale's Baronage.—Madox's History of the Exchequer.

William I. granting lands to his nephew, the Earl of Brittany. From the Registrum Honoris de Richmond. Kerrick, Collect. 6730.

his vassals, however great, would *singly* be as nothing.

As we have before had occasion to remark, their very position, in the midst of a conquered but spirited and warlike people, caused the great vassals of the king to assemble frequently around him. There is reason to believe that, at least on certain solemn occasions, all the immediate vassals of the king had a right to attend his great council. According to the Saxon Chronicle and other ancient authorities, the Conqueror was wont "to wear his crown," as it is expressed, at Christmas in the city of Gloucester, at Easter in Winchester, and at Whitsuntide in Westminster. On these occasions, Malmsbury states, all the spiritual and temporal nobles were assembled and feasted by the king. The same custom was kept up by William Rufus, and, although discontinued by Henry I., was revived by Stephen. Henry II. and his successors, in the same manner, used to call their nobles around them both at these great festivals and on other occasions; and there can be no doubt, from the accounts of contemporary writers, that consultation on public affairs was always one of the purposes of these meetings. But the real power of such a parliament could not have been considerable.. The king is far richer and more powerful than any of his vassals. He alone makes laws, levies taxes, rewards with lands, punishes with banishment or death. He is supreme judge and commander-in-chief, as well as supreme legislator, throughout his dominions.*

Before we proceed further in the development of our subject, let us pause for a moment to examine the machinery by which he puts his government in motion and does its work. It is the more important that we should do this, as the explanation we are

* Glanville, in the Preface to his *Tractatus de Legib. et Consuetud.*, speaks of the will of the prince as law; using almost the very words of Justinian, with whose *Corpus Juris* he seems to have been familiar.

about to give is the analysis of a system out of which has arisen the whole machinery which has set in motion the English government and laws from that day to this.

The power of William the Conqueror and his immediate successors being, as we have seen, not limited by any other power within the realm of England, they did whatever seemed good in their own eyes. If they chose, therefore, to administer the affairs of state, or to execute justice between subject and subject, in person, they did so; or if they chose to delegate any of those functions to their officers, they did so. Among our early Norman princes, as throughout the whole of feudal Europe, and likewise, as we have seen, under the Roman empire, the officers of state were the prince's household officers. Thus the king's treasurer was the state treasurer; the king's steward the state steward; the king's secretary the state secretary;* and so for other officers.

There is here a contrast not unworthy of remark between the Roman polity and the feudal. In the former everything bore the popular stamp; in the latter, the monarchical. Thus, instead of PRÆTORS, ÆDILES, QUATUOR VIRI VIARUM PUBLICARUM CURANDARUM,† (the Four Curators of the Public Roads), we have the KING'S JUSTICIARY, the KING'S CHAMBERLAIN, the KING'S FORESTER (now Commissioners of Woods and Forests). The contrast between the results is also striking. Here the basis of the government has been *widening* from the first William downwards. There it went on narrowing, that is with some oscillations, till it ended in the apex of the imperial despotism.

The only titles of nobility at this period were those of Baron and Earl, or Count; the latter being in all cases either the possessor or at least the governor of a county, and being always also a Baron, which indeed meant no more than a person holding lands in fee of a superior on the usual condition of military service. The king's barons were the tenants of the crown, or the tenants in chief, as they were called, just as other tenants were the barons of the lordship of which they held. All the barons of the crown, among whom were included the bishops, appear to have consituted what the old writers call the *Commune Concilium*, or Common Council of the realm. It has been commonly supposed that what is called the *Curia Regis* (literally, the king's council or senate) was a different body from this; but for that notion there appears to be no foundation.‡ The ordinary business of the state, however, was certainly mainly conducted in the first ages after the Conquest by the great officers of the king's court, or, which is much the same thing, the great officers of the king's household. In order to see this matter in a clear light, we must go a good way back. The Anglo-Normans borrowed from the Normans, the Normans from the Franks; and the Franks, though doubtless, like other people in a similar stage of civilization, they would have some offices attached to the persons of their kings, which they retained after their conquest over the Roman territory (that they had such, is implied in the names seneschal, mareschal); yet they unquestionably borrowed that complex graduated system of offices and ranks from the courts of the Roman emperors.

The English lawyers and legal antiquaries have produced between them almost inextricable confusion on the subject of some of these offices. Madox, who, in an antiquarian point of view, has done the most for this subject, and whom Blackstone and others seem to have followed, in his History of the Exchequer, places the great officers of the king's court in the following order:—1. The High Justiciary, or High Justiciar, as he writes it. 2. The Constable. 3. The Mareschall. 4. The Seneschall, or Dapifer. 5. The Chamberlain. 6. The Chancellour. 7. The Treasurer. Instead of this classification we shall substitute the following, for reasons which will be given immediately: 1. The Grand Seneschall, or *Dapifer Angliæ*. 2. The High Justiciary. 3. The Seneschall, or *Dapifer Regis*. 4. The Constable. 5. The Mareschall. 6. The Chamberlain. 7. The Chancellor. 8. The Treasurer.

I. The *Grand Seneschall*, or *Dapifer—Senescallus*, or *Dapifer** *Angliæ*; in modern phraseology, the Lord High Steward—*comes palatii, major domus regiæ*, or *maire du palais*. The word *seneschalch*, about the etymology of which opinions vary somewhat, meant originally a sort of steward in the household of the Frank kings. After their conquest of Gaul, it came to signify a high political dignity. Dapifer, as shown in the preceding note, means the same thing, being the Latin synonyme for it. This officer was the highest in the State after the king, executing all the chief offices of the kingdom as the king's representative. He was not only at the head of the king's palace, but of all the departments of the State, civil and military, chief administrator of justice, and leader of the armies in war. This is proved not only to have been the case in France, by Ducange and other high authorities, as well as by the public records of that kingdom,† but to have been so

* The Home Secretary was at first merely the clerk of the Privy Council. The King's secretary, or clerk, was, properly speaking, the Chancellor.

† Heinecc. Hist. Jur. Rom. § 55 et seq., and l. 2, § 30 D. *de orig. jur.*

‡ See this point established in a very learned and able Article on the History of the English Legislature in the Edinburgh Review, No. 69.

* That these terms are synonymous, is shown by Ducange, Spelman, &c. Dapifer seems to have been introduced when a Latin word came to be wanted for seneschall, and was adopted for want of a better, there being no Latin term exactly corresponding. Dapifer has been ignorantly translated "sewer" by Dugdale and others: whereas sewer, so far from meaning seneschall, means only *écuyer tranchant*, an officer a great many degrees below the seneschall. See Ducange, ad voc. *Dapifer, Senescallus*; Spelman, ad voc. *Dapifer, Capitalis Justitiarius, Senescallus*; and Dugdale's Baronage.

† Ducange Gloss. ad voc. *Dapifer* et *Senescallus*. See also the Grand Coustumier de Normandie, c. x. "Solebat autem antiquitus quidam justiciarius predictis *superior* per Normaniam discurrere qui seneschallus principis vocabatur."—Conf. La Coutume Reformée de Normandie commentée par Basnage, t. i. p. 2. col. 2 (Senéschal). See also the charters of the various Frank kings, in the witnessing of which the name of the seneschal or dapifer (sometimes the one word is used, sometimes the other) always stands before those of all the

also in England, by a document published by Madox himself, from the black and red books of the Exchequer—to wit, the celebrated *Dialogus de Scaccario*, written in the time of Henry II.;* and likewise by certain MSS. preserved in Sir Robert Cotton's collection in the British Museum, particularly an old MS., entitled, "Quis sit Seneschallus Angliæ, et quid ejus officium."† Consequently, Madox is wrong, when he says (Hist. Exchequ. p. 28) that in the reign of William I. William Fitz-Osbern was the king's constable, *because* he is called *magister militum*. The fact is, that in the very same passage (of Ordericus Vitalis) he is called *Normanniæ Dapifer*, in virtue of which office he would be *magister militum*. It was not till afterwards that the constable became magister militum, being originally an officer subordinate to the dapifer.

By the nature of feudalism, every thing had a tendency, as we remarked before, to be given in fief. Among other things, the office of seneschal was given in fief, too, and became hereditary among the Franks, Normans, and at the conquest of England, among the Anglo-Normans. In France, under the Merovingian dynasty, the office was in the family of Charles Martel, from whom sprung the Carlovingian dynasty; afterwards the Plantagenet counts of Anjou were hereditary seneschals of France; and in England this high office was granted by William the Conqueror to the Grantmesnils, and thence came by marriage to the earls of Leicester. After the attainder of the family of Montfort, earls of Leicester, the office was given to Edmund, the second son of King Henry III., and it then remained in the royal family till its abolition—Thomas Plantagenet, second son of King Henry IV., being the last permanent High Steward. The office has been since conferred only for special occasions.

In France, when the office became hereditary in the counts of Anjou, it soon became necessary, for various reasons, to have another seneschal, or dapifer, besides the hereditary one; and this officer, whether he be considered as the representative or as the deputy of the hereditary seneschal, still took precedence, as appears from the charters of the French king, of all the other great officers of state. In England also, something of the same kind took place, but with this difference—that the various functions of the original grand seneschal, or *Senescallus Angliæ*, were divided into two parts, and committed to two distinct officers as his representatives; the judicial functions being committed to an officer styled the High, or rather Chief Justiciary; the administrative and those relating to the affairs of the king's palace or household, to an officer styled, *not* the Senescallus *Angliæ*, but the senescallus, or dapifer *Regis*.* This explanation will be found completely to remove the confusion that has so long prevailed among the English historians, antiquaries, and lawyers on this subject. Our view of the subject, if it needed it, would be corroborated by the high privileges of the officer created in later times, to preside in the House of Lords at State Trials, which officer, be it observed, is not "High Justiciary," but "Lord High Steward," that is, "*Senescallus Angliæ*." This explanation also removes the difficulty of accounting for the extraordinary powers of the Lord High Steward's court, which some English lawyers have attempted to get over, by saying that the Lord High Steward succeeded to some of the powers of the High Justiciary, whereas he merely exercises powers which he had delegated to the High Justiciary.†

We would add a reflection which will make apparent to every one the vast power anciently attached to this high office of seneschal, dapifer, or steward. To two of the most illustrious royal lines of modern Europe, the Carlovingians and Plantagenets,‡ it served as a stepping-stone to the throne. It was for fear of its again doing the same thing to the House of Montfort, earls of Leicester, that the office was first taken into the royal family, and afterwards abolished in England. And the very name of the House of Stuart came from their holding the office of Steward of Scotland.

II. *The Chief Justiciary—Capitalis Justitiarius.*—This officer was usually a person who had given special attention to the study of jurisprudence. As the representative of the judicial portion of the Grand Seneschal's power, his authority extended over every court in the kingdom. One of the most distinguished persons who filled this high office was Ranulph de Glanville, to whom is usually attributed the *Tractatus de Legibus et Consuetudinibus Angliæ*, the oldest English law book extant. The two offices of Chief Justiciary and Dapifer seem to have been sometimes filled by the same person; Ranulph de Glanville seems to have been at the same time High Justiciary and Dapifer.§

III. *The Seneschal, or Dapifer Regis.*—That the functions of this officer, as the representative of that portion of the Grand Seneschal's authority,

the other great officers. It is right to add, that in the English charters the name of the dapifer, or seneschal, does not *invariably* stand so high as in the French.

* Madox, Hist. Exchequer (edition 1711). See also Co. Litt. fol. 61 a, for some account of the judicial part of the office of seneschal, or steward, and some attempts at the etymology of the word, which, however, are not very successful.

† Cotton MS. Vespasian, b. vii. fol. 99, b. It will also be found in Harl. MSS., 305, fol. 48, transcribed in a modern hand by D'Ewes, who supposed it to be of the age of Edw. II. See also Cotton MS. Titus C. *passim*, at the beginning of which volume there is a well-written tract, which contains the most satisfactory account we have met with of the subject. There is also a tract entitled "Summus Angliæ Seneschallus," in Somers' Tracts, vol. viii. All these agree in one thing, viz.—the vastness and paramount nature of the authority *originally* wielded by the high steward, though none of them explain the anomaly of the co-existence of such an officer as the high justiciary. This we hope we shall now be enabled to do.

* Among many other proofs of this, see Madox's Form. Anglic., cclxxxix.

† See a Disquisition on the Office of Lord High Steward, by Mr. Amos, in Phillips's State Trials, Appendix, vol. ii. Mr. Amos falls into the usual error of supposing that the judicial authority of the Lord High Steward "grew out of that which appertained to the Chief Justiciar at the period when the latter office was abolished."

‡ Charles Martel was *maire du palais*, or seneschal, to the Merovingian kings, and the Plantagenets, Counts of Anjou, were seneschals of France. The eldest son of Henry II. is said to have actually performed the duties of the office to the French king.

§ Madox, p. 35. Beames's Glanville, Introd. p. 12.

were political, and not merely, like those of the present Lord Steward of the Household, confined to matters connected with the king's household, is proved from the constant appearance of his name in the charters and other important public documents of the time. His relative position with regard to the Mareschal appears from the following passage of Britton: "We ordain also, that the Earl of Norfolk (Marshal) shall, either by himself or his deputy (being a knight), be attendant upon us and our Steward, to execute our commands, and the attachments and executions of our judgments, and those of our Steward, throughout the verge of our palace, so long as he shall hold the office of Marshal."*

IV. *The Constable—Comes Stabuli.*—An officer who originally had the care of the king's stable and horses; † afterwards, as the power of the Seneschal declined, leader of the armies, or, at least, holding certain posts of honour in them—as, for instance, leading the vanguard in an advance, the rearguard in a retreat.

V. *The Mareschall*, or *Marshal;* from German *march* or *marach*, horse, and *schalch*, master.‡ Madox § says mareschall is a general name for several officers employed about horses, game, &c. For some time the Mareschal was an officer subordinate, in the leading of the armies, to the Constable.

VI. *The Chamberlain.*—This requires little explanation. It is sufficient to observe, that while some of his functions belonged to the king's household, others belonged to the Exchequer.

VII. *The Chancellor.*—This officer did not enjoy by any means the same importance in early times which he afterwards obtained. There was an officer about the court in later times whose functions and even whose title will furnish a good idea of what the chancellor originally was. This was the "clerk of the closet," a sort of confidential chaplain or (before the Reformation) confessor to the king, occasionally employed by him as secretary, or clerk, in the modern sense of the term. In this capacity the Chancellor applied the king's great seal to charters and other public documents. But, as Madox observes, "the chancellorship, from a small beginning, became, in process of time, an office of great dignity and pre-eminence." ‖ When the grandeur of the Seneschal and High Justiciary began to decline, the power of the Chancellor gradually increased, until it last approached to within a certain distance of—for it has never come up to by many steps—that portion of the authority of the Great Seneschal which was represented by the High Justiciary. The Chancellor, up to a late period, was a churchman. He was *ex officio* chief of the king's chapel.¶ He also was wont to act with the High Justiciary and other great officers in matters of revenue at the Exchequer.**

Of the Chancellor, we shall add one curious fact, given from an ancient memorial by Madox. "The Chancellour has five shillings a day, and so much in simnells (a sort of sweet biscuit), wine, and other small things."*

VIII. *The Treasurer.*—He was mostly an ecclesiastic. Anciently it seems to have been the duty of the Treasurer to act with the other barons at the Exchequer in the management of the king's revenue.† The dignity of the Treasurer, as well as that of the Chancellor, was by no means, however, what it became afterwards, he being an officer subordinate to the Chamberlain, and more so to the Seneschal. But in the mutations brought about by time, which often decrees that the first shall be last and the last first, the Chancellor has become (after the king), in point of dignity, the first officer of the state; and the Treasurer, or rather only a portion of him,—namely, the First Lord of the Treasury,—the first in political power; while the Lord Steward and Lord Chamberlain of the Household, and the Earl Marshal (albeit the last has become hereditary in a potent house of high and comparatively ancient nobility), are little more than old lumber; and the High Steward, to all ordinary intents and purposes, is no longer in existence.

These high officers seem not only to have attended, each in his department, to all the public business which is commonly understood at present to fall under the province of the king's ministers, but also to the hearing and decision of causes between suitors,—to have, in other words, fulfilled the judicial as well as the administrative office. The court of justice which was thus formed was originally held in the king's palace or wherever he happened to be in person. There was a particular branch of it held in a particular part of the palace, in which all matters relating to the revenue were transacted, and which, though composed of nearly the same persons, was known by the name of the Exchequer.

Among the things that most strike us on first looking at this period of our legal and judicial history are the substitution of general and central for local judicatures, and the appointment of judges regularly trained to a knowledge of the law to preside in the several courts. Soon after the Conquest great inconveniences appear to have been felt from the administration of justice in the county courts, hundred courts, and courts baron. These inconveniences arose from various causes, of which the principal, according to Sir Matthew Hale,‡ were the three following:—1st. The IGNORANCE of the judges, who were the freeholders of the county. "For," says Hale, "although the alderman or chief constable of every hundred was always to be a man learned in the laws, and although not only the freeholders, but the bishops, barons, and great men, were, by the laws of King Henry I., appointed to attend the county court, yet they seldom attended there, or, if they did, in process of time they neglected to study the English laws, as great men

usually do." 2ndly. The GREAT VARIETY of laws, the effect of several independent jurisdictions. Glanville says, "The customs of the lords' courts are so numerous and various that it is scarcely possible to reduce them into writing."* 3rdly. The corruption and intimidation practised; for all the business of any moment was carried by parties and factions.

It is probable, however, that we are to seek for the main causes of the subversion of the ancient system in certain changes which the very principle of that system was itself producing, and which we shall now proceed to consider.

Of these changes the most important and fundamental was the establishment of the trial by jury. It has been explained, in the preceding book, that the essential principle of the original Saxon mode of trial was the submission of the matter in dispute, in some form or other, to what was held to be the arbitration of Heaven. There was no interference of the human judgment,—no attempt to arrive at the truth by weighing and comparing the adverse probabilities; the question was not held to be a question of probabilities at all; it was conceived to be capable of a solution as certain as any question in arithmetic. The decision was left not to the fallible judgment of man, but, as was believed, to the infallible judgment of the Deity. As long as this belief subsisted universally, it is evident, as we have already observed, that no mode of trial proceeding upon a different principle could well come into use. Men would not readily relinquish a method which afforded them in all cases a certain determination of the matter, for one which afforded them only a doubtful determination of it. They would not easily be disposed to remain satisfied with a decision which might be wrong, while they believed that they had it in their power to obtain one that could not but be right. That belief, however, was so entirely founded in ignorance and superstition, that it of necessity decayed in the light of increasing knowledge and civilization; even the results of the trials at law that were founded on it would themselves be constantly raising suspicions of its fallacy. Nevertheless, there is reason to suppose that it was not any general conviction of the absurdity of the ordeal, or of the vanity of the imagination on which the use of it rested, that led first to its discouragement, and eventually to its entire abandonment. If such a conviction had been arrived at, the practice would have been given up at once, as one wholly irrational and iniquitous. But this was not the course taken. In the first instance, the legislature only interfered to narrow the application of the ordeal, and the church to discountenance the frequent or indiscriminate resort to it. It is evident that the popular prejudice in its favour could not yet be attacked in front. Its folly was discerned by the ruling and more enlightened part of the community; and the government and the church, even if either or both may be supposed to have had an interest in keeping it up as a convenient instrument of control, must have perceived that it was one which could not be much longer left in their hands; but they did not, for all that, announce that the supposed judgment of Heaven was really nothing of the kind. If they had, they would have offended what was yet the general sentiment, and their announcement would probably have been received with incredulity and scorn. Besides, there would be a natural reluctance on the part of those by whom the ordeal had been hitherto sanctioned and upheld to make a frank acknowledgment that it was all a solemn mockery. They therefore took another course. The clergy began to preach against the ordeal, not as being absurd, but as being impious; they did not deny its efficacy, as an appeal to Heaven, but they endeavoured to show that it was an appeal which, in ordinary circumstances, at least, it was sinful in human beings to make. They may possibly also have sometimes insinuated that one of the consequences of its abuse would be its frequent failure,—that the Deity would not consent to favour with a true decision of their cause the parties who thus improperly called upon him: Be this as it may, it was only after a long course of partial opposition to the ordeal that the church ventured finally and distinctly to prohibit its use. It did do this at last, however, by the 18th canon of the Fourth Council of Lateran, published in November, 1215.

Meanwhile, the ordeal had been gradually falling more and more into disuse under the operation of various causes. The discouragement of it by the church, and the diffusion of the feeling upon which that discouragement was professedly grounded, would, no doubt, have a powerful effect in indisposing the public mind towards such a mode of trial except in very extraordinary circumstances. Then, the conviction of its inherent absurdity, and utter unsuitableness in any circumstances, was of course growing and extending itself. Besides, it was not necessary, in order to be opposed altogether to the ordeal as a mode of trying causes, that a person should be a disbeliever in the assumed principle of that kind of trial. That principle was, that the Deity, if fairly appealed to, would work a miracle in vindication of the innocent party—would prevent the boiling water from scalding him, or the red-hot iron from burning him. This might be granted; and still the ordeal might be objected to on the ground that there was, and could be, no security for its being in any case a fair submission of the matter to the arbitration of Heaven. It might be alleged that, from the way in which the matter was managed, the result was wholly in the hands of the functionaries who superintended the process. The historian Eadmer relates, as an instance of the daring impiety of William Rufus, that upon one occasion, when about fifty Englishmen, of good quality and fortune, whom he had caused to be tried for killing his deer, by the ordeal of hot iron, had all come off unburnt, and were consequently acquitted, that king declared he would have them tried again by another mode, and not by

* Lib. xii. c. 6.—Beames's Translation.

this pretended judgment of God, which was made favourable or unfavourable at any man's pleasure. Yet Rufus here did not dispute the efficacy of the ordeal if it had been fairly managed; he did not deny that Heaven, if appealed to, would pronounce a just decision, and would even, if necessary, work a miracle for that purpose; he only denied that the professed appeal to Heaven was really made. And this was a suspicion that was, no doubt, very generally entertained.

The gradual extinction, however, of the practice of trying causes by appeal to the judgment of Heaven was mainly brought about by the natural development of the principle of that mode of trial itself. And this is the most curious point in the inquiry, and that which is most deserving of attention. It has been shown in the former Book that the manner in which what we should now call evidence originally obtained admission in trials at law was by its assuming the form of an appeal to Heaven; that is to say, it obtained admission on the only principle then recognised,—the principle of the ordeal. In a criminal case, instead of the ordeal of water or iron being at once resorted to, an attempt was made to avoid that expedient, and to decide the case by a contest of oaths between the authors of the charge on the one hand, and the accused party and his friends on the other: it was only in the event of the charge not being established by this preliminary process that the trial was carried farther. But the persons who thus swore were not at first witnesses at all: they did not profess to testify to the facts at issue upon their own knowledge; all that they declared was, those on the one side their belief in the guilt, those on the other their belief in the innocence of the accused. Nor was their testimony considered and weighed by any act of the judgment; their testimony, properly speaking, was not estimated at all, but they themselves were counted and valued, each man according to his "were," or the legal worth at which he was rated according to his rank in society. This, therefore, was not the hearing of evidence in any sense; it was merely another mode of appealing to Heaven, which it was supposed would no more suffer the guilty party to come off victor in this contest of oaths than it would fail to vindicate the innocent in the ordeal of fire or water. Nevertheless, this method of compurgation, as it was called, could scarcely fail to lead, in course of time, to a further innovation. The person pledging his faith in favour of the one side or the other, with an evident or understood knowledge of the facts bearing on the question at issue, would inevitably make a stronger impression upon the court than the person manifestly destitute of such knowledge who presented himself to make a similar or an opposite deposition: this would happen even while the letter and practice of the law made no distinction on that ground between the two deponents. The bringing forward of persons to make their depositions who were not acquainted with the facts of the case would, in this way, become disreputable, and gradually fall into disuse, till at length the deponents on both sides, though still only called upon to make oath to their belief in the statement of the one party or of the other, would be almost always understood to speak not merely from partiality to the party whom their declarations were to benefit, or from a general confidence in his credibility, but from their own knowledge of the disputed facts. In truth, a person ignorant of the facts would, it may fairly be presumed, scarcely dare now to present himself to make oath in opposition to one to whom the facts were well known. Here, then, we have the deponents on both sides already turned into witnesses even before the law yet demands their testimony. But, this point arrived at, it is impossible that the next step should be long delayed. The witnesses, that is the persons having a knowledge of the facts, being thus brought before the court, would naturally be led by degrees to extend their depositions beyond a mere general declaration in support of either party; they would proceed to state the grounds of the belief which they made oath that they entertained; in other words, they would state the facts which they knew in relation to the cause,—they would give their testimony as well as their depositions. Evidence having thus once obtained admission, however irregularly, and with however little legal efficacy in the first instance, would speedily come to be received as of weight in the decision of the cause, and would then be demanded as indispensable. But this change would render necessary other important changes.

So long as causes were tried on the principle of submitting the matter in dispute, in some form or other, to the arbitration of Heaven, no functionaries that could properly be called judges were required in the courts of law. There might be a person to preside, and to declare or make publicly known the result of the process which had been gone through; but no exercise of the judgment was demanded either here or in any other part of the proceedings. The whole affair, as already observed, was of the nature of a chemical experiment, or an arithmetical calculation; it was conducted according to certain fixed rules, or might be said to carry on itself; and the ascertainment of the result was merely a matter of observation, and of observation of the easiest kind. Under this state of things, therefore, all kinds of causes were tried at popular meetings—at the wittenagemote, and the shiremote, and the other assemblies of the same kind; and the judgment passed in each case might as truly be said to be that of the attending crowd as that of the members of the court. It was really the judgment neither of the one nor of the other, nor was it so considered; it was called not the judgment of man at all, but the judgment of God. But as soon as the principle of the appeal to Heaven was departed from, by the admission of evidence, the whole system of the administration of the law necessarily assumed a new form. The exercise of judgment by the court now became indispensable.

It is probable, however, that in the gradual progress of the change, this consequence was not for some time very clearly perceived, and that it came upon the country and the government before the requisite preparations were made for it. Hence, as occasions arose, expedients of various kinds would be at first resorted to with the view of making the old machinery still answer. It would soon be found, for instance, that the hearing of evidence, unlike the ordeal and the trial by compurgation, produced differences of opinion among the persons present; and it would also become abundantly apparent that a large multitude of persons did not form the most convenient tribunal for weighing and coming to a decision upon the statements of conflicting witnesses. In these circumstances we might, on the first view of the matter, suppose the most natural course would be to appoint a small committee of the court to examine the witnesses and come to a judgment upon the cause. But this is to assume that the proper distinction between the provinces of the court and of the witnesses was already much more distinctly perceived than it could as yet be, when things were only beginning to emerge out of that state in which the court had really never taken any part in the trial of the cause at all. The witnesses, or the persons who came to give evidence, and not the court, would at this time in fact be most naturally looked upon as the real triers of the cause. A committee of the witnesses, therefore, rather than a committee of the court, would be the select body appointed for its consideration and settlement in the earliest attempts to escape from the confusion and perplexity of conflicting evidence. Those of the witnesses who were conceived to be the persons of greatest probity, or to be those best acquainted with the facts, would be chosen out from among the rest, and left to agree among themselves as to how the truth stood,—in other words, to try the cause. The persons thus set apart would probably be called upon to make their depositions with more form and solemnity than ordinary witnesses; for instance, although the ordinary witness might be heard merely upon his declaration, the selected witness would be required to give his evidence upon oath. Finally, it would very soon become the custom for the selected witnesses, or triers, to be always of the same number; such a rule would be properly held to conduce to fairness of procedure; and besides, the popular feeling has always attached a certain virtue or importance to particular numbers.

In the above deduction we have in fact what appears to be the history of the origin in this country of trial by jury, in as far as it can be collected from the scanty notices that remain to us of changes which, however important they were destined to be in their ultimate results, were scarcely deemed worthy of being recorded by any contemporary chronicler, and the only memory of which that has come down to us has been preserved more by accident than by design. We know that, even in the Saxon times, it was occasionally the practice to select for the decision of a civil suit certain of the most reputable of the persons who professed to be acquainted with the facts in dispute, the parties agreeing together in their nomination, and consenting to abide by their decision or verdict. In the Norman times this became a more usual mode of trying causes, and it was now consequently subjected to more strict regulation. Nothing is better established than that the original jury, or body of sworn triers, were really the witnesses in the case, and that their verdict was their deliverance upon it from their own knowledge of the facts. At first this mode of trial appears to have been only occasionally and sparingly resorted to. Two instances are recorded in the reign of the Conqueror, one in a suit between the crown and Gundulphus, Bishop of Rochester, in 1078, the other in a suit respecting certain lands claimed for the bishopric of Ely in 1080.* In the subsequent reigns the instances are more frequent. Sir F. Palgrave is of opinion that in criminal cases the jury was unknown in this country until enacted by the Conqueror. William, in a charter by which he professed to restore the laws of the Confessor, with certain additions, directed that, in the particular case of a charge made by an Englishman against a Norman, or by a Norman against an Englishman, the guilt or innocence of the accused should be determined by a tribunal of sworn witnesses, "according to the law of Normandy." The first regulation, however, which established the jury as a general mode of trial appears to have been one of the laws, or "assizes," as they were called, enacted by Henry II. at Clarendon, about 1176. By this law, to quote the account of Sir F. Palgrave, "the justices, who represented the king's person, were to make inquiry by the oaths of twelve knights, or other lawful men, of each hundred, together with the four men from each township, of all murders, robberies, and thefts, and of all who had harboured such offenders since the king's accession to the throne." Another enactment of the same assizes abolished the trial by compurgation in criminal cases, except in certain boroughs. The verdict of the inquest, however, was not yet made final. The person charged by the twelve knights was still allowed to clear himself, if he could, by the ordeal of fire or water. Other laws of the same king, some of which, however, are only imperfectly preserved, appear to have established the inquest or "recognition" by the twelve lawful men as the regular mode of trial in various kinds of civil suits.

If the trial by battle was at all known in the Saxon times, the earliest record of it in England is subsequent to the Conquest. The duel (or orneste, as its Saxon name appears to have been) would seem to be a still ruder mode of trial than any of those methods that were more peculiarly called the ordeal, as allowing, which they did not, mere physical force to be the main arbitrator of the dis-

* See Palgrave's Eng. Com. p. 253, and Illustrations, p. clxxviii.

pute, and being therefore almost identical in principle with the mode of deciding quarrels which is proper to a state of nature. It is, probably, indeed, of greater antiquity than the ordeal; yet it was neither supplanted by the ordeal, nor when that mode of trial was abolished did the duel even share its fate. It continued in common use for ages afterwards. The duel was undoubtedly looked upon as being, not less than the ordeal, an appeal to the judgment of God, and it was in virtue of this character that it retained its place as one of the allowed modes of trial in association with the ordeal. If it had been deemed to be a mere contest of physical strength, it is difficult to conceive that it ever should have been adopted as a mode of legal trial at all, and it certainly could not have kept its ground as such after the more refined principle of the ordeal came to be recognised. The belief was that Heaven would by no means allow the issue of the appeal to depend upon the thews and sinews of the two combatants, but would defend the right, if necessary, by enabling the weaker man to overcome the stronger,—that is to say, by working a miracle, just as in the case of the ordeal. The duel and the ordeal therefore stood in the popular imagination upon the same principle. Why, then, when the ordeal was prohibited, was not the duel abolished along with it? To be enabled to answer this question we must recollect that the prohibition of the ordeal was by no means distinctly placed by the church upon the ground of the inherent absurdity of such a mode of trial,—of the fallacy of the notion that the special interference of Heaven was to be so secured. The practice was discouraged, and at last formally condemned as unlawful, on other grounds altogether, as has been shown above. It was denounced as impious rather than as fallacious or absurd. If it was admitted to be in any sense fallacious, it was merely in so far as the supposed appeal to Heaven might by dishonest management be rendered only apparent instead of real. The generally received opinion that the direct judgment of God in a cause might be obtained by being properly sought for was left unassailed. All that was affirmed was, that the ordeal of fire, or of water, was not a proper mode of seeking for such judgment. The condemnation of these modes, therefore, did not necessarily touch the trial by combat. It lay under none of the objections on account of which they were condemned. It did not easily admit of collusion or any other species of unfair management. It was from its nature not likely to be resorted to upon trivial occasions, or to be taken advantage of in any circumstances as a mere form, but was always of necessity a solemn encounter, in which neither party could engage without peril of his life. Add to all this the accordance of the trial by combat with the martial spirit of the times, when prowess in arms was looked upon as almost the chief of human virtues; and we shall be at no loss to understand the favour, or at least the toleration, which was shown to this mode of trial when the not more barbarous or more unjust custom of the ordeal was banished from the judicial practice of Christendom. Yet even within the period now under consideration an important step was taken towards the extinction of the appeal of battle in civil suits by a law of Henry II., which gave to both the tenant and defendant in a writ of right* the alternative of having the case tried by what was called the grand assize, which was in fact merely a jury composed of four knights returned by the sheriff, and of twelve other persons named by them. The introduction of the grand assize is ascribed to the advice of Glanville, who has in his book given a very particular description of it, and expatiated upon its great importance as an improvement of the law.†

It is obvious that the entirely new form and character assumed by judicial proceedings, after the commencement of the practice of trying and deciding causes by evidence, would render the old machinery for the administration of the law altogether unserviceable. An exercise of the judgment was now called for on the part of the court, instead of merely an exercise of the faculty of observation. Judges were therefore of necessity appointed in all the courts. It is probable that this innovation was partially introduced in the Saxon times; but it was not generally established till after the Conquest. The general character of the Norman domination, under which all authority was held to proceed and to derive its being from the crown, was especially favourable to the completion of the new system. It appears to have been as early as 1118, in the reign of Henry I., that Justices Itinerant, or Justices in Eyre, as they were called, were first appointed to go on circuits through the kingdom for the holding of all pleas both civil and criminal.‡ They were not however made a regular part of the judicature of the kingdom till 1176, the twenty-second year of the reign of Henry II.

The court which sate in the king's palace was also, in course of time, divided into several courts, although opinions vary somewhat as to the precise period at which this change took place. According to Madox, whose inquiries into the subject were more minute and accurate than those of Sir Edward Coke and others, the bank or court of Common Pleas was in being several years before the *Magna Charta* of the seventeenth of King John, though it was then first made stationary. That the division, as existing at this day, was complete in the time of Edward I. is proved more fully than from any other of the ancient law books from a passage of Britton, in which he speaks of the

* The writ of right was the proceeding in which the right to land was tried when the claimant, or those under whom he claimed, had lost the possession for more than twenty years. The limitation to this custom was sixty years.—*Booth on Real Actions.*

† The mode of trial by the grand assize was only abolished in 1833, by the 3rd and 4th Will. IV. c. 27. We may take this opportunity of mentioning that the other ancient mode of trial by Wager of Law (a remnant of the primitive practice of compurgation), which was spoken of by mistake in a former page (260) as still subsisting, was also abolished the same year by the 3rd and 4th Will. IV. c. 42.

‡ Madox, Hist. Excheq. c. iii.

"*clerks of our court of chancery, and of one bench and of the other, and of the exchequer.*"*

Upon the subdivision of the king's court into several separate judicatures, and the increasing complication of legal proceedings, the great officers of state, whom we have enumerated, and who were originally, together with the king, the judges of it, gave up their places in it to regular lawyers. Of the original nature of this great court it will afford some illustration to remark that, as was the case generally in the feudal system, where, from the top to the bottom, the less was shaped after the image of the greater, the court-baron was a model of it on a small scale. The baron had his court, in which, subordinate to himself, presided his seneschal, dapifer, or steward, precisely as the king had *his* court, wherein, subordinate to himself, presided *his* seneschal, dapifer, or steward. In the case of the kings of England one portion of the judicial functions† of the steward's office came, as we have shown, first to be executed by a sort of deputy or representative, called the chief justiciary, afterwards to be abolished, or rather to be divided among a number of judges; while the other portion of those judicial functions remained with another representative of the original steward, or rather representative of another portion of him, called the Steward of the king's Household.

There has been much controversy respecting the origin of what is called the common law of England. The oldest treatise we have on the English law after the Conquest is the work bearing the name of "Glanville," and composed in the reign of Henry II. Doubtless many individual laws and customs passed from the Anglo-Saxon to the Anglo-Norman times. There is still extant, as we have already had occasion to notice, a charter, or body of laws which the Conqueror is said to have granted to the English people, being, says the title, "the same which his predecessor and cousin, King Edward, observed before him."‡ These recognise all the main features of the Saxon system, and especially the principle of the "were," or pecuniary compensation for personal injuries. We know also, that the system of the frank-pledge continued to be strictly enforced for a long period after the Conquest.§ Still the general features and character of the English law after the Conquest appear to be, on the whole, more Norman than Anglo-Saxon. One striking feature of distinction between Glanville and the Anglo-Saxon laws is the detail with which the former enters into the matter of procedure or actions at law; and the minute intricacy of the system which he thus presents to us strangely contrasts with the rudeness and simplicity of that of the Anglo-Saxons, described in the last chapter. We find in Glanville the germs of the system of pleading which was afterwards carried out into so much greater complexity. In fact, Glanville presents much, both in body and spirit, of the English common law as it existed for many ages, and does in some degree still exist. With respect, however, to the portion of the common law that may be considered of Saxon, and the portion that may be considered of Norman origin, there is a remark of Mr. Hallam's that appears worthy of quotation. "Perhaps," says he, "it might be reasonable to conjecture that the treatise called 'Leges Henrici Primi'* contains the ancient usages still prevailing in the inferior jurisdictions, and that of Glanville the rules established by the Norman lawyers of the king's court, which would of course acquire a general recognition and efficacy in consequence of the institution of justices holding their assizes periodically throughout the country."† It is remarkable, and may be taken as some confirmation of what is here advanced, that the pecuniary compositions are not mentioned in Glanville. However, even by Mr. Hallam's estimate, the Saxon would bear but a small proportion to the Norman element in the compound produced under the name of the common law of England. But to say precisely what the proportion of either element may be, is a very different matter; for we must needs admit thus much at least, with Sir Matthew Hale, that "among all those various ingredients and mixtures of laws, it is almost an impossible piece of chemistry to reduce every *caput legis* to its true original, as to say this is a piece of the Danish, this of the Norman, or this of the Saxon or British law."‡

Among the most important of the remaining innovations in the law and its administration which were introduced in the period now under review may be mentioned the following:—Courts of ecclesiastical jurisdiction were for the first time established by the Conqueror, the bishops being forbidden for the future to sit as heretofore with laymen in the county or other civil courts, and all spiritual causes, and all those in which clergymen were concerned, being made over to the new jurisdiction. By the time of Henry II. we find express mention of the courts of the archdeacon, the bishop, and the archbishop. The contests which soon broke out between the temporal and the spiritual jurisdictions have repeatedly occupied our attention in the two preceding chapters. These ecclesiastical courts established the partial authority of the canon law in England; and the principles and rules of the civil, or Roman imperial law being also favoured by the clergy, were introduced into the Court of Chancery and into other jurisdictions where churchmen presided, and opposed by them to the common law. Attorneys, or agents for the management of causes at law, are first distinctly mentioned after the Conquest, and were probably not introduced till then. The series of our judicial records commences with

* Britton, f. 37. b.

† For, originally, as has been shown, the seneschal was the king's representative universally, in his military as well as his judicial capacity.

‡ These laws of the Conqueror have been preserved both in Latin and in Romance, or French. The best edition of both texts is to be found (with a valuable Commentary) in the Illustrations to Sir F. Palgrave's Eng. Com. pp. lxxviii—cxl.

§ See Palgrave's Eng. Com. p. 527.

* A summary of Saxon law, in ninety-four chapters, found appended to some copies of the charter of Henry I.

† Middle Ages, vol. ii. p. 468. ‡ Hist. of Com. Law, chap. iv.

the reign of Richard I., and the custom of making any written memorials of legal proceedings does not appear to be of much earlier origin. Down to this time the technical phrase, "to record," meant merely to testify from memory. It is commonly said that after the coming of the Normans all pleadings, at least in the supreme courts, were carried on in French, and that all deeds were drawn and all laws promulgated in the same language. "This popular notion," observes Sir F. Palgrave, "cannot be easily supported. . . Before the reign of Henry III. we cannot discover a deed or law drawn or composed in French. Instead of prohibiting the English language, it was employed by the Conqueror and his successors in their charters until the reign of Henry II., when it was superseded, not by the French, but by the Latin language, which had been gradually gaining, or rather regaining, ground; for the charters anterior to Alfred are invariably in Latin."* To this it may be added that, according to Ordericus Vitalis, so far was the Conqueror from showing any aversion to the English language, or making any such attempt as has been ascribed to him to effect its abolition, that he applied himself to learn it for the special purpose of understanding the causes that were pleaded before him. The common statement rests on the authority of Ingulphus, which is extremely suspicious.

Mr. Hallam thinks the subtle and complex character of English law and legal proceedings attributable in some measure to the shrewd and litigious spirit observable in the Normans.† It may, perhaps, be more correctly ascribed to a more general cause—the state of society then existing in feudal Europe. The practitioners of the law, who were, in a great measure, churchmen, had to deal with men—the iron barons "of the bloody hand"—who were accustomed to obtain every object of their desire by the shortest road—direct violence. In bringing about many alterations in the law, both as regarded the punishment of crimes and the conveyance and descent of real property, each of which alterations might be considered as a step made in the march of civilization, though it, at the same time, either directly or obliquely, struck at the power of the feudal aristocracy, they had to take a circuitous course, so as in a great measure to conceal their real design from the powerful and violent, but for the most part obtuse and uninstructed men with whom they had to deal. We must here note a grand distinction between the Roman aristocracy and the feudal. The Roman patricians, as we before observed, were carefully instructed, not only in the art of war, but in the laws and proceedings of the courts. The feudal aristocracy were mere men of the sword, regarding the habits of study and intellectual industry that would have been necessary to enable them to master a knowledge of their laws as things far beneath their consideration. The consequence was, that the more complicated the legal net became which was woven around them, the less powerful they became, and the more dependent upon the subtle men of the gown, whose power proportionally rose, till they were at last reduced somewhat to the condition of an animal which, though physically stronger than a spider, has become the spider's prey, by being caught in its cunningly-devised net. In short, what M. Guizot has remarked of the Roman lawyers (meaning rather those under the empire, when the practice of the law had become a distinct profession, than the patrician lawyers alluded to some sentences back) is applicable, with very slight modification, to the English. The English as well as the Romans troubled themselves little about the foundations and the general principles—about the philosophy of law. They set out with certain axioms—with certain legal precedents; and their ability consisted in tracing with subtlety the consequences of these, in order to apply them to particular cases as such presented themselves. Thus the English, as well as the Roman lawyers, were dialecticians of wonderful acuteness, but never philosophers. As to what has been said of the English lawyers borrowing less than those of any other civilized people from the writings of philosophers, it just amounts to nothing at all, seeing that in the works of the Roman jurisconsults and their modern commentators (however admirable as expositors both may be) there is not a particle more of the philosophy of law than in the writings of the English lawyers.

The most important part of the history of the legislation of this period consists of the history of those great Charters which are usually regarded as the bulwarks of English liberty.

As we have before remarked, the Norman barons, from the circumstances in which they were placed in England, formed a compact body, of which body the Norman king was the undisputed head. When the necessity which kept this body together ceased to exist, when the invaders began to feel themselves tolerably secure in their possessions, feudalism again resumed its natural character. Each fief-owner sought to isolate himself on his own lands, and to enrich himself by violence and robbery. The kings took advantage of this to increase their own power. If Henry I. and Henry II. cannot be called absolute sovereigns, they possessed more power than any other contemporary king. But the barons, although they had no longer the same motives—namely, their common safety—to rally round the king, which they had formerly, had not lost the recollection of how they had thus been banded together to side *with* the king; and they now thought that they might again assemble and unite, when the purpose was no longer to defend themselves and the king against the Saxons or English, but to defend themselves against the encroachments of the royal power, becoming every day more formidable.

Several circumstances favoured the tendency which we have above alluded to. Three usurpers

* Eng. Com. p. 56.
† Middle Ages, vol. ii. p. 468.

in less than fifty years, William Rufus, Henry I., and Stephen, had occasion to have their title acknowledged by the barons, and consequently made general promises respecting their liberties. Afterwards, in the reign of Richard I., from the disputes about the regency, and the intrigues of John, factions of all sorts arose. In this state of things the government fell into the hands of a council of barons. Hence one portion of the barons acquired the habit of governing, the other portion that of resisting the government, composed only of their peers; and when, in 1199, John mounted the throne, the face of things was quite changed. Though the amalgamation of the two races, the Normans and Saxons, was by no means completed, the principal war was no longer between the Normans and Saxons, but between royalty and aristocracy; the former desiring to retain the power, very nearly absolute, which it had held for a little time,—the latter confederating to compel the recognition of certain rights which they claimed. Some barons joined the king; and without that there could have been no struggle. And the struggle, when it came, was not, as on the continent, a series of combats between individual interests,—it was truly a contest between two general independent forces. The concession of the charters was the result of that struggle.

The confirmation of the laws of Edward the Confessor by the Conqueror, mentioned above, may be considered as the first charter granted by the Anglo-Norman kings. It is assigned by the old chroniclers to the year 1070.

Henry I. having usurped the throne from his elder brother Robert, who remained duke of Normandy, occupied a less firm position than his father. Soon after his coronation he granted a charter, which enumerates the abuses of the preceding reigns, and promises the redress of them. Many of its enactments have reference to the relations of feudalism; but one of its clauses expressly restores the laws of Edward the Confessor, "with those emendations," adds Henry, "with which my father amended them, by the advice of his barons." Most of the engagements contained in this charter were very indifferently observed; but it is of importance in the history of the Constitution, as having served in some respects for the model of that which was afterwards extorted from John. Matthew Paris informs us that when the barons took arms, in 1215, their demand was that those rights and liberties should be conceded to the church and the kingdom which were set down in the charter of Henry I. and in the laws of Edward the Confessor. Lord Lyttelton remarks that, "in some respects, this charter of Henry I. was more advantageous to liberty than Magna Charta itself."

Stephen, likewise a usurper, granted two charters—one to the barons, the other to the clergy—both short, and confined to a renewal of the promises before made, but not kept.

Henry II. again renewed those promises in a fourth charter, also short, and also inefficacious.

The Anglo-Norman barons, under their first kings, were not in a condition to undertake a struggle, even if they had wished to do so. Under Henry II. circumstances were somewhat changed. The extent of Henry's possessions on the continent drew him into long wars, into which the Anglo-Norman barons were not always disposed to follow him. Nor were they much more disposed to submit patiently to the heavy imposts he levied on them to support the numerous mercenary troops he was obliged to employ. The strong and firm hand of Henry II., however, suppressed, for a time, this insurgent spirit, which, on that account, only broke out with the more violence under his feeble, cowardly, and vicious son John. It would seem that the circumstances most favourable to liberty's making a step in its progress are those of a powerful and arbitrary ruler, followed by a feeble successor, who fancies that he has an undoubted right to all that his predecessor claimed, without possessing any of the qualities that made good that claim. Such were the circumstances in which John assumed the crown of England. The strong hands of the two first Plantagenets—Henry II. and Richard Cœur de Lion, his father and brother—were in the dust, and the iron sceptre which they had wielded lay rusting among the heavy armour which an imbecile and a coward could not wear.

Magna Charta was granted on the 15th of June, 1215. The enactments of it may be arranged under three heads:—1. Rights of the clergy. 2. Rights of the barons or fief-holders. 3. Rights of the people at large.

I. With regard to the clergy, the charter merely gives a general confirmation of their immunities and privileges.

II. It carefully enumerates and confirms the rights of the barons. In particular, the right of imposing an escuage, or any extraordinary aid, is formally confined to the great national council; and the occasions and modes of convocation of that council are carefully determined.

III. The rights of the freemen of the kingdom are attended to in the following provisions: "The court of common pleas shall not follow the king's court, but shall be held in a certain fixed place.*—Justice shall not be sold, refused, or delayed to any one.†—We, or if we are absent from the kingdom, our chief justiciary shall send four times a year into each county two judges, who, with four knights, chosen by each county, shall hold the assizes at the time and place appointed in the said county.‡—No freeman shall be arrested or imprisoned, or dispossessed of his tenement, or outlawed, or exiled, or in anywise proceeded against, unless by the legal judgment of his peers, or by the law of the land.§—No *freeman*, or *merchant*, or *villain*, shall be unreasonably fined for a small offence: the first shall not be deprived of his tenement; the second of his merchandise; the third of his implements of husbandry."‖—This last is

SPECIMEN OF MAGNA CHARTA, engraved from one of the Original Copies in the British Museum. The passages are a portion of the Preamble, the Forty-sixth Clause, and the Attestation, as follows:—

Johannes dei gratia rex Anglie, dominus Hybernie, dux Normannie, Aquitanie, et comes Andegavie, archiepiscopis, episcopis, abbatibus, comitibus, baronibus, justiciariis, forestariis, vicecomitibus, prepositis, ministris, et omnibus ballivis, et fidelibus suis, salutem.

46. Nullus liber homo capiatur, vel imprisonetur, aut dissaisiatur, aut utlagetur, aut exuletur, aut aliquo modo destruatur, nec super eum ibimus, nec super eum mittemus, nisi per legale judicium parium suorum, vel per legem terre.

Data per manum nostram in prato quod vocatur Runingmede inter Windlesorum et Stanes quinto decimo die Junii anno regni nostri septimo decimo.

the only clause which relates to the interests of the class of villains,—probably, as Hume observes, at that time the most numerous in the kingdom.

The king, also, promised to appoint none but able and upright judges; to reinstate in his possessions every man unjustly ousted; to compel no one to make or support bridges but by ancient customs; that the goods of every freeman should be disposed of according to his will, or, if he died intestate, that his heirs should succeed to them; and that no officer of the crown should take any horses, carts, or wood, without the consent of the owner.

Upon the whole, we are inclined to agree with Barrington, that the main object of those who framed and obtained Magna Charta was not so much the restoration of the Saxon laws in general, or those of Edward the Confessor in particular, as the continuance of the Norman and feudal law introduced with the Conquest, and the preservation of their own feudal privileges, which the great power of the early Anglo-Norman kings threatened to destroy. "In Magna Charta," says Barrington, "there is not one Saxon term for anything that relates to feudal tenures, which are the great object of many of the chapters. It appears by the last chapter of the Charter, that all the attesting witnesses not in holy orders were of Norman extraction. Whence, then, could arise the inducement to make it an express article that the Saxon laws should be restored?" The Norman barons, he adds, "could never mean to abolish the Norman and feudal law, which was in every respect so highly advantageous to them."*

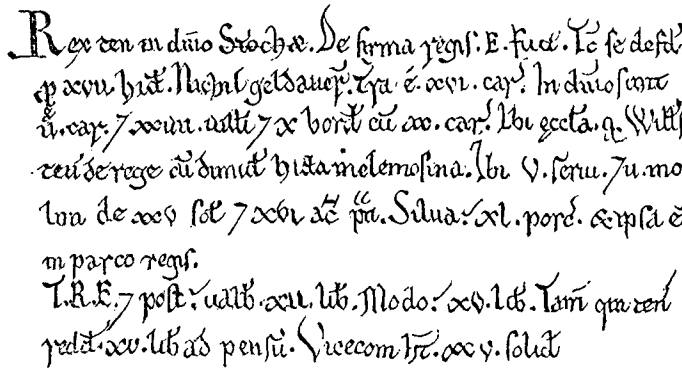
In reading Magna Charta, we are struck with the even lawyer-like precision with which it is worded. It was evidently drawn up by men with intellects as sharp as the swords of the iron barons who wrested it from the reluctant king, who had the will, but not the courage and ability, to be a tyrant.

But though the provisions of this famous charter were as complete as the knowledge of that age could make them, and though they were then and there solemnly signed and sealed, they had many fortunes to go through, many reverses to encounter, many violations to endure, before they were destined to operate quietly and securely. These it will be our business to give some account of in the sequel; contenting ourselves here with the cheering reflection, that though the movement of free institutions is an oscillating one, it is, upon the whole, a decided progress—an advance in the course of a certain number of years, and that

> "Freedom's battle, once begun,
> Though baffled oft, is ever won."

We have now to give a short account of the famous

* Observations upon the Statutes, p. 3.



Specimen of Domesday Book. From the page engraved in the Report on the Public Records. The reading is as follows:—

Rex tenet in Dominio Stochæ. De firma Regis E. fuit. Tunc se defendebat pro 17 Hidis. Nichil geldaverunt. Terra est 16 Carucatæ. In Dominio sunt 2æ Carucatæ & 24 Villani and 10 Bordarij cum 20 Carucis. Ibi Ecclesia quæ Willelmus tenet de Rege cum dimidia Hida in Elemosina. Ibi 5 Servi & 2 Moliui de 25 sol. & 16 Acræ Prati. Silva 40 Porcorum & ipsa est in parco Regis.
T. R. E. & post valebat 12 lib. Modo 15 lib. Tamen qui tenet reddit 15 lib. ad pensum. Vicecomes habet 25 solid.

record called Domesday, which remains so remarkable a monument of the extensive and statesmanlike genius of the Conqueror. Domesday Book consists of a general survey of all the lands in the kingdom, with the exception of the northern counties, Westmoreland, Cumberland, Northumberland, Durham, and part of Lancashire; specifying their extent in each district; their proprietors, tenures, value; the quantity of meadow, pasture, wood, and arable land, which they contained; and, in some counties, the number of tenants, villains, cottarii, and servi who lived upon them. "All this," says Sir H. Ellis, in his 'Introduction to Domesday,' "was to be triply estimated; first, as the estate was held in the time of the Confessor; then, as it was bestowed by King William; and, thirdly, as its value stood at the formation of the survey. The jurors (upon whose oaths it was made) were, moreover, to state whether any advance could be made in the value." The making of this survey was determined upon, after much deliberation, at a great council held at Gloucester in 1085, and it was finished in the course of the following year. The particulars were collected by Commissioners appointed by the king, on the verdicts of sworn inquests, or recognitions; and this important application of the jury (in the form in which it then existed) may probably be considered to have had much influence in establishing the general use of that mode of trial.

Domesday Book, perhaps the most valuable monument of its kind possessed by any nation, is still preserved. It consists of two volumes—a greater and a less; the greater comprehending all the counties of England except those specified above, which were never surveyed, and except Essex, Suffolk, and Norfolk, which are contained in the lesser volume.

The name Domesday has been by many, and, among others, the author of the 'Dialogue on the Exchequer,' supposed to allude to the final day of judgment. But "if this whimsical account of the name was the real one," says Barrington, "the Latin for it would be Dies Judicii; whereas, in all the old chronicles, it is styled either Liber Judicialis, or Censualis. Bullet, in his Celtic Dictionary, has the word Dom, which he renders *Seur*, *Seigneur*, and hence the Spanish word Don; as also the words Deya and Deia, which he translates Proclamation, Advertisement. Domesday, therefore, may signify the lord's or king's advertisement to the tenants who hold under him; and this sense of the word agrees well with part of the contents of this famous survey."* Another account given by Stow, from an old monastic chronicle—the 'Book of Bermondsey'—is, that *Domesday* is a corruption of *Domus Dei* (or God's house), the name of the apartment in the king's Treasury where the volumes were kept.

As some specimen of so curious and important a document may be acceptable to our readers, we select the following examples of the manner of entering the lands in it, and subjoin an English translation.

"Essessa. Terra Regis. Dimid. Hundred de Witham. Witham tenuit Haroldus t. R. E. pro maner. et pro 5 hidis. Modo custodit hoc manerium Petrus vicecomes in manu regis; tunc 2 car. in dñio. modo 3; tunc 21 villan. modo 15; tunc 9 bordar. modo 10; tunc 6 servi, modo 9; tunc 23 sochemanni, et modo similiter; tunc 18 car. hominum, modo 7; tunc inter totum valebat 10 lib. modo 20; sed vicecomes inter suas consuetudinis et placita de dimid. hundred, recepit inde 34 lib. et 4 lib. de gersuma .... In hoc manerio adjacebant t. R. E. 34 liberi hominis, qui tunc reddebant 10 sol. de consuetudine et 11d. Ex illis tenet Ilbodius 2, de 45 acr. et val. 6 sol. et redd. maner. suam consuetudinem. Tedricus Pointel 8, de dimid. hid. et 22 acr. dimid. reddentes consuetudinem. Ranulph Piperel 10 de 2 hid. et 45 acr. non reddentes consuetudinem. Willielmus Grosse 5, et unus tantum reddit consuetudinem, et val. 3 lib. 13s. Rad. Baignard 6, et unus reddit consuetud. et val. 20s. Hamo dapifer 1. de dimid. hid. et val.

* Barrington on the Statutes, p. 232, note.

20s. Goscelinus Loremarius habet terrata unius, et non reddit consuetud.*

Thus in English:—"Essex (title in the top of the leaf); the king's land;" and before the particular manor or town, the hundred is noted, as here, "The half-hundred of Witham. Harold held Witham, in the time of King Edward, for a manor and for 5 hides. Now, Peter, the sheriff, keeps this manor in the king's hand. Then there were 2 carucates in the lord's hands, now 3. Then there were 21 villeins, now 15 (for they recorded what was in Edward the Confessor's time as well as in that of the Conqueror); "then there were 9 bordars, now 10; then 6 slaves, now 9; then there were 23 sochemans, now the same number; then 18 carucates among the men, now 7: then the whole was valued at 10 pounds, now 20 pounds; but the sheriff, for his customs and mulcts from the half-hundred, received on account of this manor (*inde*) 34 pounds, and 4 pounds for fine. In this manor there were, in the time of King Edward, 34 freemen, who then paid an accustomable rent of 10 shillings and 11 pence. Of these, Ilbods holds 2, who had 45 acres, and they were worth to him 6 shillings, and paid their old rent to the manor. Tedric Pointel holds 8, who had half a hide, and 22½ acres, paying custom or old rent. Ranulph Piperel holds 10, who had 2 hides and 45 acres, not paying custom or old rent. William Grosse holds 5, and only one of them pays custom, and were worth 3 pounds 13 shillings. Ralph Baignard holds 6, and one pays custom; they were worth 20 shillings. Hamo, the seneschal or steward, holds 1, who has ½ hide, and is worth 20 shillings. Goscelin Loremar has the land of 1, and pays no custom."

We give another example, which differs somewhat from the former:—

"Essessa Terra Regis Hund. de Beventre. Haveringas tenuit Haroldus t. R. E. pro 1. maner. et pro 10 hid. Tunc 41 villan. modo 40; semp. 41 bordar. et 6 servi, et 2 car. in dominio; tunc 41 car. hominum, modo 40; sylv. d. porc. c. acr. prati; modo 1 molen. et 2 runc. et 10 animalia, et 160 porc. et 269 ov. Huic maner. adjacebant 4 lib. homines, de 4 hidis t. R. E. reddentes consuetudinem; modo ten. 3 hid. Rob. fil. Corbutionis, et Hugo de Montafori quartam hidam, et non reddidere consuetudinem ex quo eas habuere, &c. Hoc maner. val. t. R. E. 36l. modo 40; et Petrus vicecomes inde recepit 80l. de censu, et 10l. de gersuma.†

Thus in English:—"Essex (title as before), the king's land; the hundred of Beventre. Harold held Haveringe, in the time of Edward the Confessor, for 1 manor and 10 hides. Then there were 41 villeins, now 40; there were always 41 bordars, and 6 slaves, and 2 carucates in demesne, or the lord's lands; there were 41 carucates among the men (or vassals or tenants), now 40; wood sufficient for 500 hogs, 100 acres of meadow; now 1 mill, and 2 working-horses or pack-horses, and 10 young growing beasts, 160 hogs, and 269 sheep. To this manor there belonged 4 freemen, who had 4 hides in the time of Edward the Confessor, paying an accustomable rent; now Robert, son of Corbutio, holds 3 of those hides, and Hugh Montfort the fourth, and have paid no rent since they held them. This manor was worth, in the time of King Edward, 36 pounds, now 40; and Peter the viscount, or sheriff, receives from it 80 pounds for rent, and 10 pounds for an income or fine."

Domesday Book was formerly kept by the side of the Tally Court in the Exchequer, under three different locks and keys; one in the custody of the treasurer, and the others of the two chamberlains of the Exchequer. In 1696 it was deposited in the Chapter-house at Westminster, where it still remains.*

In 1767, in consequence of an address of the house of lords, his majesty gave directions for the publication, among other records, of the Domesday Survey. "In the following year," says Sir Henry Ellis,† "specimens—one executed with types, the other by engraving—were submitted, by command of the lords of his majesty's Treasury, to the president and council of the Society of Antiquaries, for their opinion; and an engraved copy of the work appears to have been at first considered as the most proper and advisable. At the close, however, of 1768, the fairest and most perfect letter having been selected from different parts of the survey, a resolution was taken to print it with metal types. A *fac-simile* type, uniform and regular, with tolerable exactness, though not with all the corresponding nicety of the original, was at last obtained, and the publication was entrusted to Mr. Abraham Farley, a gentleman of learning as well as of great experience in records, and who had had almost daily recourse to the book for more than forty years.‡ It was not, however, till after 1770 that the work was actually commenced. It was completed early in 1783, having been ten years in passing through the press. The type with which it was executed was destroyed in the fire which consumed Mr. Nichols's printing office, in the month of February, 1808."

We shall subjoin here a few explanations of the terms made use of in the above extracts which have not been already noticed.

1. LIBERI HOMINES (Free men).—In this term, besides the freemen or freeholders of a manor, appear to have been included all the ranks of society above these, *i. e.*, all holding in military tenure. "The ordinary freemen before the Conquest, and at the time of compiling Domesday," says Kelham, "were under the protection of great men; but what their quality was, further than that their persons and blood were free, that is, that they were not nativi, or bondmen, it will give a knowing man trouble to discover to us."§ In Domesday, the

liberi homines are mentioned as distinct from the Sochemanni, or Socmen; but by the time of Magna Charta, they would seem not to have been distinct; at least the three classes of society specified in the famous 20th article of that, are the free men, the merchants, and the villains.

2. The Sochemanni, or Socmen.—In regard to these, whatever may be the disputes about the origin of their name (some deriving it from *soca*, a plough; others from *soc*, a franchise) and their condition, one thing is certain, that they held their land by a tenure of a different and inferior kind to military tenure. Littleton defines tenures in socage to be, where the tenant holds his tenement of the lord by any *certain* service, in lieu of all other services, so that the service be not knight's service; and Blackstone describes the "grand criterion and distinguishing mark of this species of tenure" to be, "the having its renders or services ascertained."

3. The Bordarii.—Respecting these, opinions vary. Coke calls them "boors, holding a little house with some land of husbandry, bigger than a cottage.* "The Bordarii, often mentioned in the Domesday Inquisition," says Bishop Kennett, "were distinct from the Servi and Villani, and seem to be those of a less servile condition, who had a *bord* or cottage, with a small parcel of land allowed to them, on condition they should supply the lord with poultry and eggs, and other small provisions for his *board* and entertainment." "Bordarii," adds Sir H. Ellis, "it should seem, were cottagers merely; and in the Ely manuscript, we find *Bordarii* where the Breviate of the same entry in Domesday itself reads *Cotarii*."

4. Servi. These, as distinguished from the villani, seem personal, the latter being territorial bondmen; or, in the English law language, *villains in gross*, as distinguished from *villains regardant*. The term serf, which is used on the continent as the translation of servus, is not recognized in English law, though it is sometimes loosely used in common discourse to designate *villain regardant*.

5. Homines is synonymous with vassals, or feudatory tenants, and seems, in fact, a literal translation of the Saxon "*men*;" to be any one's *man* being the same as being his vassal.

6. Terra Regis. "The Terra Regis of Domesday," says Mr. Allen, "was derived from a variety of sources. It consisted in part of land that happened at the time of the survey to be in the king's hands by escheat or forfeitures from his Norman followers. It was constituted, in part, of the lands of Saxon proprietors, which had been confiscated after the Conquest, and had not been granted away to subjects. But it was chiefly composed of land that had been possessed by the Confessor in demesne, or in farm, or had been held by his thegns and other servants. Of the last description, part was probably the private bocland of the Confessor, which had belonged to him as his private inheritance. But if we compare the number of manors assigned to him as his demesne lands in Domesday, with the estates of bocland possessed by Alfred, it seems incredible that the whole should have been his private property. A great part must have been the folcland or public property of the state, of which, though the nominal proprietor, he was only the usufructuary possessor, and, with the license and consent of his witan, the distributor on the part of the public. The land which is called terra regis in the Exchequer Domesday, is termed, in the original returns of the Exon Domesday, demesne land of the king belonging to the kingdom.*"

7. Terra.—"Put simply," says Sir H. Ellis, "uniformly signifies arable land, as distinct from wood, meadow, and common pasture."†

8. Hide.—The quantity of land it contained is uncertain. "Gervase of Tilbury," says Bishop Kennett, "makes it 100 acres. The Malmsbury MS., cited by Spelman, computes it at 96 acres, 1 hide, 4 vigates; and every vigate 24 acres. And yet the history of the foundation of the abbey of Battle makes 8 vigates go to 1 hide. But Polydore Vergil blunders most, who reduces a hide to 20 acres. The truth seems to be, that a hide, a yard-land, a knight's fee, &c., contained no certain number of acres, but varied according to different places."‡

9. Carucate.—The *carucate* was of Norman introduction, and probably nearly corresponded in Norman to *hide* in Saxon. Its measure is involved in as much uncertainty as that of the hide. Bishop Kennett gives instances of its application to quantities of land varying from 60 to as much as 150 acres.

We now proceed to give some account of the royal revenue in this period.

The complete establishment of the feudal system after the Norman conquest, put the kings of England in possession of revenues greatly more ample than their predecessors had enjoyed. The crown, in the first place, as appears from Domesday Book, acquired the entire property of above 1400 manors, the rents of which must have formed a large income altogether independent of casualties. These were in addition to 68 royal forests, 13 chases, and 781 parks, in different parts of the country, which were retained to serve as hunting grounds, and only became a source of revenue in consequence of the penalties to which the people were subjected for trespasses upon them in breach of the forest laws. But a very considerable annual return must also have been derived from the various feudal dues that remained payable even from the lands that were granted to his followers by the Norman conqueror. The crown, it is to be remembered, still retained to itself what was called the *dominium directum*, or property of these lands: the persons to whom they were granted held them only as tenants under the crown; and, besides the services which they were bound to

* 1 Inst. p. 5. b.

† Introd. to Domesday, v. i. p. 95.

‡ Par. Antiq. Gloss. Hide.

render as vassals, they were subjected to the payment both of quit-rents, which were regularly collected by the sheriffs, and of other dues to the lord superior, which, although only exigible upon certain extraordinary occasions, were generally of much greater amount than the annual quit-rents. Of these, the principal were, the Relief, or fine, which, on the death of every tenant, his heir was obliged to pay to the lord before entering upon the possession of the lands—being the same thing that was known in the Saxon times by the name of the Heriot, that is, the suit of armour, a certain quantity of warlike weapons being the original exaction; the Primer Seisin, a species of additional relief, consisting in some cases of a whole, in others of half a year's profits of the lands, which was payable only by tenants of the crown; Fines of Alienation, paid on the sale or grant by the tenant of any part of the lands to a stranger; and Aids, which were called for to ransom the king whenever he was taken prisoner in war, to furnish a portion for any of his daughters when she was married, and to defray the expense incurred when his eldest son was made a knight. Every tenant of the crown also was bound, whenever the king went to war, to furnish an armed soldier, and to maintain him in the field for forty days, for each knight's fee that he possessed—the whole kingdom, as appears from Domesday Book, containing 60,215 such fees. This law, therefore, enabled the crown to raise and keep on foot a numerous army in times of war at no cost. The burden which it imposed upon the tenants of the crown was afterwards commuted by Henry II., into a money-payment of twenty shillings for each knight's fee, which was called an escuage, or scutage, that is, literally, a tax for furnishing a soldier armed with a bow.*

The crown, besides, drew large profits from its prerogatives of wardship and of marriage, by the first of which it took the custody and drew the rents of all estates held of it so long as the tenant, if a male, was under twenty-one; if a female under sixteen years of age: and by the second of which it disposed of all female heiresses, and also of all widows, of its tenants in marriage, or exacted a fine for the relinquishment of the right. Both of these, indeed, were rights of all lords of manors over their vassals; and that of marriage was extended in the thirteenth century to heirs male as well as female. Another right which the king possessed in common with other lords was, to all escheats, that is, to all the landed property of persons who either died without heirs or whose blood was attainted by the commission of treason or felony. The numerous forfeitures of the estates of the large proprietors, who were all tenants of the crown, that were constantly occurring in the first ages after the Conquest, must have brought immense wealth into the royal treasury. The estates of which the crown acquired possession in this manner formed the only fund from which it could legally make new grants—the alienation of any part of the original royal demesne being prohibited by law; and although this restriction was often violated, it was also at other times taken advantage of by the king, and made a pretext for resuming the illegal grants of his predecessors. It was in this way that Henry II., on his accession, recovered from the crown all the estates (with the exception only of those acquired by the church) that had been alienated in the preceding times of confusion, whether by Stephen or by his own mother, the empress. The profits of the estates of all idiots also belonged to the crown, as well as all the personal effects of persons who had died without known heirs. The crown had likewise a right to all treasure trove, or money, plate, or bullion found hidden in the earth; to all waifs, or stolen goods thrown away by the thief in his flight; to all estrays, or cattle found wandering without an owner; to all royal fish—that is, whales and sturgeons—either thrown ashore, or caught close to it; to all goods wrecked to which the owner did not establish his claim within a certain time; and to all spoil taken in war.

The crown also possessed various other regular sources of income, besides the produce of the crown lands, and the different dues from its vassals. There were various descriptions of what we should now call taxes, either permanently established, or occasionally imposed. In 1083, the Conqueror is said to have revived the old Saxon land-tax, or hideage, called the danegeld, of which an account has been given in the preceding book,* and to have advanced it to six shillings on each hide; a rate at which, if the common account of the number of hides of land in England may be depended upon, it would have produced above 80,000*l.*, an amount of silver equal to what is contained in 240,000*l.* of our present money. Gervase of Tilbury, or the author of the 'Dialogue on the Exchequer,' commonly attributed to him, says that William would not revive this tax as an annual supply, nor yet would he entirely give it up, but reserved it to answer extraordinary and unforeseen occasions; for which reason it was rarely taken either by him or his successors, and only when actual wars with foreign nations, or the fear thereof, came upon them. A land-tax, however, can be traced to have been repeatedly collected, either under this or another name, by all the succeeding kings. Such a tax appears, indeed, to have been regularly levied throughout a great part of the reign of Stephen; it was occasionally revived by Henry II.; and Richard I. is recorded to have, in the tenth year of his reign, collected it at the rate of five shillings on each hide. The aids, mentioned above, and also the scutages, appear to have been sometimes exacted under the name of a hideage, or carucage.

A species of house-tax is mentioned in Domesday Book under the name of Hearth-money, and seems to have been collected both before and after the Conquest. Another species of hearth-money, of

* See Barrington's Observations on the Statutes (2nd edit.) p. 277.

* See ante, p. 253.

Norman origin, which was collected till its abolition on the accession of Henry I., was that called Moneyage, being a tax of a shilling on each hearth, payable every three years, as a recompense to the king for not exercising his prerogative, as he was entitled to do, in altering or debasing the coins. Customs, or duties upon the import and export of articles of merchandize, seem to have existed from the earliest times, and were no doubt continued after the Conquest. Similar duties appear to have been also paid by merchants selling their goods within the kingdom, for the use of the king's warehouses, weights, measures, &c. Another permanent tax consisted of the tallages, that is, the cuttings, being a certain assessment upon their property, annually exacted from the inhabitants of the towns and boroughs throughout the kingdom. The first general personal tax, however, is said to have been imposed by Henry II., in 1166, for the support of the war in the Holy Land: it amounted only to sixpence in the pound upon each man's personal effects, to be collected in five years, at the rate of twopence the first year, and a penny each of the four years following. It was followed, in 1188, on the news of the expulsion of the crusaders from Jerusalem, by another tax of the same kind, but much heavier in amount, being an exaction of the tenth of the personal property of all those who should not join the expedition which it was proposed to send to regain the holy city. This tax, which came to be known by the name of the Saladin tithe, is said to have produced 130,000*l.*, of which the Jews contributed 60,000*l.* Some years after another new species of general taxation was introduced by Richard I., under the form of a scheme for the sale of licenses, which persons of different degrees were obliged to obtain before being permitted to engage in the exercise of the tournament; an earl being called upon to pay twenty marks of silver, a baron ten marks, a knight having lands, four marks, and a knight without lands, two marks.

Much additional revenue was also obtained by means of various prerogatives of the crown that yet remain to be mentioned. By that of purveyance and pre-emption the king's purveyors were entitled to take such provisions and other necessaries as were wanted for the use of his household at a certain fixed price, without the owner's consent, and also to impress the carriages and horses of the subject to do the king's business on the public roads. Considerable profits were derived from the tolls and other dues exacted at public fairs and markets; from the coining of money, and, in later times at least, from the superintendence of weights and measures, for which fees were received; and from the grant of patents and monopolies. All fines and amerciaments paid by persons convicted of breaches of the law also went to the king; and this was one of the most productive sources of revenue in early times. The maintenance of the Saxon system of pecuniary expiation for crimes, including both compensation to the party injured and a fine to the king, was no doubt recommended to the Conqueror, among other considerations, by the supplies it provided for the royal coffers. It has even been suspected that Henry II., in the institution of the itinerant justices, looked more to the benefit of the revenue than to any other object. The instructions given to them certainly show a great solicitude to turn their administration of the law to account in the augmentation of the royal profits. But the fines exacted for offences by no means formed the only revenue that the crown drew from its power of administering and executing the law. Privileges of all kinds were matter of open purchase from the king or the royal officers, by what were called oblations or offerings, which was really only another name for bribes. If the dealers, for instance, in any commodity in a particular place wished a certain price to be fixed upon it below which it might not be sold for a certain time, they bought an order to that effect. Numbers of persons are recorded in the rolls of the Exchequer to have paid large sums merely to obtain the favour or good will of the king, or to induce him to remit his displeasure. Other payments were made to purchase his direct interference with law proceedings. "Even in the reign of Henry II.," observes Lord Lyttelton, "we have instances of fines being paid to the king, from several of his subjects, for stopping or delaying of pleas, trials, and judgments, or for expediting and speeding them, or to have seisin or restitution of their lands or chattels, or to be replevied or bailed, or to be quit of certain crimes or certain methods of trial (as, for instance, by hot iron), or to have the assistance of the king in recovering their debts." The right of being tried by a jury was at first often purchased by a money payment. Fines were often paid for permission to hold or quit certain offices: and in some reigns all offices under the crown were sold. In the reign of John we find the wife of Hugh de Neville paying a fine of two hundred hens for permission to sleep one night with her husband; she was probably a ward of the crown who had married without the king's consent. It appears also to have been customary, when any of these bribes were paid to the king, for an acknowledgment of smaller amount, which passed under the name of the queen's gold, to be paid to his consort.*

To all these irregular sources of revenue may be added the sums that were repeatedly obtained by actual extortion and robbery. The Conqueror, according to Matthew Paris, possessed himself in this way of great quantities of wealth by plundering the churches and monasteries, and seizing not only the money that had been deposited in these buildings for security, but even the shrines and chalices, and other furniture of the altars. Both Rufus and Stephen are accused of obtaining money by the same open disregard of all law and right. The victims of the most frequent exactions of this

* Mention is also found of the *aurum reginæ*, or queen's gold, in the Saxon times. See Palgrave's Eng. Com., p. 652.

description, however, were the Jews. "As they fleeced the subjects of the realm," says Madox, "so the king fleeced them." Besides the general impositions that were laid upon them, so constant a stream of fines and amerciaments was derived from individuals of their body, that a particular office of the Exchequer was set apart for the management of the revenues thus obtained. In the same class of irregular gains may be placed the profits accruing from vacant church livings retained in the hands of the crown, which were sometimes very great. William Rufus is stated to have been at his death in the receipt of the temporalities of an archbishopric, four bishoprics, and eleven abbeys. Under this head, too, may be reckoned the sums first extracted from individuals in the same reign under the name of Benevolences, and the disguise of being free gifts, although they were in fact compulsory; and the Loans, equally free and equally gifts with the benevolences, the credit of the contrivance of which is assigned to Richard I. Another of the expedients adopted by this king for raising money is said to have been the causing a new great seal to be made, under the pretence that the old one had been lost, and then declaring all existing royal grants to be invalid unless the holders should take out renewals and confirmations of them at the cost of a second payment of the fees. But it would be endless to enumerate all the forms of royal extortion of which the records of the period furnish instances. Any contrivance, however essentially iniquitous or oppressive, to which the thinnest colour of a legal character could be given, would appear to have answered the purpose when an urgent occasion arose; and indeed at all times the sovereign seems to have been less restrained in his exactions from the subject by any barriers that the law presented, than by his own sense of the length to which it was prudent to go, or by the absolute failure of sources from which to feed his rapacity.

It cannot be doubted that the annual returns which flowed into the royal treasury through all these channels must have been very great. Ordericus Vitalis, who was a contemporary of the Conqueror, assures us that the daily income of that prince amounted to above 1060*l.*, without including the casual profits arising from the redemption of offenders and the other prerogatives of the crown. This would make a fixed ordinary revenue of about 400,000*l.* a-year in the money of that day, which would be equivalent in weight of silver to nearly 1,200,000*l.* of our money, and in real efficacy, no doubt, to a much larger sum. This statement of Ordericus has been rejected as incredible by Hume and other modern writers; but from its precision and formality (the exact sum is set down, after the manner of keeping accounts in the Exchequer books, at one thousand and sixty pounds, thirty shillings, and three farthings, and that in words at full length), it would seem to have been taken from an official record, and it can only be reasonably disputed on the supposition of some corruption having crept into the text. William is said to have left at his death, in the royal Treasury at Winchester, 60,000 pounds of silver, besides gold, jewels, vestments, and other articles of great value; and this was probably only part of his accumulated wealth, much, if not most, of which we may suppose, he would have with him in Normandy, where he died. Nor is the account of the Conqueror's income given by Ordericus inconsistent with almost the only other notice of a similar kind relating to this period that has been preserved,—that which is found in Hoveden of the revenue of Richard I. This historian relates that when Hubert, Archbishop of Canterbury, resigned the office of High Justiciary in 1196, he proved from his books that the revenue he had collected for the king during the two preceding years amounted to not less than 1,100,000 marks, or about 750,000 pounds of silver. The revenue of the Conqueror in all probability considerably exceeded that of Richard.

According to the author of the 'Dialogue on the Exchequer,' the rents of the crown lands were paid in kind from the Conquest till the latter part of the reign of Henry I., when, in consequence of the complaints of the vassals of the great oppressions they suffered in being obliged to bring provisions for the royal household to different parts of the country from their own dwellings, that prince, with the advice of his great council, sent commissioners over the kingdom to estimate the money value of all the rents; after which the sheriff of each county was appointed to collect them, and to account for them to the Exchequer. It is certain, however, that they were partially paid in money before this time. The institution of the Exchequer, we may add, is ascribed by the author of the 'Dialogue' to the Conqueror, who took the plan of it, he says, from the Exchequer of Normandy, yet with many differences, and some even in points of great importance. "The authority of this court," the writer proceeds, "is very eminent, as well in respect of the image of the king impressed on his great seal, which is constantly kept in the Treasury, as of the persons who sit there, by whose wisdom the whole state of the realm is preserved and maintained in safety; for there resides the king's chief justiciary, who is next to the king in jurisdiction; and all the greatest men of the kingdom, who are of his privy council, have also places there; that whatsoever is decreed or determined in the presence of so august an assembly may remain inviolable." This treatise appears to have been written in the reign of Henry II.

CHAPTER IV.

HISTORY OF THE NATIONAL INDUSTRY.

THE Norman Conquest, by the closer connexion which it established between our island and the continent, must have laid the foundation for an ultimate extension of English commerce; but a revolution which so completely overturned the established order of things, and produced so much suffering to the body of the population, could not be favourable, in the first instance, or until after the lapse of a considerable space of time, either to the foreign trade of the country, or to the national industry in any of its other branches. For the first four reigns after the Conquest, accordingly, the notices that have come down to us on the subject of the present chapter are very few and unimportant.

When the Normans first came over, however, they found England a country possessed of considerable capital, or accumulated wealth, and also, as it would seem, of a flourishing foreign commerce, which had, no doubt, chiefly grown up in the long, and, for the greater part, tranquil reign of the Confessor. We have already quoted the account given by William of Poictiers of the quantities of gold and silver and other precious effects which the Conqueror carried with him on his first visit to Normandy, and of the admiration which these spoils excited both in the Normans themselves and in strangers from other parts of the continent by whom they were seen.* The writer expressly testifies that merchants from distant countries were at this time wont to import to England articles of foreign manufacture that were unknown in Normandy. He mentions also in other passages, the great wealth of the native or resident merchants both of London and Winchester. Exeter was another town distinguished for its opulence; and Ordericus Vitalis relates, that when it was attacked by the Conqueror, in 1068,† there were in the harbour a great number of foreign merchants and mariners, who were compelled by the citizens to assist them in their defence. These notices occur incidentally in the relation of political transactions or military events; no chronicler has thought it worth his while to enumerate either the various points at which this foreign commerce was carried on, or the articles in the exchange of which it consisted. If our information were more complete, we should probably find that it was shared by various other towns besides those that have been mentioned. There is reason to believe that Hastings, Dover, Sandwich, and the other towns on the coast nearest to France, which afterwards came to be distinguished as the Cinque Ports, and also Lincoln, and York, and other places in the more northern parts of the kingdom, all at this time maintained some commercial intercourse with the continent—with Italy, and perhaps also with Spain, as well as with France and the north of Europe or Germany. An active trade also seems to have existed between Ireland and both Bristol and Chester on the west coast.

The principal exports at this early period were probably the same that for many ages after constituted the staples of our trade with foreign countries, namely, the natural productions of the island—its tin and lead, its wool and hides, and sometimes perhaps also its beeves, and the other produce of the same description reared in its pastures and forests. We find a regular trade in these and other articles established at the most remote date to which it is possible to carry back the history of English commerce; and it may be safely presumed that they were the commodities for which the island was resorted to by foreign merchants from the earliest times. As for corn, it was probably at this date, as it long afterwards continued to be, sometimes an article of export, sometimes of import. The articles we have enumerated were, no doubt, those in the production of which the industry of the great body of the people was employed. The only manufacture for their skill in which the English were then eminent was the working in gold and silver; and William of Poictiers states that the best German artists in that department found themselves encouraged to come and take up their residence in the country. From this, we may presume that the chief demand for their productions and those of the native artists of the same class was among the English themselves; but from the high repute of the English workmanship, some of the embroidered stuffs, of the vases, ornamented drinking-cups, and other similar articles fabricated here, would, no doubt, also be sent abroad. Considerable quantities of the precious metals must have been consumed in the manufacture of these articles; and it is not unlikely that the supply was in great part obtained from Ireland, where it is agreed on all hands, that, whencesoever it may have been obtained —whether from native mines, or from the ancient

* See ante, p. 364. † Ibid. p. 366.

intercourse of the island with the East, or from the Northmen, enriched by the spoils of their piracy, who had conquered and occupied a great part of the island in the period immediately preceding that with which we are now engaged—there was formerly an extraordinary abundance of gold and silver, of the former especially.* William of Malmsbury, it may be observed, seems to speak of the trade between England and Ireland as one which the former country could dispense with without any serious inconvenience, but upon which the latter was dependent for the necessaries of life. He tells us that upon one occasion, when the Irish monarch, Murcard (or Murtach O'Brien) behaved somewhat haughtily towards Henry I., he was speedily humbled by the English king prohibiting all trade between the two countries; "for how wretched," adds the historian, "would Ireland be if no goods were imported into it from England." Perhaps English agricultural produce was exchanged for Irish gold.

In the violent transference and waste of property, however, that followed the Conquest, and the long struggle the invaders had to sustain before they made good their footing in the country, the wealth, and commerce, and general industry of England, must all have received a shock from which it was not possible that they could rapidly recover. The minds and the hands of men were necessarily called away from all peaceful pursuits, and engaged in labours which produced no wealth. Nor was the system of government and of society that was at last established favourable, even after its consolidation and settlement, to trade and industry. It was a system of oppression and severe exaction on the one hand, depriving the industrious citizen of the fruits of his exertions and of the motive to labour; and, on the other hand, it was a system of which the animating principle was the encouragement of the martial spirit, to which that of trade and industry is as much opposed as creation is opposed to destruction.

Two charters were granted to the city of London by the Conqueror, and a third by Henry I.; but it is remarkable, that not even in the last-mentioned, which is of considerable length, and confers numerous privileges, is there anything relating to the subject of commerce, with the exception of a clause, declaring that all the men of London and their goods should be exempted throughout England and also in the ports from all tolls and other customs. There is no reference to the city itself as a great mart, or to either its shipping or its port. Even in the general charter granted by Henry I., on his accession, there is not a word in relation to commerce or merchants. It is stated, however, by William of Poictiers, that the Conqueror invited foreign merchants to the country by assurances of his protection.

The numerous ships in which the Conqeuror brought over his troops—amounting, it is said, in all, to about 700 vessels of considerable size, besides more than three times that number of inferior dimensions—must have formed, for some time, a respectable royal navy. William of Poictiers informs us that the first care of the duke, after disembarking his men, was to erect defences for the protection of his ships; and most of them were, doubtless, preserved, and afterwards employed in war or commerce. It is the opinion of a late writer, that the numerous fleet thus brought over by the Conqueror, "when not engaged in ferrying himself and his armies to and from the continent, was probably employed in trading between his old and new territories and the adjacent coasts of France

* "It appears that there were greater stores of the precious metals in Ireland than could well be supposed. Large sums of gold and silver were frequently given for the ransom of men of rank taken in battle; and duties or rents, paid in gold or silver, to ecclesiastical establishments, occur very often in the Irish annals. At the consecration of a church in the year 1157, Murha O'Lochlin, king of Ireland, gave a town, 150 cows, and 60 ounces of gold, to God and the clergy: a chief called O'Carrol gave also 60 ounces of gold; and Tiernan O'Ruark's wife gave as much—donations which would have been esteemed very great in that age in England or upon the continent. What superstition so liberally gave, some species of industry must have acquired; and that was most probably the pasturage of cattle . . . unless we will suppose that the mines of Ireland, which, though unnoticed by any writer, seem to have been at some time very productive, were still capable of supplying the sums collected in the coffers of the chiefs and the clergy."—Macpherson's Annals of Commerce, p. 334. See also ante, p. 14.

SHIP BUILDING. Royal MS. 2 B. vii.

and Flanders, which were all now connected with the new masters of England."* We find a naval force occasionally employed in the wars even of the first English kings after the Conquest. The Saxon Chronicle states, that when the Conqueror made his expedition against Scotland in 1072, he sent a fleet to attack that country by sea, at the same time that he invaded it in person at the head of his army. The good service done for Rufus against his brother Robert by the privateers which he permitted his English subjects to fit out in the beginning of his reign, has been mentioned in the narrative of civil and military transactions.† A fleet was also equipped by Henry I., to oppose the threatened invasion of Robert, on his accession, the greater part of which, however, deserted to the enemy.‡ Provision, indeed, was made by the Conqueror for the defence of the kingdom, whenever it should become necessary, by a naval force, by means of the regulations which he established in regard to the Cinque Ports—originally Hastings, Hythe, Romney, Dover, and Sandwich—each of which towns was bound, upon forty days' notice, to furnish and man a certain number of ships of war, in proportion probably to its estimated wealth or population. Other towns in different parts of the coast also appear to have held of the crown by the same kind of service.

One of the old Saxon laws revived or continued by the Conqueror, and the only one in the collection of enactments which passes under the name of his charter, having any reference to trade, is the prohibition against all purchases above a certain amount, except in the presence of witnesses. "No one shall buy," it is declared, "either what is living or what is dead, to the value of four pennies, without four witnesses, either of the borough or of the village."§

We have already mentioned the establishment by Henry I. of the colony of Flemings in the district of Ross, in Pembrokeshire.‖ These foreigners had come over in the reign of the Conqueror, driven from their native country, it is said, by an inundation of the sea, and they had been settled, in the first instance, chiefly about Carlisle and the neighbouring ports, and as it would seem, with a view merely to the service their hardihood and skill in war might be of in the defence of the northern frontier of the kingdom. But they were as dexterous in handling both the plough and the shuttle as the sword. Henry is said to have been induced to remove them to Wales, by finding that they and the English, with whom they were mixed, did not agree well together. In the district of which he put them in possession, and which he had taken from the Welsh, they maintained their ground against all the efforts of the hostile people by whom they were surrounded, to dislodge them, and soon came to be regarded as the force to be mainly depended upon for keeping the Welsh in check. By these Flemings the manufacture of woollen cloths appears to have been first introduced into this country; and it is supposed that they soon came to be made for exportation as well as for home consumption. Giraldus Cambrensis describes the foreigners as "a people excellently skilled both in the business of making cloth and in that of merchandize, and always ready with any labour or danger to seek for gain by sea or land."* It is probable that they also introduced some improvements in agriculture; and, altogether, the example of industry, activity, and superior acquirements set by this interesting colony—the last, as it has been remarked, of any consequence settled in any part of the island till the coming over of the French Protestant silk-weavers, after the revocation of the edict of Nantes, in 1685—could not fail to be of high public benefit. Their language was very nearly the same with the English; and the district in which they dwelt, it seems, used to be called Little England beyond Wales; in fact, they made the whole county of Pembroke, though lying at the further extremity of Wales, an English county. Henry II. afterwards added to their numbers by permitting some of those of their countrymen who had served as mercenaries under Stephen to settle among them. It is said that the descendants of these Flemings may still be distinguished from their Welsh neighbours.

The Flemings were indebted, both for the welcome reception they met with in the first instance, and for the permanent settlement they obtained, to their martial more than to their commercial skill—to their being a people, as Giraldus expresses it, equally most ready, now at the plough—now at the sword.† The Jews, who came over in great numbers soon after the Conquest, were a people of altogether another stamp. Precluded by their religion from engaging in the wars of any of the European nations among whom they had settled, they had become mere traders, and were, indeed, men of peace in a more strict sense than any other class of persons in those days, the clergy themselves not excepted. Independently, therefore, of the odium to which their faith exposed them, their habits made them in a peculiar degree objects of hatred and contempt to the warlike population of England and the other countries in which they took up their residence. Yet almost wherever commerce had taken any root, there were they to be found, pursuing perseveringly, under obloquy, danger, and the cruellest oppression, their peculiar trade. To draw down upon them still more of the popular suspicion and dislike in a rude and ignorant age, that trade was not any species of industry by which produce of any kind was visibly created; it did not necessarily imply even the exertion of any peculiar powers or acquirements; it was labour neither of the hand nor of the head. Yet it was, in truth, a trade as essential to the creation of

† Nunc ad aratra, nunc ad arma, gens promptissima.

wealth as any labour. The Jews were the capitalists of those times; they were the dealers in that other element, by a combination with which alone it is that labour itself can, in the creation of wealth, accomplish any extraordinary results. Even in that dark and turbulent age the inherent power of property was strikingly evinced in their case, by the protection which it long secured to them, notwithstanding all the hostility of the popular feeling, and the disregard of them by the law itself. It was early found necessary to support them in their rights over their debtors; and, while affairs went on in their ordinary course, it does not appear that a Jew ever had any greater difficulty in recovering the money owing to him than a Christian. The law, indeed, seems to have considered the Jews as the property of the king; and he oppressed and plundered them to any extent that he deemed prudent. But he did not usually allow them to be injured by others; and perhaps, indeed, they were more secure under the royal protection than they would have been under that of the law. Some of the kings, William Rufus in particular, excited much popular clamour by favouring them, as it was alleged, too much. Their wealth enabled them, at different times, to purchase charters from the crown. For one which they obtained from King John, and which is styled a confirmation of their charters, they are recorded to have paid four thousand marks; and it refers to previous charters which they had received both from Henry I. and Henry II.*

There are traces, as we have already had occasion to observe, of an intercourse having subsisted between these islands and the East from the remotest times. The mere derivation of the people of Europe from Asia most probably, of itself, had always kept up some connexion between the East and the West; neither the Gothic nor the earlier Celtic colonists of Europe seem to have ever altogether forgotten their Oriental origin; the memory of it lives in the oldest traditions alike of the Irish and of the Scandinavians. But even within the historic period we find a succession of different causes operating to keep up a connexion between Britain and the East. As long as the country was under the dominion of the Romans it was of course united by many ties, and by habits of regular intercourse, with all the other parts of the extended empire to which it belonged. Afterwards, in the Saxon times, the establishment of Christianity in the country contributed in various ways to keep up its connexion with the East. The Greek learning, and probably also some of the Greek arts, were introduced by Archbishop Theodore and other churchmen from Asia: at a later date we find Alfred despatching a mission to the Christians in India; and not long afterwards we find pilgrimage to the Holy Land becoming a common practice. From this practice we may most properly date the commencement of our modern trade with the East; it has ever since been a well-established and regular intercourse. The pilgrims, from the first, very generally combined the characters of devotees and merchants. Then, towards the close of the eleventh century, commenced the crusades, which for nearly two hundred years kept, as it were, a broad highway open between Europe and Asia, along which multitudes of persons of all sorts were continually passing and repassing.

Some curious evidences of the extent to which eastern commodities now began to find their way to the remotest extremities of Europe may be collected from the records of the times. One very remarkable notice occurs in the Register of the Priory of St. Andrew, in Scotland, in which it is related that Alexander I., when bestowing a certain endowment of land upon the church of that city, presented at the same time an Arabian horse which he was wont to ride, with his bridle, saddle, shield, and silver lance, a magnificent pall or horse-cloth, and other Turkish arms (*arma Turchensia*) of various descriptions. He caused the horse, arrayed in its splendid furniture, to be led up to the high altar of the church; and the chronicler adds that the Turkish armour, the shield, and the saddle were still preserved there, and shown to the people, who came from all parts of the country to behold them. Alexander reigned from 1107 till 1124; and this account is written in the reign of his brother and successor, David I.*

But the most precious gift which Europe obtained from the East within the present period was the knowledge of the art of rearing and managing the silk-worm. Cloth of silk had long been known in England and other European countries, to which it was brought in a manufactured state from Greece and other parts of the East. Afterwards the Saracens introduced the art of weaving silk into Spain. The silk-worm, however, was first brought from Greece, in 1146, by Roger, the Norman king of Sicily, who, in an expedition which he led against Athens, Thebes, and Corinth, carried off a great number of silk-weavers from these cities, and settled them in his capital of Palermo. From them the Sicilians learned both how to weave the cloth and how to rear the worm; and within twenty years from this time the silk fabrics of Sicily were celebrated over Europe. It is not till some centuries later that we have any accounts of the establishment of any branch of the manufacture in this country; but from about this time we find silks becoming much more abundant in England as well as in the other countries of Europe than formerly—and they must now have been imported, probably from Spain, Sicily, and Italy, as well as from Asia, in considerable quantities.

It so happens that rather more information has come down to us respecting the commerce of Scotland than of England during the first half of the twelfth century. We have not only some very interesting notices respecting David I., who reigned

* Madox, Hist. Exchcq., p. 174.

* Extracts from the Register of St. Andrew's, printed in Pinkerton's Inquiry, i. 464. The circumstance is also mentioned by Wynton, who is, however, a much later authority.

from 1124 till 1153, from the historian Ailred, or Aldred, who was educated in Scotland along with Prince Henry, David's eldest son; but we have also a collection of the laws and customs of the burghs of Scotland, which professes to be as old as the reign of the same king, and is generally admitted to be, in the greater part, of that antiquity. Ailred celebrates the attention of David to foreign commerce. He exchanged, he says, the produce of Scotland for the wealth of other kingdoms, and made foreign merchandize abound in his harbours. Among the laws of the burghs attributed to him the following may be quoted as referring to trade with other countries:—By chap. 10, all goods imported by sea are ordered not to be sold before being landed, except salt and herrings; by chap. 18, foreign merchants are prohibited from buying wool, hides, or other goods, from any but burgesses; and by chap. 48, the lands of all persons trading to foreign countries are exempted from seizure for any claim whatever during their absence, unless they appeared to have withdrawn on purpose to evade justice. From this regulation it would appear that some of the Scottish merchants already traded themselves to foreign parts. Another of these burgh laws prohibits all persons except burgesses from buying wool for dyeing, or making into cloth, or for cutting cloth for sale, except the owners of sheep, who might do with their own wool what they chose. The manufacture of woollen cloth had, therefore, been by this time introduced into Scotland. The art had probably been taught to the inhabitants of that country by settlers from England. William of Newbury, writing about twenty years after the death of David, says that the towns and burghs of Scotland were then chiefly occupied by English inhabitants. We know, too, that in the next reign numbers of Flemings left England and took refuge in Scotland. "We can trace the settlement of these industrious citizens," says Mr. Tytler, "during the twelfth and thirteenth centuries, in almost every part of Scotland; in Berwick, the great mart of our foreign commerce; in the various towns along the east coast; in St. Andrews, Perth, Dumbarton, Ayr, Peebles, Lanark, Edinburgh; and in the districts of Renfrewshire, Clydesdale, and Annandale. There is ample evidence of their industrious progress in Fife, in Angus, in Aberdeenshire, and as far north as Inverness and Urquhart. It would even appear, from a record of the reign of David II., that the Flemings had procured from the Scottish monarchs a right to the protection and exercise of their own laws. It has been ingeniously conjectured that the story of Malcolm IV. having dispossessed the ancient inhabitants of Moray, and of his planting a new colony in their stead, may have originated in the settlement of the Flemings in that remote and rebellious district.* The early domestic manufactures of our country, the woollen fabrics which are mentioned by the statutes of David, and the dyed and shorn cloths which appear in the charter of William the Lion to the burgh of Perth, must have been greatly improved by the superior dexterity and knowledge of the Flemings; and the constant commercial intercourse which they kept up with their own little states could not fail to be beneficial in imparting the knowledge and improvements of the continental nations into the remoter country where they had settled."* A manuscript in the Cottonian Library, the work of a contemporary writer, is quoted by Mr. Macpherson for the fact, that, in the reign of David I., the Frith of Forth was frequently covered with boats manned by English, Scottish, and Belgic fishermen, who were attracted by the great abundance of fish (most probably herrings) in the neighbourhood of the island of May. Anderson speaks of the Netherlanders resorting to Scotland so early as about the year 836, for the purpose of buying salted fish of the Scotch fishermen;† but his authority for this statement is not known. Mr. Macpherson considers the passage in the Cottonian Manuscript to be "the very first authentic and positive notice of a fishery, having any claim to consideration as a commercial object, upon the North-British coast." He also doubts if it be not "the earliest notice of English fishermen going so far from their own ports, on a fishing voyage, if they were indeed subjects of England; for in the age of the writer here quoted the Scottish subjects on the south side of the Frith of Forth were called English."‡

The long reign and able and successful government of Henry II. not only enabled the commerce of England to recover from the depression under which it had languished during the whole of the turbulent and miserable reign of his predecessor, but eventually raised it to an extent and importance which it had certainly never attained either since the Conquest or before it, at least since the departure of the Romans. The intercourse, in particular between this country and France, must immediately have been placed upon a new footing, and no doubt greatly augmented, both by the restoration of the old connexion with Normandy, and still more by Henry's acquisition through his marriage of the great Duchy of Aquitaine, which gave the English crown the dominion of all the French coast from Picardy to the Pyrenees. Some years afterwards the conquest of Ireland, and the establishment in that island of a numerous English population, must have also considerably extended the range, or at least added to the activity, of English commerce in that other direction.

In several contemporary writers we find notices of the commerce of London, and also of other English cities, in this reign. Henry II., in a charter which is without date, but which was probably granted soon after he came to the throne, confirmed to the citizens of London all the privileges which they enjoyed under his grandfather,

* See ante, p. 543.

* History of Scotland, ii. 287.
† Origin of Commerce, i. 77. (Edit. of 1787.)
‡ Annals of Commerce, i. 325.

with some others in addition, none of which, however, have any particular reference to the commerce of the city. The fullest and most curious account we have of London at this period is that given in the introduction to a Latin Life of Becket by a monk of Canterbury, of Norman descent, named William Fitz-Stephen, or Stephanides, as he calls himself in Latin, which appears to have been written about 1174. He says that no city in the world sent out its wealth and merchandize to so great a distance; but he has not recorded either the description of goods that were thus exported or the countries to which they were sent. Among the articles, however, which were then brought to London by foreign merchants, he enumerates gold, spices, and frankincense from Arabia; precious stones from Egypt; purple cloths from India; palm-oil from Bagdad; furs and ermines from Norway and Russia; arms from Scythia; and wines from France. The citizens he describes as distinguished above all others in England for the elegance of their manners and dress and the magnificence of their tables. It was in this reign, it may be observed, that London first became decidedly, what Fitz-Stephen calls it, the capital of the kingdom of England (*regni Anglorum sedes*). Winchester, the ancient royal seat of the West Saxons, although it was the place where the early Norman kings kept their treasury, had begun to decline even before the Conquest, and had sustained such calamities in the civil wars of the time of Stephen that it was never afterwards in a condition to dispute the ascendancy of its rival on the Thames. At this time, according to Fitz-Stephen, and his account is confirmed by Peter of Blois, there were, in the city and suburbs, thirteen large conventual churches and 126 parochial ones. The archdeacon says that the population was only 40,000; but this is not absolutely inconsistent with the statement of Fitz-Stephen, that in the reign of Stephen there issued from the city, of fighting men, no fewer than 60,000 foot and 20,000 horse, since the army assembled in the city, or raised under the orders of its authorities, might very possibly greatly exceed the number of the actual inhabitants. It is most probable, however, that there is an error in the numbers found in Fitz-Stephen's text as it has come down to us. He adds, that the dealers in the various sorts of commodities, and the labourers and artizans of every kind, were to be found every day stationed in their several distinct places throughout the city, and that a market was held every Friday in Smithfield for the sale of horses, cows, hogs, &c. At this time Ludgate, now far within Temple Bar, was the west end of London; the space from thence to Westminster was a tract of fields and gardens: Moorfields was a large lake of water, into which ran several streams turning mills; the rising grounds towards Pentonville and Islington were covered with corn and grass; and a large district of country beyond was a forest, that had probably stood since the creation, in which the citizens hunted wild-boars and other game. According to Fitz-Stephen, the citizens of London were distinguished from those of other towns by the appellation of barons; and Malmsbury, an author of the same age, also tells us that, from their superior opulence and the greatness of the city, they were considered as ranking with the chief people or nobility of the kingdom. "It is filled," he adds, "with merchandize brought by the merchants of all countries, but chiefly those of Germany; and, in case of scarcity of corn in other parts of England, it is a granary where the article may be bought cheaper than anywhere else." It was in London that the Jews chiefly resided, and many of them were no doubt among its wealthiest citizens.

The following are some of the most remarkable particulars that are to be collected from contemporary authorities respecting other English cities at this period. Exeter, according to Malmsbury, was a magnificent city, filled with opulent citizens. Henry of Huntingdon states, that in consequence of its being the principal port for the mineral productions of the adjacent country, it was so much resorted to by foreign merchants, that everything that could be desired might be purchased there in abundance. Bristol is mentioned by Malmsbury as having a great trade, not only with Ireland, but also with Norway and other foreign countries. Both Gloucester and Winchester are celebrated for the excellence of their wines made from the grapes of the country. For foreign wines, again, Chester would appear to have been one of the chief ports, if we may trust the testimony of a monk of that city named Lucian, whom Camden quotes. According to this authority, ships repaired to Chester in great numbers, not only from Ireland, but also from Gascony, Spain, and Germany, and supplied the inhabitants with all sorts of commodities; "so that," adds Lucian, "being comforted by the favour of God in all things, we drink wine very plentifully; for those countries have abundance of vineyards." Dunwich, on the coast of Suffolk, now reduced by the encroachments of the sea to an insignificant village, is described by William of Newburgh as a famous sea-port town, stored with various kinds of riches; and in the reign of John this town is stated to have paid twice as much rent to the king as any other upon the neighbouring coast. Norwich is described in general terms by Malmsbury as famous for its commerce and the numbers of its population. Lynn is described by Newburgh as a city distinguished for commerce and abundance, the residence of many wealthy Jews, and resorted to by foreign vessels. Lincoln, Malmsbury speaks of as having become one of the most populous seats of home and foreign trade in England, principally in consequence of a canal of about seven miles in length, made by Henry I., from the Trent to the Witham, which enabled foreign vessels to come up to the city. Grimsby is noted by the Norwegian, or Icelandic writers, as an emporium resorted to by merchants from Norway, Scotland, Orkney, and the Western Islands. York is

mentioned by Malmsbury as resorted to by vessels both from Germany and Ireland, though surely it lay very much out of the way of any trade with the latter country. Whitby, Hartlepool, and some other towns on the same part of the east coast, appear to have possessed shipping. Berwick, as already noticed, was the most eminent of the Scottish towns for foreign commerce. It had many ships. Perth, however, was at this time, properly speaking, the capital of Scotland; and Alexander Neckham, abbot of Cirencester, a Latin poet of this age, says that the whole kingdom was supported by the wealth of that city. Inverleith (now Leith), Striveling (now Stirling), and Aberdeen, are also mentioned in charters as places at which there was some shipping and trade, and where customs were collected.* Glasgow was as yet a mere village; it was made a burgh, subject to the bishop, by William the Lion, in 1175; but in the charter there is no mention of a guild, of any mercantile privilege, or of any trade whatever, except the liberty of having a weekly market. Edinburgh, though it was probably made a burgh by David I., was of little note till the middle of the fifteenth century. In Ireland, Dublin, which Henry II. granted by a charter in 1172 to be inhabited by his men of Bristol, is spoken of by Newburgh as a noble city, which, it is added, somewhat hyperbolically, might be considered as almost the rival of London for its opulence and commerce.

There are two laws of Henry II. relating to commerce, that deserve to be here mentioned. Henry I. had so far mitigated the old law or custom, which made all wrecks the property of the crown, as to have enacted, that if any human being escaped alive out of the ship, it should be no wreck; and his grandson still farther extended the operation of the humane principle thus introduced, by decreeing, that if either man or beast should be found alive in any vessel wrecked upon the coasts of England, Poictiers, Gascony, or the isle of Oleron, the property should be preserved for the owners, if claimed within three months. The other law is the last clause of the statute called the 'Assize of Arms,' published in 1181: it very emphatically commands the Justices in Eyre in their progress through the counties, to enjoin upon all the lieges, as they love themselves and their property, neither to buy nor sell any ship for the purpose of its being carried out of England, and that no person should convey, or cause to be conveyed away any mariner out of England. It has been inferred, from these regulations, that both English ships and English seamen were already held to be superior to those of other countries; but they can only be considered as showing that the naval force of the kingdom had now come to be looked upon as an important arm of its strength, and was the object of a watchful and jealous superintendence.

The only articles that are mentioned as imported into England from foreign countries in this period, are the spiceries, jewels, silks, furs, and other luxuries enumerated by Fitz-Stephen, of which there could not be any very extensive consumption; some woad for dyeing, and occasionally corn, which was at other times an article of export. The exports, on the other hand, appear to have been of much greater importance and value. Henry of Huntingdon enumerates as being annually sent to Germany by the Rhine, great cargoes of flesh and of different kinds of fish (especially herrings and oysters), of milk, and, above all, of what he calls "most precious wool." He also mentions mines of copper, iron, tin, and lead as abundant; and it appears from other authorities that there was a large exportation both of lead and tin. The roofs of the principal churches, palaces and castles, in all parts of Europe, are said to have been covered with English lead; and the exports of tin from mines belonging to the crown in Cornwall and Devonshire furnished at this time and for ages afterwards a considerable portion of the royal revenue. It is probable also that hides and skins, and woollen cloths were exported, as well as wool. All this could not be paid for by the few articles of luxury above enumerated; and it may, therefore, be concluded that a large part of the annual returns derived by the country at this time from its foreign trade was received in the form of money or bullion. This supposition is confirmed by the account of Huntingdon, who expressly informs us that the Germans paid for the wool and provisions they bought in silver; on which account, he adds, that metal is even more plentiful in England than in Germany, and all the money of England is made of pure silver. The balance of trade, then, was what is commonly called in favour of England, unreasonably enough, as if nothing were wealth but gold and silver. The country at this time did not really become richer by exchanging its produce for money, than it would have done by taking foreign produce or manufactures in exchange for it. Nor, even if we should hold money to be the only true wealth, could it have accumulated in the country with more rapidity or to a greater amount under the one system than under the other; for a country in a given social condition can only retain a certain quantity of money in circulation within it, and that quantity it always will obtain, if it is able to obtain anything else of equivalent value. Money is necessary, and profitable, to a certain extent, just as shoes or hats are; but beyond that extent, neither they nor it are either profitable or necessary—that is to say, something else for which the article could be exchanged would be more useful. The money anciently obtained by England through its foreign trade did not enrich the country, or even remain in it; so much of it as was not required for the purposes of circulation was as sure to find its way abroad again, as the stone thrown up into the air is to return to the ground.

If the commerce of England had not struck far deeper root, and grown to far greater magnitude and strength at the time of the death of Henry II.

* See these and other facts collected, and the authorities cited, by the laborious and accurate Macpherson, Ann. of Com. i. 330–333.

than at that of Henry I., somewhat more than half a century before, the reign of Richard would have been, in proportion to its length, nearly as ruinous to it as was the disorderly and distracted reign of Stephen. All the activity and resources of the country were now turned from trade and industry to the wasteful work of war, which was carried on, indeed, in a foreign and distant land, and therefore did not produce the confusion and desolation within the kingdom that would have resulted from a civil contest; but, on the other hand, was, doubtless, on that account attended with a much larger expenditure both of money and of human life. Yet even from Richard's warlike preparations, and the pecuniary burdens which his expedition in other ways brought upon his people, we may collect a few notices of interest in regard to the progress of the commerce, navigation, and wealth of the country. The fleet which carried out his troops to the Holy Land was probably, as already observed, by far the most magnificent that had ever as yet left the English shores, although some of those of former times may have consisted of a greater number of vessels. But the barks, amounting, it is said, to some thousands, in which the Conqueror brought over his army from Normandy, and the four hundred vessels in which Henry II. embarked his forces for the conquest of Ireland, not to speak of the more ancient navies of Edgar and Ethelred in the Saxon times, must have been craft of the smallest size, or what would now be merely called boats. Besides a crowd of vessels of this description—the number of which is not given—Richard's fleet, when it assembled in the harbour of Messina, is said to have consisted of thirteen large vessels, called busses or dromons, fifty-three armed galleys, and a hundred carricks, or transports.* All these vessels were constructed both to row and to sail, the dromons having three sails, probably each on a separate mast, and both they and the galleys having, as it would appear, in general two tiers or banks of oars. "Modern vessels," says Vinisauf, "have greatly fallen off from the magnificence of ancient times, when the galleys carried three, four, five, and even six tiers of oars, whereas now they rarely exceed two tiers. The galleys, anciently called *liburnæ*, are long, slender, and low, with a beam of wood fortified with iron, commonly called a spur, projecting from the head, for piercing the sides of the enemy. There are also small galleys called galeons, which, being shorter and lighter, steer better, and are fitter for throwing fire."† The fire here alluded to is the famous Greek fire, the great instrument of destruction at this time, both in encounters at sea, and in assaults upon fortified places on shore. This expedition of Richard was the first in which an English fleet had accomplished so long and various a navigation; and, under the conduct of so energetic a commander, it could not fail to give an impulse to the naval progress of the country, and to raise both the military skill and the seamanship of English sailors.

The kingdom had not yet recovered from the exhausting exertions it had made in fitting out this great fleet and army, when it was called upon to raise what was in those days an immense sum for the king's ransom. The agreement was, that before Richard's liberation, his gaoler, the emperor, should be paid 100,000 marks of silver, besides 50,000 more afterwards—an amount of money then deemed so great, that a contemporary foreign chronicler, Otto de St. Blas, declines mentioning it, as he could not, he says, expect to be believed. It does not clearly appear how much of the 150,000 marks was paid in all; but it is stated that 70,000 marks of silver, equal in weight to nearly 100,000*l.* of our money, were remitted to Germany before the king was set free. The grievous exactions by which this money was raised have been alluded to in a former chapter.* It was not all obtained till three successive collections had been made. Four years before this, it may be noted, in the beginning of Richard's reign, the much poorer kingdom of Scotland had repurchased its independence at the cost of 10,000 marks.

A few laws for the regulation of trade are recorded to have been enacted by Richard after his return home. The same year in which he returned, a prohibition was issued against the exportation of corn, "that England," as it was expressed, "might not suffer from the want of its own abundance." The violation of this law is stated to have been punished in one instance with merciless severity: some vessels having been seized in the port of St. Valery, loaded with English corn for the king of France, Richard burned both the vessels and the town (which belonged to that king), hanged the seamen, and also put to death some monks who had been concerned in the illegal transaction. He then, after all this wild devastation, divided the corn among the poor. In 1197 also, a law was passed for establishing a uniformity of weights and measures, and for regulating the dyeing and sale of woollen cloths. The business of dyeing, except in black, it was enacted, should only be carried on in cities and boroughs, in which alone also any dyeing stuffs, except black, were allowed to be sold. It appears that the duties upon woad imported into London in 1195 and 1196, amounted to 96*l.* 6*s.* 8*d.* "If London alone," observes Macpherson, "imported woad to an extent that could bear such a payment (and it will afterwards appear that but a small part of the whole woad imported arrived in London), the woollen manufacture, to which it was apparently mostly confined, must have been somewhat considerable. But there is reason to believe, that but few *fine* woollen goods were made in England, and that the Flemings, who were famous at this time for their superior skill in the woollen manufacture, as is evident from the testimony of several of the English historians of this age, continued for a series of ages to supply most of the western

* See ante, p. 494.
† Translation in Macpherson, Ann. of Com. i. 352.

* See ante, p. 510.

parts of Europe, and even some of the Mediterranean countries, with fine cloths, which the Italians called French cloths, either as reckoning Flanders a part of France (as, indeed, in feudal language it was), or because they received them from the ports of the south coast of that country." Much of the wool used in Flanders, however, appears to have been obtained from England. In the History, indeed, which bears the name of Matthew of Westminster, it is said that all the nations of the world used at this time to be kept warm by the wool of England, which was made into cloth by the Flemish manufacturers. In the patent of incorporation of the guild of weavers in London by Henry II., granted in the thirty-first year of his reign, there is a prohibition against mixing Spanish with English wool in the making of cloth, from which it may be inferred that the wool of England was in this age of superior quality to that obtained from Spain.

From the commencement of his reign, John appears to have affected to favour the interests of the part of the community connected with trade, now daily rising into more importance, and to have courted their support against the power of the nobility and the clergy. Immediately after his accession, he granted three charters to the citizens of London; the first generally confirming all their ancient rights and privileges; the second empowering them to remove all kidells, or wears, for catching fish, from the rivers Thames and Medway, the navigation of which had been much impeded by these erections, set up by the keeper of the Tower and others; and the third confirming to them the fee-farm of the sheriffwicks of London and Middlesex at the ancient rent, and also giving to them the election of the sheriffs. For these charters he received 3000*l.* He also, probably at the same time, addressed letters to the most important commercial towns throughout the kingdom, promising that foreign merchants of every country should have safe conduct for themselves and their merchandize in coming into and going out of England, agreeably to the due right, and usual customs, and should meet with the same treatment in England that the English merchants met with in their countries.* The places to which these letters were sent were the towns of London, Winchester, Southampton, Lynn, the Cinque Ports, and the counties of Sussex, Kent, Norfolk, Suffolk, Dorset, Somerset, Hants, Hertford, Essex, Devon, and Cornwall; "whence it appears," observes Macpherson, "that the south coast, and the east coast only as far as Norfolk, were esteemed the whole, or at least the chief, of the commercial part of the country." It is certain, however, that several towns beyond these limits had already risen to considerable commercial importance. In a list of towns which in the year 1205 paid the tax called the quinzième, or fifteenth, which appears to have been a species of excise or tallage exacted from merchants, we find enumerated the following places in the northern part of the kingdom:—Newcastle in Northumberland; Yarum, Cotham, Whitby, Scarborough, Headon, Hull, York, and Selby, in Yorkshire; and Lincoln, Barton, Ymmingham, Grimsby, and Boston, in Lincolnshire. The other towns in the list are Lynn, Yarmouth, and Norwich, in Norfolk; Dunwich, Orford, and Ipswich, in Suffolk; Colchester in Essex; Sandwich and Dover in Kent; Rye, Winchelsea, Pevensey, Seaford, and Shoreham, in Sussex; Southampton in Hampshire; Exmouth and Dartmouth in Devonshire; Esse (now Saltash), and Fowey, in Cornwall; and London. It will be observed, however, that these are all coast towns, or places having a river communication with the sea; and it surely cannot be supposed that there were not at this time some trading towns in the interior of the country. Either the quinzième was not a duty payable, as has been asserted, by "all persons who made a business of buying and selling, however trifling their dealings might be,"* or this is not a complete list of the places from which it was collected. Besides, not a single place on the western coast of the kingdom is mentioned, not even Bristol or Chester. We should be disposed to conjecture that the quinzième was only an impost upon foreign commerce, and even perhaps only upon some particular branch or branches of that. This supposition would make somewhat more intelligible the proportions of the whole amount collected which are set down as received from particular towns. It appears that the whole tax at this time yielded about 5000*l.* per annum; while of this total Lynn paid 651*l.*, Southampton 712*l.*, Boston 780*l.*, and London only 836*l.* It cannot for a moment be believed that in their general mercantile wealth London and Boston stood in this relation to each other. To add to the perplexity, we find that three years after this time the merchants of London purchased from the king an entire exemption from paying the quinzième for the small sum of 200 marks, that is to say, for less than a sixth part of the amount of the tax for one year. We must, in these circumstances, suppose the exemption to have been accorded as a mark of royal favour to the city, and the 200 marks to have been paid merely as an acknowledgment. Newcastle is the only other town the amount paid by which is mentioned; it is set down as paying 158*l.*, and must therefore have already grown to considerable consequence, although only founded, as we have seen, little more than a century before this time.† Hull also appears for the first time as a place of trade only in the close of the last reign.

That several of the Scotch burghs were at this period possessed of very considerable opulence is testified by their having, in 1209, contributed 6000 marks of the 15,000 which William the Lion bound himself to pay to John by the treaty of Berwick.‡ In this age Mr. Macpherson calculates that 6000 marks would have purchased in Scotland

* Maitland's Hist. of London, i. 73—75.—Hakluyt's Voyages, i. 129.

* Macpherson, Ann. of Com. i. 371.
† See ante, p. 536.
‡ Ibid. p. 545.

about 240,000 bolls of oats, or 60,000 bolls of wheat. Among other countries, a trade with Norway is known to have been carried on by the Scotch in the beginning of the thirteenth century. Among the articles which are mentioned in the monastic chartularies of the country as paying tithe at this time are wool, corn, butter, cheese, cattle, fish, and flax. From the occurrence of the last article it may be inferred that some linen was already made in Scotland.

It was in the reign of John, as already related, that their first great naval victory was gained by the English, at the battle of Damme, or of the Sluys, as it is sometimes called, fought in 1213.* As yet, however, the country possessed nothing that could properly be called a navy. The royal navy usually consisted merely of merchant ships collected from all the ports of the kingdom, each of which, as we have seen, was bound, when required by the king, to furnish him with a certain number. In pressing emergencies, indeed, the king seized upon the whole mercantile shipping of the kingdom, or as much of it as he required; "so that in those times," as the historian of commerce observes, "the owners could never call their vessels their own. A striking illustration of the king's claim of right to the services of all merchant ships appears in a letter, written by Edward II. to the king of Norway, upon the detention of three English vessels, which he concludes by saying, that he cannot quietly put up with the vessels belonging to his kingdom, *which ought at all times to be ready for his service*, being detained in foreign countries."† John appears to have possessed merely a few galleys of his own.

In this reign we find the earliest mention of what may be called *letters of credit*, the first form, it may be supposed, of *bills of exchange*, the introduction and general employment of which very soon followed. In a document printed in the Fœdera, John, under date of 25th August, 1199, at Rouen, engages to repay in four instalments, in the course of two years, a sum of 2125 marks, which had been advanced by a company of merchants of Placentia to the bishops of Anjou and Bangor, on the faith of the letters of King Richard. Afterwards John himself repeatedly raised money by such letters, addressed to all merchants, whereby he bound himself to repay the sums advanced to his agents to the amount named, at such time as should be agreed upon, to any person presenting his letter, together with the acknowledgment of his agents for the sum received by them. Mr. Macpherson is of opinion that, as there is no mention of interest in any of those letters, it must have been discounted when the money was advanced. It is remarkable that although at this time, in England, no Christian was permitted by law to take interest, or usury as it was called, even at the lowest rate, upon money lent, the Jews in this respect lay under no restriction whatever. The interest which they actually received, accordingly, was sometimes enormous. In the large profits, however, which they thus made the crown largely shared, by the power of arbitrarily fining them, which it constantly exercised. William of Newburgh frankly speaks of them as well known to be the royal usurers; in other words, their usury was a mode of suction, by which an additional portion of the property of the subject was drawn into the royal treasury: and this sufficiently accounts for the manner in which they were tolerated and protected in the monopoly of the trade of money-lending.

Very few direct notices of the state of trade in this reign have come down to us. Licenses are recorded to have been granted to the merchants of various foreign countries to bring their goods to England, on due payment of the quinzième, which would thus appear to have been a customs duty, payable probably both on the import and export of commodities. The Flemings were the chief foreign traders that resorted to the country, and next to them, apparently, the French. In 1213 the duties paid on woad imported from foreign countries amounted to nearly 600*l.*; of which the ports in Yorkshire paid 98*l.*; those in Lincoln, 47*l.*; those in Norfolk and Suffolk, 53*l.*; those in Essex, 4*l.*; those in Kent and Sussex (exclusive of Dover), 103*l.*; Southampton, 72*l.*; and other places, not named, 214*l.* The woad, it may be presumed, was almost wholly used in dyeing cloths; but much cloth would also be both exported and worn at home without being dyed.

The freedom of commerce was sought to be secured by one of the clauses of the Great Charter (the forty-first), which declared that all merchants should have safety and security in going out of, and coming into England, and also in staying and travelling in the kingdom, whether by land or by water, without any grievous impositions, and according to the old and upright customs, except in time of war, when, if any merchants belonging to the hostile country should be found in the land, they should, at the commencement of the war, be attached, without injury of their persons or property, until it should be known how the English merchants who happened to be in the hostile country were treated there: if they were uninjured, the foreign merchants should be equally safe in England. This was as reasonable and even liberal a regulation as could have been desired on the subject. By other clauses, it was declared, that the debts of a minor should bear no interest during his minority, even if they should be owing to a Jew; that London and other cities and towns should enjoy their ancient privileges; that no fine should be imposed upon a merchant to the destruction of his merchandize; and that there should be a uniformity of weights and measures throughout the kingdom.

The only coined money of this period, as far as is certainly known, was the silver penny, which, as at present, was the twelfth part of a shilling;

* See ante, p. 525.

† Macpherson's Ann. of Com. i. 379.

the shilling being also, as it has ever since been, the twentieth part of a pound. The pound, however, was still a full pound of silver, according to the ancient Saxon or German standard of eleven ounces and a quarter troy, or 5400 grains to the pound.* The same amount of silver is now coined, as explained in the former Book, into 2*l.* 16*s.* 3*d.* sterling; and that, therefore, was the amount of money of the present denominations in the early Norman pound. The shilling, consequently, being the twentieth part of this, was equivalent to 2*s.* 9¾*d.* of our present money; and the penny, being the twelfth part of the shilling, or the 240th part of the pound, was still of the same value as in the Saxon times, and contained an amount of silver equal to a trifle more than what might be purchased by 2¾*d.* of our money. But both the pound and the shilling were only money of account; there were no coins of these denominations. It is doubtful, also, if there were any coins of inferior value to the silver penny; no specimens of any such have been discovered. Both halfpence and farthings, however, are mentioned in the writings of the time; and a coinage of round halfpennies by Henry I. is expressly mentioned by Florence of Worcester, Simeon of Durham, and Hoveden. It has been supposed that the people before, and also perhaps after this, used to make halfpence and farthings for themselves, by breaking the penny into halves and quarters, which, it has been said, they were more easily enabled to do from the coin having on one side of it a cross very deeply indented. Leake, however, has remarked that "the story of the cross being made double, or so deeply impressed for the conveniency of breaking the penny into halves and quarters, is disproved by the coins now extant, whereon the crosses generally terminate at the inner circle, and, instead of being impressed, are embossed, which prevents their being broken equally."† It is most probable, perhaps, that both halfpence and farthings were actually coined, though none have come down to us.

Other denominations of money, however, than the above are also mentioned. In the early part of the period, and especially in the reign of the Conqueror, the Saxon mode of reckoning appears to have remained in general use. "In his laws," says Ruding, "the fines are regulated by pounds, oras, marks, shillings, and pence. The shillings are sometimes expressly stated to be English shillings of four pennies each. But in Domesday Book various other coins or denominations of money are to be found, such as the mite, farthing, halfpenny, mark of gold and silver, ounce of gold, and marsum. There seems also to have been current a coin of the value of half a farthing, which was probably the same as the mite above mentioned."* The values of the Saxon coins here enumerated have been stated in the former Book.† The mark, it may be added, long remained a common denomination, and was at all times reckoned two-thirds of the pound. Some foreign coins, especially Byzantines, which were of gold, are also supposed to have been still in use, as in the Saxon times.

The coins of the earlier Norman kings are of great rarity. Those issued by the Conqueror

Silver Penny of William I. From specimen in Brit. Mus.

"were made," Ruding thinks, "to resemble those of Harold in weight and fineness, and some of them in type," in conformity with the policy upon which William at first acted, of affecting to be the regular successor of the Saxon kings. The coins of the two Williams can scarcely be distinguished, the

towns; and the name of the place where it was struck continues to be commonly found on the coin. In the lawless times of Stephen all the bishops and greater barons are said to have very generally coined and issued money of their own; every castle had its mint; and the money thus thrown into circulation is alleged to have been so debased that, in ten shillings, not the value of one in silver was to be found. Stephen himself is

SILVER PENNY OF STEPHEN. From specimen in Brit. Mus.

also charged with having, in his necessities, resorted to the expedient of diminishing the weight of the penny. When Henry II. came to the throne, however, he put down all this base money; and

SILVER PENNY OF HENRY II. From a fine specimen in Brit. Mus. The coins of this reign are very numerous, but in most cases badly struck.

none of the baronial coins of Stephen's reign are now known to exist, with the exception of a few bearing the names of his son Eustace, and of his brother, the Bishop of Winchester, which were probably issued by the royal license.

Henry I., on his accession, abolished the tax of moneyage, which had been introduced either by the Conqueror or his son Rufus; and he afterwards effected a reform of the coinage, which had been greatly corrupted by the frauds of the moneyers. Henry II. also called in all the old coins in circulation in the year 1180. No coins are known to be in existence either of Richard I. or John, as kings of England, although there are some of the former as Earl of Poictou and as Duke of Aquitaine, and of the latter as lord of Ireland.

An English penny of Richard's is given in various collections of plates of coins, but is admitted to be a forgery. Mr. Ruding, speaking of it and another of John, says—"These two pennies are now well known to be the fabrication of a late dealer in coins, who pretended to have discovered them amongst some which were found upon Bramham Moor in Yorkshire. He sold one of them for thirty guineas; the other remained in his possession, and was disposed of with the rest of his collection, after his death." The man's name was White. *

The earliest Scotch coins that have been discovered are some of Alexander I., who began his reign in 1107. The Scotch money appears to have, at this period, entirely corresponded with the English;

IRISH SILVER PENNY OF JOHN. From a specimen in Brit. Mus.

and, indeed, the circulation of Scotland probably consisted in great part of English coins.

In regard to the real or efficient value of the money of those days, as compared with that of our present money, it is, as we have before had occasion to remark, impossible to make any statement which shall be universally applicable. The question of the value of money at any given period is merely a question of the price of a particular commodity—namely, the metal of which the money is made. But we have no means of estimating with precision the price of any commodity whatever, in the scientific sense of that term. All that we can do is to state it relatively to the price of some other commodity. This is all that we really do when we state the money-price of anything. That is only a statement of the relation between the price of the article in question and the price of the other article called money. It is no expression either of the general price of either, or of the relation of the price of either to that of any other article whatever. Commodities of all kinds, from causes sufficiently obvious, are constantly changing their relative positions in regard to price; and, therefore, the relation between the prices of any two of them can be no permanent index of the relation between the prices of any two others. In other words, the money-price of any one article at a particular time will give us no certain information as to the money-price either of all other articles, or of any other article.

Although no precise estimate, however, can be arrived at of the general value of money in former times as compared with its present value, many important conclusions in regard to the state of society, and the command possessed by the several classes of the population over the necessaries and comforts of life, may be drawn from the notices that have been preserved of the money-prices of commodities and labour at different periods. But these inferences will be more fitly introduced in our chapter on the Condition of the People. The only point which properly belongs to our present subject is that of the relative values of gold and silver in the period we have been reviewing. The relation between the values of these two metals has fluctuated considerably in different ages. In ancient Rome, about the commencement of our era, it seems to have been usually as one to ten. About the fourth century, however, silver had become so much more plentiful, or gold so much scarcer, that fourteen pounds eight ounces of the

* See Ruding's Ann. of the Coinage, ii. 35 and 50, and v. 98 and 262.

former were exchanged for a pound of the latter. In England, in the Saxon times, the legal proportion appears to have been as one to twelve. After the Conquest, however, gold became cheaper; and, about the middle of the twelfth century, one pound of it was exchanged for nine pounds of silver. In the beginning of the thirteenth century we find the value of silver rated to that of gold in the proportion of ten to one. At present the proportion is about as fourteen to one.

Our notice of the useful arts within the six centuries which the Saxon period comprises will, in some degree, render it unnecessary to enter into a lengthened account of their state from the Conquest to the death of King John. A century and a half is an interval sufficiently long to produce and consolidate political changes; but the arts of life, under ordinary circumstances, move with a slower step, and their progress is thwarted by individual habits, and prejudices, and old customs. The power which effects, with little difficulty, alterations of a constitutional nature cannot be brought to act with the same force upon the common course of life, and time is required to work silently any material changes in its character. The devastations of the Conqueror at the commencement of the present period, the wretchedness of the people during the nineteen turbulent years of Stephen's reign, and the lawlessness which distinguished the unprincipled reign of King John at its close, together with many intermediate causes arising from the unsettled state of society, were sufficient to retard improvement either of handicrafts or agriculture. There were, however, some other causes of a beneficial kind which served to counteract the evils of the times. The instability of Stephen's position led to concessions which were subsequently favourable to improvement. Stephen's reign had been preceded by five-and-thirty years of comparative tranquillity, and it was fortunately followed by a reign of the same length, presenting the same contrast to the intermediate period.

As in the Anglo-Saxon times, land was still held during the present period in large masses, the great landowners residing in the midst of their possessions, and reserving to themselves a portion of their

Reaping and Gleaning. —Royal MS. 2 B. vii.

demesne, which they cultivated by their own hinds. The following are the descriptions of rural labourers mentioned in Domesday Book, from which we may infer the ordinary divisions of rural employments soon after the Conquest: ploughmen, shepherds, neat-herds, cowherds, goatherds, swineherds, and keepers of bees.*

The population to be fed from the produce of the soil was probably under two millions, and an unfavourable season always occasioned severe distress; while in our own time the soil of Great Britain is capable, in ordinary seasons, of sustaining a population of sixteen millions. Still the importance of agriculture was highly estimated. The Conqueror seems to have been fully aware of the capabilities of the soil, and did not neglect the means of deriving the utmost advantage from its resources. The Saxon chronicler complains of the rapacity which he exercised towards his tenants:—"The king (he says) let his land at as high a rate as he possibly could; then came some other person, and bade more than the former one gave; and the king let it to the man that bade him more. Then came the third, and bade him yet more; and the king let it to hand to the man that bade him most of all; and he recked not how very sinfully the stewards got it of wretched men."*

The use of manures was carried to a greater extent than before, as not only was the old practice of marling the land continued, but the more expensive application of chalk was not uncommon.† Ingulphus notices the spirit with which one of the great landowners, Richard de Rulos, lord of Brunne and Deeping, and chamberlain of the Conqueror, carried on his agricultural operations.

* Sir H. Ellis, Introd. to Domesday Book.

* Ingram's Sax. Chron., p. 291. † Peter of Blois, Ep. v.

THRESHING. Royal MS. 2 B. vii.

CORN-SACKS AND STORE-BASKET. Royal MS. 2 B. vii.

"He was," says Ingulphus, "much addicted to agriculture, and delighted in breeding horses and cattle. Besides enclosing and draining a great extent of country, he embanked the river Welland (which used every year to overflow the neighbouring fields) in a most substantial manner, building many houses upon the bank, which increased so much that, in a little time, they formed a large town called Deeping, from its low situation. Here he planted orchards, cultivated commons, and converted deep lands and impassable quagmires into fertile fields, rich meadows, and pastures."

To the monks belong the praise of effecting the greatest improvements in the agriculture of this period. They were, many of them, acquainted with the best modes practised in Normandy, and their intelligence enabled them to apply their knowledge with skill in the cultivation of their own ample estates. Land was the cheapest means of obtaining the favours of the church, and was rich in this description of property; but it was the skill and labour of the monks which gave it value, which drained the marshes, and cleared the woodland. They engaged actively in the labours of husbandry; and even Becket, while he filled the see of Canterbury, was accustomed, during harvest, to go into the fields with the monks of the monasteries where he happened to reside, and to join them in reaping their corn or in making their hay.*

Further to illustrate the part which the clergy took in husbandry, the twenty-sixth canon of the third Council of Lateran, held A.D. 1179, may be quoted. This canon decreed "that all presbyters, clerks, monks, converts, pilgrims, and peasants, when they were engaged in the labours of husbandry, together with the cattle in their ploughs, and the seed which they carried into the field, should enjoy perfect security; and that all who molested or interrupted them, if they did not desist when they had been admonished, should be excommunicated." †

* Chron. Gervas, col. 1400. † Idem. col. 1456.

The draining of the fens of Cambridgeshire and Lincolnshire, which was commenced at this period, proves that, in spite of the insecurity arising from various causes, the spirit of agricultural improvement existed in considerable vigour, and that it only waited for tranquillity and the stimulus of commerce to put forth greater powers. Agriculture does not seem to have been in so advanced a state in Scotland; for we find that, in 1214, a law made respecting the cultivation of the land directed that those who did not possess a sufficient number of oxen should delve as much with hand and foot as would produce enough of corn to support themselves and their families. It would seem, therefore, that at this time a considerable part of the country was only cultivated by the method of spade husbandry. At the same time a law was passed requiring farmers carefully to destroy a weed called "guilde." In Ireland, somewhat earlier, agriculture was probably not much further advanced than amongst the ancient Britons. The food of the people was flesh, fish, and milk; and it is even said that neither bread nor cheese formed any part of their diet.*

It is impossible, at this distance of time, to obtain any certain knowledge of the processes of agriculture in England at this period. In most parts of the country they ploughed their lands twice in summer and once in winter, to prepare them for wheat; but in Wales they were ploughed only once a-year, in March or April, in order to be sown with oats.† Summer fallowing and careful ploughing were confined to England, and the produce would be large in proportion to the care bestowed. The description of stock upon a farm would be regulated by the state of the land. If there were much wood-land many hogs would be kept; while sheep would be more profitable on the uplands and wolds. Goats were kept in parts of the country where they are now seldom seen. The authority for these inferences rests upon a single statement in Domesday Book, in which the stock upon a farm is enumerated. The land was in Hertfordshire, and was held by Hunfrid, who, it appears, possessed 68 head of cattle (animalis), 350 sheep, 150 hogs, 59 goats, and 1 mare. The number of sheep is larger than could have been expected, being greater that that of hogs.‡ Horses, it will be recollected, were not commonly employed in field labour. Hunfrid had as much household stuff (pannos et vasa) as was worth twenty shillings.§

Licenses to export corn, as has already been mentioned, were not unfrequently granted during this period; and though there were frequent famines, they seem to have been occasioned rather by untoward seasons and warlike devastations than by defective husbandry. This part of the subject, and the casualties which agriculture experienced, may be illustrated by a reference to some of the notices in the Saxon Chronicle, in which years of scarcity are carefully recorded.

In 1070, four years after the Conquest, and before the Conqueror had firmly established his power, there was a great famine. In 1082, 1086, and 1087, there were also famines; but these were owing either to one or other of the causes before alluded to. The year 1086, the Chronicler remarks, "was a very heavy season, and a swinkful and sorrowful year in England in murrain of cattle; and corn and fruits were at a stand, and so much untowardness in the weather as a man may not easily think." The following year "was a very heavy and pestilential year in this land;" and the cause is attributed "to the badness of the weather." Then came, says the writer, "so great a famine over all England, that many men died a miserable death through hunger." The year 1089 "was a very late year in corn, and in every kind of fruits, so that many men reaped their corn about Martinmas and yet later." In 1095 the weather was "very unseasonable; in consequence of which, throughout all this land were all the fruits of the earth reduced to a moderate crop." The year 1096 "was a very heavy-timed year through all England; both through the manifold tributes, and also through the very heavy-timed hunger, that sorely oppressed this earth." The succeeding year was "in all things a very heavy-timed year, and beyond measure laborious from badness of weather, both when men attempted to till the land, and afterwards to gather the fruit of their tilth." Again, 1098 "was a very troublesome year, through manifold impositions; and from the abundant rains that ceased not all the year, nearly all the tilth in the marsh-lands perished." Five years afterwards (A.D. 1103) was "a very calamitous year." There was a murrain among the cattle, and a deficiency of the crops of every kind; but the latter misfortune seems to have been occasioned by a violent storm of wind on St. Lawrence's day, which "did so much harm to all fruits as no man remembered that ever any did before." In 1105 the produce of the soil was also injured by the weather. In 1110 the weather was again unfavourable, "by which the fruits of the earth were very much marred, and the produce of the trees over all this land almost entirely perished." In 1111 "was the winter very long, and the season heavy and severe; and through that were the fruits of the earth sorely marred, and there was the greatest murrain of cattle that any man could remember." The next year was fortunately "a very good year, and very fruitful in wood and in field." It was, however, accompanied by a severe mortality amongst men. In 1116 occurred a "very heavy-timed winter, long and strong for cattle, and for all things." The chronicler adds, that "this was a very vexatious and destructive year with respect to the fruits of the earth, through the immoderate rains that fell soon after the beginning of August, ha-

rassing and perplexing men till Candlemas day." It was also noted for a deficiency of the woods in mast, to such an extent "that there was never known such in this land or in Wales."* The next year was "a very blighted year in corn, through the rains, that scarcely ceased for nearly all the year." In 1124 "the seasons were very unfavourable in England for corn and all fruits." A famine ensued in the following year. In 1131 "was so great a murrain of cattle as never was before in the memory of man over all England. That was in neat-cattle and swine; so that in a town where there were ten ploughs going or twelve, there was not one left; and the man that had two or three hundred swine had not one left. Afterwards perished the hen-fowls; then shortened the flesh-meat and the cheese." In 1137 (in Stephen's reign) the writer of the Chronicle observes,—"then was corn dear, and flesh, and cheese, and butter. The earth bare no corn,"—in consequence of the pervading rapine.

It seems impossible to read these notices without entertaining the conviction that the vicissitudes of the seasons were greater in those days than in our own. Years of plenty and scarcity still occur, and with something like regularity, but there is no comparison in the averages of the two periods. An unfavourable season tries severely the present highly-improved system of agriculture; but it is easy to see that when the means of stall-feeding were exceedingly limited, the backwardness of vegetation would be fatal to numbers of cattle which had been supported with difficulty throughout a protracted winter.

It appears from Domesday Book, which was completed twenty years after the Conquest, that there was generally "pasture for the cattle of the village" on land where all enjoyed rights of common. The owners of woodland were accustomed to let at a fixed sum the right of turning hogs into the woods. The charge for pannage was often defrayed by taking one hog in ten: this system also prevailed in Scotland. But money was also paid. The value of a wood was ascertained by the number of hogs it would support;† and a wood yielding neither acorns nor beech-mast was comparatively of little value. We find, however, that there were in some parts of the country young plantations; a fact which seems a little inconsistent with this notion. The oak is mentioned in Domesday Book only once;‡ a grove of ash-trees occurs in one county, and many osieries existed.

* The fluctuation in produce of this description, which we have now ceased to notice, was of great importance in this and the preceding period. The mast which fell in the woods in the autumn might be of more value than timber, on account of its use as food for hogs; and it is not longer ago than the year 1764 since a year of great abundance in acorns had a very sensible effect upon the meat markets of the metropolis. In consequence of the great abundance two years before, the feeders had been induced to fatten their whole stock of hogs, and an extraordinary number were in consequence slaughtered. The number had not been replaced in the subsequent two years, and the meat markets not receiving the usual supply, prices rose to an unusual height.

† Nichols, vol. i. p. 63.—Hist. Leicester.

‡ Sir H. Ellis, Introd. to Domesday Book.

"Wood for the hedges" is often mentioned in the survey of the southern counties.

Gardens, orchards, and vineyards are mentioned in the Conqueror's survey; and if the improvements that took place in agriculture were in a great measure owing to the skill of the monks, still more was the kindred art of gardening indebted to them. The objects of culture to which the husbandman directs his care are few in number, but there is a much greater diversity in those which claim the attention of the horticulturist. The introduction of a foreign clergy at the Conquest could not fail to be immediately followed by the transplanting of the arts with which they were acquainted; and gardening was one of those which the soil and climate of Normandy had alike encouraged. Vineyards are mentioned in thirty-eight different places in the Survey.* The vine had been cultivated in the time of Bede, and is noticed in the laws of Alfred, but probably its culture was but little attended to. In several parts of Middlesex vineyards are mentioned in the Survey as being "newly planted." The vale of Gloucester is represented as being rich in vineyards and fruit-trees. William of Malmsbury describes it in glowing terms:—"This vale," he says, "is planted thicker with vineyards than any other province in England; and they produce grapes in the greatest abundance and of the sweetest taste. The wine that is made in these vineyards hath no disagreeable tartness in the mouth, and is very little inferior in flavour to the wines of France." It was not, however, until a subsequent period that additions were made to the number of culinary vegetables, or that the number and quality of fruits underwent much change; but the work of improvement had commenced. At Fulham, now celebrated for the number and productiveness of its market-gardens, there were in the days of the Conqueror "eight cottagers with their gardens;" and it is stated, that in the village where the church of St. Peter (Westminster Abbey) is situated, there were forty-one cottagers who paid forty shillings for their gardens.

In addition to the food furnished by the field and the garden, a considerable supply would be obtained from the woods and forests after the forest-laws had become less rigorous. Parks of "beasts of the wood" were kept by persons of distinction. The "Haiæ" belonging to manor-houses were enclosed places, hedged or paled round, into which beasts were driven for catching.† A warren of hares occurs in the Survey of Lincolnshire. By a letter of grace respecting the forests, in 1215, proprietors of land were permitted to form rabbit-warrens on their own land. The coasts, rivers, and meres were also productive of food. In Kent, Sussex, Norfolk, and Suffolk, herring-fisheries are noticed as existing at the period of the Survey. Sandwich yielded annually 40,000 herrings to the monks of Christ Church, Canterbury; and in Cheshire and

* Sir H. Ellis, Introd. † Ibid.

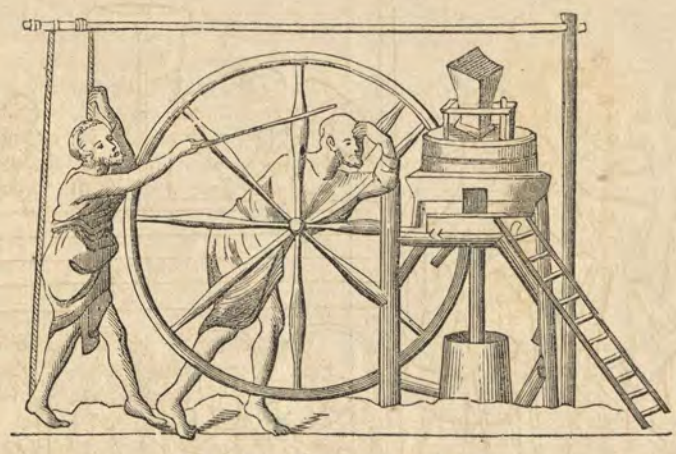
Fishing with a Seine Net. Royal MS. 2 B. vii.

Devonshire there were salmon-fisheries. In the former county one fishery paid 1000 salmon annually as rent. Stews or fish-ponds are also frequently mentioned. One at Tudenuorde (Tudworth), Yorkshire, yielded 20,000 eels annually. The rent of marsh or fen-land was generally paid in eels.

Another source of natural riches which the industry of the age rendered productive, existed, as already mentioned, in mines and quarries. In Gloucestershire, mines of iron were worked;* and in the king's demesne, in Derbyshire, the mines of lead supplied ore which was smelted and rolled into sheets, and used for roofing the churches and other purposes. The progress of cultivation had not yet rendered wood the dearest description of fuel, and though coal was consumed to a small extent, yet wood and turf continued to be used for fuel in this as it had been in the preceding period. Stone-quarries are but seldom mentioned in the Survey, and the stone used in many of the ecclesiastical edifices was brought from Normandy. Salt was not obtained in a fossil state until the seventeenth century, before which time it was procured by evaporation in salt-pans on the coast, and from the salt-springs in the interior parts of the country. The management of these salt-pans was an important branch of industry.

But few changes in the common handicrafts took place within the century and a half subsequent to the Conquest. The arts of the miller and baker

* Giraldus Cambrensis, lib. i. c. 5.



Corn Hand-Mill. Royal MS. 2 B. vii.

were necessarily in constant exercise. No description of building is so frequently mentioned in Domesday Book as water-mills. They were in every case the property of the lord of the manor, and his tenants were not permitted to grind at any other mill; a restriction which has not been abolished in some cases even at the present day. Hand-mills had not, however, gone out of use. The lord of the manor monopolised also the privilege of baking his tenants' bread at the common *fourne;* but the necessity of the case put an end to this restriction at an early period. Water-mills were known on the continent at the end of the sixth century: they existed in England before the Conquest, and were applied to other purposes besides that of grinding corn. The corn-mills are described by Strutt as square weather-boarded houses, sometimes without a covering at the top, the water-wheel being at one end. The machinery was simple enough, as the process of separating the bran from the meal was not performed by the machinery, but by a sieve with the

hand. Wind-mills were not known in England at the Conquest,* but were introduced in less than a century afterwards. Those who did not bake at the common *fourne* made the dough into cakes and baked them on the hearth. The law fixed the assize of bread, and the price at which it was to be sold by the bakers; and they were severely punished for "lack of size," the first offence subjecting them to the loss of the bread, the second to imprisonment, and a third offence to the pillory or tumbrell. In the year 1202 the assize of bread was fixed on the principle that in a quarter of wheat, supposed to weigh 512 lbs., the baker should make a profit of three pennies. The price of wheat at this period ranged from two to six shillings the quarter, and a scale was framed which fixed the weight of the farthing loaf at each fluctuation. Thus, when wheat was sold at two shillings the quarter, the loaf of white bread was to weigh three lbs., and the loaf of brown bread four lbs., and the weight was diminished at each successive increase in the price of wheat.†

The fabrication of armour now gave a new and higher direction to the art of working in metal. The shoeing of horses with iron is supposed not to have been usual before the Conquest.* The number of builders and artificers employed in the construction of domestic, ecclesiastical, and defensive edifices was far greater than it had been at any previous time, and their skill was much superior, as will be evident from the notice of the progress of architecture in the subsequent chapter. Norman piety displayed itself in founding cathedrals, abbeys, and monasteries, and the insecurity of society everywhere led to the erection of strongholds for protection. In Stephen's reign, "every one who was able (says the Saxon Chronicler) built a castle;" and he adds, that "the whole kingdom was covered with castles." The progress of one art inevitably leads to improvements in others, as obstacles which have never before been encountered stimulate ingenuity, and lead to inventions for overcoming them. Thus, we are told, that William of Sens, whom Lanfranc the archbishop employed as an architect, constructed machines for loading and unloading vessels, and for conveying heavy weights by land. In the reign of Rufus, a bridge of timber was thrown across the Thames, the old one having been carried away by a flood; and in 1209 this timber bridge was replaced by one of stone.

* In the year 1143 there was in Northamptonshire an abbey, situated in a wood, which, in the course of 180 years, was entirely destroyed. One of the causes of this destruction was said to be, that, in the whole neighbourhood, there was no house, water-mill, or "wind-mill" built, for which timber was not taken from this wood. —Beckmann, Hist. of Inventions, vol. i. p. 250.

BUILDING A HOUSE. Royal MS. 2 B. vii.

The architect explaining his plan and receiving instructions;—the builders raising and laying stones with a crane;—carving, plumbing the work, &c.

The textile arts were also improved. The introduction of the art of weaving woollen cloth by the Flemings has been mentioned above. In 1197 this manufacture had become of sufficient consequence to call forth laws for its proper regulation, in regard to both the fabrication and the sale of the cloth.* In the unprincipled reign of King John the merchants and manufacturers obtained licenses for permission to manufacture cloth under the prescribed measure.* Linen was also manufactured. The weavers and fullers, and the bakers, were amongst the earliest of the incorporated trades or guilds. In the reign of Henry I. the weavers

* Hoveden, Annal. p. 467, col. 2.

and fullers had guilds at Winchester and Oxford as well as in London.* Subsequently many other trades were incorporated; but the next period was the era in which these incorporations generally took place. In 1180, the saddlers were an incorporated body, but the goldsmiths, glovers, butchers, and curriers, who had established themselves as corporate bodies without permission from the king were fined.† The oldest charters of incorporation now existing are of a later date. The object of the Saxon guilds was rather to afford each other mutual succour than to regulate trade.

The art of dyeing was necessarily of considerable importance in connexion with the woollen manufacture. The Jews in some instances are said to have followed the trade of dyeing; but the art was probably in a very imperfect state, and persons of rank are said to have maintained dye-houses on their own account. Embroidery was the chief occupation of ladies of rank as it had been in the Anglo-Saxon period. Christina, Abbess of Markgate, is mentioned as having worked three mitres and a pair of sandals, which she sent as a present to Pope Adrian. The vestments of the higher ranks of the clergy were embroidered, and it was regarded as a pious work to be thus occupied. The churches on festival days were many of them hung with tapestry, which illustrated the lives of saints and holy men. It is not perhaps of much importance to determine whether these works were the production of professed artizans, or of the pious industry of the inmates of convents and the higher class of females.

The art of refining and working in metals was perhaps, as already observed, carried to greater perfection than any of the useful arts; and a superior class of men was engaged in this department of industry. Two candlesticks, made of gold and silver, which Robert, Abbot of St. Alban's, sent to his countryman, Pope Adrian, are stated to have excited the warm admiration of the pontiff, who declared that he had never seen more beautiful workmanship.* A large cup of gold, made by order of the same abbot, by a goldsmith named Baldwin, is described by Matthew Paris as being "adorned with flowers and foliages of the most delicate workmanship, and set around with precious stones in the most elegant manner." Native artizans were always to be found to execute the vessels required in the services of the church and the costly and curious ornaments with which shrines and altars were adorned. The precious metals were lavished on works of this description. Otho, a goldsmith, received orders from William Rufus to ornament his father's tomb out of the gold and silver which formed a part of the royal treasure at Winchester.

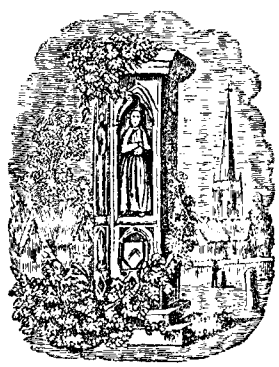
CHAPTER V.

THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.



IT is probable that learning in England had begun before the Norman Conquest to recover from the state of depression into which it had fallen in the calamitous period of the last Danish invasions. The Danish Conquest, as completed by the accession of Canute, preceded the Norman by exactly half a century, and during the whole of this space, with scarcely any interruption, the country had enjoyed a government which, if not always national, was at least acknowledged and submitted to by the whole nation. The public tranquillity was scarcely disturbed either by attacks from abroad or by domestic commotions. Such of the latter as occurred were either merely local or of very short duration. During this period, therefore, many of the monastic and other schools that had existed in the days of Alfred, Athelstan, and Edgar, had probably been re-established. The more frequent communication with the continent that began in the reign of the Confessor ought also to have been favourable to the intellectual advancement of the country. Accordingly, as we have before remarked, the dawn of the revival of letters in England may be properly dated from about the commencement of the eleventh century.*

Still, at the time of the Norman Conquest, there is reason to believe that literature was at a very low ebb in this country. Ordericus Vitalis, a contemporary writer, and himself a native of England, though of French descent and educated abroad, describes his countrymen generally as having been found by the Normans a rustic and almost illiterate people. The last epithet may be understood as chiefly intended to characterize the clergy, for the great body of the laity at this time were every where illiterate. In fact we know that, a few years after the Conquest, the king took advantage of the general illiteracy of the Saxon clergy to deprive great numbers of them of their benefices, and to supply their places with foreigners. His real motive for making this substitution was probably not that which he avowed; but he would scarcely have alleged what was notoriously not the fact, even as a pretence. No names eminent for learning, it may be observed, are recorded in this age of the annals of the Saxon church.

The Norman Conquest introduced a new state of things in this as in most other respects. That event made England, as it were, a part of the continent, where, not long before, a revival of letters had taken place scarcely less remarkable, if we take into consideration the circumstances of the time, than the next great revolution of the same kind in the beginning of the fifteenth century. In France, indeed, the learning that had flourished in the time of Charlemagne had never undergone so great a decay as had befallen that of England since the days of Alfred. The schools planted by Alcuin and the philosophy taught by Erigena had both been perpetuated by a line of the disciples and followers of these distinguished masters, which had never been altogether interrupted. But in the tenth century this learning of the West had met and been intermixed with a new learning originally from the East, but obtained directly from the Arab conquerors of Spain. The Arabs had first become acquainted with the literature of Greece in the beginning of the eighth century, and it instantly exercised upon their minds an awakening influence of the same powerful kind with that with which it again kindled Europe seven centuries afterwards. One difference, however, between the two cases is very remarkable. The mighty effects that arose out of the second revival of the ancient Greek literature in the modern world were produced almost solely by its eloquence and poetry; but these were precisely the parts of it that were neglected by the Arabs. The Greek books which they sought after with such extraordinary avidity, were almost exclusively those that related either to metaphysics and mathematics on the one hand, or to medicine, chemistry, botany, and the other departments of physical knowledge on the other. All Greek works of these descriptions that they could procure they not only translated into their own language, but in course of time illustrated with voluminous commentaries. The prodigious magnitude to which this Arabic literature eventually grew will stagger the reader who has adopted the common notion with regard to what are called the middle or the dark ages. "The royal library of the Fatimites" (sovereigns of Egypt), says Gibbon, "consisted of 100,000 manuscripts, elegantly transcribed and splendidly bound, which were lent, without jealousy or avarice, to the students of Cairo. Yet this collection must appear

* See ante, pp. 289 and 306.]

moderate if we can believe that the Ommiades of Spain had formed a library of 600,000 volumes, 44 of which were employed in the mere catalogues. Their capital Cordova, with the adjacent towns of Malaga, Almeria, and Murcia, had given birth to more than 300 writers, and above 70 public libraries were opened in the cities of the Andalusian kingdom."* The difficulty we have in conceiving the existence of a state of things such as that here described arises in great part from the circumstance of the entire disappearance now, and for so long a period, of all this Arabic power and splendour from the scene of European affairs. But long extinct as it has been, the dominion of the Arabs in Europe was no mere momentary blaze. It lasted, with little diminution, for nearly 500 years, a period as long as from the age of Chaucer to the present day, and abundantly sufficient for the growth of a body of literature and science, even of the wonderful extent that has been described. At the time of which we are now writing Arabic Spain was the fountain-head of learning in Europe. Thither students were accustomed to repair from every other country to study in the Arabic schools; and many of the teachers in the chief towns of France and Italy had finished their education in these seminaries, and were now diffusing among their countrymen the new knowledge which they had thence acquired. The writings of several of the Greek authors, also, and especially those of Aristotle, had been made generally known to scholars by Latin versions of them made from the Arabic.

There is no trace of this new literature having found its way to England before the Norman conquest. But that revolution immediately brought it in its train. "The Conqueror himself," observes a writer who has illustrated this subject with a profusion of curious learning, "patronized and loved letters. He filled the bishoprics and abbacies of England with the most learned of his countrymen, who had been educated at the University of Paris, at that time the most flourishing school in Europe. He placed Lanfranc, abbot of the monastery of St. Stephen at Caen, in the see of Canterbury—an eminent master of logic, the subtleties of which he employed with great dexterity in a famous controversy concerning the real presence. Anselm, an acute metaphysician and theologian, his immediate successor in the same see, was called from the government of the abbey of Bec, in Normandy. Herman, a Norman, bishop of Salisbury, founded a noble library in the ancient cathedral of that see. Many of the Norman prelates preferred in England by the Conqueror were polite scholars. Godfrey, prior of St. Swithin's at Winchester, a native of Cambray, was an elegant Latin epigrammatist, and wrote with the smartness and ease of Martial; a circumstance which, by the way, shows that the literature of the monks at this period was of a more liberal cast than that which we commonly annex to their character and profession." Geoffrey, also a learned Norman, who came over from the University of Paris, and established a school at Dunstable, where, according to Matthew Paris, he composed a play, called the 'Play of St. Catherine,' which was acted by his scholars, dressed characteristically in copes borrowed from the sacrist of the neighbouring abbey of St. Alban's, of which Geoffrey afterwards became abbot. "The king himself gave no small countenance to the clergy, in sending his son Henry Beauclerc to the abbey of Abingdon, where he was initiated in the sciences under the care of the abbot Grymbald, and Farice, a physician of Oxford. Robert D'Oilly, constable of Oxford Castle, was ordered to pay for the board of the young prince in the convent, which the king himself frequently visited. Nor was William wanting in giving ample revenues to learning. He founded the magnificent abbeys of Battle and Selby, with other smaller convents. His nobles and their successors co-operated with this liberal spirit in erecting many monasteries. Herbert de Losinga, a monk of Normandy, bishop of Thetford, in Norfolk, instituted and endowed with large possessions a Benedictine abbey at Norwich, consisting of sixty monks. To mention no more instances, such great institutions of persons dedicated to religious and literary leisure, while they diffused an air of civility, and softened the manners of the people in their respective circles, must have afforded powerful incentives to studious pursuits, and have consequently added no small degree of stability to the interests of learning."*

To this it may be added, that most of the successors of the Conqueror continued to show the same regard for learning of which he had set the example. Nearly all of them had themselves received a learned education. Besides Henry Beauclerc, Henry II., whose father Geoffrey Plantagenet, earl of Anjou, was famous for his literary acquirements, had been carefully educated under the superintendence of his admirable uncle, the Earl of Gloucester; and he appears to have taken care that his children should not want the advantages which he had himself enjoyed; for, at least, the three eldest, Henry, Geoffrey, and Richard, are all noted for their literary as well as their other accomplishments.

What learning existed, however, was still for the most part confined to the clergy. Even the nobility—although it cannot be supposed that they were left altogether without literary instruction—appear to have been very rarely initiated in any of those branches which were considered as properly constituting the scholarship of the times. The familiar knowledge of the Latin language in particular, which was then the key to all other erudition, seems to have been almost exclusively confined to churchmen, and to those few of the laity who embraced the profession of schoolmasters, as some, at

* Decline and Fall of the Rom. Emp. c. lii.

* Warton's Dissertation on Introduction of Learning into England, prefixed to History of English Poetry, p. cxliii. (Edit. of 1824.)

least on the continent, were now wont to do. The contemporary writer of a Life of Becket relates, that when Henry II., in 1164, sent an embassy to the Pope, in which the Earl of Arundel and three other noblemen were associated with an archbishop, four bishops, and three of the royal chaplains, four of the churchmen at the audience to which they were admitted, first delivered themselves in as many Latin harangues; and then the Earl of Arundel stood up, and made a speech in English, which he began with the words, "We, who are illiterate laymen, do not understand one word of what the bishops have said to your holiness."

The notion that learning properly belonged exclusively to the clergy, and that it was a possession in which the laity were unworthy of participating, was in some degree the common belief of the age, and by the learned themselves was almost universally held as an article of faith that admitted of no dispute. Nothing can be more strongly marked than the tone of contempt which is expressed for the mass of the community, the unlearned vulgar, by the scholars of this period; in their correspondence with one another especially, they seem to look upon all beyond their own small circle as beings of an inferior species. This pride of theirs, however, worked beneficially upon the whole: in the first place, it was in great part merely a proper estimation of the advantages of knowledge over ignorance; and, secondly, it helped to make the man of the pen a match for him of the sword—the natural liberator of the human race for its natural oppressor. At the same time, it intimates very forcibly at once the comparative rarity of the highly-prized distinction, and the depth of the darkness that still reigned far and wide around the few scattered points of light.

Schools and other seminaries of learning, however, were greatly multiplied in this age, and also elevated in their character, in England as well as elsewhere. Allusion has been made in a preceding chapter to the exertions made by Archbishop Lanfranc to establish proper schools in connexion with the cathedrals and monasteries in all parts of the kingdom. Both he and his successor, Anselm, laboured for this praiseworthy object with great zeal; and it was one which was also patronized and promoted by the general voice of the church. In 1179 it was ordered by the third general council of Lateran, that in every cathedral should be appointed and maintained a head-teacher, or scholastic, as was the title given to him, who, besides keeping a school of his own, should have authority over all the other schoolmasters of the diocese, and the sole right of granting licenses, without which no one should be entitled to teach. In former times the bishop himself had frequently undertaken the office of scholastic of the diocese; but its duties were rarely efficiently performed under that arrangement, and at length they seem to have come to be generally altogether neglected. After the custom was introduced of maintaining it as a distinct office, it was filled in many cases by the most learned persons of the time. Besides these cathedral schools there were others established in all the religious houses, and many of the latter were also of high reputation. It is reckoned that of religious houses of all kinds there were founded no fewer than five hundred and fifty-seven between the Conquest and the death of King John; and, besides these, there still existed many others that had been founded in the Saxon times. All these cathedral and conventual schools, however, appear to have been intended exclusively for the instruction of persons proposing to make the church their profession. But mention is also made of others established both in many of the principal cities, and even in the villages, which would seem to have been open to the community at large; for it may be presumed that the laity, though generally excluded from the benefits of a learned education, were not left wholly without the means of obtaining some elementary instruction. Some of these city schools, however, were eminent as institutes of the highest departments of learning. One in particular is mentioned by Matthew Paris as established in the town of St. Alban's, which was presided over by Matthew, a physician, who had been educated at the famous school of Salerno, in Italy, and by his nephew Garinus, who was eminent for his knowledge of the civil and canon laws, and where we may therefore suppose instructions were given both in law and in medicine. According to Fitz-Stephen there were three of these schools of a higher order regularly established in London, besides several others that were occasionally opened by distinguished teachers. The London schools, however, do not seem to have been academies of science and the higher learning, like that of St. Alban's. Fitz-Stephen's description would rather lead us to infer that, although they were attended by pupils of different ages and degrees of proficiency, they were merely schools of grammar, rhetoric, and dialectics. "On holidays," he says, "it is usual for these schools to hold public assemblies in the churches, in which the scholars engage in demonstrative or logical disputations, some using enthymems, and others perfect syllogisms; some aiming at nothing but to gain the victory, and make an ostentatious display of their acuteness, while others have the investigation of truth in view. Artful sophists on these occasions acquire great applause; some by a prodigious inundation and flow of words, others by their specious but fallacious arguments. After the disputations other scholars deliver rhetorical declamations, in which they observe all the rules of art, and neglect no topic of persuasion. Even the younger boys in the different schools contend against each other, in verse, about the principles of grammar, and the preterites and supines of verbs."

The twelfth century may be considered as properly the age of the institution of what we now call Universities in Europe, though many of the

establishments that then assumed the regular form of universities had undoubtedly existed long before as schools or *studia*. This was the case with the oldest of the European universities, with Bologna and Paris, and also, in all probability, with Oxford and Cambridge. But it may be questioned if even Bologna, the mother of all the rest, was entitled, by any organization or constitution it had received, to take a higher name than a school or *studium* before the latter part of this century. It is admitted that it was not till about the year 1200 that the school out of which the University of Paris arose had come to subsist as an incorporation, divided into nations, and presided over by a rector.* The University of Oxford, properly so called, is probably of nearly the same antiquity. It seems to have been patronized and fostered by Richard I., as that of Paris was by his great rival, Philip Augustus. Both Oxford and Cambridge had undoubtedly been eminent seats of learning long before this time, as London, St. Alban's, and other cities had also been; but there is no evidence that either the one school or the other had at an earlier date become anything more than a great school, or even that it was distinguished by any assigned rank or privileges above the other great schools of the kingdom. In the reign of Richard I. we find the University of Oxford recognized as an establishment of the same kind with the University of Paris, and as the rival of that seminary.

Of the state of the school at Cambridge throughout the twelfth century we have the following distinct account from a contemporary writer :— "In the year 1109," says Peter of Blois, in his 'Continuation of the History of Ingulphus,' "Joffrid, Abbot of Croyland, sent to his manor of Cottenham, near Cambridge, Master Gislebert, his fellow monk, and professor of theology, with three other monks who had followed him into England; who being very well instructed in philosophical theorems, and other primitive sciences, went every day to Cambridge, and, having hired a certain public barn, taught the sciences openly, and in a little time collected a great concourse of scholars; for, in the very second year after their arrival, the number of their scholars from the town and country increased so much that there was no house, barn, nor church capable of containing them. For this reason they separated into different parts of the town, and imitating the plan of the Studium of Orleans, brother Odo, who was eminent as a grammarian and satirical poet, read grammar, according to the doctrine of Priscian and of his commentator Remigius, to the boys and younger students, that were assigned to him, early in the morning. At one o'clock, brother Terricus, a most acute sophist, read the logic of Aristotle, according to the Introductions and Commentaries of Porphyry and Averroes,† to those who were further advanced. At three, brother William read lectures on Tully's Rhetoric and Quintilian's Institutions. But Master Gislebert, being ignorant of the English, but very expert in the Latin and French languages, preached in the several churches to the people on Sundays and holidays." There is here no hint of any sort of incorporation or public establishment whatever; the description is merely that of a school set on foot and conducted by an association of private individuals; and even this private school would seem to have been first opened in the year 1109, although there may possibly have been other schools taught in the place before. It may be gathered from what the writer adds, that at the time when he wrote (in the latter part of the same century), the school founded by Gislebert and his companions had attained to great celebrity; but there is nothing to lead us to suppose that it had even then become more than a very distinguished school. "From this little fountain," he says, "which hath swelled into a great river, we now behold the city of God made glad, and all England rendered fruitful, by many teachers and doctors issuing from Cambridge, after the likeness of the holy Paradise."

Notwithstanding, however, the rising reputation of Oxford and Cambridge, the most ambitious of the English students continued to resort for part of their education to the more distinguished foreign schools during the whole of the twelfth century. Thus, it is recorded that several volumes of the Arabian philosophy were brought into England by Daniel Merlac, who, in the year 1185, had gone to Toledo to study mathematics. Salerno was still the chief school of medicine, and Bologna of law, although Oxford was also becoming famous for the latter study. But, as a place of general instruction, the University of Paris stood at the head of all others. Paris was then wont to be styled, by way of pre-eminence, the City of Letters. So many Englishmen, or, to speak more strictly, subjects of the English crown, were constantly found among the students at this great seminary, that they formed one of the four nations into which the members of the university were divided. It would appear from the following verses of Negel Wircker, an English student at Paris in 1170, that his countrymen, whom they describe, were already noted for that spirit of display and expense which still makes so prominent a part of their continental reputation :—

> Moribus egregii, verbo vultuque venusti,
> Ingenio pollent, consilioque vigent.
> Dona pluunt populis, et detestantur avaros,
> Fercula multiplicant, et sine lege bibunt.
>
> Of graceful mien and manners, gracious speech,
> Strong sense, with genius brightened, shines in each.
> Their free hand still rains largess; when they dine
> Course follows course, in rivers flows the wine.

Among the students at the University of Paris in the twelfth century are to be found nearly all the most distinguished names among the learned of every country. One of the teachers, the celebrated Abelard, is said to have alone had as pupils

* See Crevier, Hist. de l'Univ. de Paris, i. 255.

† The works of Averroes, however, who died in 1198, were certainly not in existence at the time here referred to. Either Peter of Blois must have been ignorant of this, or—if he was really the author of the statement—the name must have been the insertion of some later transcriber of his text.

twenty persons who afterwards became cardinals, and more than fifty who rose to be bishops and archbishops. It has already been mentioned that Thomas à Becket received part of his education here. Several of the most eminent teachers were Englishmen. Among these may be particularly mentioned Robert of Melun (so called from having first taught in that city), and Robert White, or Pullus, as he is called in Latin. Robert of Melun, who afterwards became Bishop of Hereford, distinguished himself by the zeal and ability with which he opposed the novel views which the rising sect of the Nominalists were then introducing both into philosophy and theology. He is the author of several theological treatises, none of which, however, have been printed. Robert White, after teaching some years at Paris, where he was attended by crowded audiences, was induced to return to his own country, where he is said to have read lectures on theology at Oxford for five years, which greatly contributed to spread the renown of that rising seminary. After having declined a bishopric that was offered to him by Henry I., he went to reside at Rome in 1143, on the invitation of Celestine II., and was soon after made a cardinal and chancellor of the holy see. One work written by him has been printed, a summary of theology, under the then common title of 'The Book of Sentences,' which is said to be distinguished by the superior correctness of its style and the lucidness of its method.

Another celebrated name among the Englishmen who are recorded to have studied at Paris in those days is that of Nicolas Breakspear, who afterwards became pope by the title of Adrian IV. But, above all others, John of Salisbury deserves to be here mentioned. It is in his writings that we find the most complete account that has come down to us not only of the mode of study followed at Paris, but of the entire learning of the age.

At this time, it is to be observed, those branches of literary and scientific knowledge which were specially called the Arts were considered as divided into two great classes,—the first or more elementary of which, comprehending Grammar, Rhetoric, and Logic, was called the Trivium; the second, comprehending Music, Arithmetic, Geometry, and Astronomy, the Quadrivium. The whole seven arts, so classified, used to be thus enumerated in a Latin hexameter:—

Lingua, Tropus, Ratio, Numerus, Tonus, Angulus, Astra;

or, with definitions subjoined, in the two still more singularly constructed verses,—

Gram. loquitur, *Dia.* vera docet, *Rhet.* verba colorat,
Mus. cadit, *Ar.* numerat, *Geo.* ponderat, *Ast.* colit astra.

John of Salisbury speaks of this system of the sciences as an ancient one in his day. "The Trivium and Quadrivium," he says, in his work entitled 'Metalogicus,' "were so much admired by our ancestors in former ages, that they imagined they comprehended all wisdom and learning, and were sufficient for the solution of all questions and the removing of all difficulties; for whoever understood the Trivium could explain all manner of books without a teacher; but he who was farther advanced, and was master also of the Quadrivium, could answer all questions and unfold all the secrets of nature." The present age, however, had outgrown the simplicity of this arrangement; and various new studies had been added to the ancient seven, as necessary to complete the circle of the sciences and the curriculum of a liberal education.

It was now, in particular, that Theology first came to be ranked as a science. This was the age of St. Bernard, the last of the Fathers, and of Peter Lombard, the first of the Schoolmen. The distinction between these two classes of writers is, that the latter do, and the former do not, treat their subject in a systematizing spirit. The change was the consequence of the cultivation of the Aristotelian Logic and Metaphysics. When these studies were first introduced into the schools of the West, they were wholly unconnected with theology. But, especially at a time when all the learned were churchmen, it was impossible that the great instrument of thought and reasoning could long remain unapplied to the most important of all the subjects of thought—the subject of religion. It would appear, as was formerly stated, that John Erigena and other Irish divines introduced philosophy and metaphysics into the discussion of questions of religion as early as the eighth century; and they are consequently entitled to be regarded as having first set the example of the method afterwards pursued by the schoolmen. But although the influence of their writings may thus probably be traced in preparing the way for the introduction of the scholastic system, and also afterwards, perhaps, in modifying its spirit, it was derived immediately, in the shape in which it appeared in the eleventh and twelfth centuries, from another source. Erigena was a Platonist; the spirit of his philosophy was that of the school of Alexandria. But the first schoolmen, properly so called, were Aristotelians; they drew their logic and metaphysics originally from the Latin translations of the works of Aristotle made from the Arabic. How far, if at all, they may also have have been indebted to the commentaries of the Arabic doctors, would be a curious inquiry. But whether they took their method of philosophy entirely from the ancient heathen sage, or in part from his modern Mahomedan interpreters and illustrators, it could in neither case have at first any necessary or natural alliance with Christianity. Yet it very soon, as we have said, formed this alliance. Both Lanfranc and Anselm, although not commonly reckoned among the schoolmen, were imbued with the spirit of the new learning, and it is infused throughout their theological writings. Abelard soon after, before he was yet a churchman, may almost be considered to have wielded it as a weapon of scepticism. Even so used, however, religion was still the subject to

which it was applied. At last came Peter Lombard, who, by the publication in the latter part of the twelfth century of his celebrated Four Books of Sentences, properly founded the system of what is called the Scholastic Theology. The schoolmen, from the Master of the Sentences down to Francis Suarez, who died after the commencement of the seventeenth century, were all theologians. Although, however, religious speculation was the field of thought upon which the spirit of the Aristotelian philosophy chiefly expended itself, there was scarcely any one of the arts or sciences upon which it did not in some degree seize. The scholastic logic became the universal instrument of thought and study; every branch of human learning was attempted to be pursued by its assistance; and most branches were more or less affected by its influence in regard to the forms which they assumed.

John of Salisbury went to complete his education at Paris in the year 1136. "When I beheld," he writes in a letter to his friend Becket, "the reverence paid to the clergy, the majesty and glory of the whole church, and the various occupations of those who applied themselves to philosophy in that city, it raised my admiration as if I had seen the ladder of Jacob, the top of which reached to Heaven, while the steps were crowded with angels ascending and descending." The first master whose lectures he attended was the renowned Abelard, still, after all the vicissitudes of his life, teaching with undiminished glory, in the midst of a vast confluence of admiring disciples, on the Mount of St. Genevieve. "I drank in," says his English pupil, "with incredible avidity, every word that fell from his lips; but he soon, to my infinite regret, retired." Abelard lived only a few years after this date, which he spent in devotion and entire seclusion from the world. John of Salisbury then studied dialectics for two years under other two masters, one of whom was his countrymen, Robert de Melun, mentioned above. After this he returned to the study of grammar and rhetoric, which he pursued for three years under William de Couches, of whose method of teaching he has left a particular account. It appears to have embraced a critical exposition both of the style and the matter of the writers commented upon, and to have been well calculated to nourish both the understanding and the taste. After this he spent seven years under other masters, partly in the further prosecution of his acquaintance with the writers of antiquity and the practice of Latin composition, partly in the study of the mathematics and theology. The entire course thus occupied twelve years; but some, it would appear, devoted the whole of this time to the study of dialectics, or logic, alone. One of the treatises of John of Salisbury, that entitled 'Metalogicus,' is intended principally to expose the absurdity and injurious effects of this exclusive devotion to the art of wrangling; and although it must be considered as written with some degree of satirical license, the representation which it gives of the state of things produced by the new spirit that had gone abroad over the realms of learning is very curious and interesting. The turn of the writer's own genius was decidedly to the rhetorical rather than the metaphysical, and he was not very well qualified, perhaps, to perceive certain of the uses or recommendations of the study against which he directs his attack; but the extravagances of its devotees, it must be confessed, fairly exposed them to his ridicule and castigation. "I wish," he says in one place, "to behold the light of truth, which these logicians say is only revealed to them. I approach them,—I beseech them to instruct me, that, if possible, I may become as wise as one of them. They consent,—they promise great things,—and at first they command me to observe a Pythagorean silence, that I may be admitted into all the secrets of wisdom which they pretend are in their possession. But by-and-by they permit, and even command me, to prattle and quibble with them. This they call disputing; this they say is logic; but I am no wiser." He accuses them of wasting their ingenuity in the discussion of such puerile puzzles as whether a person in buying a whole cloak also bought the cowl? or whether, when a hog was carried to market with a rope tied about its neck and held at the other end by a man, the hog was really carried to market by the man or by the rope? It must be confessed that if their logic had been worth much, it ought to have made short work with these questions, if their settlement was deemed worth any thing. Our author adds, however, that they were declared to be questions which could not be solved, the arguments on both sides being perfectly equal. But his quarrel with the dialecticians was chiefly on the ground of the disregard and aversion they manifested, in their method of exercising the intellectual powers, to all polite literature, to all that was merely graceful and ornamental. And there can be no question that the ascendancy of the scholastic philosophy was fatal for the time to the cultivation of polite literature in Europe. So long as it reigned supreme in the schools, learning was wholly divorced from taste. The useful utterly rejected all connexion with the beautiful. The head looked down with contempt upon the heart. Poetry and fiction, and whatever else belonged to the imaginative part of our nature, were left altogether to the unlearned, to the makers of songs and lays for the people. It was probably fortunate for poetry, and the kindred forms of literature, in the end, that they were thus left solely to the popular cultivation for a time; they drew nourishment and new life from the new soil into which they were transplanted; and their produce has been the richer and the racier for it ever since. The revival of polite literature probably came at a better time in the fifteenth, than if it had come in the twelfth century. Yet it was not to be expected that when it was threatened with blight and extinction at the earlier era, its friends should either

have been able to foresee its resurrection two or three centuries later, or should have been greatly consoled by that prospect if they had.

John of Salisbury's chief work in his 'Polycraticon,' or, as he farther entitles it, 'A Treatise in eight books, on the Frivolities of Courtiers and the Footsteps of Philosophers.' (De Nugis Curialium et Vestigiis Philosophorum.) It is, says Warton, "an extremely pleasant miscellany, replete with erudition, and a judgment of men and things, which properly belongs to a more sensible and reflecting period. His familiar acquaintance with the classics appears not only from the happy facility of his language, but from the many citations of the purest Roman authors with which his works are perpetually interspersed."* He also wrote Latin verses with extreme elegance. John of Salisbury died bishop of Chartres in 1182. Another distinguished cultivator of polite literature in the same age was Peter of Blois, to whose letters, abounding as they do in graphic descriptions of the manners and characters of the time, we have already more than once had occasion to refer. Neither in elegance of taste and style, however, nor in general literary accomplishment, is the Frenchman to be compared with his illustrious English contemporary.

The classical knowledge of this period, however, was almost confined to the Roman authors, and some of the most eminent of these were as yet unstudied and unknown. Even John of Salisbury, though a few Greek words are to be found in his compositions, seems to have had only the slightest possible acquaintance with that language. Both it and the Hebrew, however, were known to Abelard and Eloisa; and it is probable that there were both in England and other European countries a few students of the oriental tongues, for the acquisition of which inducements and facilities must have been presented, not only by the custom of resorting to the Arabic colleges in Spain, and the constant intercourse with the East kept up by the pilgrimages and the crusades, but also by the numbers of learned Jews that were everywhere to be found. In England the Jews had schools in London, York, Lincoln, Lynn, Norwich, Oxford, Cambridge, and other towns, which appear to have been attended by Christians as well as by those of their own persuasion. Some of these seminaries, indeed, were rather colleges than schools. Besides the Hebrew and Arabic languages, arithmetic and medicine are mentioned among the branches of knowledge that were taught in them; and the masters were generally the most distinguished of the rabbis. In the eleventh and twelfth centuries, the age of Sarchi, the Kimchis, Maïmonides, and other distinguished names, rabbinical learning was in an eminently flourishing state.

In regard to the state of the other branches of knowledge that have been mentioned, only a few words more require to be added. There is no certain evidence that the Arabic numerals were yet known in Europe; they certainly were not in general use. Although the Elements of Euclid and other geometrical works had been translated into Latin from the Arabic, the mathematical sciences appear to have been but little studied. "The science of demonstration," says John of Salisbury, in his Metalogicus, "is of all others the most difficult, and alas! is almost quite neglected, except by a very few who apply to the study of the mathematics, and particularly of geometry. But this last is at present very little attended to amongst us, and is only studied by some persons in Spain, Egypt, and Arabia, for the sake of astronomy. One reason of this is, that those parts of the works of Aristotle that relate to the demonstrative sciences are so ill translated, and so incorrectly transcribed, that we meet with insurmountable difficulties in every chapter." The name of the mathematics at this time, indeed, was chiefly given to the false science of astrology. "Mathematicians," says Peter of Blois, "are those who, from the position of the stars, the aspect of the firmament, and the motions of the planets, discover things that are to come." Astronomy, however, or the true science of the stars, which was zealously cultivated by the Arabs in the East and in Spain, seems also to have had some cultivators among the learned of Christian Europe. Latin translations existed of several Greek and Arabic astronomical works. Ingulphus gives the following curious description of a sort of scheme or representation of the planetary system called the Nadir, which he says was destroyed when his abbey of Croyland was burnt in 1091: "We then lost a most beautiful and precious table, fabricated of different kinds of metals, according to the variety of the stars and heavenly signs. Saturn was of copper, Jupiter of gold, Mars of iron, the sun of latten, Mercury of amber, Venus of tin, the moon of silver. The eyes were charmed, as well as the mind instructed, by beholding the colure circles, with the zodiac and all its signs, formed with wonderful art, of metals and precious stones, according to their several natures, forms, figures, and colours. It was the most admired and celebrated Nadir in all England." These last words would seem to imply that such tables were then not uncommon. This one, it is stated, had been presented to a former abbot of Croyland by a king of France.

John of Salisbury, in his account of his studies at Paris, makes no mention either of medicine or of law. With regard to the former, indeed, he expressly tells us that the Parisians themselves used to go to study it at Salerno and Montpellier. By the beginning of the thirteenth century, however, we find a school of medicine established at Paris, which soon became very celebrated. Of course there were, at an earlier date, persons who practised the medical art in that city. The physicians in all the countries of Europe at this period were generally churchmen. Many of the Arabic medical works were early translated into Latin; but the

* Introd. of Learning into Eng. p. 153.

Parisian professors soon began to publish treatises on the art of their own. The science of the physicians of this age, besides comprehending whatever was to be learned respecting the diagnostics and treatment of diseases from Hippocrates, Galen, and the other ancient writers, embraced a considerable body of botanical and chemical knowledge. Chemistry in particular the Arabs had carried far beyond the point at which it had been left by the ancients. Of anatomy little could as yet be accurately known, while the dissection of the human subject was not practised. Yet it would appear that physicians and surgeons were already beginning to be distinguished. Both the canon and civil laws were also introduced into the routine of study at the University of Paris soon after the time John of Salisbury studied there. The canon law was originally considered to be a part of theology, and only took the form of a separate study after the publication of the systematie compilation of it called the 'Decretum of Gratian,' in 1151. Gratian was a monk of Bologna, and his work, not the first collection of the kind, but the most complete and the best arranged that had yet been compiled, was immediately introduced as a text-book in that university. It may be regarded as having laid the foundation of the science of the canon law, in the same manner as the system of the scholastic philosophy was founded by Peter Lombard's Book of Sentences. Regular lecturers upon it very soon appeared at Orleans, at Paris, at Oxford, and all the other chief seats of learning in western Christendom; and before the end of the twelfth century no other study was more eagerly pursued, or attracted greater crowds of students, than that of the canon law. One of its first and most celebrated teachers at Paris was Girard la Pucelle, an Englishman, who afterwards became bishop of Lichfield and Coventry. Girard taught the canon law in Paris from 1160 to 1177; and, in consideration of his distinguished merits and what was deemed the great importance of his instructions, he received from Pope Alexander III. letters exempting him from the obligation of residing on his preferments in England while he was so engaged; this being, it is said, the first known example of such a privilege being granted to any professor.* The same professors who taught the canon law taught also, along with it, the civil law, the systematic study of which, likewise, took its rise in this century, and at the University of Bologna, where the Pandects of Justinian, of which a more perfect copy than had before been known is said to have been found, in 1137, at Amalphi,† were arranged and first lectured upon by the German Irnerius,—the Lamp of the Law, as he was called,—about the year 1150. Both the canon and the civil law, however, are said to have been taught a few years before this time at Oxford by Roger, surnamed the Bachelor, a monk of Beck, in Normandy. The study was, from the first, vehemently opposed by the practitioners of the common law, but, sustained by the influence of the church, and eventually also favoured by the government, it rose above all attempts to put it down. John of Salisbury affirms that, by the blessing of God, the more it was persecuted the more it flourished. Peter of Blois, in one of his letters, gives us the following curious account of the ardour with which it was pursued under the superintendence of Archbishop Theobald:—"In the house of my master, the Archbishop of Canterbury, there are several very learned men, famous for their knowledge of law and politics, who spend the time between prayers and dinner in lecturing, disputing, and debating causes. To us all the knotty questions of the kingdom are referred, which are produced in the common hall, and every one in his order, having first prepared himself, declares, with all the eloquence and acuteness of which he is capable, but without wrangling, what is wisest and safest to be done. If God suggests the soundest opinion to the youngest amongst us, we all agree to it without envy or detraction."

Study in every department must have been still greatly impeded in this period by the scarcity of books; but their multiplication now went on much more rapidly than it had formerly done. We have already alluded to the immense libraries said to have been accumulated by the Arabs, both in their oriental and European seats of empire. No collections to be compared with these existed anywhere in Christian Europe; but of the numerous monasteries that were planted in every country, few were without libraries of greater or less extent. A convent without a library, it used to be proverbially said, was like a castle without an armoury. When the monastery of Croydon was burnt in 1091, its library, according to Ingulphus, consisted of 900 volumes, of which 300 were very large. "In every great abbey," says Warton, "there was an apartment called the Scriptorium; where many writers were constantly busied in transcribing not only the service-books for the choir, but books for the library. The Scriptorium of St. Alban's Abbey was built by Abbot Paulin, a Norman, who ordered many volumes to be written there, about the year 1080. Archbishop Lanfranc furnished the copies. Estates were often granted for the support of the Scriptorium . . . . I find some of the classics written in the English monasteries very early. Henry, a Benedictine monk of Hyde Abbey, near Winchester, transcribed, in the year 1178, Terence, Boethius, Suetonius, and Claudian. Of these he formed one book, illuminating the initials, and forming the brazen bosses of the covers with his own hands." Other instances of the same kind are added. The monks were much accustomed both to illuminate and to bind books, as well as to transcribe them. "The scarcity of parchment," it is afterwards observed, "undoubtedly prevented

* Crevier, Hist. de l'Univ. de Paris, i. 244.

† "The discovery of the Pandects at Amalphi," says Gibbon, "is first noticed (in 1501) by Ludovicus Bolognius, on the faith of a Pisan chronicle, without a name or date. The whole story, though unknown to the twelfth century, embellished by ignorant ages, and suspected by rigid criticism, is not, however, destitute of much internal probability."

the transcription of many other books in these societies. About the year 1120, one Master Hugh, being appointed by the convent of St. Edmondsbury, in Suffolk, to write and illuminate a grand copy of the Bible for their library, could procure no parchment for this purpose in England."* Paper made of cotton, however, was certainly in common use in the twelfth century, though no evidence exists that that manufactured from linen rags was known till about the middle of the thirteenth.

We have already had occasion to notice the incorrectness of a statement frequently made which attributes to the Conqueror the deliberate design of abolishing the Saxon language in England. The oldest authority for this statement appears to be a writer of the name of Robert Holkot, who lived in the fourteenth century; and his account is not more improbable in itself than it is in opposition to the testimony of the earlier historians. But although the Norman appears neither to have made any efforts to extirpate the English tongue, nor even to have introduced the French as the language of the law and of public documents, the substitution of French for English must have followed to a great extent, as one of the inevitable consequences of the Conquest. Indeed, causes that helped to bring about this change were in operation even before that event. The Confessor himself, according to Ingulphus, though a native of England, yet, from his education and long residence in Normandy, had become almost a Frenchman; and when he succeeded to the English throne, he brought over with him great numbers of Normans, whom he advanced to the highest dignities in the church and the state. "Wherefore," it is added, "the whole land began, under the influence of the king and the other Normans introduced by him, to lay aside the English customs, and to imitate the manners of the French in many things; for example, all the nobility in their courts began to speak French as a great piece of gentility, to draw up their charters and other writings after the French fashion, and to grow ashamed of their old national habits in these and in many other particulars." The establishment of the Norman dominion of course perpetuated and added much additional force to this tendency, in various ways. The king himself, and, with few exceptions, all the nobility, could speak no language but French. The residence of the Norman nobles and great proprietors in all parts of the country must have spread the language of the court. Above all, it would be diffused over the land by the clergy, who were now brought over in great numbers from Normandy, both to serve in the parochial cures, and to fill the monasteries that were multiplying so rapidly. These churchmen must have been in constant intercourse with the people of all classes. Besides, they were not only the instructors of the people from the altar, but the teachers of all the schools. This last circumstance sufficiently accounts for the fact mentioned by Ingulphus, that it now became the practice for the elements of grammar to be taught to boys at school, not in English, as formerly, but in French. All this would soon make the French language universally familiar to the educated classes even of the Saxon population, while to the Norman part of the nation it was the only language known. The English or Saxon, however, still continued to be the common language of the great body of the people; and for nearly a century after the Conquest it appears, though considerably modified from its form in earlier times, to have preserved what may still be called a decidedly Saxon character. We give as a specimen the following passage from the Saxon Chronicle, relating to the close of Stephen's reign:

Tha was Engle-land suithe todeled. sume helden mid te king. & sume mid themperice. for tha the king was in prisun. tha wenden the eorles & te rice men that he nevre mare sculde cumme ut. & sæhtleden wyd themperice. & brohten hire into Oxenford. and iauen hire the burch. Tha the king was ute. tha herde that sægen. and toc his feord & besæt hire in the tur. & me læt hire dun on niht of the tur mid rapes. & stal ut & scæ fleh & iæde on fote to Walingford. Thær efter scæ ferde ofer sæ. & hi of Normandi wenden alle fra the king to the eorl of Angæu. sume here thankes & sume here unthankes. for he besæt heom til hi aiauen up here castles. & hi nan helpe ne hæfden of the king. Tha ferde Eustace. the kinges sune. to France. & nam the kinges suster of France to wife. wende to bigæton Normandi thær thurh. oc he spedde litel. & be gode rihte. for he was an yuel man. for ware se he wes dide mare yuel thanne god. he reuede the landes & læide micel gildes on. he brohte his wif to Engle-land. & dide hire in the castle of . . teb. god wimman scæ wæs. oc scæ hedde litel blisse mid him. & xpist ne wolde that he sculde lange rixan. & wærd ded and his moder beien. & te eorl of Angæu wærd ded. & his sune Henri toc to the rice. And te cwen of France

Then was England very much divided: some held with the king, and some with the empress; for when the king was in prison, the earls and the rich men supposed that he never more would come out: and they settled with the empress, and brought her into Oxford, and gave her the borough. When the king was out, he heard of this, and took his force, and beset her in the tower.† And they let her down in the night from the tower by ropes. And she stole out, and fled, and went on foot to Wallingford. Afterwards she went over sea; and those of Normandy turned all from the king to the earl of Anjou; some willingly, and some against their will; for he beset them till they gave up their castles, and they had no help of the king. Then went Eustace, the king's son, to France, and took to wife the sister of the king of France. He thought to obtain Normandy thereby; but he sped little, and by good right; for he was an evil man. Wherever he was he did more evil than good; he robbed the lands, and levied heavy guilds upon them. He brought his wife to England, and put her into the castle of . . . Good woman she was; but she had little bliss with him; and Christ would not that he should long reign. He therefore soon died, and his mother also. And the earl of Anjou

*. Introd. of Learning into Eng., p. 146.

† The tower of the castle at Oxford, built by D'Oyley, which still remains.

todælde fra the king. & scæ com to the iunge eorl Henri. & he toc hire to wive. & al Peitou mid hire. Tha ferde he mid micel færd into Engle-land. & wan castles. & te king ferde agenes him mid micel mare ferd. & thoth wæthere fuhten hi noht. oc ferden the ærcebiscop & te wise men betwux heom. & makede that sahte. that te king sculde ben lauerd & king wile he liuede. & æfter his dæi ware Henri king. and he helde him for fader & he him for sune. & sib & sæhte sculde ben betwyx heom & on al Engle-land. This and te othre forwardes that hi makeden suoren to halden the king & te eorl. and te biscop. & te eorles. & ricemen alle. Tha was he eorl underfangen æt Wincestre and æt Lundene mid micel wurtscipe. and alle diden him manred. and suoren the pais to haiden. and hit ward sone suithe god pais sua that neure was here. Tha was the king strengere thanne he æuer ther was. & te eorl ferde ouer sæ. & al folc him luuede. for he dide god justise & makede pais.

died, and his son Henry took to the earldom. And the queen of France parted from the king; and she came to the young earl Henry, and he took her to wife, and all Poictou with her. Then went he with a large force into England, and won some castles; and the king went against him with a much larger force. Nevertheless, fought they not; but the archbishop and the wise men went between them, and made this settlement: that the king should be lord and king while he lived, and after his day Henry should be king: that Henry should take him for a father, and he him for a son: that peace and union should be betwixt them, and in all England. This, and the other provisions that they made, swore the king and the earl to observe, and all the bishops, and the earls, and the rich men. Then was the earl received at Winchester, and at London, with great worship; and all did him homage, and swore to keep the peace. And there was soon so good a peace as never was here before. Then was the king stronger than he ever was before. And the earl went over sea; and all people loved him; for he did good justice, and made peace.

An. MCLIV. On this gær wærd the king Stephne ded. & bebyried ther his wif and his sune wæron bebyried æt Fauresfeld. thæt minstre hi makeden. Tha the king was ded tha was the eorl beionde sæ. & ne durste nan man don other bute god for the micel eie of him. Tha he to Engle-land com. tha was he underfangen mid micel wurtscipe. & to king bletcæd in Lundene on the sunnen dæi beforen mid-winter dæi. and ther held he micel curt.

A.D. 1154. In this year died the king Stephen; and he was buried where his wife and his son were buried, at Faversham, which monastery they founded. When the king died, then was the earl beyond sea; but no man durst do other than good, for the great fear of him. When he came to England, then was he received with great worship, and blessed to king in London on the Sunday before mid-winter day. And there he held a full court.

The short composition which follows appears to present a specimen of our language and poetry at the latest period at which they could fairly be denominated Saxon. It is from a volume of Homilies in the Bodleian Library (MS. 343), supposed to have been written in the time of Henry II. It was first communicated to the Society of Antiquaries, in 1811, by the late Rev. John Josiah Conybeare.

The wes bold gebyld	For thee is a house built
Er thu iboren were,	Ere thou wert born,
The wes mold imynt	For thee was a mould shapen
Er thu of moder come	Ere thou of (thy) mother camest.
The hit nes no idiht	Its height is not determined,
Ne thes deopnes imeten	Nor its depth measured,
Nes til iloced,	Nor is it closed up
Hu long hit the were,	(However long it may be)
Nu me the bringæth	Until I thee bring
Wer thu beon scealt,	Where thou shalt remain
Nu me sceal the meten	Until I shall measure thee
And tha mold seoththa:	And the sod of earth.
Ne bith no thine hus	Thy house is not
Healice itimbred,	Highly built (timbered),
Hit bith unheh and lah;	It is unhigh and low;
Thonne thu bist therinne	When thou art in it
The helewages beoth lage,	The heelways are low,
Sidwages unhege.	The side-ways unhigh.
The rof bith ybild	The roof is built
Theie brost full neh,	Thy breast full nigh;
Swa thu scealt in mold	So thou shalt in earth
Winnen ful cald,	Dwell full cold,
Dimme and deorcæ.	Dim, and dark.
Thet clen fulæt on hod.	That clean putrefies.
Dureleas is thæt hus.	Doorless is that house,
And deorc hit is withinnen	And dark it is within:
Dær thu bist fest bidyte	There thou art fast detained,
And Dæth hefth tha cæge.	And Death holds the key.
Lathlic is thæt eorth hus,	Loathly is that earth-house,
And grim inne to wunien.	And grim to dwell in;
Ther thu scealt wunien	There thou shalt dwell,
And wurmes the to deleth.	And worms shall share thee.

Thus thu bist ileyd,	Thus thou art laid
And ladæst thine fronden,	And leavest thy friends;
Nefst thu nenne freond	Thou hast no friend
The the wylle faren to,	That will come to thee.
Thæt æfre wule lokien	Who will ever inquire
Hu the thæt hus the like,	How that house liketh thee?
Thæt æfre undon	Who shall ever open
The wule tha dure,	For thee the door,
And the æfter haten	And seek thee?
For sone thu bist ladlic	For soon thou becomest loathly,
And lad to iseonne.	And hateful to look upon.

From about the middle of the twelfth century, the Saxon language is commonly considered to have begun to take a form in which we may discover the beginning of the present English.* We are not, however, in possession of any undoubted specimens of the language in the latter part of the twelfth century. Of the pieces which Warton has given as belonging to this period, the late able and learned editor of the 'History of English Poetry' has remarked that, "judging from internal evidence, there is not one which may not safely be referred to the thirteenth century, and by far the greater number to the close of that period."† In these circumstances we shall reserve the consideration of what may be called the birth of the English language for the next book. We shall there also find the most convenient opportunity of noticing the rise and progress of the poetry of the Provençal troubadours, and of the French and Anglo-Norman romance minstrelsy.

The Latin, during the whole of the present period, was the chief language of literary composition. It was in Latin that the teachers at the chief seats of learning (many of whom were foreigners) delivered their prelections in all the sciences, and that all the disputations among the students were carried on. English and French churchmen of this age appear to have generally been as familiar with Latin as with their native tongue, and to have usually employed it in their intercourse with each other. Nay, some of them who could not speak English seem to have been accustomed to preach to the people in Latin, and, what is remarkable enough, sometimes with much acceptance and effect. Peter of Blois, as we have seen, speaks of this having been done by the French monk Gislebert, or Gilbert, who was one of the founders of the University of Cambridge. So Giraldus Cambrensis tells us that, in a progress which he made through Wales in 1186, to assist Archbishop Baldwin in preaching a crusade for the recovery of the Holy Land, he was always most successful when he appealed to the people in a Latin sermon; it never failed, although they did not understand a word of it, to melt them into tears, and to make them come in crowds to take the cross.

Much poetry was also written in Latin, in various styles. Joannes Grammaticus, Laurence, prior of Durham, Robert Dunstable, the historian, Henry of Huntingdon, Geoffrey of Monmouth, Eadmer, William of Malmsbury, John Hanvil, Giraldus Cambrensis, Alexander Neckham, Walter Mapes, and, above all, Josephus Iscanus, or Joseph of Exeter, are enumerated and celebrated by Warton as flourishing within the present period. Joseph of Exeter Warton characterises as "a miracle in classical composition:" of his epic poem on the Trojan war he says, "the diction is generally pure, the periods round, and the numbers harmonious; and, on the whole, the structure of the versification approaches nearly to that of polished Latin poetry. The writer appears to have possessed no common command of poetical phraseology, and wanted nothing but a knowledge of the Virgilian chastity." Some of the compositions of this age, especially some of those of Walter Mapes, who has been styled the Anacreon of the eleventh century, are written in the rhyming Latin called Leonine verse. Mapes's drinking song, in particular, beginning—

"Mihi est propositum in taberna mori,"

is well known. This jovial bard was Archdeacon of Oxford.

But by far the most precious literary remains of this age are the numerous historical works it has left us. So large a body of early contemporary history as that formed by the writings of the English chroniclers of the eleventh and twelfth centuries is probably not possessed by any other nation. We will briefly mention some of the chief names. That venerable monument, the Saxon Chronicle, in the first place, comes down to the end of the reign of Stephen. We have the Life of the Conqueror from the pen of William of Poictiers, his chaplain. Doubts have been cast upon the authenticity of the history which passes under the name of Ingulphus, Abbot of Croyland, and indeed it may now be considered as established that the work is not what it professes to be;* but if a forgery in respect to its title and the form it is made to assume, it is impossible not to believe that it is founded upon genuine records of the times to which it relates, and that much of the information contained in it is as trustworthy as it is curious. It narrates the history of the abbey of Croyland, and, to a certain extent, that of the kingdom, from the foundation of that abbey in A.D. 664 to A.D. 1091. The Ecclesiastical History of Ordericus Vitalis comes down

* See History of the English Language, prefixed to Johnson's Dictionary.

† Warton's Hist. of Eng. Poetry, i. 7. (Edit. of 1824.)

* See an able Article on the sources of early English History, in the Quarterly Review, No. lxvii. pp. 289—297.

to the year 1121, and is interspersed with many notices of civil transactions. The History of Eadmer, the monk of Canterbury, which embraces the period from the Conquest to the year 1122, is especially valuable for the original papers preserved in it, and for the great number of facts related upon the author's own knowledge. The work of Florence of Worcester, though in what he has given of English history he is little more than a translator of the Saxon Chronicle, is not to be the less prized on that account. "He understood the ancient Saxon language well," says the learned critic to whom we have referred above, "better, perhaps, than any of his contemporaries; and he has furnished us with an accurate translation from a text which seems to have been the best of its kind."* He comes down to the year 1117; and the work is continued to the year 1141 by another monk of the same place.

The excellent histories of William of Malmsbury, his five books of the Acts of the English kings, and the sequel, in two books, under the title of 'Historia Novella,' extend over the time from the first arrival of the Saxons to the year 1143, in which the author died. Simeon of Durham, and his continuators John and Richard, successively priors of Hexham, have preserved much information, especially respecting the northern part of the kingdom, that is nowhere else to be found: their narrative comes down to the year 1156. Another highly valuable work relating to the latter part of the same period is the anonymous account of the reign of Stephen, entitled 'Gesta Stephani.' The eight books of the History of Henry of Huntingdon, which, beginning with the earliest accounts of Britain, also come down to the end of the reign of Stephen, and are continued by another writer for ten years farther, derive a high value from the numerous ancient authorities, now lost, which appear to have been consulted in their preparation; some fragments of very early Saxon compositions appear to be almost literally translated and fitted into the text. William of Newbridge, or Newburgh (also known by the names of Little, or Parvus, or Petit), has written with great ability a history of the events from the Norman conquest to the year 1197. The Annals of Roger de Hoveden, from A.D. 731, where Bede's Ecclesiastical History ends, to A.D. 1202, present an immense repertory of minute details. It has been supposed also that the work entitled the Flowers of History, and attributed to Matthew of Westminster, who appears to be a fictitious personage, most probably belongs to this age. The critic quoted above is inclined to believe that the author of the greater part of the work was anterior even to Florence of Worcester.†

To these might be added a long list of other names:—Brompton, Turgot, Ailred, Gervase of Canterbury, Ralph de Diceto, Benedict, abbot of Peterborough, Giraldus Cambrensis, Richard of Devizes, Walter of Coventry, Ralph, abbot of Coggeshall, &c.; not to mention the foreign writers, William of Jumieges (Gulielmus Gemeticensis), Vinesauf, William of Tyre, and others; and the Chronicle of Mailros, the Annals of Burton, Margan, Waverley, and other monastic registers.*

* Quarterly Review, vol. lxvii. p. 281.
† Ibid. p. 281.

Few nations, in any period of history, have been more distinguished than the Normans by a taste for magnificent buildings. At the period of their establishment in Neustria, the later Romanesque architecture—the origin of which has been adverted to in the preceding book—had already taken its ultimate form and character; and in this style, which they adopted, and continued to practise for above two hundred years, many examples remain to attest their proficiency as early as the tenth century. But in the early part of the eleventh century, which was to them an interval of comparative peace and tranquillity, when they began to enjoy the benefits of permanent security in their possessions, the Normans appear to have been seized with a mania for founding monasteries. The nobility emulated each other in erecting churches on their domains, and the period immediately preceding the descent upon England is distinguished by the erection of the most magnificent edifices in this style remaining in Normandy. Among these may be cited the two celebrated abbeys at Caen, founded by William the Conqueror and his wife Matilda, of which one at least was nearly completed at the time of the Conquest, and the other immediately after. The success of the Norman arms in England was immediately followed by the general diffusion of Norman arts; and when the land was parcelled out among Norman barons, and appropriated to the endowment of Norman monasteries, and when the sees and religious establishments were filled with Norman bishops and monks, edifices rivalling those of their continental dominions speedily rose in every part of the country. Such was the activity and zeal with which the Normans exerted themselves in securing their acquisitions by the construction of fortresses, and in displaying

* The principal of the works mentioned above are to be found in the following collections:—

their piety by the foundation of monasteries, and the erection and restoration of ecclesiastical buildings, that before the end of the eleventh century their strongholds were scattered over the kingdom to its remotest parts; and in addition to the numerous religious establishments originating from the munificence of the Normans, many of those already existing were refounded, and the buildings demolished for the purpose of restoring them on a more extensive scale. However rapaciously the Normans may have possessed themselves of the wealth of England, they certainly applied it with good taste, and, by a liberal expenditure, encouraged the arts, and restored the forms of religion. "You might see," says William of Malmsbury, "churches rise in every village, and monasteries in the towns and cities, built in a style unknown before. You might behold the country flourishing with renovated sites, so that each wealthy man accounted that day lost to him, which he neglected to signalize by some magnificent action."

The twelfth century was still more productive in works of architecture, especially of the military class. Henry I. was a great builder both of castles and monasteries; but in the following turbulent reign the country became, in the words of the Saxon Chronicle, "covered with castles—every one built a castle who was able." So that before the death of Stephen they are reckoned to have amounted to the number of 1115. Church architecture flourished in nearly an equal degree in the more tranquil part of this century; and to this period, accordingly, we are indebted for a large proportion of our principal ecclesiastical edifices.

Of the resources which the clergy of this period brought to the work of founding and constructing churches and monasteries, we may form an idea from the example of Bishop Herbert Losing, who removed the episcopal see of Thetford to Norwich in 1094. Besides settling a community of Clugniac monks at Thetford, he established an extensive and numerous monastery at Norwich, defraying the expense entirely out of his private fortune, and erected the splendid church which still remains a monument of his wealth and liberality; and yet William of Malmsbury, to whom we owe these particulars, expressly says, *that he was by no means a rich bishop*. This church, however, was much surpassed in size by others of the same date; and the enlarged ideas of Mauritius, bishop of London, appear to have astonished even his contemporaries. He began to rebuild his cathedral in 1086, upon a plan so vast and magnificent, that it was censured as a rash undertaking, never likely to be completed; and though this building be lost to posterity, the accounts we have of its form and dimensions would go far to justify these feelings of wonder and incredulity. Roger, bishop of Sarum (1107—1139), was another munificent builder. Besides his cathedral, which he rebuilt in such a manner "that it yielded to none, and surpassed many, he erected several castles," says Malmsbury, "and splendid mansions on all his estates, with such unrivalled magnificence, that in merely maintaining them, the labour of his successors will toil in vain." The abbey of Malmsbury was also the work of this great prelate; and its ruins and some fragments of Sherborne castle are all that remain of the numerous works which drew forth these high encomiums from the historian.

To particularize all the ecclesiastical edifices founded during this period, would be to enumerate most of the cathedrals and principal abbeys in England. So solid and well constructed are these works, that wherever the hand of time has not been assisted by violence or neglect, they remain to this day entire, and apparently imperishable. It is true that in many instances the alterations and additions of succeeding periods have done much to obliterate the original character of the Norman style, yet there are few of the buildings in which it cannot be distinctly traced, and in a considerable number it still predominates. In this latter class, besides the cathedral of Norwich already mentioned, we may notice those of Durham, founded by William de Carilepho (1093); Chichester, by Bishop Ralph (1091); Peterborough, by Ernulph (1107); Rochester, by Gundulph (1077); Hereford, by Robert de Losing (1079); Gloucester, by Abbot Serlo (1088); and Oxford, by Prior Guymond (1120). There are also considerable remains of this period at Ely, in the nave and transepts (1081—1106); at Exeter, in the two noble towers built by Bishop Warelwast (1112); at Winchester, in the tower and transepts, the work of Bishop Walkelyn (1070); and in the cathedral of Canterbury, of which the whole of the eastern part was erected before the end of the 12th century. Many other examples will be noticed incidentally as we proceed.

It is not only as the munificent founders of so many noble buildings, and the patrons of the artists by whom their erection was superintended, that these prelates have a claim upon our admiration. In an age when all arts, sciences, and learning were confined to the clerical order, there is great reason to believe that it was their architectural skill which produced the designs which their wealth contributed to carry into execution. Gundulph, bishop of Rochester, is recorded to have been the most able architect of his day, not only in the ecclesiastical, but also in the military style. The cathedral and castle of Rochester, though neither was completed in his lifetime, and the Tower of London, are sufficient evidence of his talents. Peter of Colechurch, architect of the first stone bridge across the Thames at London (1176), was also an ecclesiastic. To these may be added, though on less direct evidence, the names of Henry de Blois, bishop of Winchester, who, besides continuing the works at his cathedral, founded the monasteries of St. Cross and Romsey, in Hampshire, where the churches still retain their original architectural character; the bishops Roger and Ernulph, already mentioned, and Alexander, bishop of Lincoln (from 1124 to 1147). The list might be much further

extended, upon at least probable grounds. William of Sens, however, who rebuilt part of Canterbury cathedral in 1174, appears to have been a professional architect, as well as another William, an Englishman, who succeeded him, and completed his works.

As the Norman style of architecture forms an intermediate link between the Roman and the Gothic, and as its transition into the latter is extremely gradual, we find in it, as may be expected, much that recalls the memory of the one, and much which connects it with the other. Its principal characteristic feature is the circular arch, springing either from a single column, varying in every degree from a cylinder of two diameters high to a proportion nearly classical, or from a pier decorated with half columns or light shafts, the evident origin of the clustered pillar of a later date. Both these forms are frequently used in the same building, as in the cathedral of Durham, where they support the main arches alternately. Polygonal shafts and plain rectangular piers are also to be met with, but they are less common. The walls are so massive as to render buttresses unnecessary—the projections so called being rather for ornament than utility. The windows are small in proportion, and generally simple in form, though sometimes divided by a column into two lights within the external arch. Circular windows were also used, and in their simple division by

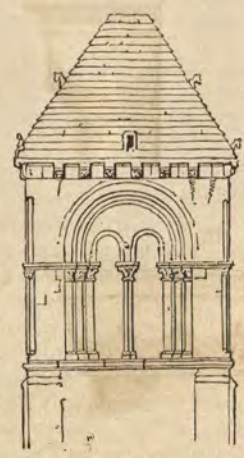
small shafts, we may see the outline of the elaborate wheel windows of the Gothic style. The cornices

Window of Castle Hedingham Church.

are often extremely bold, and supported by corbels in a variety of forms, of which grotesque and monstrous heads are the most common. Another sort of cornice consists merely of a band, indented underneath, and forming a parapet: this cornice is usually of the same projection as the buttresses, which die into it. The former style of cornice was generally used to terminate towers, and perhaps originally to support an acute-angled stone roof, many of which remain in Normandy; though in England, so universal has been the taste for alterations, as various styles of architecture succeeded to each other, it would be difficult to find an example in its original state. These roofs are probably the origin of the spire; and in that of the church of Then, the angles are decorated in a manner in which the germ of a *crocket* may be distinguished. But the general pitch of the Norman roof is moderate; the acute pitch accompanied the establishment of the pointed arch.



Tower of Then Church, Normandy

The details of the Norman style are extremely varied, yet the mouldings are few and simple, and may be traced to a Roman origin. The bases of the columns are also usually simple and regular. In the capitals we constantly find imitations of the classical orders (except, perhaps, the Ionic), from the plainest to the most elaborate. Other forms of the most frequent occurrence appear to be peculiar to the style, whilst in a very large class, possessing the general resemblance of a sort of campanulate form with a massive square abacus, the imagination seems to have exhausted itself in devising the ornaments with which they are sculptured. In the main columns of buildings the shafts are for the most part plain, and a certain degree of uniformity is observed in the capitals, as in those of the cathedral of Oxford, where they are foliated and of the same general aspect, though varied in the details with much taste; but when columns are used as decorations only, as they frequently are to a great extent, it is common to find a studied variety not only in the capitals, but even in the shafts.

The running decorations are also extremely various, and, like the capitals, may often be traced to a classical origin. The antique scroll is reproduced in a variety of modifications. But the most characteristic ornament of the style is the chevron, or zigzag, which is used in the greatest profusion equally in the earliest and latest examples, and even lingers after almost every other trace of the style has disappeared. After this almost universal decoration, frets and reticulations of various forms, right-angled, triangular, and lozenge-shaped, are the most common; and the billeted moulding, described by Bentham, "as if a cylinder should be cut into small pieces of equal length, and then stuck on alternately round the face of the arch." Another common and peculiar decoration is a range of beaked heads lying over a hollow moulding. Cabled and spiral mouldings are also frequent.

These decorations, and an infinite number of others, of which many may be gathered from the accompanying illustrations, were frequently used in great profusion, both in arches and horizontal bands. But in Anglo-Norman works the greatest display of ornament was lavished on the doorways, the arch of which often consists of a repetition of many enriched bands, one within another, surrounded by an archivolt, sometimes resembling that member in classical architecture, sometimes partaking more of the form of a label. Square-headed doors are common; but this form is generally (the exceptions are rare) inclosed within an arch, and the space filled up with sculpture.

1 to 8. Shafts of Columns. 9 to 16, and 24. Arch-Mouldings. 17 to 23. Strings and Imposts. 25 and 26. Cornices. 27 to 30. Ornaments on Flat Surfaces.

These particulars will be best understood by reference to the engravings. The mode of ornamenting the archivolt with figures in compartments, as in the doorway of Barfreston church, is not uncommon.

As the windows in the Norman style are small, and there are no salient buttresses to break the external outline of the building, several kinds of decoration are appropriated to ornament the face of the walls, which would otherwise exhibit a large extent of plain surface. Of these the most conspicuous is a series of small columns and arches, sometimes simple, and sometimes interlaced. One or two tiers of these graceful arcades are very common, either introduced as a dado (both inside and out), as at Canterbury, Christ Church, and Winchester, or as a band between the upper and lower windows, as at Norwich; but some façades present a mass of this beautiful arch-work; such are the west fronts of Rochester Cathedral and Castle Acre Priory, and the ancient parts of Lincoln. Sometimes these arches are richly decorated, and even the flat surfaces within them; as in the tower of St. Augustine at Canterbury, now destroyed, of which a representation has been given in a preceding page.

The Latin cross had become at this period the established form for churches of the larger class, terminating at the east end in a semicircular apsis. The circular form also predominated in the appendent chapels, as may be observed in the cathedrals of Canterbury, Norwich, and Gloucester, and still more distinctly in their prototypes in Normandy, which have undergone less alteration. The internal elevation consists of three divisions—the lower arches; the triforium, occupying the space between the vaulting and external roof of the side aisles; and the clerestory. These parts may be considered invariable; and the interior of Durham Cathedral may be taken as an example of their arrangement. But their forms and proportions differ in different buildings; the triforium

1. Lincoln Minster. 2. Castle Acre Priory. 3. St. Augustine, Canterbury.

being sometimes a spacious open arch, as at Waltham Abbey, and sometimes a very insignificant member of the composition, as at Tewksbury. The windows of the clerestory also vary from a single to a triple light.

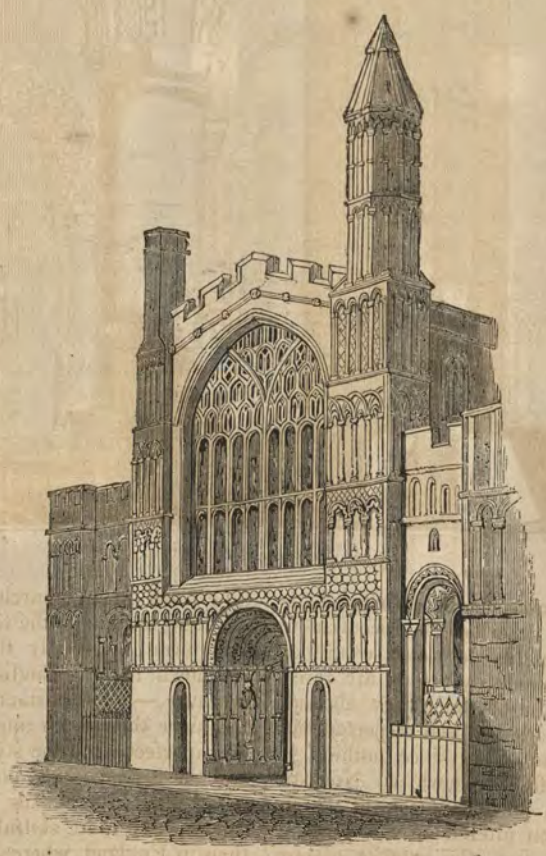
The internal roofs are sometimes vaulted and sometimes left open to the timbers. In the former case the groins most commonly spring from a lofty shaft, either rising from the ground, or superposited on the capitals of the main columns.

The intersection of the cross generally supports a tower, low in proportion, and much decorated with arches pierced for windows. Within it is open to the roof, and forms a lantern. The west end is often flanked by two other towers, as at Southwell Minster, Worksop Abbey, and Durham Cathedral. The angles of the building very commonly break forward before the face of the wall, and are surmounted by square or octangular turrets, formed of groups of columns and arches, and terminating in a pinnacle, of which examples remain at Rochester, Bishop's Cleeve in Gloucestershire, and a few other places; but their mutilation is almost universal.

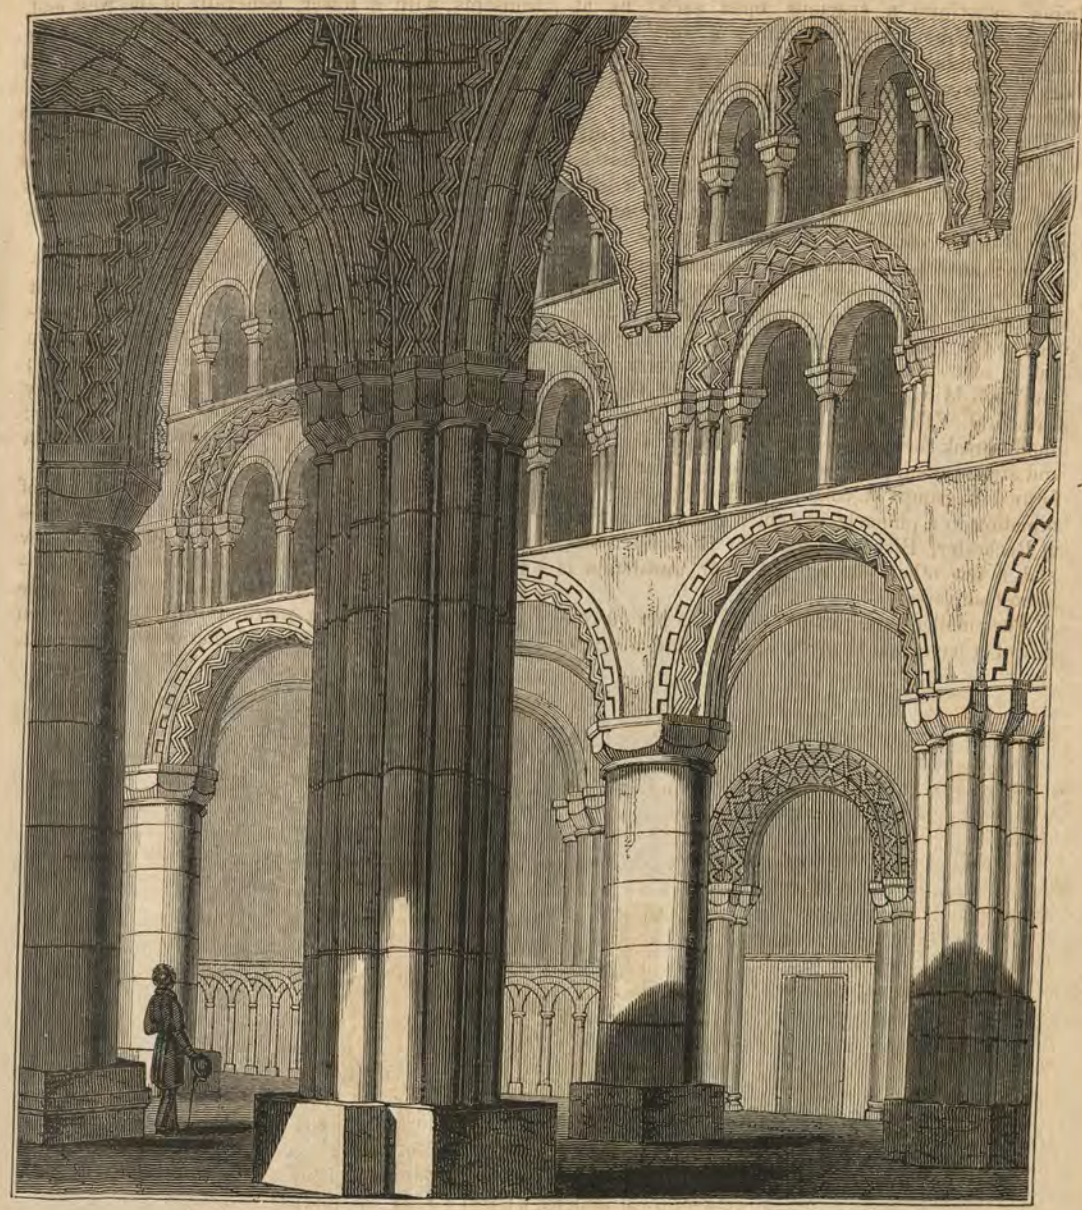
The smaller parish churches of this period consist of a nave and chancel, without side aisles or transepts, with a tower, generally at the west end, but sometimes, as at Iffley and Stewkeley, at the junction of the two divisions of the building. In all churches of this class which possess a decorative character a great share of enrichment is bestowed upon the arch which spans the building between the nave and chancel, as at Tickencote and Barfreston. The east end sometimes terminates in the semicircular apsis, as at Steetly in Derbyshire, but is more commonly square.

In this view of Norman ecclesiastical architecture it has been deemed expedient to dwell at some length upon its details. In the most important structures of this class, the dates, as we have had occasion to see, are generally to be ascertained; but we shall not find the light of history so clearly thrown upon the other branches of our inquiry: analogy must often supply its place, and then a knowledge of detail will be our only guide.

But, previously to entering into the subject of the military and domestic architecture of this period, it may not be uninteresting to offer a few remarks upon a point which has caused some embarrassment to antiquaries,—namely, that in some particulars there is a marked difference between the Anglo-Norman style and that of the continent.



West Front of Rochester Cathedral.
The centre window is an addition of much later date.



NAVE OF DURHAM CATHEDRAL.

Thus the common occurrence of the enriched doorways that have been described is peculiar to England; for though highly-decorated examples are to be found in Normandy, yet they are rare; whereas on our side of the Channel they abound, and seem at all periods to have been respected and thought worthy of preservation, since nothing is more common than to find an enriched Norman doorway remaining in a parish church of which every other part has been altered or rebuilt at a subsequent period. In fact, the exterior of our principal churches of this date is generally in a more decorative style than those in Normandy. The front of the church of St. Stephen at Caen* (as high at least as the towers) is not merely plain, but mean, especially the windows, to a degree unknown in any English structure of equal importance,—a circumstance difficult to be accounted for, since there is no appearance of parsimony or of imperfection in the style in any other respect; and the instance is by no means singular. On the other hand, the details are more regular, better drawn, and more skilfully executed in Normandy than in England, where we shall seek in vain for so near an approach to the graceful forms of antiquity

* Page 390.

as in the two first examples of capitals. The style of these capitals, and of many other specimens of architectural sculpture to be found in France, may lead to an explanation of the difficulty.

The architectural works of this period, and throughout the middle ages, must have been the result of a division of labour. The share the clerical architect took in the work was probably confined to the general dimensions, outline, and character of the building; the actual construction was the business of the master mason; while the subordinate parts, with their various details, were confided to a class of operative artists unknown in the present age, whose minds as well as hands were occupied upon the mouldings and decorations, which they invented as well as executed, each man's province being, perhaps, extremely limited. It is difficult upon any other theory to account for the combination of unity of design and prodigious variety of detail in the works of the middle ages. We shall find, upon examination, what has been incidentally noticed in a former Chapter,—that Byzantine sculpture abounds in the architecture of this period on the continent, but is of extreme rarity in England. A people so far advanced as the Anglo-Saxons in an original style of decorative painting might be independent of foreign aid in architectural sculpture; general designs would naturally be modified by the means of execution at hand; and we may fairly conclude that, though we undoubtedly owe our greatest works to the energy and magnificence of the Normans, yet much that is valuable about them is due to genuine native talent.

The military structures of this period must not be confounded with the extensive fortified residences which came into vogue toward the end of the thirteenth century. The palatial character of the castles of the feudal barons, the vast halls and lightsome oriels which the records and fictions of chivalry and romance have inseparably associated with them, had no existence in those of the twelfth century, which were essentially fortresses, in which everything was sacrificed to security.

At this period the principles upon which such places were constructed were of necessity essentially different from those adapted to the modern art of war, and in some respects even totally opposite, the chief strength of the fortress lying in the height and inaccessibility of the defences. For resistance to the modes of attack then in use the buildings in question were admirably calculated, and though the form and arrangement of the strongholds of the Anglo-Norman barons were as various as the positions in which they were erected, yet it is not difficult to perceive in their scattered remains a common resemblance from which the general system of their construction may be deduced.

The Anglo-Norman castle occupied a considerable space of ground, sometimes several acres, and usually consisted of three principal divisions,—the outer or lower Ballium (Anglicé Bailey) or court,

A Norman Castle.

1. The Dungeon. 2. Chapel. 3. Stable. 4. Inner Bailey. 5. Outer Bailey. 6. Barbican. 7. Mount. 8. Soldiers' Lodgings.—The Mount is supposed by Grose to be the Court-hill, where the lord dispensed justice, and where it was also executed.

the inner or upper court, and the keep. The outer circumference of the whole was defended by a lofty and solid perpendicular wall, strengthened at intervals by towers, and surrounded by a ditch or moat. Flights of steps led to the top of this rampart, which was protected by a parapet,* embattled and pierced in different directions by loop-holes or chinks, and œillets, through which missiles might be discharged without exposing the men. The ramparts of Rockingham Castle, according to Leland, were embattled on both sides, "so that if the area were won the castle keepers might defend the walls." The entrance through the outer wall into the lower court was defended by the barbican, which in some cases was a regular outwork, covering the approach to the bridge across the ditch; but the few barbicans which remain consist only of a gateway in advance of the main gate, with which it was connected by a narrow open passage commanded by the ramparts on both sides. Such a work remained until lately attached to several of the gates of York, and still remains, though of a later date, at Warwick Castle. The entrance archway, besides the massive gates, was crossed by the portcullis, which could be instantaneously dropped upon any emergency; and the crown of

a Outer Gate. *b* Barbican. *c* Groove for Portcullis. *d* Inner Gate *f* City Walls. *g* Stairs to ditto. *h* Guard-room. *i* Sally-port.

the arch was pierced with holes, through which melted lead and pitch, and heavy missiles, could be cast upon the assailants below.

A second rampart, similar to the first, separated the lower from the upper court, in which were placed the habitable buildings, including the keep, the relative position of which varied with the nature of the site. It was generally elevated upon a high artificial mound, and sometimes inclosed by outworks of its own. The keep bore the same relation to the rest of the castle that the citadel bears to a fortified town. It was the last retreat of the garrison, and contained the apartments of the baron or commandant. In form the Anglo-Norman keeps are varied, and not always regular; but in those of the larger size rectangular plans are the most common, and of the smaller class many are circular. The solidity of their construction is so great that we find them retaining at least their outward form in the midst of the most dilapidated ruin. Time and violence appear to have assaulted them in vain, and even the love of change has respected them through successive generations.

In those towers much judgment is shown in disposing of the limited space they afford so as to obtain the best accommodation in a manner compatible with security; and as it was also necessary to provide for the subsistence of a garrison independently of all external communication, they invariably contain a well, which is sometimes contrived with a funnel in the wall to supply water to each story separately. There are generally three stories, and often four, of which the lowest is a dark, vaulted basement, traditionally assigned to the custody of prisoners of war. To such a use these dungeons were undoubtedly too often put, but their general destination was more probably for store-rooms. This story communicated from above with the second, on which was the entrance, accessible only by a steep and narrow flight of steps. The upper floor was the principal apartment, and often the only one possessing the advantage either of a window or a chimney. There was always one, and in the larger keeps two rooms, on each floor, as large as the extent within the walls would admit; and, in the upper story, a variety of closets and conveniences contrived in the projections and thickness of the walls. At Conisborough, the keep, which is four stories high, is a circle of about twenty-two feet diameter inside, with walls fifteen feet thick, flanked by six projecting turrets. In this example both the third and fourth stories contain fire-places, and were therefore both intended for lodging rooms, though the former is very imperfectly lighted. From the latter, though the state-apartment has but one window, opens a small but well-decorated hexagon room, occupying one of the turrets, with a closet adjoining. A piscina or basin for holy-water in the wall indicates the former to be the chapel, a necessary appendage to every castle. Six other closets, opening to the platform on the top of the building, are obtained in the six turrets, which rise above the parapet, one of which, from the appearance of an oven within, seems to have been used as a kitchen. The floors have been of timber, and the stone corbels upon which the beams rested still remain. In its extent and arrangement this building may be taken as a fair representation of the Norman keeps of the smaller class.

The greater keeps are often enormous masses of building. That of the Tower of London is a parallelogram of one hundred and sixteen feet by ninety-six, and sixty-nine high. Rochester occupies a square of about seventy feet, and rises to the immense height of one hundred and four. Dover, Colchester, Castle Rising, Kenilworth, Richmond, Bamborough, and others too numerous to be separately distinguished, are of the same

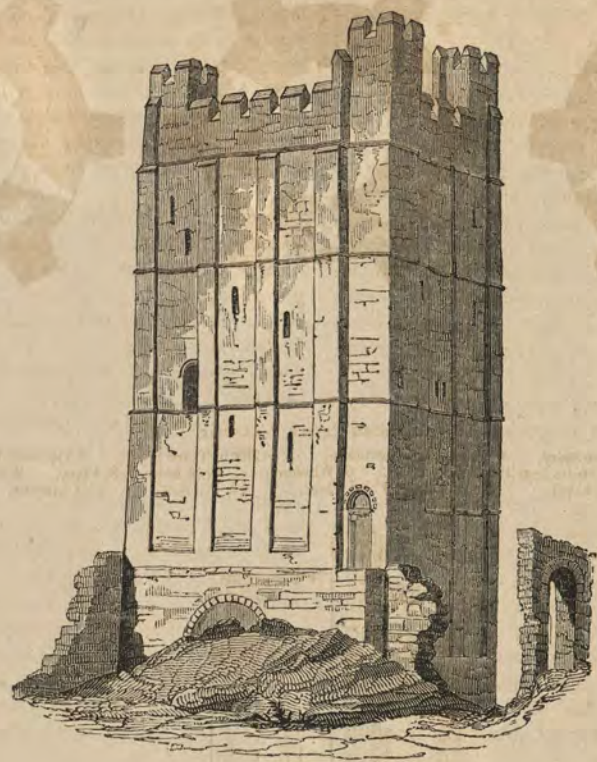
Conisborough Castle.

class and on a similar plan. Their vast surfaces are relieved by shallow buttresses, and in some instances, as at Norwich,* by ornamental arches. Their angles are broken by turrets containing staircases, and a projecting tower of entrance with the chapel in the upper story is a feature common to many.† In their internal accommodation they differ from the smaller keeps only in extent. The principal rooms are larger, and the secondary ones more numerous, but they are in no respect more conveniently arranged or less gloomy.

Dark and comfortless as these towers were, the incessant warfare which rendered their construction necessary also compelled the Anglo-Norman barons to inhabit them with their families and retinue. In Scotland, and particularly in the border country, where society long remained in a similar state, even the private houses continued for centuries to be erected in the form of towers, with windows reduced to loop-holes; the ground-floor, strongly barricaded, being used to secure the cattle at night, and the family dwelling in the ill-lighted apartments above, where they were sometimes obliged to shut themselves up for days together. These Peel houses, as they are called, abounded on the frontier; and Hoddam Castle, a fortalice of this description, was erected by John, Lord Herries, as late as the reign of Mary Stuart.

The long continuance of the feudal system in the

* See ante, p. 380. † See ante, p. 395.



THE KEEP OF RICHMOND CASTLE.

northern parts of Great Britain has had the effect of bringing down many ancient customs to a recent date. As lately as the year 1740, the notorious Simon Frazer, Lord Lovat, maintained all the customs of his ancestors in his residence of Castle Dunie; and his manner of living, described on the authority of Ferguson (the astronomer), who in his youth had passed several months there, may serve to explain by what means the Norman barons and their numerous retainers could find even temporary accommodation in the confined buildings that have been described. "The residence of this powerful laird was a sort of tower, forming at best such a house as would be esteemed but an indifferent one for a private country gentleman in England. It had in all only four apartments on a floor, and none of them large. Here, however, he kept a sort of court and several public tables, and had a very numerous body of retainers always attending. His own constant residence, and the place where he received company and dined with them, was in one room only, and that the very room in which he lodged. His lady's sole apartment was also her bedchamber. The only provision made for lodging either the domestic servants or the numerous retainers was a quantity of straw, which was spread every night over the lower rooms, where the whole of the inferior part of the family, consisting of a very great number of persons, took up their abode. Sometimes above 400 persons attending this petty court were kennelled there."

It is not, however, to be doubted that the extensive circuit of the Norman castles inclosed subsidiary buildings, and those not always confined to such as were requisite for the mere accommodation of the garrison, their horses, and their live-stock. Portchester Castle protected a religious community within its walls, whose church remains to attest its early date. A similar structure is to be traced at Bamborough. At Okeham Castle, a great hall erected before the end of the twelfth century, is still extant, and Robert Earl of Gloucester, who died in 1147, is said to have built a baronial hall in his castle of Bristol. All such appendages must, however, be absolutely distinguished from those which were afterwards incorporated with the main edifice. The extensive and connected residentiary buildings which form the upper ward of such Norman castles as were subsequently retained for habitation, are invariably in a later style than the keep. The castle of Newark, built by Alexander, Bishop of Lincoln, is a rare example of any departure from the established system of fortification at that period, and its remains may indicate a first step toward that union of habitable space with strength, which afterwards expanded into the magnificence of Warwick, Kenilworth, and Alnwick.

There are few remains of the domestic buildings of this period, but a sufficient number exist to prove that even those of the greatest extent and solidity were buildings of a character altogether distinct from the

strong holds that have just been described. This fact may also be inferred from the incidental testimony of ancient writers. At an earlier period we find that Edward the Confessor had a hunting-seat, and Harold a country-house. William of Malmsbury, in a passage already quoted, distinguishes the mansions erected by Bishop Roger from his castles; and from the same passage we may also infer, that they were in a style of magnificence corresponding to that of the other descriptions of Norman architecture. Of the Palatial style of the period, William Rufus's hall at Westminster survives, a splendid monument; for though no feature of its original character remains in view, yet there is indisputable evidence that the dimensions of the building are unaltered. It is supposed, with much reason, to have been originally divided by columns into a centre and side aisles. This at least appears to have been the general construction of the great halls of the Norman period, as far as there are means of judging. Such was the hall of Henry I.'s palace at Oxford; that of Okeham Castle is on the same plan; and the remains of a similar hall existed until lately at the Norman manor-house of Barnack, in Northamptonshire.

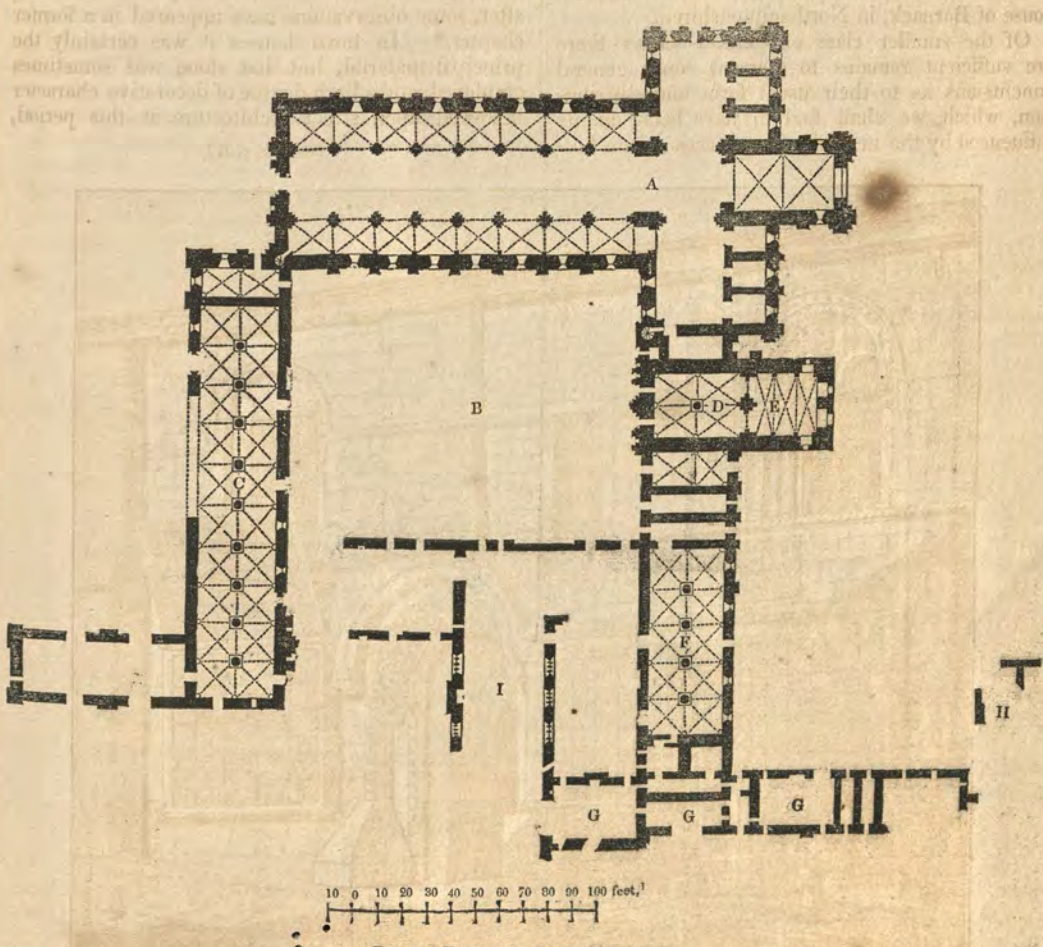
Of the smaller class of country-houses there are sufficient remains to warrant some general conclusions as to their usual form and distribution, which we shall find to have been mainly influenced by the necessity for protection from hostile attacks. The manor-house of Boothby Pagnel, which, though degraded to baser uses, remains nearly in its original state, is built in the form of a parallelogram, with a gable at each end; the lower story is vaulted, and has no communication with the habitable apartment above, which was originally divided into two rooms, of which one only had a chimney; the entrance was by an external stair, probably moveable. In the roof was a loft, accessible only by a ladder, for there is no appearance of an internal staircase in this building or any other of the same class. The structure called Pythagoras's school, at Cambridge, has been a domestic edifice, in all respects similar; and another was destroyed near the church of St. Olave, in Southwark, during the alterations consequent upon rebuilding London Bridge.

These confined and comfortless dwellings evidently bear considerable analogy to the keeps of the same period, and we must suppose them to have been placed within enclosures, and surrounded by offices and outbuildings, which were probably, for the most part, of timber; upon the general use of which material in domestic architecture, now and long after, some observations have appeared in a former chapter.* In town houses it was certainly the principal material, but that stone was sometimes employed, and a high degree of decorative character bestowed upon street architecture at this period,

* See ante, p. 317.

Jew's House at Lincoln.

STAIRCASE IN THE CONVENTUAL BUILDINGS, CANTERBURY.



PLAN OF KIRKSTALL ABBEY, YORKSHIRE.

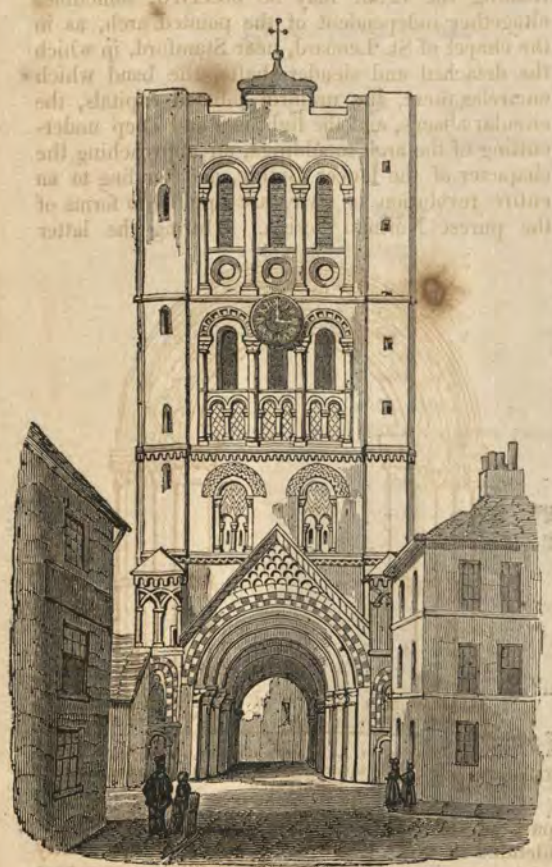
several instances remain to prove, especially that remarkable building at Lincoln, known by the name of the Jew's house, in which the position of the chimney clearly shows the same distribution to have been followed, of placing the principal apartment in the upper floor. Another Norman house, on precisely the same plan, but in a less perfect state, remains within a short distance; and a third in the same city (vulgarly called John of Gaunt's stables), of which the lower part remains intact, shows the ground-floor to have been lighted on the outside by loopholes only. This latter is an extensive building, and encloses a court-yard, with a large ornamented gateway. Moyses Hall, at Bury St. Edmund's, another Norman domestic building, agreeing in every respect with the general conclusions that have been stated, is further remarkable for the form of the windows, which are square-headed (within the circular arch), and divided, not by a column, but a mullion. These windows are undoubtedly original.

The conventual buildings of all ages may be expected to throw considerable light upon contemporary domestic architecture; but of those of the period under consideration subsequent alterations have left little but what is peculiar to the monastic style. The systematic use of external staircases is, however, proved by several instances, and especially by the very remarkable one remaining in the conventual buildings at Canterbury.

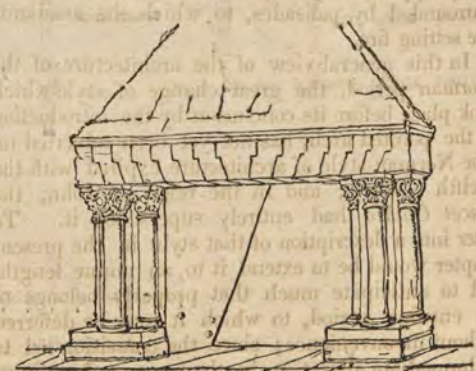


Abbey Gateway, Bury St. Edmunds.

The distribution of the conventual buildings of the twelfth century will be best understood by reference to the accompanying plan of the remains of Kirkstall Abbey, Yorkshire, the principal features of which are common to all similar edifices, whether on a larger or smaller scale. The quadrangle, which adjoins the transept, and extends westward, is always placed on the south side of the church, unless local circumstances prevent it. The position of the chapter-house is invariable, and the arrangement of the larger apartments about the quadrangle differs but little in any instance. This edifice and that of the Norman abbey of Jervaux, in the same county, are nearly similar in plan, and the conjectural references in the one are supplied by comparison with the other. Much architectural splendour was at all times displayed in the abbey gate-houses. That of Bury St. Edmund's is the most perfect remaining of this period, and exhibits in its plain rectangular outline the unvarying character of the Norman style.

The Norman chimneys are of the same construction as those now in common use. It is only in some very early examples that we find the flues carried through the wall, and continued merely for a few feet upward outside. The fire-place consists of a spacious hearth, with a projecting funnel on brackets above. Those at Conisborough are remarkable for their close resemblance to the modern style of chimney-pieces. With this perfect know-

Fire-place, Boothby Pagnel Manor-House.



Fire-place, Conisborough Castle.

ledge of their construction, it seems astonishing that the Norman builders should have introduced chimneys so sparingly; but when we see that the builders of the middle ages down to a much later period gave the preference to warming their halls by a central hearth, leaving the smoke to blacken the roof, and escape as it best might by an open lantern, we can only wonder at the different ideas of domestic convenience which have prevailed in different ages.

The conclusions which have been drawn as to the general system of the military and domestic architecture of the Normans will be strikingly corroborated by a reference to the Bayeux Tapestry. In the compartment relating to the embarkation of Harold, he is represented setting out with his suite from a house precisely like those that have been described, arched below, a large apartment above (in which several persons are drinking), and an external stair, which two of the party are descend-

ELEVATION OF A NORMAN HOUSE. From the Bayeux Tapestry.

ing to join those who are on their way to the ships. Further on is a building, which, from the connexion of the history, must be the palace of Rouen, represented by a gate-house in advance of the hall in which William receives the embassy, the architectural character of which is distinctly marked by the long range of windows above. Subsequently we have several fortified places, of which Dol, Dinant, and Bayeux are identified by the inscriptions. They are represented, according to the ancient custom, both in the classical and middle ages, of putting a part for the whole, as castles, consisting in every case, of the mound, the tower, and the steep approach by steps: that of Dinant is also surrounded by palisades, to which the assailants are setting fire.

In this general view of the architecture of the Norman period, the great change of style which took place before its conclusion by the introduction of the pointed arch, has not yet been adverted to. The Norman style of architecture expired with the twelfth century; and in the reign of John, the *lancet Gothic* had entirely superseded it. To enter into a description of that style in the present chapter would be to extend it to an undue length, and to anticipate much that properly belongs to the ensuing period, to which it may be deferred without inconvenience; since the transition led to no immediate alteration in those general outlines, characteristic of the manners and customs of the age into which it is more especially the province of history to inquire. The origin of the pointed arch, and the priority of invention of the style with which it became identified, are questions which it would be foreign to our purpose to discuss. None of the theories which have been propounded with regard to the origin of the pointed arch have succeeded satisfactorily in assigning it to any remote source, and the latter question can scarcely be settled but by the assistance of a mass of precise dates which are known to be unattainable.

The first introduction of the pointed arch certainly brought with it no change of style, either in Normandy or England, but was merely incidental, as in the example of St. Bartholomew the Great, in London, founded in 1133, where the arches of the transept at their intersection being narrower than those of the nave, are, for convenience, thrown into the pointed form in preference to using the *horse-shoe* arch, which is very common in similar cases. But it was not long before the pointed arch came to be introduced systematically, as in the church of St. Cross, in Hampshire, and the abbeys of Malmsbury and Kirkstall; in all of which examples the main arches are pointed, though the style is essentially Norman in every other respect. After the middle of the twelfth century, a new mode of treating the detail may be observed, sometimes altogether independent of the pointed arch, as in the chapel of St. Leonard, near Stamford, in which the detached and slender shafts, the band which encircles them, the uniform foliated capitals, the circular abacus, and the lightness and deep undercutting of the arch mouldings, all approaching the character of the lancet Gothic, and tending to an entire revolution in style, are applied to forms of the purest Norman design. During the latter

DOOR-WAY OF ST. LEONARD'S CHAPEL, STAMFORD.
This door was originally square, as may be seen by the abutments of the flat arch.

part of the twelfth century the two styles are blended in every possible variety, and apparently with a caprice subject to no rule. The eastern part

of Canterbury cathedral, from the choir to the extremity called Becket's Crown, is an interesting example of the *transition* during the reign of Henry II. In the latter the lancet Gothic is nearly complete; but the square abacus and the chevron ornament still remain to connect it with the Norman.* Of the same date is the round church in the Temple, one of the imitations of the Holy Sepulchre at Jerusalem which resulted from the crusades. But the mixture of style in this example is greater; for though the main arches are pointed, and spring from a cluster of four detached shafts, yet the door and windows are circular, the triforium displays the interlaced arch, and the dado is ornamented with billets. After the reign of Henry II. the new style is dominant.

The architecture of Scotland during this period is identical in character with that of the southern portion of Great Britain; but there are few examples of the Norman style in an unmixed state. Notwithstanding the introduction of the Norman arts of civilization under Malcolm Can-more, and the foundation of Dunfermline Abbey, of which the style indicates its early date, architecture seems to have been little cultivated until the time of David I., since, in the reign of his predecessor, magic was supposed to have assisted in the construction of an arch somewhat beyond the ordinary proportions. The reign of David I. is the great architectural era of Scotland; and the buildings of the numerous monastic institutions founded by that munificent prince and his nobles during the twelfth century, rival those of England, and exhibit the same struggle between the circular and pointed styles of architecture. The churches of Kelso, Dryburgh, Jedburgh, Dundrennan, and Dunkeld may be cited as examples. All these were founded before the middle of the twelfth century; and if no delay took place in the erection of the buildings (and there is no reason to suppose any), it would appear that the transition style was introduced into Scotland in a more forward state than it had attained in England at the same date,—a fact very difficult to be accounted for, since there is no room to believe that the Scots at this period drew their style of architecture from any source independent of the Anglo-Norman school.

Kelso, which exhibits a considerable mixture of the pointed arch, was founded in 1128, and was certainly completed in the lifetime of David I., since his son was buried there. In Dundrennan Abbey, founded in 1142, the arches are mixed, though the circular form predominates; and the transition proceeded regularly till the latter part of the twelfth century, when the lancet Gothic, as in England, became completely established. The abbeys of Aberbrothick and Glenluce, the one founded by William the Lion in 1178, and the other by Roland, lord of Galloway, in 1190, are both in that style.

The system of military architecture in Scotland at this period is also the same as that of the Anglo-Normans. The construction of the Scottish keep-towers differs in nothing from those already described, but they do not generally possess an equal degree of architectural character, being for the most part plain rectangular masses, without breaks or buttresses, or any decorations on the arches.

Sculpture did not flourish during the Norman period. Statues hold no place in the composition

of Norman architecture. A few examples of such an imperfect approach to a figure in a niche as that of Herbert Losing, at Norwich, cannot be considered as exceptions. Those of Henry I. and his queen, under the porch at Rochester, form one of extreme rarity; and the feeble artists of the age seldom ventured upon the human figure otherwise than in relief, in which manner we sometimes find the second person of the Trinity in glory, represented in the heads of doorways. Even in monumental sculpture the effigy was rarely introduced before the twelfth century, and then in a very imperfect manner.

The earliest sepulchral monuments of the Norman period consist merely of the stone coffins in general use with all who could afford them; the lids of which were shaped in a ridge, or, as it is commonly called *en dos d'âne*. Such coffins being let into the ground no lower than their depth, which was the usual mode of interring persons of consequence, the covering-stone stood above the level of the pavement; and they thus became a memorial as well as a receptacle for the dead.

Monuments of this kind were frequently quite plain. When they bore an inscription, which was seldom, it ran round the edge of the covering-stone. The custom of sculpturing them with a cross is nevertheless of great antiquity, and was by no means confined to the clergy, as it has been supposed, though Gough imagines that some peculiar forms may have been appropriated to them to mark not only their profession but their rank. Thus a cross-flory in a circle may denote a rector, as a cross-patée may probably indicate a Templar. Crosiers, chalices, and other ecclesiastical insignia, are also introduced for the same purpose.

Stone coffins were often placed entirely above ground, in the manner of a sarcophagus, in which case the sides are sometimes sculptured. Architectural decorations were afterwards introduced, but probably not earlier than the middle of the twelfth century. Of this kind is the monument at Canterbury assigned to Archbishop Theobald, who died in 1161. And here it may be remarked,

SARCOPHAGUS, assigned to Archbishop Theobald, at Canterbury.

with reference to this monument, that in all *transitions* the new style first shows itself in a perfect form in smaller works, such as tombs and shrines; and we must not be surprised at finding in such works the trefoil arch, and other forms peculiar to the lancet Gothic, at an earlier date than the establishment of that style in works of architecture generally.

The earliest monumental effigies are sculptured on the covering slabs of coffins in low-relief, the ground being sunk into the stone, and the figure level with the surrounding margin. A specimen of this kind, probably a very early one, remains, though in the last stage of dilapidation, in the cloister at Westminster. It was not long, however, before a bolder style was adopted; and the monumental effigies of the twelfth century are mostly in half-relief.

With the Gothic style of architecture, canopies were introduced over the head of the effigy, consisting of a trefoil arch supported by columns, to which was added the pediment and other characteristics of that style as it advanced. Of this class several monuments of the abbots remain at Peterborough.

Most of the effigies which remain of this period represent ecclesiastics. There is little variety in the manner of treating the subjects. The figures are generally represented treading on a dragon, emblematic of the evil principle, and piercing it with the pastoral staff or crosier they bear in the right hand; the left frequently holds a book: or the left hand bears the crosier, and the right is elevated in the act of benediction. The two angels supporting the head of the effigy were introduced at this period, and are to be found in early examples.

The full recumbent effigy cannot be assigned to a date much earlier than the thirteenth century. King John is the first of our monarchs for whom such a memorial was executed in England, though his two predecessors were so commemorated at Fontevraud. The effigy of Robert, Duke of Normandy, who died in 1134, in Gloucester Cathedral, is admitted not to be contemporary, and that of Geoffrey de Magnaville, Earl of Essex, in the Temple church, assigned to about the middle of this century, must be considered more than doubtful. The armorial bearing on the shield seems sufficient to invalidate its claims to so early a date, independently of its similarity to other statues in the same place, which indisputably belong to the succeeding period. In addition to these, the circumstances attending his death and burial render it not improbable that a delay took place in executing the monument.

In the higher departments of the art of painting this period is destitute of monuments and scanty in records. The most industrious collector of authentic documents on the subject, Vertue, could find none bearing even remotely upon it until the reign of Henry III., when a precept appears to the sheriff of Southampton, directing that the wainscot of the king's room in the castle of Winchester shall be painted with the same *pictures* as formerly. This, as Walpole observes, implies that history painting had been in use at an earlier date;

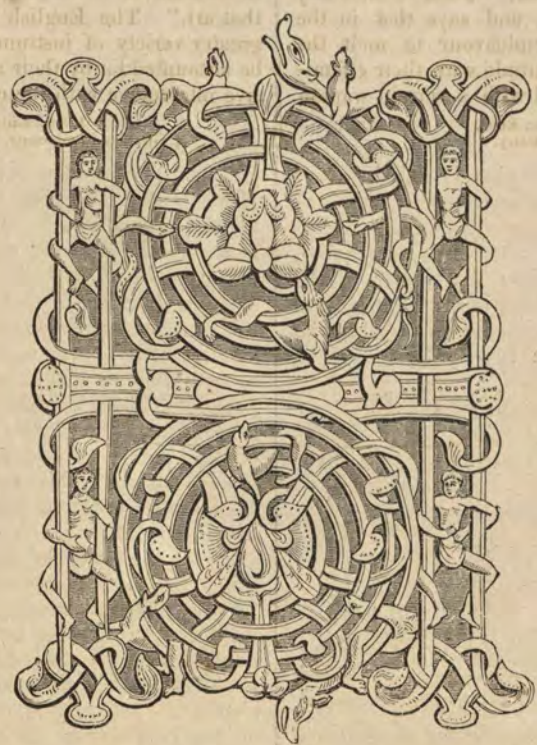
and we may, moreover, reasonably conclude that the artists who designed the Bayeux Tapestry would not flinch from any historical subject, however extensive or complicated.

Nothing, however, is certain but that painting and gilding were used abundantly, especially in the decoration of ceilings. William of Malmsbury, in a curious passage, calls Godfrey of Bouillon "a brilliant mirror of chivalry, in which, as in a splendid ceiling, the lustre of every virtue was reflected." Both this author and Gervasius extol highly the painted roof of Canterbury Cathedral, completed by Prior Conrad in 1114, but give us no insight into the style in which it was executed further than that it represented Heaven, though the latter is very particular in his description of the building. A reference to Normandy will afford no better satisfaction. The portraits of William the Conqueror and his family, formerly at Caen, might be cited; but their authenticity, the antiquity of the wall on which they were painted, and the accuracy of Montfaucon's engraving, by which alone they are preserved to the present day, are alike doubtful. Nor is any trace left of the paintings on the tomb of Walter Gifford, Earl of Buckingham (buried at his own foundation of the Priory of Longueville, in 1102), though they existed to a comparatively recent date.

With this deficiency of examples in its more important branches, we must again have recourse to illuminated manuscripts for information upon the state of the art as regards composition and drawing; and upon these points it will be sufficient to refer to the numerous engravings from these manuscripts that are elsewhere given in illustration of the manners and costumes of the period.

The manuscripts of the twelfth century are described by Sir F. Madden* "as remarkable for a profusion of ornament, and a graceful but intricate mode of illuminating capital letters, which renders it more easy to recognise manuscripts of this period than any other. This style, by the aid of gold and silver, was carried to an excess of extravagance scarcely to be conceived. In elegance and elaborate art the decorations of this century will yield to none, but they occasionally betray a portion of that false taste which gradually crept into the patterns of a later period. About this time it became the practice with the scribes to leave blanks for the initial letters, to be filled up by one or more limners; and this accounts for the imperfect state, and sometimes total omission of them, which we find in manuscript volumes of this and the two succeeding centuries. The fashion, also, of writing books of a size and magnitude almost incredible, was adopted toward the end of the twelfth century."

* Introduction to Shaw's Illuminated Ornaments.



Specimen of Ornamental Letter of the period.
Drawn from a MS. of the period in the Royal Library.

A short time before the commencement of the present period, a new form was given to the science of music by the improved scale of musical notation invented by the celebrated Guido of Arezzo. This invention was first published by the author in his 'Micrologus,' which appeared about 1030. It was not, however, till after the introduction of a correct method of marking time that the full benefit from Guido's invention was felt. In the present period great attention was paid to church music by the clergy, some of whom composed pieces for the use of the choirs. Thomas, the first archbishop of York after the Conquest, who had doubtless become acquainted with the Italian scale, is described as frequently employing his leisure in singing or in playing upon the organ; and "in making organs, and in teaching his clergy to make them, and to set hymns both in prose and verse to music."* When the archbishop "heard any of the secular minstrels sing a tune which pleased him, he adopted and formed it for the use of the church, by some necessary variations."† The trouveurs and troubadours were also active in contributing to the improvement of secular music during the twelfth century. During the thirteenth century, it is not unlikely, from the increasing popularity of minstrels and troubadours, that secular music, having a wider field for its exercise, underwent greater improvement than church music. Attempts were made to force the latter beyond the limits to which it had been confined during an earlier period. John of Salisbury complains of this change, and says that in the churches "the singers endeavour to melt the hearts of the admiring multitude with their effeminate notes and quavers, and with a certain wanton luxuriancy of voice."* But at this period the choral services were not the same in all parts of the country. Each cathedral had its own formulary, or as it came to be called, "use." In the northern counties the "use" of the archiepiscopal church of York prevailed; in South Wales that of Hereford; in North Wales that of Bangor; and in other places the "use" of other principal sees, particularly that of Lincoln. In Canterbury, where the monks of St. Augustine had introduced their church music, the "use" of Salisbury was almost general throughout the province. Secular music was still more likely to be modified by local circumstances. The music of the English was grave and measured, and that of the Scotch, Irish, and Welsh of a more lively kind. In the country about York, and generally beyond the Humber, the popular music resembled that of Wales. The organ was the instrument used in sacred music. The harp, used as an accompaniment to the popular minstrels, was the most common instrument in Scotland, Wales, and Ireland; and there were but few others in those countries. "The Irish," says the writer just quoted,† "use only two musical instruments—the harp and the timbrel; the Scotch use three—the harp, the pib-corn, and the bagpipe. The Irish harps have brass strings." "It is the opinion of many," he adds, "that the Scotch music at present not only equals, but even very much excels the Irish; for which reason they go to Scotland as to the fountain-head of perfection in that art." The English were acquainted with a greater variety of instruments—a fact which may be accounted for by their more intimate and extensive intercourse with the continent.

CHAPTER VI.

THE HISTORY OF MANNERS AND CUSTOMS.

WE shall begin the present chapter as we did the last under the same title, with a notice of the few facts that are to be collected respecting the furniture of the houses and other domestic accommodations of the period. In as far as we can judge from the Bayeux Tapestry and the various illuminated MSS. of the eleventh and twelfth centuries, it would appear that very few additions or improvements were made by the Normans to the stock of English household furniture. We perceive the same description of tables, long and oval, bearing the same sort of plates, dishes, cups, and knives; the fowls and roast meats being still served up upon the spit to the guests seated at the festive board. In the reign of King John we find mention of saltcellars. A mark of gold is ordered in the Close Rolls to be furnished to make a saltcellar for the king's use; and twenty-nine shillings and sixpence to be paid for a silver saltcellar, gilt within and without. The chairs of state, the seats of regal and ecclesiastical personages, are similar to those already described of the Anglo-Saxons; and though some appear to be more elaborately carved and ornamented, it is a question whether such was, indeed, the fact, or if the improvement is not rather in the art of the delineator than in that of the maker of the article itself. The chairs in which are seated the kings and bishops of the set of chess-men of the twelfth century, found in the isle of Lewis, in 1831, and engraved in the 24th volume of the

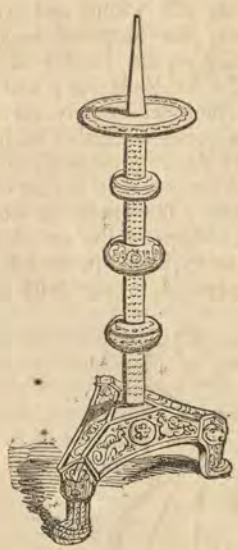
Chairs. Ancient Chessmen, from Specimens in the British Museum.

Cradle, Royal MS. 2 B. vii.

Archæologia, are amongst the best specimens of the ornamental carved furniture of that period. The hangings of needlework and embroidery which adorned the walls of the Anglo-Saxon palace seem to have been partially superseded in the course of this period by the fashion of painting on the walls themselves, or the wainscot of the chamber, the same historical or fabulous subjects which had hitherto been displayed in threads of colours and gold; for in the early part of the reign of Henry III., as mentioned in a preceding page, the sheriff of Hampshire is commanded to take care that the wainscoted chamber of the king in the castle of Winchester be painted with the same histories and pictures with which it had been *previously* painted, thereby showing that this style of decoration had been introduced prior to that date. Thus, says an old French romance:—

"Lors cambres et lors grans sales font tambroissier peindre et pourtraire."

They caused their chambers and great halls to be wainscoted and painted with figures.



CANDLESTICK. Archæologia, vol. 23.

CUP found in the RUINS of GLASTONBURY ABBEY.

In the 23rd volume of the Archæologia is engraved one of a pair of candlesticks of the twelfth century, now at Goodrich Court. They are of copper, engraved and gilt, and ornamented with enamel of seven colours let into the metal, displaying figures of men, women, and animals. They have spikes at top, on which the candles were fixed, the socket to contain them being of much later date.

Limoges, in France, was celebrated as early as 1187 for the art of enamelling; and boxes, cups, and dishes, ornamented like the candlesticks above mentioned, are occasionally met with, and may be considered of the same period.

Ypres, in Flanders, was equally famous before the year 1200 for its manufactures of fine linen, and from thence the term Diaper, or D'Ypres, *i. e.* of Ypres, which was afterwards applied to all similar cloths wherever fabricated. Thus, in the 'Roman d'Alexandre,' written about 1200, we find the expression "Dyapres d'Antioche,"* and we may presume the napkins and cloths of the Anglo-Normans were scarcely inferior to those of the present day.

In the Close Rolls of the reign of King John forty-nine shillings and eight pence halfpenny are ordered to be paid for three pieces of taffety and one and a half of fustian, and five pounds of silk or fine cotton for three couches or beds for the king and for the workmanship of the same.

Linen sheets were also used at the same period: there is an order to the sheriff of Southampton to deliver to Norman Esturmy, the king's valet, amongst other gifts, because he had become a knight, a couch or bed, and a pair of linen sheets.

Slender as the information is that we possess upon this subject, it affords some indications of the advance of refinement; and if our materials were more ample we should no doubt find that the augmentation of wealth and the improvement of taste made themselves visible in many more particulars than we can now discover, though it is not probable that the progress of comfort and elegance in either the useful or decorative furniture of the houses of the period at all corresponded to that which took place in the magnificence of their external architecture. The art of architecture was fostered by the passion for erecting ecclesiastical buildings into what we may almost call a premature development as compared with any of the other arts,—certainly as compared with those whose province it is to minister to the convenience of the great body of the people. But the spirit of show which belonged to the time found ample oppor-

* To diaper was also understood in heraldry to signify the mode of covering the field with a pattern of flower-checquers or scroll-work quite independent of the charge placed upon it. The shield of Robert de Vere, Earl of Oxford, engraved in Stothard's Monumental Effigies, exhibits a fine specimen of this style of ornament.

tunity of displaying itself in what we are next to describe, the fashions of dress which prevailed, and which had already acquired not a little of the mutability for which this characteristic is still proverbial above all other fashions.

The Anglo-Saxons during the reign of Edward the Confessor had aped so much the dress and manner of the Normans, that, at the time of the Conquest, little difference seems to have existed between the two nations in their appearance, if we except that produced by the singular fashion amongst the Normans of not only shaving the upper lip as well as the rest of the face, but also of shaving or cropping the hair at the back of their

Groups of Soldiers, selected from the Bayeux Tapestry, to show the Norman fashion of shearing the back of the head.

heads, a custom they had themselves borrowed of the Poictevins, as Glaber Rodolphus informs us, and which induced the spies of Harold to declare that the army of William appeared to be composed wholly of priests.*

The general habit of the Normans consisted of the tunic, the cloak, the long tight hose, called by them *chausses*, the leg bandages and shoes, or short boots. A greater variety of caps appear in the Anglo-Norman illuminated MSS.; but the Phrygian-shaped and a flat sort of bonnet, like that of the modern Scotch, are those most frequently

Matilda, Queen of Henry I., from a Statue in the West door-way of Rochester Cathedral, exhibiting the mode of plaiting the hair.

Costume of Norman English Ladies of the Twelfth Century. Cotton MS. Nero, C. iv.

met with. The Saxon subjects of William continued for some time after the Conquest to be distinguished by their long flowing locks and the rich embroidery of their dresses.*

In the female costume the change was more in name than in garment. The *gunna* or gown became the *robe*, and the veil or head-cloth the *couvre-chef*, from whence the modern word kerchief. The hair is rarely seen in illuminations of this period, but occasionally it appears long, and sometimes plaited, after the ancient Gothic or in the modern Swiss fashion.

During the reigns of Rufus and Henry I. the dress of the higher classes became much more costly in material† and extravagant in shape. Some most ridiculous fashions are reprobated and caricatured by the historians and illuminators of that period. The sleeves of the tunics were made long enough to cover and hang considerably below the hand. Peaked-toed boots and shoes of the most absurd shapes, some terminating like a scorpion's tail, others stuffed with tow and curling round like a ram's horn, are mentioned by the monkish historians. Ordericus Vitalis says they were invented by some one deformed in the foot. The mantles and tunics were worn much longer and fuller, and the former lined with the most expensive furs. Henry I. is said to have had one presented to him by the Bishop of Lincoln, lined with black sable with white spots, and which cost 100*l.* of the money of that day.

The English now, both Saxon and Norman, suffered their hair to grow to an immoderate length instead of being cropped ridiculously short; and William of Malmsbury, who has previously complained of his countrymen having imitated the latter fashion, now laments over the long hair, the loose flowing garments, the pointed shoes, and effeminate appearance of the English generally. Even long beards were worn during the reign of Henry I.; and Ordericus Vitalis compares the men of that day to "filthy goats."

Anselm, Archbishop of Canterbury, refused his benediction on Ash Wednesday to those who would not cut their hair.‡ Councils were held on this important matter.§ The razor and the scissors were not only recommended *ex cathedra*, but positively produced sometimes at the end of a sermon, against the sinfulness of long locks and curling moustaches. Serlo d'Abon, Bishop of Seez, on Easter Day, 1105, after preaching against beards before Henry I., cropped not only that of the king but those of the whole congregation with a pair of scissors he had provided for the occasion. But nothing could long repress these fashions, which in the time of Stephen again raged to such an extent that the fops of the day suffered their hair to grow till they looked more like women than men; and those whose ringlets were not sufficiently luxurious added false hair to equal or surpass in appearance their more favoured brethren.

The female dress of those times appears to have had its share of their preposterous and expensive fashions. The sleeves of the ladies' robes, and their veils or kerchiefs, appear, in the illuminations of

FEMALE COSTUME OF THE TIME OF RUFUS AND HENRY I., from a Psalter of the twelfth century. The long and knotted sleeves are very remarkable.

this period, knotted up, to prevent their trailing on the ground. Some of the sleeves have cuffs hanging from the wrist down to the heels, and of the most singular forms. The ancient heraldic maunch is evidently copied from them. A garment called the

LACED BODDICE AND KNOTTED SLEEVES, from a Satirical MS. Illumination of the twelfth century. Cotton MS. Nero, C. iv.

* William of Malmsbury.—William of Poictiers.

† The well-known story, told by William of Malmsbury and Robert of Gloster, of Rufus, that he threw away with disdain a pair of new hose because they only cost three shillings, is very characteristic. "A king," said he, "should not wear anything so cheap; fetch me some worth a mark of silver!"

‡ Eadmer, p. 23.

§ At Limoges, in 1031; by Pope Gregory VII., in 1073; and at Rouen, in 1095.

surcote (surcoat) was worn as an upper robe or tunic, as its Latin name implies (*super-tunica*); and the under garment was laced up the front, a custom often alluded to in the romances of the twelfth and thirteenth centuries. In an illuminated manuscript of the close of the eleventh century,* the sarcastic painter has represented the devil so attired; the skirts as well as the sleeves of the robe being tied up in knots, as before mentioned. The surcoat was frequently richly embroidered, and the edges escalloped or indented, a fashion exceedingly prevalent during the middle ages, and which provoked many legislative attempts to put it down. The first enactment against its being followed by the lower classes appeared during the latter part of the reign of Henry II. The hair was still worn in long plaited tails, and sometimes encased in a sort of silken pipe, or bound with ribbon like a pigtail.

With the reign of Henry II. a more becoming and graceful, although equally splendid style of attire, seems to have made its appearance. The monumental effigies, which begin now to afford us their valuable information, exhibit the sovereign and the nobles of this period in full and flowing robes of a moderate length, girded with a richly ornamented waist-belt, mantles fastened by fibulæ on the breast or on the shoulders, chausses or long hose, and shoes or boots, the latter sometimes beautifully embroidered, caps of various forms (the Phrygian style predominating), and jewelled gloves. In the illuminated manuscripts we still see the leg bandages crossing each other all the way up the leg from the very point of the toes, sandal-wise, as they are seen in the latest Saxon and earliest Norman manuscripts, the Bayeux Tapestry, &c. They are generally represented as made of gold stuff or leather. Henry II. introduced, or, we should rather say, re-introduced the short cloak of Anjou, and was in consequence surnamed Court-manteau or Curt-mantell; and also the old Norman fashion of close cropping and shaving, which was adhered to pretty generally till the latter part of the reign of Richard I., when the beard and moustache were again worn.

In the reign of John the laity were at length liberated from all legislative interference upon this point, and allowed to consult their own fancy or convenience. The hair in the reign of King John was curled with crisping-irons, and bound with fillets or ribbons; the beaux of the day wearing no caps, in order that its beauty might be seen and admired.

The ladies, following the example of the men, or having set them the example (for we confess we have no authority for deciding that part of the question), appear in the reign of Henry II. to have discarded their long cuffs and trailing skirts, their knotted sleeves, kerchiefs, &c., and adopted a more rational appearance altogether. The robe, like that of the men, girdled round the waist, and having long but tight sleeves reaching to the waist, a mantle gracefully depending from the shoulders, and the hair again almost entirely concealed by the veil, kerchief, or wimple, which is frequently brought together under the chin, or fastened by a band passing beneath it, give altogether a conventual appearance to the costume.

There is nothing requiring notice in the ecclesiastical costume of the present period, except that the form of the mitre begins to approach that now in use.

The armour of the Anglo-Normans, judging from the figures in the Bayeux Tapestry, does not appear to have differed very materially from that of the Saxons. During the eleventh century the hauberk of flat rings sewn upon leather, or of small pieces of iron similarly secured, was apparently the defensive body armour of the Saxons, the Danes, the Franks, and the Normans. It was called, as we have observed, the *gehringed byrne* by the first, *brynio* by the second, and by the Normans *halbers* and *haubert*, or *hauberk*, Latinized *halbercum*, the word being generally derived from *halsberg*, a protection for the throat; and as at this period we perceive that the mailed tunic is furnished with a cowl which protects the neck behind, and is hooked up occasionally over the chin, and fastened to the nasal before, it may owe its Norman denomination to that additional safeguard. The word mail, too, so familiar to our ears, is of this period, the French word *mailles* being derived, according to some authors, from the Latin *macula*, sometimes used for the mesh of a net.* Several hauberks represented in the Bayeux Tapes-

MASCLED ARMOUR.—Seal of Milo Fitz-Walter, Constable of England and Governor of Gloucester under Henry I.

try, and in the illuminated manuscripts of this period, appear marked with transverse lines, which,

* There is a British word *mael*, signifying iron generally, but it may have had the same derivation.

EXAMPLES OF MASCLED ARMOUR. Cotton MS. Caligula, A. 7. The Illumination represents the Slaughter of the Innocents.

if they were not intended to depict the quilted panzar worn by the Danes, and therefore most likely by the Normans and Saxons also, would seem to be lozenge-shaped pieces of iron or steel sewn, like the rings, upon a leathern or woollen foundation; a species of defence which Sir S. Meyrick has denominated mascled armour,* and which still more resembles the meshes of a net. Instances of that peculiar mail composed of rings set up edgewise, which came generally into use towards the close of the twelfth century, occur as early as the close of the eleventh.

In Kerrick's collection of notes and drawings in the British Museum, there is a highly curious sketch of the marble figure of a knight under one of the lions which support the choir of the cathedral of Modena, armed in a hauberk of rings set edgewise, the front hooked up to the nasal of the helmet, which is of a very early shape, and laced or buckled under the throat by double thongs of leather. His shield is of the pear or kite shape, and has a ridge down the centre like that of King

KNIGHT OF MODENA. Kerrick's Collect. 6738.

Stephen on his great seal. The long-pointed shoe, the prick spur, and the great breadth of the sword-blade near the hilt, are all indicative of a period corresponding with that of our early Anglo-Norman monarchs, Rufus, Henry I., and Stephen.†

* Vide Letter on the Body-armour anciently worn in England. Archæologia, vol. xix.

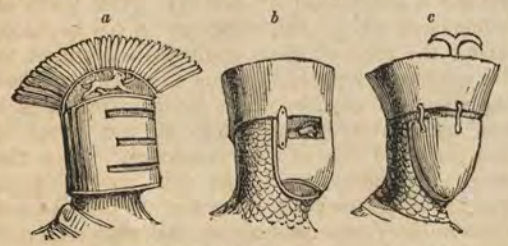
† Mr. Kerrick remarks, in his note to this sketch, "I take this to be the most ancient figure I have yet seen in carving."

Scale armour, the *lorica squamata*, in fact, of the ancients, was also worn during the eleventh and twelfth centuries, and in some instances the overlapping plates are of a square form, instead of being rounded or plumated. This description has been denominated by Sir S. Meyrick the *tegulated*, —and a specimen is presented in the seal of Richard, constable of Chester, temp. Stephen.

Tegulated Armour.
Seal of Richard, Constable of Chester in the time of Stephen.

Anna Comnena mentions the French knights at the close of the eleventh century as wearing both ringed and scale armour; and Bohadin, the Saracen historian of the Crusades, describing the infantry of Richard I. says, "they were covered with thick strong pieces of cloth, fastened together with rings, so as to resemble dense coats of mail."*

The Anglo-Norman helmet was conical, with a nose-guard, called the nasal, to which, as we have remarked, the front of the collar of the hauberk was occasionally looped up, so as to leave no part of the face exposed but the eyes. Cheek-pieces were afterwards added; and in the reign of Richard I. we find the helmet assume a cylindrical or barrel shape, flat at the top, with an oval opening for the face, which was, during combat, covered



Avantailes.

with a perforated plate or grating, removable at pleasure, and called the *avantaille* or *ventaille*.

* Vide Turner's Hist. of Eng., vol. i. p. 382, note.

In some lately discovered perfect impressions of the second great seal of Richard I., the monarch's helmet of this form is surmounted by a sort of crest composed of a semicircle of rays or points, in the centre of which is portrayed a lion passant gardant.

The shield was, from the time of the Conquest to that of Henry II., of the form called kite or

Geoffrey Plantagenet. (Le Bel.) Kerrick's Collect. 6728.

pear-shape; and, from its similitude to those seen in the Sicilian bronzes, is imagined to have been brought by the Normans from that part of Europe after their Italian conquests. Those in the Bayeux Tapestry are perfectly flat, and ornamented with rude figures of animals, crosses, rings, &c. About the time of Stephen it appears curved, but destitute of heraldic bearings. On the first great seal of Richard I. it is considerably shortened, and bent till it is almost a semi-cylinder; and this is the first of our regal seals which presents us with an undoubted armorial bearing,—namely, a lion heraldically termed counter-rampant, *i. e.*, facing the sinister or left side instead of the dexter or right side of the shield. The form of the military standard is shown in some of the great seals, and also by the annexed representation.

A short notice of the rise and progress of English heraldry may here not inappropriately find a place.

Most writers on the subject worthy of attention consider the close of the eleventh century as the period when armorial bearings, properly so called, became the distinctions of the royal and knightly families of Europe; but until the middle of the

WILLIAM I. and TONSTAIN bearing the CONSECRATED BANNER at the BATTLE of HASTINGS. Bayeux Tapestry.

twelfth we have no positive authority for their existence in England. The rude and fanciful figures upon the shields of the Normans, in the Bayeux tapestry, can no more be called coats of arms than the better executed lions and griffins on the bucklers of the Greeks and Romans. A monk of Marmontier, who is said to have lived in the reign of Henry I., describes that monarch, upon the occasion of the marriage of Geoffrey Plantagenet, Count of Anjou, with his daughter Matilda, A.D. 1122, as hanging about the neck of his son-in-law "a shield ornamented with little golden lions," and the count is said also to have worn shoes embroidered with similar animals. But neither the number of the lions nor the colour of the field is mentioned, and they are spoken of more as fanciful ornaments than as insignia having any distinct signification, not the slightest allusion being made to the arms of England, of Henry himself, or of any particular family.*

The shield of Stephen on his great seal is perfectly plain, having only a ridge down the centre; and that of Richard, constable of Chester during his reign, is covered with a pattern resembling the tegulated hauberk he wears. It *may* be intended to represent that charge which the heralds afterwards called *checquy*, but we know not who would venture to assert its title to be considered an armorial bearing.

Henry II., on his great seal, presents us but with the interior of his shield.† John of Salisbury, however, who wrote during his reign, speaking of the luxuriousness and effeminacy of the English knights, says, "if a piece of gold, minium, or any colour of the rainbow, by any chance or blow should fall out of their shields, their garrulous tongues would make it an everlasting memorial;" and, further, he remarks that they "gild their shields;" but he intimates nothing of armorial bearings.

It is nevertheless during the reign of this monarch that the first undoubted description of English heraldic devices occurs. Gulielmus Brito, or William the Breton, the author of the Latin poem on the exploits of Philip Augustus, called the 'Philippeis,' not only describes Richard Cœur de Lion, while Count of Poictou, as being recognised by his antagonist, William de Barr, by "the lions grinning on his shield," * but he also mentions the swallows borne by an ancestor of the Cornish family of Arundel, and which his descendants display to this hour.†

The first great seal of Richard I. presents us, as we have already mentioned, with a shield on which is distinctly seen a lion counter-rampant, leaving it doubtful, according to some writers, whether this alone constituted the whole charge of the field, or that the remaining half unseen, in consequence of the curve of the shield, was charged with another lion-rampant, making the device two lions combatant, and therein bearing out the description of the old Latin writer above quoted.

On Richard's second seal, and after his return from captivity, we find his shield emblazoned with three lions passant regardant, as they have ever since been quartered in the English arms. The shield of his brother John exhibits before his accession to the throne two lions passant regardant, and to these a third was added when he became king.

In the reign of Henry III. heraldry appears to have become a science. A roll of arms of that period is in existence, and from that time the principal terms of blazon are to be found in the fabliaux and romances of France and England.

The singular combination of the military and the religious spirit, which forms the most striking characteristic of the present period, was especially exemplified in those usages which constituted the system of knighthood or chivalry. The youth of noble birth was placed, while yet in his boyhood, under the care of some distinguished knight, in the quality of a page. In this capacity he waited upon his preceptor, by whom he was treated as a son, and carefully instructed in the forms of courtesy and the military exercises. Even the sons of princes attended in this manner upon knights of inferior rank, but redoubted prowess and great military accomplishments, under whose severe instruction they were trained for future eminence.

* The words are simply "Clypeus leunculos aureos imaginarios habens collo ejus suspenditur" (a shield is suspended from his neck, having upon it the likenesses of little lions in gold). The same author, speaking afterwards of a combat of this prince, again mentions the lions on his shield,—"Pictos leones præferens in clypeo, veris leonibus nulla erat inferior fortitudo" (bearing painted lions on his shield, his courage was not inferior to that of real lions).—Menestrier, Origine des Armoiries.

† A proof, in our opinion, that it bore no particular device by which that monarch was distinguished, or the artist would surely have so disposed the shield as to have rendered the bearing at least partly visible. The same inference may be drawn from those of William I. and II., Henry I., and the various knights and nobles of those reigns, whose seals are extant, on which the interior of the shield alone is uniformly represented. It is not improbable, however, that Henry II. may have occasionally borne lions on his shield, as his father Geoffrey did before him, and thus transmitted them to his sons, Richard and John.

Gul. Brito, lib. iii.

This is one of the earliest specimens of what are called canting arms, or *armes parlantes.*

After the youth had finished this stage of his noviciate, and was deemed qualified for a higher grade, he was advanced to the rank of squire. He was now perfected in the necessary arts of riding and tilting, and also in the accomplishments of hunting and hawking, and frequently of music; and if war broke out, he then followed the banner of his instructor into actual service. The rank, but more especially the military renown of the knight, contributed to swell his train of pages and squires; and while the houses of some might be considered as schools, those of others might be termed colleges of chivalry. Fitz-Stephen describes their pupils during the reign of Henry II. as exhibiting, on horseback, before the citizens, all the active evolutions of a battle, on the Sundays during Lent. Youths, so educated, and constituting one household, naturally formed strong attachments for each other, and each selected his future companion in arms, between whom and himself there was, from thenceforth to subsist a reciprocity of affection and interest. The connexion between the members of these associations, who were termed *fratres conjurati*, or sworn brothers, often superseded the ties of common relationship.*

When the pupil had spent seven or eight years in the capacity of squire, and was considered fit to receive the high distinction of knighthood, a solemn and imposing ceremony took place. The candidate passed several nights in prayer and watching, in a church or chapel, and the sacraments of religion were administered during this period of probation. At length, when the longed-for day of consummation had arrived, the sacred building was arrayed in all its splendour; the youth, accompanied by his patron, his kindred, his friends and companions, and followed by an eager crowd, repaired in procession to the church, with his sword of knighthood dependent from his neck in a scarf; the weapon was blessed by the officiating priest at the altar, and the oaths of the highest order of chivalry were administered. He swore that he would be loyal and obedient to his prince; that he would defend the church and clergy; and be the champion of virtuous ladies, and especially of the orphan and the widow. When he had thus pledged himself to fulfil the duties of a true knight, the warriors of noble rank, or sometimes the high-born ladies, who attended the spectacle, first buckled on his spurs, then clothed him in the various pieces of a suit of armour, and, lastly, girded his sword to his side. The prince or noble from whom he was to receive the honour of knighthood then advanced, and giving him the accolade, which consisted of three gentle strokes with the flat of a sword upon the shoulder, exclaimed, "In the name of God, St. Michael, and St. George, I make thee a knight; be brave, hardy, and loyal!" After the impressive ceremony was thus finished, the young cavalier, all armed as he was, leaping into the saddle of his war-steed, pranced up and down within the church, and then issuing forth, galloped to and fro before the spectators, brandishing his weapons to display his strength, gracefulness, and skill. His education was now complete; he had assumed an important rank in society; and from thenceforth he might aspire to its highest offices and distinctions.* It is not, however, till an age considerably later that we are to look for the full development of the principles of chivalry; what we have now described of it is perhaps as much of the system as existed at the close of the present period.

The knightly virtues inculcated by this course of education, as has been already mentioned, were finally impressed by the solemn sanction of oaths; and chiefly consisted in devotion, in courtesy to females, and in gentleness towards the weak. The general practice of the age, however, and, what is more strange, even that of most of the persons who took upon themselves the vows of knights, was certainly very little in accordance with the elevated theoretical morality which was thus taught and professed. Still, amidst the disorder and licentiousness that prevailed, we meet with occasional instances of true knightly excellence, proving that noble principles could not be announced, even in a form the most fantastic, and in a state of society the most unfavourable, without producing some beneficial effect.

The science of heraldry arose naturally out of the usages of knighthood and war. The adoption by each knight of some peculiar mark or cognizance was rendered necessary by the sort of panoply in which he was wrapped up, which otherwise, especially after the introduction of the aventaile, or the vizor, would have made it impossible to distinguish him in the fight or the tournament. The Saxon and Norman warriors, therefore, like their savage ancestors in the wilds of Germany, were probably early accustomed to wear upon their crests the figure of some animal. As the parts of defensive armour were multiplied, and chivalry assumed a more regular form, additional cognizances were painted upon the shield. These were chiefly animals, or emblematic devices, rudely delineated, and which seem for a long period to have been assumed at the caprice of each individual. At first also, it was, probably, only the individual, and not the family to which he belonged, that was to be distinguished by the blazonry upon a shield. The case, however, was altered by the wars of the crusades. As romantic valour was displayed to the uttermost in the well-fought fields of the East, while a peculiar sacredness was supposed to belong to those warlike devices by which the brave knights who wore them were distinguished, a feeling of honourable pride as well as piety induced the son to assume the hallowed escutcheon of his crusading parent; and thus the bearings upon the shield, from a merely personal, became a family and hereditary distinction. It was from this period that heraldry assumed the form of a regular science, while the bezant,

* Ducange.

* Mémoires sur la Chevalerie, par M. de St. Palaye, tom. i.

the crescent, and other Asiatic emblems, became its choicest distinctions. Contemporaneously with this practice on the part of the princely and lordly leaders, the natural custom was copied by such of their followers as were by their birth entitled to that privilege, of adopting all or a part of the military distinctions of their patron. Those who had followed the banner of a distinguished noble, or who even held lands of him as their lord, thus indicated the illustrious house with which they were connected, and perpetuated the tie to their posterity. When a motto was added to the figures upon the shield, it was generally taken from the war-cry with which the leader summoned his followers to the rescue or animated them in the conflict. As for the crest, it does not appear to have been used at this period as a family cognizance. It was only when the refinements of heraldry had so overloaded the shield with figures as to make its frequent delineation a work of labour and difficulty that the crest was adopted as the more summary distinction of a noble family.*

It does not appear that the Normans assumed family names at the same time that they adopted family escutcheons. The former distinction was as yet unknown even to the royal house, and such additions as the Bastard, the Red, the Fine Scholar, the Son of the Empress, the Lion-heart, and the Landless, were the only surnames by which the proud sovereigns of the Norman race were distinguished. We find, however, that their chief vassals had been, from an early period, accustomed to use an addition to their Christian name, as may be seen by the roll of Battle Abbey. This was generally derived from the birthplace or patrimonial possession of the individual, on which account so many names of our noble English families are derived from towns or estates upon the continent. Sometimes, also, the office held at court supplied the possessor with the necessary distinction, such as the Steward, the Seneschal, the Warden, &c. What is properly termed a family-name, however, was scarcely introduced within the present period. The nearest approach to it was the assumption of the father's Christian name in addition to his own, by which the man who perhaps had neither office nor landed property, still announced his Norman descent. The only species of surname known among the English, for some time after the Conquest, appears to have been an epithet descriptive of some quality of the individual, distinguishing him from others of the same baptismal name. But this addition was not regarded as a family name, and did not descend to the posterity of the person who bore it. The generality of the people had only one name. The Normans, on the contrary, soon came universally to assume second names, usually commencing with a De, or Le, or Fitz (that is, Fils, or son), taken either from the estate, the birth-place, the office, or the immediate parentage of the individual, till it became a mark of low birth or of bastardy to be without such a distinction. Thus, it is related by one of the old chroniclers that the daughter and heiress of a great lord, named Fitz-Haman, refused at first to give her hand to Robert, the bastard son of King Henry I., for no other reason except that he had no second name. "My father and my grandfather," said the lady, "had each two names, and it were a great shame to me to marry a man who has only one." This was, in other words, declaring that she would not consent to accept the husband proposed for her until the stain of his illegitimate birth should be as far as possible wiped off. The king on this gave him the surname of Fitzroy, which amounted to a distinct acknowledgment of him for his son. He is the same who makes so great a figure in the succeeding reign under the title of the Earl of Gloucester, and who, if he was not, as Camden has called him, "the only worthy of his age in England," was certainly one of the very few characters entitled to that epithet, and the first of those few.

During the ages of chivalry, personal distinction was eagerly attempted to be secured, not merely by names and heraldic insignia, but also by numerous and splendid retinues; these formed the guard of the prince or noble in war and his ornament in peace; and as the Norman chiefs, from their national habits as well as the immense possessions they acquired in England, were able as well as willing to indulge in this species of ostentation, we find that their attendants were sometimes multiplied to an incredible amount. But, after all, these cavalcades more resembled an Asiatic caravan toiling through the desert than a well-ordered princely procession. Such was the case even at the court of Henry II., incontestably the richest and most powerful monarch in Europe. Peter of Blois, in one of his letters, gives a description of one of these royal processions, which is sufficiently startling to every idea of modern refinement. There were knights and nobles,—throngs of cavalry and foot-soldiers,—baggage-waggons, tents, and pack-horses,—players, prostitutes, and the marshals of the prostitutes,—gamesters, cooks, confectioners, mimics, dancers, barbers, pimps, and parasites,—and in the rising at morn of this tremendous medley to commence the march of the day, he adds, that there was such justling, overturning, shouting, and brawling, that you would have imagined hell itself had let loose its inhabitants. Such was the real squalidness that lay beneath so much superficial glitter; a kingly array was but a mob, in which everything pertaining to taste and order was unknown or disregarded. The train of Becket, notwithstanding the waggons of ale and furniture with which it was encumbered, and the monkeys on horseback,* was immeasurably superior in point of dignity and true elegance to that of his royal master, and perhaps was the choicest specimen of this kind of magnificence which the taste of the age could have produced. When a royal procession travelled through the country the pur-

* Brydson's Summary View of Heraldry.—Camden's Remains.

* See page 447.

veyors swept the district in every direction of its provisions, which, in virtue of the prerogative, were seized for the king's use at any price they chose to offer; and the powerful barons were not slow to imitate the example of their sovereign. The greatest of the English nobles travelled with trains scarcely inferior to that of the king; and, in time of war, their retainers composed formidable armies. William Longchamp usually travelled, in the time of peace, with above 1000 horse;* and we may suppose that the same vanity operated through all the inferior ranks of nobles down to the knight who could muster a few spears under his pennon, and that in most cases there was the same want of order, economy, and elegance. We are not, however, to attribute this mode of travelling altogether to a passion for show and magnificence. From the scarcity of places for the entertainment of travellers, and the wild state of many parts of the country, it was often difficult to find the articles of subsistence, or at least the instruments with which to cook them; and even materials for setting up tents in which they might lodge had to be provided and carried along with them by personages undertaking any considerable journey with a numerous train of attendants. During part of this period, also, in the reign of Stephen, the land was dotted with fortresses, the abodes of predatory nobles, who were ready to dart out upon those whom they were able to outnumber, while the forests, on the other hand, embosomed numerous bands of Saxon outlaws who regarded every Norman as an object of hate and vengeance.

When we descend from the public to the domestic life of this period, we find the same uncouth combination of grandeur and discomfort. The Normans, indeed, introduced a more stately and durable style of architecture than had hitherto been practised in the island; and it is probable that, with these exterior improvements, they added largely to the elegancies and comforts of domestic life. But still this improvement was only comparative, and, in its best condition, was sordid and poor when measured by the present standard of living. Thus the stately palaces and castles of those days had no better carpets than a litter of straw or rushes, and no better beds than a rug laid upon a wooden bench, or spread upon the floor. The kingly or noble banquet, although it blazed with a rich profusion of gold and silver plate, could not even furnish the necessary accommodation of a fork; the fingers of the eaters were thrust into the rich dishes, or employed in tearing the flesh into morsels; and the luxuries that were collected at the greatest expense were laid upon a huge table of plain oak, while the princes and lords sat upon clumsy benches, and partook of the good cheer. Several English estates were held upon the condition of supplying fresh straw for the royal beds, and litter for the apartments of the palace;† and Fitz-Stephen, describing the splendid hospitality of Becket while chancellor, adds, as a special proof of his munificence, that he caused his servants to cover the floor of his dining-room with clean straw or hay every morning in winter, and green branches of trees in summer, that those guests who could not find room at table might sit on the ground without spoiling their fine clothes. It is a curious fact that the official situation of rush-strewer remained to a very late period on the list of the royal household. From these few hints we may conjecture that the rest of the domestic accommodations of this age were mean and scanty; but we must remember, also, that as yet household comfort was a word not understood, or at least of very limited signification; and as the Normans were an active out-door people, independent of domestic conveniences, it was enough for them if they possessed stately buildings, large retinues, rich armour, and splendid tournaments. This rude simplicity, however, sometimes degenerated into extreme coarseness. Peter of Blois, in one of his letters, thus vents his ire at the discomforts of the English courtiers while waiting upon their sovereign: "To say nothing of other matters, I cannot endure the annoyances of the marshals. . . I have seen very many who have been most generous to them; and yet, when after the fatigue of a long journey, the persons had got a lodging, when their meat was half-dressed, or when they were actually at table, nay, sometimes when they were asleep on their rugs, the marshals would come in with violence and abuse, cut their horses' halters, tumble their baggage out of doors without any distinction, and (with great loss to the owners) turn them out of their lodgings shamefully; and thus, when they had lost every thing which they had brought for their comfort, at night they could not, though rich, find a place to hide their head in."*

The Normans, however, are stated to have introduced into England a fashion of more delicate living and solemn banqueting than had previously been known in the country. The Saxons, as we have already seen, were a people of large and gross appetite, who spent the chief part of the day at feasts, in which excess was considered to compensate for elegance; while their thirst was at least commensurate with their hunger; so that drunkenness had become their national reproach. The Normans, on the other hand, notwithstanding their Danish descent, appear to have, in a great degree, renounced the coarse habits of their ancestors; so that at their arrival in England, their moderation and refinement in eating and drinking distinguished them from the natives. This is testified, not only by incidental hints of the mode of living that are scattered through the writings of the period, but by the express testimony of William of Malmsbury. He tells us that the Normans were delicate in the choice of meats and drinks, but seldom exceeded the bounds of temperance; so that they lived with greater elegance, and at less expense than the English. Peter of Blois, indeed, would seem to intimate that, by the time of Henry II.,

* Brompton. † Blount's Ancient Tenures.

* Translation in the Quarterly Review, vol. lviii.

they had considerably degenerated in this particular: he describes the knights going forth to battle laden with all kinds of provisions, carrying cheeses instead of lances, and wine-skins and spits instead of swords and spears. But this ludicrous description, which more than realises Falstaff's preparations for the battle of Shrewsbury, is evidently a caricature. Either the worthy archdeacon had established in his own mind a romantic standard of abstinence with which the expeditions of the period were incompatible, or these recreant sons of chivalry were a few of the younger sort whom the wealth which their fathers had won in England had excited to such whimsical extravagance.

The feasts of the Norman nobles, however, after they came to England, soon came to be distinguished by the rarity and costliness of their materials. According to John of Salisbury, the Conqueror used to send into every country, from whence he collected all that was rich and difficult to be procured for the furnishing of his table. The same author also mentions that he was present at a great entertainment where there were served up the choicest luxuries of Babylon and Constantinople, of Palestine and Alexandria, of Tripoly, Syria, and Phenicia. But, still, that the Normans were contented with little, compared with the Saxons, is attested by their common proverb, which gives us not only the number of their meals, but the hours at which they were eaten :—

Lever a cinque, diner a neuf,
Souper a cinque, coucher a neuf,
Fait vivre d'ans nonante et neuf.

To rise at five, to dine at nine,
To sup at five, to bed at nine,
Makes a man live to ninety-nine.

Among a people so choice in their diet as the Normans are declared to have been, we can imagine that cookery, as a science, was held in particular estimation. We find, accordingly, that some of the English estates were held by the tenure of dressing a particular dish. Among the dishes of which the names are recorded we find *Maupigirnun*, *Diligrout*, *Karumpie*;* but we are ignorant of their particular composition. Indeed, of their preparations in cookery in general, nearly all we know is, that rich spices were plentifully used in the greater part of them. Among their most esteemed dainties seem to have been the peacock and the crane; the former of which was only produced at solemn chivalric banquets, while the latter was served up at the common meals of the Norman princes. The boar's head was regarded as a truly regal dish; and we are told that it was brought to the table of Henry II. in great pomp upon the coronation of his son, and, as it was brought into the hall, musicians went before it sounding upon their trumpets.

The bread which was used was of various kinds. The *panis piperatus* was a sort of spice-cake composed of the finest flour; and, at the tables of the rich and noble, simnel and wastel cakes were also in general use. But while the finest of the wheat was only used for the bread of the aristocracy, the common people were contented with their brown bread, made of rye, oats, and barley. It is likely that the Saxon population still adhered to the homely cookery and rough dishes of their ancestors.

The drinks used by the rich of both nations were spiced wines and hippocras, pigment, morat, and mead; while the poorer classes were satisfied with cider, perry, and ale. Excess in the use of liquor still continued to form the national vice of the Saxons, as we find from the revival of the laws against "drinking at pins," which were especially directed against their rural clergy.

But whatever the refinements in Norman gastronomy may have been, we are justified in suspecting that they were too exclusively confined to set banquets and solemn occasions. Peter of Blois, in one of his letters, speaking of the wretched accommodation afforded to those unfortunate knights and nobles who attended the court of Henry II., says, "I often wonder how one who has been used to the service of scholarship and the camps of learning can endure the annoyances of a court life. Among courtiers there is no order, no plan, no moderation, either in food, in horse exercise, or in watchings. A priest or a soldier attached to the court has bread put before him which is not kneaded, not leavened, made of the dregs of beer; bread like lead, full of bran, and unbaked; wine spoiled either by being sour or mouldy,—thick, greasy, rancid, tasting of pitch, and vapid. I have sometimes seen wine so full of dregs put before noblemen, that they were compelled rather to filter than drink it—with their eyes shut, and their teeth closed; with loathing and retching. The beer at court is horrid to taste, and filthy to look at. On account of the great demand, meat, whether sweet or not, is sold alike: the fish is four days old, yet its stinking does not lessen its price. The servants care nothing whatever whether the unlucky guests are sick or dead, provided there are fuller dishes sent up to their masters' tables. Indeed, the tables are filled (sometimes) with carrion, and the guests' stomachs thus become the tombs for those who die in the course of nature. Indeed, many more deaths would ensue from this putrid food, were it not that the famishing greediness of the stomach (which, like a whirlpool, will suck in anything), by the help of powerful exercise, gets rid of everything. But if the courtiers cannot have exercise (which is the case if the court stays for a time in town), some of them always stay behind at the point of death."*

We have seen from the proverb quoted above, that the customary hour of retiring to rest in England was nine o'clock in the evening; and it has been commonly supposed that, by a regulation established by the Conqueror, the people were compelled to put out their fires and all other lights on the ringing of the curfew-bell (or *courre-feu*, that is, cover-fire), which took place at sunset in summer, and about eight or nine o'clock in winter.

* Blount's Ancient Tenures.

* Translation in Quarterly Review, vol. lviii.

But there is really no good authority for believing that any such regulation as this was introduced by the Conqueror. The curfew appears to have prevailed in early times not only in England, but in Scotland, France, Spain, Italy, and perhaps most of the other countries of Europe; and it was probably in use in England, as elsewhere, long before the Norman Conquest. Such a regulation was rendered expedient by the combustible materials of which the houses were generally composed, and the frequency of conflagrations in the towns and villages. Notwithstanding the precaution of the curfew law, Fitz-Stephen, in his account of London, mentions frequent fires as one of the great inconveniences of the metropolis. It may be added that the curfew was continued in England as a useful police regulation till after the beginning of the sixteenth century.

In the article of popular superstitions, both the Normans and Saxons might furnish a chapter sufficiently copious. From their northern descent, their ancient traditions, their recent and imperfectly understood Christianity, and the habits of a chivalrous life among the great, as well as the general rudeness and ignorance of the common people, the path of their existence was bestrown with omens, prodigies, and superstitious observances. People were afraid to meet a hare in their path, as the omen of some coming calamity. A woman with dishevelled hair, a blind man, a lame man, or a monk, were all, strangely enough, regarded as equally indicative of misfortune. On the contrary, if a wolf happened to cross them, if St. Martin's bird flew from left to right, if they heard distant thunder, or met a hump-backed or leprous man, these omens were considered as promises of good fortune.*

We find that certain particular forms characterised the practice of sepulture at the present period. The nearest relative, as in the earliest ages of antiquity, closed the eye-lids of the dead. The face was then covered with a linen cloth, and afterwards the body was washed, anointed, and laid out for burial. A suit of apparel which the deceased had been accustomed to wear frequently, sufficed for a shroud; the body was carried to the place of interment upon the shoulders of the mourners, or, when the distance was considerable, upon a sledge or car; and, commonly, the remains were deposited in the grave without the protection of a coffin. We do not find coffins in general use until the reign of Henry III.; and for some time before this date they seem to have been confined to people of high rank. But at first they were dispensed with even in the case of princes themselves. The Conqueror appears to have been interred in this primitive fashion, except that the grave itself was a sort of chest or coffin formed of solid masonry. A more decent and respectful ceremonial was observed in the funerals of the succeeding kings. A rude and unskilful attempt was made to embalm the body of Henry I. After the brains and bowels had been carefully extracted, it was saturated with salt, and enclosed in a skin of wool. A triple funeral graced the obsequies of Richard I.; and Carlisle, Fontevraud, and Rouen, had each the honour of receiving a portion of his remains for sepulture. The body of young Henry, the junior king (son of Henry II.), was wrapped up in those linen clothes that had been used at his coronation, and upon which the sacred oil had flowed. But the most splendid of all the royal funerals in England, during this period, appears to have been that of Henry II., which is particularly described by Matthew Paris. The body was arrayed in royal robes; the face was uncovered, and the head was adorned with a golden crown; the hands were covered with gloves, and the feet with shoes embroidered with gold-work; spurs were buckled to the heels, and a sword was girded upon the side of the dead, while the fingers, on one of which was a large ring, were closed upon a sceptre.

The royal coffins seem to have been lined with lead; at least such is stated to have been the case with that of Stephen. As kings were thus buried with the insignia of their rank, the same rule was probably followed in the funerals of the nobility. At all events we know that it prevailed in the sepulture of ecclesiastical dignitaries; primates, bishops, and abbots were always placed in their graves attired in their canonical robes, and having beside them the several symbols of their rank in the church.*

Such were the practices that generally prevailed in the royal, noble, and common burials, during this period, and by which the living endeavoured to display their respect and affection for the dead. But the case was very different with those who died under excommunication. The body, now regarded as the special property of Satan, was viewed with fear and abhorrence; no sacred earth could receive it, or hallowed rites be performed over it; it was thrown forth like a polluted thing, or hurried into some obscure spot, and interred in silence and secrecy by those who were ashamed of so humane and necessary a deed. Thus, in the case of an unfortunate Templar, during the reign of Henry I.,—one Geoffrey Mandeville, who had been excommunicated, and who had died without being reconciled to the church,—it is related that his brethren, equally afraid to bury and unwilling to degrade the corpse of their departed member, adopted a singular compromise by which it might be reduced to its kindred dust within their sacred precincts. They inclosed the body in a pipe or coating of lead, after which they hung it upon a tree in the orchard of the old Temple.†

It is chiefly, however, in the sports and pastimes followed by the different classes of the people that we discern the spirit of the national character and of that of the times. In an age of martial habits and imperfect civilization, the excitements of a game, during the short intervals of peace, are

adopted as the natural substitutes for those of real war. The chase was pursued by the Normans, from the time they obtained possession of England, with an eagerness to which the conquered race owed some of their worst sufferings. The history of the formation of the New Forest, and of the depopulation and misery wrought by that act of despotic power, has already been detailed.* The Conqueror was so jealous of his kingly prerogatives

* See ante, p. 387.

ROYAL PARTY HUNTING RABBITS. Royal MS. 2 B vii.

in this, his favourite recreation, that the royal chases were guarded from the intrusion of both Saxon and Norman by the severest penalties: every offender detected in hunting the king's deer was subjected to the loss of life or limb; and the dog that strayed into the king's enclosures was lamed by the amputation of one of its claws, unless redeemed by the owner. The nobles followed the example of their sovereigns by surrounding extensive parks with walls, for the preservation of game; in doing which they frequently, by a lawless exercise of power, drove the unfortunate peasantry from their meadows, fields, and pasture lands; and when these ferocious hunters burst through enclosures and swept over corn-fields in pursuit of the flying deer, the wretched cottagers were compelled to hurry to their doors with provisions and refreshments, lest they should be reckoned disaffected, or punished as traitors.* The Conqueror, in his paternal fondness for wild beasts, is said to have collected and imported many from abroad, with which he stocked the New Forest.

As the habits and interests, however, of the

LADIES HUNTING DEER. Royal MS. 2 B vii.
A lady seems to have roused the deer by a blast from a horn, while another prepares to discharge an arrow at it.

two races became more closely united, the lawlessness of these tyrannical Nimrods was restrained, and after the reign of Rufus the severity and restrictive character of the game-laws were considerably abated. It has been already mentioned that, by a charter of Henry I., the citizens of London were allowed to have their chases to hunt as well and fully as their ancestors had had, in the Chiltern hundreds, in Middlesex, and in Surrey. The Norman prelates and clergy, it would appear from the records of the times, were as keen hunters as the laity. Females, also, seem to have sometimes pursued this diversion.

Hawking was another favourite sport of this period. This amusement had been keenly followed in England before the period of the Conquest; so that, by some writers, the cause of Harold's unfortunate voyage to Normandy is attributed to the straying of a favourite falcon which he wished to recover; and in the Bayeux Tapestry, as we have seen, he is represented as journeying to the court of William with one of those birds on his wrist. After the Conquest the common people seem to have been prohibited even from keeping hawks; to hunt with them was considered an amusement fitting only for kings and nobles. Thus those birds became as distinct marks of high rank as the spurs of knighthood or the emblazonry upon a shield. The nobles carried their favourite falcons along with them on journeys, and even to battle. These feelings and habits, which at that time prevailed throughout Europe, will account for the extravagant conduct of Richard when he seized by force, as already related, the splendid hawk of the peasant in Calabria.*

By the Great Charter, however, granted by King John, liberty was given to every freeman to have in his woods eyries of hawks, spar-hawks, falcons, eagles, and herons. Stores of good hawks were generally kept in the monasteries for the recreation of their reverend inmates; and many of the ecclesiastical dignitaries were so enamoured of the sport of hawking, that one of the favourite topics of declamation with the censors of the manners of the time was the conduct of those pastors who cared for birds, not sheep (*aves, non oves*), and hallood the falcon upon its quarry with the same voice that had been consecrated to chant the praises of God.† From the gentle exercise which this sport promoted, it seems to have been endeared not only to churchmen, but also to the female sex; and in the twelfth century we find that they excelled the men in dexterity in hawking,—a proof, says John of Salisbury, that it is an effeminate amusement. When the hawk was carried it was generally upon the wrist, which was protected by a thick glove; the head of the bird was covered with a hood, and its feet were secured to the wrist by straps of leather called jesses, and to its legs were fastened small bells toned according to the musical scale.

Another of the sports of the time, which as yet however was practised only on a small scale, was that of horse-racing. Fitz-Stephen has given us a description of the London horse-races, which were held in Smithfield, then, as in the present day, the great cattle-mart of the city. "When a race," he says, "is to be run by this sort of horses (hackneys and war-steeds), and perhaps by others which also, in their kind, are strong and fleet, a shout is immediately raised, and the common horses are ordered to withdraw immediately out of the way. Three jockeys, sometimes only two, according as the match is made, prepare themselves for the contest (for such, as being used to ride, know how to manage the horses with judgment): the grand point is to prevent a competitor from getting before them. The horses, on their part, are not without emulation,—they tremble, are impatient, and continually in motion; and at last, the signal once given, they strike, devour the course, hurrying along with unremitting velocity. The jockeys, inspired with the thoughts of applause and the hopes of victory, clap spurs to the willing horses, and brandish their whips, and cheer them with their cries. You would think, according to Heraclitus, that all things were in motion, and that the opinion of Zeno was certainly wrong, as he held that there was no such thing as motion, and that it was impossible to reach the goal."*

But the chief of all the amusements of those ages, and that which was the most characteristic of the chivalric period, was the tournament. The origin of this great military spectacle is lost in the darkness of the middle ages; but we find that tournaments were practised in France and Normandy previous to the Norman conquest of England. It might have been expected, that after the Norman invasion they would have been speedily established in England; but instead of this, we find that William and his immediate successors absolutely forbade them. The reason assigned for this prohibition was, the expense and danger with which tournaments were attended. But it may be suspected that the true reason was of a different kind. It is probable that the Norman kings apprehended danger from such concourses as those which a tournament would have occasioned, where the hard-ruled nobles would have learned their own strength, and found every facility for plotting against their sovereign. During the unsettled reign of Stephen, when the royal authority was relaxed, these prohibitory laws were disregarded, and tournaments were frequently held by the nobility, at which it is probable they alternately conspired against him and his rival Matilda, as circumstances inclined them. This license, however, with many others, was restrained on the accession of Henry II. He revived the prohibitions that had formerly been in force; so that his sons, when arrived at manhood, were obliged to repair to the tournaments on the continent, at which they exhibited the reckless daring of knights-errant, and gathered many trophies of their valour and skill. A partial revival of the tournament took place in England under

* See ante, p. 483. † Letters of Peter of Blois.

* Translation by Pegge.

the reign of the Lion-hearted Richard. After his truce with the French king in 1194, he permitted tournaments to be held in his own kingdom, in consequence of having seen the insults and numerous foils which his own unskilful knights had suffered at the hands of those of France.* Still, however, this chivalrous monarch had the policy to restrict these dangerous assemblages, so that they could only be held at five places in England, which were particularly specified; and as money was at all times welcome to him, he contrived that they should be conducive to the replenishment of his empty exchequer, by compelling those who attended them, as we have had occasion to mention in a preceding chapter, to purchase each a license, the price of which varied with the rank of the party.† By the same law, all foreigners were prohibited from entering the lists, probably in consequence of their superior experience and skill. From this era, the tournament rose in importance in England, and speedily occupied a prominent place in the national institutions and history.

During the long interval that elapsed before these military spectacles were sanctioned by law, we find that the young students of chivalry in England improved their strength and skill by certain military sports, which still continued to be practised after the tournament was legalized. One of these was the Pel (in Latin, *palus*), practised with a post, or the stump of a tree, about six feet in height, which the youth, armed at all points, attacked vigorously on foot; and while he struck or thrust at the different parts which were marked to represent the head, breast, shoulders and legs of an antagonist, he was taught to cover himself carefully with his shield in the act of rising to the blow. Similar to this was the Quintain, where the attack was made on horseback. A pole or spear was set upright in the ground, with a shield strongly bound to it, and against this the youth tilted with his lance in full career, endeavouring to burst the ligatures of the shield, and bear it to the earth. A steady aim and a firm seat were acquired from this exercise, a severe fall being often the consequence of failure in the attempt to strike down the shield. This, however, at the best, was but a monotonous exercise, and therefore the pole, in process of time, was supplanted by the more stimulating figure of a misbelieving Saracen, armed at all points, and brandishing a formidable wooden sabre. The puppet moved freely upon a pivot or spindle, so that unless it was struck with the lance adroitly in the centre of the face or breast, it rapidly revolved, and the sword, in consequence, smote the back of the assailant in his career, amidst the laughter of the spectators. Every blow in the centre of the figure was numbered from one to three, according to its ascertained effectiveness in unhorsing a real enemy, while the false strokes that only sufficed to turn the figure were counted against the player as forfeits. In addition to these exercises, the young squires and pages were taught to career against each other with staves or canes; and sometimes a whole party exhibited on horseback the various evolutions of a battle, but without the blows or bloodshed of a tournament. The elegant practice of riding at the ring, which was an

* W. Newb. † See ante, p. 582.

ANCIENT QUINTAIN, now standing on the Green of Offham, Kent.

improvement upon the quintain, was the refinement of a later age.*

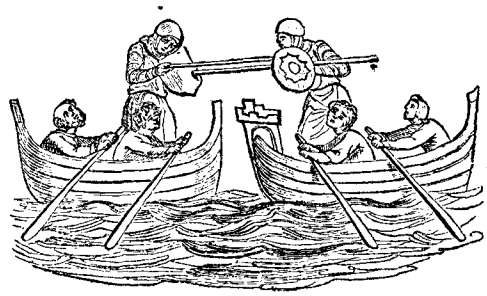
As for the tournament itself, it was generally held in honour of some important event, such as a coronation, a marriage, or great national victory; and previous to the celebration, heralds were despatched in every direction to announce the place of meeting, and invite all good knights and true to repair to the solemnity. The joyous summons roused the neighbouring counties—the hut and the castle equally sent forth their inhabitants, and every road to the place of meeting was thronged with those who repaired to the appointed spot as combatants or spectators. Even from distant lands, when the event commemorated was of general importance, the noblest in rank were accustomed to attend, either to grace the spectacle by their presence, or win honour in the lists. The space marked out for the combat was a level piece of ground, cleared of every impediment that might annoy the feet of the horses, and strongly paled in, to prevent the intrusion of the crowd; the inclosure was entered by two gates, one of which was at the east, and the other at the west end of the barriers; and round the whole paling scaffolds were erected for the high-born dames and maidens, the princes, the nobles, and the elected judges of the conflict. A throng of heralds, troubadours, and minstrels, dressed in their gorgeous and picturesque attire, were also present to discharge their several offices, and give order and solemnity to the assembly. As so much importance was attached to the tournament, various precautions were adopted to prevent the intrusion of the unworthy; the shields of those who were competitors for the honours of the combat were, for some days previous to the event, hung up in the neighbouring church; and if any candidate was charged with an offence against the rules of chivalry, the accusation was sometimes made by a lady touching his shield with a wand. Even when the lists were filled, and when the combats had commenced, the same anxiety was manifested to guard the tournament from profanation; and if a knight behaved himself discourteously to the assembled ladies, or infringed upon the fair and chivalrous rules of encounter, he was driven from the inclosure as a recreant by the spear-staves of the combatants. It sometimes happened that a favoured knight was led to the gate of the barrier by the lady of his love, in whose honour he had vowed to contend, and whose colours he wore in his crest and upon his scarf. Two different kinds of fighting were practised at the tournament. The first was called justing—an encounter performed with the lance; the second was either a close hand-to-hand duel, or a desperate, general *pell-mell*, in which the combatants, divided into two parties, hewed, struck, and thrust at each other with battle-axes, two-handed swords, maces, and daggers. The simple just was not reckoned so honourable as the latter kind of engagement, which properly constituted the tournament. The just, however, from the superior grace and dexterity which it was qualified to display, and perhaps on account of its less hazardous nature, outlasted the more formidable *mêlée* of the tournament, and continued to be practised with sharpened or headless lances till a very late period. The chief excellence of a combatant in this kind of exercise consisted in bearing the point of his spear against the breast or helmet of his adversary, so as to throw him backward out of the saddle to the ground—or, failing in this, to shiver his own weapon in the encounter, by which he avoided a similar downfall for himself. The lists, as has been already mentioned, were guarded from intruders; but every knight or squire who entered them was allowed to bring with him a page, who stood aloof from the contest, and supplied his master, at need, with a sword or truncheon.

Such were the laws and usages of the tournament, and the circumstances devised to give them splendour and importance. We now proceed to describe the encounter:—The combatants, in two parties, having entered the barriers, the one by the eastern, and the other by the western gate, arranged themselves in order for battle; and at the sonorous cry of the heralds—"To achievements! to achievements!"—they closed their vizors, couched their spears, and impatiently waited the signal of onset. This was given by the president dropping his wand or truncheon, and the trumpets at the same instant sounding the charge; and then commenced the furious hurtling together of men and horses, the shivering of spears, and the clashing of helmets and shields. As the conflict proceeded, and the confusion deepened, the ground was gradually covered with fallen knights, some deeply wounded, and others endeavouring to continue the strife on foot; or, where they were utterly disabled, the pages endeavoured to extricate them from amidst the rushing and trampling of the horses' hoofs. When the battle had continued for some time, knight after knight from either party might be seen retiring to the palisade, to open his aventaile, and take breath for a few moments; and it was considered ignoble and unlawful to assail him while so occupied. Ghastly wounds, lameness, and death, generally summed up the disasters of the day; but victory had been won, and the lustre of the wreath was only enhanced by the blood that stained it. At the close of each day (for sometimes the tournament continued for several days) the names of those who had most distinguished themselves were proclaimed by the heralds, and the rewards distributed by the ladies; after which, the joys of the banquet succeeded: the successful combatants, after being unarmed by those fair hands that had distributed the prizes, were advanced to an honoured place at the board, where their valour was commended by princes and redoubted warriors, and sung by attendant minstrels. Such was the nature of that solemn festival, which may be regarded as the great master-piece of chivalry, and by which knightly bravery and skill were im-

* Strutt's Sports of the English.

proved to their utmost capability. The church, indeed, denounced the tournament on account of the bloodshed with which it was attended, and the priests directed their spiritual thunder against all who engaged in it or favoured it; but this opposition had little effect against a species of amusement so accordant with the whole bent of the spirit and habits of the times.*

As noble birth was so indispensable a qualification for these heroic exercises, that none under the rank of an esquire could engage in them, the yeomen and burgesses consoled themselves with certain other warlike amusements, in all probability derived from those of the Norman aristocracy; and although these homely sports were inferior in solemnity and high excitement to the tournament, they were certainly superior in merriment and freedom. One of these was similar to the quintain of the young nobility. A pole was strongly fixed in the ground, and across its top was fixed, to turn upon a spindle, a piece of wood, having at one end of it a board, and at the other a sand-bag. The peasants who repaired to the sport galloped against the quintain by turns, couching their staves, and striking the board in their rapid career. But unless a dexterous escape immediately followed the blow, the heavy sand-bag at the other extremity came round with a furious counterbuff, and struck the tilter between the shoulders, amidst the jeers and shouts of the spectators. Another sport in use among the English, and similar to the foregoing, has been called the water-quintain, and is thus described by Fitz-Stephen, as practised by the Londoners. A shield was nailed to a mast that was set up in the midst of the Thames, against which a boat was impelled swiftly by vigorous rowers, and a man standing upright in the stern of the boat couched his lance against the shield, and struck it in passing. If the spear shivered while the champion maintained his place, the prize was won; but if, on the contrary, the stave did not yield to the encounter, the boat glided from beneath his feet, and he fell back into the water. To avoid a tragic close, however, to such mirthful exhibitions, two boats filled with men were always in readiness beside the quintain, to rescue the baffled wight. There was also practised what may be called the water tournament, in which the combatants, armed with staves and shields, tilted against each other in boats, in the same manner as, in the common land tournament, the knights were wont to do on horseback. These sports, in their natural course, descended, with the necessary modifications, to the children, who had also their own quintains, by which they trained themselves to the exercises of manhood and to dexterity in war. One of these is mentioned by Fitz-Stephen. In winter, he tells us, the young boys tied the shank-bones of sheep to their feet, upon which they skated along the ice, and tilted against each other with staves in full career. Such, it would appear, was in those days the substitute for skates.



WATER TOURNAMENT. Royal MS. 2 B. vii.

In addition to these exciting sports, the peasantry amused themselves with archery, throwing large stones, darting spears, wrestling, running, leaping, and sword and buckler playing; and in large towns, the citizens frequently diverted themselves with boar and bull-baiting. Cock-fighting, which as yet had not been exalted into a noble or even a manly amusement, was confined to children. On the Tuesday of Shrovetide, each schoolboy was allowed to bring a fighting-cock to the school, which for a day was turned into a cockpit for the diversion of the urchins. The game of football was general in England during the reign of Henry II., and seems to have possessed equal attractions for men and children.*

Of the sedentary or within-doors amusements that were known in England in this period, a very brief notice will be sufficient. Among them, we find certain diversions then possessing attractions for persons of the highest rank which, in a more refined age, are exclusively confined to the lowest. The juggler, with his feats of dexterity and slight-of-hand was an important personage even in the royal court, when men had not yet learned to distinguish between the natural and the supernatural. The buffoon, with his ribald jests, was a welcome substitute, where more refined wit was wanting, along with the power to appreciate it; and the mime, with his antic personifications, added enjoyment to the luxuries of the feast. To these may be added dramatic exhibitions. Plays founded upon romantic, historical, or passing events, were already represented before the nobles and citizens; but these primitive attempts were so completely in accordance with the grossness and licentiousness of the age, both in language and manner of acting, that they were condemned by the church, and all priests were prohibited from attending them.† The actors of those days appear to have strolled from town to town, and from castle to castle, attended by a congenial fraternity composed of jongleurs, tumblers, dancers, jesters, and mimics.‡ The immorality of these theatrical exhibitions awoke not only the ire, but the inventive powers of the church, and the clergy endeavoured to supersede the secular by the reli-

* Mémoires sur l'Ancienne Chevalerie, par M. de St. Pelaye.—Ducange in *Tournament*.—Mills's History of Chivalry.—Strutt's Sports of the English.

* Fitz-Stephen's London.
† J. Sarisbur. de Nugis Curialium. ‡ Idem.

gious drama; and hence the origin of those productions called miracles and mysteries. These were composed of scriptural incidents; or, as Fitz-Stephen informs us, "representations of those miracles that were wrought by holy confessors, or those passions and sufferings in which the martyrs so signally displayed their fortitude." The actors were the scholars of the clergy; the church itself was frequently used as the place of exhibition; and the rich vestments and sacred furniture employed in the church service were sometimes permitted to be used by the actors, to give superior truth and lustre to their representations.

In a propensity to gambling, the Normans and Saxons equally evinced their northern origin: they had ten different games that were played with dice; of which, however, we have no particular account; and the large sums that were lost, as well as the quarrels that were stirred up by what the clergy of those days emphatically called the "damnable art of dicing," may be surmised from the curious enactments on this head by Richard I. and Philip Augustus, on their expedition to the Holy Land.* Matthew Paris also is careful to reproach the English barons who revolted against John, with their fondness for dice; and the same charge was brought against the clergy in general by those ecclesiastics who censured the vices of the age. The intellectual game of chess, we may also notice, which is undoubtedly of oriental origin, is commonly supposed to have been imported into England and the other countries of Europe in this period by the Crusaders. There is some reason, however, for believing that it was known to our Saxon ancestors before the Norman Conquest.

* See ante, p. 491.

Ancient Chessmen, preserved in the British Museum.

Allusion has been already made to the bands of Saxon glee-men, dancers, and jugglers, that traversed the kingdom, and found a ready welcome from burgher and noble. The following group represents one of these peripatetic bands, consisting of a taborer, a bagpiper, three dancers, and a singer or glee-man.

Country Revel. Royal MS. 2 B vii.

The juggler was generally the superintendent of the party; and his feats of slight-of-hand, which passed for supernatural, and by which he astonished the unskilful peasants and equally illiterate nobles, were similar to those exhibited in the present day. A part of the exhibitions of these jugglers consisted in feats of balancing, of which the following engraving is a representation. Here, two

BALANCING.—Strutt, from various ancient MSS. in the Bodleian and private Collections.

men support a large board, on which a girl kneels, and balances three swords, resting upon their hilts, with the points in contact. The steadiness of nerve requisite for such a feat, in the female, but more especially in her supporters, is evident at a glance. The other figures of the group are employed in such trials of balancing as are witnessed among us every day, with the exception perhaps of the person who is attempting, in rather an unfavourable attitude, to make two swords stand upright on the ground. The women who formed a part of the juggler's train balanced, danced, and tumbled, and performed those feats of agility or gracefulness for which they were better qualified than the more robust sex. These females, as may be supposed, were of very light reputation, on which account the daughter of Herodias was classed among them by our ancestors. When she procured the death of John the Baptist, she is said, in the Saxon translation of the Gospels, to have "tumbled before Herod;" and in an ancient illuminated MS., she is thus represented at her exercise, attended by her maid-servant.

In addition to such displays of human strength and

THE DAUGHTER OF HERODIAS TUMBLING.—Strutt, from an ancient MS.

dexterity, the ingenuity of the jugglers trained the inferior animals to co-operate in their exhibitions: bears were taught to dance and tumble, and horses and monkeys to imitate, or rather ape the actions of humanity. The following sketch, copied from an ancient MS., represents a monkey imitating the action of playing on the harp, and a second mimicking the violin-player; a third is riding on a bear, which is dancing to the imaginary music; and a fourth monkey is tumbling under the direc-

tions of its teacher. In another drawing we have a glee-woman dancing round an unmuzzled bear, that endeavours to seize her, while the bear-keeper is scourging the animal, and exciting it to greater

Playing Bears. Harl. MS. 603.—Royal MS. 2 B. vii.

fury. The docility also of that noble animal the horse did not escape the notice of these ingenious tormentors: it was taught to dance, to fence with its fore-feet against a man armed with a staff and buckler; to put a trumpet to its mouth as if about to sound a charge; and to beat a war-point with its

Equestrian Exercises.

Horse tutored to beat time with his fore and hind feet on a tabor.—Strutt, from an ancient MS.

hoofs upon a drum or tabor. A still more cruel sport appears to have been sometimes exhibited, in which a horse, haltered to a stake or tree, was baited by dogs.

Horse-Baiting. Royal MS. 2 B. vii.

The jugglers also made the science of defence a part of their public exhibitions. On this account they are frequently called *gladiators* by the writers of the time. They not only exhibited feats of skill at sword and buckler, but they were also the teachers of the art of fencing. Fitz-Stephen men-

tions this as a common exercise in the reign of Henry II.; and in the following engravings from ancient manuscripts we have representations of the principal wards and feints that were practised:

SWORD FIGHT. Royal MS. 20 E. 6.

SWORD FIGHT. Royal MS. 14 E. 3.

FENCING. Royal MS. 2 B. vii.

The combatants here appear to be in right earnest, and the kind of combat in which they are engaged was, no doubt, attended with some danger. In other cases the mock encounter was practised in a fashion much less perilous. In the following engraving, two youths, who appear to be studying the *defensive* part of the science merely, are crouching safely behind their bucklers, while each is armed with nothing better than a light cudgel. The Saxons also appear to have learned from their German ancestors to play gracefully with their weapons in the sword-dance,* where dexterity could be exhibited without dangerous consequences. The sword-dance of the Anglo-Saxons which we have already described,† continued to be practised long after the Norman Conquest. In the following delineation two men are wielding sword and buckler, and directing their movements by the music of the bagpiper.

BUCKLER PLAY.
Strutt, from an ancient MS. in the Douce Collection.

Wrestling was also practised in various forms. One mode of a very peculiar kind is also said to have been in use among the ancient Greeks. In this game, two persons, mounted each on the back of a companion, encountered each other like knights on horseback; and he who could throw his

* The sword-dance described by Tacitus (de Mor. Germani. c. 24) was among naked weapons with the points upwards. The fashion in which it was performed by the Saxons was much less dangerous.

† See ante. p. 313.

SWORD DANCE. Royal MS. 14 E. iii.

antagonist to the ground was declared the conqueror.

Wrestling. Royal MS. 2 B. vii.

Bowling is another amusement which we find represented in the manuscripts of this period. In the annexed drawing two small cones are set up to serve as marks for the bowl. Similar to this was the game of kayles (in French *quilles*), probably of Norman origin, and from which the game of nine-pins was perhaps derived. A number of pins were set up—not in three rows, however, but in a line—and these the player endeavoured to strike down by throwing a cudgel. The same amusement, with slight variations, is common at our fairs in the present day. Three pins are placed upright, surmounted by toys; at these the player, standing at a considerable distance, throws a stick, and whatever he can manage to knock down becomes his own.

Most of the amusements still practised by our peasantry in some parts of the country on the eve of All-Hallows are probably much older than the Norman, or even the previous Saxon conquest. The following representation of the well-known game of bob-apple is found in a manuscript of the present period.

Bowling. Royal MS. 20 Ed. IV

Kayle Pins. Royal MS. 2 B. vii.

BOB-APPLE. Royal MS. 2 B. vii.

While the prohibitions of their Norman masters were so severe against the English using dogs and hawks for the purposes of hunting and fowling, we may presume that the conquered people (when they dared to pursue these sports) would betake themselves to gins, snares, and nets. In the following representation we have birds taken by the clap-net. In another drawing we see the cross-

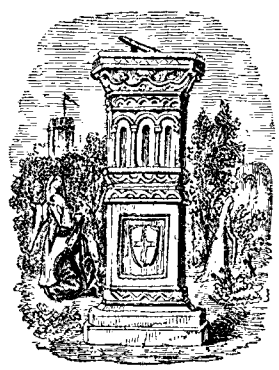
BIRD-CATCHING BY CLAP-NET. Royal MS. 2 B. vii.

bow employed in shooting at small birds. This instrument was introduced into England by the Conqueror, whose soldiers did great execution with it at the battle of Hastings. The second Council of Lateran afterwards forbade the use of it in wars between Christian nations, and it was, in consequence, for some time laid aside; but Richard I. reintroduced it in his French wars after his return from Palestine. His death, which took place soon after by an arrow discharged from a crossbow, was of course considered as a judgment which he had thus brought upon himself by his disregard of the authority of the church.

CROSS-BOW SHOOTING AT SMALL BIRDS. Royal MS. 2 B. vii.

CHAPTER VII.

HISTORY OF THE CONDITION OF THE PEOPLE.



IT is no justification, on the one hand, of the spirit of wrong and violence in which the enterprises in question may have originated, nor any condemnation, on the other, of the resistance that was made to them, to admit that all the successive foreign conquests of England have turned out, in the end, to be fortunate events for the country. We do not include under that term the temporary ascendancy of the Danes, which lasted only for a quarter of a century in all, and was then followed by the re-establishment of the Saxon power—although the country probably made greater progress in wealth and civilization, and enjoyed in every way more of the advantages of good government, during the twenty years of the reign of Canute than it had done in any period of the same length since the death of the great Alfred; but, confining our view to the permanent conquests of the original Britons by the Romans,—of the Roman provincials by the Saxons,—and of the Saxons by the Normans,—it is impossible to doubt that, of each of these revolutions, severe as was the immediate suffering which they occasioned, the eventual result was an immense addition to the civilization, the power, and the general prosperity of the country.

It was by the Romans that the arts and habits of civilized life were first introduced into and planted in the island. There is no reason to suppose that, but for their subjugation by the arms, and annexation to the empire of Rome, the ancient Britons would have attained a condition much superior to that of their contemporaries inhabiting the forests of Germany or Scandinavia. The establishment of the Roman dominion substituted for this state of rudeness and comparative destitution an empire of the arts and of letters, which continued to flourish unimpaired for a longer space of time than has elapsed from the Reformation to the present day, and which, even after its decay and ruin, left behind it many enduring benefits. It is not probable, however, that the Romanized Britons, if they had been left to themselves after the fall of the Western Empire, would have succeeded in working out their emancipation from the anarchy into which they were thrown by the dismemberment of the mighty system of which they had formed a part; the stroke of fate had fallen upon the heart of that system, and it was impossible that any of its extremities should escape dissolution.

The Saxons brought along with them no new arts or additional intellectual culture; they swept away, in the violence of their first seizure of the country, much of the civilization that had previously been established in it; and they were indebted for the communication of the light of religion and letters long after their settlement to that very Rome whose old institutions and monuments they had at first thrown down and trampled upon. But they brought with them what was better than any literary civilization, the spirit, at least, and elementary forms of a new system of political arrangements, founded upon larger and juster views of human rights and duties, and, in its final development, more favourable to the general security of person and property, and to the promotion of all the other ends of good government and social union, than any with which antiquity had been acquainted.

The soil of the national character is to this day mainly Saxon, with our institutions, our manners, our language, our literature, and whatever else has sprung out of it. The conquest of the country by the Saxons has made its population in all things essentially a Teutonic race, and, as such, partakers in the most vigorous and productive species at least of modern civilization. This is a distinction which no subsequent revolutions or changes have been, and which it is not probable that any ever will be, able to obliterate.

But various causes contributed to hinder the Saxons from rearing a superstructure of state, in their kingdom of England, of a height and proportions at all corresponding to the broad and deep foundations they had laid. The better part of their original energy they would seem to have expended in the long and arduous contest they had to sustain before they made good their possession of the country; when, after this was over, they found themselves in the undisturbed occupation and enjoyment of the settlements their swords had won, the cessation of the only excitement to exertion they had ever hitherto known, and the want, owing to their unacquaintance with letters and the arts, of any new stimulus to supply its place, would naturally have the effect of allowing them to subside into habits of indolence and sensuality. Then followed a long succession of miserable contests, sometimes between one state and another,

sometimes between adverse factions in the same state,—in either case having almost equally the rancorous character of civil strifes. Thus were consumed three hundred and fifty years of the six hundred which make up what is commonly called the Saxon period. The destructive ravages of the Danes extend, with some interruptions, over nearly the whole of the remaining two centuries and a half: the several states had, indeed, been consolidated into one kingdom, and their ferocious contention with one another was at an end; but for the greater part of this space the old scene of bloodshed, desolation, and public distraction was kept up by the restless plague of a foreign enemy, either hovering upon the coasts and making descents now at one point, now at another, throughout their whole circuit, or permanently stationed in the heart of the kingdom and sweeping it in all directions with fire and sword. Even during the only considerable interval for which this long contest with the Danes was suspended, the space that elapsed from the time of Alfred to that of Ethelred, the numerous foreign population which had forced its way into the country was only kept quiet by being allowed to divide the possession of it with its previous occupants. How precarious was the subjection that was thus obtained from them was at length testified by the renewal of the old contest between the two races in the reign of Ethelred, and its obstinate prosecution by the Danes till they placed their own king on the English throne. In short, of the whole six hundred years that intervened from the coming of the Saxons to the coming of the Normans, the quarter of a century forming the reign of the Confessor is almost the only portion that can be referred to as that in which the country enjoyed the blessings of a national government and a united people. Nearly all the rest of the period was spent in the contest of the invaders with the previous inhabitants, in the wars that the several bands of the invaders afterwards carried on among themselves, and, finally, in the long struggle they had to sustain with their foreign competitors for the possession of the country, the course of which was only an alternation of hard fighting and reluctant concession, of the din and confusion of arms and of occasional intervals of an insecure and uneasy calm, attempted to be maintained by truces and oaths which quenched no hostile feeling, and which either party was constantly on the watch for the first fair occasion to break.

It was impossible that in such circumstances the national character should not have become deteriorated, and that the country should not have lagged behind in the career of wealth, of the arts, of literature, and of every other line of public prosperity and greatness. Accordingly, at the era of the Norman invasion, England was still a country of no account in the political map of Europe. Some foreign commerce it was beginning to have; but still its intercourse, either commercial or of any other description, with other parts of the world was apparently very limited. A certain degree of excellence indeed seems to have been attained by its artists in some kinds of ornamental work, in the fabrication of trinkets and other articles of luxury, a taste for which probably prevailed among its few wealthier inhabitants,—and on a first view we might be disposed to conjecture that other and more necessary descriptions of industry must needs have also flourished where there was room and encouragement for the exercise of this species of refined and expensive ingenuity; but nothing can be more unsafe and fallacious than such a mode of inference, by which some particular feature is taken to indicate in one age, or country, or state of society, the same thing which it would indicate in another. It would be quite unwarrantable to assume the existence of any general wealth or refinement among the Anglo-Saxons of the eleventh century merely from their passion for show and glitter, which, in its lower manifestations, is an instinct of the rudest savages; and, even when directed with very considerable taste, may co-exist both with the most imperfect civilization and with much general poverty and squalor, as we see it doing in eastern countries at the present day. No other species of art or manufacture, except the ordinary trades required for the supply of their most common necessities, appears to have been practised among them. But the backward and declining condition of the country was most expressively evinced by the lamentable decay of all liberal knowledge among all classes of the people. The oldest historians are unanimous in their attestations to the general ignorance and illiteracy that prevailed among the English of this age. To the testimony of Ordericus Vitalis, which has been already adduced,* may be added that of Malmsbury, who, writing within sixty or seventy years from the time of the Conquest, may be considered to speak almost with the authority of a contemporary. He was an Englishman as well as Vitalis, and, as he informs us himself, as much a Saxon as a Norman by descent. He assures us that, when the Normans first came over, the greater number of the English clergy could hardly read the church service, and that, as for anything like learning, they were nearly to a man destitute of it: if any one of them understood grammar, he was admired and wondered at by the rest as a prodigy. The rest of his account represents the upper classes in general as sunk in sloth and self-indulgence, and addicted to the coarsest vices. Many of the nobility, he says, had even given up attending divine service in churches altogether, and used to have matins and mass said to them in their chambers while they lay in bed, and as fast as the priests could hurry them over. Besides other gross practices, they were universally given to gluttonous feeding and drunkenness, continuing over their cups for whole days and nights, and spending all their incomes at riotous feasts, where they ate and

* See ante, p. 603.

drank to excess, without any display either of refinement or of magnificence. The dress, the houses, and the domestic accommodations of the people of all ranks are stated to have been mean and wretched in the extreme.

Whatever judgment may be formed as to the comparative moral qualities of the two races, the Normans, at the time of their conquest of England, were undoubtedly much farther advanced than the Saxons in that sort of cultivation to which the name of civilization is commonly applied. They introduced into the country not only a higher learning, but improved modes of life. They set an example of elegance and magnificence, to which the Saxons were strangers, in their festivities, in their apparel, and in their whole expenditure. Instead of wasting the whole of their wealth in eating and drinking, their pride was to devote the greater part of it to works of permanent utility or embellishment, to the building of castles, and churches, and monasteries. The art of architecture in England may be said to have taken its rise from them. By them, also, it is probable that the agriculture of the country was improved, and its commerce extended. Under their government, after it was fairly established, the kingdom for the first time had its natural strength and resources turned to account, and came to be recognized as of any importance in the political system of Europe.

These eventual benefits, however, were purchased at a heavy immediate cost. No national revolution brought about by violence can take place without occasioning much misery to individuals, and also giving a severe shock for the moment to the whole fabric of the public interests. But the Norman conquest of England, from the manner and circumstances in which it was effected, swept the land with an uprooting and destructive fury far transcending that of ordinary tempests of this description. It was much more than a mere transference of the dominion of the country into the hands of foreigners; along with the dominion nearly the whole property of the country was torn from its former possessors, and seized by the conquerors. A handful of aliens not only wielded the powers of the government, and recast at will the whole system of the national institutions, but the natives were, for the most part, stripped of their estates as well as of their political rights, and driven forth to destitution and beggary, at the same time that they were made to pass under the yoke. The distinction of this conquest was, that it was to an almost unexampled extent one of confiscation and plunder. It was not merely the establishment of a foreign prince upon the throne, but the surrender of the country to a swarm of foreign robbers, who divided it among them like so much spoil, and, settling in all parts of it, treated the unhappy natives as their thralls. The necessity of satisfying the claims of the troops of hungry and rapacious adventurers from all countries, by whom he had been assisted in his enterprise, compelled the Norman thus extravagantly to overstretch and abuse even the hateful rights of conquest; and the system thus entered upon could only be maintained by a perseverance in the sternest and most grinding tyranny. It was impossible that the moderation and clemency with which William at first affected to treat the conquered people should be long kept up. His spoliations and incessant exactions could not fail to provoke a spirit of resistance, which was only to be reined in by the steadiest and most determined hand. After some time, accordingly, he seems to have thrown away all scruples, and, resigning himself to the necessities of his position and the current of events, to have relinquished every view of governing his English subjects by any other means than force and terror. The consequence was, the establishment of a system of government which, in so far as respected the great body of the people, was certainly as iron a despotism as ever existed in any country calling itself civilized.

The constitutional changes introduced by the Norman Conquest do not appear to have greatly altered the legal position of the different ranks of the population. The labouring classes, and the great body of the occupiers and cultivators of the soil, remained, as before, partly serfs or bondmen, entirely the property of their masters,—partly villains, attached to the estates on which they resided, so as neither to have the power of removing at their own will nor to be removable at the will of their lord. Of these latter there appear to have been a variety of descriptions, whose conditions and rights probably differed in some subordinate particulars; but the distinctions implied by the various names which we find used to designate them are very imperfectly understood. Some of them, perhaps, were entitled only to a maintenance from the land,—others to the occupation of a cottage,—others to a certain portion of the estate to cultivate for their own profit, for it would appear that some descriptions of the villains at least were capable of possessing and accumulating private property. There is no proof that all of them might not have done so, although some classes of them may have been more advantageously placed than others for saving or otherwise acquiring wealth. Glanville, indeed, informs us that whatever money or goods a villain possessed were considered by the law to belong to his lord, and therefore he could not emancipate himself, or purchase his freedom, with his own money; but all that can be meant by this is, that the lord had perhaps the legal right if he chose of taking from his villain whatever property the latter might have acquired. This very statement is an evidence that the villain might possess money or other property, which was his own at least so long as his lord refrained from demanding it. It is probable that custom, if not the law, imposed some limitation upon the lord's power of exaction, and that, even although all that the villain had might strictly or technically be said to belong to his master, it rarely or never happened

that, if he paid from his earnings or his savings the ordinary dues, he was disturbed in the possession of what remained. The great and conspicuous distinction at all events of his peculiar position was, as explained in the last book,* that on the one hand he was bound to remain on the estate on which he was born, and to perform certain labours or services, and to pay certain dues to the lord or proprietor of the estate; and that on the other hand he could not be removed by the lord from the soil to which he was thus attached, nor deprived of what was substantially his tenure or holding in it, which no doubt always implied at least lodging and maintenance for himself and his family, and probably in many cases more extensive rights. Besides the villains, however, there was a considerable class of persons designated as freemen or free tenants. These, it may be presumed, were in no respect bound to the soil, or otherwise subjected to a qualified servitude, as the villains were. They held apparently the same legal position that all commoners hold in the present day, modified only by the very different constitution of society and state of the law generally which then prevailed. The villains, though by no means excluded from the protection of the law, seem not to have possessed any political rights; these were exclusively confined to freemen. They alone were the *legales homines*, or lawful men, of whom the laws and other writings of the time so often make mention. Such of the freemen as occupied land which was not their own property may be considered as having nearly corresponded to our modern tenantry, in the popular acceptation of that term. The tenants of those days again were, what tenants still are in the language of the law, the proprietors of estates; and were called either tenants-in-chief (in Latin, *tenentes in capite*), by which expression were meant holders under, that is, by direct grant from the king, or tenants under a mesne (that is, a middle) lord, under which description was included all other proprietors. The higher political rights seem originally to have been exclusively confined to the tenants-in-chief. The common freeholder, or freeman, for instance, might exercise municipal functions; might be a deputy from his township to the hundred or the county-court, and might sit upon an inquisition or jury; in other words, he might take part in various ways in the execution or administration of the law; but with the making of the law, or with the function of legislation in any form, he seems to have been considered as having nothing to do. That was a right reserved to the tenants of the crown, though in what degree it was participated in, or in what manner exercised, by all the descriptions of persons who belonged to that class, has given rise to much difference of opinion. It may certainly be reasonably doubted if all the tenants-in-chief were ever considered as barons, in the sense of what we now call noblemen, and were summoned as such to the meetings of the great council or parliament. It seems to be more probable that such a barony as entitled to this privilege was a distinct honour conferred by the crown only upon certain of the tenants-in-chief. The others, who had no such privilege, might be considered as lesser barons. It may be added, that the existence of allodial property* ceased altogether in England from the time of the Norman Conquest. The establishment of the feudal system was made complete by the Conqueror assuming to himself the *dominium directum*, or original and supreme property, of all the lands in the kingdom, at the same time that he took possession of the throne. "If we compare the constitution established here by the Normans with that of the Anglo-Saxons," says a learned historian of this period, "the greatest difference between them will be found to arise from many estates which were allodial being made feudal, and from others which approached the nearest to fiefs, and were indeed of a feudal nature, but not lands of inheritance, being rendered hereditary, and in consequence of that change subjected to burdens to which they had not been liable in their former condition."†

The sufferings of the nation under the Norman dominion, therefore, were not principally occasioned by any new form or element of slavery that was introduced into the constitution of the kingdom or of society. The legal restrictions and disabilities by which the great body of the people were fettered all existed before the Conquest, nor was any portion of the community deprived by that revolution of rights which it had previously exercised, or depressed to a lower position in the state than it had previously held. The laws and institutions of the country, in short, remained in all essential respects nearly the same as before. But in that immature state of society comparatively little of the substance of liberty resided in its mere forms. As yet the spirit in which the law was administered was of infinitely greater importance than the letter of its enactments. The government of the Normans proved a yoke of grievous bondage to the English in manifold ways. First, it was a government of foreigners, and, therefore, intolerably hateful to every feeling of patriotism and national honour. Secondly, it was a system which put a mark of exclusion and degradation upon all native Englishmen, ejecting and debarring them from every office of honour or profit in the state, and treating them in every way as aliens and outcasts in their own land. Thirdly, feudalism now bound the land, and all degrees of men in it, with a much firmer grasp than formerly; it was the difference between the waters beginning to congeal, with the ice, indeed, floating here and there upon their surface, but still free and flowing in the greater part, and their state when hardened into one vast floor of fixed and impenetrable rock. There was no escape now anywhere from the embrace and pressure of the

* See ante, p. 353, &c.

* See ante, p. 248.

† Lyttelton's Henry II., vol. ii. p. 189.

system,—no retiring out of its way, or assuaging its force by a mixture of yielding and resistance;—the closely fitting iron bolt was driven forward to the bottom of its cavity, and crushed every obstacle to dust. Fourthly, it was a frightful national calamity, and one that, for the time, must have disorganized society as completely as the most convulsive overthrow of old laws and institutions could have done, for nearly the whole body of the landed proprietors of the country to be suddenly stripped of their possessions, and new families to enter everywhere upon the lordship of the soil and of its cultivators. Domesday Book shows the extent to which this spoliation of the natives was carried by the Norman conquerors. It is not correct to assert, as has been sometimes done, that the English were indiscriminately deprived of their lands; for a few of them appear to have been left in almost every county even as tenants-in-chief, and a considerable number more are mentioned as holding of mesne lords. But still the deprivation was so sweeping and general as to produce nearly the same amount of change and misery as if it had been universal; it was substantially the overthrow of the whole order of native proprietors, and the transference of the lordship of the soil into new hands. The sufferings of the numerous individuals who were the immediate victims of this policy would be but a part of the misery it inflicted; the shock of their downfall would be felt in some degree by all their connexions and dependents; and in the violent and simultaneous tearing asunder of so many old ties, and unlinking of men from the anchorages by which they had been accustomed to hang, the entire frame of society must have been loosened and weakened. But, fifthly, the conquered people were made, by the rapacity and incessant exactions of their new masters, to groan under a permanent load much more burdensome and oppressive, there is reason to believe, than they had ever before experienced. Their foreign government and their foreign landlords ground them to the earth at the same time with their separate extortions. The government especially was essentially a government of extortion and rapine; the main principle upon which it was conducted was to wring from the country the utmost revenue it could be made to yield; to meet the demands of the government upon themselves, again, the nobles and other landed proprietors were compelled in their turn to become the fleecers of all under them; and thus, in every way, the miserable people were harassed and robbed of the earnings of their industry. Sixthly, there was the occasional occurrence of such terrible excesses of reckless and unbridled tyranny as the formation of the New Forest, by which the government made open profession of its contempt for all the restraints of law, and right, and common humanity; and might be said actually to wage unprovoked war upon its subjects. Finally, there was the long succession of wars that grew out of the Conquest,—first between the two races nearly throughout the reign of the Conqueror, and afterwards between the two factions that divided the country in the time of Stephen,—by which the lives of two out of the first three generations that followed the establishment of the Norman dominion were made to pass in the sadness of continual anxiety and fear, the land was everywhere drenched with blood, and large districts of it were repeatedly laid desolate with fire and sword.

The sufferings of the people from all these causes have been very imperfectly detailed in the accounts that have come down to us; but they are expressively indicated by the demand that was constantly made for the restoration of the laws of the Confessor, in other words, of the comparatively happy state of things that had existed before the arrival of the Normans. It is remarkable that these supposed laws of the Confessor were really, as has been already noticed, the laws which had been first collected and reduced to a system by the Danish king Canute; so that the popular cry was the expression of a strong preference even for the Danish over the Norman dominion. And, in fact, there can be no question that the nation was much happier under the government of Canute than under that of the Norman conqueror.

Domesday Book also is the faithful record both of the extent of the spoliation which followed upon the Norman Conquest, and of part of the general depression of the national prosperity which was the immediate consequence of that great revolution. By the statements there given, almost all the principal towns throughout the kingdom appear to have been greatly reduced in their population and the number of houses they contained, at the end of the reign of the Conqueror, from their condition in the time of the Confessor; while the rents, customs, and other payments exacted from them had been in most cases seriously augmented. Part of this diminution appears to have been brought about by the ravages of war or accidental conflagrations—part by mere decay and neglect. In either case it equally told the miseries through which the country had passed, and the heavy weight that pressed upon all the springs of the national industry. This will be more clearly shown by the enumeration of a few particulars. The city of York—as yet the only town in the vast county to which it gives name—is set down as containing, at the date of the survey, only 967 inhabited houses out of 1607 which it had contained before the Conquest. Of the six scyræ, or wards, into which it was divided, one is described as laid waste for building the castles, or military strongholds for overawing the town. Besides the 640 houses pulled down or quite waste, 400 others are stated to be so much decayed as to be capable of paying to the crown only an annual tax of a penny each, or even less. In Lincoln there were formerly 1150 inhabited houses; of these, 166 were now laid waste for building the castle, and other 74 were also in ruins, having been reduced to that state by fire or

the poverty of their proprietors. In Dorchester, of 188 houses, 100 were totally destroyed. In Oxford, out of 721 houses which the town formerly contained, 478 were so decayed as not to be in a condition to pay any geld or tax. In Cambridge, 28 houses had been pulled down to build a castle. In Northampton, of 46 houses—all that the place appears to have contained—14 were lying waste. In many of the towns also a considerable proportion of the houses were now occupied by Frenchmen, as the Normans are called, who, in most instances, appear to have contributed no part of the tax exacted from the place by the crown. Thus, in the city of Shrewsbury, it is noted as a complaint of the English burgesses, that they were still compelled to pay the whole of the royal dues they paid in the time of King Edward, although, of the 252 houses of which the town consisted, there were 51 destroyed for the earl's castle, and 50 others lying waste, besides 43 that were occupied by French burgesses, who paid nothing, and 39 given by the earl to an abbey, which were in like manner exempted from taxation. The annual geld exacted from this town, and now, according to this statement, to be paid by little more than a fourth of the number of persons who formerly contributed to it, was 7*l.* 16*s.* 8*d.* But the geld or tax paid by the burgesses was far from being the whole of what each town paid to the king. From Shrewsbury, for instance, the entire profits of the crown were estimated at 30*l.* annually. In Derby, 103 houses were destroyed out of 243. In Ipswich, 328 houses are set down as now waste, which had yielded geld in the time of King Edward. Of 210 burgesses which remained out of 808, 100 were so poor as to be able to pay only a penny each. The entry respecting the city of Chester presents a rare instance of a partial recovery from the devastations of the earlier part of the reign; there were, it is stated, 205 houses lying waste when the town came into the possession of Earl Hugh, and it was worth only 30*l.*; but it had since so far recovered as to be farmed from the earl for 70*l.* and one mark of gold.

Both the Conqueror and his son Henry have the character of having been strict administrators of the laws, and rigorously exact and severe in the punishment of offences against the public peace. The Saxon Chronicler says that, in the time of the former, a girl loaded with gold might have passed safely through all parts of the kingdom. In like manner the same authority tells us, that, under the government of Henry, "whoso bore his burden of gold and silver, durst no man say to him nought but good." The maintenance of so effective a system of police must, no doubt, have made a great difference between these reigns and those of Rufus and Stephen—in both of which robbery ranged the kingdom almost without restraint, and, in the latter especially, the whole land was almost given up as a prey to anarchy and the power of the strongest. But still even this supremacy of the law was in many respects an oppressive bondage to the subject. In this, as in everything else, the main object of the government was the protection and augmentation of the royal revenue; and it may be correctly enough affirmed, that private robbery and depredation were prohibited and punished chiefly on the principle that no interference was to be tolerated with the rights of the great public robber, the government. Many of the laws, also, which were so sternly enforced, were in reality most unjust and grievous restrictions upon the people. Of this character, in particular, were the forest-laws, which punished a trespass upon the royal hunting-grounds, or the slaughter of a wild beast, with the same penalty that was inflicted upon the robber or the murderer. And in all cases the vengeance of the law was wreaked upon its victims in a spirit so precipitate, reckless, and merciless, that any salutary effect of the example must have been, to a great extent, neutralized by its tendency to harden and brutalize the public mind; and the most cruel injustice must have been often perpetrated in the name and under the direct authority of the law.

Henry I. was popularly called the Lion of Justice, and he well deserved the name. His mode of judicial procedure was in the highest degree summary and sweeping. In the twenty-fifth year of his reign, for instance, in a fit of furious indignation occasioned by the continued and increasing debasement of the coin, he had all the moneyers in the kingdom, to the number of more than fifty, brought up before the Court of Exchequer, when, after a short examination by the treasurer, they were all, except four, taken one by one into an adjoining apartment, and punished by having their right hands struck off, and being otherwise mutilated. The year before he had hanged at one time, at Huncot, in Leicestershire, no fewer than forty-four persons, charged with highway robbery. Robberies, however, of the most atrocious description were, during a great part of the reign, perpetrated, without check, by the immediate servants, and it may be said under the very orders, of the crown. The insolence of the purveyors and numerous followers of the court in the royal progresses is described by contemporary writers as having reached a height under this king far transcending even what it had attained to under either of his immediate predecessors. They used not only to enter the houses of the farmers and peasantry without leave asked, to take up their lodgings and remain as long as it suited them, and to eat and drink their fill of whatever they found, but, in the wantonness of their official licence, frequently even to burn or otherwise destroy what they could not consume. At other times they would carry it away with them, and sell it. If the owners ventured to remonstrate, their houses would probably be set on fire about their ears, or mutilation, and sometimes even death, might punish their presumption. Nor was it their goods only that were plundered or wasted; the honour of their wives and daughters was equally a free prey to these swarms of protected spoilers. The approach of the king to any

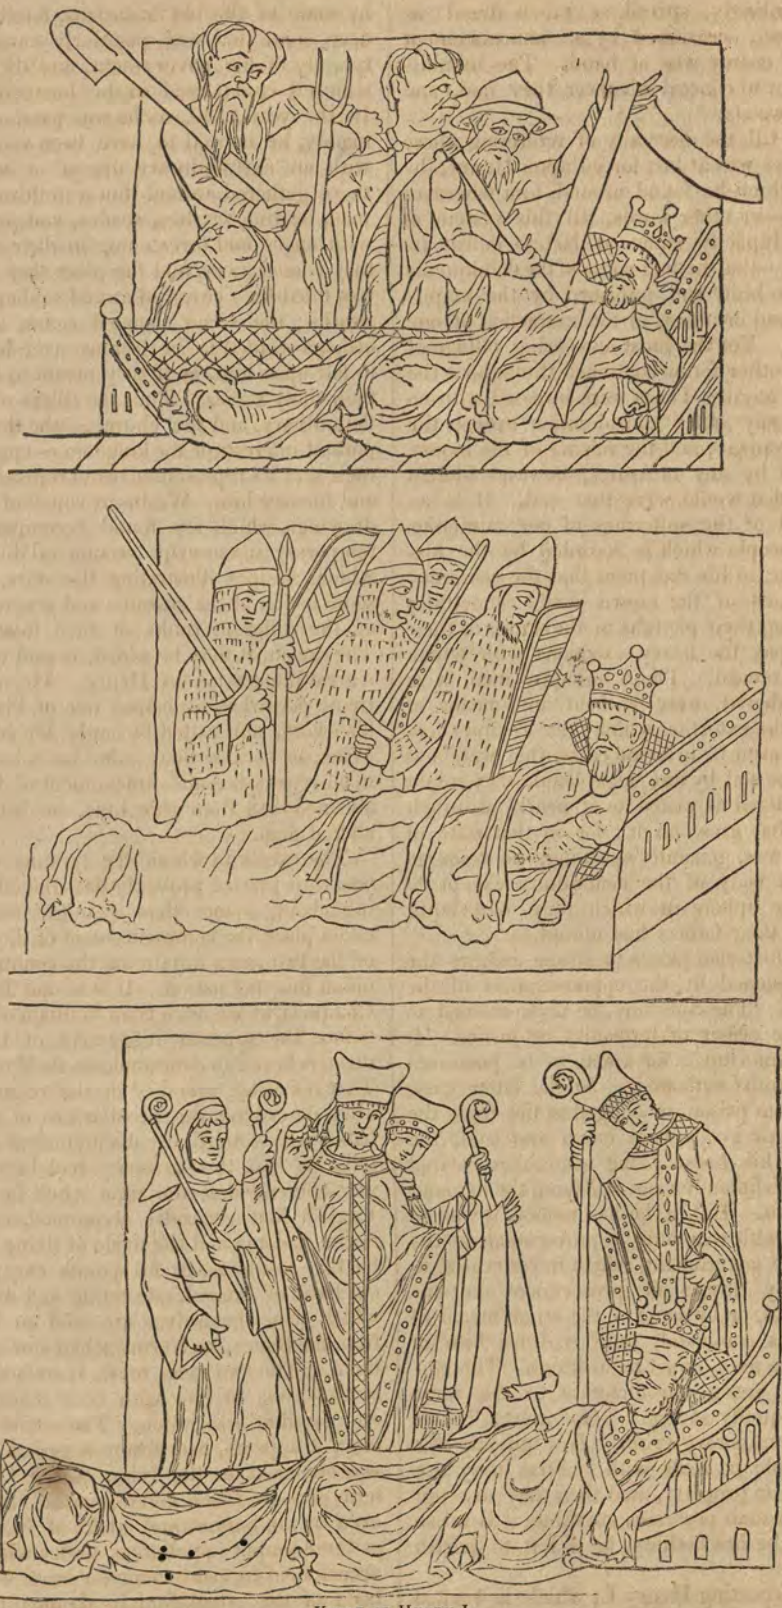
district, accordingly, spread as much dread as could have been occasioned by an announcement that a public enemy was at hand. The inhabitants were wont to conceal whatever they had, and to flee to the woods.

It was not till the necessity of reforming these frightful abuses was at last forced upon Henry, by the solitude which he found around him wherever he appeared,—in other words, till this system of unrestrained rapacity came at last to defeat its own purpose,—that he had some of the delinquents brought before him, and punished by the amputation of a hand or a foot, or the extraction of one of their eyes. Yet the most unsparing pillage of the people in other forms continued throughout the whole of this reign. Taxes were imposed with no reference to any other consideration except the wants of the crown; and the raising of the money was managed by any measures, however violent or irregular, that would serve that end. It is an affecting trait of the sufferings of one numerous class of the people which is recorded by the historian Eadmer, in his statement that the peasantry on the domains of the crown would sometimes offer to give up their ploughs to the king, in their inability to pay the heavy exactions with which they were burdened. These unhappy men, it is to be remembered, were without any means of escape from the extortion which thus ground them to the earth; even if, in some cases, they were not attached to the soil by any legal bond, they might still be considered as rooted to it nearly as much as the trees that grew on it; for in that state of society there was, generally speaking, no resource for the great body of the community except to remain in the sphere in which they were born, and in which their fathers had moved.

The same historian paints in strong colours the miseries occasioned by the oppressiveness of the general taxes. The collectors, he says, seemed to have no sense either of humanity or justice. It was equally unfortunate for a man to be possessed of money as to be without it. In the latter case, he was cast into prison, or obliged to flee from the country; or his goods were taken and sold, the very door of his house being sometimes carried away as a punishment for not satisfying the demand made upon him. But, if he had money, it was no better; his wealth was only a provocation to the rapacity of the government, which never ceased to harass him by threats of prosecutions on unfounded charges, or by some of the other means of extortion at its command, until it drove him to comply with its most unjust requisitions. The language of the Saxon chronicler is to the same purport, and equally strong. "God knows," says that other contemporary writer, "how unjustly this miserable people is dealt with. First they are deprived of their property, and then they are put to death. If a man possesses anything, it is taken from him; if he has nothing, he is left to perish by famine."

A legend respecting Henry I., which is related by some of the old historians, forcibly depicts the deep sense that was popularly entertained of the tyranny of his government, and the fierce hatred which it engendered in the hearts of his subjects. In the year 1130, as he was passing over to Normandy, he is said to have been visited one night with an extraordinary dream or vision. First, there gathered around him a multitude of countrymen, bearing scythes, spades, and pitch-forks, and with anger and threatening in their countenances: they passed away, and the place they had occupied was filled by a crowd of armed soldiers with drawn swords; the scene changed again, and crosiered bishops seemed to be leaning over his bed, ready to fall upon him, as if they meant to kill him with their holy staves. Thus the tillers of the ground, the military, and the church,—the three most important interests of the kingdom,—appeared to have each sent its representatives to reproach, and curse, and menace him. We insert copies of three ancient drawings, which are found accompanying a contemporary manuscript version of this legend, and which, besides illustrating the story, will convey some notion of the costume and general appearance of the different ranks of men introduced in it. The dream, it may be added, is said to have made a great impression on Henry. He awoke in extreme perturbation, leaped out of his bed, seized his sword, and called violently for his attendants. When he became more calm he solemnly resolved upon repentance and amendment of life, and it is affirmed that, from this time, he began to be an altered man.

The excess to which the tyranny of the crown was thus carried probably had the effect of bringing about, sooner than it might otherwise have taken place, the commencement of the intermixture of the two races inhabiting the country, and their union into one nation. It was not long after the Conquest, as we learn from William of Malmsbury, before the superior refinement of their Norman masters began to communicate itself to the English. That historian, who died in the reign of Stephen, after describing the peculiarities of manners and habits which originally distinguished each people, tells us that this diversity had become in great part obliterated at the time when he wrote. The English had generally accommodated themselves to the customs and the mode of living brought over by the Normans, in all points except one, their old habit of immoderate eating and drinking: this, which they themselves are said to have learned from the Danes, the Normans had now acquired from them. The two races must, therefore, have come by this time to live with each other in common and familiar association. The name of Englishman, it appears, had also now ceased to be what it was esteemed in the reign of the Conqueror,—a term of degradation and reproach. It was assumed even by the barons, and others of Norman lineage, as their proper appellation, under which they were accustomed to make common cause with the great body of the population in demanding the resto-



VISION OF HENRY I.

ration of the old Saxon laws and customs. By the time of Henry II. the English had begun to be re-admitted to offices of honour and profit in the state, and intermarriages had taken place between the two races to a great extent. The historian Ailred, who lived in that reign, observes that England had now, not only a king, but many bishops and abbots, many great earls and noble knights, who, being descended both from the Norman and English blood, were an honour to the one and a comfort to the other. But the most distinct statement of the general intermixture of the two races that had by this time taken place is found in a remarkable passage of the Dialogue on the Exchequer, in relation to the old legal custom of what were called presentments of Englishry. A presentment of Englishry was the return of an inquisition held upon the body of a person found slain, when the author of the slaughter could not be discovered, declaring him to have been an Englishman; in which case the vill or hundred was excused from a heavy amerciament, which it would otherwise have had to pay, by a law said to have been first introduced by Canute for the protection of his Danish countrymen, and which was afterwards continued or revived by William the Conqueror for the security of the Normans. But now, says the writer of the Dialogue, by reason of the English and Normans dwelling together, and constantly intermarrying, the two nations are so completely mixed one with the other, that, in so far as regards the portion of the community that is free, it can scarcely any longer be ascertained who is of English, who of Norman descent. The villains attached to the soil, however, it is added, were still an exception; they remained of unmixed Saxon blood,—a statement, by the way, from which we may gather that it was not usual for marriages to take place between the villains and persons in a state of freedom;—that such marriages sometimes happened we know, from the provisions made by law respecting their issue. The consequence of the state of things which had thus arisen, the writer of the Dialogue concludes by informing us, was, that, except it were a villain, the case of every person found secretly slain was considered to be murder,—that is to say, was punished by the imposition of the fine upon the neighbourhood, for that was then the meaning of the word which we now use for the highest degree of the illegal shedding of blood. Had it not been for the sake of the revenue which accrued to the crown from these amerciaments, the directly opposite result would seem to be that which should have most naturally flowed from the general obliteration of the old distinguishing characteristics of the two races; all persons found secretly slain should have been assumed to be English, and the fine upon the neighbourhood remitted. It was not, however, till nearly two centuries after this time that presentations of Englishry were formally abolished by statute.

There can be little doubt that the national character was decidedly improved on the whole by this mixture of new blood with that of the old Saxon population of the country. The Saxon solidity was brightened, and its tendency to decline into heaviness and coarseness checked, by an infusion of the more fiery temperament and more brilliant qualities of the Norman race. The Celtic tincture which was thus introduced into the pure Teutonic blood of the Saxons was, however, but very slight; for the Normans were but half Frenchmen, and the French themselves were but half Gauls. The substance of the English character, therefore, remained thoroughly Teutonic as before, though lighted up with something of a more refined animation. But the perfect produce of this chemistry was a result not to be realized till a distant period; the consequences of the oblivion by the two races of their old animosities, and their coalescence into one nation, were evidenced for the present chiefly in the favourable change that followed in their political and social circumstances. The government, indeed, still continued to be in many respects an oppressive tyranny: its spirit, and also to a great extent its power, was still despotic; the law was a most imperfect protection for either the property or the liberty of the subject; witness, to mention no other instances of its scandalous insufficiency and barbarism, the right which it appears was still left to the crown, and not unfrequently exercised by it even in the reign of Henry II., of not only punishing the individual himself who might have been found guilty of certain crimes, but also sending into banishment all his innocent relations. Henry, it may be remembered, in 1165, banished out of England, by a general sentence, all the relations, friends, and connexions of Thomas à Becket, to the number of nearly four hundred persons, without distinction of sex or age; even infants at the breast, as we learn both from Becket's own letters and from his biographer Fitz-Stephen, were not excepted. What liberty, or what law deserving the name, could there be said to exist in a country where so enormous a stretch of arbitrary power could be tolerated? Many of the other prerogatives of the crown, indeed, were utterly incompatible with a state of general security and freedom. Yet from this time the spirit of resistance to bad government, however inefficient as yet for the prevention of numerous abuses, was at least a national spirit. It was no longer the mere feeling of a part of the people either actually contending in arms with the rest, or only kept down by force and fear; it was no longer a sentiment of disaffection or open rebellion; the classes naturally most attached to the existing government, and most interested in its preservation, shared equally with their fellow-subjects in the desire for good laws and a just administration of them. The Saxons had ceased to be rebels; the Normans had ceased to be conquerors; both, united under the common name of Englishmen, had come to feel that they had the

HENRY II. BANISHING BECKET'S FAMILY. Royal MS. 2 B vii.

same interests and the same rights. Their union, as has been just observed, did not at first enable them always to restrain the excesses of the crown; that power would still, on occasion, break through all restraints; but yet, in ordinary circumstances, a considerable degree of moderation and good government was enforced. The government of Henry II., for instance, was undoubtedly an infinite improvement on that of his grandfather. At first this practical amelioration was nearly all that was aimed at; but the reform of the constitution of the kingdom followed in due course: when King John attempted to renew the arbitrary rule of the Conqueror and his sons, he found that he had neither the same kind of resistance to encounter, nor the same support to lean upon; the Norman party was not now to be wielded as an ir strument for beating down the English; his tyrannical proceedings were as little agreeable to the former as to the latter; and they soon gave proof of their combined strength, and of the birth of a power which hitherto had not showed itself in the state, by not only stopping him in his course of insolent aggression and outrage, but by proceeding to extract some and to pare down others of the mischievous prerogatives through which he had been enabled to perpetrate the wrongs thus put an end to. For the manner in which it was gained, and its glorious memory as the first victory of the nation over the old despotism of the crown, even more than for any of the provisions contained in it, MAGNA CHARTA is worthy to stand in the front of the Statute Book, and to be regarded as having laid the foundation of the liberties of England.

The precise information that has come down to us respecting the social statistics of this period, amounts only to a few scattered facts, from which scarcely any general conclusions can be drawn as to the condition of the people. We have not as yet arrived at the age of regular and official records; we have only the occasional notices incidentally let fall by the chroniclers while pursuing their main subject—the course of public affairs. Most of these notices that throw any light upon the important point of the prices of commodities and of labour have been collected by Bishop Fleetwood, in the 'Chronicon Preciosum,' by Sir Frederick Eden, in his 'State of the Poor,' and by Mr. Macpherson, in his 'Annals of Commerce.' Their number, as we have said, is very inconsiderable; and, few as they are, they are for the most part of little value. "The accounts, for instance," as is observed by one of the writers we have just named, "of the prices of grain, are in general only those which, from the particular circumstances of the time, attracted the attention of the annalist; they are usually the prices in dearths and famines, or in years of extraordinary cheapness; and are, therefore, no very accurate criterion of the mean or ordinary price: it is often impossible to ascertain the capacity of the measures that were used, or to point out the places where the prices were taken. In the distracted state of the country from the twelfth to the fifteenth century, the intercourse between the different parts of the island was interrupted; the want of good roads, an injudicious system of agriculture, and the desolating incursions of rival barons, often prevented one part of the kingdom, where the crop was scanty, from being supplied with the superabundant produce of another. It is further to be remarked, that, in stating both the prices of labour and commodities, authors have often been misled by the composition-price agreed upon between the landlord and tenant, perhaps according to some ancient valuation. In some instances it is difficult to distinguish whether the rent of land, as stated in ancient records, is the whole benefit the landlord received, or whether the personal services of the tenant did not constitute by far the most valuable part; in others, whether the price of grain is the price for which it sold in the market, or the quota which in ancient times tenants paid to their landlords in lieu of a rent in kind, and which was always much below the market price."* To these sources of fallacy may be added the chances of a corrupt text, which are very great wherever figures

* Eden's State of the Poor, vol. iii., Appendix, p. vi.

are concerned, and the occasional contradictions between one authority and another, or even sometimes between two statements of the same writer. The value of the money of the present period, or rather the quantity of silver contained in each denomination, has been explained in a preceding chapter.*

The price which, in ordinary circumstances, chiefly regulates all other prices, or sympathizes with them where it does not regulate them, is the price of labour. But, in regard to that in the present period, our information is hardly worth anything. It appears, however, to have varied from about three farthings to a penny a day, with victuals. Thus, in 1126, the wages of the common servants employed at the abbey of Peterborough are stated to have been 1*l.* 4*s.* 4*d.* yearly, which is at the rate of about three farthings a day. The Abbey baker had the same wages, with bread and beer; but what we are to infer from this probably is, not that the other servants had no victuals, but that bread (that is, wheaten bread) and beer were not allowed them as a part of their fare. In 1173, the subsistence of a footman for one day is set down at twopence, which makes about 3*l.* in the year; so that it can hardly be supposed that the 1*l.* 4*s.* 4*d.* was the whole that domestic servants received. The entire yearly gains of persons of this class may probably be taken as amounting to about 4*l.* Labour of a higher kind was of course better paid. By the old Scottish burgh laws, which may be referred to about the middle of this century, it is enacted, that a butcher, for slaughtering an ox, or a cow, or a hog, or five sheep, should be paid a halfpenny, with victuals, while employed. Supposing the work stated to be that of half a day, the butcher's annual earnings in money would amount to about 1*l.* 10*s.* 6*d.*; and, if he was allowed provisions at the same rate with a footman or common domestic servant, his entire yearly income would amount to about 4*l.* 10*s.*, or, in quantity of silver, to about 13*l.* of our present money.

The prices of grain were wont to vary excessively, not only in different years, but even at different periods of the same year. Stow asserts that, in the reign of Henry II., the usual price of wheat was 1*s.*, and of oats 4*d.* the quarter; but no contemporary notice places it nearly so low. In scarce years the price of wheat is stated to have sometimes risen to a pound. If we take it as averaging 4*s.*, the yearly gains of the butcher would purchase about twenty-three quarters of wheat, which, estimating the wheat at about 50*s.* the quarter, would now make an income of between 50*l.* and 60*l.* Nothing, however, can possibly be more uncertain than such a deduction as this. Every element and step of it is tainted with uncertainty.

The prices of many other kinds of provisions were low in comparison with that which we have assumed for wheat. Thus, in 1185, we find hens rated at a halfpenny each; sheep at about 5½*d.*; rams at 8*d.*; hogs at 1*s.*; oxen at 5*s.* 6*d.*; cows at about 4*s.* 6*d.*; breeding-mares at less than 3*s.* At these rates, the expense of a day's maintenance of a man-servant at 2*d.* would be equivalent to the value of four hens, and of more than a third of a sheep. It is unnecessary to remark how greatly these and the other proportions deducible from the account differ from those that now subsist. In the year 1205, again, we find ten capital horses rated at 20*l.* each, or nearly 60*l.* of our present money.

Of the prices of other commodities we have very few notices. In 1172, twenty-five ells of scarlet cloth, bought for the king, cost 5*s.* 6*d.* the ell; and twenty-six ells of green, 2*s.* 10*d.* the ell. Ten pairs of boots for his Majesty at the same time cost 1*s.* 6*d.* each. In 1212, a pair of Cordovan boots for the king are charged at 2*s.* 6*d.*; and a pair of what are called single boots, at only 7*d.* About the end of the twelfth century, the price of the tun of French wine appears to have varied from about 1*l.* to 1*l.* 6*s.* 8*d.* A sack of wool about the same time cost 3*l.* 6*s.* 8*d.* The expense of the building of two arches of London Bridge in 1140, was 25*l.* A few years later, a piece of ground, with a stone house on it, in the city of London, was sold for 2*l.*, besides a rent in perpetuity of 6*s.* 8*d.* It is evident that, by an appeal to these various prices, the value of money in the twelfth century might be made out to bear any proportion to its value in the present day that the fancy of the calculator might prefer, or that it might best suit his particular object to fix upon.

The most curious illustrations we possess of the social life of this period, and the point to which civilization had attained in England, are afforded by some of the facts mentioned in Fitz-Stephen's account of London. According to this writer, for instance, the English capital had already its sewers and aqueducts in the streets (*eluvies et aqueductus in vicis*). He speaks of the comfort of a residence in the place, and the beauty of the surrounding country, in very glowing terms. It was encompassed, he tells us, on the north side, by "corn-fields, pastures, and delightful meadows;" and these fields, he adds, "are by no means hungry gravel or barren sands, but may vie with the fertile plains of Asia, as capable of producing the most luxuriant crops, and filling the barns of the herds and farmers with Ceres' golden sheaf." "The city, on the whole," he proceeds, "is doubtless most charming—at least when it has the happiness of being well governed." "The two only inconveniences of London," he afterwards informs us, "are the excessive drinking of some foolish people, and the frequent fires." "To all that has been said," he concludes, "I may add, that almost all the bishops, abbots, and great men of this kingdom, are, in a manner, citizens and inhabitants of London, as having their respective and not inelegant habitations there, to which they resort, and where their disbursements and expenses are

* See ante, p. 594.

not sparing, whenever they are summoned thither from the country, to attend councils and solemn meetings, by the king or their metropolitan, or are compelled to repair thither for the prosecution of their own proper business." But the most remarkable passage in the account is the description he gives of a sort of public eating-house, or cook's shop (*publica coquina*), which was established on the bank of the river. "Here," he says, "according to the season, you may find victuals of all kinds, roasted, baked, fried, and boiled; fish, large and small; and coarse viands for the poorer sort, and more delicate ones for the rich, such as venison, fowls, and small birds. In case a friend should arrive at a citizen's house much wearied with his journey, and chooses not to wait, anhungered as he is, for the buying and cooking of meats,—

"Dant famuli manibus lymphas panesque canistris."—
Æn. i. 705.

The water's served, the bread's in baskets brought;—

and recourse is immediately had to the bank abovementioned, where everything desirable is instantly procured. No number so great, of knights or strangers, can either enter the city at any hour of day or night, or leave it, but all may be supplied with provisions; so that those have no occasion to fast too long, nor these to depart the city without their dinner. To this place, if they are so disposed, they resort, and there they regale themselves, every man according to his abilities. Those who have a mind to indulge need not hanker after sturgeon, or a Guinea-fowl, or a gelinote de bois (a particularly delicate bird), for there are delicacies enough to gratify their palates. It is a public eating-house, and is both highly convenient and useful to the city, and is a clear proof of its civilization."* We may smile at this notion of civilization, and at the instance selected to set forth the wealth and pre-eminence of London at this early period; but, after all, the establishment here described is highly interesting, as an indication of the growing importance of the more numerous classes, and as the commencement of that extended system of public accommodations, of all kinds, which, far more than the palaces of her grandees, has since made our noble capital the Queen of Cities.

GREAT SEAL OF HENRY III.

CHAPTER I.

NARRATIVE OF CIVIL AND MILITARY TRANSACTIONS.

HENRY III., SURNAMED OF WINCHESTER.

AS soon as they had buried John at Worcester, the Earl of Pembroke, the Marshal of England, marched with the royal army and Prince Henry, the deceased king's eldest son, to the city of Gloucester. On the day after their arrival, being the feast of St. Simon and St. Jude, October 28th, 1216, Henry was crowned in the church of St. Peter, belonging to the Abbey of Gloucester, by Gualo, the pope's legate, whose services in supporting the royal cause were of great value and efficacy. The ceremony was precipitated: no English bishops were present except those of Winchester, Bath, and Worcester; no lay nobles save the earls of Chester, Pembroke, and Ferrers, and four barons. The scanty retinue was completed by a few abbots and priors. The prince took the usual oaths "upon the gospels and relics of saints." The crown had been lost, with the rest of the regalia, in the Wash, and, instead of it, Gualo put a plain ring of gold on his head. Henry was only ten years old when he went through these solemnities, without understanding them. It required no great force or persuasion to induce him to consent to do homage to the pope for England and Ireland, and to swear to pay the thousand marks a-year which his father had promised. The clergy of Westminster and Canterbury, who considered their rights invaded by this hurried and informal coronation, appealed to Rome for redress: Gualo excommunicated the appellants, who, however, persevered; and this matter occasioned considerable trouble, which did not end till the ceremony was repeated in a more regular manner.

A great council was held at Bristol on the 11th of November following; and there the Earl of Pembroke was chosen Protector, with the title of *Rector Regis et Regni*. His pure character and many eminent qualities,—his temper, prudence, and conciliating manners,—his experience in public affairs and his military skill, all seemed to point him out as the most eligible person; but some jealousies arose on the part of the great Earl of Chester, and Pembroke did not assume the style of "Rector" till the end of the month of November. At the same great council of Bristol Magna Charta was carefully, and, on the whole, skilfully revised, with the view of satisfying the demands of the barons who adhered to Louis, without sacrificing the royal prerogative. These

measures, however, were not considered conclusive, for Pembroke prudently left several clauses open for future discussion, when all the barons of the kingdom should be reconciled, and should meet again in one council. As yet the greater number of the nobles were on the side of Louis, who not only held London and the rich provinces of the south, but was powerful both in the north and the west, where the King of Scotland and the Prince of Wales supported his cause.*

When Louis learned the death of John he fancied that all opposition would presently cease. To take advantage of the consternation which he fancied must prevail among the royal party, he again pressed the siege of Dover Castle with great vigour, and, finding himself still incapable of taking it by force, he skilfully worked upon the fears and misgivings of the garrison, representing to them that they were fighting for a king who no longer existed, and whose death freed them from the obligation of their oaths of fealty. He tempted the governor, the brave Hubert de Burgh, with the most magnificent offers; and, when these failed, he threatened to put Hubert's brother to death. But threats were as ineffectual as promises; and, finding he was losing precious time, the French prince finally raised the siege, and returned to London, where the Tower, which had hitherto held out, was given up to him on the 6th of November. From London Louis marched to Hertford, and laid siege to the castle there, which he took on the 6th of December. He then attacked the castle of Berkhampstead, which he reduced on the 20th of the same month. Both these castles made a stout resistance, costing him many men; and the taking of that of Berkhampstead was a loss rather than a gain, for it led to a quarrel with Robert Fitz-Walter, to whom he refused the custody of the castle. But his mistrust of the English was made every day more evident. From Berkhampstead Louis marched to St. Albans, where he threatened to burn the vast abbey to the ground if the abbot did not come forth and do him homage as legitimate king of England; but the abbot, it is said, escaped on paying a fine of eighty marks of silver. For a long period the carnage of war had been brought to a pause, by unanimous consent, on the seasons of our Saviour's birth and suffering. Christmas was now at hand, and a truce was agreed upon which was to last till a fortnight after the Epiphany. At the expiration of this truce Pembroke willingly agreed to another which did not expire till some days after the festival of Easter. Each party hoped to gain by this long armistice, and both were extremely active during its continuance. Louis, in Lent, went over to France to procure supplies of men and money, and Pembroke recruited in England, and drew off many of the nobles during the absence of the French prince. Louis left the government in the hands of Enguerrand de Coucy, a nobleman of great quality, but of very little discretion, under whose misrule the French became more arrogant than ever, and the English barons were made to feel that, by securing

* Rymer.—Carte.—M. Paris.

Henry III. From his Tomb in Westminster Abbey.

the throne to a foreign prince, they should impose upon themselves foreign nobles for masters. At the same time the death-bed story of the Viscount de Melun was artfully revived; and the clergy, in obedience to the orders of Gualo the legate, read the sentence of excommunication in the churches every Sunday and holiday against the partisans of Louis. Hubert de Burgh, as constable of Dover Castle and warden of the Cinque Ports, was in constant communication with the best mariners in England, and he kept them true to young Henry. Philip d'Albiney put himself at the head of a popular party in Sussex, where one William de Collingham collected a thousand gallant archers,—rough English yeomen, who would allow of no truce with the French, and cared not for the armistice concluded by the Earl of Pembroke. On his way to the coast Louis came into collision with these sturdy patriots, who treated him very roughly, and would have made him a prisoner but for the opportune arrival of the French fleet, in which he and his attendants embarked in great disorder. On his return from France with reinforcements, the mariners of the Cinque Ports cut off several of his ships at sea, and took them by boarding. On this Louis landed at Sandwich, and burned that town to the ground in spite. He then, after making another unsuccessful attempt on Dover Castle, marched to London, where everything was falling into confusion.

On the expiration of the truce the Earl of Pembroke recommenced hostilities by laying siege to the castle of Mount Sorel, in Leicestershire. Louis sent the Count of Perche with six hundred knights and twenty thousand armed men to relieve it. On their march this mixed army of English, French, Flemings, and all kinds of mercenaries, committed great havoc, plundering the peaceful inhabitants, and wantonly burning the churches and monasteries. They succeeded, however, in their first object, Pembroke's forces raising the siege and retiring before superior numbers. Flushed with this success, the Count of Perche marched away to Lincoln: the town received him, but the castle resisted, and when he laid siege to it, he was foiled by a woman,—Nichola, the widow of Gerard de Camville, who held the custody of Lincoln Castle by hereditary right, and made a brave defence. While the confederates were wholly occupied with this siege, Pembroke suddenly collected a force of four hundred knights, two hundred and fifty cross-bowmen, many yeomen on horseback, and a considerable body of foot, and appeared before Lincoln in admirable order. The count for a time would not believe that the English would venture to attack him within a walled town; and though his superiority in cavalry would have given him an advantage in the open country, he rejected the advice of some English barons who were with him, and would not march out of the town. He continued to batter the castle until he found himself engaged in a fatal street contest. To animate Pembroke's force Gualo now excommunicated Prince Louis by name, and pronounced the curse of the church against all his adherents; dispensing at the same time full absolution, and promises of eternal life, to the other party. The regent took advantage in the most skilful manner of the count's blunder: he threw all his crossbows into the castle by means of a postern. These yeomen made great havoc on the besiegers by firing from the castle walls; and seizing a favourable opportunity they made a sortie, drove the enemy from the inside of the northern gate of the city, and enabled Pembroke to enter with all his host. The French cavalry could not act in the narrow streets and lanes: they were wounded and dismounted, and at last were obliged to surrender in a mass. The victory was complete: as usual, the foot-soldiers were slaughtered, but the "better sort" were allowed quarter; only one knight fell, and that was the commander, the Count of Perche, who threw away his life in mere pride and petulance, swearing that he would not surrender to any English traitor. This battle, facetiously called by the English "the Fair of Lincoln," was fought on Saturday, the 20th of May, 1217.

Without halting or refreshing himself, the Earl of Pembroke rode the same night to Stow, to give his royal pupil an account of his success.* It was indeed a victory worthy of such a courier,—its effect was to keep Louis cooped up within the walls of London, where plots and disturbances soon forced him to propose terms of accommodation. In the middle of June a conference was held at a place between Brentford and Hounslow, but it led to nothing. Philip of France had been so scared by the threats of Rome that he durst not send reinforcements in his own name: but he urged that he could not prevent Blanche of Castile, the wife of his son Louis, from aiding her own husband in his extremity; and under this cover another fleet and army were prepared for England. It was not till the 23rd of August that this fleet could sail from Calais: it consisted of eighty great ships and many smaller vessels, having on board three hundred choice knights and a large body of infantry. On the next day, the great festival of St. Bartholomew, as they were attempting to make the estuary of the Thames, in order to sail up the river to London, they were met by the hero of Dover Castle, the gallant De Burgh. Hubert had only forty vessels great and small, but he gained the weather gage, and by tilting at the French with the iron beaks of his galleys, sunk several of the transports with all on board. He afterwards grappled with the enemy, fastening his ships to theirs by means of hooks and chains, and in the end he took or destroyed the whole fleet with the exception of fifteen vessels. Eustace le Moine, or "the Monk," who had left his monastery in Flanders to adopt the more congenial life of a sea-rover, had his head struck off on his own deck; for he was not considered a true knight entitled to the honours

* Mat. Par.—Chron. Dunstap.

of war, and he had previously given great offence to the English.*

This decisive naval victory gave the death-blow to the project of Louis. That prince, however, acted generously and nobly in the midst of his difficulties: he would not abandon his friends, but said, when pressed, that he was ready to agree to any terms not inconsistent with his honour or the safety of his English adherents. The prudent regent was glad enough to promise good terms to these barons, who, whatever might be their after errors, had been among the foremost champions of English liberty, and had assisted in obtaining the great charter, which he himself loved as much as any of them. There were also many other nobles, on the same side, equally averse to proceeding to extremities against countrymen, former friends, and relations. The final terms were easily settled in a conference held on the 11th of September on an islet of the Thames near Kingston. It was agreed that the English barons who had continued to adhere to Louis, besides having their estates restored to them, should enjoy the customs and liberties of the kingdom, and all improvements thereof, equally with others. The privileges of London, as of all other cities and boroughs, were to be confirmed, and the prisoners on both sides taken since Louis's first landing were to be released without ransom, unless where previous arrangements had been made between parties. Louis was to give up all the castles he possessed; to order the brothers of Eustace the monk to evacuate the isles they had made themselves masters of; and to write to Alexander, king of Scotland, and Llewellyn, prince of Wales, to induce them to restore all the fortresses and places they had taken, if they would be included in the treaty. He also acquitted the English nobles of their oaths and obligations to him, and promised never to enter again into any confederacy with them to Henry's prejudice; and the barons made a like engagement on their own behalf. The French prince and his adherents swore to observe these articles, and to stand to the judgment of the church, upon which they were all absolved by the legate.† Matthew Paris adds another article, which does not appear to have been committed to writing, though it was frequently urged by Henry in after-times as an existing and sacred engagement. This article imported that Louis would do all in his power to persuade his father to restore all the foreign possessions lost by John; and, failing in this, that he should fairly restore those provinces when he himself became king of France. Such a clause was utterly useless, for it was one which could never be considered binding by the French nation, nor by any other in similar circumstances. Louis was so poor, that he was obliged to borrow money from the citizens of London to defray the expenses of his journey home. On the 14th of September, a safe conduct was granted to him: he was honourably escorted to the sea-side by the Earl of Pembroke, and he sailed for France with his foreign associates. On the 2nd of October, a few refractory barons, the only remnant of a great party, went to court, and were exceedingly well received there. On the fourth day of the same month, a new charter for the city of London was promulgated; and a few days later, the regent, for the general good of the nation, concluded with Haquin, or Haco, king of Norway, a treaty of free commerce between the two countries. At the same time, this excellent regent's prudence and equity did more than a written treaty in reconciling conflicting parties at home. He was accessible and courteous to all, taking especial care that no man should be oppressed for his past politics. His authority, however, did not extend to the church, and Gualo severely chastised many of the English abbots and monks who had ventured to disregard his excommunications. This circumstance contributed with others to render the new reign unpopular with a large portion of the English church; and, during the struggles between the king and the barons which ensued at a later period, the barons had generally the monks on their side.

In all these transactions no mention had been made of Eleanor, the Maid of Brittany, who still occupied her dungeon or her cell at Bristol, nor was her name ever breathed during the civil wars which followed—a proof how little female right was then regarded; for, by the rules of succession as now recognised, she was the undoubted heiress to the throne. Henry began his reign in leading-strings, and owing to his weak and defective character, he never freed himself from such absolute guidance, but passed his whole life in a state of tutelage and dependence—being now governed by one powerful noble, or by one foreign favourite, and now by another. Nothing, however, could well surpass the wise policy and moral worth of his first guardian, the great Earl of Pembroke, who continued to act as protector to the kingdom, and as a more than father to the boy-king. As for Eleanor, the selfish queen-mother, she abandoned her child in the midst of his troubles, and hurried back to Guienne in search of a new husband. It conveys a strange notion of the delicacy of those times, to find that the Count of La Marche, from whom John had stolen her, consented to take her back, and remarried her with great pomp. England, and probably her son, too, gained by her absence, for she had as little conscience or conduct as her husband John. Gualo, the pope's legate, continued for some time near the young king's person. Every day the peace of the country was made more secure—"the evil will borne to King John seeming to die with him, and to be buried in the same grave."* But the determination to preserve the liberties which had been wrung from him was alive and active, and a second confirmation of Magna Charta was granted by the young king. Besides that the benefits of the charter were now

* Matt. Par.—Holinshed.—Southey, Nav. Hist.
† Rymer.

* Speed, Chron.

extended to Ireland, several alterations were made in the deed, and a clause was added, ordering the demolition of every castle built or rebuilt since the beginning of the war beween John and the barons. Other clauses were withdrawn, to form a separate charter, called the Charter of Forests. By this instrument, which materially contributed to the comfort and prosperity of the nation, all the forests which had been enclosed since the reign of Henry II., were thrown open; offences in the forests were declared to be no longer capital; and men convicted of the once heinous crime of killing the king's venison, were made punishable only by fine or imprisonment. These famous charters were now brought nearly to the shape in which they have ever since stood, the repeated confirmations of them not being intended to change or modify them, but to strengthen them by fresh guarantees, and increase the reverence of the people for them.

Meanwhile the spirit of insubordination which had arisen out of the civil war was gradually coerced or soothed by the valour and wisdom of the Earl of Pembroke, who was singularly averse to the cruelties and bloodshedding which had formerly disgraced all similar pacifications. But the excellent protector did not long enjoy the happy fruit of his labours; he died in the year 1219, about the middle of May, and was buried in the church of the Knights Templars at London, where his tomb or statue is still to be seen, with an inscription which scarcely exaggerates his virtues as a warrior and statesman. His authority in the state was now shared between Hubert de Burgh, the justiciary, the gallant defender of Dover Castle, and Peter des Roches (a Poictevin by birth), bishop of Winchester. These ministers were jealous of each other: De Burgh was the more popular with the nation; but Des Roches, who had the custody of the royal person, possessed the greater influence at court, and among the many foreigners who, like himself, had obtained settlements and honours in the land. Dissensions soon broke out; but dangerous consequences were prevented by the skill of Pandulph, who had resumed the legateship on the departure of Gualo. On the 17th of May, 1220, young Henry was crowned again by Langton, archbishop of Canterbury, whom the pope had permitted to return to the kingdom. In the following year, Joanna, the eldest sister of Henry, was married at York, to Alexander, the king of Scotland; and nearly at the same time, one of the Scottish princesses who had been delivered to John, and who had ever since remained in England, was married to Hubert de Burgh, the justiciary. Pandulph then returned to Rome, having previously demanded, in the name of the pope, that no individual should hold more than two of the royal castles. On his departure, however, little respect was paid to the orders from Rome. Many of the barons—chiefly foreigners imported by John—refused to deliver up the fortresses which they pretended to hold in trust till the young king should be of age. While De Burgh insisted on their surrender, his rival, Des Roches favoured the recusant chiefs. Plots and conspiracies followed; but in 1223, the justiciary, with the assent of the pope and the great council of the nation, declared Henry of age; and in the course of the following year he succeeded in getting possession of most of the disputed castles, taking some of them by siege and assault. Des Roches then gave up the struggle, under pretence of making a pilgrimage to Jerusalem, and many of the foreign adventurers followed him out of England. Though not a cruel man, Hubert de Burgh was far more severe than the Earl of Pembroke; for at the taking of Bedford Castle he hanged eighty of the foreign garrison, knights and others, who had been in the habit of committing frightful excesses in the country.

A.D. 1225. In the following year, 1225, one of the main springs of the English constitution, which checks the abuse of power, by the mode of allotting money, began its salutary movements. Louis, the French prince, who had now succeeded his father, Philip, on the French throne, unmindful of his promises, not only refused to surrender Normandy and the other states wrested from King John, but overran some parts of Guienne and Poictou, and took the important maritime town of Rochelle. The young king summoned a *parliament* (for that name was now coming into use) to meet at Westminster; and there Hubert de Burgh, having opened the proceedings by an explanatory speech, asked for money to enable the king to recover his own. At first the assembly refused to make any grant, but it was finally agreed that a fifteenth of all moveable property should be given, on the express condition, however, that the king should ratify the two charters. Henry, accordingly, gave a third ratification of Magna Charta, together with a ratification of the Charter of Forests, and sent fresh orders to some of his officers, who had hitherto treated them with little respect, to enforce all their provisions.* In the month of April, Richard, earl of Cornwall, the king's brother, was sent to Guienne, under the guidance of the Earl of Salisbury, with an English army. But the French king had taken the cross against the Albigenses, an unfortunate people in the south of France, who were called heretics, and treated more cruelly than Saracens. A papal legate interfered, threatened the English with excommunication if they opposed obstacles to Louis in his holy war, and, at last, made both parties agree to a truce for one year. Before the term expired, the French king died at Paris, after a brief reign of three years, and was succeeded by his son Louis IX., who was only in his twelfth year. A stormy minority ensued; and Henry, who was now twenty years of age, might have taken advantage of it, had his character and his own circumstances been somewhat different from what they were. But the English king had little more real manhood than the child on the French throne; his barons were by no means anxious for the foreign war,

* Matt. Par.—Brady.

and the armistice was subsequently renewed year after year, the English never recovering Rochelle, and the French making no further progress of importance.

Though he ruled with a firm hand, Hubert de Burgh was not always able to cause the government to be respected, and to maintain the tranquillity of the country. The king's brother Richard, earl of Cornwall, who was possessed of immense estates, repeatedly defied his authority, and exacted humiliating concessions. As for the king, he continued a mere puppet, notwithstanding the flattering assurance of the pope, that his manly virtues supplied the defects of his unripe years.

A.D. 1229. It was at length, however, resolved to carry war into France. Henry was twenty-two years old, Louis only fifteen; but Blanche, the mother of the latter prince, and regent of the kingdom, had composed all dissensions, and put the kingdom into a posture of defence. When Henry went to Portsmouth he found that the shipping provided was not sufficient to carry over his army, and after a violent altercation with Hubert de Burgh, who was accused of being the cause of this deficiency, the expedition was given up till the following year. At length the English king, elated by the promises and invitations of the barons of Guienne, Poictou, and even many nobles of Normandy, set sail for the continent, and landed at St. Malo, in Brittany, where he was joined by a host of Bretons. He advanced to Nantes, where, like his father before him, he wasted his time and his means in feasts and pageantries, leaving the malcontents in Normandy and Poictou to curse their folly in committing their fortunes in the cause of so unwarlike a prince. In the meantime young Louis, accompanied by his mother, who shared all the hardships of a campaign which was prolonged through the winter months, took several towns belonging to Henry. In the beginning of October the English king returned home, covered with disgrace; and his ally, the Duke of Brittany, was obliged to appear at the foot of the throne of Louis with a rope round his neck.* De Burgh had accompanied his master on this expedition; and, in spite of his known honour, bravery, and ability, the king, and some favourites with whom he had surrounded himself, attempted to throw all the blame of the miserable failure upon Hubert. The people, however, took a different view of the case, and set Henry down as a trifler and a coward. When he applied to parliament for a further grant of money, and complained of the poverty to which his French expedition had reduced him, they refused the aid, and told him that, through his thoughtlessness and extravagance, his barons were as poor as he was.

A.D. 1232.—Hubert had now been eight years at the head of affairs. He enjoyed the good opinion of the people, whom he had never wantonly oppressed; but many of the nobles envied him his power, and hated him for his zeal in resuming the castles and other possessions of the crown. But for his tried fidelity, and his courage in the worst of times, that crown in all probability would never have been worn by the helpless Henry. But the proverbial ingratitude of princes was fostered in the present case by other circumstances, the most cogent of all being, that the minister was *rich* and the king wofully in want of money. On a sudden, Hubert saw his old rival Peter des Roches, the Poictevin bishop of Winchester, re-appear at court, and he must have felt from that moment that his ruin was concerted. In fact, very soon after Henry threw off his faithful guardian and able minister, and left him to the persecutions of his enemies. The frivolous charges brought against Hubert almost lead to a conviction that he was guilty of no breach of trust or abuse of authority,—of no real public crime whatever. Among other things, he was accused of winning the affections of the king by means of magic and enchantment.* The fallen minister took refuge in Merton Abbey. His flight gave unwonted courage to the king, who vapoured and stormed, and then commanded the mayor of London to force the asylum, and seize Hubert dead or alive. The mayor, who seems a strange officer to employ on such an occasion, set forth with a multitude of armed men; but the king being reminded by the Archbishop of Dublin of the illegality and sacrilegiousness of such a procedure, despatched messengers in a great hurry and recalled the mayor. In the end, the Archbishop of Dublin, the only one among the great men who did not forsake Hubert, obtained for him a delay of four months, that he might prepare for his defence, the charges against him being daily increased. For the interval, the king gave him a safe conduct. Relying on these letters-patent, De Burgh departed to visit his wife, the Scottish princess, at St. Edmunds-Bury; but he had scarcely begun his journey when the king, notwithstanding his plighted faith, listened to his enemies and sent a knight—one Sir Godfrey de Crancumb—with 300 armed men to surprise and seize him. Hubert was in bed at the little town of Brentwood, in Essex, when this troop fell upon him. He contrived to escape, naked as he was, to a parish church, where, with a crucifix in one hand and the host in the other, he stood firmly near the altar, hoping that his attitude and the sanctity of the place would procure him respect. His furious enemies, however, were not deterred by any considerations, and, bursting into the church with drawn swords, they dragged him forth, and sent for a smith to make shackles for him. The poor artisan, struck with the sad state of the great man, and moved with generous feelings, said he would rather die the worst of deaths than forge fetters for the brave defender of Dover Castle and the conqueror of the French at sea. But Sir Godfrey and his "black band" were not to be moved by any appeal: they placed the earl on horseback, naked as he was, and, tying his feet under the

* Daru, Hist. de Bret.

* Matt. Par.

girths, so conveyed him to the Tower of London. As soon as this violation of sanctuary was known, an outcry was raised by the bishops; and the king was in consequence obliged to order those who had seized him to carry the prisoner back to the parish church; but at the same time he commanded the sheriff of Essex, on the pain of death, to prevent the earl's escape, and to compel him to an unconditional surrender. The sheriff dug a deep trench round the sanctuary,—erected palisades,—and effectually prevented all ingress or egress. Thus cut off from every communication,—unprovided with fuel and proper clothing (the winter was setting in),—and at last left without provisions, Hubert de Burgh came forth, on the fortieth day of his beleaguerment, and surrendered to the black band, who again carried him to the Tower of London. A few days after, Henry ordered him to be enlarged, and to appear before the court of his peers; but it is said that this decent measure was not adopted until Hubert surrendered all his ready money, which he had placed for safety in the hands of the Knights Templars. When Hubert appeared in court in the midst of his enemies, he declined pleading: some were urgent for a sentence of death, but the king, who said with perfect sincerity that he was not fond of blood, and would rather be reputed weak and negligent than a cruel tyrant or a bloody man towards one who had long served him and his predecessors, proposed an award which was finally adopted by all parties. Hubert forfeited to the crown all such lands as had been granted him in the time of King John, or been obtained by him, by purchase or otherwise, under Henry. He retained for himself and his heirs the property he had inherited from his family, together with some estates he held in fief of mesne lords. Thus clipt and shorn, the brave Hubert was committed to the castle of Devizes, there to abide, in "free prison," under the custody of four knights appointed by four great earls. Within these walls, which had been built by the famous Roger, bishop of Sarum, whose adventures in some respects resembled his own, Hubert remained for nearly a year, when he was induced to adopt a desperate mode of escape by learning that the custody of the castle had just been given to a dependent of his bitter enemy the Poictevin bishop of Winchester. In a dark night he climbed over the battlements, and dropped from the high wall into the moat, which was probably in part filled with water. From the moat he made his way to a country church; but there he was presently surrounded by an armed band, led on by the sheriff. Circumstances, however, were materially altered: several of the barons who had before been intent on the destruction of the minister were now at open war with the king, and anxious to secure the co-operation of so able a man as De Burgh. A strong body of horse came down, released him from the hands of his captors, and carried him off into Wales, where the insurgent nobles were then assembled. Some eighteen months later, when peace was restored, Hubert received back his estates and honours: he was even re-admitted into the king's council; but he had the wisdom never again to aspire to the dangerous post of chief minister or favourite. At a subsequent period the king again fell upon him, but, it appears, merely to enrich himself at his expense, for the quarrel was made up on Hubert's presenting Henry with four castles.*

The Poictevin bishop, who succeeded to power on the first displacement and captivity of Hubert, soon rendered himself extremely odious to all classes of the nation. He encouraged the king's growing antipathy to the English barons, and to Magna Charta; he taught him to rely on the friendship and fidelity of foreign adventurers rather than on the inconstant affection of his own subjects; and he crowded the court, the offices of government, the royal fortresses, with hosts of hungry Poictevins, Gascons, and other Frenchmen, who exhausted the revenues of the already impoverished crown, derided the national charters, invaded the rights of the people, and provoked the nobles by their insolence and their grasping at every place or honour in the state that fell vacant. The business of politics was as yet in its infancy: the nature of an opposition, constitutional and legal in all its operations, was as yet a discovery to be made; nor could men in their times and circumstances be expected to understand such things. The barons withdrew from parliament, where they were surrounded by armed foreigners, and took up arms themselves. When again summoned, they answered that unless the king dismissed his Poictevins and the other foreigners, they would drive both them and him out of the kingdom. Peter des Roches averted his ruin for the present by sowing dissensions among the English nobles. Several battles or skirmishes, which defy anything like a clear narration, were fought in the heart of England and on the Welsh borders. Richard, Earl of Pembroke, the son of the virtuous Protector, to whom King Henry was so deeply indebted, was treacherously and most barbarously murdered, and, following up his temporary success, the Poictevin bishop confiscated the estates of several of the English nobles without any legal trial, and bestowed them on adventurers from his own land. The last sting was given to revenge by the bishop's declaring, in his place at court, that the barons of England were inferior in rank and condition to those of France, and must not pretend to put themselves on the same footing. Edmund, the new Archbishop of Canterbury, who had succeeded Langton, and who was, like that great churchman, a patriot and a statesman, took up the national cause, and threatened the king with excommunication if he did not instantly dismiss Des Roches and his associates. Henry trembled and complied: the foreigners were banished, and the archbishop for a short time governed the land with great prudence, and according to the charters. But Henry's dislike both of his native nobles and

* Matt. Par.—M. West.—Wykes—Chron. Dunst.—Holinshed.

of the charters increased with his years. The barons evidently took little pains to remove his prejudices or conciliate his affections, and he continued to repose all his confidence in foreigners.

A.D. 1236.—Henry now married Eleanor, daughter of the Count of Provence, who came to England with a numerous retinue, and was soon followed by a swarm of foreigners. These were mostly persons of higher rank than their precursors; they were Gascons and Provencals instead of Poictevins, but they were equally odious to the English nobility and people, equally insolent and quite as grasping. The Bishop of Valence, the queen's maternal uncle, was made chief minister. Boniface, another uncle, was promoted to the see of Canterbury; and Peter, a third uncle, was invested with the earldom of Richmond, and received the profitable wardship of the Earl Warenne. The queen invited over damsels from Provence, and the king married them to the young nobles of England of whom he had the wardship. This was bad enough, but it was not all; the queen mother, Isabella, whom the nation detested, had now four sons by the Count of la Marche, and she sent them over all four, Guy, William, Geoffrey, and Aymer, to be provided for in England. The king heaped honours and riches upon these half-brothers, who were soon followed by new herds of adventurers from Guienne. Henry had resumed, with the pope's permission, nearly all the grants of estates he had made to his native subjects; but even the resources thus obtained were soon exhausted, and he found himself without money and without credit. When he asked aids from the parliament, the parliament told him that he must dismiss the foreigners who devoured the substance of the land, and they several times voted him small supplies, on the express condition that he should so do, and also redress other grievances; but he forgot his promises as soon as he got the money. The barons then bound him by oath, and Henry took the oaths, broke them, and acted just as before. The great charter had provided for the banishment of unjust favourites without any process of law, and the king was frequently reminded of the clauses relating to this subject; but the Poictevins and Gascons, who were in the habit of breaking every part of that charter, said with effrontery, "What signify these English laws to us?" *

A.D. 1242.—Isabella, the queen mother, added alike to the odium in which she was held by the English, and to the embarrassments and unpopularity of her son, by hurrying him into a war with France. Other grounds were publicly assigned; but it appears that that woman's offended vanity was the chief cause of hostilities, which ended in a manner disgraceful to the English king. Louis was now in the prime of manhood, and immeasurably superior in all eminent qualities to his rival. He was loved and respected by his subjects; whereas Henry was despised by his. When the English parliament was called upon for a supply of men and money, they resolutely refused both, telling the king that he ought to observe the truce which had been continually renewed with France, and never broken (so at least they asserted) by Louis. By means not recorded, but which were probably not very legal or very honourable, Henry contrived to fill thirty hogsheads with silver, and, sailing from Portsmouth with his queen, his brother Richard, and 300 knights, he made for the river Garonne. Soon after his landing, he was joined by nearly 20,000 men, some his own acknowledged vassals, some the followers of nobles who had once been the vassals of his predecessors, and who were now anxious, not to re-establish the supremacy of the English king in the south, but to render themselves independent of the crown of France by his means or at his expense.* Louis met Henry with a superior force on the banks of the river Charente, in Saintonge, and defeated him in a pitched battle near the castle of Taillebourg. The English king, after being saved from capture by the presence of mind and address of his brother Richard, retreated down the river to the town of Saintes, where he was beaten in a second battle, which was fought on the very next day. His mother's husband, the Count of La Marche, who had led him into this disastrous campaign, then abandoned him, and made his own terms with the French king. Henry fled from Saintes right across Saintonge, to Blaye, leaving his military chest, the sacred vessels and the ornaments of his moveable chapel royal, in the hands of the enemy. A terrible dysentery which broke out in his army, some scruples of conscience, and the singular moderation of his own views, prevented Louis from following up his successes, and induced him to agree to a truce for five years. Although their ardour for foreign wars and conquests was marvellously cooled for a season, the pride of the English was much hurt by these defeats.

A.D. 1244.—When Henry met his parliament this year, he found it more refractory than it had ever been. In reply to his demands for money, they taxed him with extravagance,—with his frequent breaches of the great charter: they told him, in short, that they would no longer trust him, and that they must have in their own hands the appointment of the chief justiciary, the chancellor, and other great officers. The king would consent to nothing more than another ratification of Magna Charta, and therefore the parliament would only vote him twenty shillings on each knight's fee for the marriage of his eldest daughter to the Scottish king. After this he looked to a meeting of parliament as a meeting of his personal enemies, and to avoid it he raised money by stretching his prerogative in respect to fines, benevolences, purveyances, and the other undefinable branches of the ancient revenue. He also tormented and ransacked the Jews, acting with regard to that unhappy people like a very robber; and he begged, besides, from town to town,—from castle

* Matt. Par.—Chron. Dunst.—Ann. Waverl.

* Mezeray.

to castle,—until he obtained the reputation of being the sturdiest beggar in all England. But all this would not suffice, and, in the year 1248, he was again obliged to meet his barons in parliament. They now told him that he ought to blush to ask aid from his people whom he professed to hate, and whom he shunned for the society of aliens; they reproached him with disparaging the nobles of England by forcing them into mean marriages with foreigners. They enlarged upon the abuse of the right of purveyance, telling him that the victuals and wine consumed by himself and his un-English household,—that the very clothes on their backs were all taken by force and violence from the English people, who never received any compensation; that foreign merchants, knowing the dangers to which their goods were exposed, shunned the ports of England as if they were in possession of pirates; that the poor fishermen of the coast, finding they could not escape his hungry purveyors and courtiers, were frequently obliged to carry their fish to the other side of the Channel; and they added other accusations still more minute and humiliating.* It has generally been conceived that there entered no small share of spite and exaggeration into this remarkable list of grievances; but if we consider the small sums doled out by parliament to Henry, who received less money in the way of grants than any of his immediate predecessors,—if we bear in mind that many sources of profit were narrowed or stopped altogether by the provisions of the national charter, and that the revenue formerly derived from the continental dominions of the crown had in great part ceased, it will not appear improbable that this king and his rapacious ministers, who were retained by no national sympathy,—by no sense of shame,—should have tried to make up these deficiencies in mean and irregular ways; and that the peaceful trader, the mass of the people, who had no arms wherewith to defend themselves, and no towers or castles wherein to take refuge, should have been sorely harried and oppressed. Another argument in support of this supposition may be derived from the well-known and lasting unpopularity of the king in London and the other great trading towns. Our old historians talk vaguely about the insubordination,—the mutinous spirit,—the proneness to rioting,—of the Londoners; but, judging of those citizens, not by later epochs when they were more civilized, but by their conduct in earlier and still ruder times, we cannot believe that the excesses complained of could have arisen under any other than a vile and oppressive system of government. In reply to the remonstrance of his barons, Henry gave nothing but fair promises which could no longer deceive, and he got nothing save the cutting reproof to which he had been obliged to listen.

The king now racked his imagination in devising pretexts on which to obtain what he wanted. At one time he said he was resolved to reconquer all the continental dominions of the crown; but, unfortunately, all men knew that Louis had departed for the East, and that Henry, who had not shone in the field, had contracted the most solemn obligations not to make war upon him during his crusade. He next took the cross himself, pretending to be anxious to sail for Palestine forthwith; but here again it was well known he had no such intention, and only wanted money to pay his debts and satisfy his foreign favourites. At a moment of urgent necessity he was advised to sell all his plate and jewels. "Who will buy them?" said he; his advisers answered,—"The citizens of London, of course." He rejoined bitterly,—"By my troth, if the treasures of Augustus were put up to sale, the citizens would be the purchasers! These clowns, who assume the style of barons, abound in all things, while we are wanting in common necessaries."* This curious anecdote throws light upon more than one subject, and it is said that the king was thenceforth more inimical and rapacious towards the Londoners than he had been before. To annoy them and touch them in a sensitive part, he established a new fair at Westminster, to last fifteen days, during which all trading was prohibited in London. He went to keep his Christmas in the city, and let loose his purveyors among the inhabitants: he made them offer new-year's gifts, and shortly after, in spite of remonstrances, he compelled them to pay him the sum of 2000*l.* by the most open violation of law and right.

In A.D. 1253, Henry was again obliged to meet his parliament, and this he did, averring to all men that he only wanted a proper Christian aid that he might go and recover the tomb of Christ. If he thought that this old pretence would gain unlimited confidence he was deceived. The barons, who had been duped so often, treated his application with coldness and contempt; but they at last held out the hope of a liberal grant on condition of his consenting to a fresh and most solemn confirmation of their liberties. On the 3rd day of May, the king went to Westminster Hall, where the barons, prelates, and abbots were assembled. The bishops and abbots were apparelled in their canonical robes, and every one of them held a burning taper in his hand. A taper was offered to the king, but he refused it, saying he was no priest. Then the Archbishop of Canterbury stood up before the people and denounced sentence of excommunication against all those who should, either directly or indirectly, infringe the charters of the kingdom. Every striking, every terrific part of this ceremony was performed: the prelates and abbots dashed their tapers to the ground, and as the lights went out in smoke, they exclaimed,—"May the soul of every one who incurs this sentence so stink and be extinguished in hell!" The king subjoined, on his own behalf,—"So help me God! I will keep these charters inviolate, as I am a man, as I am a Christian, as I am a knight, and as I am a king crowned and anointed!" His outward behaviour during this awful performance was exem-

* Matt. Par.—Matt. West.—Chron. Dunst.

* Matt. Par.

plary; he held his hand on his heart, and made his countenance express a devout acquiescence; but the ceremony was scarcely over when, following the impulse given him by his foreign favourites, he returned to his old courses, and thus utterly uprooted whatever confidence the nation yet had in him.*

With the money he thus obtained, he went to Guienne, where Alphonso, the king of Castile, had set up a claim to the earldom, and induced many of the fickle nobles to revolt against the English crown. This expedition was less dishonourable than the former ones; indeed it was successful on the whole, and led to a friendly alliance between England and Castile—Prince Edward marrying Eleanor, the daughter of Alphonso. But no cunning was too mean or low for Henry, who concealed these arrangements for some time, in order to obtain a fresh grant from the parliament, under colour of carrying on the war. During part of this expedition, in spite of the money he had carried with him, he had not wherewithal to feed his troops; and he despatched the prior of Newburgh with others into England, to cause provisions to be sent to him into Gascony; "and so," says an old historian, "there was a great quantity of grain and powdered flesh, taken up, and sent away, with all convenient speed." Henry returned pennyless; for the partial re-establishment of his authority in the south of France seems never to have benefited his exchequer. The expedients to which he had recourse in England, rendered him more and more odious and contemptible. When his fortunes were at this low ebb, he blindly embarked in a project which immensely increased his embarrassments. This project was no other than to raise one of his sons to the throne of the Two Sicilies. Frederick II., the son of Constance of Sicily, had died in the year 1250, after a reign which had been disturbed from its commencement to its close by the inveterate hostility of the court of Rome. He left a legitimate son, Prince Conrad; but Frederick had died in a state of excommunication, and Pope Innocent IV. claimed the southern kingdom as forfeited to its feudal superior, the holy see. Conrad maintained his rights with an army; and as he was supported by the Neapolitan and Sicilian people, the pope had no chance of succeeding, unless he invited some new foreign host into the heart of Italy. He offered the kingdom to be held as a fief of the church to a variety of princes in succession, who all found some good reason for declining his proposals. After the pope had thus hawked the Sicilian crown through the continent of Europe, he turned his eyes towards England, where Richard, earl of Cornwall, the king's brother, attracted attention by his great wealth, which (it was reasoned at Rome), would enable him to bribe the Sicilian barons, and engage mercenaries of all nations. Accordingly, the crown was offered to Richard, but he wisely saw the difficulties that stood in his way, and declined the proffered kingdom, observing, that those who made the offer of it might just as well say, "I make you a present of the moon—step up to the sky and take it down." Soon after this, Innocent offered the crown to Henry himself, for his second son, Prince Edmund; and the beggared and incapable king joyfully closed with the proposal, agreeing to march presently with a powerful army into the south of Italy, accepting an advance of money from the pope to enable him to commence the enterprise, and proposing also to raise what more it might be necessary to borrow on the pope's security. Had the energy and the means of the English king at all corresponded with the activity and cunning policy of the Roman priest, there is little doubt that the prince might have obtained a dependent and precarious throne; but Henry was placed in circumstances in which he could do little—and, wavering and timid, he did nothing at all, except giving his son the empty title of "King of Sicily." The pope ordered the English clergy to lend money for the expedition, and even to pawn the property of their church to obtain it. The clergy of England were not very obedient; but whatever sums were raised were dissipated by the king or the Roman legate, and, in the end, the pope brought a claim of debt against Henry, to the amount of more than 100,000*l.*, which, it was alleged, had been borrowed on the continent, chiefly from the rich merchants of Venice and Florence. Henry, it appears, had never been consulted about the borrowing or spending of this money; but the pope was an imperative accountant—a creditor that could enforce payment by excommunication, interdict, and dethronement; and Henry was obliged to promise that he would pay, and to rack his weak wits in devising the means. Backed by the pope, he levied enormous contributions on the churches of England and Ireland. The native clergy were already disaffected, but these proceedings made them as openly hostile to the king as were the lay barons. The wholesale spoliation of the church had also the effect of lessening the clergy's reverence for the pope, and of shaking that power which had already attained its highest pitch, and which was thenceforward gradually to decline. When called upon to take up some of the pope's bills, the bishop of Worcester told Rustan, the legate, that he would rather die than comply; and the Bishop of London said, that the pope and king were, indeed, more powerful than he, but if they took his mitre from his head, he would clap on a warrior's helmet. The legate moderated his demands, and withdrew, fully convinced that a storm was approaching, and that the Sicilian speculation had completed the ruin of the bankrupt king.* As long as his brother Richard, the great Earl of Cornwall, remained in England, and in possession of the treasures he had hoarded, there was a powerful check upon insurrection; for

* Matt. Par.—Matt. West.—W. Hemingford.
† Holinshed.

* Matt. Par.

though the earl's abilities in public affairs seem hardly to have been equal to his wealth, still the influence he possessed in the nation was most extensive. He had repeatedly opposed the illegal courses of the king, and had even been out in arms with the barons more than once; but he was averse to extreme measures, and, from his position, not likely to permit any invasion of the just prerogative of the crown. He had rejected one dazzling temptation, yet was he not proof against a second. The Germans were setting up their empire for sale, and Richard's vanity and ambition induced him to become a purchaser. Having spent immense sums, he was elected in the beginning of 1256 as "king of the Romans," which was considered the sure step to the dignity of emperor. But there was a schism among the electors, part of whom a few weeks later gave their suffrages to Alphonso, king of Castile. Richard, however, went over to the continent, was crowned at Aix-la-Chapelle, and left the crown of England to be dragged through the mire.

A.D. 1258. A scarcity of provisions disposed the people to desperate measures. On the 2nd of May, Henry called a parliament at Westminster. The barons, who had formed a new confederacy, went to the hall in complete armour. As the king entered, there was a rattling of swords: his eye glanced timidly along the mailed ranks; and he said, with a faltering voice, "What means this? am I a prisoner?" "Not so," replied Roger Bigod, "but your foreign favourites and your own extravagance have involved this realm in great wretchedness; wherefore we demand that the powers of government be entrusted and made over to a committee of bishops and barons, that the same may root up abuses and enact good laws." One of the king's foreign half-brothers vapoured and talked loudly, but as for himself, he could do nothing else than give an unconditional assent to the demands of the barons, who thereupon promised, that if he proved sincere, they would help him to pay his debts, and prosecute the claims of his son in Italy. The parliament then dissolved, appointing an early day to meet again at Oxford, where the committee of government should be appointed, and the affairs of the state finally adjusted.*

The present leader of the barons, and in all respects the most remarkable man among them, was the Earl of Leicester. It is evident that the monkish chroniclers were incapable of understanding or properly appreciating the extraordinary character of this foreign champion for English liberties; and those writers have scarcely left materials to enable us to form an accurate judgment. Simon de Montfort was the youngest son of the Count de Montfort in France, who had gained an unhappy celebrity in the barbarous crusades against the Albigenses. In right of his mother, Amicia, he had succeeded to the earldom of Leicester; but he appears to have been little known in England until the year 1238, when he came over from his native country, and married Eleanor, the countess dowager of Pembroke, a sister of king Henry. This match was carried by the royal favour and authority; for Richard, earl of Cornwall, the king's brother, and many of the English barons, tried to prevent it, on the ground that it was not fitting a princess should be married to a *foreign* subject. But the earl had no sooner secured his marriage, and made himself known in the country, than he set himself forward as the decided opponent of foreign encroachment and foreign favourites of all kinds; and such was his ability, that he caused people to overlook the anomaly of his position, and to forget that he himself was a foreigner. He not only captivated the good-will of the English nobles, but endeared himself in an extraordinary degree to the English people, whose worth and importance in the state he certainly seems to have been one of the first to discover and count upon. His devotional feelings—which upon no ground, that we can discover, have been regarded as hypocritical—gained him the favour of the clergy; his literary acquirements, so unusual in those times, increased his influence and reputation. There seems to be no good reason for refusing him the merits of a skilful politician; and he was a master of the art of war as it was then understood and practised.

The favour of the king was soon turned into a hatred as bitter as Henry's supine and not cruel nature was capable of: it seemed monstrous that a foreigner should be, not a courtier, but the popular idol—and Leicester was banished the court. He was afterwards entrusted with the government of Guienne, where, if he did not achieve the impossibility of giving entire satisfaction to the turbulent and intriguing nobles, he did good service to the king, his master, and acquitted himself with ability and honour. Henry, however, was weak enough to listen to the complaints of some of his southern vassals, who did not relish the firm rule of the earl. Leicester was hastily recalled, and his master called him traitor to his face. Thus insulted by a man he despised, the earl gave the lie to his sovereign, and told him, that, but for his kingly rank, he would make him repent the wrong he had done him.* This happened in 1252. Leicester withdrew for a season into France, but Henry was soon reconciled, in appearance, and the earl returned to England, where his popularity increased in proportion to the growing weakness and misgovernment of the king. He was one of the armed barons that met in Westminster-hall, and now he was ready to follow up those demonstrations at Oxford. It cannot be denied that measures beyond the ordinary course of the constitution were necessary to control so prodigal and injudicious a sovereign. The legal course of the constitution, moreover, was not yet ascertained and defined—all was experiment—a groping in the dark, and men, for the present, saw no impropriety in abridging the prerogative of a king who had constantly

* Matt. Par.—Wykes.—Rymer.

abused it, and who had so repeatedly broken his promises, his most solemn vows, that it would have looked like fatuity to place the smallest trust in him.

Oxford Castle, as it appeared in the Fifteenth Century.

On the 11th of June the parliament, which the Royalists called the "Mad Parliament," met at Oxford. Having no reliance on the king, the great barons summoned all who owed them military service to attend in arms on the occasion. Thus secured from the attack of the foreigners in the king's pay, they proceeded to their object with great vigour and determination. The committee of government was appointed without a murmur on the part of the timid Henry: it consisted of twenty-four members, twelve of whom were chosen by the barons and twelve by the king. The king's choice fell upon his nephew Henry, the son of Richard, the titular king of the Romans, upon Guy and William, his own half-brothers, the bishops of London and Winchester, the earls of Warwick and Warenne, the abbots of Westminster and St. Martin's, London, on John Mansel, a friar, and Peter of Savoy, a relation of the queen's. The members appointed by the barons were the bishop of Worcester, the earls Simon of Leicester, Richard of Gloucester, Humphrey of Hereford, Roger of Norfolk, earl marshal; the lords Roger Mortimer, John Fitz-Geoffrey, Hugh Bigod, Richard de Gray, William Bardolf, Peter de Montfort, and Hugh Despencer. The Earl of Leicester was at the head of this supreme council, to the maintenance of whose ordinances the king, and afterwards his son Edward, took a solemn oath. The parliament then proceeded to enact that four knights should be chosen by the votes of the freeholders in each county, to lay before the parliament all breaches of law and justice that might occur; that a new sheriff should be annually chosen by the freeholders in each county; and that three sessions of parliament should be held regularly every year; the first, eight days after Michaelmas; the second, the morrow after Candlemass-day; and the third, on the first day of June.

The benefits derived from the acts of this parliament were prospective rather than immediate, for the first consequences were seven or eight years of anarchy and confusion, the fruits of insincerity and discontent on the part of the court, and of ambition and intrigue on the part of the great barons. Prince Edward, the heir to the throne, the Earl of Warenne, and others, took the oaths to the statutes or provisions of Oxford with unconcealed reluctance and ill-humour. Prince Henry openly protested that they were of no force till his absent father, the king of the Romans, should consent to them. "Let your father look to himself," cried Leicester; "if he refuse to join the barons of the kingdom in these provisions he shall not enjoy a foot of ground in England." Though their leaders were liberally included among the twenty-four guardians of the kingdom, the foreign faction was excessively dissatisfied with the recent changes, and said openly, and wherever they went, that the Acts of Oxford ought to be set aside as illegal and degrading to the king's majesty; which indeed they would have been had Henry had any character to degrade, and had it not been indispensable to adopt extreme precautions against the sovereign's well-known faithlessness and perfidy, or fatal facility of disposition. Irritated by their opposition and their secret intrigues, Leicester and his party scared the four half-brothers of the king and a herd of their relations and retainers out of the kingdom. The

departure of these foreigners increased the popularity of the barons with the English people; but they were seduced by the temptations of ambition and an easy triumph over all opposition; they filled up the posts vacated in the committee of government with their own adherents, leaving scarcely a member in it to represent the king; and they finally lodged the whole authority of government in the hands of their council of state and a standing committee of twelve persons. This great power was abused, as all unlimited power, whether held by a king or an oligarchy, ever will be, and the barons soon disagreed among themselves.*

A.D. 1259.—About six months after the meeting at Oxford, Richard, king of the Romans, having spent all his money among the Germans, was anxious to return to England that he might get more. At St. Omer he was met by a messenger from Leicester, who told him that he must not set foot in the kingdom unless he swore beforehand to observe the provisions of Oxford. Richard finally gave an ungracious and most unwilling assent: he took the oath, joined his brother, and immediately commenced organizing an opposition to the committee of government.† Soon after his arrival it was seen that the barons disagreed more than ever. The Earl of Gloucester started up as a rival to Leicester, and a violent quarrel—the first of many—broke out between these two powerful lords. Then there was presented a petition from the knights of shires or counties, complaining that the barons had held possession of the sovereign authority for eighteen months, and had done no good in the way of reform. A few improvements, chiefly regarding the administration of justice, were then enacted; but their slender amount did not satisfy the nation, and most of the barons were more anxious for the prolongation of their own powers and profits than for anything else. By degrees two factions were formed in the committee: when that of Gloucester obtained the ascendancy, Leicester withdrew into France. Then Gloucester would have reconciled himself with the king; but as soon as Prince Edward saw this he declared for Leicester, who returned. The manœuvres and intrigues of party now become almost as unintelligible as they are uninteresting—reconciliations and breaches between the Leicester and Gloucester factions, and then between the barons generally and the court—a changing and a changing again of sides and principles, perplex and disgrace a scene where nothing seems fixed except Leicester's dislike and distrust of the king, and a general but somewhat vague affection among the barons of both parties for the provisions of Magna Charta.

A.D. 1261.—Henry, who had long rejoiced at the division among the barons, now thought the moment was come for escaping from their authority. He had a papal dispensation in his pocket for the oaths he had taken at Oxford, and this set his conscience quite at ease. On the 2nd of February he ventured to tell the committee of government that, seeing the abuse they had made of their authority, he should henceforward govern without them. He then hastened to the Tower, which had recently been repaired and strengthened, and seized all the money in the Mint. From behind those strong walls he ordered that the gates of London should be closed, and that all the citizens should swear fresh fealty to him. At these unexpected proceedings the barons called out their vassals and marched upon the capital. Prince Edward was amusing himself in France at a tournament, and it was agreed by both parties to await his arrival. He came in haste, and, instead of joining his father in the Tower, joined the barons. In spite of this junction, or perhaps we ought rather to say, in consequence of it, many of the nobles went over and joined the king, who published the pope's bull of dispensation, together with a manifesto in which he set forth that he had reigned forty-five years in peace and according to justice, never committing such deeds of wrong and violence as the barons had recently committed. For a time he met with success, and Leicester returned once more to France, vowing that he would never trust the faith of a perjured king.*

A.D. 1263.—Another change and shifting of parts now took place in this troubled drama: the Earl of Gloucester was dead, and his son, a very young man, instead of being the rival, became for a while the bosom friend of Leicester. Prince Edward, on the other hand, veered round to the court, and had made himself unpopular by calling in a foreign guard. In the month of March young Gloucester called his retainers and confederates together at Oxford, and the Earl of Leicester returned to England in the month of April, and put himself at their head. The great earl at once raised the banner of war, and after taking several royal castles and towns, marched rapidly upon London, where the mayor and the common people declared for him. The king was safe in the Tower; Prince Edward fled to Windsor Castle, and the queen, his mother, attempted to escape by water in the same direction; but, when she approached London-bridge, a cry ran among the populace, who hated her, of "Drown the witch!" and filth and stones were thrown at the barge. The mayor took pity on her, and carried her for safety to St. Paul's.†

The king of the Romans, who, though his hoarded treasures were exhausted, still possessed considerable influence, contrived to effect a hollow reconciliation between the barons and his unwarlike brother, who yielded everything,—only reserving to himself the usual resource of breaking his compact as soon as circumstances should seem favourable. It is true his subjects had repeatedly exacted too much; but it is equally certain that he never made the smallest concession to them

in good faith, and with a determination of respecting it. Foreigners were once more banished the kingdom, and the custody of the royal castles was again entrusted to Leicester and his associates. This was done, and peace and amity were sworn in July, but by the month of October the king was in arms against the barons, and nearly succeeded in taking Leicester a prisoner. This new crisis was mainly attributable to a condition exacted by that great earl, that the authority of the committee of government should not only last for the lifetime of the king, but be prolonged during the reign of his successor. Up to this point Prince Edward had pretended a great respect for his oath, professing to doubt whether an absolution from Rome could excuse perjury; and he had frequently protested that, having sworn to the provisions of Oxford, he would religiously keep that vow; but this last measure removed all his scruples, and denouncing the barons as rebels, traitors, and usurpers, he openly declared against them and all their statutes.

A. D. 1264.—To stop the horrors of a civil war some of the bishops induced both parties to refer their differences to the arbitration of the French king. The conscientious and justice-loving Louis IX. pronounced his award in the beginning of February: he insisted on the observance of the great charter; but otherwise his decision was in favour of the king, as he set aside the provisions of Oxford, ordered that the royal castles should be restored, and that the sovereign should have full power of choosing his own ministers and officers, whether from among foreigners or natives. The barons, who were better acquainted than Louis with the character of their king, well knew that if the securities they had exacted (with too grasping a hand, perhaps) were all given up, the provisions of the national charters would be despised, as they were previously to the parliament of Oxford, and they therefore resolved not to be bound by the award, which they insisted had been obtained through the unfair influence of the wife of Louis, who was sister-in-law to King Henry. The civil war was therefore renewed with more fury than ever. The strength of the royalists lay in the counties of the north and the extreme west,—that of the barons in the midland counties, the south-east, the Cinque Ports, and, above all, in the city of London and its neighbourhood. At the tolling of the great bell of St. Paul's, the citizens of London assembled as an armed host, animated by one daring spirit. In the midst of this excitement they fell upon the unfortunate Jews, and, after plundering them, massacred above 500, men, women, and children, in cold blood. In other parts of the kingdom the royalists robbed and murdered the Jews under pretext of their being friends to the barons, and the barons' party did the like, alleging that they were allied with the king, and that they kept Greek fire hid in their houses in order to destroy the friends of liberty.*

The opening of the campaign was in favour of the royalists, but their fortunes changed when they advanced to the southern coast and endeavoured to win over the powerful Cinque Ports. Leicester, who had remained quietly in London organising his forces, at length marched from the capital with the resolution of fighting a decisive battle. He found the king at Lewes, in Sussex,—a bad position, in a hollow,—which Henry, relying on his

* Wykes.—West.—Dunst.

Lewes Priory.

superiority of numbers, did not quit on the earl's approach. Leicester encamped on the downs about two miles from Lewes. Whether in war or peace, he had always been an exact observer of the rites of religion: he now endeavoured (and, it should appear, with full success) to impress his followers with the belief that the cause in which they were engaged was the cause of Heaven, as well as that of liberty: the king, he said, was obnoxious to God by reason of his many perjuries: he ordered his men to wear a white cross on the breast as if they were crusaders engaged in a holy war; and his friend, the Bishop of Chichester, gave a general absolution to the army, together with assurances that all those who fell in battle would be welcomed in Heaven as martyrs. On the following morning, the 14th of May, leaving a strong reserve on the downs, he descended into the hollow. The two armies soon joined battle: on the king's side were the great houses of Bigod and Bohun, all the foreigners in the kingdom, the Percys with their warlike borderers, and from beyond the borders, John Comyn, John Baliol, and Robert Bruce,—names that were soon to appear in a very different drama. On the Earl's side were Gloucester, Derby, Warenne, the Despencers, Robert de Roos, William Marmion, Richard Grey, John Fitz-John, Nicholas Seagrave, Godfrey de Lucy, John de Vescy, and others of noble lineage and great estates. Prince Edward, who was destined to acquire the rudiments of war in the slaughter of his own subjects, began the battle by falling desperately upon a body of Londoners, who had gladly followed Leicester to the field. This burgher militia could not stand against the trained cavalry of the prince, who chased and slew them by heaps. Eager to take a bloody vengeance for the insults the Londoners had offered his mother, Edward spurred forward, regardless of the manœuvres of the other divisions of the royalist army. He was as yet a young soldier, and the experienced and skilful leader of the barons made him pay dearly for his mistake. Leicester made a concentrated attack on the king, beat him most completely, and took him prisoner, with his brother the king of the Romans, John Comyn, and Robert Bruce, before the prince returned from his headlong pursuit. When Edward arrived at the field of battle, he saw it covered with the slain of his own party, and learned that his father, with many nobles besides those just mentioned, were in Leicester's hands, and shut up in the priory of Lewes. Before he could recover himself, he was charged by a body of horse, and made prisoner. The Earl Warenne, with the king's half-brothers who were again in England, fled to Pevensey, whence they escaped to the continent.* The victory of the barons does not seem to have been disgraced by cruelty, but it is said to have cost the lives of more than 5000 Englishmen, who fell on the field. On the following morning, a treaty, or the "*Mise* of Lewes," as it was called, was concluded. It was agreed that Edward and his cousin Henry, the son of the king of the Romans, should remain as hostages for their fathers, and that the whole quarrel should be again submitted to a peaceful arbitration. But Leicester, who had now the right of the strongest, kept both the king and his brother prisoners as well as their sons, and, feeling his own greatness, began to be less tractable. Although the pope excommunicated him and his party, the people regarded the sentence with indifference; and many of the native clergy, who had long been disgusted both with pope and king, praised him in their sermons as the reformer of abuses, the protector of the oppressed, the father of the poor, the saviour of his country, the avenger of the church. Thus supported, and indeed carried forward by a boundless popularity, he soon forced all such barons as held out for the king to surrender their castles and submit to the judgment of their peers. These men were condemned merely to short periods of exile in Ireland: not one suffered death, or chains, or forfeiture, and the age was not so generally improved in humanity as to have enforced this mildness, had the earl himself not been averse to cruelty. Every act of government was still performed in the name of the king, whose captivity was made so light as to be scarcely apparent, and who was treated with every outward demonstration of respect. The queen had retired to the continent before the battle of Lewes, and having busied herself in collecting a host of foreign mercenaries, in which she was greatly assisted by the active sympathies of foreign princes, who saw in the proceedings of the English barons nothing but the degradation of a crowned head, she now lay at Damme, in Flanders, almost ready to cross over and renew the civil war. The steps taken by Leicester show at once his entire confidence in the good-will of the nation, and his personal bravery and activity: he summoned the whole force of the country, from castles and towns, cities, and boroughs, to meet in arms on Barham Downs, and, having encamped them there, he threw himself among the mariners of England, and, taking the command of a fleet, cruised between the English and Flemish coasts to meet the invaders at sea. But the queen's fleet never ventured out of port; her land forces disbanded, and that enterprise fell to the ground.

The ruin of Leicester was effected by very different means: confident in his talents and popularity, he ventured to display too marked a superiority above his fellows in the same cause: this excited hostile feelings in several of the barons, whose jealousies and pretensions were skilfully worked upon by Prince Edward, who had by this time been removed from Dover Castle, into which he had been thrown after the battle of Lewes, and placed with his father, in the enjoyment of considerable personal liberty, by the order of a parliament which Leicester had summoned expressly to consider his case in the beginning of the present year (1265), and which is memorable in the history of the constitution as the first in which we have certain evidence of the appearance of representatives from

* Matt. Par.—Wykes.—West.—Chron. Dunst.

the cities and boroughs. The Earl of Derby opened a correspondence with the prince, and the Earl of Gloucester set himself up as a rival to Montfort, and then, by means of his brother, Thomas de Clare, who had been placed about the prince's person, concerted a plan for releasing Edward. This plan was successful; and on Thursday in Whitsun week the prince escaped on a fleet horse which had been conveyed to him, and joined the Earl of Gloucester at Ludlow, where the royal banner was raised. The prince was made to swear that he would respect the charters, govern according to law, and expel foreigners; and it was upon these express conditions that Gloucester surrendered to him the command of the troops. This earl was a vain, weak, young man, but his jealous fury against Leicester could not blind him to the obvious fact that but few of the nobility would make any sacrifices for the royal cause unless their attachment to constitutional liberty were gratified by such pledges.

About the same time Earl Warenne, who had escaped from the battle of Lewes, landed in South Wales with one hundred and twenty knights and a troop of archers; and other royalist chiefs rose in different parts of the country, according to a plan which seems to have been suggested by the military sagacity of Prince Edward. The Earl of Leicester, keeping good hold of the king, remained at Hereford, while his eldest son, Simon de Montfort, with a part of his army, was in Sussex. The object of the prince was to prevent the junction of these separated forces, and to keep the earl on the right bank of the Severn. Edward destroyed all the bridges and boats on that river, and secured the fords; but, after some skilful manœuvres, the earl crossed the Severn, and encamped near Worcester, where he expected his son would join him. But Simon's conduct in war was not equal to his father's, for he allowed himself to be surprised by night near Kenilworth, where Edward took his horses and treasure, and most of his knights, and forced him to take refuge, almost naked, in the castle there, the principal residence of the De Montfort family. The earl, still hoping to meet his son's forces, advanced to Evesham, on

Evesham.

the river Avon: on the morning of the 4th of August, as he looked towards the hills in the direction of Kenilworth, he saw his own standards advancing:—his joy, however, was but momentary, for he discovered, when too late to retreat, that they were his son's banners in the hands of his enemies, and nearly at the same time he saw the heads of columns showing themselves on either flank and in his rear. These well-conceived combined movements had been executed with unusual precision,—the earl was surrounded,—every road was blocked up. As he observed the skilful way in which the hostile forces were disposed, he uttered the complaint so often used by old generals,—"They have learned from me the art of war," he exclaimed; and then, it is said, he added, "The Lord have mercy on our souls, for I see our bodies are Prince Edward's." He did not, however, neglect the duties of the commander, but marshalled his men in the best manner. He then spent a

short time in prayer, and took the sacrament, as was his wont, before going into battle. Having failed in an attempt to force the road to Kenilworth, he formed in a solid circle on the summit of a hill, and several times repulsed the charges of his foes, who gradually closed round him, attacking at all points. The king being in the earl's camp when the royalists appeared, was encased in armour which concealed his features, and was put upon a war-horse. In one of the charges the imbecile old man was dismounted and in danger of being slain, but he cried out, "Hold your hand, I am Harry of Winchester;" and the prince, who happened to be near, ran to his rescue, and carried him out of the *melée*. Leicester's horse was killed under him, but the earl rose unhurt from his fall, and fought bravely on foot: a body of Welsh were broken and fled, and the number of his enemies still seemed to increase on all sides. He then asked the royalists if they gave quarter? and was told that there was no quarter for traitors: his gallant son Henry was killed before his eyes, the bravest and best of his friends fell in heaps around him, and at last the great earl himself died with his sword in his hand.*

The hatred of the royalists was too much inflamed to admit of the humanities and usages of chivalry: no prisoners were taken; the slaughter, usually confined to the "meaner sort," who could not pay ransom, was extended to the noblest and wealthiest; and all the barons and knights of Leicester's party, to the number of one hundred and eighty, were despatched. † The historians who praise the *clemency* of the royal party, by whom "no blood was shed on the scaffold," seem to overlook the fact that all their dangerous enemies were butchered at Evesham, and that little blood was left to be shed by the executioner. Not even death could save Leicester from their barbarous vengeance: they mutilated his body in a manner too brutal and disgusting to be described, and so presented it, as an acceptable spectacle, to a *noble lady*, the wife of the Lord Roger Mortimer, one of the earl's deadly enemies. "The people of England," says Holinshed cautiously, "conceived an opinion that the earl being thus slain fighting in defence of the liberties of the realm and performance of his oath, as they took it, died a martyr; which, by the bruited holiness of his past life, and the miracles ascribed to him after his death, was greatly confirmed in the next age: but the fear of the king's displeasure stayed the people from hastily honouring him as a saint at this time, where otherwise they were inclined greatly thereto, reputing him for no less in their conscience, as in secret talk they did not hesitate to say." This popular reverence was not evanescent; for many years after, when men could speak out without danger, they called the earl "Sir Simon the Righteous," and complained of the church because it would not canonise him.

After the decisive victory of Evesham, the king, resuming the sceptre, went to Warwick, where he was joined by his brother the king of the Romans, who, with many other prisoners taken by Leicester at Lewes, now first recovered his liberty. Early in the next month, on the "Feast of the Translation of St. Edward," a parliament assembled at Winchester. Here it was seen that, even in the moment of success, the king could not venture to revoke any part of the great charter. His victory had been achieved by the arms of English barons, who, generally speaking, had concurred in the former measures against his faithless government, and whose opposition to the Earl of Leicester's too great power, had in no sense weakened their love of constitutional safeguards, or their hatred of an absolute king. Led away, however, by personal animosities, the parliament of Winchester passed some severe sentences against the family and partisans of the late earl, and deprived the citizens of London of their charter.

A desperate resistance was thus provoked, and successive insurrections broke out in different parts of the kingdom. Simon de Montfort and his associates maintained themselves for a long time in the isles of Ely and Axholm; the Cinque Ports refused to submit; the castle of Kenilworth defied several royal armies; and Adam Gourdon, a most warlike baron, maintained himself in the forests of Hampshire. Prince Edward's valour and ability had full occupation for nearly two years, and at last it was found necessary to relax the severity of government, and grant easier terms to the vanquished, in order to obtain the restoration of internal tranquillity. With this view, a committee was appointed of twelve bishops and barons, and their award, called the "Dictum de Kenilworth," was confirmed by the king and parliament. The Earl of Gloucester, whose personal quarrel with Leicester had been the chief cause of the overthrow of the baronial oligarchy, and the restoration of Henry, quarrelled with the king, and once more took up arms, alleging, that even the Dictum de Kenilworth was too harsh, and that the court was seeking to infringe the provisions of Oxford, and breaking the promises given on the field of Evesham. The dissatisfied Londoners made common cause with him, and received him within their walls, but losing heart at the approach of the king's army, Gloucester opened negotiations, and submitted, on condition of receiving a full pardon for himself. At the same time, the Londoners compounded for a fine of 25,000 marks. The pope most laudably endeavoured to diffuse the spirit of mercy and moderation: he told the king, who was not naturally inclined to that, or to any other strong passions, that revenge was unworthy of a Christian, and that clemency was the best support of a throne. All this, with the determined aspect of the people, whenever harsh measures were threatened, produced a salutary effect; and

* Contin. Matt. Par.—M. West.—Chron. Mailros.—Chron. Dunst.

† Some ten or a dozen knights who were found breathing, after the carnage, were permitted to live, or, at least, to have that chance of living which their wounds allowed.

the gallantry and generosity shown by Prince Edward, on one occasion, did more in subduing opposition than a hundred executions on the scaffold could have done. In a battle fought in a wood near Alton, the prince engaged Adam Gourdon hand to hand, and vanquished that redoubtable knight in fair single combat. When Adam was brought to the ground instead of despatching him, he generously gave him his life: on that very night he introduced him to the queen at Guilford, procured him his pardon, received him into his own especial favour, and was from that time forward most faithfully served by Sir Adam.*

A.D. 1267. On the 18th of November, two years and three months after the battle of Evesham, the king, in parliament at Marlborough, adopted some of the most valuable of the provisions of the Earl of Leicester, and enacted other good laws. Thus all resistance was disarmed, and the patriots or the outlaws in the Isle of Ely, who were the last to submit, threw down their arms, and accepted the conditions of the Dictum of Kenilworth, which they saw had been faithfully observed with respect to others. As soon as the country was thoroughly tranquillised, Prince Edward and his cousin Henry, the son of the king of the Romans, took the cross; in which they were followed by nearly one hundred and fifty English lords and knights. Exhortation and example urged them to this step. Ottoboni, the pope's legate, who had been very instrumental in restoring peace in the land, had earnestly and eloquently recommended the crusade; and Louis IX., who was soon to be called "Saint Louis," had departed a second time for the East.

Having taken many precautionary measures in case his father should die during his absence, and having most wisely obtained the grant of a new charter, with the restoration of their liberties, to the citizens of London, and a free pardon to a few nobles who still lay under the king's ban, Edward departed with his wife Eleanor, his cousin Henry, and his knights, in the month of July, 1270. Many of the choicest chivalry of England left their bones to bleach on the Syrian shore; but the fate of Henry d'Almaine, as they called the son of the king of the Romans, was more tragical as well as much more unusual. Being despatched back to England on a secret mission by his cousin Edward, he took the road through Italy, and loitered in the city of Viterbo, to witness the election of a new pope. One morning, at an early hour, as he was at his prayers in a church, he heard a well-known voice exclaiming, "Thou traitor, Henry!—thou shalt not escape!" Turning round, he saw his two cousins, Simon and Guy de Montfort, who, with their mother, the Countess of Leicester, King Henry's own sister, had been driven out of England, and who considered the king of the Romans as the bitterest enemy of their house. They were in complete armour, and waved their naked swords over their defenceless victim. He clung to the holy altar before which he was kneeling, and two priests threw themselves between him and them. But nothing could save him from the fury of his cousins: the two priests lost their lives in their generous endeavours to protect him; and, pierced with many wounds, he was dragged out of the church, when the murderers mutilated his body in horrid revenge for the treatment of their father's corpse at Evesham. They then mounted their horses and rode away, being protected, it is said, by Count Aldobrandini, whose daughter had been married to Guy, one of the assassins.* That vain old man, the king of the Romans, was rejoicing in the possession or display of a young German bride he had just married, and was still flattering himself with the hopes of the imperial crown, which had now deluded his imagination for fifteen long years, when the melancholy catastrophe of his son reminded him of the vanity of human wishes. He did not long survive the shock: he died in the month of December, 1271; and in the following winter his brother, the king of England, followed him to the grave, expiring at Westminster, after a long illness and great demonstrations of piety, on the feast of St. Edmund, the 16th of November, 1272. He had rebuilt the abbey church of St. Peter's from the foundation, and he had removed the bones of Edward the Confessor into a golden shrine. According to his wish, they therefore carried his body to that stately church, and laid it in the very grave which the remains of his saintly predecessor had once occupied. Before his body was lowered to its last resting-place, the Earl of Gloucester, putting his bare hand upon it, swore fealty to the absent Edward; and the rest of the barons present followed his example. Henry had lived sixty-eight years, and had been fifty-six years a king—at least in name.

* Contin. Matt. Par.

Edward I. surnamed Longshanks.

From the Abbey Church of Westminster the barons, who had attended his father's funeral, went to the new Temple and proclaimed the absent Edward by the style of "King of England, Lord of Ireland, and Duke of Aquitaine." This was on Sunday, the 20th of November, four days after the demise of Henry. A new great seal was made; Walter de Merton was appointed chancellor; Walter Gifford, archbishop of York, the Earl of Cornwall, a surviving son of Richard, king of the Romans, and the Earl of Gloucester, assumed conjointly the office of guardians or regents of the kingdom, and such wise measures were taken that the public peace was in no way disturbed; and the accession of Edward, though he was far away, and exposed to the chances of war and shipwreck, was more tranquil than that of any preceding king since the Conquest.

When Edward departed on the crusade he found that the French king, instead of sailing for

* Rymer.—Wykes.—Muratori, Annali.

GREAT SEAL OF EDWARD I.

Syria or Palestine, had turned aside to attack the Mussulman king or bey of Tunis. The kings of Sicily had some old claims to tribute from this African state, and the Italian crown, after hovering over the heads of so many princes, had at last settled on that of Charles of Anjou, who, with the assistance of the pope, won it from Manfred, the illegitimate Suabian, at the battle of the Grandella, fought near Benevento, in the year 1266. This Charles was the ferocious, unworthy brother of the amiable Louis IX.; and it is generally supposed that, for his own selfish ambition and interests, he craftily induced the French king to turn his arms against Tunis; though it is also probable that the exaggerated accounts of the wealth of that city acted as a strong temptation with the crusaders in general. Louis landed on the African shore in the midst of summer, and took the camp and town of Carthage; but the excessive heat of the climate, the want of

EDWARD I. From a Statue in the Choir of York Minster.

provisions, and even of wholesome water, and pestilential miasmata from bogs and swamps, soon caused dreadful maladies among his host. The king himself was attacked by a fatal dysentery, and he laid himself down to die among the ruins and fragments of ancient Carthage. The superstition of this excellent man was the fault of the age in which he lived; but the better part of his devotion, his resignation, and magnanimity, will have a claim to reverence in all ages. As long as he could act he submitted to every privation, encountered every risk, in order to alleviate the sufferings of his poorest followers, who died round him by hundreds. When he could no longer move, and when he was himself suffering agonies, he incessantly occupied his still unclouded intellect in devising means for mitigating the pains of others: with his dying breath he endeavoured to reanimate the courage of his family and of his officers, who were weeping about his bed. "My friends," said he, "I have finished my course,—grieve not for me. It is natural that I, as your chief, should march off first. You must all follow me in time,—keep yourselves ready for the journey." *

When Prince Edward arrived he found that Louis was dead, and that more than half of his army had perished by disease. The survivors had, however, made advantageous terms with the Bey of Tunis, and showed little inclination to leave that country and encounter fresh dangers in Palestine. The English then re-crossed the Mediterranean to Sicily (a short voyage of 150 miles); but Edward would not renounce his project, or return home. He passed the winter at Trapani, vowing that, though all his soldiers should desert him, he would go to Acre attended only by Fowen, his groom. Early in the following spring he set sail from Sicily, and he landed at Acre, which was now almost the only residue of the crusaders' conquests in the East, with a force which did not exceed a thousand men. But the fame of Richard was still bright on those shores; and, while the Mahomedans trembled, the Christians gathered round the standard of the successor of Lion-heart, to whom Edward was scarcely inferior in physical strength and courage, while he was his superior in coolness and policy, and probably also in military science. Bondocar, the sultan of Babylon, who had prepared to take that city by assault, immediately retreated from the vicinity of Acre, and, crossing the Desert, went into Egypt. Edward advanced, and obtained temporary possession of Nazareth, which was taken by storm. Eighty years had elapsed since Richard's massacres of Acre, and nearly two hundred since the first capture of Jerusalem by the Christians of the West; but the crusaders had made little progress in humanity, and the slaughter committed on the Moslems, under the eye of Edward at Nazareth, was only less atrocious than the butchery at Jerusalem, because the scene was more confined, and the place had fewer Turkish inhabitants. The prince, and many of the English with him, were soon after attacked with sickness, and returned to Acre, where they lingered some fifteen months, doing little or nothing; for the first enthusiasm among the Latin Christians had subsided upon seeing that Edward had scarcely any money, and received no reinforcements. He had never been able to collect more than seven thousand armed men, and this mixed force could not be kept together for any length of time. The English chivalry distinguished itself by many feats of arms, and revived the glory of the national name; but, after all, the only other solid advantages gained were the capture of two castles and the surprise and partial plunder of a caravan. The Mahommedans were not strong enough to attack Acre, which, chiefly by Edward's means, was so strengthened as to be enabled to defy them for twenty years longer, when the Mamelukes of Egypt took it and drove the crusaders and their descendants from every part of the Holy Land. Edward on his side was always too weak to attempt any extensive operations. His presence, however, both annoyed and distressed the Turks, and an attempt was made to get rid of him by assassination. The emir of Jaffa, under pretence of embracing the Christian religion, opened a correspondence with the English prince, and gradually gained his confidence. The emir sent letters and presents, till his messengers were allowed to pass and repass without examination or suspicion. On the Friday of Whitsun week, about the hour of vespers, as Edward was reclining on a couch with nothing on him but a loose robe, the emir's messenger made his usual salam at the door of his apartment: he was admitted; and as he knelt and presented a letter with one hand, he drew a concealed dagger with the other, and aimed a blow at the prince's heart. Edward, though wounded, caught the murderer in his iron grasp, threw him to the ground, and despatched him with his own weapon. The prince's wound was not deep, but the dagger had been smeared with poison: when he learned this fact, he made his will, and gave himself up as lost. The English soldiers would have taken a horrid vengeance upon the poor Turks in their power, but he restrained their fury, and made them reflect on what might befal the helpless Christian pilgrims then at Jerusalem. Fortunately there was at Acre an English surgeon with skill and nerve enough to pare away the sides of the wound; and the grand master of the Templars sent some precious drugs to stop the progress of the venom. The piety, the affectionate attentions of his loving wife Eleanor may have contributed very effectually to his cure, but there is no good ground for believing that she sucked the poison from her husband's wound.*

Henry had already implored his son to return

* Le Sire de Joinville.

* Hemingford.—Chron. Papini in Muratori.—Matt. West.—Wykes. The story of Eleanor's sucking the wound is not mentioned by any chronicler living near the time. It seems to be of Spanish origin, and to have been first mentioned a century or two after the time.

to England, and now Edward gladly listened to proposals of peace made by the sultan, who was so much engaged with other wars in the interior as to have little time to spare for the prosecution of hostilities on the coast. A truce was therefore concluded for ten years, and then Edward sailed again for Sicily. Theobald, Archdeacon of Liege, who had accompanied the prince to Palestine, had been recalled some months before from Acre to fill the vacant chair of St. Peter. At Trapani, Edward received an earnest invitation from his old companion and steadfast friend, now Gregory X., to visit him at Rome. The prince crossed the Faro of Messina to travel by land through the Italian peninsula. At a mountain village in Calabria he met messengers, by whom he was informed, for the first time, of the death of his father. He had recently lost an infant son whom Eleanor had borne him in Syria; and Charles of Anjou, who had now returned from Tunis, and had little tenderness for any one, expressed his surprise that he should grieve more for the death of his old father than for that of his own offspring. "The loss of my child," said Edward, "is a loss which I may hope to repair, but the death of a father is a loss irreparable!"* By the month of February, 1273, he was at Rome, but his friend the pope being absent, he staid only two days in the Eternal City, and then turned aside to Civita Vecchia, where the pope received him with honour and affection. Edward demanded justice on the assassins of Henry d'Almaine; but Simon de Montfort, one of them, had gone to account for his crimes before a higher tribunal; Aldobrandini was too powerful to be rigorously examined, and was not a principal in the murder; and as Guy de Montfort had absconded, the king of England was obliged to be satisfied with a very imperfect vengeance. Leaving the pontiff, he continued his journey through Italy, and he was received in triumph at every town. The admiring Milanese presented him with some fine horses and purple mantles. His exploits in Palestine, limited as they had been, had gained him the reputation of being the Champion of the Cross; the dangerous wound he had received (if he had died of it he would have been enrolled among saints and martyrs) created an additional sympathy in his favour, and, as if people knew he would be the last king to embark in the crusades, he was hailed with extraordinary enthusiasm. It was the bright, broad flash of the flame about to sink into the socket. In a few years the passion for the crusades, which had animated all Europe for more than two centuries, was utterly extinct. On crossing the Alps, Edward was met by a deputation from England. He travelled on to Paris, where he was courteously received by his cousin, Philip le Hardi, and did homage to that king for the lands which he held of him in France.

Notwithstanding the tranquil state of the country, and the loyal disposition of his subjects, it must excite some surprise to see, that after so long an absence, Edward had no anxiety to reach England.* Instead of crossing the Channel, he turned back from Paris, where he had staid a fortnight, and went to Guienne. The motives generally assigned for his protracted stay on the continent are, his wish to await the decisions of a general council of the church, which the pope had summoned to meet at Lyons, and the distracted state of Guienne, which province seems never to have been tranquil for a year at a time. But it is pretty evident that the English king entertained suspicions of Philip, who was a far less conscientious sovereign than his father, Louis IX., who had been severely blamed by the French, for not taking advantage of the weakness of Henry to drive the English out of all their continental possessions. The dark shadows of some deep and disgraceful intrigues are visible; and it seems to us, that when the pope warned Edward against the swords of assassins, he did not apprehend danger from the ruined and fugitive Guy de Montfort, so much as from more prosperous and more powerful agents. In the month of May, 1274, while the English king was in Guienne, he received a challenge, couched in all the nice terms and circumlocutions of chivalry, from the Count of Chalons, to meet him lance to lance in a tournament. This fashion was then at its height, and knights and nobles of high renown and princes royal were accustomed to defy each other in the name of God, of the blessed Virgin Mary, and of their respective saints and mistresses, and to invite one another out of love and reverence, to joustings and tiltings, which often terminated in blood and death or fractured limbs. Edward considered himself bound in honour as a true knight to accept the count's challenge, and, on the appointed day he entered the lists, as stalwart and fearless a combatant as ever sat in saddle. He was attended by a thousand champions; but the Count of Chalons rode to the spot with nearly two thousand. Whispers of bad faith on the part of the count had already been heard, and the sight of this unfair advantage probably confirmed the worst suspicions of the English. The image of war was converted into its stern reality—a sanguinary battle ensued, in which the foot-soldiers took part as well as the knights. The English crossbowmen drove the French infantry from the field, and then mixing with the English horse, who were far outnumbered by their opponents, they overthrew many of the count's knights by stabbing their horses or cutting their saddle-girths—two operations against all rule, and deemed infamous in the code of chivalry. The count himself, a man renowned for his physical strength, after charging Edward several times with his lance, rode in, and grasping the king round the neck, endeavoured to

* Walsingham.—Trivet.

* He had written letters expressing some fear of the Londoners, and had several times commanded the "mayor, sheriffs, and commons" most carefully to keep the peace of the city. The measures adopted in consequence were more vigorous than legal. All persons suspected of having been partisans of the Earl of Leicester were hunted down in every ward, and, without form of trial or examination, thrown into prison till Edward's return.

unseat him. Edward sate like a rock, and gave the proper touch with the spur;—his war-horse sprang forward, the count was pulled out of his saddle, and hurled to the ground with a dreadful shock. He was remounted by some of his knights; but, sorely bruised and stupified by his fall, he cried out for quarter. Edward was so enraged, that he kept hammering on the iron armour of his suppliant foe for some time, and at last rejected his sword, and made him surrender to a common foot-soldier—an extremity of disgrace which the count, had he been a true knight, would have avoided at the cost of life. The English had the best of the affray, taking many knights, who were obliged to ransom their persons, their arms, and their horses (where any were left alive), and *slaying* many of the French footmen—"because they were but rascals, and no great account was made of them." The whole affair was so fierce and sanguinary, that it afterwards went by the name of the little war of Chalons. *

A.D. 1274. Edward now turned his thoughts towards England, and sent orders to prepare for his coronation. If these orders were obeyed, the coronation-feast must have been a sublime specimen of a well-loaded table; for 380 head of cattle, 430 sheep, 450 pigs, 18 wild boars, 278 flitches of bacon, and 19,660 capons and fowls were ordered by the king for this solemn occasion.† As he travelled through France, Edward stopped at the pleasant town of Montreuil, to settle some differences which had long existed between the English and Flemings, and which had curiously committed the commercial interests of both countries. For several reigns the counts of Flanders had been accustomed to let upon hire certain bands or troops of foot-soldiers to the kings of England. These contracts ceased altogether during the reign of Henry III.; but, some time before the death of that sovereign, Margaret, the reigning countess, claimed payment of a large sum as arrears, and pressed her claim so rudely, that she seized all the English wool—then our great article of export—that could be found in her dominions. Henry retaliated, by seizing all the manufactured Flemish cloths in England, and strictly forbade all trade between the two countries. He enticed over some Flemish clothiers, but their number was insufficient; and it is said, that as the English were unskilled in the arts of dyeing cloths, they for some time wore their coats of the natural colour of the fleece. The Flemings stood in still greater need of our wool, wanting which their looms remained idle, and their artisans were beggared. The countess, who lost immensely by this stoppage of trade, now offered a public apology to Edward, and entreated that the commercial relations of the country might be renewed. The king, who, much to his credit, took the advice of some London merchants of good repute, immediately made up the quarrel; the countess agreed to certain reparations, and the trade was renewed.

On the 2nd of August, 1274, after an absence of more than four years, Edward landed at Dover, and on the 19th of the same month, "after the

* Hemings.—West.—Trivet.—Holinshed. † Rymer.

Queen Eleanor. From her Tomb in Westminster Abbey.

feast of the Assumption," he was crowned, together with his high-minded wife, in Westminster Abbey. On their entrance into London they were "received with all joy that might be devised: the streets were hung with rich cloths of silk, arras, and tapestry; the aldermen and burgesses of the city threw out of their windows handfulls of gold and silver, to signify the great gladness which they had conceived of his safe return; the conduits ran plentifully with white wine and red, that each creature might drink his fill."* The nation was proud of the valour and fame of their king, who was now in the prime of mature manhood, being in his thirty-sixth year; and the king had good reason to be proud of the affection, loyalty, and prosperity of the nation.

The government, however, was poor and embarrassed, and, in spite of all pretexts, this circumstance seems to have been the real whetstone of the animosity which Edward showed immediately after his accession to one class of his subjects,—the unhappy Jews. The rest of the nation were now tolerably well protected from arbitrary spoliation by the great charter and the power of parliaments; but the miserable Israelites, considered unworthy of a participation in the laws and rights of a Christian people, were left naked to oppression, no hand or tongue being raised in their defence, and the mass of the people rejoicing in their ruin. As a zealous crusader, Edward detested all unbelievers, and his religious antipathies went hand-in-hand with his rapacity, and probably justified its excesses in his own eyes. The coin had been clipped and adulterated for many years, and the king chose to consider the Jews as the sole or chief authors of this crime.† To bring a Jew before a Christian tribunal was almost the same thing as to sign his death-warrant. Two hundred and eighty of both sexes were hanged in London alone, and many victims also suffered in every other town where they resided. As it was so common, clipped money might be found upon every person in the kingdom; but once discovered in the possession of an Israelite, it was taken as an irrefragable proof of guilt. The houses and the whole property of every Jew that suffered went to the crown, which thus had an interest in multiplying the number of convictions. Even before these judicial proceedings, the king prohibited the Jews from taking interest for money lent, from building synagogues, and buying lands or any free tenements. He put a capitation or poll-tax upon them, similar to the kharatch which the grand-signior exacts from his Christian subjects: he set a distinctive and odious badge upon their dress, that they might be known from all others,—another Turkish custom, which in its time has been the cause of infinite suffering. Thirteen years later, when Edward was engaged in expensive foreign wars, and the parliament, in ill humour thereat, stinted his supplies, he ordered the seizure of every Jew in England; and on an appointed day, men, women, and children,—every living creature in whose veins the ancient blood of the tribes was known or supposed to flow,—were brutally arrested and cast into loathsome dungeons. There seems to have been no parity of justice on this occasion, and the Jews purchased their enlargement by a direct payment of the sum of 12,000*l.* to the king. Edward might have continued to make good use of them from time to time in this manner, as most of his predecessors had done, but his fanaticism overcame his avidity for money, or, probably, he wanted a large sum at once, for he was now in the midst of his scheme for the subjugation of Scotland, and had just married two of his daughters. It was in the year 1290, soon after the sitting of a parliament at Westminster, that his proclamation went forth commanding all the Jews, under the penalty of death, to quit the kingdom for ever, within the space of two months. Their total number was considerable, for though long robbed and persecuted in England, they had, notwithstanding, increased and multiplied, and their condition in the other countries of Christendom being still worse than here, the stream of emigration had set pretty constantly from the opposite side of the Channel. Sixteen thousand five hundred and eleven individuals received the king's pass, with the gracious permission to carry with them as much of their ready money as would pay the immediate expenses of their voyage. Houses, lands, merchandise, treasures, debts owing to them, with their bonds, their tallies and obligations, were all seized by the king. The mariners of London, and the inhabitants of the Cinque Ports generally, who were as bigoted as the king, and thought it no sin to be as rapacious towards the accursed Jews, robbed many of them of the small pittance left them, and drowned not a few during their passage. To help to keep alive a wholesome abhorrence of these detestable cruelties, we will mention one particular case, as recorded by Holinshed on the credit of a contemporary chronicle:—"Some of the richest of the Jews being shipped in a mighty tall ship which they had hired, when the same was under sail, and had got down the Thames towards the mouth of the river, the master mariner bethought him of a wile, and caused his men to cast anchor, and so rode at the same, till the ship, by ebbing of the stream, remained on the dry sands. The master then enticed the Jews to walk out with him for recreation. And at length, when the Jews were on the sands, and he understood the tide to be coming in, he gat him back to the ship, whither he was drawn by a rope. The Jews made not so much haste, because they were not aware of the danger; but when they perceived how the matter stood, they cried to the master for help. He, however, told them that they ought to cry rather upon Moses, by whose guidance their fathers had passed through the Red Sea. They cried, indeed, but no succour appeared, and so they were swallowed up by the water." Some few mariners were convicted

* Holinshed.
† A few Christians were afterwards punished for the same offence.

and suffered capital punishment; for the king, to use the keen sarcasm of Hume, was determined to be the sole plunderer in his dominions.

Contemporaneously with these shameful proceedings against the Jews, Edward enacted many just and wise laws for his Christian subjects; and the additions and improvements which he made in the laws and the practices of the courts will be noticed in their proper place. The nature of his reforms shows the extent of the evil that had existed: in 1299, all the judges of the land were indicted for bribery, and only two of the number were acquitted; the chief justice of the Court of King's Bench was convicted of instigating his servants to commit murder, and of protecting them against the law after the offence; the chief baron of the Exchequer was imprisoned and heavily fined, and so was Sir Ralph de Hengham, the grand justiciary. But perhaps in some of these cases we shall not greatly err if we deduct from the delinquency of the accused, and allow something for the arbitrary will of the accuser. It is known that the king, who had just returned from a costly sojourn of nearly three years in France, was in great want of money, when, as the consequence of their condemnation, he exacted about 80,000 marks from the judges. In recovering, or attempting to recover, such parts of the royal domain as had been encroached upon, and in examining the titles by which some of the great barons held their estates, he roused a spirit which might have proved fatal to him had he not prudently stopped in time. When his commissioners asked Earl Warenne to show his titles, the Earl drew his sword and said,—"By this instrument do I hold my lands, and by the same I intend to defend them! Our ancestors, coming into this realm with William the Bastard, acquired their possessions by their good swords. William did not make a conquest alone, or for himself solely; our ancestors were helpers and participants with him!" Such title-deeds were not to be disputed; but there were other cases

Earl Warenne justifying his Title to his Estates.

where men wore less powerful swords, and where written deeds and grants from the crown had been lost or destroyed during the convulsions of the country; and Edward seized some manors and estates, and made their owners redeem them by large sums of money. There was much bad faith in these proceedings, but as the king chose his victims with much prudence, no insurrection was excited.

We must now retrace our steps, to take a regular view of this king's great operations in war. Edward was to the full as ambitious and fond of conquest as any prince of the Norman or Plantagenet line; but, instead of expending his power in foreign wars, he husbanded it for the grand plan of reducing the whole of the island of Great Britain under his immediate and undivided sway. He employed the claim of feudal superiority—a right most difficult to define, even if its existence had been admitted—with final success against Wales; and though, with regard to Scotland, it eventually failed, the ruin of his scheme there did not happen until after his death, and he felt for a time the proud certainty of having defeated every opponent. If the acknowledgment of the paramount authority of the English kings, extracted from unsuccessful princes, justified a forcible seizure of territory against the wishes of the people, Edward may be acknowledged to have had that right over Wales. Setting aside the somewhat doubtful vassalage of the Welsh principalities to our Saxon kings, on which the Norman conquerors impudently founded a pretension, as being the lawful heirs to those kings, we have repeated instances of a seeming submission, when the princes purchased peace by engaging to pay certain tributes, and to recognise the suzerainty of the English throne. This feudal superiority, however, was liable to all sorts of variation, and was never really fixed by the written or understood law of the feudal system, though, in certain cases, the forms of that law could be applied in regard to it with an appearance of regularity and justice. When a weak state stood in this relation with a strong one, the feudal supremacy implied an almost unlimited right of interference and control; but when the relation existed between two states of equal power, it meant little or nothing beyond a mere ceremony. Thus the kings of England, as vassals to the sovereigns of France for their territories on the continent, had for a long time defied the authority of their liege lords, after making them tremble in Paris, their own capital. Those other nominal vassals, the great dukes of Burgundy, although they had no separate sovereignty like the Normans and Plantagenets, repeatedly followed the same course. The forfeiture pronounced against John was generally considered as an unjustifiable stretch of the rights of supremacy, but it was well timed—it was directed against one who had made himself universally odious, and whose continental subjects, for the most part, at this crisis, preferred a union with France to their old connexion with England. The nature of Edward's right is scarcely deserving of a further examination—had no such claims existed he would have invented others—for he was determined on the conquest of the country, and internal dissensions and other circumstances favoured the enterprise. The expediency of the measure, and the advantages that have resulted from it, ought not to make us indifferent to the fate of a brave people who were fighting for their independence. The Anglo-Normans, who had been gradually encroaching on their territory for two hundred years, accused the poor Welsh of cruelty and perfidy—forgetting that they were themselves the aggressors, and had been guilty of treachery the most manifold, and of cruelties the most atrocious. Since the beginning of the reign of Henry II. civilization had advanced in the rich champaign of England, and had, from the circumstances in which the country was placed, retrograded in Wales; but there are writers of the time who trace in that land the most interesting picture of an hospitable and generous race of men, full of the elements of poetry, and passionately fond of their wild native music. According to their countryman, Giraldus Cambrensis, no people could well be more gentle and courteous in times of peace: notwithstanding the injuries constantly inflicted upon them by their neighbours, whenever an Anglo-Norman or Englishman visited them in their mountains without arms, and as a quiet guest, he was received with the greatest kindness, and feasted at every house where he chose to stop. Such as arrived in the morning hours were entertained till the evening by the young women with the harp and songs. In every house there was a harp; and the company, seated in a circle round the harper, sang verses alternately—the verses being sometimes improvised. At times, a challenge to improvisation was sent from man to man, or from a whole village to another village. Though chiefly a pastoral people, they were not rude or clownish. "All the Welsh," says Giraldus, "without any exception, from the highest to the lowest, are ready and free in speech, and have great confidence in replying even to princes and magnates." The mass of the nation, however, notwithstanding this partial refinement, was poor, and but rudely clad, as compared with their English contemporaries. One day, as Henry II. rode through part of their country attended by his splendid chivalry, he looked with a contemptuous eye on the Welsh gentlemen riding on their rough ponies, and on the poorer sort who were clad in sheep or goats' skins. A mountaineer approached the great king, and said, with a noble pride, "Thou seest this poor people—but such as they are thou never shalt subdue them—that is reserved alone for God in his wrath." And though this wrath may have been manifested, and their country reduced by Henry's great grandson, seldom has even a race of mountaineers made a longer or more gallant stand for liberty. When

the sword of slaughter had passed over them to smite no more,—when better times and better feelings came, though, as less numerous and far more exposed, they had been less fortunate than the Scots, their valour entitled them to the same admiration and sympathy; and perhaps the high national character of the united kingdom of Great Britain may be in part owing to the fact, that no one portion of it fell an easy or degraded conquest to the other.

At the time of Edward's aggression, the principality of North Wales, called by the Welsh the principality of Aberfraw, or Snauden, was still almost untouched by English arms; but the conquerors had established themselves in Monmouthshire, and held a somewhat uncertain and frequently disturbed possession of a good part of South Wales. This occupation had been effected very gradually by the great barons who had made incursions at their own expense, and with their own retainers. These lords were rewarded with the lands they gained from the Welsh, and which they defended by erecting strong castles. As they advanced, they raised chains of fortifications, building their castles sufficiently near to communicate with, and support each other. Thus, in Monmouthshire, a regular chain of fortresses was occupied on the banks of the Monnow, the Wye, and the Severn: these were Scenfreth, Grosmont, Monmouth, Trelech, perhaps Tintern, Chepstow, and Caldecot. A second line stretched diagonally from Grosmont on the Monnow to the banks of the Rumney; these were Whitecastle, Tregaer, Usk, Langibby, Caerleon, and Newport; this diagonal line, with the strong castle of Abergavenny to the north of it, was intended to curb the mountaineers, who made perpetual incursions on their invaders.* In addition to these strong fortresses, many smaller castles were constructed for the purpose of keeping the natives in awe. The more advanced posts were often re-taken, and the day when one of these castles was destroyed was held by the Welsh, who foresaw the consequences of this gradual advance, as a day of universal joy, on which the father, who had just lost his only son, should forget his misfortune. But still the chains were drawn more and more closely around them by the persevering invaders; and, since the conquest of Ireland, extraordinary pains had been taken to secure the whole of the line through South Wales to Milford Haven, the usual place of embarkation for the sister island. In the wilderness of the Tivy, and in many of the more inaccessible moors, marshes, and mountains, the invaders were still defied; and, except in Pembrokeshire, where the Flemish colony had been settled by Henry I., and in the lower part of Monmouthshire, the English were scarcely safe beyond the walls of their castles, so fierce was the recollection of past wrongs, and so enduring the hope of the southern Welsh to recover all that they had lost. But the jealousies of their petty princes, and the rancorous feuds of the clans, defeated all their greater projects; and, at the critical moment which was to seal the fate of the whole country, Rees-ap-Meredith, the prince of South Wales, was induced to join Edward and fight against Llewellyn, the ruler of the northern principality, and the representative of a rival family. Llewellyn, moreover, was opposed by his own brother David, who also rallied, with his vassals, round the standard of the English king.

* Coxe's Monmouthshire.

In the wars between Henry III. and the barons, the prince of North Wales had taken part with the latter, and had shown himself the steady friend of De Montfort. A body of northern Welsh had fought for that great earl against Edward at the battle of Evesham; and when De Montfort was dead, and his family ruined and scattered, Llewellyn still retained his old affection for the house, and agreed upon a marriage with Elinor de Montfort, daughter to the deceased earl. As that young lady was on her voyage from France to Wales, with Emeric her youngest brother, she was taken by four ships of Bristol, and was sent to King Edward's court, where both brother and sister were detained as prisoners. Angry feelings had existed before, but this seizure of his bride transported Llewellyn with wrath, and, bitterly complaining of the wrong and insult which had been done to him in a time of peace, he prepared for war. According to some accounts, he began hostilities by falling upon the English on his borders, killing the people, and burning their towns; but this is not quite certain, and, at all events, Edward had long been employed in making preparations for conquest, and, what was equally notorious, and still more irritating to the unfortunate prince, he had been intriguing with Llewellyn's subjects and corrupting the Welsh chiefs with bribes and promises. As to the ground of quarrel chosen by Edward, it was quite true that Llewellyn had not obeyed the summons to do homage as one of the great vassals of the crown; but he had acknowledged the duties of his vassalage, and excused his non-attendance, which he said had solely arisen out of Edward's violation of a solemn treaty which had been concluded by the mediation of the pope.

One of the clauses of this recent treaty had provided that neither party should harbour the enemies or revolted subjects of the other; and Edward, it was well known, had given shelter and encouragement to all the enemies of Llewellyn, and continued to receive the rebellious Welsh as personal friends. Llewellyn said, that under these circumstances, his life would be in danger if he ventured to the king of England's court, and he demanded a safe conduct, which was refused. After the seizure of his bride his demands naturally rose: he asked for hostages and for the previous liberation of Elinor de Montfort, and then, he said, he would go to court. But Edward did not want him there: that resolute king had now matured his measures for the subjugation of Wales. He had levied a fine army,—his parliament had pronounced the sentence

of forfeiture against Llewellyn as a rebel,—it had also voted a large supply,—and the church had excommunicated the Welsh prince.*

In A.D. 1277, after the feast of Easter, Edward departed from Westminster, and with a mighty force, which increased as he advanced, marched towards Chester. At Midsummer he crossed the Dee, and, keeping between the mountains and the sea, took the two castles of Flint and Rhuddlan. Cautious in the extreme, he made no further progress until he had repaired these fortresses and strengthened their defences. At the same time his fleet, which was skilfully managed by the mariners of the Cinque Ports, co-operated along the devoted coast, blockading every port, and cutting off the supplies which Llewellyn had counted upon receiving from the Isle of Anglesey. On the land side every outlet was strongly guarded, and the Welsh prince, driven to the mountains, was soon in want of provisions. Edward prudently avoided a battle with desperate men, and, girding in the barren mountains, waited the effects of a surer and more dreadful destroyer than the sword. When winter made its approach the condition of Llewellyn was horrible, and it finally obliged him to throw himself on the generosity of his enemy. On the 10th of November Edward dictated his harsh terms at Rhuddlan Castle. The treaty stipulated that Llewellyn should pay fifty thousand pounds,—that he should cede the whole of his principality as far as the river Conway,—that he should do homage, and deliver hostages. He was to retain the Isle of Anglesey; but even that remnant was to revert to the English crown in case of his dying without issue male; and during his possession he was to pay for it an annual tribute or rent of one thousand marks.† The English king afterwards remitted the tremendous fine, which so poor a country could never have paid, and resigned his claim to the rent of Anglesey; but he showed no great alacrity in making these concessions, and he let nearly a year elapse before he performed his promise of releasing Llewellyn's bride.

Such treaties as that imposed on this occasion upon the Welsh are never kept, and all Edward's art could not reconcile either the prince or people to the sense of degradation. He gratified Llewellyn's brother David, who had fought for him, by marrying him to the daughter of an English earl, and making him an English baron; but, when David stood among his native mountains, he forgot this and other honours; he cursed his own folly, which had brought ruin upon his country, and had excluded him from the hope of succeeding, either in his own person or in that of his children, to the principality.‡ The English conquerors were not sufficiently refined to exercise their power with moderation; they derided the national usages, and insulted the prejudices of a susceptible and brave people. The invasion of their own demesnes, and the cutting down of the woods on the lands reserved to them by treaty, exasperated both Llewellyn and David; but it is perfectly clear that had these princes been converted into subservient vassals, or won by the kindest treatment to be solicitous for the preservation of the peace, they would still have been forced into war by the unanimous feeling of the Welsh people. Superstition allied itself with patriotism, and, in order to increase the popular confidence, certain old prophecies of bards and seers were revived under a happy coincidence of circumstances which seemed to denote a speedy accomplishment. One of these mystic predictions imported nothing less than that the ancient race should recover its traditional supremacy in the island, and that the Prince of Wales should be crowned king in London. On the night of Palm Sunday, March the 22nd, of the year 1282, David surprised and took the strong castle of Hawardine, belonging to Roger Clifford, the justiciary, "a right worthy and famous knight." according to the English;—a cruel tyrant, according to the Welsh. Several men who made resistance were killed, but the lord, who was caught in his bed, was only wounded, and then carried off as a prisoner. A general insurrection ensued: the Welsh rushed in arms from their mountains, and Llewellyn, joining his brother, laid siege to the castles of Flint and Rhuddlan. These strong places held out, but many of the new castles were taken and destroyed, and the English intruders were in some places driven across the marches. Forgetting their own cruelties and oppressions of all kinds, the English accused the Welsh of great barbarity in this brief moment of success. When the news was carried to Edward, he affected surprise; but it has been suspected that he was not displeased with the opportunity, afforded by what had taken place, of making his conquest final and absolute. He was in want of money, and had no time to assemble a parliament; he therefore had recourse to the very unconstitutional means of a forced loan, which was levied, not only on towns and religious establishments, but also on private individuals who were known to possess money. He then sent out commissioners to raise an army, and despatched such troops as he had in readiness to the relief of Flint and Rhuddlan. He soon followed in person, and having assembled nearly all his military tenants and 1000 pioneers, he advanced into North Wales, leaving his fleet, which was still more formidable than in the preceding war, to act upon the coast, and reduce the Isle of Anglesey. His pioneers cut down woods, and opened roads into the very fastnesses of Snowdon, whither the natives were again forced to retire. Some entrenched positions were carried, but not without a great loss; and in one affair, which appears to have been a regular battle, Edward was completely checked, if not defeated. But the means at his disposal made the struggle too unequal; reinforcements continually crossed the Dee, or came up from the coast, and he procured the services of foreign mercenaries, who were particularly well suited for mountain warfare.

‡ Llewellyn, it appears, had no children.

These were bands of Basques from the Pyrenees, whose method of fighting, and whose general habits and manners differed little from those of the Welsh people, whom they were employed to hunt down like blood-hounds. These foreign hordes acted where the regular troops of the English king could not;—accustomed in their own country to mountains far more rugged, they penetrated into every

Summit of Snowdon.

part of Snowdon, and the last bulwark of Welsh independence was forced. Edward, chiefly by means of his fleet (the Welsh seem to have had no ships to oppose it), occupied Anglesey; but, in passing from that island to the main, a detachment of his forces sustained a severe loss. They had laid down a bridge of boats across the Menai Strait, at or near to the place where Telford's suspension-bridge, hanging in air, now affords a commodious communication between the opposite shores; and in the absence of Edward, who was at Aberconway, a party of English, with some Gascon lords and a body of Basques, crossed over before it was finished, making part of their way by wading through the water when the tide was out. The Welsh, who had thrown up some intrenchments near the spot, permitted them to land, and even to reconnoitre their works; but when the tide rolled in, and made deep water between them and the unfinished bridge of boats, they rushed down upon them, and drove them into the sea, where, loaded as they were with armour, many of them were drowned. Between the sword and the waves there perished thirteen knights, seventeen esquires, and several hundred foot-soldiers. When Edward learned this sad disaster, he vowed he would build a stone bridge at the place; but such an undertaking was soon found to be impracticable. This reverse at the Menai Strait happened on St. Leonard's day, the 6th of November. In another battle, Edward himself was worsted, being obliged to fly for protection to one of his castles, leaving the Lords Audley and Clifford dead on the field. Llewellyn was elated by these successes, and he fondly hoped that the severity of winter would force the English to retire; but Edward had collected a strong force in Pembrokeshire and Carmarthen, and he now sent it orders to advance through South Wales, and attack his enemy in the rear. Leaving his brother David to carry on the war in North Wales, his own principality, Llewellyn boldly turned his steps to the south, to meet the new invaders. This movement may possibly have been recommended by false friends; and there certainly is an appearance of treachery in what followed. He had reached Bualth, in the valley of the Wye, when the English, under the savage Earl of Mortimer, appeared suddenly on the opposite side of the river. A Welsh force was on the neighbouring heights; but the prince had been left with only a few followers. The English crossed the river and surprised him before he had time to put on his armour; he was murdered, rather than slain in battle. They cut off his head and sent it to Edward, who forwarded it to London, there to be placed on the Tower, with a crown of willow, in mockery of the prophecy of his coronation.

The struggle for liberty did not, however, end with this unfortunate prince. In spite of the sub-

mission of most of the Welsh chiefs, his brother David still kept his sword in his hand, and for six months he wandered a free man over his native wilds. At last he was betrayed by some unpatriotic Welshmen, and with his wife and children carried in chains to the castle of Rhuddlan. In the month of September following, an English parliament assembled by Edward at Shrewsbury, pronounced the doom—not of the last champion of Welsh independence (for Madoc and others soon followed)—but of the last sovereign prince of one of the most ancient ruling families of Europe. He was sentenced—1st. To be dragged by a horse to the place of execution, because he was a traitor to the king, who had made him a knight. 2ndly. To be hanged, because he had murdered the knights in Hawardine castle. 3rdly. To have his bowels burned, because he had done the deed on Palm Sunday, the season of Christ's passion. 4thly. To be quartered, and have his limbs hung up in different places, because he had conspired the death of his lord the king in various parts. The sentence was executed to the letter, and it remained for many ages a revolting precedent in cases of high treason.*

* Hemingf.—Chron. Dunst.—Rymer.—Carte.

Edward had far more patience and prudence than was common to the warriors and conquerors of his time; and he devised wise means for retaining possession of what he had gained by force. He did not move from Wales until more than a year after the death of Llewellyn, and he spent the greater part of that time in dividing the country into shires and hundreds, after the manner of England, and restoring order and tranquillity. Immediately after the affair of Bualth, he published a proclamation, offering peace to all the inhabitants, giving them at the same time assurances that they should continue to enjoy all their lands, liberties, and properties as they had done before. He seems even to have lightened the taxes they paid to their native princes. Some of the ancient usages of the country were respected, but, generally speaking, the laws of England were introduced and enforced. He gave charters with great privileges to various trading companies in Rhuddlan, Caernarvon, Aberystwith, and other towns, with the view of encouraging trade and tempting the Welsh from their mountains, and their wild, free way of living, to a more social and submissive state. When his wife Eleanor bore him a son in the castle of Caernarvon,

CAERNARVON CASTLE.

he adroitly availed himself of that circumstance, by presenting the infant Edward to the people as their countryman, and telling them that he who was born among them should be their prince. The Welsh chiefs expected that this "Prince of Wales" would have the separate government of their country, for Alphonso, an elder brother of the infant Edward, was then alive, and the acknowledged heir to the English crown. For some time they indulged in this dream of a restored independence, and professed, and probably felt, a great attachment to the young Edward; but Prince Alphonso died; the illusion was also dissipated by other circumstances, and, in the

sequel, the Welsh-born prince came to be regarded by his countrymen with very different feelings from either pride or affection.

King Edward strongly fortified the two castles of Caernarvon and Conway, and built some other fortresses, all which places he supplied with good garrisons and stores of provisions. To secure his conquest from the incursions of the people of Snowdon, he divided most of the lands at the foot of that mountain among his great English barons, and they again subdivided them among their officers and vassals, who held them in fief, and built other castles and towers for their defence. But these tyrannical lords and greedy retainers could not follow the example of the king's moderation; and their cruel excesses and their insulting demeanour towards the Welsh, continually provoked hostilities, and kept alive feelings which frequently vented themselves in deeds of a savage enough character, though scarcely more lawless than the oppressions out of which they arose.

After the subjugation of Wales, Edward's ambition rested for about four years—three of which he passed almost wholly on the continent, where he was honourably engaged as umpire to settle a fresh dispute which had arisen between the kings of France, Arragon, and the house of Anjou, respecting the island of Sicily. His ability and conduct in this matter gained him a great increase of reputation among foreign princes;* but the affairs of his own kingdom fell into disorder; the English people complained that he neglected their interests to take charge of what did not concern them; and the parliament at last refused him a supply which he had asked. The king then returned in haste, and, almost immediately after, he involved himself in the affairs of Scotland, which, with a few short intervals, entirely occupied him all the rest of his reign.

Before proceeding, however, to this part of the story of the English king, it will be most convenient to resume our Scottish narrative from the point to which we brought it down in the last Book.†

The reign of Alexander II., who succeeded to the throne in 1214, will not detain us long. After the death of John, the king of Scots continued to co-operate with Prince Louis of France and the confederated English barons; and he himself, his whole army, and kingdom were, in consequence, excommunicated by the legate Gualo; but the sentence seems to have been very little minded either by the people or their clergy. It was not even published by the latter till almost a twelvemonth had passed. In the mean time Louis made peace with Henry, without giving himself any concern about his ally. On this, Alexander, who was on his march into England, returned home. He soon after, however, effected his reconciliation both with the pope and the new king of England. On the 1st of December, 1217, he received absolution from the delegates of Gualo at Tweedmouth; and at the same time he surrendered to Henry the town of Carlisle, of which, although not of the castle, he had made himself master, and did homage for the earldom of Huntingdon and his other honours and possessions in England. On the 25th of June, 1221, Alexander married the Princess Joan, Henry's eldest sister. A long period of uninterrupted peace and amity between the two countries was the consequence of these arrangements. Some insurrections or disturbances in the as yet only half-subdued provinces of Argyle, Caithness, Moray, and Galloway, all of which were successively suppressed, are almost the only events that mark the history of the northern kingdom for the next twelve or thirteen years. The most serious of these provincial commotions was the last, which broke out in Galloway in 1233, upon the death of Alan, constable of Scotland, the lord of that district, leaving three daughters, but no male heir. This Alan of Galloway occupies an important place in Scottish history, in consequence of his marriage with Margaret, the eldest of the three daughters, and eventual heiresses, of David, Earl of Huntingdon, the brother of William the Lion; a connexion through which Dervorguil, his eldest daughter by that marriage, transmitted, as we shall presently find, to her descendants the lineal right of succession to the throne. On the death of their lord, the Gallowegians rose in resistance to the partition of their country among his legitimate heirs; and, placing at their head Thomas, a bastard son of Alan, who was aided by an Irish chief named Gilrodh (or Gilderoy), they did not even wait to be attacked by the Scottish king, who was marching against them, but rushed forth from their mountains with Celtic fury, and proceeded to ravage the adjacent country. They even contrived to surround Alexander, when he had got entangled among morasses, and he was in imminent danger till the Earl of Ross came to his assistance, and, assaulting the rebels in the rear, discomfited them with great slaughter. This victory put an end to the insurrection for the present. The following year, however, Thomas and Gilrodh, who had both escaped to Ireland, returned with a fresh force, and renewed the war. But this second attempt was soon checked: the two leaders were pardoned on their surrender; their Irish followers, crowding towards the Clyde, in the hope of being able to find a passage to their own country, fell into the hands of a band of the citizens of Glasgow, who are said to have beheaded them all, with the exception only of two, whom they sent to Edinburgh to be hanged and quartered there.

Notwithstanding the alliance that connected Alexander and Henry, and the friendship and frequent intercourse in which they lived,—for the King of Scots made repeated visits to the English coast,—no final settlement of their claims upon each other had yet taken place. It was not till

* Rymer.—Mezeray, Hist. Franc.—Giannone, Storia del Regno di Napoli.

† See ante, p. 546.

September, 1237, that at a conference, held at York, it was agreed that Alexander, who, among other things, laid claim, by right of inheritance, to the counties of Northumberland, Cumberland, and Westmoreland, should receive lands in the two former of the yearly value of two hundred pounds in full satisfaction of all his demands. The following year (4th March, 1238) Queen Joan, who had been long in a declining state, died at Canterbury. She had left no issue, and within little more than a year (15th May, 1239) Alexander married again: his new queen was Mary, daughter of Ingelram de Couci, a great lord of Picardy. The chief bond that had attached the two kings was thus snapped; and Mary de Couci, whose family had been distinguished for its opposition to the English interests, is, besides, supposed to have exercised an unfavourable influence over the mind of her husband. It was some years, however, before the old friendship that had subsisted between him and Henry wholly gave way; even in 1242 we find Henry, when about to set out on his expedition to France, confiding to Alexander the care of the northern borders. But in this same year an event occurred which is especially memorable for the consequences attributed to it. An old feud had existed between the Bissets, a powerful family in the north of Scotland, and the House of Athole. At a tournament held at Haddington, Patrick, Earl of Athole, a youth distinguished for his knightly accomplishments, chanced to overthrow Walter Bisset. Within a day or two after the Earl of Athole was found murdered in the house where he lodged, which was also set on fire. Suspicion immediately fell upon the Bissets: the nobility, headed by the Earl of March, immediately raised an armed force, and demanded the life both of Walter and of his uncle William Bisset, the chief of the family. It appears pretty certain that the latter at least was innocent of any participation in the murder: he urged, what seems to have been the fact, that he was not within fifty miles of Haddington when it was committed: he offered to maintain his innocence by the wager of battle; and, still further to clear himself, he had sentence of excommunication against the murderers published both in his own chapel and in all the churches of the kingdom. It seems to have been against him, nevertheless, that the rage both of the connexions of Athole and of the people generally was chiefly turned; the savage notions of the period could not view what had taken place in any other light than as a ground for hunting to death the whole kindred of the supposed criminal; and the head of his family, as higher game, was naturally, in the spirit of this mode of considering the matter, pursued even with more eagerness than himself. The king, however, seems to have felt the injustice of the popular clamour; he interposed for Bisset's protection; and even the queen, according to Fordun, offered to make oath that he had no part in devising the crime; that is to say, she was so convinced of his innocence that she was willing to come forward as one of his compurgators, if the case should be submitted to that mode of trial. The opposite party, however, seem to have declined submitting the question to decision either by compurgation or by combat: they insisted that it should be brought before a jury; so that this affair is remarkable, in addition to its other points of interest, as a memorial of all the three great forms of judicial procedure in criminal cases which were then in use. Bisset refused the trial by jury, "on account of the malevolence of the people, and the implacable resentment of his enemies." At last, by the exertions of the king, it was agreed that he should be allowed to escape with his life on condition of forfeiting his estates and leaving the country. But he was still, notwithstanding, in the greatest danger from the secret determination of his enemies to have his blood; and it was only by remaining in concealment under the royal protection for about three months that he was at last enabled to make his escape to England. Whatever may have been his injuries, he now certainly showed little nobleness of character. Stung, possibly, with an indignant sense of the injustice he had experienced, he sought to avenge himself on his enemies at the expense not only of his country but of its king, to whose zealous and energetic interposition in his favour he owed his life. It is said that he made his appeal to the king of England against the judgment that had been passed on him, on the plea that "Alexander, being the vassal of Henry, had no right to inflict such punishment on his nobles without the permission of his liege lord;" and that, at the same time, he further endeavoured to excite Henry against the Scottish king by describing the latter as devoted to the interests of France, and quoting instances in which, as he affirmed, English traitors who had escaped from prison were received and harboured at the northern court.*

These insidious representations may not improbably have had some part, along with other causes, in fomenting the hostile disposition which Henry not long after openly showed. At length, having fully arranged his plans, he proclaimed war against Alexander in 1244, and assembling a numerous army at Newcastle, prepared to invade Scotland. Some troops, which had been sent to the assistance of Alexander by his brother-in-law, John de Couci, had been intercepted by Henry, who had also organised a confederacy of Irish chiefs to aid him in his enterprise, by making a descent upon the Scottish coast; but the country, nevertheless, prepared to make a vigorous resistance. The contemporary English historian, Matthew Paris, has given us a description of the force with which Alexander marched to oppose the invasion. "His army," he says, "was numerous and brave; he had 1000 horsemen, tolerably mounted, though not, indeed, on Spanish or Italian horses; his infantry approached to 100,000, all

* Hailes, Ann. of Scot. i. 188—190.—Tytler, Hist. of Scot. i. 4—6.

unanimous, all animated, by the exhortations of their clergy, and by confession, courageously to fight and resolutely to die in the just defence of their native land." The sword, however, was not drawn, after all; a negotiation took place between the two kings, and a peace was concluded at Newcastle (13th August), by which Alexander agreed always to bear good faith and love to his dear and liege lord, Henry King of England, and never to enter into alliance with the enemies of Henry or of his heirs, unless they should unjustly aggrieve him.*

The only event of the reign of Alexander which remains to be noticed, is a contest into which he entered, in 1248, with Angus, Lord of Argyle, with the view of compelling that chief to transfer to the Scottish crown the homage which he had been wont to render for certain of the western islands to the king of Norway. The position of Angus was a very difficult one; he was the vassal of both sovereigns, for different parts of his possessions; and if he consented to the demand of Alexander, he was as sure to draw down upon himself the vengeance of the Norwegian king as he was to incur Alexander's hostility if he refused. In these circumstances he seems to have considered it the most expedient, perhaps also the fairest and most reasonable course, to decline moving from his existing engagements. Alexander's first expedition against him seems to have proved unsuccessful; but he renewed the attempt the following year. He was engaged in this war when he was taken ill, and died in the island of Kerarry, near the Sound of Mull, on the 8th of July, 1249, in the fifty-first year of his age and thirty-fifth of his reign. "Alexander," says Matthew Paris, "was a devout, upright, and courteous person, justly beloved by all the English nation, no less than by his own subjects." It seems to have been to this general regard entertained for him by the English nobility and people that Henry's abandonment of his scheme of invading Scotland a few years before was in part owing; for it is said that the peace of Newcastle was brought about by the mediation of the Earl of Cornwall and other noblemen. Henry's barons could feel little pride or interest in supporting the projects of their own imbecile sovereign against the Scottish king; and some of them also, no doubt, still remembered their old association of arms with Alexander against Henry and the tyrant, his father. Alexander, like most of the other Scottish kings of those times, stood up throughout his reign for the independence of the national church with great spirit. Although a favourer of the clergy, however, he does not appear to have gone into any extravagant expenditure for the aggrandizement of their order. He founded, indeed, no fewer than eight monasteries for the Dominicant or Black Friars; and Boece supposes that his partiality to these mendicants may have been occasioned by his having seen their founder, St. Dominic, in France, about the year 1217. "The sight of a living saint," observes Lord Hailes, "may have made an impression on his young mind; but perhaps he considered the mendicant friars as the cheapest ecclesiastics: his revenues could not supply the costly institution of Cistertians and canons regular, in which his great-grandfather, David I., took delight."

Alexander was succeeded on the throne by his only son, Alexander III., who was born at Roxburgh on the 4th of September, 1241, and was now consequently only in his ninth year. There was reason to apprehend that the King of England might endeavour to take advantage of this occasion to renew his attempt against the independence of the kingdom; and, therefore, by the patriotic advice of William Comyn, Earl of Menteith, no time was lost in proceeding to the coronation of the young king. The ceremony took place at Scone on the 13th of July, the Bishop of St. Andrew's knighting the king as well as placing the crown on his head. Some of the other forms that were observed are curiously illustrative of the chequered intermixture of the two opposite colours of nationality now contending with one another in Scotland—the old Celtic spirit and usages, and the recently imported Anglo-Norman civilization. After the coronation oath, for instance, had been administered to the king both in Latin and in French, the language of the nobility, he was placed upon the sacred stone of destiny, which stood before the cross in the eastern end of the church, and while he there sate, with the crown on his head and the sceptre in his hand, a grey-headed Highland bard, stepping forth from the crowd, addressed to him a long genealogical recitation in the Gaelic tongue, in which, beginning, "Hail Alexander, king of Albion, son of Alexander, son of William, son of David," &c., he carried up the royal pedigree through all its generations to the legendary Gathelus, who married Scota, the daughter of Pharaoh, and was the contemporary of Moses. It may be doubted if Alexander understood a word of this savage pæan, but he is recorded to have expressed his gratification by liberally rewarding the venerable rhapsodist.

It would serve no useful end to load our pages with any detail of the intricate, and in great part very imperfectly intelligible struggles of adverse factions that make up the history of the kingdom during this as during every other minority in those times. It is sufficient to state that at the head of one of the two great contending parties was the powerful family of the Comyns, of which name it is said there were at this time in Scotland no fewer than thirty-two knights, several of whom were barons; the Baliols, among others, were adherents of this party: among their most distinguished opponents were the Earl of March and Dunbar, the Earl of Strathern, the Earl of Carrick, the

* Nisi nos injuste gravent. Dr. Lingard describes this treaty as "an arrangement by which, though he eluded the express recognition of feudal dependence, he (Alexander) seems to have conceded to Henry the substance of his demand." In fact, "the express recognition of feudal dependence" was not at all eluded by Alexander; it was made in the most distinct terms, but it was not made for the kingdom of Scotland, and therefore it was Henry, not Alexander, who conceded the point in dispute.

Bruces, the Steward of Scotland, and Alan Durward, who held the office of Great Justiciary, and was also one of the most distinguished soldiers of the age. But many of the nobility were constantly changing sides, according to the course and apparent chances of the contest. The king of England also soon found a fair pretence for interfering in Scottish affairs by giving his daughter Margaret in marriage to Alexander, according to an agreement which had been entered into soon after the births of the prince and the princess. Although neither party was yet quite eleven years old, the nuptials were celebrated at York with great magnificence on the 26th of December, 1251. Matthew Paris assures us that six hundred oxen, given by the Archbishop of York to furnish part of the marriage feast, were all consumed upon the first course! Men were heroic eaters in those days, certainly; but it will probably be admitted that the historian has judged prudently in not entering into further particulars, lest, as he says, his narrative "might become hyperbolical, and produce irony in the hearts of the absent."

On this occasion Alexander, according to custom, did homage to Henry for his English possessions; but when the latter demanded homage also for the kingdom of Scotland, the young Scottish sovereign, with a spirit and firmness remarkable for his years, said, "that he had been invited to York to marry the princess of England, not to treat of affairs of state; and that he could not take a step so important without the knowledge and approbation of his parliament." It was agreed, however, that Henry, in consideration apparently of his natural interest in the welfare of his son-in-law, should send a person in whom he placed confidence to Scotland, who might act in concert with the Scottish guardians of the young king. He sent, accordingly, Geoffrey of Langley, keeper of the royal forests, a man who had already acquired the worst reputation in England by the severity with which he exercised the powers of his odious office; but the Scottish barons, finding his insolence intolerable, soon compelled him to leave the country.

In 1255, we find the English king despatching a new mission to Scotland, under pretence of inquiring into certain grievances complained of by the queen, his daughter. At this time Robert de Ros and John de Baliol, two noblemen of the Comyn party, appear to have been at the head of the government under the name of Regents. Queen Margaret complained that she was confined in the castle of Edinburgh,—a sad and solitary place,—without verdure, and, by reason of its vicinity to the sea, unwholesome; that she was not permitted to make excursions through the kingdom, nor to choose her female attendants; and that, although both she and her husband had by this time completed their fourteenth year, they were still excluded from each other's society. By a scheme concerted between Henry and the party opposed to the Comyns, the Earl of March, Durward, and other leaders of that party soon after this contrived to surprise the castle of Edinburgh, and to get possession of the king and queen. They were immediately conveyed to the north of England, where Henry was with an army; and at last, in a meeting of the two kings at Roxburgh (20th September, 1255), a new plan of government was settled, to subsist for seven years, that is, till Alexander should have attained the age of twenty-one, by which all the Comyns were deprived of office, and the Earls of Fife, Dunbar, Strathern, and Carrick, Alexander the Steward of Scotland, Robert de Bruce, Alan Durward, and other principal persons of the same faction, were appointed regents of the kingdom and guardians of the king and queen.

This settlement appears to have been maintained for about two years; but, in 1257, a counter-revolution was effected through the junction with the Comyns of Mary de Couci, Alexander's mother, who had married John de Brienne, son of the titular king of Jerusalem, and had lately returned from abroad, animated with all her old hereditary hatred of the English influence, and strengthened both by her new alliance and by the favour and countenance of the pope. The lately expelled faction now suddenly rose in arms, seized the king and queen at Kinross, and so completely carried every thing before them that the principal adherents of the English interest all found it necessary to save themselves by instant flight. There can be no doubt that, with whatever justice or by whatever means, the Comyns contrived to make theirs appear to be the patriotic cause, and to gain, at least for the moment, the popular voice. They probably made use of the old cry of independence, and worked upon the sensitive national jealousy of England with good effect. Even the king, now that he was in their hands, was of course compelled to act along with them, and to submit to be their instrument. They put him at the head of their forces, and marched towards the English border, where it would appear that the adherents of the late government had rallied and collected their strength. No contest of arms, however, took place; the dispute was eventually settled by negociation; and it was agreed that while the chief power should remain in the hands of the Comyns and the queen-dowager, to six regents of this party should be added four of the members of the late government. Mary de Couci and her husband were placed at the head of this new regency.

The coalition thus formed seems to have substantially subsisted till the king came of age, and took the management of affairs into his own hands although, shortly after the new government was established, the Comyns lost their great leader, Walter, Earl of Menteith, poisoned, as was suspected, by his countess: the unhappy woman was believed to have been instigated to the commission of this crime by a passion she had formed for one John Russell, an Englishman of obscure birth according to Boece, whom she soon afterwards married. In 1260, on the Queen of Scots becoming pregnant, she and her

husband were permitted to go to her father in London, Henry engaging that neither the king nor his attendants should be required to treat of state affairs during their visit, and also making oath that he would not detain either the queen or her child if her delivery should take place in England. In the event of the death of Alexander, certain of the Scottish bishops and nobles were appointed to receive the child from the hands of Henry, and to convey it to Scotland; and in the list of these appear the names of the principal persons of both the great national parties. In February, 1261, the Queen of Scots was delivered at Windsor of a daughter, who was named Margaret, and through whom, as she was her father's first-born, his short line was destined to have its latest prolongation.

The year 1263 is the most memorable in the reign of Alexander. The Earl of Ross and other northern chiefs had, at the instigation of the Scottish king, invaded the Hebrides, or Western Islands, which were under the dominion of Norway, and had signalised their descent, according to the Norwegian chroniclers, by the most frightful excesses of savage warfare. Haco, the Norwegian king, immediately prepared for vengeance. Having collected a great fleet, he sailed from Herlover in the beginning of July. The Orkney Islands, which although formerly belonging to Norway, had been lately compelled to acknowledge the sovereignty of Scotland, were his first destination. Anchoring in the bay of Ronaldsvoe (now Ronaldsay), the formidable armament remained there for some weeks, during which the inhabitants both of the islands and of the opposite main-land were compelled to supply it with provisions and to pay tribute. It is recorded in the Norse chronicle of the expededition, that while the fleet lay at Ronaldsvoe "a great darkness drew over the sun, so that only a little ring was bright round his orb;" and it is found that the remarkable phenomenon of an annular eclipse must have been seen at Ronaldsvoe this year on the 5th of August. Such confirmations seem to revivify the long-buried past, and make its history read like a narrative of events of our own day. Haco now sailed for the south, and being joined as he proceeded by his allies, Magnus, the Lord of Man, and various Hebridean chiefs, he found himself at the head of a fleet of above a hundred sail, most of them vessels of considerable size. Dividing his force, he sent one powerful squadron to ravage the Mull of Cantyre; another, to make a descent on the Isle of Bute. The latter soon compelled the Scottish garrison of the castle of Rothsay, in that island, to surrender. In the mean time Haco himself entered the Frith of Clyde, and anchored in the Sound of Kilbrannan, between the main-land and the Isle of Arran. Additional accessions had by this time increased his fleet to a hundred and sixty sail. The Scottish government now attempted to avert the danger by negotiation: the abandonment of all claim to the Hebrides was offered by Alexander; but to these terms Haco would not listen. Some time however was thus gained, which was in various ways advantageous to the Scots and detrimental to their invaders. It allowed the former to improve their preparations for defence; it embarrassed the latter by a growing difficulty in obtaining provisions, and it exposed their fleet, upon a strange coast, to the hazards of the stormy season of the year that was fast approaching. Many of the inhabitants of the neighbouring country meanwhile had retreated for safety to the islets in Loch-Lomond. There, however, they were soon attacked by a division of the invading force under the command of the King of Man, who, first sailing to the head of Loch-Long, and plundering the shores as they passed, then dragged their boats across the neck of land that divides the two lakes. "The persevering shielded warriors of the thrower of the whizzing spear," sings a Norwegian celebrator of the exploit, "drew their boats across the broad isthmus. Our fearless troops, the exactors of contribution, with flaming brands, wasted the populous islands in the lake and the mansions around its winding bays." A devastating expedition into Stirlingshire followed under another chief. But now the heavens began to fight against them. One gale destroyed ten of their ships that lay in Loch-Long; and soon after, on Monday, the 1st of October, a tempest of tremendous violence from the south-west attacked the main squadron lying under the command of Haco in the Clyde, and tearing nearly every ship from its moorings, after casting several of them on shore, drove the rest, mostly dismasted or otherwise disabled, up the channel. The Scottish forces collected in the neighbourhood immediately fell upon the crews of the vessels that were stranded; but the Norwegians defended themselves with great valour; and assistance having been sent to them by Haco, when the wind had somewhat abated, they succeeded in driving off their assailants. As soon as daylight appeared, Haco, who had collected his shattered ships off the village of Largs, landed at the head of a strong force for the protection of two transports that had been among the vessels cast ashore the preceding afternoon, and which the Scots had attempted to plunder during the night. This movement may be said to have commenced what is called the battle of Largs. The Scottish army, led by Alexander, the Steward of Scotland, now came down from the surrounding high grounds; it consisted of a numerous body of foot, together with a troop of 1500 cavalry, who are described as being armed from head to heel, and as mounted on Spanish horses, which were also clothed in complete armour. The handful of Norwegians, drawn up in three divisions, one of which occupied a small hill, while the other two were stationed on the shore, were greatly outnumbered by this force; and Haco, as the engagement was about to commence, was, although with much difficulty, prevailed upon by his officers to row back to the ships for further aid. But he had scarcely got on board when another furious storm

came on, and rendered the landing of more men for the present impossible. In the mean time, the Scots had attacked the most advanced body of the Norwegians, who were soon obliged to fly in confusion. The rout immediately became general; numbers of the Norwegians threw themselves into their boats and attempted to regain their ships; the rest were driven along the shore amid showers of arrows from their pursuing enemy. Still they repeatedly rallied, and, turning round upon their pursuers, made an obstinate stand at every point where the ground favoured them. In this way, although still galled by the Scots hovering on their rear, they seem to have at length converted their flight into a slow and comparatively orderly retreat. Towards night, a re-enforcement from the ships having, notwithstanding the storm, which still continued, effected a landing by extraordinary efforts, the foreigners, if we may trust to their own account, even made a general attack upon the Scottish army, and, after a short resistance, succeeded in driving them back. They then re-embarked in their boats and regained the ships. But on the water the elements had been doing their destructive work even with more effect than human rage on land. Haco's magnificent navy was now reduced to a few shattered vessels; most of those which the wrath of the former tempests had spared, that of this disastrous day had dashed to pieces, and their fragments covered the beach. The Norwegian king sailed away to the island of Arran, and from thence through a course of stormy weather to Orkney, which he did not reach till the 29th of October. He proceeded no farther on his homeward voyage. An illness seized upon him, brought on probably by mental agony as much as by bodily exposure and fatigue, under which he lingered for some weeks, and at last expired on the 15th of December.*

The battle of Largs is the great event of the reign of Alexander. The Scottish historians make 24,000 Norwegians to have fallen in the slaughter of that day; and although there can be no doubt that this is an enormous exaggeration, still the overthrow sustained by the foreigners was complete, and the victory was among the most important the Scots ever won. It was their last conflict with the pirate kings. After negotiations which lasted for nearly three years, a peace was concluded with Norway, by which both the Hebrides and the Isle of Man, and all other islands in the western and southern seas of which that power might have hitherto held or claimed the dominion, were made over in full sovereignty to Scotland. The Western Islands were never afterwards withdrawn from the Scottish rule.

There is little more to relate under the reign of Alexander. In some transactions relating to ecclesiastical affairs in his later years, he maintained the independence of the national church with great firmness, and at the same time, with equal spirit and prudence, kept in check the encroaching ambition of the clergy. He was present with his queen and many of his nobility at the coronation of Edward I., in 1274, and on that occasion did homage, according to custom, for his English possessions. In 1278, he performed this ceremony a second time, declaring, according to the record preserved in the Close Rolls, that he became the liegeman of his lord, King Edward of England, against all people. This was substantially the same acknowledgment that Alexander II. had made to Henry III. in 1244. It was no admission of Edward's claim of feudal superiority over Scotland, as is conclusively proved, if there could be any doubt on the subject, by the sequel of the record, which expressly states that Edward "received it, saving his right and claim to homage for the kingdom of Scotland, when it shall please him to bring it forward."

The slight notice taken by history of the course of events in Scotland for twenty years after the battle of Largs, is the best evidence of the tranquillity and happiness of the country. We can collect little more than the general fact that the government of Alexander, after he took the management of affairs into his own hands, made him universally beloved by his people, and that peace and plenty blessed the land in his time. No foreign enemy assailed or threatened it; and the turbulence of its domestic factions seems also to have given way under the firm and judicious rule of the king. The friendly relations, too, that were maintained with England, and the intercourse that subsisted between the two countries, must have been highly favourable both to the increase of wealth and the general improvement of the useful arts and the habits of social life in Scotland. But clouds and storms were soon to succeed this sunshine.

Alexander had lost his queen, Margaret of England, in 1275; but, besides the daughter already mentioned, she had left him a son, named Alexander, born at Jedburgh on the 21st of January, 1264: David, a younger son, had died in his boyhood. In 1281 the Princess Margaret was married to Eric, king of Norway; and the following year the Prince of Scotland, now a youth of eighteen, was united to Margaret, daughter of Guy, Earl of Flanders. At this time the king himself, as yet only in his forty-first year, might reasonably have counted on a much longer reign; the alliances which he had formed for his children promised to enable him to transmit his sceptre to a line of descendants; and the people seemed entitled to look forward to the continuance of the present peace and prosperity of the country for many years. By a singular succession of calamities all these fair hopes were, one after the other, rapidly extinguished. First, in the latter part of the year 1283, died the Queen of Norway, leaving only an infant daughter. The death of Queen

* See "The Norwegian Account of Haco's Expedition against Scotland," in Islandic and English, with notes; by the Rev. James Johnstone, A.M.; 12mo., 1782: and "Observations on the Norwegian Expedition against Scotland, in the year 1263, and on some previous events which gave occasion to that War," by John Dillon, Esq., in "Transactions of the Society of the Antiquaries of Scotland," vol. ii., 4to. Edin. 1823, pp. 350—407.

Margaret was followed by that of her brother the Prince of Scotland, on the 28th of January, 1284. No time was lost by Alexander in taking the measures for the settlement of the succession which these events rendered necessary. On the 5th of February the parliament was assembled at Scone, when the estates of the kingdom solemnly bound themselves, failing Alexander and any children he might yet have, to acknowledge for their sovereign the Norwegian princess,—"the Maiden of Norway," as she is called by the old writers. The following year (15th April, 1285) Alexander married Joleta, the young and beautiful daughter of the Count de Dreux. The nuptials were celebrated at Jedburgh with great magnificence and much popular rejoicing, the nation anticipating from this new union the speedy restoration of all those prospects which the two recent deaths had overclouded. But death had not yet done all his work. Within a year after his marriage, on the 16th of March, 1286, as Alexander was riding in a dark night between Kinghorn and Burnt Island, on the northern shore of the Frith of Forth, his horse, on which he had galloped forward from his attendants, stumbled with him over a high cliff, at a place now known by the name of King's Wood End, when he was killed on the spot.

The loss of this excellent king would in any circumstances have been a heavy calamity to his country; but the blow could not have been received at a more unfortunate moment than the present. A long minority was now the least evil the kingdom had to dread, and that evil was certain if a worse should not take its place. The life of an infant, in a foreign country, alone stood between the nation and all the sure confusion and miseries of a disputed succession. The first proceeding of the Estates was to appoint a regency, at a meeting held at Scone on the 11th of April. But scarcely, it would appear, had the throne of Queen Margaret been thus set up, when it began to be undermined by plots and secret treason. The rule of a female sovereign was new to the country; the attempt to transmit his crown to a daughter had already failed in England, even when made in the most favourable circumstances, by Henry I.; there was everything in the situation of the infant Maiden of Norway to call forth, in its utmost strength, all both of prejudice and of reason that opposed itself to so rigid and extreme an application of the principle of legitimacy. Indeed, it must be confessed that the refined view of the rule of succession upon which Margaret's title rested was much better suited to times in which men have been long and thoroughly habituated to the advantages of regular government, than to the circumstances of that rude age and turbulent people; and it was therefore not to be expected that it should have been at once generally and unresistingly acquiesced in.

Surprise has sometimes been expressed that when the Scottish parliament, in 1284, settled the crown upon Margaret in failure of other children that might be born to Alexander, it did not go farther, and appoint who was to succeed in default of Margaret and her issue; but in truth it was the undetermined state in which this last point was left, that was likely most effectually to contribute to secure Margaret's succession. The main strength of her cause lay in there being no other certain heir to the throne if she was set aside. The choice was between her and a disputed succession. Had it not been for this, it is more than probable that the settlement in her favour would have been wholly disregarded after Alexander's death, with whatever solemnity it might have been made. The next heir, if a male of mature age, and a native of the country, would at once have been preferred to the foreign female infant. Even as matters stood, there was, it would seem, one party which had already formed the design of displacing Queen Margaret in favour of its own chief. Robert de Brus, or Bruce, lord of Annandale and Cleveland, was the son of Isabella, one of the three daughters of David, earl of Huntingdon, the brother of William the Lion. He and a number of his adherents, including some of the principal of the Scottish nobility, held a meeting on the 20th of September, 1286, at Turnberry Castle, in Ayrshire, the seat of Bruce's son, Robert Bruce, called Earl of Carrick in right of his wife, and there entered into an agreement, by which they bound themselves to adhere to one another on all occasions, and against all persons, saving their allegiance to the king of England, and to him who should gain the kingdom of Scotland as the rightful heir of the late king.* The intention of the parties to this bond would appear to have been to obtain the crown for Bruce, by the aid of the king of England, whom, with that view, they were prepared to acknowledge as Lord Paramount of Scotland. Edward however had, for the present, another scheme of his own, with which this of theirs could not be suffered to interfere.

It is doubtful in what manner, or on what pretext, Edward first found an opportunity of interposing in the affairs of the northern kingdom. It is known that two of the chief members of the regency, the Earl of Buchan and the Earl of Fife, died towards the close of the year 1288 (the Earl of Fife was murdered); and that from this time violent divisions arose in the government, and all things began to tend to confusion and anarchy. One account is, that the Estates of Scotland now made a formal application to the English king for his advice and mediation towards composing the troubles of the kingdom. But this statement does not rest upon any certain authority. In the end of the year 1289, however, Eric, king of Norway, opened a negotiation with Edward on the affairs of his infant daughter and her kingdom; and at Edward's request the Scottish regency sent three of its members to take part in a solemn deliberation which was appointed to be held at Salisbury. It was here agreed that the young queen should be

* Tytler, Hist. of Scot. i. 65.

immediately conveyed either to her own dominions or to England, Edward engaging in the latter case to deliver her, on demand, to the Scottish nation, provided that good order should be previously established in Scotland, so that she might reside there with safety to her person. No mention was made in this convention of an English match for Margaret; but it appears that Edward had already obtained a dispensation from Rome for her marriage to her cousin, his eldest son. A report to that effect was very soon after spread in Scotland; whereupon the Estates immediately assembled at Bridgeham, a village on the Tweed, and from thence addressed a letter to the English king, expressing in warm terms their gratification at the rumour that had reached them, and beseeching him to inform them if it was true. "If it is," they concluded, "we on our part heartily consent to the alliance, not doubting that you will agree to such reasonable conditions as we shall propose to your council." They wrote at the same time to the King of Norway, pressing him to send his daughter instantly to England.

Some months after this (on the 18th of July, 1290,) a treaty was concluded at the same place, by which everything in regard to the proposed marriage was finally arranged. Many stipulations were made for securing the integrity and independence of the Scottish kingdom; and all points, both of substance and of form, relating to that matter, were regulated with elaborate scrupulosity. But the event of a few weeks rendered all the painstaking and oathtaking of no effect. The Maiden of Norway having at length set sail for Britain, fell sick on her passage, and landing on one of the Orkney islands, died there, about the end of September: she was in her eighth year.

The fatality which seemed to have pursued the royal family of Scotland for about a century past was certainly very remarkable. Within that period it will be found that William the Lion and his posterity had made no fewer than ten marriages, and yet there was not now a descendant of that king in existence. Of these ten marriages so many as six produced no issue; the remaining four produced only four males and five females; and all these nine persons were now dead. It probably would not be possible to find in history another case of ten related households, as we may call them, and these forming the entire branch to which they belonged, being thus swept away, in so short a space of time, without leaving a vestige behind them, unless by the sudden ravages of war, or pestilence, or some similar widely destructive casualty.*

* As this is a curious fact in statistics, as well as in history, we subjoin a list of the ten marriages, with the issue of each :—

A.D. 1186..William the Lion (a son and three daughters).
1221..Alexander II. (none).
1221..Margaret, daughter of William the Lion, (none).
1225..Isabella, ditto (none).
1235..Marjory, ditto (none).
1239..Alexander II., second time (a son).
1242..Alexander III. (two sons and a daughter).
1281..Margaret, daughter of Alexander III. (a daughter).
1282..Alexander, son of Alexander III. (none).
1285..Alexander III., second time (none).

In this failure of the line of William the Lion, the heir to the crown was to be sought for among the descendants of his younger brother, David, Earl of Huntingdon. David, besides a son, who died without issue, left three daughters; the eldest, Margaret, married to Alan of Galloway; the second, Isabella, married to Robert Bruce; the third, Ada, married to Henry Hastings. Margaret's eldest daughter, Dervorgoil (she had no son), married John de Baliol, Lord of Bernard Castle, by whom she had a son, John Baliol; Robert Bruce, Earl of Carrick in right of his wife, was the son of Isabella; John Hastings was the son of Ada. Baliol, therefore, was the grandson of the eldest daughter of David, Earl of Huntingdon; Bruce and Hastings were the sons of his two younger daughters. According to the rule of descent as now established, no question about who had the right of succession could be raised in such a case; the descendant of the elder daughter, however remote, would be preferred to the descendant of the younger daughter, however near; and, indeed, even in that age this rule, which flows directly and necessarily from the admission of the principle of primogeniture, seems to have been all but universally recognised by the authorities on this part of the law. Still the point was not so distinctly settled that a debate might not be raised on it, or that, supported by popular or party zeal, the one claim might not be put forward, and asserted to be that of law and right, with as much plausibility to the general understanding, and as fair a chance of success, as the other.

When the death of the queen first became known, it was probably doubtful how many competitors might start up for the vacant throne, or to what extent the controversy might be entangled by their conflicting claims. It was certain, however, that a controversy there would be, and in all likelihood a long and fierce one; and, also, that a state of circumstances had arisen in which everything was to be feared for the national independence from the ambition of the English king, and the ascendancy in Scottish affairs his artful management and the course of events had already given him. The news, therefore, spread universal grief and consternation throughout Scotland. It seemed the heaviest as it was the last of the succession of sudden strokes of misfortune that had fallen upon the country, and the consummation of the public calamities.

According to one account, it was now that the embassy to Edward, soliciting his advice and mediation, was sent by the estates of Scotland. From what immediately followed, it does appear probable that some such application may have been now made by the Scots. Upon this supposition we can most easily account for the invitation which Edward addressed to their nobility and clergy to meet him at Norham, a town on the English side of the Tweed, and the readiness with which they obeyed his summons. The conference took place on the 10th of May, 1291. Here Edward dis-

tinctly announced that he proposed to regulate the succession to the throne of Scotland as superior and lord paramount of that kingdom, and insisted upon their recognition of his title as such before any other business should be proceeded with. Little doubt can be entertained that many of the persons present were perfectly prepared for all this; but it took a part of the assembly by surprise; and at length one voice ventured to respond, that no answer could be made to the demand that had been addressed to them while the throne was vacant. "By holy Edward!" cried the English king, "By holy Edward! whose crown I wear, I will vindicate my just rights or perish in the attempt!" At last the meeting was adjourned till the morrow, and from that day, on the Scots requesting a longer delay, it was further adjourned to the 2nd of June. Edward had already issued writs to his barons and other military tenants in the northern counties, commanding them to assemble at Norham on the 3rd of the same month with horses, arms, and all their powers.

The meeting of the 2nd of June took place on a green plain called Holywell Haugh, near Upsettlington, on the north bank of the Tweed, opposite to Norham Castle, and within the territory of Scotland. Among those present were no fewer than eight persons who, under various titles, laid claim to the crown. One of these was Robert Bruce, Lord of Annandale. Turning first to him, Robert Burnel, Bishop of Bath and Chancellor of England, demanded "Whether he acknowledged Edward as Lord Paramount of Scotland? and whether he was willing to ask and receive judgment from him in that character?" Bruce, says the official record of the proceedings, definitively, expressly, publicly, and openly, declared his assent. The other seven competitors afterwards did the same. Next day, John Baliol and another competitor, making ten in all, appeared, and followed their example. "The whole form of this business," as Lord Hailes remarks, "appears to have been preconcerted." There were probably few of the assembled nobility and clergy that were not the sworn adherents of one or other of the competitors; they were divided into the Bruce party and the Baliol party; and they were of course severally ready to follow in whatever direction their chiefs might lead them. With regard, again, to the two great claimants of the crown themselves, if either consented to submit to the arbitration of Edward, it is obvious that his rival had no alternative but to acquiesce in the same mode of deciding the question, unless he were prepared to resign all hope and chance of success. The true explanation, however, of Baliol's absence on the first day of the meeting probably is, that he sought by this piece of management, perhaps in concert with Edward, to throw upon his opponent the odium of taking the first step in the unpopular course of thus surrendering the national independence. There is reason to believe that, whether swayed by his view of the justice of the case or by other considerations, Edward had, from the first, determined that Baliol should have the crown, and that all the anxious and protracted deliberation he affected to give to the subject was merely so much hollow and hypocritical formality. Of the other claimants who presented themselves along with Baliol and Bruce, most seem to have been brought forward only to throw a greater air of perplexity over the case, and to give some chance of dividing any opposition that might eventually be made to the successful candidate, or even, it may be, with the object of leaving the question of the succession to the Scottish crown still open, if any casualty should remove either of the two principal competitors before Edward's designs for the complete subjection of the country should be matured; for Edward's ultimate aim certainly went far beyond the assertion and maintenance of a mere feudal superiority over Scotland. The whole course of his conduct leaves no room to doubt that he intended to treat Scotland as he had treated Wales, that is to say, to make it, to all intents and purposes, a part of the dominions of the English crown. This union of the whole island under one sceptre was evidently the grand scheme upon which he had set his heart, and which inspired and directed his whole policy. At first he hoped to accomplish his object, in so far as Scotland was concerned, by the marriage of his eldest son with the queen of that country; when the death of Margaret defeated this arrangement, he could not for the present proceed to the attainment of his end by so direct a path; but that end was still the same, and was never lost sight of for a moment. At this very meeting at Norham, the English chancellor protested, in the name and in the presence of the king his master, "that, although he now asserted his right of *superiority* with the view of giving judgment to the competitors, yet that he meant not to relinquish his right of *property* in the kingdom of Scotland, acclaimable hereafter in fit manner and time convenient."* And the manner in which he treated Baliol after he had set him upon the throne as clearly indicates the same purpose, and indeed is only intelligible on that supposition. All this has been very strangely overlooked by some of the writers of this part of our history.

The proceedings at Norham, on the 3rd of June, were terminated by an unanimous agreement that a body of 104 commissioners should be appointed to examine the cause and report to Edward; forty being named by Baliol, the same number by Bruce, and the remainder by Edward himself, who was, moreover, empowered to add to the commission as many more persons as he chose. On the 11th of the same month, the regents of Scotland made a solemn surrender of the kingdom into the hands of the English king, and the keepers of castles made a like surrender of their trusts; in both cases, however, on the condition that Edward should make full restitution in two months from the date of his award in the cause of the succession.

Gilbert de Umfreville, Earl of Angus, alone

† Foedera ii. 551.

BALIOL SURRENDERING THE CROWN TO EDWARD. Opie.

refused to deliver the castles of Dundee and Forfar, which he held, without an obligation to indemnify him from Edward and all the competitors. It was found expedient to comply with the terms thus insisted upon by "the only Scotsman," observes Lord Hailes, "who acted with integrity and spirit on this trial of national integrity and spirit." On the 15th of the same month Bruce and his son, Baliol, and many of the principal Scottish barons, swore fealty to Edward. One churchman only, the Bishop of Sodor, presented himself to perform the disgraceful ceremony. The peace of the King of England, as Lord Paramount of Scotland, was then proclaimed, and the assembly finally adjourned to the 2nd of August.* Edward himself, in the mean time, made a progress through Scotland, in the course of which he visited Edinburgh, Dunfermline, St. Andrew's, Kinghorn, Linlithgow, and Stirling; wherever he appeared, calling upon persons of all ranks, from bishops and earls to burgesses, to sign the rolls of homage as his vassals. Elsewhere officers were appointed to receive the oaths; whoever refused to take them being ordered to be seized and imprisoned.

When the commissioners met at Berwick, and proceeded to business in the presence of Edward, on the 3rd of August, twelve claimants of the crown in all presented themselves. Soon afterwards a thirteenth was added, in the person of King Eric of Norway. All of them, however, with the exception of Baliol, Bruce, and Hastings, withdrew their pretensions before any decision was pronounced. The rest, in fact, —some of them descendants from illegitimate daughters of William the Lion, others alleging a descent from some earlier king,—had none of them any ground whatever on which to come in before the posterity of David, Earl of Huntingdon.

The final decision of the cause did not take place till the following year. On the 2nd of June, 1292, the Commissioners reported that there ap-

* Hailes, i. 242—252.

peared to be a diversity of opinion among the fourscore Scottish members of their body, by whose advice, if unanimous, it would have been the duty of the king to have regulated his conduct; and they therefore declined to give any advice without hearing the better judgment of the prelates, nobility, and other wise men of England. On this, the further consideration of the question was appointed by Edward to take place in a parliament which he summoned to meet at Berwick on the 15th of October. Here Baliol and Bruce were fully heard in defence of their respective claims; upon which the assembly came unanimously to the conclusion "that by the laws and usages of both kingdoms, in every heritable succession, the more remote in one degree lineally descended from the eldest sister, was preferable to the nearer in degree issuing from the second sister;"—thus declaring, by implication, against the claim of Bruce as opposed to that of Baliol. In another meeting, on the 6th of November, Edward formally pronounced his decision "that Bruce should take nothing in the competition with Baliol." Bruce and Hastings now demanded each a third of the kingdom, on the ground that it was a divisable inheritance; but this doctrine the assembly unanimously rejected. Finally, on the 17th of the same month, in the great hall of the castle of Berwick, Edward gave judgment, "that John Baliol should have seisine of the kingdom of Scotland." But, again, at this, the termination, as a year and a half before, at the commencement of these proceedings, the English king solemnly protested "that the judgment he had thus given should not impair his claim to the *property* of Scotland." On the 19th the regents of Scotland and the governors of castles were ordered to surrender their respective trusts to the new king; and the same day the great seal that had been used by the regency was broken into four parts, and the pieces deposited in the Treasury of England, "in testimony, to future ages, of England's right of superiority over Scotland." The next day Baliol swore fealty to Edward at Norham. On the 30th (St. Andrew's day) he was solemnly crowned at Scone. Soon after he passed into England, and on the 26th of December did homage to Edward for his kingdom at Newcastle: and thus finished the first act of this extraordinary drama.

Events that unexpectedly arose now called away the English king to another scene. Edward's progress at home had not been viewed without serious alarm abroad. The subjugation of Wales and Scotland, by leaving him master of the whole island of Great Britain, rendered him most formidable to all his continental neighbours, and to none so dangerous as to France, where there was a source of dissension ever open, and where the English had a footing that enabled them at all times to carry the war into the heart of the country. On former occasions, several of the French kings had given countenance and encouragement,—if little or nothing more,—to both Scots and Welsh when up in arms against the Anglo-Norman sovereigns; but now Philip le Bel thought that the best thing to do was to exert all his strength and drive the English from what was left of their continental dominion. The moment seemed favourable; Edward was absorbed by his great project; and as for the justice of the undertaking, had not Philip as good a right to gather up the scattered fragments of France, and to make of them a respectable whole,—a united and powerful kingdom,—as Edward had to seize and consolidate the ancient independent states of Great Britain in the same view?

The English sovereign, however, was too politic not to see and provide for these schemes: he had long watched Philip with a jealous eye, and while he wisely kept his own armies at home, he had courted alliances abroad, and laboured to raise barriers against Philip's ambition. In the south, by means of presents and flattering assurances, he had won over the powerful Count of Savoy; in the north, he had a good understanding with the Emperor, whom he afterwards subsidized; he had married his daughter Margaret to Henry Count of Bar, whose territories gave an easy access into France on the east; and, at a later period, he made an alliance with Guy Earl of Flanders. The French, moreover, accuse him of opening and maintaining a correspondence in the interior of France with the disaffected subjects of Philip, an accusation which Edward retorted. Matters were in this state when a paltry broil gave rise to sanguinary hostilities. Some English and some Norman sailors met at a watering-place, in or near to the Port of Bayonne, and quarrelled about which party should fill their casks first. An English mariner struck a Norman with his fist; the Norman drew his knife; his adversary closed with him, and, after a scuffle, threw him: in the fall the Norman, it was said, fell upon his own knife and was killed. The English sailor's comrades saved him from the fury of the opposite party, and, according to the French account, the authorities of Bayonne, which city belonged to the English, refused the Normans proper satisfaction. Burning with revenge, for they maintained that their companion had been foully murdered, the Normans put to sea, and, lying in wait, they seized the first English ship of inferior force they encountered, and taking from it a merchant of Bayonne, they hanged him at the yard-arm, with a dog hung to his feet. Reprisals soon followed, and the mariners of the Cinque Ports pursued their vengeance with relentless fury, hanging nearly every Norman they could take upon the seas. The Normans called in the assistance of the Genoese and the French, for France was now beginning to have a considerable mercantile navy, and even a royal fleet, one of the immense advantages derived from expelling the English and clearing her sea-board. Our mariners at the same time procured the aid of those of Ireland, and Gascony, and Holland. Wherever these opposite parties met, they fought with deadly

rancour, carrying on a war on their own account, without any commission from their respective governments; for though it was known or suspected that Philip encouraged the French, he, as well as Edward, seemed for a time to remain indifferent spectators. A Norman fleet of 200 or more vessels, of all sizes, swept the English Channel, plundered the sea-coast of Gascony, hanging many mariners, and then returned with their booty and the cargoes of wine they had been to purchase to the port of St. Mahe, in Brittany. They had scarcely cast anchor when an English fleet appeared. The mariners of the Cinque Ports, still acting under their own commission, had got ready some stout ships: they were only eighty in number, but they were of superior size, and manned with picked seamen. In an evil hour for themselves, the Normans accepted the challenge to a pitched battle, which was fought round a ship anchored near the coast, on a spot agreed upon by both parties. After a desperate conflict, where every man fought as in a personal quarrel, the English gained a complete victory, taking every one of the Norman ships, and killing or drowning nearly every mariner on board, for no quarter was given in this savage war. Thus the most vindictive feelings were excited between the two nations before the kings took any open part in the hostilities that were carried on.*

But now Philip, enraged himself and borne forward to the accomplishment of his favourite project by the universal wrath of the nation, declared his determined enmity. By certainly a strained and exaggerated interpretation of his feudal rights and jurisdiction, he pretended that he could punish Edward as Duke of Aquitaine, in which character he was a vassal of the French crown. He sent officers to seize some of Edward's estates, but these were driven back by John St. John, an English officer: he then caused a summons to be issued by his judges ordering the "Duke of Aquitaine" to appear at Paris after the feast of Christmas, and answer for his offences against his suzerain. Edward sent a bishop, and then his own brother Edmund, to negotiate. This Edmund appears to have been a very believing, simple personage; for, crediting Philip's assertion that he wanted no acquisition of territory, but merely a striking show of satisfaction to his own injured honour, he consented to surrender Gascony for forty days, at the end of which it was to be faithfully restored to the English king. Upon this surrender, which in some cases gave Philip a military possession of the province, the summons against Edward was withdrawn, and the French king declared himself satisfied. When the forty days had elapsed, Edward demanded repossession, which, as a matter of course, was refused to him. Philip pleaded very triumphantly, in his own court, against some English advocates, and, with a bold contempt of appearances and of the recent agreement, pronounced a judgment of forfeiture because Edward had not presented himself as a vassal ought. De Nesle, the Constable of France, was sent to seize some of Edward's cities and towns, and he succeeded in several instances because the nobles declared against the English. Soon after the feast of Easter, Philip again summoned Edward to plead as Duke of Aquitaine before his peers of France, and, upon his non-attendance, he declared him contumacious and dis-seised of all his lands in France.*

Edward now prepared to plead, but it was with the sword. Having formally renounced the homage of the French king, he got ready a powerful fleet and army; but he was detained for several weeks by contrary winds, and, while he lay at Portsmouth, the Welsh, who thought he was gone, broke out in a general insurrection, to which it seems probable that Philip was no stranger. Detained at home by this circumstance, Edward dispatched a small force to Gascony, and gave commission to his ships to plunder the French coast, upon which a number of fierce sea-battles were fought, the victory falling almost invariably to the English, who were principally commanded by the lord John Botetourt, Sir William de Leyborne, and a "valiant knight of Ireland," whose name is not mentioned. As for Edward himself, he turned with his usual rapidity and vigour against the Welsh, who had taken many castles and towns, and driven the English across the marshes with dreadful loss. It took him some months to suppress this bold struggle for independence: he carried on the war through all the severities of winter, suffering great hardships, and encountering many personal dangers; but in the following spring the Welsh once more fell beneath the mighty weight of his arms and policy: Madoc, their brave leader, surrendered to the conqueror; the most dangerous of the chieftains were thrown into dungeons for life; and after the sacred summits of Snowdon had been again invaded, and the country again wasted with fire and sword, a mournful peace was restored. In none of the old accounts either of this or of the preceding conquest do we find any mention of Edward's hanging the Welsh bards; the circumstance seems to have been first mentioned by a writer who lived some three centuries after.† The "ruthless king," however, though not wantonly cruel, was still not a man to hesitate at such an execution if he deemed it useful to his state views; and it is at least probable that many of the bards, who must have been hateful to him, as they cherished and gave enthusiasm to the people's love of independence, may have felt his rigour, and that popular tradition has only exaggerated and generalized a real fact.‡

When Edward rode a conqueror from the mountains of Wales, he thought that he should at last

be allowed to proceed to France, and punish what he considered the execrable perfidy of Philip; but the spirit of liberty was again awake in the mountains of Scotland, and he was once more compelled to forego his continental expedition. He, however, sent his brother Edmund with a small force to Guienne, where the barons, who could never remain satisfied for a year with either the English or the French, were already tired of Philip. Edmund died soon after landing; but the Earl of Lincoln, who succeeded to his command, drove the French from most of the towns they had occupied. These successes, however, were not lasting: Charles de Valois, Philip's brother, recovered those places; and the Count d'Artois, the king uncle, taking the command of a numerous and excellent army, beat the English in several encounters, and finally expelled them from nearly all the country, with the exception of a few maritime towns. Edward's continental allies did nothing at the time in his defence. A little later the Duke of Brittany raised an insignificant force, and joined a body of English that landed in his country; but this prince was as volatile as the Gascons, and changed sides three or four times in the course of as many years. His people paid dearly for his vacillating policy, being harried at each change either by the soldiers of Philip or the sailors of Edward. On one occasion an English fleet ravaged the whole coast of Brittany from Vannes to St. Malo, inflicting great mischief on the defenceless inhabitants, but in no way contributing to the recovery of Edward's lost dominions. Several attempts were made by Normans, Bretons, and French, to avenge these injuries by attacks and surprises on the English coast, and on one occasion the town and priory of Dover were sacked and partially burnt. As the men were absent, *only* the women and children were butchered; but, before the invaders could get back to their ships with their plunder, the men of Dover returned, and slew some hundreds of them. But we must turn from this most savage yet desultory warfare on the English coast, to the interior of Scotland.

Scarcely had Baliol been fairly seated on his vassal throne when he was made to feel all the dependence and degradation of his position. Even before the year had expired, on one of the last days of which, as related above, he had done homage for his kingdom to his English lord paramount, Edward, in an angry altercation that arose out of an appeal brought by a citizen of Berwick against a judgment of the Scottish courts, to defend which he had compelled Baliol to appear with his principal prelates and nobles in the royal chamber at Newcastle, frankly informed him that he should persist in hearing in England every cause regularly brought before him from Scotland, and that he would summon the king of Scotland to appear personally at the hearing of every such cause in which he should think his presence necessary. Nor did this prove an empty threat. In the course of the following year Baliol was repeatedly called upon to submit to the annoyance and intolerable indignity of thus appearing in the English courts to answer as a defendant in all sorts of causes. Such treatment could only have had one object, and, if it had been tamely acquiesced in, one effect,—to make the menial king utterly contemptible in the eyes of his subjects. A generous reluctance to join with the crowd in bearing hard upon one otherwise unfortunate, has prompted some modern writers to dispute the justice of the popular odium that rests on the memory of John Baliol, and to contend that he was by no means deficient in eminent and estimable qualities. Lord Hailes attributes to him a high spirit, and speaks of him as having erred only in enterprising beyond his strength. After all, however, the estimate that seems to have been formed of him in his own day is perhaps most consonant with the entire course of his life, both while he sat on a throne, and after he descended from that elevation; on the whole, the name of *Toom* (that is, empty) *Tabard*, which he used to receive among his countrymen, seems to have aptly enough expressed his unmagnanimous, inefficient character. At the commencement of Edward's rough usage he bore it with all submission. Immediately after the declaration of the English king that has just been mentioned, he gave Edward a solemn discharge from all the obligations he had contracted by the treaty of Bridgeham in 1290, which treaty was now the sole remaining security to his country for the possession of any national rights, and by which, in particular, provision was made against the very grievance, the galling humiliation, under which he was now made to smart, by one of the clauses which declared that no native of Scotland should be compelled to answer out of the kingdom in any legal cause, either civil or criminal. But the tyranny was so unrelentingly persisted in, and carried so far, that if he had the spirit of a worm it must have roused him at last. An appeal respecting the succession to some lands in Fife was the case in which his patience gave way. In the first instance he ventured to take no notice of the usual order to present himself at the hearing of the cause. But he did not persist in this bold course. On receiving a second summons, he yielded obedience so far as to make his appearance in the English parliament on the day named, the 15th of October, 1293. When asked what defence he had to make to the appeal, he said,—"I am king of Scotland. To the complaint of the appellant, or to aught else respecting my kingdom, I dare not make answer without the advice of my people."—"What means this?" cried Edward: "You are *my* liegeman; you have done homage to *me*; you are here in consequence of *my* summons." Baliol, however, would only repeat his first answer. He declined even to ask an adjournment of the cause. The parliament then resolved that the king of Scots had offered no defence; that in his answer he had been guilty of a manifest contempt of the court, and of open disobedience; that the appellant should have damages of the king of Scots; and,

finally, "because it is consonant to law that every one be punished in that which emboldens him to offend, that the three principal castles of Scotland, with the towns wherein they are situated, and the royal jurisdiction thereof, be taken immediately into the custody of the king, and there remain until the king of Scots shall make satisfaction for his contempt and disobedience." On the prayer of Baliol, however, Edward, before this sentence was publicly intimated, consented to stay all proceedings till the day after the Feast of the Trinity in the following year. Before that day arrived, war between England and France broke out on the seizure of Guienne by Philip; and in the new position of his affairs, Edward had his hands for the present too full of work in defending himself against his own liege lord to have leisure for the further humiliation and oppression of the king of Scots.

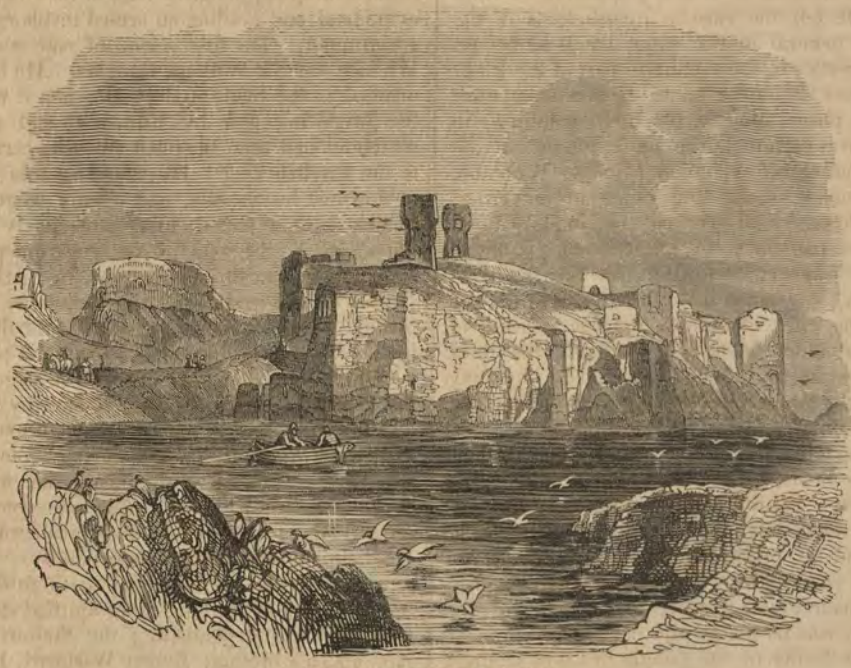
The opportunity, however, was too tempting a one not to be seized by the latter for a strenuous effort to cast off the yoke. Hitherto the nation, struck down by the irresistible course of events, and deserted by its natural leaders, had lain, as it were, stunned and in despair. Its old spirit now began to awaken as a new dawn of hope appeared. The nobles themselves,—they whose selfish or factious ambition had laid their country at the feet of the English king,—had many of them by this time been roused to a sense of the bondage into which they had fallen. Their first measures, however, were cautiously taken. A parliament, which met at Scone in the latter part of the year 1294, on pretence of lightening the public burdens, directed that all the Englishmen maintained at the court should be dismissed; and then appointed a council of four bishops, four earls, and four barons, without whose advice the king was restricted from performing any public act. These arrangements may have been made with Baliol's full concurrence; but it is more probable that they were dictated by a distrust of him. It is asserted indeed by English writers that Baliol was at this time kept by his subjects in a state very closely resembling captivity.

The suspicions of Edward were naturally enough excited by these proceedings. He required that Berwick, Roxburgh, and Jedburgh should be delivered to the Bishop of Carlisle, to remain in his hands during the war between England and France. With this demand the Scottish government deemed it prudent to comply, although they were at the moment negotiating an alliance with the French king. This treaty,—"the groundwork," observes Lord Hailes, "of many more, equally honourable and ruinous to Scotland," was signed at Paris on the 23rd of October, 1295. By it the King of Scots, "grievously offended at the undutiful behaviour of Edward to the King of France, his liege lord," engaged to assist Philip in his wars with his whole power, and at his own charges. Towards the end of March, 1296, accordingly, a Scottish army, consisting of 40,000 foot soldiers and 500 cavalry, invaded Cumberland, and, laying waste the country as they proceeded, marched to Carlisle, and attacked that place. Here, however, they were repulsed, and that with circumstances of unusual disgrace, if we may credit the English historians, who assert that the town having been set on fire, and the citizens having left their posts to extinguish the flames, the women flew to the walls and compelled the besiegers to retire. Another inroad, which they made a few days after into Northumberland, was not more successful. Meanwhile Edward himself, at the head of a great army, was already at the borders. A pardon had been proclaimed for all outlaws and malefactors who should join the expedition; and the force which now rolled on to pour upon the Scottish rebels the vengeance of their English master, consisted of 30,000 foot and 4000 horse. Its numbers were farther swelled on its arrival in the north by a body of 1000 foot and 700 horse, brought by Anthony Beck, the warlike Bishop of Durham. Crossing the Tweed, the royal army marched direct upon the town of Berwick, which either had never been delivered by the Scots to the Bishop of Carlisle, according to their late promise, or had freed itself again from his authority. A strong garrison, composed of the men of Fife, now defended the town, besides a smaller force that held the castle. The English king commenced the attack at once by sea and land; of his ships, three were burnt, and the rest compelled to retire; but all resistance soon gave way before the impetuous onset of the soldiery; Edward himself, mounted on his horse Bayard, was the first who leaped over the dike that defended the town. In the devastation and carnage that followed no quarter was given; no pity, no human feeling, turned aside the sword from infancy, or womanhood, or grey hairs; the inhabitants, with the garrison, were indiscriminately butchered. The numbers that perished are variously stated, but they undoubtedly amounted to many thousands: the massacre was continued for two days, during which no one escaped whom the infuriated victors could reach. A party of thirty Flemings had posted themselves in a building called the Red Hall, which the resident merchants of their nation held by the tenure of defending it at all times against the English. They stood out gallantly till the evening of the first day; the building, which they would not surrender, was then set fire to, and they perished, every man of them, in the flames.

Berwick was taken on the 30th of March. On the 5th of April, a bold ecclesiastic, Henry, Abbot of Aberbrothock (otherwise Arbroath), arrived in the town a messenger from the Scottish king, and delivered to Edward Baliol's solemn renunciation of his allegiance and fealty. "What a piece of madness in the foolish traitor!" exclaimed Edward, when the message had been delivered; "since he will not come to us, we will go to him."* A pause of a few weeks, to make the blow the surer, did not prevent

* Ha, ce fol felon tel folie faict! s'il ne voult venir à nous, nous viendrons à lui.

this threat from being both speedily and effectually executed. Earl Warenne was first sent forward with a chosen body of troops to recover the castle of Dunbar, which the Countess of March had delivered to the Scots, while her husband, by whom it was held, served in the army of Edward. The Scottish army, in full strength, advanced to its relief, when they were engaged by Warenne, and completely routed, with the loss of 10,000 men. This action was fought on the 28th of April. The castle then surrendered at discretion. On the 18th of May that of Roxburgh was given up by James



Ruins of the Castle of Dunbar.

the Stewart of Scotland, who at the same time swore fealty to Edward and abjured the French alliance. The castles of Dunbarton and Jedburgh soon after surrendered. That of Edinburgh stood a short siege, but it also soon capitulated: no attempt was made to defend that of Stirling. Thus, in the space of about two months, all the principal strongholds of the kingdom were in Edward's hand, and the conquest of the country was complete. A message (very different from his last) now arrived from Baliol, offering submission and imploring peace. Edward, in reply, desired him to repair to the castle of Brechin, where the Bishop of Durham would announce to him the terms on which his surrender would be accepted. Soon after, Baliol laid down his kingly state in a ceremonial of the last degree of baseness and humiliation. Divested of every ensign of royalty, he presented himself before the Bishop of Durham and an assembly of English barons, and standing with a white rod in his hand, went through a detailed confession of all the offences which, misled by evil and false counsel, as he affirmed, and through his own simplicity, he had committed against his liege lord—concluding the recital by an acknowledgment of the justice of the English invasion and conquest, and by therefore freely resigning to the English king his kingdom, its people, and their homage. The old accounts differ as to the exact date, and also as to the scene of this penance; but it was most probably performed on the 7th of July, and, as the tradition of the neighbourhood still reports, in the churchyard of Strathkathro, in Angus.* Edward was at this time at Montrose.† He proceeded northward as far as Elgin—the nobility, wherever he passed, crowding in to swear fealty, and to abjure the French alliance. It was on his return from this triumphant progress that he ordered the famous stone on which the Scottish kings had been wont to be crowned, to be removed from the abbey of Scone, and conveyed to Westminster, in testimony, says an English contemporary chronicler, of the conquest and surrender of the kingdom.‡ He appears to have been at St. Johnstone's, or Perth, on Wednesday, the 8th of August. By the 22nd, he was once more at Berwick; and on the 28th he held a parliament in that town, at which great numbers both of the Scottish laity and clergy presented themselves to take the oaths of fealty. He then pro-

* See Hailes, i. 293; Tytler i. 429, 430; and Chambers's Picture of Scotland, ii. 253.

‡ Hemingford.

ceeded to finish his work, by settling the government of the conquered country. Here his measures were characterized by great prudence and moderation. He ordered the forfeited estates of the clergy to be restored. He even allowed most of the subordinate civil functionaries who had held office under Baliol, to retain possession of their places. He left the various jurisdictions of the country in general in the same hands as before. The chief castles in the southern part of the kingdom, however, he intrusted to English captains; and he also placed some of his English subjects in command over certain of the more important districts. Finally, he appointed John de Warenne, Earl of Surrey, under the name of governor, Hugh de Cressingham as treasurer, and William Ormesby as justiciary, to exercise the supreme authority. A royal exchequer, on the model of the English, was established at Berwick. Thus ended in the utter extinction, for the present, of the national independence of Scotland, the most miserably abortive attempt ever made by any people for the preservation or recovery of that first and most indispensable of national blessings.

But although Edward had put down the rebellion of the Scots, he had not subdued their spirit of resistance. Within a few months after this settlement of the country it was again in insurrection. The last and all preceding attempts to throw off the foreign yoke under which the kingdom groaned had been made under the direction of the government; there was no longer any native government; but a great leader of the people had now stepped forth from their own ranks. This was the renowned William Wallace, the second son of a knight of ancient family, Sir Malcolm Wallace, of Ellerslie, in Renfrewshire. Wallace had all the qualities of a popular hero—a strength and stature corresponding to his daring courage, and also, it cannot be doubted from the known history of his career, as well as from his traditionary fame, many intellectual endowments of a high order,—decision, military genius, the talent of command, a stirring though rude eloquence, and in every way a wonderful power of reaching the hearts of men, and drawing them along with him. Above all, an enthusiastic patriotism, and a fierce and unextinguishable hatred of the English dominion, were passions so strong in Wallace, that while he lived, be the hour as dark as it might, all felt that the cause of the national independence never could be wholly lost. It is his glorious distinction that, while all others despaired of that cause, he did not despair—that when all others submitted to the conqueror, he betook himself to the woods, and remained a freeman—that when there was no other to renew the struggle, he started up in that time of universal dismay and prostration, and showed, by an example precious to all time, that even in the worst circumstances nothing is really gone for ever where the spirit of hope and effort is not gone.

Wallace is first mentioned in the month of May, 1297. At this time he was merely the captain of a small band of marauders, most of them probably outlaws like himself, who were accustomed to infest the English quarters by predatory attacks. Their numbers, however, rapidly grew as reports of their successful exploits were spread abroad. Suddenly we find the robber-chief transformed into the national champion, joined by some of the chief persons in the land, and heading an armed revolt against the government. The first person of note who joined Wallace was Sir William Douglas. He had commanded in the castle of Berwick when it was taken the preceding year by Edward; and after his surrender had been liberated upon swearing fealty to the English king. Disregarding this oath, he now armed his vassals, and openly went over to Wallace. The united chiefs immediately marched upon Scone, the seat of the government. Earl Warenne was at this time absent in England, and Ormesby, the justiciary, was acting as his lieutenant. That functionary, with difficulty, saved his life by flight; but much booty and many prisoners fell into the hands of the insurgents, and the English government was, in fact, by this bold and brilliant exploit, for the moment overthrown. For some time the neighbouring country was wholly at the mercy of the insurgents, who roved over it, assaulting every place of strength that refused them admission, and massacring every Englishman who fell into their hands.

Many persons of note and distinguished rank now crowded to the once more uplifted standard of freedom and independence; the Stewart of Scotland and his brother, Robert Wisheart, Bishop of Glasgow, Alexander de Lindesay, Sir Richard Lundin, and Sir Andrew Moray of Bothwell, are especially mentioned. But no accession was more important, or more gladly welcomed, than that of the young Robert Bruce, the son of Robert Bruce who had married the countess of Carrick, and the grandson of him who had been a competitor with Baliol for the crown. A few years before this, Bruce's father had resigned the earldom of Carrick, which he held in right of his wife, to his son; and the latter, by the possession of this lordship, now commanded a territory reaching from the Frith of Clyde to the Solway. The course taken by Baliol had hitherto naturally determined the conduct and position of the rival family. So long as Baliol stood even nominally at the head of the patriotic cause, the Bruces were almost necessarily on the other side. In the last days of Baliol's reign the Scottish government issued an order confiscating the estates of all partisans of England and of all neutrals, which was principally aimed at the house of Bruce; and a grant of their estate of Annandale was made to Comyn, Earl of Buchan, who actually took possession, in consequence, of the family castle of Lochmaben. This of course he did not long retain; but the wrong was not the less one, which in that fierce age never could be forgiven. Allowance must be made for these personal resentments and rivalries, and the opposition into which men were thereby

thrown, in passing judgment upon the conduct of many of the actors in this turbulent and bewildering drama. Bruce, eventually the great liberator of his country and restorer of the Scottish monarchy, makes his first appearance on the scene, soon after the fatal fight of Dunbar, in the unpatriotic part of a commissioner empowered by the conqueror to receive into favour the people of Carrick.* He was at this time only in his twenty-second year. His heart, however, was probably already drawing him, through doubts and misgivings, to the cause which he was at a future day so gloriously to illustrate. Now that Baliol was removed, the time for Bruce to show himself seemed to have come. Edward, it would appear, was not without some suspicion of what his inclinations were. He, therefore, had summoned him to Carlisle, and made him renew, on the sword of Becket, his oaths of allegiance and fidelity. In the national enthusiasm, however, excited by the first success of Wallace, he could restrain himself no longer. "I trust," he said, "that the pope will absolve me from oaths extorted by force;" and so, breaking from his bonds, he joined the army of the patriots.

But, in that camp, jealousies and dissensions were already actively at work, and disorganizing everything. Edward was embarking for Flanders when he received intelligence of the new Scottish revolt. The military force of the kingdom to the north of the Trent was instantly called into array by the Earl of Surrey; and as soon as the men could be collected, Sir Henry Percy and Sir Robert Clifford were sent forward to meet the insurgents at the head of an army of forty thousand foot and three hundred horse. They found the Scots, in nearly equal numbers, posted in a strong position in the neighbourhood of the town of Irvine, in Ayrshire. But no acknowledged leader controlled the irregular congregation of chiefs who had crowded with their retainers to the standard that Wallace had raised; his authority was disowned, or but reluctantly submitted to, by many of the proud knights and barons, who never before had obeyed a plebeian general; and there were probably as many conflicting plans of operation as there were competitors for the supreme command. In this miserable state of affairs, it appeared to all who had anything to lose, that the wisest plan was to make their peace with the government before it should be too late. All the chief associates of Wallace accordingly, including Bruce, the Stewart of Scotland, the Bishop of Glasgow, Sir Alexander Lindesay, Sir Richard Lundin, and even Sir William Douglas, the first who had joined him, laid down their arms after a short negotiation, and, for themselves and their adherents, made submission to Edward. The instrument in which they acknowledged their offences, and agreed to make every reparation and atonement that should be required by their sovereign lord, is dated at Irvine, the 9th of July.† Only one baron, Sir Andrew Moray of Bothwell, continued to adhere to Wallace. Many of the vassals, however, even of the lords and knights that had deserted him remained among his followers; and he withdrew to the north at the head of a force that was still numerous and formidable.

No farther effort seems to have been made by the government to put down the insurrection for several months. In the meanwhile, the army of Wallace was continually receiving accessions of numbers. The English historian, Knighton, affirms that the whole of the lower orders had attached themselves to him, and that, although their persons were with the king of England, the hearts of many of the nobility also were with Wallace, whose army, it is added, now grew to so immense a multitude that the community of the land obeyed him as their leader and prince. By the beginning of September, it appears that he had driven the English from the castles of Brechin, Forfar, Montrose, and most of the other strongholds to the north of the Forth, and was now engaged in besieging the castle of Dundee. While there, he received information that an English army was marching upon Stirling. Leaving the siege to be continued by the citizens of Dundee, he led his whole force, amounting to forty thousand foot and a hundred and eighty horse, towards Stirling, and succeeded, by rapid marches, in reaching the banks of the Forth opposite to that town before the English had arrived. He immediately drew up his army so as to be partly concealed behind the neighbouring high grounds. Brian Fitzalan had by this time been appointed by Edward chief governor of Scotland; but the Earl of Surrey still commanded the forces. The English army soon appeared on the other side of the river; it is said by Hemingford to have consisted of one thousand horsemen and fifty thousand foot. On its being perceived how Wallace was posted, it was resolved to offer him terms before risking an engagement; but he refused to enter into any negotiation. "Return," he said to those who came to him, "and tell your masters that we come not here to treat, but to assert our rights, and to set Scotland free; let them advance; they will find us prepared." That night, however, no movement was made. But Surrey's men impatiently called upon him to accept of Wallace's defiance; Cressingham, the treasurer, protested against the waste of the king's money in keeping up an army if it was not to fight; and to this passionate importunity the English commander weakly yielded his own better judgment, and suffered his army to throw itself, not into a snare, for, if the common accounts of the affair may be relied upon, no stratagem or deception of any kind was employed by Wallace, but into obvious and certain destruction. Early the following morning (the 11th of September) the English began to pass over by the bridge,—a narrow wooden structure, along which, even with no impediment or chance of interruption of any kind to

* Hailes, i. 292. † Rymer, ii. 774.

retard them, so numerous a force could not have been led in many hours. The issue was what it is unaccountable should not have been foreseen. Wallace waited till about half the English were passed over; then, detaching a part of his forces to take possession of the extremity of the bridge, as soon as he perceived the communication by this means effectually cut off, he rushed down upon the portion of the enemy who had thus put themselves in his power, as they were still forming, and in a moment threw them into inextricable confusion. Many thousands of the English were slain or driven into the water; Cressingham himself, who had led the van, was one of those who fell; he had, by the severity of his administration, made himself particularly hateful to the Scots, who now stripping the skin from his dead body, cut it into small pieces to be preserved, not as relics, says Hemingford, but for spite.* Wallace himself, it is affirmed, had a sword-belt made of part of it. No prisoners, indeed, seem to have been taken; and nearly all the English that had crossed the river must therefore have been destroyed. One knight, however, Sir Marmaduke Twenge, putting spurs to his horse, gallantly cut his way back through the force that guarded the bridge, and regained the opposite side in safety. Surrey himself had not passed over; but, after the fortune of the day became clearly irrecoverable, charging Twenge to occupy the castle of Stirling with what remains of

* Non quidem ad reliquias, sed in contumelias.

STIRLING CASTLE.

the army he could collect, he mounted his horse, and rode, without stopping, to Berwick. Even the portion of the army that had remained on the south side of the river seems to have been in great part dispersed. The loss of the Scots was trifling; the only man of note that fell was Sir Andrew Moray. A large quantity of spoil was taken. But the great result of the victory was nothing less than the almost complete liberation of the country once more from the English dominion. The castles of Edinburgh, Dundee, Roxburgh, and Berwick, all immediately surrendered; and in a short time there was not a fortress, from one end of Scotland to the other, in the possession of the English king. Wallace soon after even invaded England, and for some time maintained his army in Cumberland,—a movement to which he was partly induced by a severe famine that now arose in Scotland, where unfavourable seasons had conspired with the waste of war to afflict the soil. He returned from this expedition about the end of the year; and it is said to have been then that, in an assembly of the principal nobility, held at the Forest Kirk in Selkirkshire, he was invested with the title of Guardian or Governor of the kingdom, and commander-in-chief of the armies of Scotland (Custos regni Scotiæ, et ductor exercituum ejusdem), in the name of King John. The Scottish patriots, it is to be observed, had all along professed to act in the name of Baliol,—so general, notwithstanding all that had taken place, was the conviction that his was the legitimate right to the crown, or so strong the aversion to re-open the question of the succession, from which all the calamities of the country had sprung.

Thus was Scotland again lost by Edward even

more suddenly than it had been won. He was still detained in Flanders by the war in which he had engaged with the French king for the recovery of Guienne, while his conquest nearer home was thus wrested out of his hands. It appears that strenuous efforts were made by Philip to have the Scots included in the benefit of the treaty of peace, the truce preliminary to which was agreed upon in October of this year.* But Edward would hear of no terms for those whom he called revolted subjects and traitors. By letters addressed to all the earls and barons of England, he commanded that a general muster of the military force of the kingdom should take place at York on the 14th of January. A week after that day a mighty army, of a hundred thousand foot and four thousand cavalry, was on its march, under the command of Surrey, across the Scottish border. After this force, however, had proceeded as far as Berwick, of which they took possession, letters arrived from the king ordering them not to continue their advance till he should himself join them. On this Surrey sent home the greater part of the immense multitude, retaining only a body of twenty thousand foot and fifteen hundred horse.

Edward returned to England about the middle of March, 1298, and instantly summoned the barons and other military tenants to reassemble with their powers at York on the Feast of Pentecost. A still more numerous army than the last gathered at this new call, at the head of which Edward proceeded in the first instance to Roxburgh. From this point he advanced, in the beginning of June, along the east coast, a fleet with supplies for the army having been sent forward to the Frith of Forth; but for several weeks no enemy, scarcely even any inhabitants, were to be seen, and the invaders could only take a useless revenge in wasting an already deserted country. The Scots meanwhile, under the direction of Wallace, had been collecting their strength in the interior; and many of the chief nobility, including Bruce, were now assembled again around the great national leader. The plan of Wallace, however, was to avoid for the present a general engagement, and only to watch, out of sight, the movements of the enemy, and hang upon his line of march, in readiness to take advantage of such favourable circumstances as might arise. Edward soon became involved in very serious difficulties: his ships were detained by contrary winds; and while he was waiting at Templeliston (now Kirkliston), a small town between Edinburgh and Linlithgow, till he should receive some intelligence of them before proceeding upon his design of penetrating into the west, an alarming mutiny broke out in the camp, originating in a quarrel between the English and the Welsh soldiers, the latter of whom, amounting in number to 40,000, were at one time on the point of withdrawing and joining the Scots. "I care not," said Edward, with his usual lofty spirit, when their intention was reported to him; "let my enemies go and join my enemies; I trust that in one day I shall chastise them all." No news of the ships arriving, however, the scarcity of provisions soon became so distressing that a retreat to Edinburgh was resolved upon, when information was received that the Scottish army was encamped not far off in the wood of Falkirk. It is said that two noblemen serving in the Scottish camp, the Earls of Dunbar and Angus, came privately at day-break to the quarters of the Bishop of Durham, and communicated this intelligence. "Thanks be to God!" exclaimed Edward, "who hitherto hath delivered me from every danger; they shall not need to follow me; I will forthwith go and meet them!" That night the army lay in the fields, the king himself sleeping on the ground. A kick from his horse, which stood beside him in the night, broke two of his ribs, and in the first confusion occasioned by the accident, a cry arose that the king was seriously wounded or killed,—that there was treason in the camp. Edward immediately, disregarding the pain he suffered, mounted his horse, and, as it was now dawn, gave orders to continue the march. The advanced guard of the enemy was first seen on the ridge of a hill in front, after they had passed Linlithgow. Soon after, the whole army was descried, forming, on a stony field, at the side of a small eminence in the neighbourhood of Falkirk.* Wallace divided the infantry of his army, which was greatly inferior in numbers to that of the English, into four circular bodies, armed with lances, which the men protruded obliquely, as they knelt with their backs against each other; the archers were placed in the intermediate spaces: the horse, of which there were only 1000, were drawn up at some distance in the rear. Edward's cavalry were ranged in the front of his battle, in three lines. The attack was made at the same time by the first of these, led by Bigot, Earl Marshal, and the Earls of Hereford and Lincoln; and by the second, under the leading of the bold Bishop of Durham. The shock was gallantly met by the Scottish infantry, and for some time they stood their ground firmly. The cavalry, however, whether dismayed by the immense disparity between the numbers of the enemy and their own, or, as has been conjectured, from treason on the part of their commanders, fled without striking a blow; and, thus left without support against the repeated charges of the English horse, the lancers and archers also at length gave way, and the rout became complete. The battle of Falkirk was fought on the 22nd of July, 1298. It is said that 15,000 of the Scots fell on this fatal day. On the English side the loss was inconsiderable. Wallace retreated with the remains of his army to Stirling, whither he was pursued by the English; but when they arrived, he was gone, and the town was found reduced to ashes. The victorious invaders now carried fire and sword through the country in all directions. The whole of Fifeshire was laid waste and given up to military execution. The city of

* Hailes, i. 314.

St. Andrews, which was found deserted, was set on fire and burnt to the ground. Perth was burnt by the inhabitants themselves on the approach of the English. Edward, however, was speedily obliged to leave the country from the impossibility of finding the means of subsisting his troops. He appears to have returned to England about the middle of September,—having, indeed, regained possession of the principal places of strength in the south of Scotland, but leaving the whole of the country to the north of the Forth still unsubdued.

The expensive wars of Wales, Scotland, and Guienne, had caused Edward to oppress the English people with levies and taxes, in the raising of which he had not always respected the constitutional charter; while on some occasions he had recourse to artifices similar to those which had succeeded so badly with his father, Henry III. At one time, he pretended that he had again taken the cross, and thus obtained the tenth of all church benefices for six years. A few years after this, he seized the monies deposited in the churches and monasteries, and kept the greater part for his own uses, promising, however, to pay it back some time or other. His financial proceedings with the church show that times were materially altered—for the main weight of taxation was thrown upon that body. After obtaining a reluctant grant from the lords and knights of the shire of a tenth on lay property, he demanded from the clergy a *half* on their entire incomes. Here, for the first time, he encountered a stern opposition on the part of the bishops, abbots, and common clergy; but they were bullied into compliance, being told, among other harsh things, that every "reverend father" who dared to oppose the king would be noticed as one who had broken the peace. This was in 1294. In the following year, having obtained a very liberal grant from Parliament, he exacted a fourth from the churchmen, who again were obstinate, and obliged him, in the end, to be satisfied with a tenth. Besides these heavy burdens, the church was sorely racked by the king's purveyors and commissaries, who, particularly during the more active parts of the Scotch war, continually emptied the store-houses, granaries, farm-yards, and larders, and carried off all the vehicles, horses, and other animals for the transport of army stores, in so much that the poor abbots and priors complained that they had scarcely a mule left in their stables upon which to go their spiritual rounds. At last they applied to the pope for protection, and Boniface VIII. granted them a bull, ordaining that the clergy should not vote away their revenues without the express permission of the holy see. But the pope was engaged in many troubles; the bull, which applied equally to all Christian countries, was strenuously opposed in France by Philip le Bel; and in the following year, 1297, he found himself obliged to publish a second bull, which explained away and stultified the first; for it provided, that whenever the safety of the kingdom required it, churchmen must pay their aids; and it left to the king and his council the right of deciding on the necessity. Before this second bull arrived, the English clergy, fancying that they were well supported by the previous document, met, and boldly refused some of Edward's demands; upon which he outlawed the whole body, both regular and secular, and seized their goods and chattels, not leaving bishop, parish priest, abbot, or monk, so much as bread to eat, or a bed to lie upon. As there were no Beckets in the land, these measures produced a general submission to the king's arbitrary will, even before the arrival of the explanatory bull. A few recusants were supported for a season by the charity of their relatives and of the common people, but no popular movement took place in their favour, nor does their hard treatment appear to have created any great excitement.*

It was far otherwise when the king laid his greedy hand on the trading classes: they had borne a great deal in the way of tallages and increased export duties; but when he seized all the wool and hides that were ready for shipping, and sold them for his own profit, a universal and loud outcry was raised, notwithstanding his assurances that he would faithfully pay back the amount. The merchants assembled, the rich burghers, the landed proprietors of all classes consulted together; and their consultations were encouraged by some of the greatest of the nobles, who were not so blinded by the career of conquest and glory in which the king was leading them, as to be neglectful of their more immediate interests, or indifferent to those violent inroads on the national rights. Towards the end of February, 1297, Edward felt the effect of these deliberations. He had collected two armies, one of which was to go to Guienne, the other into Flanders; when the Earl of Hereford, the constable, and the Earl of Norfolk, the marshal of England, both refused to quit the country. Turning to the marshal, the king exclaimed, "By the everlasting God, Sir Earl, you shall go or hang." "By the everlasting God, Sir King, I will neither go nor hang;" and, so saying, Norfolk withdrew with Hereford. Thirty bannerets and 1500 knights immediately followed the marshal and the constable, and the king was left almost alone.† An incautious step at this moment might have cost him his crown or his life, but Edward was a wonderful master of his passions when necessary, and his craft and policy were fully equal to his merits as a warrior. He knew that the Archbishop of Canterbury and the clergy gave great weight to the present opposition, and these he detached by blandishments and promises. He knew that his brilliant exploits in war had endeared him to the unthinking multitude, and he also knew how to touch their hearts. The measure he adopted was singularly dramatic: he stood forth before the people of London, mounted on a platform in front

* Rymer.—Brady.—Wykes.—Knight.—Heming.
† Heming.

of Westminster Hall, nobody being near him save his son Edward, the Archbishop of Canterbury, and the Earl of Warwick: he told them that nobody grieved more than he did for the burdensome taxes laid upon his dear subjects, but this burden was one of absolute necessity to preserve, not only his crown, but their blood from the Welsh, the Scots, and the French.* Then, in the proper place falling into the pathetic, he said, "I am going to expose myself to all the dangers of war for your sakes. If I return alive I will make you amends for the past; but if I fall, here is my dear son, place him on my throne, his gratitude will be the rewarder of your fidelity!" Here he stopped, and let a few tears roll down his iron cheek. The archbishop wept; the spectators were tenderly affected; and, after a brief pause, the air was rent with shouts of applause and loyalty.† This display of enthusiasm gave the king great encouragement, and having issued writs for the protection of church property, and appointed his former opponent, the Archbishop of Canterbury, chief of the council of regency under Prince Edward, he went to embark for Flanders with such troops as he had kept together. But a few days after, on August 12th, he was brought to a halt at Winchester, by reports of the hostile spirit of the nobles; and while in that city, a remonstrance, in the name of the archbishops, bishops, abbots, and priors, the earls, barons, and commons of England, was presented to him. After stating in broad terms that they were not bound to accompany the king to Flanders,—a country where neither they nor any of their ancestors had ever done service for the kings of England; and that even if they were inclined to take part in that expedition, the poverty to which he had reduced them rendered them unable to do so: they went on to tell him, in their bold remonstrance, that he had repeatedly violated their charters and liberties; that his "evil toll" (so they called the export duty on wool) was excessive and intolerable, and that his present expedition to the continent was ill-advised, seeing that his absence would leave the country open to the incursions of the Scots and Welsh. The king evaded any very direct answer, and relying on the favourable disposition of the common people, and the vigilance of his officers, he had the courage to depart in the very midst of these discontents.‡ He landed near Sluys in the end of August: his plans were concerted with his usual sagacity; but coalitions are faithless and uncertain things, and he had in Philip le Bel an opponent as crafty and, at the least, as unscrupulous as himself. These great kings had long struggled for possession of a young lady,—Philippa, daughter of Guy Count of Flanders. As early as the year 1294, Edward had concluded a treaty of marriage, which was to unite the fair Fleming to the Prince of Wales; but it was Philip's interest to prevent any close union between England and Flanders, and he resolved that the marriage should not take place. After many secret intrigues,—which failed, as both the young lady and her father were bent on the English union,—the French king invited Count Guy to meet him at Corbeil that he might consult him on matters of great importance. The Count, who was a frank, honest old man, went, and took his countess with him: he was no sooner in his power than Philip harshly reproached him with the English treaty,—told him that no *vassal* of the French crown, however great, could marry any of his children without the king's license,—and then sent him and his wife prisoners to the tower in the Louvre.

This arbitrary and treacherous measure excited great disgust, and the better feeling of the French peers, and the remonstrances of a papal legate, forced Philip to liberate the old count and his countess. Before letting go his hold, however, he made Guy swear he would think no more of his English alliance. The count contracted the forced obligation; but this was not enough for the French king, who had broken too many oaths himself to have much reliance on those of other people: he demanded that Philippa should be placed in his hands as a hostage; and when that young lady was brought to Paris—and not before—her parents were liberated. Their parting was sad and tender. As soon as the count reached his own dominions, he made an affecting appeal to the pope; the church entered with some zeal into the case; but notwithstanding repeated threats of excommunication, Philip le Bel persisted in keeping his innocent hostage, who was not more than twelve years of age. At last, the old count formally renounced his allegiance, defied his suzerain, and entered heart and soul into a league with the English king, whose notion was, that France would be found more vulnerable on the side of Flanders than on that of Guienne. It was in consequence of this treaty, which was sworn to in the most solemn manner, that Edward went to Flanders, after preparing a formidable alliance. The other chief members of the coalition were, the emperor, the Duke of Austria—who had both been subsidized by Edward—and the Duke of Brabant and Count of Bar, who were his own sons-in-law by their marriage with the princesses Margaret and Eleanor of England. When the hired allies got Edward's money, they seem to have considered their part of the business as done; and no member of the coalition was very faithful or strenuous, except the unhappy Count Guy, whose cruel wrongs bound him firmly to Edward. But the whole expedition became a series of misadventures, some of which were sufficiently disgraceful to the English conqueror. He had scarcely landed at Sluys, when the mariners of the Cinque Ports, and those of Yarmouth and other ports—between whom there were many rancorous old jealousies—quarrelled, and then fought, as if they had been national enemies ranged under two opposite flags. On the Yar-

* The descent at Dover had greatly inflamed the people against the French; and in the popular accounts of the savage warfare by sea, the atrocities of the enemy alone were dwelt upon.

† Heming.—Knyghton.—Rymer.

‡ Heming.—Wals.—Knyght.—Rymer.

mouth side, five-and-twenty ships were burnt and destroyed in this wild conflict. One fact which the chroniclers mention looks almost as if the fight had been for the money on board, and most of the mariners little better than pirates; "and also three of their greatest ships—part of the king's treasure being in one of them—were tolled forth into the high sea, and quite conveyed away."* The king's land-forces were scarcely in a better state of discipline, owing probably to the absence of most of the great officers whom they had been accustomed to obey. The disorders they committed did not tend to produce unanimity in the country, which was already in "evil state, by reason that the good towns were not all of one mind." The rich and populous cities of Flanders were, in fact, as jealous of each other, and split into almost as many factions as the little Italian republics of the middle ages. Philip had a strong party among them, and that active sovereign had greatly increased it, and weakened his enemies, by marching into the Low Countries at the head of 60,000 men, and gaining a great victory at Furnes, before Edward could arrive. The French occupied many of the towns; and Lille, Courtrai, Ypres, Bruges, and Damme were either taken or given up to them soon after the landing of the English. Edward drove them with great loss out of Damme, and might have done the same at Bruges, had it not been that his English and the Flemings, who were serving with them, fell into strife, and fought about the division of the spoils of the town, which they had not yet taken. Soon after this, he went into winter-quarters at Ghent, and there deadly feuds broke out between the townspeople and his troops: seven hundred of the latter were killed in a tumult, in which Edward's own life was endangered. The English foot-soldiers, on their side, sacked the town of Damme, and killed some two hundred Flemings. It was not likely that such tender allies should do much against the common enemy; and all the efforts made by the king and Count Guy failed to reconcile these animosities.

A.D. 1298. Spring approached, but it brought no news of the inactive members of the coalition; and as Edward's presence was much wanted at home, he eagerly listened to overtures from Philip, concluded a truce for two years, and, leaving Count Guy to shift for himself, sailed for England.

It could not be denied that, after throwing away immense sums of money, he returned humbled and disgraced. But his English subjects had not waited for this moment of humiliation to curb his arbitrary power. As soon as he set sail for Flanders the preceding year, the Constable and Earl Marshal, with many other nobles, in presence of the Lord Treasurer and of the judges, forbade the officers of the Exchequer, in the name of the whole baronage of England, to exact payment of certain taxes which had been laid on without proper consent of parliament. The citizens of London and of the other great trading towns made common cause with the barons; and, after issuing some orders which the Exchequer durst not obey, and making some fruitless attempts at deception and evasion, Edward was obliged to send over from Ghent instructions to his son and the council of regency* to bend before a storm which there was no opposing; and, in the month of December, from the same city of Ghent, he was fain to grant, under the great seal, another confirmation of the two charters, together with a full confirmation of the important statute called "De Tallagio non Concedendo," declaring that henceforth no tallage or aid should be levied without assent of the peers spiritual and temporal, the knights, burgesses, and other freemen of the realm, which had been passed in a parliament held by Prince Edward in the preceding September. For many years parliament had exercised a salutary control in such matters, but this statute, for the first time, formally invested the representatives of the nation with the sole right of raising the supplies. Edward felt this as a painful state of dependence; he knew it would check his ambition, and probably prevent his foreign wars; and he had scarcely set foot in England when he betrayed his irritation and disgust. It is said that, among his confidential friends, he laughed at the restrictions attempted to be imposed upon him; but his subjects were resolute, and soon made him feel that the matter was neither to be treated as of light consequence nor set aside by subterfuges.† In full parliament, which met at York in the month of May, some six weeks after his return, the Earl of Hereford, the Constable, and the Earl of Norfolk, the Marshal, demanded of him that he would ratify in person, and with proper solemnities, his recent confirmation of the charters. Edward, as if the ceremony could not have been performed in a few hours, or even *then*, at the moment, said, that it could not be now, as he must hasten to chastise the Scottish rebels; but he promised to do what was asked of him on his return from the North, and he pledged solemn oaths, *vicariously*, the Bishop of Durham and three lay lords swearing, by the soul of the king, that he should keep his promise.‡

It will prevent confusion to bring these transactions to one point, without regard to the strict chronological order in which they occurred. In March, 1299, about ten months after the meeting at York, Edward met his parliament again at Westminster. The bloody laurels of Falkirk were fresh on his brow: he had all the prestige of recent success; but, undaunted by his glory and might, the barons required the fulfilment of his promises. He was "nothing contented that this matter should be so earnestly pressed, for loth he was to grant their full request." He therefore endeavoured to gain time, putting off the question, and giving no direct answer one way or the other. When the lords

* Holinshed.

* Several members of this council, with the Archbishop of Canterbury [illegible]eir head, were known to be favourable to the cause of reform.

† He pretended that the confirmation was not binding, as he had put his seal to it in a foreign country.

‡ Heming.—Walsing.

urged him, he withdrew from parliament and got out of London, secretly, and as if by stealth; but these earnest men would not be evaded: they followed him; and then the proud conqueror was compelled to make mean and debasing excuses, throwing the blame of his departure on the air of London, which, he said, did not agree with his constitution. At last he granted the ratification so firmly demanded; but, with singular bad faith, he took parliament by surprise, and added a clause at the end of the document,—a saving of the right of the crown,—which utterly destroyed the value of the concession, and went to shake the very foundations of the Great Charter itself. Upon this the Earls of Hereford and Norfolk, with the mass of the barons, returned sullenly to their homes. Edward was alarmed at their hostile countenance, but fancying he could delude the plain citizens, he ordered the sheriffs of London to call a public meeting, and to read the new confirmation of the charters. The citizens met in St. Paul's Churchyard, and listened with anxious ears: at every clause, except the last, they gave many blessings to the king for his noble grants, but when that last clause was read, the London burghers understood its effect as well as the noble lords had done, and they cursed as loud and as fast as they had blessed before. Edward took warning: he summoned the parliament to meet again shortly after Easter, and then he struck out the detested clause, and granted all that was asked of him in the forms prescribed.* One of the immediate benefits of these enactments was a proper definition of the limits of the royal forests, which, it was decreed, should never again be enlarged by encroachments on the subjects' lands.† But still Edward only considered these concessions as temporary sacrifices of his high prerogative, and, from the moment of granting them, he occupied the leisure which the Scottish war and his intrigues on the continent allowed him, in devising means to overthrow the power of parliament. Hereford, the Constable, died shortly after the ratification, but his principles had taken too deep and wide a root to be much injured by the death of any one man, however great. In the course of three years, the king artfully contrived to punish, on other charges, and impoverish many of the barons who had most firmly opposed him; but this measure only convinced men more than ever of the vital necessity of restricting his power. In 1304, when he had triumphed, for the moment, over all opposition in Scotland, Edward arbitrarily sent to raise a tallage on all the cities and boroughs of his demesne; and in the following year he despatched secret envoys to the pope, to represent that the concessions he had made had been forced from him by a traitorous conspiracy of his barons, and to ask an absolution from his oaths and the engagements he had so repeatedly and solemnly contracted with his subjects. Notwithstanding Edward's instancing the case of his father, Henry III., who was absolved of his oaths to the Earl of Leicester, the answer of Clement V. was rather an evasive one. Thus, but slightly encouraged to perjury on the one hand,—awed by the unanimity of the barons on the other,—and then, once more embarrassed by a rising of the patriots in Scotland, who never left him long in tranquil enjoyment of his usurpation, the mighty Edward was compelled to respect his engagements and the will of the nation, and to leave, as a part of the law of the land, those limitations on the power of future rulers which had been wrung from him, one of the most powerful, warlike, and skilful of kings. It required, indeed, an "intrepid patriotism" to contend* with and finally control such a sovereign, and England never has produced any patriots to whom she owes more gratitude than to Humphrey Bohun, Earl of Hereford, and Roger Bigod, Earl of Norfolk. But English historians have not borne sufficiently in mind the indirect obligation to the hardy patriots of Scotland who divided and weakened the strength of the tyrant, and, on more than one occasion, served the cause of liberty in England by distracting his attention at a critical moment, and giving full employment to his arms and resources in the North. If the Scots had been mean-spirited and submissive, the "Confirmation of the Charters" might have been annulled; and if the English had succeeded in enslaving the Scots, they might have found that they had been forging fetters for themselves.

The vision of the splendid inheritance of Eleanor of Aquitaine still haunted Edward's imagination. With such an opponent as Philip le Bel he could scarcely hope to recover all those states which the divorced wife of Louis VII. conveyed to Henry II. of England; but he was resolved to get back at least the country of Guienne, the loss of which preyed on his mind and irritated his self-esteem, for Edward prided himself as much on his policy as on his military prowess, and in that particular Philip had fairly, or rather foully, outwitted him. In the transactions which now took place, the two sovereigns ran a pretty equal career of baseness. Having experienced the expensiveness and uncertainty of foreign coalitions, and having no great army of his own to spare for continental warfare, Edward determined to obtain his end by treating diplomatically with the French king, and sacrificing his faithful ally, the Count of Flanders. In this he had more in view than the recovery of Guienne, for, as a price of his own treachery to Count Guy, he expected that Philip would be equally false to his treaty with the Scots, whom he had hurried into hostilities for his own purposes, swearing, however, that he would never abandon them. Since Edward's unfortunate campaign in Flanders, the arrogance and exactions of the French had almost destroyed their party in that country; and though they made a temporary conquest of it, the burghers of Ghent, Lille, Bruges, and the other free cities, gave them a signal defeat in the battle of Courtrai, which was fought in the year 1302.

* Hemingford.—Knyghton. † Brady.

* Hallam, Midd. Ages.

Philip's cousin, the Count of Artois, commanded the French on this occasion; and after his disgraceful defeat, all the Flemish towns threw off the French yoke, and elected John of Namur to be their governor-general, for Count Guy had been once more entrapped by Philip, who kept him a close prisoner. The French king was as anxious to recover Flanders as Edward was to keep Scotland, and to get back Guienne; and all the chivalry of France longed to wipe out the disgrace their arms had sustained at Courtrai from the "canaille of Flemings."*

It appears that the pope, who had been appealed to as mediator, first suggested, as a proper means of reconciling the two kings, that Edward, who had been for some years a widower, should marry Margaret the sister of Philip; and that his eldest son, the Prince of Wales, should be affianced to Isabeau, or Isabella, the daughter of that sovereign. This double marriage had been for some time under discussion, and had given scope to much mutual deception. Each of the kings impudently affected a delicacy of conscience about abandoning his allies, and Edward stated (what was perfectly true) that he had pledged his soul and honour to the marriage between the Prince of Wales and Philippa, the daughter of the unfortunate Earl of Flanders, and had stipulated that in case of that union being frustrated by the young lady's continued detention, or by her death, then the young prince should marry her sister;—that he, King Edward, had sworn upon the Gospels to make neither peace nor truce with France unless it were conjointly with his ally the Earl of Flanders, not even though the pope should demand it. Philip le Bel, on his side, spoke of his allies, the brave, the unfortunate Scots, and of the solemn obligations he had contracted with them; but each gracious king must have laughed at the other, and probably at himself, too, in making this interchange of scruples of conscience. Edward married Margaret of France, in September, 1299; and at the same time his son, who was thirteen years old, was privately contracted by proxy to Isabella, who was about six years old. A sort of congress, held at Montreuil, which preceded this marriage, had settled that there should be peace between the French and English crowns, that the King of England should make satisfaction for the many French ships which his mariners had illegally taken at the beginning of the war, and that the King of France should place sundry towns in Gascony in the custody of the pope, to be by him held till the Guienne question should be adjusted by peaceful negotiation. This treaty, however, had not been properly ratified; Philip le Bel quarrelled with the arbiter, and even instigated Sciarra Colonna to arrest and ill-treat Pope Boniface. Other circumstances, besides the national antipathies of the English and French people, which were already very strong, had prevented the accommodation; but at last, on the 20th of May, 1303, the treaty of Montreuil was ratified, a treaty of commerce was concluded between the two countries, and Edward recovered Guienne, for which the Earl of Lincoln swore fealty and did homage in his name. In this treaty the Scots were not even mentioned: their envoys at the French court complained of this dishonourable abandonment, and Philip solemnly promised to plead their cause like a warm and sincere friend in an interview which he was shortly to have with the English king. This personal application, he said, would have more effect than the discussing of clauses and provisos with ambassadors; and so it might; but Philip never made it, having, indeed, bargained with Edward to abandon Scotland if he would abandon Flanders. In part through inability to prevent it, Edward had permitted Philip to have his way with the Flemings ever since his unfortunate campaign and the truce of 1297, and now he wholly gave them up, by treaty, to their enraged enemies the French, who, a few months after, avenged their defeat at Courtrai by a frightful massacre of the burghers and peasants of Flanders in the battle of Monts-en-Puelle, which was fought at a place so named, between Lille and Douai. The fate of Count Guy and of his innocent daughter was sad in the extreme. After keeping him four years in close prison, Philip le Bel liberated the count in a moment of great difficulty, and sent him into Flanders to induce his own subjects to convert a truce they then had with the French into a lasting peace. The count went, and not succeeding in his mission,—for the Flemish citizens hoped to be able to cope with the French single-handed,—he honourably returned, as he had promised to do in that case, to Philip, who again committed him to prison, and caused him to be treated with infamous severity. The poor old man died soon after at Compeigne, in the eighty-first year of his age. But neither the battle of Monts-en-Puelle, nor a series of bloody engagements which followed it, could break the spirit of the free citizens of Flanders, whose wealth, the fruit of commerce, gave them many advantages over the miserably poor aristocracy of France, and whose numbers, considering the limited extent of the country they occupied, were truly prodigious. After each reverse they rallied again, and the carnage of many battles left no perceptible diminution in their ranks. "By St. Denis," cried Philip, "I believe it rains Flemings!" At last he condescended to treat on moderate terms with the trading and manufacturing citizens whom he had once despised as incapable of "high deeds of arms;" and, about a year after the ratification of the treaty with Edward, he agreed to a truce for ten years, on condition that the Flemings, while they preserved all their ancient liberties, should acknowledge his feudal suzerainty, pay him one hundred thousand francs for the expenses of the war, and leave him in undisturbed possession of the cities of Lille, Douai, Orchies, and Bethune.

* The nobles of France seldom condescended to give the industrious burghers of Flanders a better title.

Robert, the eldest son of Count Guy, was then liberated, and entered on possession of Flanders; the body of the octogenarian state-prisoner, which had been embalmed, was delivered up; and his younger son and many Flemish gentlemen recovered their liberty. But in this general enlargement the fair Philippa,—the, at one time, affianced bride of Prince Edward of England,—was excepted; and she died of grief and captivity not long after, about two years before Edward of Caernarvon completed his marriage with Isabella of France. The events which rose out of this ill-fated marriage might have satisfied the manes of the most revengeful; and it could hardly happen otherwise than that they should be interpreted into a direct judgment of Heaven provoked by political perfidy. If she did not positively command the atrocious deed herself, Isabella was at least a main cause of the murder of her husband, and from her union with the Plantagenet were derived those English claims to the French crown, in the prosecuting of which her native land was repeatedly wasted with fire and sword from one extremity to the other, and the spirit of enmity and hatred between the two countries—already a prevalent feeling—became so envenomed and deep-rooted that five hundred years have scarcely sufficed to remove it.*

All this while Edward had never ceased to be occupied with his design of completing the subjugation of Scotland; but so long as he was embarrassed by having the French war on his hands at the same time, his operations in the north of Britain had been comparatively cramped and inefficient. Accordingly, the four years that followed the battle of Falkirk were productive of no important results, although during the whole time the hostilities between the two countries never were suspended except occasionally by a truce for a few months. Wallace disappears from the scene after his great defeat. In his room, the barons appointed William Lamberton, Bishop of St. Andrews, John de Soulis, John Comyn the younger, and Robert Bruce Earl of Carrick, Guardians of the kingdom in the name of Baliol. This was indeed a strange union of all the great factions, Bruce acting in the name of Baliol, and associated in the same commission with Comyn, the only person who stood between him and the throne if Baliol should be set aside; for Comyn was the son of Baliol's sister Marjory, and, failing King John and his issue, the heir of right to the crown. John Baliol, who had remained a prisoner in the Tower since his abdication in 1296, was liberated by Edward on the intercession of Pope Boniface, in July, 1299, and conveyed to his ancestral estate of Bailleul in Normandy, where, forgetting that he had ever been a king, he lived in quiet till his death in 1314. Edward Baliol, who had been his father's fellow-prisoner, accompanied him to France; but of him we shall hear more in the sequel. It was not till November, 1299, that the English king found leisure from his other affairs to set about preparations for the prosecution of the Scottish war, and the effort he then made ended in nothing; for after an army had been assembled at Berwick in November, his barons, alleging his continued evasion of the charters, peremptorily refused to advance, and he was obliged to return home. The consequence was the capitulation of the castle of Stirling to a Scottish force that had been for some time besieging it. In the summer of 1300, Edward made an incursion into Annandale and Galloway; but it was attended with no result except the devastation of the former of these districts, and the formal and useless submission of the latter. On the 30th of October, a truce with the Scots was concluded at Dumfries, to last till Whitsunday in the following year. It was during this interval that Pope Boniface VIII., in a letter to Edward, advanced the singular claim that the kingdom of Scotland belonged of right to the holy see. "But," added his holiness, "should you have any pretensions to the whole or any part of Scotland, send your proctors to me within six months: I will hear and determine according to justice. I take the cause under my own peculiar cognizance." To this impudent demand, a parliament, which met at Lincoln in February, 1301, returned a short and spirited answer. "At no time," said the English barons, "has the kingdom of Scotland belonged to the church. In temporal affairs, the kings of England are not amenable to the see of Rome. We have with one voice resolved that, as to temporal affairs, the king of England is independent of Rome; that he shall not suffer his independency to be questioned; and therefore that he shall not send commissioners to Rome. Such is, and such, we trust in God, will ever be our opinion!" A longer and more deferential epistle from Edward himself, a few months afterwards, entered into an elaborate examination of the question; and, in the end, Boniface found it expedient to profess himself convinced, or at least to act as if he had no longer any doubt of the English supremacy. He soon after addressed the Scottish clergy in terms of violent reproof for their opposition to Edward his "dearly-beloved son in Christ," and enjoined them to strive, by repentance and by most earnestly pressing the submission of their countrymen, to obtain forgiveness of God and man. Meanwhile, the truce having expired, Edward, in the summer of 1301, again marched into Scotland. This campaign, however, was still more unproductive than the last; the Scots, adhering to the course that had hitherto proved most effective in ridding them of their invaders, as the English king advanced, laid the country waste before him, till at last, an early and severe winter coming on, he was compelled to retire into the town of Linlithgow. Here he built a castle, and kept his Christmas. In January, 1302, by the mediation of France, he was induced to conclude another truce with the Scots, to endure till the 30th of November (St. Andrew's Day). It is observable that the Scottish commissioners on

* Rymer.—Sueyro and Bzovius, as quoted in Southey's Naval Hist.—Mezeray.

this occasion still professed to act in the name of Baliol, against whose title to be called a king, however, Edward protested. As soon as the truce had expired, he prepared to renew the war. This time, however, instead of proceeding to Scotland in person, he sent thither John de Segrave, upon whom he had lately bestowed the appointment of governor, at the head of an army of 20,000 men, mostly cavalry. The issue of this expedition was eminently disastrous. Segrave, advancing towards Edinburgh, was suddenly attacked early in the morning of the 24th of February, 1303, in the neighbourhood of Roslin, by the Scottish forces under the command of Comyn, the guardian, and Sir Simon Fraser, and sustained a total defeat. He had arranged his forces in three divisions, which appear to have been successively fallen upon by the Scots, and one after the other completely put to the rout. In the first fight, Segrave himself, after being dangerously wounded, was made prisoner, along with sixteen knights and thirty esquires: his brother and son were afterwards taken; and it is said that the victors, on coming up with the second and third divisions of the English, were each time compelled to disencumber themselves for the fresh encounter by the slaughter of all their prisoners. Much spoil was also taken; and the affair once more for the moment cleared the country of its invaders.

But the termination of the dispute with France now left Edward free to turn with his whole power to the Scottish war. The treaty of Montreuil was ratified at Paris, as above related, on the 20th of May; on the 21st of that month, the English king was with his army at Roxburgh, and, on the 4th of June, he had reached Edinburgh, his progress, in which he had encountered no opposition, having been marked at every step by fields laid waste and towns and villages set on fire. From Edinburgh he appears to have pursued his unresisted and destructive course by Linlithgow and Clackmannan to Perth, and thence to Aberdeen and Kinloss in Moray. At the strong and extensive fortress of Lochendorb, built on an islet in the midst of a lake in the heart of Morayshire, he established his quarters for some time, while he received the homage and oaths of fealty of the northern barons. The tradition of the neighbourhood, after the lapse of more than 500 years, still connects the ruins of Lochendorb with the name of the great English king.* From this remote point he returned southwards in the latter part of October. Of all the places of strength to which he came, the castle of Brechin alone shut its gates against him. It was commanded by Sir Thomas Maule, who, while the English were battering the fortresses with their engines, is said to have exhibited himself in defiance on the ramparts, with a towel in his hand, with which he contemptuously wiped off the dust and rubbish that fell upon him. The valiant knight, however, was at last struck by a missile; but even while expiring of his mortal wound, he inveighed against his men as cowards when they asked him if they might now surrender the castle. The garrison, however, capitulated the day after their commander ceased to breathe. Edward took up his winter-quarters in Dunfermline in the beginning of December. Here, according to the History attributed to Matthew of Westminster, the English soldiers levelled with the ground the magnificent abbey of the Benedictines, a building so spacious, says this writer, that three kings with all their attendants might have been lodged conveniently within its walls; but "the Scots," he adds, by way of apology, "had converted the house of the Lord into a den of thieves, by holding their rebellious parliaments there." The last remnant of the Scottish forces that kept the field now assembled in the neighbourhood of Stirling, with the view of protecting that fortress, the only place in the country that still held out. But the advance of Edward and his cavalry at once dispersed this little army. Shortly after, on the 9th of February, 1304, Comyn, by whom it had been commanded, and some other noblemen, made their submission to the commissioners of the English king at Strathorde,* in Fifeshire. It was agreed that they should retain their lives, liberties, and lands, subject only to such fines as Edward might impose. The capitulation was to include all other persons who might choose to take advantage of it, with the exception only of Wisheart, Bishop of Glasgow, the Steward, and Sir John Soulis, who were to remain in exile for two years, and not to pass to the north of the Trent; of David de Graham and Alexander de Lindesay, who were to be banished from Scotland for six months; of Simon Fraser and Thomas Bois, who were to be banished for three years from all the dominions of Edward, and also to be prohibited from passing into France; and, closing the honourable list, the illustrious Wallace, to whom it was significantly accorded that, if he chose, he might render himself up to the will and mercy of Edward. Not long after, about the middle of Lent, a parliament was assembled at St. Andrew's, in which sentence of outlawry was pronounced against Wallace, Fraser, and the garrison of Stirling, on their being summoned and failing to appear. All the persons above named eventually surrendered themselves on the terms offered to them; even Fraser at length gave himself up: Wallace alone stood out. The rhyming chronicler, Langtoft, relates that, from his hiding place in the forest of Dunfermline, the outlaw sent some of his friends to Edward, with a proposal to surrender himself on a written and sealed assurance of his life and heritage. But "full grim" was Edward, it is added, when this was reported to him: he cursed Wallace and all who supported him as traitors, and set a reward of 300 marks upon his head. On hearing this, Wallace, flying again to the moors and marshes, betook himself for subsistence to his old occupation of plunder,—"in mores and mareis with robberie him fedis."

* See Tytler, i. 200 and 433.

* This place, we believe, is not now known.

Scotland, however, was not yet completely subdued so long as its chief place of strength, the castle of Stirling, remained unreduced. To the siege of this fortress, therefore, Edward now addressed himself. The operations commenced on the 22nd of April. Sir William Oliphant, the governor, had offered, if a cessation of hostilities were granted, to repair to France and there take the commands of Sir John Soulis, from whom he had received his charge. "Am I to wait for his orders?" exclaimed Edward; "defend the castle if you will!" Thirteen warlike engines, according to Langtoft, the best in the kingdom, were brought to be used against the devoted walls; and the ample leaden roof of the cathedral of St. Andrew's, Fordun tells us, was torn off to assist in the construction of these formidable machines. Some of them, Hemingford says, threw stones of two and three hundred weight. Another species of engine that was used was the espringal, or springal, by which darts were projected, sometimes winged with brass instead of feathers. Edward himself directed every thing that was done, and "though far advanced in years," to borrow the expression of Lord Hailes, "exposed his person with the fire and temerity of a young soldier." He was several times struck by stones and javelins thrown from the castle, and once an arrow shot at him from a sort of cross-bow stuck in his armour. After the siege had continued nearly a month, without much progress having been made, the sheriffs of York, Lincoln, and London were commanded to purchase all the bows, quarrels, and other warlike weapons that could be procured within their districts, and to send them to Stirling; and the governor of the Tower was also desired to send down immediately a supply from those under his charge. All the efforts of these assailants, however, were repelled for two months longer by Sir William Oliphant and his handful of gallant associates. They held out till their provisions were exhausted and the castle was reduced almost to a heap of ruins. Then, on the 20th of July, when Edward would listen to no other terms, they surrendered at discretion. The governor and twenty-four of his companions of rank, all, except two of them who were ecclesiastics, stripped to their shirts and under garments, were led forth from the castle, and presenting themselves before Edward on their bent knees, with their hair dishevelled and their hands joined in supplication, acknowledged their guilt with trembling and the semblance of shedding tears,* and gave themselves up to his mercy. Such was the ungenerous price exacted from them for a chance of life. Their lives were spared, and they were sent to the Tower of London and other English prisons. Besides the twenty-five gentlemen, thirteen ladies, their wives, and sisters, had shared along with them the dangers and privations of their obstinate defence. The garrison, which had so long defied the whole power of the English army, was found to have consisted of no more than a hundred and forty soldiers.

A few months after the fall of Stirling, the last enemy that Edward had to dread, and the last hope of Scottish independence, seemed to be cut off by the capture of Wallace. It appears that Edward had anxiously sought to discover his retreat, and that, tempted by the prospect of the rewards his baseness might earn for him, Ralph de Haliburton, one of the prisoners lately taken at Stirling, had proffered his services for that purpose. It is not clear, however, that it was by Haliburton's exertions that Wallace was actually taken; all that is certainly known is, that, upon being seized, he was conveyed to the castle of Dunbarton, then held under a commission from the English king, by Sir John Menteith. Menteith has been represented as the betrayer of Wallace, whose friend or intimate associate, moreover, to make his treachery the blacker, he is said to have been; but his part in the transaction seems to have gone no farther than the performance of the duty to which his trust bound him—of receiving the prisoner, and having him conveyed to England.* He was brought to London, "with great numbers of men and women," says Stow, "wondering upon him. He was lodged in the house of William Delect, a citizen of London, in Fenchurch-street. On the morrow, being the eve of St. Bartholomew, he was brought on horseback to Westminster, John Segrave and Geoffrey, knights, the mayor, sheriffs, and aldermen, of London, and many others, both on horseback and on foot, accompanying him; and in the great hall at Westminster, he being placed on the south bench, crowned with laurel—for that he had said in times past that he ought to bear a crown in that hall, as it was commonly reported—and being appeached for a traitor by Sir Peter Malorie, the king's justice, he answered, that he was never traitor to the king of England; but for other things whereof he was accused, he confessed them." These circumstantial and minute details, inartificially as they are put together, and homely or trivial as some of them may be thought, are yet full of interest for all who would call up a living picture of the scene. Wallace was put to death as a traitor, on the 23rd of August, 1305, at the usual place of execution—the Elms in West Smithfield. He was dragged thither at the tails of horses, and there hanged on a high gallows, after which, while he yet breathed, his bowels were taken out and burnt before his face. The barbarous butchery was then completed by the head being struck off, and the body being divided into quarters. The head was afterwards placed on a pole on London Bridge; the right arm was sent to be set up at Newcastle, the left arm to Berwick, the right foot and limb to Perth, and the left to Aberdeen.

* Quasi cum lacrimis.—Rym. ii. 951.

* There is a very able and spirited vindication of Sir John Menteith in Mr. Mark Napier's late "Memoirs of John Napier of Merchiston," 4to. Edin. 1834, pp. 527, &c. See also "Tracts Legal and Historical," by J. Riddell, Esq., 8vo. Edin. 1835. pp. 145—149. The admirable Hailes first pointed out the improbabilities and unfounded assumptions of the vulgar account, Annals, i. 343, 344.

A few weeks after the execution of Wallace, ten commissioners, elected by a council of the Scottish nation, which Edward had summoned to meet at Perth—namely, two bishops, two abbots, two earls, two barons, and two representatives of the boroughs, assembled in London, and there, in concert with twenty commissioners from the English parliament, proceeded to settle a plan of government for the conquered country. The alterations made were not greater than might seem to be called for to secure the dependence of Scotland upon the English crown; but as was to be expected, a controlling power over all offices and appointments was left in the hands of the king. The whole arrangement, however, was suddenly overthrown ere it had been well established. Within six months from the death of Wallace, the Scots were again up in arms, around a new champion.

This was Robert Bruce. Bruce had again made his peace with England some time before the capitulation of Comyn and his friends at Strathorde, which he was enabled the more easily to effect, inasmuch as he had not been present at the battle of Falkirk, having previously shut himself up in the castle of Ayr, and refused to join the Scottish army. Edward had since sought to secure his adherence, by treating him with especial favour and confidence. When his father, who had all along continued attached to the English interests, died, in the latter part of the year 1304, young Bruce was immediately permitted to take possession of the whole of his estates both in England and Scotland. At the settlement of the latter kingdom, in the following year, while his great rival, Comyn, was fined in three years' rent of his lands, Bruce was entrusted with the charge of the important fortress of Kildrummie, in Aberdeenshire, by commission from the English king. It is never to be forgotten that, up to this time, whatever his aversion to the English domination may have been, there had been repelling circumstances of the strongest nature to prevent Bruce from taking part cordially and steadily with the patriotic party in his native land, who, although they were contending against England, acted in the name and chiefly under the conduct of the enemies of his house and person—of the family which he looked upon as having come between him and his splendid birthright, and by which also he must have been regarded as a natural rival and object of suspicion. Wallace might fight for Baliol; Bruce scarcely could. And as little, after Baliol might be considered to be set aside, could he ally himself with Comyn, the near connexion of Baliol and the inheritor of his pretensions. Bruce, indeed, if he still retained a hope of seating himself on the disputed throne, must now have looked upon Comyn as the man of all others of whom it was most necessary for him to clear his path; and the same also no doubt were the feelings of Comyn in regard to Bruce. If either, by whatever means, could put down the other, the strong necessity of self-preservation would banish many scruples—for the one was scarcely safe while the other lived. It is probable enough that the favour of Edward was courted by each with the object of depressing or destroying his rival. The circumstances, how-

RUINS OF KILDRUMMIE CASTLE.

ever, that led to the fatal explosion of the inflammable elements which only required to be brought together to produce such a catastrophe, are involved in much uncertainty; the real facts were probably never very generally known, and tradition naturally busied itself in embellishing so remarkable an event. It appears, that in June, 1305, after his last submission to Edward, Bruce had entered into a secret league with William de Lamberton, bishop of St. Andrew's, by which the parties mutually bound themselves to stand by each other against all persons whatsoever. This curious instrument is still preserved.* There can be no doubt that what it chiefly contemplated was the assertion, at some future day, of Bruce's claim to the crown. It is supposed that Comyn had obtained a knowledge of this agreement, and that thereupon a conference on the subject of their pretensions took place between him and Bruce, when Bruce is said to have proposed either that he should have the crown and Comyn his estates, or that he should have Comyn's estates and Comyn the crown. It was agreed that Bruce's title to the crown should be supported by both. With whatever views Comyn may have entered into this negotiation, he eventually (so proceeds the story) communicated all that had taken place to Edward. Bruce received the first intimation of his danger from Edward's son-in-law, the Earl of Gloucester, who, by way of warning him to take instant flight, sent a messenger to him with twelve pence and a pair of spurs, under the show of restoring what he had borrowed. Early the next morning, Bruce set out for Scotland, taking the precaution to make his horse's shoes be reversed, that he might not be tracked in the snow, which had fallen heavily during the night. On his way he met a person on foot, whom he found to be the bearer of letters from Comyn to Edward, urging his death or immediate imprisonment. He slew this man, and, with the letters in his possession, pressed forward to his castle of Lochmaben, where he arrived on the seventh day after his departure from London. The most of this, it must be confessed, is more like fiction than fact. It is certain, however, that on the 10th of February, 1306, Bruce and Comyn met alone in the convent of the Minorites at Dumfries, and that there a passionate altercation having arisen between them, Bruce drew his dagger, and stabbed Comyn as they stood together beside the high altar. Hurrying from the sanctuary, he called "to horse!" and when his attendants, Alexander Lindesay of Crawfurd, and Roger Kirkpatrick of Closeburn, seeing him pale and violently agitated, inquired the cause, "I doubt," he replied, "I have slain Comyn." "You doubt?" exclaimed Kirkpatrick; "I'll make sure." And, with these words, he rushed into the church, and gave the wounded man his death-stroke, despatching also his kinsman, Sir Robert Comyn, who tried to defend him. In memory of this deed, the descendants of Kirkpatrick still bear as their crest a hand grasping a dagger distilling drops of blood, with the words "I make sicker," (that is, sure), as a motto.

* See it printed in Hailes, i. 342.

Whatever might have been Bruce's previous plans, there was no room for doubt or hesitation now. The boldest course afforded the only chance of safety. He immediately called his friends around him—they were few in number; but, desperate as the hazard looked, there were some gallant spirits that did not shrink from setting their lives (which many of them lost) upon another cast for the freedom of their country. The Bishops of St. Andrew's and Glasgow, the Abbot of Scone, Bruce's four brothers, Edward, Nigel, Thomas, and Alexander, his nephew, Thomas Randolph, his brother-in-law, Christopher Seton, and some ten or twelve others, mostly young men, gathered at the summons. They met at Glasgow, and from thence rode to Scone, where Bruce was solemnly crowned on the 27th of March.

Edward was at Winchester when the news of this revolution was brought to him. He immediately sent forward the Earl of Pembroke, with the title of Guardian of Scotland, at the head of a small army to check the insurgents; and, advanced in years as he now was, proceeded to make ready, if it should become necessary, to follow in person. In preparation for the expedition, proclamation was made that the Prince of Wales would be knighted on the feast of Pentecost; and all the young nobility of the kingdom were summoned to appear at Westminster to receive that honour along with him. On the eve of the appointed day (the 22nd of May) two hundred and seventy noble youths, with their pages and retinues, assembled in the gardens of the Temple, in which the trees were cut down that they might pitch their tents; they watched their arms all night, according to the usage of chivalry, the prince and some of those of highest rank in the abbey of Westminster, the others in the Temple church. On the morrow Prince Edward was knighted by his father in the hall of the palace, and then proceeding to the abbey, conferred that honour on his companions. A magnificent feast followed, at which two swans covered with nets of gold being set on the table by the minstrels, the king rose and made a solemn vow to God and to the swans, that he would avenge the death of Comyn, and punish the perfidy of the Scottish rebels; and then addressing his son and the rest of the company, he conjured them, in the event of his death, to keep his body unburied until his successor should have accomplished this vow. The next morning the prince with his companions departed for the borders; Edward himself followed by slow journeys, being only able to travel in a litter.

Meanwhile Bruce's adherents had been increasing in number, and he had already acquired such strength, that in several parts of the country the officers of Edward and the other English had fled in terror. He now marched upon Perth,

where the Earl of Pembroke lay. It is affirmed, that when the Scots challenged the English commander to come forth and give them battle, Pembroke answered that he would fight them on the morrow; on which Bruce retired to the neighbouring wood of Methven; but that same evening (19th of June) the English fell upon them: it was rather a rout than a battle; Bruce himself was in the greatest danger, having been three times unhorsed; Randolph and others of his friends were taken; and he with difficulty made good his retreat into the fastnesses of Atholl, with about five hundred followers, the broken and dispirited remnant of his force. For many months after this, he and his friends were houseless fugitives; a price was set upon their heads: to make their difficulties and sufferings the greater, they were joined after some time by a party of their wives and daughters; and as they penetrated farther and farther into the depths of the Highlands, to avoid the English troops that scoured the country in search of them, their miseries, both from want of shelter and frequent want of food, as well as from the increasing danger, became daily more pressing. On reaching the borders of Argyle, Bruce and his little band were set upon in a narrow defile by the Lord of Lorn, who had married an aunt of Comyn, at the head of a thousand followers, and after a sharp but unequal encounter, with difficulty escaped with their lives. At last Bruce's queen and the other ladies were conducted by his brother Nigel to the castle of Kildrummie; and Bruce himself soon after found means to pass over to the little isle of Rachrin on the northern coast of Ireland.

While the Scottish king lay concealed here, ruin fell upon almost all the connexions and adherents he had left behind. The Bishops of St. Andrews and Glasgow, and the Abbot of Scone, had fallen into the hands of the English soon after the battle of Methven: they were taken clad in armour, and were immediately sent, so attired and in fetters, to England, and there consigned to different prisons. Their sacred character alone saved their lives. Bruce's queen and his daughter Marjory having left Kildrummie, and taken refuge in the sanctuary of St. Duthac, at Tain, in Rossshire, were seized there by the Earl of Ross. The knights who were with them were put to death; and they themselves were sent to England, where they endured an imprisonment of eight years. The youthful Nigel Bruce, much beloved by the people for his gallantry and the graces of his person, was compelled to surrender the castle of Kildrummie, and, being sent in irons to Berwick, was there hanged, and afterwards beheaded, along with divers other knights and gallant men. Christopher Seton suffered a similar death at Dumfries, the Earl of Atholl and Sir Simon Fraser in London, and many others there and elsewhere. Thus did Edward make the best blood of Scotland flow in torrents in expiation of what he called the rebellion and breach of faith of the people of that country. "It is remarkable," as is well observed by Hailes, "that in the preceding year he himself procured a papal bull, absolving him from the oath which he had taken for maintaining the privileges of his people. But the Scots, without papal authority, violated their oaths, and were punished as perjured men. It is a truth not to be disguised, that in those times the common notions of right and wrong were, in some sort, obliterated. Conscience, intoxicated with indulgences, or stupified by frequent absolution, was no longer a faithful monitor, amidst the temptations of interest, ambition, and national animosities."

Bruce, however, had not been idle in his winter retreat; and early in the spring of 1307 he passed over from Rachrin to the isle of Arran, with a company of about three hundred men, embarked in thirty-three galleys, which, according to Fordun, he had been enabled to raise by the aid of a chieftainess, called Christiana of the Isles. Before venturing to the opposite coast, he despatched one of his followers to ascertain what were the dispositions of the people, with instructions, if he found appearances favourable, to light a fire on a certain day, on an eminence near the castle of Turnberry. This had been one of the chief seats of his own family, and the surrounding district was his ancestral territory of Carrick. When the appointed day arrived, Bruce looked anxiously for the expected signal: at length, when it was already past noon, he saw the fire; on which he quickly embarked with his associates, and they steered their course during the darkness by its light. When they approached the landing-place, Bruce's emissary stood on the shore. He told them that the English were in complete possession of Carrick; that Lord Percy, with a numerous garrison, held the castle of Turnberry; and that there was no hope of a rising in favour of Bruce. "Traitor!" cried Bruce; "why did you make the signal?" "I made no signal," replied the man; "but, observing a fire on the hill, I feared that it might deceive you, and I hasted hither to warn you from the coast." Bruce hesitated what to do; but his brother Edward boldly declared for pursuing their enterprise at all hazards. They immediately attacked a body of the English that lay close at hand, and succeeded in putting most of them to the sword. Percy, who heard the tumult, did not dare, in his ignorance of the numbers of the enemy, to come forth from the castle. After this exploit, Bruce sought shelter, in the first instance, in the mountainous parts of the surrounding country. But the bold blow he had struck sufficed to rekindle the war, and it soon raged in different quarters. In the beginning of February, Bruce's brothers, Thomas and Alexander, as they were bringing over a band of eleven hundred adventurers to his assistance from Ireland, were routed at Lochrian, in Galloway, by Duncan Mac Dowal, a chief of that region, who immediately carried the two brothers, who had fallen into his hands severely

wounded, to the English king at Carlisle. Edward ordered both to instant execution. Some weeks after this, Douglas Castle, which was held by Lord Clifford, was gallantly surprised by its former owner, Sir James Douglas, one of Bruce's most distinguished followers. On this occasion he behaved with distinguished ferocity; for, not contented with the numbers of the garrison that had fallen in the encounter, he piled together the malt and corn and wine-casks, and whatever else he found in the castle that he could not carry away, and then setting fire to the heap, slew his prisoners, and threw their dead bodies among the flames, which soon enveloped the whole building, and reduced it to a blackened ruin. The tradition of the neighbourhood still remembers this horrible revenge under the name of the Douglas Larder.* It was some time, however, before Bruce was strong enough to show himself openly in the field; and he was frequently again in great personal danger as he skulked from one hiding-place to another in the wilds of Galloway, while his enemies in all directions were hunting him for his life. But at length he ventured to encounter the Earl of Pembroke at Loudon Hill; when, through the skilful disposition of his force, notwithstanding a great inferiority of numbers, he obtained a complete victory. This action was fought on the 10th of May. Three days after, he attacked another English force under the command of the Earl of Gloucester; and this, too, he succeeded in routing with great slaughter. Pembroke and Gloucester having both thrown themselves into the castle of Ayr, Bruce immediately laid siege to that fortress.

But here we must break off our account of events in Scotland for the present. King Edward all this while had advanced no farther than to Carlisle, having been detained all the winter at Lanercost, by a serious attack of illness. He had directed all the late operations of the war from his sick-bed; but now, incensed at the continued progress of the insurrection, he offered up the litter on which he had thus far been carried in the cathedral church of Carlisle, and again mounting on horseback, gave orders to proceed towards the borders. It was the effort of a dying man. In four days he advanced about six miles, when, having reached the village of Burgh-upon-Sands, he there stopped once more for the night; and on the morning of the next day, the 7th of July, expired, in the sixty-ninth year of his age, and thirty-fifth of his reign. His last breath was spent in enjoining upon those who should succeed him the prosecution of the great design of his life—the complete subjugation of that country, the hated sight of which, again, after all his efforts, in revolt against him, was thus fated to be the last on which his eyes should rest.

Prince Edward was not present when his father died, having returned to London a short time before. Froissart relates that the old king, before his death, made his son be called, and, in the presence of his barons, made him swear upon the saints, that as soon as he should have expired, he would cause him to be boiled in a cauldron, till the flesh should fall from his bones, and afterwards bury the flesh, and keep the bones, and that every time the Scots rebelled, he would lead an army against them, and carry along with him these dead relics of his father. If this singular oath ever was exacted, it must have been not when Edward was at the point of death, but before he set out from Carlisle; and as at this time he imagined himself to be recovering, it is most probable that the incident never took place at all.

* Tytler, i. 256.

Edward II.—Surnamed Of Caernarvon.

A.D. 1307.—The death of Edward I. was cautiously concealed in the capital for many days, and Ralph de Baldoc, bishop of London and chancellor of the kingdom, continued to put his great seal to writs till the 25th of July. Edward II., however, had been peacefully recognised at Carlisle by the unanimous consent of the peers and magnates present with the army there, on Saturday, the 8th of July, the day after his father's death.* This prince had the outward appearance of many advantages: he was young, of an agreeable person, and cheerful disposition; and the fame and greatness of his father endeared him to the English people, and caused him to be respected abroad; but he had already betrayed weaknesses that would overthrow the strongest throne, and had incurred the suspicion of vices which, when once proclaimed, were sure singularly to irritate a manly nation. On his death-bed his father had implored him to eschew the company of favourites and parasites, and had forbidden him, under pain of his curse, to recal his chief minion, Gaveston, to England. Piers Gaveston was a remarkably handsome youth of Gascony, who had been brought up with the prince, over whose heart he obtained a disgraceful ascendancy. The stern old king had driven him from England; but, forgetful of his dying injunctions, and his own solemn oaths, Edward's first thoughts on his accession were to recal this favourite, and confer upon him the earldom of Cornwall, with other honours and immense estates. He was obliged, however, to make a semblance of prosecuting the war in Scotland: he hastened from London; he marched as far north as Cumnock, on the borders of Ayrshire; but at this point he turned round, and made his way back to England, without having performed anything. Meanwhile, Gaveston, who had hastily arrived from the continent, joined him in Scotland, and had scarcely made his appearance when the whole body of the government was changed. The chancellor, the treasurer, the barons of the Exchequer, the judges,—all the officers who had been appointed by the deceased king, were at once deprived of their

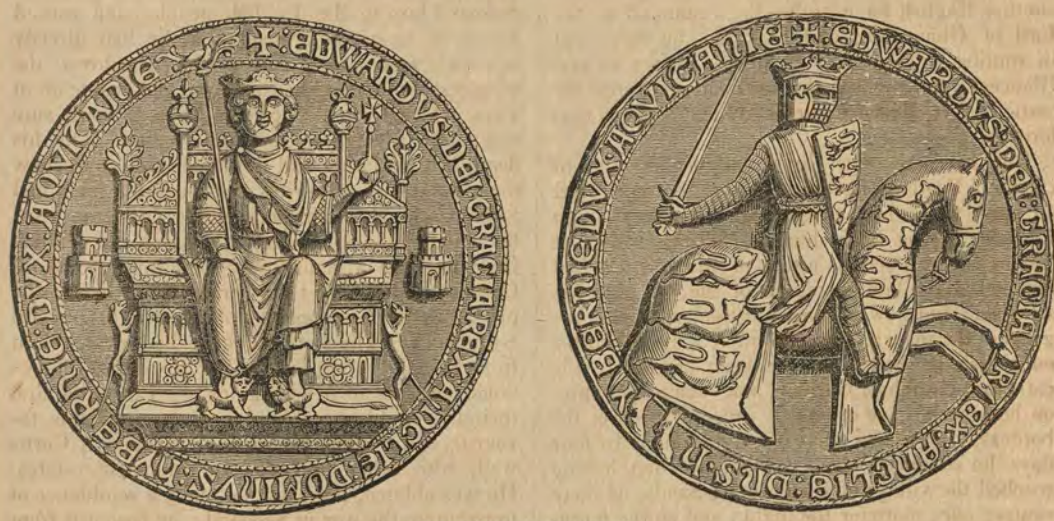
EDWARD II. Drawn from the Tomb at Gloucester.



GREAT SEAL OF EDWARD II.

places, and in some instances stripped of their property and thrown into prison. This fate particularly befel the lord treasurer, Walter de Langton, bishop of Lichfield, and it was said for no other reason than his having reproved the prince, and refused him money for his extravagance during his father's life-time. In no case does any legal procedure appear to have been resorted to. Instead of fulfilling his father's solemn behest, Edward buried his bones in Westminster Abbey, at the head of Henry III., on the 27th day of October; and soon after he gave the money which the old king had set apart for the Holy War to his insatiable favourite. Indeed, the whole of Edward's care seems to have been to disgust every feeling and prejudice of his barons, and to enrich and aggrandise Gaveston with a rapidity and to an amount unprecedented even in the shameful annals of favouritism. The great earldom of Cornwall, which had been appanage enough for princes of the blood, was not deemed sufficient for this Gascon knight. Edward married him to his own niece, Margaret de Clare, made him lord chamberlain, and gave him an extensive grant of lands

in Guienne. In travelling through England nothing was so frequently seen as the manors, the retinues, and houses of this overgrown minion. Nothing was granted without his consent; and it was reported, among many other things, that the king had said that he would leave him his kingdom if he could.*

When the infatuated Edward sailed for France, in January, 1308, to marry the Princess Isabella, to whom he had long been contracted, he left Gaveston regent of the kingdom during his absence, and intrusted him with more absolute powers than had ever been conferred in such cases. The Princess Isabella, daughter to Philip le Bel, was reputed the most beautiful woman in Europe, —*une des plus belles dames du monde*, according to Froissart. But Edward from the first was rather indifferent to her person. They were married with great pomp in "our Lady Church of Boulogne," on the 25th of January; no fewer than four kings and three queens being present at the ceremony. Edward showed the greatest impatience to return to England: the usual rejoicings were cut short, and he embarked with his bride and a numerous company of French nobles whom he had invited to the coronation. Soon after their landing they were met by Gaveston and by the flower of the English nobility, who came to salute their young and beautiful queen. At this moment, paying no attention to his wife, or his guests, or to the rest of his subjects, Edward threw himself into the arms of his favourite, hugged and kissed him, and called him brother. The whole court was disgusted at this exhibition, and two of the queen's uncles, who had accompanied her into England, could not conceal their displeasure. At the coronation, which was celebrated with great magnificence at Westminster on the 24th of February, nearly all the honours were allotted to the favourite, without any regard to the hereditary offices of the great barons. "None," says an old writer, "came near to Piers in bravery of apparel or delicacy of fashion." He carried the crown, and walked in procession before the king and queen; which things greatly increased the anger of the lords against him. Four days after the coronation the barons petitioned the king, and, without any ceremonious phrases, requested him to banish Sir Piers Gaveston immediately. Edward promised to give them an answer in parliament, which was to meet after the festival of Easter, and in the mean while he did all he could to disarm their resentment. But the favourite himself had no discretion; he continued to outshine all the nobles of the land, and being well skilled in those martial sports, he frequented all tournaments, and carried away many prizes. He unhorsed at different times the earls of Lancaster, Hereford, Pembroke, and Warenne; and these triumphs are supposed to have given a fresh edge to their hatred. When the parliament met Edward was obliged to part with his minion. Gaveston took an oath that he would never return to England, and the bishops bound him to his oath by threats of excommunication. The king accompanied him to Bristol, where he embarked; but a few weeks after it was ascertained that the exile had been appointed governor of all Ireland, and that he had established himself in that island with almost royal magnificence. From the time of his departure till that of his return,—a space of thirteen months,—the whole soul of the king seems to have been absorbed by this one subject: he employed every expedient to mitigate the animosity of his barons; he granted offices to his cousin the Earl of Lancaster; he made great concessions to Earl Warenne and others; he wrote to Rome for a dispensation for Gaveston from his oath; and having, as he fancied, removed all dangerous opposition to the measure, he sent to recal the favourite from Ireland. They met at Chester, with a wonderful display of tenderness on the part of the king. The parliament assembled at Stamford, and the promises of the king, and the affected humility of Gaveston, obtained a formal consent to his re-establishment in England.

The king was now happy; his court was filled with buffoons, parasites, and such like pernicious instruments; and nothing was seen there but feasting and revelry. At the same time the upstart favourite became much more arrogant and insolent than he had ever been before. The English people, who despised him, would call him nothing but Piers Gaveston; upon which he caused the king to put forth a ridiculous proclamation ordering all men to give him the title of the Earl of Cornwall whenever they mentioned him. He indulged in rude witticisms and sarcasms at the expense of the English nobles, and he presumed to give contemptuous nicknames to some of the greatest barons of the kingdom. Thus, he called the Earl of Lancaster the "old hog," or the "stage-player:" the Earl of Pembroke, because he was pale and tall, "Joseph the Jew:" the Earl of Gloucester "the cuckold's bird:" and the Earl of Warwick "the black dog of Ardenne."* The silly king laughed at this wretched wit, which was sure to travel beyond the applauding walls of the court. When the stern Earl of Warwick heard it, he vowed a terrible vow that he would make the minion feel "the black dog's teeth." Even the queen was so disgusted with this man's predominancy, that she sent complaints to the king her father, and conceived an aversion to her husband, which, though sometimes suppressed or concealed, was never afterwards removed. The grants voted by parliament were dissipated, and Edward was continually in great straits for money. The barons, before voting supplies, had several times made him promise a redress of grievances; but when he summoned a parliament to meet at York, in October, 1309, three months after the favourite's return from Ireland, most of the barons refused to attend, alleging that they stood in fear of the power and

* De la More.—Walsing.—Trivet.

* Packington, in Leland's Collect.—Walsing.

malice of Gaveston. The urgency of the king's wants obliged him to repeat his summons, but still they came not. The favourite then withdrew for a time; and at last the barons announced that they would assemble at Westminster. They met accordingly in the month of March, 1310; but every baron came in arms, and Edward was completely in their power. As they would no longer be amused by promises, he was obliged to consent to the immediate appointment of a committee of peers, who should have power to reform not only the state, but also the king's household. The committee was appointed by the primate, seven bishops, eight earls, and thirteen barons, who acknowledged under their signatures that this grant proceeded from the king's free will; that it was not to be considered as a precedent for trenching on the royal prerogative; and that the functions of the committee should cease at the feast of St. Michael in the following year. The committee, called "ordainers," sate in London. The king, who considered them in the light of censors and harsh schoolmasters, hurried away to the north, preferring even the toils of a campaign to a residence under their shadow. He was scarcely out of their sight when he was once more joined by Gaveston, upon whom he heaped fresh gifts, honours, and employments. The two passed the winter and the following summer at Berwick and the country about the Scotch borders, doing little or nothing, while the cautious Bruce was preparing his measures for a final expulsion of the English.

In the month of August, 1311, Edward was obliged to meet his parliament at Westminster. The barons were in a worse humour than ever: they recalled all grants made by the king to his favourite; they decreed that all made thereafter, without consent of parliament, should be invalid; that Gaveston should be banished, on pain of death in case of return; that the king should not leave the kingdom or make war without the consent of the baronage; that the baronage, in parliament assembled, should appoint a guardian or regent during the royal absence; and that all the great officers of the crown, and the governors of foreign possessions, should at all times be chosen by the baronage, or with their advice and assent in parliament. In later times these conditions were softened into the important principle that the confidence of parliament is required to render the choice of public officers agreeable to the constitution.* The king had once more confirmed the great charter, the preceding year, before going to the north, but now a new and important provision was introduced respecting the meeting of parliament:—"Forasmuch as many people be aggrieved by the king's ministers against right, in respect to which grievances no one can recover without a common parliament, we do ordain that the king shall hold a parliament once a year, or twice if need be." More for the sake of his favourite, than from any other motive, Edward made a show of resistance to several of these ordinances, but he was compelled to yield, and he affixed his signature to them all in the beginning of October. On the 1st of November following, after many tears, he took leave of Gaveston, who retired to Flanders, with royal letters warmly recommending him to the duke and duchess. The king, who was not incapable of a certain cunning, then dissolved the parliament, and, without betraying his intentions, cautiously retired to the north, where he hoped to collect an army that would stand for him. At York, in less than two months from his last departure, Gaveston was again with his royal master, who made him a new grant of all his estates and honours. But the career of the favourite was now drawing to its close. The barons, headed by the great Earl of Lancaster, the king's cousin, fell suddenly upon the royal party at Newcastle. Edward had time to escape, and he sailed away on board a vessel with Gaveston, leaving his beautiful wife behind him with the greatest indifference. Lancaster caused the queen to be treated with all respect, and then marched to lay siege to Scarborough Castle, into which the favourite had thrown himself, trusting to be able to hold out until the king, who had gone from thence to York, should return to his relief with an army. The castle was not tenable, and the favourite surrendered on capitulation on the 19th of May, 1312, to "Joseph the Jew," the Earl of Pembroke, who, with Lord Henry Percy, pledged his faith that no harm should happen to him, and that he should be confined in his own castle of Wallingford. From Scarborough he travelled, under the escort of Pembroke, as far as Dedington, near Banbury, and here the earl left him for a night to pay a visit to his countess, who was in that neighbourhood. Gaveston appears to have had no foreboding of his fate: on the following morning he was ordered to dress speedily: he obeyed, and descended to the court-yard, where, to his confusion, he found himself in the presence of the "black dog of Ardenne,"—the grim Earl of Warwick,—who was attended by a large force. They put him on a mule, and carried him, with shouts of triumph, to Warwick Castle, where his entrance was announced by a crash of martial music. In the castle-hall a hurried council, composed of the earls of Lancaster, Hereford, and Arundel, and other chiefs, sate upon the prisoner. A proposal was made, or a hint was offered, that no blood should be shed; but a voice rung through the hall,—"You have caught the fox; if you let him go you will have to hunt him again." This death-note had its effect; the capitulation of Scarborough was foully disregarded, and it was resolved to put an end to the unhappy man in conformity with the ordinance passed by parliament for his last exile. He threw himself at the feet of the "old hog,"—the Earl of Lancaster,—whom he now called "gentle lord;" but there was no mercy there. They hurried him

Warwick Castle; Guy's Tower.*

at once to Blacklow-hill, a gentle knoll a mile or two from the castle, on the edge of the road that leads from Warwick to Coventry, and there, in view of the beautiful windings of the placid river Avon, they struck off his head.†

This tragedy, unusual in England even in those turbulent times, threw the king into an agony of grief; but when he dried his tears he thought of revenge. For six months Edward and his barons were in arms against each other, but no battle took place, and a temporary reconciliation was effected at the end of the year, the king postponing the gratification of his vengeance to a more suitable opportunity. Two meetings of parliament (A.D. 1313) confirmed and completed this treaty. The barons knelt before the king in Westminster Hall, amnesties were published, and the plate and jewels of the deceased favorite were surrendered to Edward. But when they asked him to declare Gaveston a traitor, he resolutely refused.‡ This year Edward took the field in something like earnest, but he only marched to Scotland to add the disgrace of a defeat in regular war to the other reverses of his inglorious reign. While he had been occupied in England with a vain struggle to maintain his obnoxious favourite, the Scottish patriots had entirely undermined the fabric of his able father's ambition.

Ever since the death of Edward I., the English dominion in the greater part of Scotland had been little more than nominal. The progress of Bruce in liberating the country had been continued and steady; and, although something had on different occasions been attempted, little or nothing had been done by the indolent and incapable prince who now occupied the English throne to counteract his able and persevering efforts for the establishment and consolidation of his authority. We must content ourselves with noticing briefly the principal events that had marked the contest up to the time at which we are now arrived. Edward, on returning home, in the autumn of 1307, had left the war to be conducted by the Earl of Richmond, upon whom he conferred the office of Guardian of Scotland, and who was supported by that part of the nation which was opposed to Bruce's assumption of the crown. The latter, therefore, had both an English and a Scottish, both a foreign and a domestic enemy, to contend with. The great body of his countrymen soon became warmly attached to his cause; but in some districts even the popular feeling was hostile, and a powerful faction of the nobility was arrayed in determined resistance to his pretensions. For the present at least, and until they should have attained their immediate object of putting him down, this party professed to be in the English interest, and acted in concert with Edward's officers. Most of the places of strength throughout the kingdom were also in the hands of the English. In these circumstances the course which Bruce appears to have laid down for himself was to avoid a general action as long as possible, to keep his enemies divided by constantly occupying their attention at various points at the same moment, and so to give himself the chance of cutting them off in detail, while in the mean time he overran and ravaged in succession those parts of the country that refused to submit to his authority, and seized every favourable opportunity of reducing the castles and other strongholds. Most

* So called after the ninth earl, "The Black Dog of Ardenne," of the history; though there was also a famous Guy Earl of Warwick, of another family, in the Saxon times.

‡ Rymer.—Walsing.—Statutes 7th Ed. II.

of these that he recovered he immediately dismantled: they were of no use, and would only have been an incumbrance to him, with the national feeling in his favour, and it was by their occupation chiefly that the English had ever been enabled to maintain their power for any length of time in the country.

The severe bodily exertion and fatigue, and the still more trying accumulation of mental distresses to which he had been subjected since the commencement of his great enterprise, had been too much even for his heroic heart and iron frame, and had reduced Bruce by the spring of 1308 to a state of debility from which it had begun to be feared that he would not recover. On the 22nd of May the royal force was encountered near Inverury, in Aberdeenshire, by a numerous force under the command of Mowbray, an Englishman, and John Comyn, the Earl of Buchan. At this time Bruce, it is affirmed, was not able to rise without assistance from his couch, but he nevertheless desired to be set on horseback, though he was only enabled to keep his seat by being supported on each side. In this state he led his men to the charge; the enemy was put to flight, and pursued with great slaughter for many miles; and if we may believe Bruce's poetical historian, Barbour, the king was restored to health by the excitement of this day. There is nothing in the story to entitle us to reject it as incredible.

Soon after this the people of Aberdeen rose and stormed the castle there, put the English garrison to the sword, and razed the fortress to the ground. An English force immediately marched against the town, but the citizens finished their exploit by likewise encountering and defeating this new enemy. With the savage spirit which the character of the war had engendered, the victors gave no quarter, but slew every man who fell into their hands. Edward I., indeed, had already set the example of executing his prisoners, and it was not to be expected that the other side would fail to follow the same course. The capture of the castle of Aberdeen was speedily followed by that of the castle of Forfar; it was surprised by escalade during the night; and here also the English by whom it was garrisoned, and of whom the number was considerable, were all massacred, and the fortifications destroyed.

There were two districts of the kingdom where the opposition to Bruce was especially strong—that of Galloway, the turbulent inhabitants of which had never yet been thoroughly reconciled to the dominion of the Scottish kings, and were besides attached by a sort of national connexion to the Baliol family through their ancient lords; and the country of Lorn in Argyleshire, the chief of which, Allaster (or Alexander) Mac Dougal (often called Allaster of Argyle) had, as mentioned above, married an aunt of Comyn, whom Bruce had slain, and was consequently one of the fiercest enemies of the latter. In the course of this summer both these districts were overrun, and for the present reduced to subjection, the former by Bruce's brother Edward, the latter by the king himself.

Meanwhile the measures of the English government were characterised by all the evidences of distracted councils, and of the decay of the national spirit and power under the inefficient rule of the new king. Almost every quarter of a year saw the substitution of a new guardian or chief governor for Scotland; but none of these changes brought any change of fortune to the English arms. The country generally was under subjection to Bruce; and whenever he encountered any military force, whether composed of Scots or of English, he was sure to put them to flight. At last, in the spring of 1309, a truce was arranged by the mediation of the king of France. Hostilities, however, were not long suspended. The English charged the Scots with having violated the truce; but it is probable that, in the embittered state of feeling between the two parties, irregular aggressions were soon made by individuals on both sides. In the end of the year, by a second intervention of the French king, the negotiations were renewed, and another truce appears to have been concluded in the year 1310. But this also was soon broken by one party or by both. In the state to which affairs were reduced, which threatened to sweep away the last vestiges of the English authority if some great effort were not made, Edward II. at last prepared to proceed to Scotland, and take the field in person against the insurgents. Probably, however, his principal motive, as has been hinted above, for this apparent exertion of vigour was, that he might escape along with his favourite out of the observation of the Committee of Ordainers, which the parliament had recently set over him. He entered Scotland about the end of September, but, after leading his army about from place to place over the border counties for some weeks without achieving anything, he returned to Berwick, and, taking up his quarters there, remained inactive for nearly nine months. Bruce and his adherents, he afterwards boasted in a letter to the pope, lay lurking in their coverts, all the time he was in the country, after the manner of foxes.* He certainly, at any rate, did not set about unkennelling them with much ardour. Edward returned to England in the end of July, 1311; and, as soon as he was gone, Bruce made an irruption into Durham, and suffered his soldiers to wreak their vengeance on that unfortunate district by a week of unrestrained plunder and the most merciless devastation. Bringing them back loaded with spoil, he next led them to attack the castle of Perth, one of the most important of the fortresses which the English still held. After a siege of six weeks, it was taken in the beginning of January, 1312, by an assault during the night, gallantly led by the king himself. He was, Barbour says, the second person that mounted the wall. Edward now attempted, but without success, to negotiate another truce, and even solicited the intervention of the pope. But,

* Ad instar vulpium.

instead of listening to these overtures, Bruce again invaded England, burned the towns of Hexham and Corbridge, and a great part of the city of Durham, afterwards penetrated to Chester, and, although he was repulsed in an assault upon Carlisle, only consented to return across the border upon the four northern counties purchasing a truce from him by a payment of two thousand pounds each. Not long after he succeeded in making himself master of the castle of Dumfries, and of those of Butel and Dalswinton in Galloway,—the former a seat of the Baliols, the latter of the Comyns. On the 7th of March, 1313, the important castle of Roxburgh was suddenly taken by assault; a party under the command of Bruce's friend Douglas having scaled the wall while the English garrison were enjoying the revelry of the carnival. On the 14th of the same month that of Edinburgh, which had for some time been blockaded by Bruce's nephew Randolph, now created earl of Moray, was taken in a similar manner by a party of thirty men, whom Randolph headed, and who made their way at midnight up the precipitous rock, on which the castle stands, by a secret path, along which they were guided by a man who had resided in the fortress in his youth, and had been wont to descend by that intricate and perilous access to visit a girl with whom he was in love. When the assailants had by this means reached the foot of the castle wall, and had sat down to take breath, a soldier on the ramparts, calling out "Away! I see you well!" threw down a stone to the spot where they were; but they remained motionless; and the man walked away. In a few minutes Randolph and his men, having fixed their ladder of rope, were on the top of the wall. A desperate conflict ensued; but the superior numbers of the garrison did not compensate for the confusion into which they were thrown by so sudden a surprise; and, after the governor himself had fallen in the *melée*, they surrendered at discretion. The castle was afterwards demolished. It appears to have been likewise about this time, although the event is placed earlier in the common accounts, that the castle of Linlithgow was surprised by a stratagem, which might almost be supposed to have been suggested by the classic tale of the Trojan horse, but of which the contrivance as well as the conduct is attributed to a poor countryman named William Binnock or Binny. A party of Scottish soldiers having been previously placed in ambush near the gate, Binny introduced eight men into the fort by concealing them in a waggon-load of hay which he had been employed to bring in: as soon as the waggon had reached the middle of the gateway he cut the traces by which the oxen were fastened to it, when the men immediately leaped out; in an instant, while the position of the waggon prevented the portcullis from being let down, the guard was overpowered, and the drawbridge, which had been raised, was again lowered; the party of soldiers then rushing in, easily mastered the garrison, and put them to the sword. This same year Cumberland was again ravaged by Bruce, who then crossing over to Man, defeated a force which the governor brought out to oppose him, took the castle of Russin by storm, and effected the complete reduction of the island.

While the king was absent on this expedition, Edward Bruce had made himself master of the castles of Dundee and Rutherglen, and he had been for some weeks engaged in besieging that of Stirling, always of chief importance as the key to the whole northern part of the kingdom, and now almost the only considerable place of strength which the English still held in Scotland. After a gallant defence the governor, Philip de Mowbray, offered to surrender if not relieved by the Feast of St. John the Baptist (the 24th of June) in the following year; and this proposal Edward Bruce, without consulting his brother, accepted. It was an agreement, all the advantages of which seem to have been on one side; for it imposed an inaction of many months upon the Scots, during the whole of which time the castle would be in security, and the king of England would have abundant leisure to make the most efficient arrangements for its relief. Bruce expressed the highest displeasure when the treaty was made known to him; but he resolved, nevertheless, to abide by it. Every effort was now made on both sides in preparation for a crisis which it was felt would be decisive. King Edward, besides ordering a fleet to be fitted out to act in concert with the land forces, summoned all the military power of England to meet him at Berwick on the 11th of June, and also called to his aid both his English subjects in Ireland and many of the native Irish chiefs. That day, accordingly, saw assembled at the place of rendezvous perhaps the most magnificent army that our warlike land had ever yet sent forth; its numbers are asserted by the best authorities to have exceeded a hundred thousand men, including a body of forty thousand cavalry, of whom three thousand were clad in complete armour, both man and horse. At the head of this mighty array Edward took his course into Scotland, advancing by the east coast to Edinburgh, from which, turning his face westward, he proceeded along the right bank of the Forth towards Stirling. Bruce, meanwhile, had collected his forces in the forest called the Torwood, midway between that place and Falkirk; they amounted to scarce forty thousand fighting men, nearly all of whom were on foot. When the English approached, the king of Scots drew up his little army immediately to the south of Stirling, in a field then known by the name of the New Park, which, partly broken with wood, was in some parts encompassed by a marsh, and had running along one side of it the rivulet of Bannockburn, between woody banks of considerable depth and steepness. He arranged his men in four divisions, three of which formed a front line facing the south-east, from which direction the enemy was approaching, so that the right wing rested on the brook of Bannock, and the left

extended towards the town of Stirling. It was a position chosen with consummate skill; for while obstacles, partly natural, partly artificial, secured either flank from being turned, the space in front was at the same time so narrow and impeded as to be calculated in a great measure to deprive a very numerous hostile force of the advantage of its numerical superiority. On his most assailable quarter, his left wing, or the north-eastern extremity of his line of battle, Bruce had caused a great many pits to be dug, about three feet in depth, and then to be covered over with brushwood and sod, so as not to be easily perceptible; they might, says Barbour, be likened to a honeycomb; according to another account, sharp stakes were also fixed in the pits. Of the three divisions thus drawn up, Bruce gave the command of that forming the right wing to his brother Edward; of that forming the left to Randolph, Earl of Moray; of the centre to Sir James Douglas and Walter the Steward; the fourth division, composed of the men of Argyle, the islanders, and his own vassals of Carrick, formed a reserve, which was stationed in the rear, and of which he himself took charge.

On Sunday, the 23rd of June, intelligence was received that the English were at hand. Barbour has painted the day as one bright with sunshine, which, falling upon the burnished armour of King Edward's troops, made the land seem all in a glow, while banners right fairly floating, and pennons waving in the wind, added to the splendour of the scene. When he came within sight of the Scots, and perceived how they were planted, Edward, detaching eight hundred horse, sent them forward under the command of Sir Robert Clifford to endeavour to gain the castle by making a circuit on the other side of some rising grounds to the north-east of Bruce's left wing. Thus sheltered from observation, they had already passed the Scottish line, when Bruce himself was the first to perceive them. "Randolph!" he cried, riding up to his nephew, "a rose has fallen from your chaplet,—you have suffered the enemy to pass!" It was still possible to intercept Clifford and his horse. Randolph instantly set out to throw himself at every hazard between them and the castle: to prevent this the English wheeled round and charged him; but he had drawn up his men in a circle, with their backs to each other, and their long spears protruded all round, and they not only stood the onset firmly, but repelled it with the slaughter of many of their assailants. Still they contended against fearful odds, for the English were not only mounted, but greatly superior to them in number; and, seeing the jeopardy of his friend, Douglas requested to be allowed to go and succour him. "You shall not move from your ground," replied Bruce; "let Randolph extricate himself as he best may." But at length Douglas could no longer restrain himself: "In truth, my liege," he cried, "I cannot stand by and see Randolph perish; with your leave, I *must* aid him;" and so, extorting from the king a reluctant consent, he hastened forward. But, as he drew near, he perceived that the English were already giving way: "Halt!" he cried to his followers; "let us not diminish the glory of these brave men!"—and he did not go up to his friend till the latter had, alone and unaided, compelled the English captain to retire in confusion with his shattered force, and relinquish his attempt. Meanwhile, before this affair had yet been decided, a brilliant achievement of Bruce himself, performed in full view of both armies, had raised the hopes of his countrymen with another good omen. He was riding in front of his troops on a little palfrey, but with his battle-axe in his hand and a crown of gold over his steel helmet, when an English knight, Henry de Bohun, or Boone, mounted on a heavy war-horse, and armed at all points, recognising the Scottish king, galloped forward to attack him. Instead of retiring from the unequal encounter, Bruce turned to meet his assailant, and, dexterously parrying his spear, in the next instant, with one blow of his battle-axe, cleft his skull and laid him dead at his feet.

Although the two armies were so near, the English did not venture upon the attack that night. But next morning, soon after break of day, their van, led by the earls of Gloucester and Hereford, advanced at full gallop upon the right wing of the Scots, while the main body of the army, which had been drawn up in nine divisions, followed in a long close column under the conduct of Edward himself. The shock did not break the Scottish line; and successive repetitions of the charge were more disastrous to the assailants than to the firm phalanx against which their impetuous squadron was broken at every collision. From the advantages of their position, also, the other divisions of the Scots were soon enabled to take part in the contest. Randolph pushed forward with his men, till, as Barbour expresses it, their comparatively small body was surrounded and lost amidst the English, as if it had plunged into the sea; Douglas and the Steward also came up; and thus the battle became general along the whole length of the Scottish front line. Of the English army, on the other hand, the greater part appears never to have been engaged. A strong body of archers, however, by whom the attack of the cavalry was supported, did great execution, till Bruce directed Sir Robert Keith, the marshal, at the head of a small detachment of horse, to make a circuit by the right, and come upon them in flank. The bowmen, who had no weapons by which they could maintain a fight at close quarters, gave way before this sudden assault like an unarmed rabble, and spread confusion in all directions. Bruce now advanced with his reserve, and all the four divisions of the Scots pressed upon the confused and already wavering multitude of the English. The latter, however, still stood their ground; and the fortune of the day yet hung in a doubtful balance, when suddenly, on a hill behind the Scottish battle, appeared what seemed to be a new army. It was merely the crowd of sutlers

and unarmed attendants on the camp; but it is probable that their sudden apparition was not made without the design of producing some such effect as it did, since they are said to have advanced with banners waving and all the show of military array. The sight spread instant alarm among the English; at the same moment Bruce, raising his war-cry, pressed with new fury upon their failing ranks: his onset, vigorously supported by the other divisions of the Scottish army, was scarcely resisted by the unwieldy and now completely panic-struck mass against which it was directed: horse and foot, in spite of the most energetic exertions of their leaders to rally them, alike gave way, and fled in the wildest disorder. Many, trying to escape across the river, were driven into its waters and drowned; many more fell under the battle-axes of their pursuers. Among the slain were twenty-seven of the rank of barons and bannerets, including the king's nephew, the Earl of Gloucester, and others of the chief nobility of England. Of knights there fell two hundred, of esquires seven hundred, and of persons of inferior rank, according to some accounts, not fewer than thirty thousand. The slaughter in the fight and the pursuit together was undoubtedly very great. A vast amount of booty and many prisoners also fell into the hands of the victors. Edward himself with difficulty escaped, having been hotly pursued as far as Dunbar, a place sixty miles from the field of battle, where he found refuge in the castle. But twenty-two barons and bannerets and sixty knights were taken; and according to one English historian, the chariots, waggons, and other carriages, loaded with baggage and military stores, that were obtained by the Scots would, if drawn up in a line, have extended for sixty leagues. On their side the loss of life, which was the only loss, was comparatively inconsiderable, and included only one or two names of any note.

This great victory, in effect, liberated Scotland. The castle of Stirling immediately surrendered according to agreement. Bothwell Castle, in which the Earl of Hereford had shut himself up, capitulated soon after to Edward Bruce, when the Earl was exchanged for the wife, sister, and daughter of the king of Scots, who had been detained in England for the last seven years, and also for the Bishop of Glasgow and the Earl of Mar. Edward Bruce and Douglas, then entering England, ravaged Northumberland, exacted tribute from Durham, and, after penetrating as far as Appleby, returned home laden with plunder. "At this time," says Walsingham, "the English were so bereaved of their wonted intrepidity, that a hundred of that nation would have fled from two or three Scotsmen." Two other destructive incursions by the Scots into the northern counties of England followed in the autumn of 1314 and the summer of 1315. On the latter occasion, they assaulted both Carlisle and Berwick, but were defeated in both attempts.

Meanwhile, however, a still bolder enterprise had been undertaken and entered upon by the ardent and ambitious brother of the Scottish king. On the 25th of May, 1315, Edward Bruce landed at Carrickfergus with no less a design than that of winning himself a crown by the conquest of Ireland. The force which he brought with him consisted of only six thousand men; but he was joined, on landing, by a number of the native chiefs of Ulster, with whom he had had a previous understanding. The invaders and their allies immediately began to ravage the possessions of the English settlers; and no attempt to oppose them seems to have been made for nearly two months, in the course of which time they plundered and burnt Dundalk and other towns, and wasted the surrounding country with merciless barbarity. At length, about the end of July, Richard de Burgh, Earl of Ulster, assisted by some of the Connaught chiefs, marched against them. The Scots at first retreated, but suddenly halting near Coyners, (on the 10th of September,) they turned round upon their pursuers and put them completely to the rout, taking Lord William Burk, and many other persons of distinction, prisoners. Soon after this, a small reinforcement of five hundred men arrived from Scotland; and the invaders now proceeded to penetrate into the heart of the country. They advanced through Meath into Kildare, and there (on the 26th of January, 1316), encountering the English army commanded by Edmund Butler, the Justiciary of Ireland, gained another brilliant victory over an enemy greatly superior to them in numerical strength. A severe famine, however, now compelled them to return to the North. On their way they were met at Kenlis, in Meath, by Roger Lord Mortimer, who thought to cut off their retreat; but this numerous force also was defeated and dispersed, and Mortimer himself, with a few attendants, was glad to take refuge in Dublin. The Scottish prince now assumed the government of Ulster. On the 2nd of May, 1316, at Carrickfergus, he was solemnly crowned King of Ireland; and from this time he actually reigned in full and undisputed sovereignty over the greater portion of the northern province. The castle of Carrickfergus, after a long siege, at last capitulated in the beginning of winter. By this time the King of Scots himself had come over to take part in the war: the force which he brought with him is said to have raised the entire numbers of the Scottish army to twenty thousand men. Thus strengthened the invaders again set out for the South, advancing right upon the capital. They failed, however, in their attempt to reduce Dublin: the citizens, after setting fire to the suburbs, which might have sheltered their assailants, set about their defence with such determination, that after some weeks the Scots raised the siege. It is probable that the want of provisions compelled them to remove. As they had already, however, wasted the country behind them, they proceeded in their course southwards, till at length, plundering and destroying as they proceeded, they had penetrated as far as the

town of Limerick. Perhaps they hoped that they might here be joined by some of the chiefs of Munster and Connaught; but if they entertained any such expectation, it does not appear to have been gratified. The difficulties of their position must now have been very serious: they were a handful of foreigners, with many miles of a hostile country between them and the nearest spot on which they could take up a secure station: famine was staring them in the face; indeed they were reduced to feed upon their horses, and want and disease were already beginning to thin their ranks. Notwithstanding, however, that an English army of thirty thousand men was assembled at Kilkenny to oppose their passage, they contrived to extricate themselves from all these perils and embarrassments, and, by the beginning of May, 1317, the two brothers had made their way back to Ulster, after having thus overrun the country from nearly one extremity to the other, without encountering any effective opposition either from the native Irish or their English masters.

The English, however, had taken advantage of the absence of the King of Scots from his own dominions to make several attempts to renew the war there. In the South, the Earl of Arundel, a Gascon knight, named Edmond de Cailand, who was governor of Berwick, and Sir Ralph Neville, were successively defeated by Sir James Douglas. Soon after, a force, which had made a descent at Inverkeithing, on the coast of Fife, was driven back by the gallantry of Sinclair, Bishop of Dunkeld, "the King's Bishop," as he used afterwards to be called, in memory of Bruce's expression when he was told of the exploit, "Sinclair shall be *my* bishop." The pope now interfered, and attempted to compel a truce between the two countries; but as he evaded giving Bruce the title of king, the latter would enter into no negotiation; and when the papal truce was proclaimed, he declined paying any regard to it. On the 28th of March, 1318, the important town of Berwick fell into the hands of the Scots: they were admitted into the place by the treachery of one of the English guards. The castle, also, soon after surrendered to Bruce, who followed up these successes by two invasions of England, in the first of which his army took the castles of Werk, Harbottle, and Mitford, in Northumberland; and, in the second, penetrated into Yorkshire, burnt Northallerton, Boroughbridge, Scarborough, and Skipton, and forced the people of Rippon to buy them off by a payment of a thousand marks. They then returned home laden with booty, and, as the chronicle of Lanercost expresses it, "driving their prisoners before them like flocks of sheep."

In the latter part of this year, however, the career of Edward Bruce in Ireland was suddenly brought to a close. Scarcely anything is known of the course of events for a period of about a year and a half; but on the 5th of October, 1318, the Scottish prince engaged the English at Fagher, near Dundalk, and sustained a complete defeat. He himself was one of two thousand Scots that were left dead upon the field. Only a small remnant, consisting principally of the men of Carrick, made good their escape to Scotland. This is said to have been the nineteenth battle which Edward Bruce fought in the country, and till now, according to Barbour, he had been always victorious; but one hour sufficed to destroy all that three years had set up: the fabric of the Scottish dominion in Ireland passed away wholly and for ever, leaving scarce a trace that it had ever been.

In the summer of 1319, Edward determined to make another effort on a great scale for the reduction of Scotland. Having assembled a numerous army at Newcastle, he marched thence upon Berwick, and, after much preparation, made his first attack upon that town at once by land and sea on the 7th of September. He was, however, gallantly withstood by the garrison and the inhabitants, under the command of the Steward of Scotland, and, after a long and fierce contest, repulsed at all points. The attempt was afterwards repeatedly renewed, and always with the same result. Barbour has given a minute and highly curious account of this siege, in which all the resources of the engineering science of the age were called into requisition on both sides. Meanwhile, Randolph and Douglas, at the head of a force of fifteen thousand men, passing into England by the West Marches, made a dash at the town of York, with the hope of carrying off Edward's Queen; but a prisoner, whom the English took, betrayed their scheme just in time to prevent its success. The Scots then ravaged Yorkshire with a fury as unresisted as it was unsparing, till, on the 28th of September, they were encountered by a very numerous, but in all other respects very inefficient, force, mostly composed of peasantry and ecclesiastics, under the command of the Archbishop of York and the Bishop of Ely, at Mitton on the Swale. This almost undisciplined rabble was routed at once, about four thousand of them being slain, including three hundred churchmen, wearing their surplices over their armour. In allusion to the presence of so many shaved crowns, this battle used to be termed the Chapter of Mitton. The Scots then continued their devastation of the country unopposed. It appears, from a record in the Fœdera, that no fewer than eighty-four towns and villages in Yorkshire were the next year excused from the usual taxes, in consequence of having been burnt and pillaged by Douglas and Randolph in this destructive expedition. At length, Edward, raising the siege of Berwick, marched to intercept them; but they succeeded in eluding him, and got back to Scotland in safety. On the 21st of December, a truce for two years was concluded between the two nations, which it was hoped might lead to a permanent peace.

We now return to the course of domestic affairs. Edward could not live without a favourite; and almost the whole of the remainder of his reign is occupied by another long struggle for the support

of a minion. Soon after the death of Gaveston, he conceived the same unbounded affection for Hugh Despenser, a young man who was first placed about the court by the Earl of Lancaster. Hugh was an Englishman born, and the son of an Englishman of ancient descent; he was accomplished, brave, and amiable; but all these circumstances, which, except that of his birth, Gaveston had held in common with him, did not rescue him from the deadly hatred of the barons when they saw him suddenly raised above them all. Edward married him to the daughter of the late Earl of Gloucester, and put him in possession of immense estates, including the county of Glamorgan and part of the Welsh Marches. Through the favour of the son, the elder Despenser obtained as much or more, and all the avenues to favour and promotion were stopped by this one family. In 1321, after long heart-burnings, an imprudent exercise or abuse of authority, armed all the lords of the marches against the two Despensers, whose castles were taken and burnt, and their movable property carried off. Soon after this outbreak, the Earl of Lancaster, who, as a prince of the blood, had considered himself dishonoured by the promotion of Hugh, his poor dependent, marched from the north, and joined the Welsh insurgents with thirty-four barons and knights, and a host of retainers. Having bound them by an oath not to lay down their arms till they had driven the two Despensers beyond sea, the great earl led them to St. Alban's, whence he despatched a peremptory message to his cousin, the king. Edward again made a show of resistance; and he took up legal ground when he asserted that it would not be proper to punish the Despensers without form of trial. Lancaster marched upon London, and occupied the suburbs of Holborn and Clerkenwell. A few days after, a parliament having assembled at Westminster, the barons, with arms in their hands, accused the Despensers of usurping the royal power, of estranging the king from his nobles, of appointing ignorant judges, of exacting fines; and they pronounced a sentence of perpetual banishment against both father and son. The bishops protested against the irregularity of this sentence, but the timid king confirmed it. As an instance of the contempt in which the royal authority was at this time held, it is related that, when Queen Isabella, passing on a journey by the Lord Badlesmere's castle of Leeds, in Kent, desired a night's lodging, she was not only refused admittance, but some of her attendants were fallen upon and killed.

Suddenly, however, the position of the two contending parties was reversed. The Despensers had been banished in the month of August.

Leeds Castle.

In October they returned to England, encouraged by a bold move of the king, who took and hanged twelve knights of the opposite party. The Earl of Lancaster retired to the north, and opened a correspondence with the Scots, who promised to send an army across the borders to his assistance. This force, however, did not appear in time; but meanwhile the secret of the application for it transpired, and inflamed the hearts of the English against the earl—for the national animosity was at its highest—and they were deemed traitors who could think of calling in the Scots to interfere in an English quarrel.

In 1322, Lancaster and his confederates were

suddenly met at Boroughbridge, by Sir Simon Ward and Sir Andrew Harclay, who defended the bridge, and occupied the opposite bank of the river with a superior force. The Earl of Hereford charged on foot to clear the passage; but a Welshman, who was concealed under the bridge, put his lance through a hole in the flooring, and thrust it into the bowels of the earl, who fell dead. Lancaster then attempted a ford, but his men were driven back by the enemy's archers, who gathered like clouds in all directions. Night interrupted the unequal combat, but in the morning the Earl of Lancaster was compelled to surrender. He retired into a chapel, and looking on the holy cross, exclaimed, "Good Lord, I render myself to thee, and put me into thy mercy." Many knights were taken with him; and besides the Earl of Hereford, five knights and three esquires were killed. The "common sort" are neither named nor enumerated. But the more fearful part of the battle of Boroughbridge was not yet over. Edward's opportunity for revenge had arrived, and he determined that many others, besides his cousin Lancaster, whom he always suspected of being a principal mover in Gaveston's death, should perish by the hands of the executioner. A court was convoked at Pontefract, in the earl's own castle, about a month after the battle. It consisted of six earls and a number of barons of the royal party: the king presided. Lancaster was accused of many treasonable practices, and especially of calling in the Scots. He was told that his guilt was so well proved to all men, that he must not speak in his defence, and the court condemned him, as a felon traitor, to be drawn, hanged, and quartered. Froissart says, that the accusation had no other foundation than the malice of Hugh Despenser; but the existence of original documents fully proves the earl's intelligence with the Scots. Out of respect to his royal blood, Edward remitted the ignominious parts of the sentence; but his ministers heaped every possible insult on the earl, and the mob were allowed to pelt him with mud and taunt him as he was led to execution, mounted on a wretched pony without saddle or bridle. "He was," says Froissart, "a wise man, and a holy, and he did afterwards many fine miracles on the spot where he was beheaded." This reputation for sanctity is mentioned by several contemporary English writers; and it is easier for a modern historian to call the earl's devotion hypocrisy than to prove it such. In his character, adventures, and fate, Lancaster bore a striking resemblance to the Earl of Leicester, the leader of the barons in the time of Henry III. Fourteen bannerets and fourteen knights-bachelors were drawn, hanged, and quartered; one knight was beheaded. "Never did English earth, at one time, drink so much blood of her nobles, in so vile manner shed as at this;" and their enemies, not contented with their blood, procured also the confiscation of their estates and inheritances. In a parliament held at York, the attainders of the Despenser family were reversed: the father was created Earl of Winchester, and the estates of the attainted nobles were lavished on him and on his son, who became dearer to his royal master, and more prevalent in all things than he had been before his expulsion.

Many of the partisans of Lancaster were thrown into prison; others escaped to France, where they laid the groundwork of a plan which soon involved the king, his favourite, and adherents in one common ruin.* The arrogance of the younger Despenser, upon whom the lesson of Gaveston was thrown away, the ill success of an expedition into Scotland, and then the inroads of the Scots, who nearly took the king prisoner, and who swept the whole country as far as the walls of York, kept up a continual irritation, and prepared men's minds for the worst. On the 30th of May, 1323, Edward wisely put an end to a ruinous war which had lasted for twenty-three years. He agreed with Bruce for a suspension of arms, which was to last thirteen years, and which was not to be interrupted by the death of either or of both of the contracting parties; but the inestimable blessing of peace was not unaccompanied by a sense of national disgrace, for, ever since the successes of Edward I., the hopes of the English had been high and absolute, and after such immense sacrifices, they now saw themselves obliged to recognise, in fact, if not in express terms, the independence of the Scots. Soon after the conclusion of this treaty, the king was alarmed by a conspiracy to cut off the elder Despenser, and then by a bold attempt to liberate some of the captives made at Boroughbridge from their dungeons. This attempt failed; but the most important of those prisoners effected his escape by other means. This was Roger Mortimer, who had twice been condemned for treason, and who was then lying under sentence of death in the Tower of London. His adventure resembled that of Ralf Flambard, in the time of Henry I. He made his guards drink deeply of wine, into which he had thrown some narcotic drug: while they slept a sound sleep, he broke through the wall of his dungeon, and got into the kitchen, where he found or made a ladder of ropes: he climbed up the chimney, lowered himself, and contrived to pass the sentries without being observed. Under the Tower walls he found a wherry, and this enabled him to cross to the opposite side of the Thames, where some faithful servants were in attendance with good horses. He rode with all speed to the coast of Hampshire, and there he embarked for France.

Charles le Bel, a brother to Isabella, queen of England, was now seated on the French throne.† Differences had existed for some time between him and his brother-in-law, Edward; and the intrigues of the suffering Lancaster party contributed to drive

* Rymer.—Knyghton.—Walsing.—Froissart.—Speed.—Palgrave, Chron. Abstract.

† In thirteen years, three brothers of Isabella occupied, in succession, the French throne—Louis X., Philip V., and Charles IV., or Le Bel, who succeeded in 1322.

matters to extremities. The manifestos of Charles scarcely merit attention—as far as the two kings were concerned, it was the quarrel of the wolf and the lamb; and after Edward had made apologies, and offered to refer matters to the arbitration of the pope, Charles overran a good part of the territories on the continent that still belonged to the English, and took many of Edward's castles and towns. Isabella, who had long been anxious to quit the kingdom, persuaded her husband that she was the proper person to be deputed to France, as her brother would yield to fraternal affection, what ambassadors and statesmen could not procure from him. The simple king fell into the snare; and in the month of March, 1325, Isabella, accompanied by a splendid retinue, landed at Boulogne, whence she repaired to Paris, being most honourably entertained on her journey.* The treaty she concluded was most dishonourable to her husband; but the weak Edward found himself obliged to ratify it, and to promise an immediate attendance in France, to do homage for the dominions he was allowed to retain on the continent. A sickness, real or feigned, stopped him at Dover. At the suggestion of Isabella, the French court intimated that if he would cede Guienne and Ponthieu to his son, then that boy might do homage instead of his father, and everything would be arranged in the most peaceful and liberal manner. Edward again fell into the snare, or, what is more probable, was driven into it with his eyes open by the Despencers, who dreaded, above all things, the being separated from the king, and who durst not venture with him into France, where their enemies were now so numerous and powerful. Edward, therefore, resigned Guienne and Ponthieu, and the Prince of Wales went and joined his mother. The game on that side was now made up. When Edward pressed for the return of his wife and son, he received evasive answers, and these were soon followed by horrible accusations and an open defiance of him and his authority. Isabella reported that "Messire Hugh" had sown such discord between her and her husband, that the king "would no longer see her, nor come to the place where she was;"† that the Despensers, between them, had seized her dower, and kept her in a state of abject poverty and dependence. The modern historian can scarcely hint at certain parts of Isabella's complaints; but, to finish the climax, she accused the odious favourite of a plot against her life and the life of her son Edward. The king's reply was mild and circumstantial; but it did not suit the views of a harshly-treated and vindictive party to admit of any part of his exculpation; and, making every rational abatement, we believe that it must remain undisputed, that the king had most justly earned the contempt and hatred of his wife; nor will the derelictions of Isabella at all plead in his excuse. This scandalous quarrel occupied the attention of all Europe. During the lifetime of the Earl of Lancaster, the queen seems to have leant on that prince for protection: the Lord Mortimer was now the head of the Lancastrian party; and when he repaired to Paris—which he did immediately on learning her arrival—the circumstances and necessities of her position threw Isabella continually in his society. Mortimer was gallant, handsome, intriguing, and not more moral than the generality of knights. Isabella was still beautiful and young—she was not yet twenty-eight years of age—and it was soon whispered that the intimacy of these parties went far beyond the limits of a political friendship. When Isabella first arrived in France, her brother promised, by "the faith he owed to God and his lord St. Denis," that he would redress her wrongs; and he continued to protect his sister even after her connexion with Mortimer was notorious. Hugh Despenser, however, sent over rich presents to the ministers of the French king, and even to the king himself, and thus prevented the assembling of an army on the French coast. He made his master, Edward, write to the pope, imploring the holy father to interfere, and induce Charles le Bel to restore to him his wife and son; and he sent, by "subtle ways," much gold and silver to several cardinals and prelates who were "nearest to the pope;" and so, by gifts and false representations, the pontiff was led to write to the King of France, that unless he sent his sister, the Queen Isabella, back to England and to her husband, he would excommunicate him.* These letters were presented to the King of France by the Bishop of Saintes, whom the pope sent in legation. When the king had seen them, he caused it to be intimated to his sister, whom he had not spoken to for a long time, that she must hastily depart his kingdom, or he would drive her out with shame.† This anger of Charles le Bel was only feigned—it appears to have been a mere sacrifice for the sake of appearances; and when his vassal, the Count of Hainault, gave shelter to Isabella and the Lancastrian party, the count probably knew very well that he was doing what was perfectly agreeable to his liege lord. The more to bind this powerful vassal to her interests, the queen affianced the young Prince of Wales to Philippa, the second daughter of the count. The countess treated the fugitive queen with the greatest respect, considering everything that was said against her as a calumny; but no one embraced Isabella's cause with such enthusiasm as John of Hainault, a young brother of the count, who would not listen to those who warned him of the dangers of the enterprise, and told him how jealous the English were of all kinds of foreigners. The gentle knight constantly replied, that there was only one death to die, and that it was the especial duty of all knights to aid with their loyal power all

* Froissart. † Id.

* Froissart.

† Id. Charles le Bel was awkwardly situated. He and his two brothers, Louis and Philip, had, a few years before, shut their wives up in dungeons on suspicion of irregularity of conduct. Louis, on ascending the throne, caused his wife to be strangled privately in Château-Gaillard; Philip was reconciled to his; but the wife of Charles was still pining in prison. It was held monstrous that so rigid a moralist with respect to his wife should be so tolerant with regard to his sister.

dames and damsels in distress.* In a short time, a little army of 2000 men gathered round the banner of Messire John. The English exiles were both numerous and of high rank, scarcely one of them being less than a knight. The active and enterprising Roger Mortimer took the lead; but the Earl of Kent, King Edward's own brother, the Earl of Richmond, his cousin, the Lord Beaumont, and the Bishop of Norwich, all joined the queen in the Low Countries, though they had been sent by Edward as his trusty ambassadors into France. Nor had Isabella any want of partisans in England to make her way easy and straight. The leader of these was another bishop—Adam Orleton—who had been deprived by the king, or by Hugh Despenser, of the temporalities of his see of Hereford for his devotion to the Earl of Lancaster. By Orleton's means, a general outcry was raised against the personal vices of Edward—every tale of the court was divulged to the people—the fleet was won over, and a reconciliation effected between the Lancastrian party and the barons, who of late had supported the royal cause, but who were equally convinced of the king's demerits, or easily led to join in the enterprise by a common hatred of the favourite. After a stormy passage, Isabella, with her little army and her son Prince Edward, to whom all men already looked up, landed on the 24th of September at Orewell, in Suffolk, and was immediately received as the deliverer of the kingdom. The fleet had purposely kept out of her way; and a land force detached to oppose her landing joined her banner, and hailed the young prince with rapturous joy. The queen and the prince stayed three days in the abbey of the Black Monks at St. Edmunds Bury, where they were joined by many barons and knights. The Archbishop of Canterbury sent her money, and three bishops offered their services in person, being accompanied by the Earl of Norfolk, the other brother of the king.† Thus wife, son, brothers, cousin, were all in hostile array against Edward, who soon found that he had not a party of any kind in his favour. Never was king so thoroughly abandoned and despised: his weak father had always a strong party in the worst of times—even the miscreant John, his grandfather, could always count on a certain number of knights, English or foreign; but round the banner of Edward of Caernarvon there rallied not one. When he appealed to the loyalty of the citizens of London, they told him that their privileges would not permit them to follow him into the field; and they added that they would honour with all duty the king, the *queen*, and *prince*, and shut their gates against the foreigners. Upon this, Edward fled, and there were none to accompany him save the two Despensers, the Chancellor Baldock, and a few of their retainers. He had scarcely ridden out of London, when the populace rose and tore to pieces in the street the Bishop of Exeter, whom he had appointed governor. They afterwards murdered a wealthy citizen, one John le Marshal, because he had been a friend of the king's favourite; and, falling upon the Tower, they got possession of it, and liberated all the state prisoners, who appear to have been very numerous. Before Edward fled, he had issued a proclamation, offering the reward of a thousand pounds to any one that would bring him the head of Mortimer; but he was soon reduced to such straits, that he knew not where to put his own head for safety. Even the Welsh, among whom he was born, rejected the hapless fugitive, who was at last compelled to take shipping with his favourite.* For a time, the views commonly expressed among the nobles and prelates, who had all, with very few exceptions, joined the queen, were, that the wife ought to be reconciled to the husband,—that the king should be compelled to govern according to the will of his parliament,—and that measures of extreme rigour should be adopted only against the Despensers; but Adam Orleton, the Bishop of Hereford, seems to have had no difficulty in convincing them that the king was not entitled to the society of his wife, and that it was impossible that the queen could ever again trust herself in the power of so faithless and vindictive a man. The bishop produced instances of former brutality; and, false or true, exaggerated or not, no one, at the time, seems to have doubted his solemn assertions; and Edward was never again seriously spoken of as king.

The elder Despenser had thrown himself into Bristol; but the citizens rose against him as soon as the queen approached their walls; and in three days he was obliged to surrender at discretion. The earl was brought to a trial before Sir William Trussel, one of the Lancastrian exiles; and, as was usual in those times, and as had been the course taken with the Earl of Lancaster, he was condemned to die the death of a traitor, without being heard in his defence—the triumphant party, in their savage fury, brooking no delay. Old age had not moderated his eager grasping after the honours and estates of others, which seems to have been his capital offence; and his venerable grey hairs inspired neither pity nor respect. They dragged him to the place of execution a little beyond the walls of Bristol: they tore out his bowels, then hanged him on a gibbet for four days, and then cut his body to pieces and threw it to the dogs. As he had been created Earl of Winchester, they sent his head to that city, where it was set on a pole. From Bristol, the barons issued a proclamation, summoning Edward to return to his proper post. This document was merely intended to cover and justify a measure upon which they had now unanimously determined.

On the 26th day of September, the prelates and

* According to some accounts, he meant to escape to Ireland; according to others, merely to the Isle of Lundy, in the Bristol channel.

barons, assuming to themselves the full power of a parliament, declared that the king, by his flight, had left the realm without a ruler, and that they therefore appointed the Prince of Wales Guardian of the kingdom in the name and by the hereditary right of his father. In the mean time the unhappy fugitive found the winds and waves as adverse as his family and his subjects. After tossing about for many days in a tempestuous sea, he was driven on the coast of South Wales, where he was forced to land. He concealed himself for some weeks in the mountains, near Neath Abbey in Glamorganshire; but an active and a deadly enemy was in pursuit of him; and the country people, if they did not betray *him*, betrayed his favourite and his chancellor, for gold. Despenser and Baldock were seized in the woods of Lantressan, and immediately after their arrest, Edward, helpless and hopeless, came forth and surrendered to his pursuer, who was his own cousin, but also brother to the Earl of Lancaster, whom he had put to death at Pontefract. The wretched king, for whom not a banner was raised, not a sword drawn, not a bow bent in any part of his kingdom, was sent by way of Ledbury to Kenilworth, where he was put in sure keeping in the castle. Despenser found his doom at Hereford, where the queen was keeping the festival of All Saints "most royally." He had the same judge as his father, and his trial was scarcely more rational or legal; for in those times, even when men had good grounds upon which to prosecute to conviction, their blind passions almost invariably hurried them into irregular courses. William Trussel pronounced his sentence in a rage, ordering that, as a robber, traitor and outlaw, he should be drawn, hanged, embowelled, beheaded and quartered. The sentence was executed with a minute observance of its revolting details; and the gallows upon which the favourite was hung was made fifty feet high. His confidential servant, one Simon de Reding, was hanged some yards below his master. The Earl of Arundel, who was closely connected with the Despensers by marriage, and who had been forward in voting the death of the Earl of Lancaster, was beheaded: two other noblemen shared the same fate; but here the task of the executioners ceased. Baldock, the chancellor, was a priest, and as such secured from the scaffold and the gallows; but a ready death would perhaps have been more merciful than the fate he underwent, and he died not long after a prisoner in Newgate.*

On the 7th day of January, 1327, a parliament, summoned in the king's name, met at Westminster. Adam Orleton, the Bishop of Hereford, after an able speech, proposed this question,—whether, under circumstances, the father should be restored to the throne, or that the son should at once occupy that throne? The critical answer was deferred till the morrow, but no one could doubt what that answer would be. The citizens of London crowded to hear it, and they hailed the decision with shouts of joy. The king had now been a prisoner for nearly two months, but not the slightest reaction had taken place in his favour; and when parliament declared that he had ceased to reign, not a single voice spoke in his behalf. His son was proclaimed king by universal acclamation, and presented to the rejoicing people. The earls and barons, with most of the prelates, took the oath of fealty; but the Archbishop of York and three bishops refused. The proceedings were followed by an act of accusation, which surely ought to have preceded them. Five days after declaring the accession of the young king, Stratford, the Bishop of Winchester, produced a bill, charging the elder Edward with shameful indolence, incapacity, cowardice, cruelty and oppression, by which he had "done his best to disgrace and ruin his country." Out of delicacy to his son, probably, certain specific charges were suppressed, and the young Edward was present in parliament, and seated on the throne, when the articles were read and admitted as sufficient grounds for a sentence of deposition. If this was a plot or conspiracy, as some writers have laboured to prove, it was certainly a conspiracy in which the whole nation took a part. Again not a voice was raised for Edward of Caernarvon, and again all classes hailed with joy the annunciation that he had ceased to reign. The queen alone thought fit to feign some sorrow at this sentence of the nation, though she soon afterwards took pains to confirm it, and to prevent a possibility of her being ever restored to her husband. On the 20th of January, a deputation, consisting of bishops, earls, and barons, with two knights from each county, and two representatives from every borough in the kingdom, waited upon the royal prisoner at Kenilworth, to state to him that the people of England were no longer bound by their oath of allegiance to him, and to receive his resignation of the crown. The unfortunate king appeared in the great hall of the castle, wrapped in a common black gown. At the sight of Bishop Orleton, he fell to the ground. There are two accounts of a part of this remarkable interview, but that which seems most consistent with the weak character of the king is, that he, without opposition or protest,—which would have been of no avail,—formally renounced the royal dignity, and thanked the parliament for not having overlooked the rights of his son. Then Sir William Trussel, as Speaker of the whole parliament, addressed him in the name of the parliament, and on behalf of the whole people of England, and told him that he was no longer a king; that all fealty and allegiance were withdrawn from him, and that he must henceforward be considered as a private man without any manner of royal dignity. As Trussel ceased speaking, Sir Thomas Blount, the steward of the household, stepped forward and broke his white wand or staff of office, and declared that all persons engaged in Edward's service were discharged and freed by that act. This ceremony, which was one

* Knyght.—More.—Walsing.—Leland, Collect.—Rymer.—Tyrrel, Hist.

usually performed at a king's death, was held as an entire completion of the process of dethronement. The deputation returned to London, leaving the captive king in Kenilworth Castle; and three or four days after, being Saturday the 24th of January, Edward III.'s peace was proclaimed, the proclamation bearing, that Edward II. was, by the common assent of the peers and commons, "ousted" from the throne; that he had agreed that his eldest son and heir should be crowned king, and that, as all the magnates had done homage to him, his peace, which nobody was to infringe under the penalty of forfeiting life and limb, was now cried and published. The young Edward, who was only in his fourteenth year, received the great seal from the chancellor, and re-delivered it to him on the 28th of January, and he was crowned on the next day, the 29th, at Westminster, the Archbishop of Canterbury performing the ceremony in the most regular manner.*

As the new king was too young to take the government upon himself, nearly the entire authority of the crown was vested in the queen mother, who herself was wholly ruled by the Lord Mortimer, a man whose questionable position made him unpopular from the first, and whose power and ambition could not fail of exciting jealousy and rendering him odious to many. Some monks had the boldness to denounce from the pulpit the connexion existing between the queen and that lord, and even to speak of forcing Isabella to cohabit with her imprisoned husband, regardless of the decision which parliament had given on that head. The indiscreet zeal of these preachers, and some plots which were at last formed, not so much in favour of Edward as against Mortimer, seem to have hurried on a fearful tragedy. The Earl of Lancaster, though he had the death of a brother to avenge, was less cruel than his colleagues; the spectacle of his cousin's miseries touched his heart, and he treated the king with mildness and generosity. It was soon whispered to Isabella that he favoured her husband too much, and more than consisted with the safety of herself and her son. The deposed king was therefore taken out of Lancaster's hands and given to the keeping of Sir John Maltravers, a man of a fiercer disposition, who had suffered cruel wrongs from Edward and his favourites. Maltravers removed the captive from Kenilworth Castle, and his object seems to have been to conceal or render uncertain the place of his residence, for he made him travel by night and carried him to three or four different castles in the space of a few months. At last he was lodged in Berkeley Castle, near the river Severn; and the Lord Berkeley, the owner of the castle, was joined

* More.—Walsing.—Knyght.—Rymer.—Sir H. Nicholas,' Chron. of Hist.

BERKELEY CASTLE.]

with Maltravers in the commission of guarding him. The Lord Berkeley also had some bowels, and he treated the captive more courteously than was desired; but, falling sick, he was detained away from the castle at his manor of Bradley, and during his absence the care of Edward was intrusted, by command of Mortimer, to Thomas Gourney and William Ogle,—"two hell-hounds, that were capable of more villanous despite than became either knights or the lewdest varlets in the world." One dark night, towards the end of September, horrible screams and shrieks of anguish

rang and echoed through the walls of Berkeley Castle, and were heard even in the town, "so that many being awakened therewith from their sleep, as they themselves confessed, prayed heartily to God to receive his soul, for they understood by those cries what the matter meant."* On the following morning the gates of Berkeley Castle were thrown open, and people were freely admitted to behold the body of Edward of Caernarvon, who was said to have expired during the night of a sudden disorder. Most of the knights and gentlemen living in the neighbourhood, and many of the citizens of Bristol and Gloucester, went to see the body, which bore no outward marks of violence, though the countenance was distorted and horrible to look upon. The corpse was then carried to Gloucester, and privately buried in the Abbey church, without any tumult or any investigation whatsoever.

It was soon rumoured that he had been most cruelly murdered by Gourney and Ogle, who had thrust a red-hot iron into his bowels through a tin pipe; and there were many who had heard with their own ears his "wailful noise" at the dead of night; but still the nation continued in its unrelenting indifference to all that concerned this most wretched king.† Edward was forty-three years old: counting from the date of his recognition to that of his deposition, he had worn a degraded crown nineteen years and six months, wanting some days.

It was during this unhappy reign that the great Order of the Knights Templars was abolished. These knights, from a very humble beginning in 1118, when nine poor crusaders took upon themselves the obligation of protecting the faithful at Jerusalem, had attained immense wealth and power. Their association included men of the noblest birth,—natives of every Christian country. Their valour in battle,—their wisdom in council,—had long been the admiration of the world; but, after the loss of the Holy Land, they forfeited much of this consideration, for they did not, like the Hospitallers or Knights of St. John, secure an establishment in the East,‡—a real or fanciful bulwark to Christendom against the Mohammedans. Their luxury and pride increased, or became more obvious, in their state of inactivity at home; and in most of the countries where they had houses and commanderies an outcry was gradually raised against them. It was in France that the first blow was struck at their existence: Philip le Bel, of whose resolute and unscrupulous character we have given several examples, was involved in great pecuniary difficulties by his wars with the English and his other neighbours; and when he and Enguerrand de Marigni, a minister as unscrupulous as himself, had exhausted all other sources of revenue, they cast their eyes on the houses and lands and tempting wealth of the Red-cross Knights. Forthwith they proceeded to form a conspiracy,—for such it really was,—and in a short time the knights were accused of monstrous and contradictory crimes by a host of witnesses, whose depositions were either bought or forced from them by threats, or imprisonment, or the actual application of the rack. As soon as the French Templars were aware of these accusations they applied to the pope, begging him to investigate the matter: this petition was repeated several times; but Clement V., who had been raised by French interest, and who had transferred the seat of the popedom from Rome to Avignon, in France, was a subservient ally to Philip le Bel, and had consented to leave the trial and fate of the knights in his hands. On the 13th of October, 1307, Philip took possession of the Palace of the Temple in his capital, and threw the grand master and all the knights that were with him into prison. At the same time,—at the very same hour,—so nicely was the plot regulated, the Templars were seized in all parts of France. Every captive was loaded with chains, and otherwise treated with great barbarity. An atrocious inquisition forged letters of the grand master to criminate the order, and applied the most horrible tortures to the knights: in Paris alone thirty-six knights died on the rack, maintaining their innocence to the last; others, with less capability of enduring exquisite anguish, confessed to the charges of crimes which were in some cases impossible; at least, at the present day few persons will believe that the Templars invited the devil to their secret orgies, and that he frequently attended in the form of a tom-cat. But even the knights, whose firmness gave way on the rack, recanted their confessions in their dungeons, and nothing remained uncontradicted except the revelations of two members of the community,—men of infamous character, who had both been previously condemned to perpetual imprisonment by the grand-master, and who both came to a shameful end subsequently, though they were now liberated and rewarded. Two years of a dreadful captivity, with infernal interludes of torture, and the conviction forced on their minds that Philip le Bel was fully resolved to annihilate their order and seize their property, and that there was no hope of succour from the pope or from any other power upon earth, broke the brave spirit of the Red-cross Knights. Even Jacques de Molai, the grand-master, an heroic old man, was made to confess to crimes of which he never could have been guilty. He afterwards, however, retracted his confession, and, in the end, perished heroically at the stake. The particulars of the long history would fill many pages, but the whole of the proceedings may be briefly characterised as a brutal mockery of the forms of justice. The grand execution took place on the 12th of May, 1310—when fifty-four of the knights who had confessed on the rack, and then retracted all they had said in their dungeons, were burnt alive as "relapsed heretics," in a field behind the abbey of St. Antoine at Paris. In sight of the flames that were to consume them,

* Holinsh. † More.—Knyght.—Rymer.—Holinsh.

‡ The Knights of St. John, it will be remembered, got possession of the island of Rhodes, and when they lost Rhodes in the fifteenth century, of Malta and Gozo.

they were offered the king's pardon if they would again confess that they were guilty; but there was not one of them who would thus purchase life, and they all died singing a hymn of triumph and protesting their innocence. Penal fires were lit in other parts of France, and all the surviving knights who did not retract their plea of not guilty were condemned to perpetual imprisonment.

After a show of dissatisfaction at Philip le Bel's precipitancy, the pope had joined in the death-cry; and, in the course of the years 1308 and 1309, he addressed bulls to all the sovereigns of Christendom, commanding them to inquire into the conduct of the knights. He afterwards declared that seventy-two members of the order had been examined by his cardinals and other officers, and had all been found guilty, *but in various degrees*, of irreligion and immorality, and he threatened to excommunicate every person that should harbour, or give counsel and show favour to any Templar. Without waiting for these papal bulls, Philip, as soon as he had matured his plans, had endeavoured to stimulate his son-in-law, Edward of England, to similar measures; but the English court and council, while they engaged to investigate the charges, expressed the greatest astonishment at them; and two months later Edward wrote to the kings of Portugal, Castile, and Arragon, imploring them not to credit the accusations which had most maliciously been heaped upon the Red-cross Knights. He also addressed the pope in their favour, representing them as an injured and calumniated body of men. Our weak king, however, was never firm to any purpose except where his favourite was concerned: he forgot the old friendship which had existed between the English kings and the Knights Templars; and the barons, on their side, forgot the day when Almeric, the master of the English Templars, stood with their ancestors on the field of Runnymead, an advocate for the nation's liberties. The ruin of the order was therefore resolved upon; but, thank God! their suppression in England was unaccompanied by atrocious cruelties.

In 1308, the second year of Edward's reign, after the feast of the Epiphany, one of the royal clerks was sent round with writs to all the sheriffs of counties, ordering each and all of them to summon a certain number of freeholders in the several counties,—"good and lawful men,"—to meet on an appointed day, to treat of matters touching the king's peace. The sheriffs and freeholders met on the day fixed, and then they were all made to swear that they would execute certain sealed orders which were delivered to the sheriffs by king's messengers. These orders, when opened, were to be executed *suddenly*. The same conspiracy-like measures were adopted in Ireland, and in both countries, on the same day,—nearly at the same hour—all their lands, tenements, goods, and all kinds of property, as well ecclesiastical as temporal, were attached, and the knights themselves arrested.*

The Templars were to be kept in safe custody, but not "in vile and hard prison." They were confined more than eighteen months in different towers and castles. In the month of October, 1309, courts were constituted by the Archbishop of Canterbury, at London, York, and Lincoln. Forty-seven of the knights, the noblest of the order in England, who were brought from the Tower before the Bishop of London and the envoys of the pope, boldly pleaded their innocence: the evidence at first produced against them amounted to less than nothing; but the courts were appointed to convict, not to absolve, and, in spite of all law, they sent them back to their prisons to wait for timid minds and fresh evidence. The witnesses, even in France, where they had been well drilled, went through their duties in a most awkward manner; but in England, those first summoned became altogether restive; and the majority of them, both lay and clergy, candidly confessed their ignorance of the secret principles and practices of the order, and bore strong testimony to the general good conduct and character of the knights. The pope then censured the king for not making use of torture. "Thus," he wrote, "the knights have refused to declare the truth. Oh! my dear son, consider whether this be consistent with your honour and the safety of your kingdom." The Archbishop of York inquired of his clergy whether torture, which had hitherto been unheard of in England, might be employed on the Templars: he added that there was no machine for torture in the land, and asked whether he should send abroad for one, in order that the prelates might not be chargeable with negligence.* From the putting of such questions we may suppose that this archbishop was one who would not hesitate at cruelty; but it appears pretty evident, whether his queries were negatived or not by his suffragans, that the torture was *not* used on this occasion in England. The Templars were worn down by poverty and long imprisonment, and then the threat of punishing as heretics all those who did not plead guilty to the charges brought against them produced its effect. The timid yielded first: some of the corrupt were bought over by the court, and, finally (more than three years after their arrest) the English Templars, with the exception of William de la More, their grand prior, whom no threats, no sufferings could move, and two or three others who shared his heroic firmness, made a vague confession and most general renunciation of heresy and erroneous opinions, upon which they were sent into confinement in various monasteries, the king allowing them a pittance for their support out of their immense revenues. In the 17th year of Edward's reign it was ordained by the king and parliament that the Hospitallers, or Knights of St. John of Jerusalem, should have all the lands of the *late* Templars, to hold them as the Templars had held them.†

* The number of Templars seized was about 250. Of these about 30 were arrested in Ireland. It appears that only two knights were seized in Scotland.

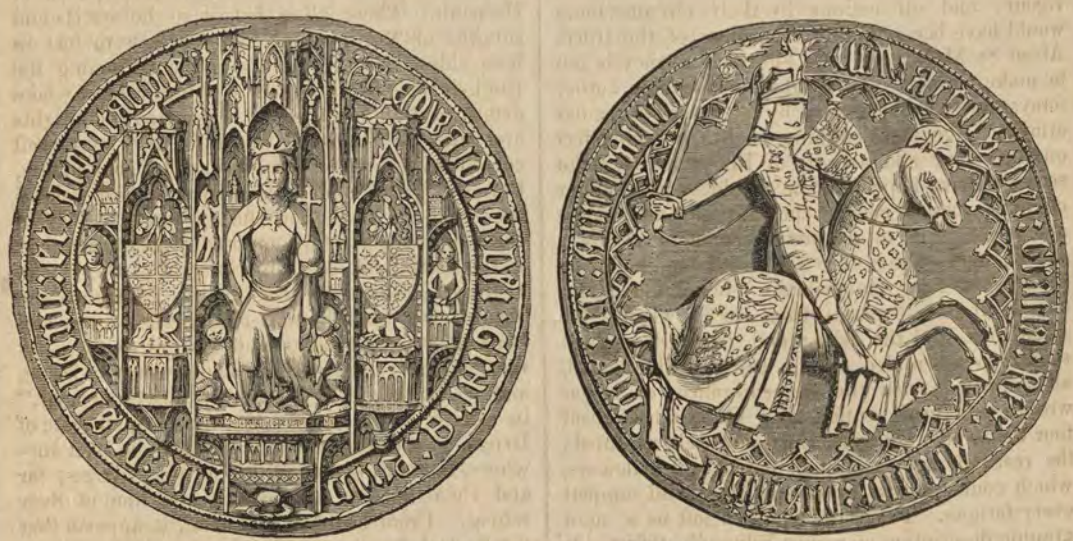
Edward III. From the Tomb in Westminster Abbey.



Great Seal of Edward III.

Edward III.

A.D. 1327.—When Edward was proclaimed king, about eight months before his father's murder, as he was but fourteen years of age, parliament decreed that a regency should be appointed, "to have the rule and government;" and to this end twelve of the greatest lords of the realm, lay and ecclesiastic, were named. These noblemen were the archbishops of Canterbury and York; the bishops of Winchester, Worcester, and Hereford; the earls of Kent, Norfolk, and Surrey; and the lords Thomas Wake, Henry Percy, Oliver Ingham, and John de Roos. The Earl of Lancaster was appointed guardian and protector of the young king's person. The same parliament reversed the attainders which had been passed in 1322 against the great Earl of Lancaster and his adherents; confiscated the immense estates of the Despensers; granted a large sum of money to Isabella, the queen-mother, to pay her debts; and voted her a jointure of twenty thousand pounds a year,—a

most liberal allowance for those times, and which materially contributed to secure her ascendancy. Nearly the whole power of government was indeed monopolised by her and Mortimer, who now assumed the state and magnificence of a king.

Although Edward was excluded from political duties, he was not considered too young for those of war. It is said that his martial spirit had already declared itself; but it is probable that Mortimer at least would be glad to see him thus occupied at a distance from the court, where the death of his unhappy father was already beginning to be agitated. The Scots had suffered too cruelly not to be anxious for revenge; and the existing truce was not sufficient to make them resist the temptation of what they considered a favourable opportunity,—the true king of England, as they deemed, being shut up in prison, and a boy intruded on the throne. Nor were there wanting plausible reasons to cover a breach of the treaty; for if the truce had been concluded for thirteen years, and to last even in case of the death of one or both kings, the Scots, on the other hand, could argue that Edward II., who made the treaty, was not dead; that Edward III. was no legitimate king; and that, in making war, they attacked a country that had no lawful government which could claim the benefit of former treaties. In whatever way they might reason, the Scots acted with great vigour; and all nations in their circumstances would have been equally regardless of the truce. About St. Margaret's tide, February 3, they began to make inroads into England, and these border forays were soon succeeded by the march of regular armies. Age and declining health had no effect on the valour and activity of Robert Bruce, who seems to have hoped that he should be able, under circumstances, to convert the truce into an honourable peace, if not to recover the northern provinces of England which the Scottish kings had possessed at no very remote date. He summoned his vassals from all parts—from the Lowlands, the Highlands, and the Isles; and twenty-five thousand men assembled on the banks of the Tweed, all animated with the remembrance of recent wrongs and cruel sufferings. Of this host about four thousand were well armed and well mounted; the rest rode upon mountain ponies and galloways, which could subsist upon anything, and support every fatigue. Froissart, who has left us a most graphic description of young Edward's "first ride against the Scots,"* gives some curious details respecting the nimble activity and hardihood of these children of the mist and the mountain. A force better suited for sudden attack and rapid retreat could scarcely be conceived. "They carry with them," says the Chronicler of chivalry, "no provision of bread or of wine, for their usage is such in time of war, and such their sobriety, that they will do for a long time with a little meat half raw, without bread, drinking the water of the rivers, without wine. And they have no need whatever of pots and caldrons, for they cook the beasts when they have skinned them in a simpler manner; and as they know they will find beeves in lots in England they carry nothing with them. Only every man carries between his saddle and his pennon a flat plate of iron, and tucks up behind him a bag of meal, in order that, when they have eaten so much flesh as to feel uncomfortable, they may put this plate upon the fire, and, heating it, bake thereon oatmeal cakes wherewith to comfort their stomachs." "And therefore," continues the chronicler, rather oddly, "it is no wonder that they make so much longer marches than other people." Bruce intrusted the command of this army of invasion to Randolph Earl of Moray and the Lord James Douglas. Crossing the Tweed, these chiefs marched through Northumberland and Durham, and penetrated into the richer country of York, without meeting any valid resistance. The mountaineers plundered and burnt all the villages and open towns that lay on the road, and seized so many fat beeves that they hardly knew what to do with them. At the first breath of this invasion, a powerful army, said to have amounted to sixty thousand horse and foot, had gathered round the standard of young Edward; but his movements were retarded by a furious quarrel which broke out between the native English archers and the foreign troops of Isabella's knight errant, John of Hainault. These allies fought in the streets and suburbs of York, where many lives were lost on both sides. The fiercest combatants among the English were the bowmen of Lincolnshire, whose determined animosity sorely disquieted the knights and men of Hainault, who otherwise were well content with their service in a land of such plenty, that the passage of a large army raised neither the price of wine nor that of meat.* When these differences were composed, Edward marched to the north, and soon came in sight of the smoke of the fires which the Scots had lit. Instantly the cry to arms ran through the English force, and horse and foot, knights and squires, with a tremendous body of archers, formed in order of battle, and so marched on, "even till the vesper hour," in search of the Scots. But the unequal force of Bruce retired, and not a Scot was to be seen anywhere, though the flames of burning villages, far and then farther off, marked the line of their retreat. From Froissart's account, it appears that the Scots did not move directly towards the Tweed, but withdrew towards the west, among the mountains and moors of Westmoreland and Cumberland, "savage deserts, and bad mountains and valleys," as he calls them. The English, fatigued by the pursuit, and in order to wait for their supplies of provisions, which were not so portable as those of the enemy, encamped for the night, and so lost all chance of ever coming up with the fleet Scots. After much useless labour, it was determined, in a council of war, that Edward should move northward in a straight line, and, crossing the Tyne,

* Sa premiere chevauchée sur les Escoçois.

* Froissart.

occupy the roads between that river and the Tweed, by which, it was calculated, the enemy must return to their own country. This manœuvre was executed with rapidity, the troops making at least one night march; but when the English got to the north of the Tyne, they found the country so entirely wasted that they could procure neither forage nor provisions, and, after staying there several days in vain expectation of intercepting the enemy with their booty, they recrossed the Tyne and retraced their steps towards the south, in a perplexing state of ignorance as to the movements of the Scots. Edward ordered it to be cried through camp and country that he would give a heritage worth a hundred pounds a-year, together with the honours of knighthood, to any man that would bring him certain information of the place where he might find the enemy. The prize was won by one Thomas of Rokeby, who came riding very hard to the king, and brought intelligence that the Scots, who, he said, were equally ignorant of the whereabout of the English, were encamped on a hill not more than three leagues off. Edward confessed, ordered a number of masses, and then marching, soon came in sight of the enemy, who were advantageously posted on the right bank of the Wear. The river was rapid and dangerous to pass, and there was no other way of getting at the Scots. As the latter showed themselves in order of battle, the young king sent a herald to challenge them to meet him like soldiers, on a fair and open field, offering them the undisturbed passage of the river if they would go over to fight him on his side. The Scots were not so chivalrously inclined: the fiery Douglas, indeed, was nettled at the defiance, and would fain have accepted the challenge, but he was overruled by the better prudence of Moray. That night the English lay on the bare ground on the left bank of the river, facing the Scots, who lit a prodigious number of fires along their strong position, and, from dark till dawn, kept "horning with their horns, and making such a noise that it seemed as if all the great devils from hell had come thither." Thus passed the night, which was the night of St. Peter ad Vincula, in the beginning of August, and in the morning the English lords heard mass. In the course of the next day, a few knights and men-at-arms, who had strong horses, swam the river and skirmished with the enemy; but these were idle bravadoes that cost many lives and produced no effect. For three days and nights the English lay on the river-side: it is said that the Scots were suffering from want of provisions and of *salt*, and that Edward expected that their necessities would force them to abandon their position; but, from Froissart's account, it should appear that the English, less accustomed to privations, were suffering from severe want, and that their army was dwindling away. On the morning of the fourth day, when the English looked towards the hill on the right bank, they saw no army, for the Scots had secretly decamped in the middle of the night. It was presently ascertained that they had only moved to a short distance farther up the river, where they had taken up a position still stronger than the one they had left. Edward made a corresponding movement on the other bank, and encamped on another hill, immediately opposite,—the river between them as before. The young king, whose patience was exhausted, would have forced the passage and marched to the attack of the Scottish position, but he was restrained by Mortimer, who was afterwards accused of treachery for this step, though it seems to have been dictated only by proper military prudence. For eighteen days and nights the two hosts thus lay facing each other and doing nothing but only suffering great discomfort. One night, however, Douglas made a sudden onslaught, which had well-nigh proved fatal to young Edward. Towards midnight, he took about two hundred of his best men, and, marching silently up the river, crossed it at a considerable distance above the English position, and then turning with equal caution, entered the English camp without being discovered. Then he made a desperate rush towards the spot where the king lay, shouting as he went, "A Douglas! you shall die, ye English thieves!" and he and his companions killed more than three hundred before they left off. He came before the royal tent, still shouting, "A Douglas; a Douglas!" and he cut in twain several of the cords of the tent; but Edward's attendants, roused from their sleep, made a gallant stand, and, his chaplain and his chamberlain having sacrificed their lives for his safety, he escaped in the dark. Missing the king, Douglas fought his way back, and contrived to return to his friends on the opposite hill with but little loss. At last the Scots abandoned this second position, taking the English, it is said, again by surprise, and marching away unheard and unseen at the dead of night. If this account be true, the English were sadly wanting in proper military vigilance; but it appears more than probable that they were as anxious to be rid of the Scots as the Scots were to be quit of them, and that Edward's officers were glad to be able to cross the Wear without fighting at disadvantage for the passage. At all events it was determined that, as the enemy had got the start of them, it would be useless to follow them any farther; and soon after, fording the river, Edward marched straight to York, where the army was disbanded.* The Scots, after their extraordinary campaign, got back to their own country with much booty. The young king, "right pensive," returned to London, breathing nothing but fresh wars and vengeance: as yet, however, he had no power, and both Mortimer and his mother, who controlled his destiny, were, for their own private interests, desirous of peace, and, soon after, they opened negotiations with Robert Bruce, who, on his side, labouring under his "heavy malady," and seeing that his son who was to succeed him was still an infant, was anxious to terminate the war by a definitive and honourable treaty, which he fondly hoped

* Froissart.

QUEEN PHILIPPA. From the Tomb in Westminster Abbey.

would secure peace to his country when he should be no longer alive to protect it with his consummate ability.

Before this treaty was concluded, young Edward was married to Philippa of Hainault, to whom his mother had contracted him during her scapade on the continent. This young lady, who proved an excellent and loving wife, was brought over to England by her uncle, John of Hainault, a little before Christmas. She was received at London with great pomp,—"with jousts, tournaments, dances, carols, and great and beautiful repasts,"—and, on the 24th of January following, (A. D. 1328), the marriage ceremonies were completed at York. A few months after, about the Feast of Whitsuntide, the parliament met at Northampton, and there, "by the evil and naughty counsel of the Lord Mortimer and the queen-mother," as it was afterwards maintained, they put the last hand to the peace with Bruce, concluding what the English called both an unprofitable and dishonourable treaty. The basis of this treaty was the recognition of the complete independence of Scotland. One of its leading articles was, that a marriage should take place between Prince David, the only son of Robert Bruce, and the Princess Joanna, a sister of King Edward. In spite of the tender age of the parties (for the bride was in her seventh and the bridegroom only in his fifth year), this part of the treaty was carried into almost immediate effect: the queen-mother Isabella carried her daughter to Berwick, where the marriage was solemnised, on the day of Mary Magdalen, the 22nd of July. With the princess, whom the Scots surnamed "Joan Makepeace," were delivered up many of the jewels, charters, and other things which had been taken out of Scotland by Edward I. In return for these and the other advantages of the compact, Bruce agreed to pay to the king of England the sum of thirty thousand marks in compensation for the damages done by the Scots in their recent invasion. The great Bruce, who had raised his country from the depth of despair and servitude to this glorious enfranchisement, did not long survive the peace, dying at his little castle of Cardross on the 7th of June in the following year. He was buried under the pavement of the choir in the abbey church of Dunfermline.

The position occupied by Mortimer inevitably exposed him to envy, yet he continued to grasp at fresh power and honours, and to show that he would hesitate at no crime to preserve what he got. In the month of October, parliament met again at Salisbury, and then Mortimer was created Earl of March, or Lord of the Marches of Wales. The council of regency was in a manner displaced, and the whole government seemed more than ever to be shared between him and the queen-mother. His expenses knew no bounds, and he caused an immoderate quantity of provisions to be taken up in the name of the queen, "at the king's price, to the sore oppression of the people." This abuse of the right of purveyance caused great discontents, and popular odium, arising from other causes, was added to the grudge of the nobles. The Earl of Lancaster was the first to attempt to make head

against this new favourite; but, though he was guardian of the young king, Edward remained with Mortimer and his mother, and after a show of force at Winchester, the earl was obliged to retreat. Mortimer fell upon his estates and plundered them, as if he had been fighting in a foreign country. The young king's uncles, the Earls of Kent and Norfolk, who were equally disgusted with the favourite's arbitrary ascendancy, joined Lancaster; but, from some cause or other, they abandoned him almost immediately after, upon which the earl was compelled to submit to ask pardon in a humiliating manner, and to pay an immense fine. Blind to the fact that young Edward was every day approaching that age when he would act for himself, Mortimer still pursued his wild career of ambition. It was said at the time that he entertained a design of destroying the king and placing himself on the throne, but there is no proof of this improbable story.*

A.D. 1330.—The Earl of Kent was now made to pay an awful price for his levity in joining and then deserting Lancaster. He was surrounded by the artful agents of Mortimer and the queen, and led to believe a story which was then widely circulated, that his brother Edward II., in whose deposition he had taken so active a part, was not dead but living. The body exhibited at Berkeley Castle and afterwards buried at Gloucester (so went the legend) was not that of the deposed king, who was actually shut up in Corfe Castle. Some monks urged the Earl of Kent to release his captive brother, and restore him to the throne, assuring him that several bishops and nobles, whose messengers they were or pretended to be, would aid him in this meritorious enterprise. The earl even received letters from the pope, exhorting him to pursue the same course. These letters appear to have been forgeries, but they imposed upon the credulous earl, who even went the length of writing to his dead brother, which letters were delivered to Sir John Maltravers, one of the suspected assassins of the late king. These strange epistles were put into the hands of Isabella and Mortimer, who, considering them proofs sufficient of treasonable practices, immediately summoned a parliament to try the traitor. The Earl of Kent was inveigled to Winchester, and there a parliament, consisting solely of the partisans of Isabella and Mortimer, met on the 11th of March. The Earl of Kent, who had been seized as soon as he was in their power, was produced as a prisoner; and, on the 16th, he was convicted of high treason, for having designed to raise a dead man to the throne; at least nothing else was proved or attempted to be proved against him; and thus this trial is entitled to a place among the curiosities of jurisprudence. The earl's accomplices were all liberated, with the exception of one Robert de Touton, and a poor London friar who had told the Earl of Kent that he had raised a spirit in order to be more fully assured that Edward II. was really living. This monk was kept in prison till he died. On account of his royal birth it was not expected that the sentence against the earl would be carried into execution; but people had not taken the proper measure of Mortimer's audacity:—on the 19th, the son of the great Edward was carried to the place of execution outside the town of Winchester; but when he reached the spot, nobody could be found

* Heming.—Knyght.—Wals.—Rymer.—Holinsh.

Dunfermline Abbey, Fife; the Burial Place of Bruce.

that would perform the office of headsman. For four hours the life of the earl was painfully prolonged by this popular scruple: at last a convicted felon took up the axe, on condition of a free pardon, and the head was struck off. His death was the less lamented, "because of the insolence and rapaciousness of his servants and retinue, who, riding abroad, would take up things at their pleasure, neither paying nor agreeing with the parties to whom such things belonged." From which statement it should appear, as also from complaints in parliament, that all the princes of the blood, and occasionally other great lords, were accustomed to consider the oppressive privileges of purveyance as part of their ways and means, or, in other words, to plunder the defenceless portion of the people of such stock and provisions as they wanted. But the iniquity of the sentence was apparent, and attributed by all to the malice and jealousy of Mortimer and Isabella. The young king, it is true, had confirmed the sentence and sent his own uncle to the block; but Edward was not considered a free or competent agent.*

About three months after the execution of the Earl of Kent, Philippa, the young queen, was delivered, at Woodstock, of her first child,—the Prince Edward, afterwards so celebrated under the title of the Black Prince. A father, and eighteen years of age, the king now thought it time to assert his authority; and, though their party was strong, the nation was most willing to assist him in overthrowing the usurpation of his mother and her daring lover. The immorality of the connexion had long been a theme of popular outcry: some had believed, or affected to believe, that scandal had exaggerated indiscretions, but now it was generally reported and credited that Isabella was with child by Mortimer. At first, however, no person about the court was bold enough to declare himself; and when Edward opened his mind to the Lord Montacute, it was with the most circumspect secrecy, and the first steps taken in conjunction with this prudent nobleman were cautious in the extreme. Probably to make it be thought that his mind was still occupied by the trivial pleasures with which Mortimer had long contrived to amuse him, Edward held a joust in Cheapside, when he, with twelve others as challengers, answered to all knights that appeared in the lists. This "solemn joust and tourney" was held in the month of September, and lasted three days. The young queen presided; and the interest felt in her favour, already high, was heightened among the people by a perilous accident. A stage or platform, on which she was seated with many other beautiful dames, broke down; "but yet, as good hap would, they had no hurt by that fall, to the rejoicing of many that saw them in such danger."* In the month of October following the parliament met at Nottingham: Edward with his mother and Mortimer were lodged in the castle: the bishops and barons who attended took up their quarters in the town and the neighbourhood. Mortimer never moved without a strong body-guard; and the knights in his splendid retinue were known to be devoted to his interests. On the morning of the 19th Edward

ANCIENT CAVES NEAR NOTTINGHAM CASTLE—supposed to communicate with the Castle.

had a private conference with the Lord Montacute, who immediately after was seen to ride away into the country with many friends and attendants. In the afternoon Mortimer appeared before the council with a troubled countenance. The plot was made up, but it was well nigh being defeated when at the point of execution; for the favourite, by some means or other, had obtained a vague hint of what was going on. This was a nervous moment for the young king: Mortimer proclaimed to the members of the council that a base attempt was making against him and the queen-mother, and that Edward himself was privy to the conspiracy. Edward denied the charge; but the favourite treated him as a liar. At the dead of the night the Lord Montacute and his associates returned quietly to Nottingham. The strong castle was not a place to be taken by assault or surprise. A proper military guard was kept, and the keys of the great gates were carried every evening to Isabella, who laid them by her bed-side. But the conspirators had taken measures to defeat all these precautions: Montacute had won over the governor of the castle, who had agreed to admit them through

Mortimer's Hole, Nottingham Castle,—the passage through which Lord Montacute and his party entered the Castle.

a secret subterraneous passage, the outlet of which concealed by brambles and rubbish, opened at the foot of the castle hill. It was near the hour of midnight when Montacute and his friends crawled through this dismal passage: when within the castle walls, and at the foot of the main tower, they were joined by Edward, who led them up a silent staircase into a dark apartment. Here they heard voices proceeding from a hall which adjoined to the queen-mother's chamber; they were the voices of Mortimer, the Bishop of Lincoln, and other adherents, who were sitting in late and anxious consultation. The intruders burst open the door, killing two knights who tried to defend the entrance. The guilty Isabella rushed from her bed, and in tears and in an agony of grief implored her "sweet son" to spare "her gentle Mortimer," "that worthy knight, her dearest friend, her well-beloved cousin." The favourite was not slaughtered there, which, considering the barbarity of the times and the violent excitement against him, was rather extraordinary; but he was dragged out of the castle, and committed to safe custody. On the following morning Edward issued a proclamation informing his lieges that he had now taken the government into his own hands; and he summoned a new parliament to meet at Westminster on the 26th of November.*

Before this parliament the fallen favourite was arraigned: the principal charges brought against him were, his having procured the death of the late king, and the judicial murder of the Earl of Kent; his having "accroached" or usurped the power which lawfully belonged to the council of regency, and appropriated to himself the king's moneys,—especially the twenty thousand marks recently paid by the king of Scots. His peers found all these articles of impeachment to be "notoriously true, and known to them and all the people;" and, as his proper judges in parliament, they sentenced him to be drawn and hanged as a traitor and enemy of the king and kingdom.† Edward, who was present in court during the trial, then requested them to judge Mortimer's confederates, but this they would not do until they had protested in form that they were not bound to sit in judgment on any others than men who were peers of the realm, like themselves. Sir Simon Bereford, Sir John Mal-

* Knyght.—Heming.—Wals.—Rymer.
† Rot. Parl.—Knyghton.

travers, John Deverel, and Boeges de Bayonne, were condemned to death as accomplices, but three of these individuals had escaped. Mortimer was accompanied to the gallows only by Bereford. They were hanged, at "the Elms," on the 29th of November. The queen-mother was deprived of her enormous jointure, and shut up in her castle or manor-house at Risings, where she passed the remaining twenty-seven years of her life in obscurity. Edward, however, paid her a respectful visit at least once a-year, and allowed her three thousand, and afterwards four thousand pounds, for her annual expenses. In this same parliament a price was set upon the heads of Gourney and Ogle, the reputed murderers of the late king. Gourney was arrested in Spain, and delivered over to an English officer, who, obeying secret instructions, cut off his head at sea, without bringing him to England for trial. From this and other circumstances it has been imagined that there were persons who still retained their influence at court, to whom silence upon all that regarded this horrid subject was particularly convenient. What became of Ogle does not appear; but it is probable that he died abroad before the murder of Gourney. Sir John Maltravers was taken and executed, but on a different charge, namely, for having aided Mortimer in misleading the Earl of Kent by false reports of the late king's life. The Lord Berkeley, in whose castle the deed had been done, demanded a trial, and was fully acquitted by a jury; nor does there appear to be any good reason for questioning the propriety of this verdict.

Edward was now his own master, and accountable for the good and evil of his government. His first transactions are not very honourable to his character; but it might be said in justification of an older head and better heart than his (and his was not a bad heart), that he was carried away by the general feeling of the nation, whose pride was hurt by the last treaty with the Scots, and who eagerly longed for a fresh war. On the borders, indeed, this war had scarcely ceased, having been prolonged in an irregular manner by the vindictive spirit of the people on both sides. We have noticed the death of the great Bruce, which happened in 1330: in the following year his brave companion in arms, the Lord James Douglas, was killed by the Moors in Spain as he was carrying his master's heart to the Holy Land; and in the month of July, 1332, Randolph, Earl of Moray, who had been appointed regent of the kingdom of Scotland and guardian of Prince David, died suddenly. The Earl of Moray was succeeded in the regency by Donald, Earl of Marr, a man inferior to him in prudence and ability. An article in the last treaty of peace had stipulated that a few English noblemen should be restored to estates they held in Scotland. This article was faithfully observed with regard to Henry de Percy; but, for various reasons, it was disregarded with respect to the lords Wake and Henry de Beaumont, and these two noblemen resolved to obtain redress by changing the dynasty of Scotland. Setting up the rights of Edward Baliol, the son and heir of the miserable John of that name, whom Edward I. had crowned and uncrowned, they went into the counties near the borders, where they were presently joined by other English lords who had claims similar to their own, though they had not had the address to get their estates in Scotland tacked to a treaty. In those northern districts the elements of war and havoc were rife and ready; and when Edward Baliol came over from Normandy, and raised his standard there, a few disaffected Scots came over the borders to join him. Edward felt, or pretended to feel, many scruples,—for the infant queen of Scotland was his own sister, and he had also sworn to observe the treaty. Proclamations were issued prohibiting the gathering of any army of invasion on the borders; but this did not prevent—nor was it intended to prevent—Baliol and the lords Wake and Henry de Beaumont, with their associates, from getting ready a small fleet and army on the shores of the Humber. In the beginning of August this expedition sailed from Ravenspur: entering the Frith of Forth, the army landed at Kinghorn, on the coast of Fife, on the 6th, and five days after won one of the most astonishing victories recorded in history. Edward Baliol,—we use his name because he was first in dignity, though it is evident the campaign was directed by some bolder and abler mind than his,—on finding himself suddenly in presence (or nearly so) of two Scottish armies,—the one commanded by the regent Marr, the other by the Earl of March,—boldly threw himself between them, and encamped at Forteviot, with the river Earn running between him and the forces of the regent. At the dead of night he crossed the Earn by a ford, and fell upon the sleeping Scots, who were slaughtered in heaps before they could get ready their arms or ascertain the force of the assailants. As day dawned, the regent blushed to see the insignificant band that had done all this mischief: he was still in a condition to take vengeance, but, in his blind fury, he engaged in a wretched pass where his men could not form; and his own life, with the lives of many of the Scottish barons, and of nearly all the men-at-arms, paid forfeit for his military blunder. Thirteen thousand Scots, in all, are said to have fallen, while Baliol, who had not three thousand when he began the battle, lost but a few men. From Duplin Moor, where this victory was gained, Edward Baliol ran to Perth, being closely pursued the whole way by the Earl of March, at the head of the other strong division of the Scots. He had just time to get within that city, and throw up some barricades. March besieged him there; but there were both scarcity and treachery in the Scottish camp; their fleet was destroyed by the English squadron which Baliol had ordered round to the mouth of the Tay; the ancient followers of his family, with all those who had forfeited their estates for their treasons under Bruce, with all who were in any way disaffected, or who hoped to

benefit largely by a revolution, flocked to the standard of the Pretender, who was crowned King of Scotland, at Scone, on the 24th of September. Edward Baliol had thus gained a crown in some seven or eight weeks, but he lost it in less than three months. Having secretly renewed to the English king all the forms of feudal submission imposed on his father by Edward I., and having stupified his opponents in Scotland by the rapidity of his success, he retired with an inconsiderable force to Annan, in Dumfriesshire, where he intended to pass his Christmas. On the night of the 16th of December he was surprised there by a body of horse commanded by the young Earl of Moray, Sir Archibald Douglas, and Sir Simon Frazer. He got to horse, but had no time to saddle, and, nearly naked himself, he galloped away on a bare back, leaving his brother Henry dead behind him. He succeeded in crossing the borders into England, where Edward received him as a friend. There was probably not a man in Scotland but knew that the English king had secretly countenanced the whole expedition: the greatest exasperation prevailed, and, with or without orders, the people near the Tweed and the Solway Frith made incursions into England, carrying fire and slaughter with them. Edward had applied to his parliament, assembled at York, to legalize, or at least to justify in the eyes of the English, his ambitious projects on Scotland; but the prelates, barons, and commons were much divided in opinion, and gave no direct answer. The inroads of the Scots, however, gave Edward a colourable pretext for declaring that they had infringed the treaty of peace, and he prepared for war,—the parliament then engaging to assist him to the utmost.*

In the month of May, 1333, Berwick was invested by a powerful English army; and on the 16th of July, Sir William Keith, the governor of that important town, was obliged to treat and to promise that he would surrender on the 20th at sunrise, if not previously relieved by Lord Archibald Douglas, who now acted as regent of Scotland. On Monday, the 19th, after a fatiguing march, Douglas came in sight of Berwick, and found Edward's main army drawn up on Halidon Hill, about a mile to the north-west of the town. This elevation was in part surrounded by bogs and marshes; yet, in spite of all these advantages, the Scots, whose heads were heated, resolved to attack them. As they moved slowly through the bogs they were sorely galled by the English bowmen: when they got firm footing they rushed up the hill with more rapidity than order: their onslaught, however, was tremendous, and for a moment seemed to be successful; but the English, who were fresh, and admirably posted, repelled the attack: the regent Douglas was killed in the melée; many lords and chiefs of clans fell around him; and then the Scots fell into confusion, and fled on every side. Edward spurred after them with his English cavalry,—the Lord Darcy followed up with a horde of Irish kerns who were employed as auxiliaries. Between the battle and the flight the loss was prodigious: never, say the old writers, had Scotland sustained such a defeat or witnessed such slaughter. The young king, David Bruce, with his wife, Edward's innocent sister, was conveyed into France, and Edward Baliol was again seated on a dishonoured throne. The price which Edward exacted for this service was immense, and the readiness with which Baliol paid it incensed the nation against him, and even estranged many of his former partisans. He openly professed homage and feudal service in its full extent to the king of England; and he not only made over the town of Berwick, which surrendered the day after the battle of Halidon Hill, but ceded in perpetuity the whole of Berwickshire, Roxburghshire, Selkirkshire, Peebleshire, and Dumfriesshire, together with the Lothians,—in short, the best part of Scotland. Edward left his mean vassal an army of Irish and English to defend him in his dismembered kingdom; but soon after his departure the indignant Scots drove Baliol once more across the borders, and sent to request assistance from the king of France, who hospitably entertained their young king and queen in the Chateau Gaillard. Edward, on his side, reinforced Baliol, who returned to the south of Scotland, and maintained himself there among English garrisons, though he could make no impression north of Edinburgh.

In 1335, Edward, having still further reinforced his vassal, marched with a powerful army along the western coast of Scotland, while Baliol advanced from Berwick by the eastern. In the month of August these two armies formed a junction at Perth, and, as they had met with little opposition, it was thought that the spirit of the Scots was subdued; but no sooner had Edward turned his back than the patriots fell upon Baliol from all quarters, and harassed his forces with continual skirmishes and surprises. In the following summer Edward was again obliged to repair to the assistance of his creature, and having scoured the country as far north as Inverness, and burnt several towns, he flattered himself that he had at last subdued all opposition. During this campaign, which was marked with more than usual cruelty and waste, the Scottish patriots, who had not been able to procure any aid from France, kept themselves in inaccessible mountains and wilds, but, again, as soon as the English king had crossed the borders, they fell upon Baliol. This obliged Edward to make a second campaign that same year: he marched to Perth in the month of November, and, after desolating other parts of the country, he returned to England about Christmas, once more buoyed up by the confident hope that he had mastered the Scots. As long as he was thus supported Baliol contrived to maintain a semblance of authority in the Lowlands; but the nation regarded him with that hatred and contempt which will ever be, or ever ought to be, the recom-

* Fordun.—Knyght.—Heming.—Rymer.

pense of an intrusive king imposed on a free people by foreign arms.

Affairs were in this uncertain state in Scotland when Edward's attention was withdrawn, and his mind filled by a wilder dream of ambition,—the plan of attaching the whole French kingdom to his dominions. The idea was not altogether new,—it had been suggested several years before; but Edward's youth, and other circumstances, had then prevented the pressing of his absurd claims by force of arms. It would occupy a volume to discuss at length the grounds of this dispute, and many volumes have been written upon the subject; the main facts of the case may be stated in short compass. Charles IV., the last of the three brothers of Isabella, the queen-mother of England, died in 1328, in the second year of Edward's reign: he had no children, but left his wife enceinte. A regency was appointed, and the crown was kept in abeyance; if Joan should be delivered of a son, then that infant was to be king; but in due time she gave birth to a daughter, and, by an ancient interpretation of a portion of the Salic law, and by the usages and precedents of many ages, it was held that no female could reign in France. The daughter of the last king was set aside without debate or hesitation; and Philip of Valois, cousin-german to the deceased king, ascended the throne, taking the title of Philip VI. Edward's mother, Isabella, with the state lawyers of England and some foreign jurists in English pay, pretended from the first that Edward had a preferable right; but it was deemed unsafe to press it at the time: and when Philip of Valois demanded that the king of England should, in his quality of Duke of Aquitaine, go over to France and do homage to him, threatening to dispossess him of his continental dominions if he refused, the young king of England was obliged to comply, though he rendered the homage in vague terms, and, according to one account, entered his protest against the measure, not before Philip or his ambassadors, but before his own council in England, the majority of whom, it is said, advised this base but childish subterfuge. Putting aside the incapacity of females, Edward certainly was nearer in the line of succession; he was grandson of Philip IV. by his daughter Isabella, whereas Philip of Valois was grandson to the father of that monarch, Philip III., by his younger son Charles of Valois. But Philip traced through males, and Edward only through his mother. The latter, however, maintained that, although by the fundamental laws of France his mother, as a female, was herself excluded, he, as her son, was not; but Philip and all France insisted, on the contrary, that a mother could not transmit to her children any right which she never possessed herself. The principle assumed by Edward was a startling novelty,—it had never been heard of in France: but, even if he had been able to prove it, he would have proved a great deal too much, and would have excluded himself as well as Philip of Valois; for by that very principle the succession rested with the son of Joan, queen of Navarre, who was the daughter of Louis X., the eldest brother of Isabella, as also of Philip V. and Charles IV., who had, in default of issue male, succeeded the one after the other; and if this son of the queen of Navarre had been born a little earlier than he was, then, by this same principle, Charles IV., the last king, must have been an usurper;* and the same king, from the moment that the boy really was born, must have occupied an unsteady throne. Such a principle was contrary to the maxims of every country in Europe, and repugnant alike to the practice in public and in private inheritances; the latter of which had been pretty clearly defined. The French, moreover, who ought to have been the only judges in this case, maintained it to be a fundamental law, *that no foreigner could reign in France*, and contended that one of the principal objects of the so-called Salic law was to exclude the husbands and children of the princesses of France, who generally married foreigners. It is very true that, when it suited their own interests, the French kings insisted on a different law of succession in some of the great fiefs of the crown; but here they tried to cover themselves with local laws or usages particular to the province or territory, and when they could not do this,—as happened more than once,—the injustice of their procedure formed but a bad precedent for others. It was in every sense with a peculiarly bad grace that the English set themselves up as authorities in the laws of royal succession: by no people had such laws been more thoroughly disregarded at home: from the time of William the Norman, who was an usurper by conquest, four out of ten of their kings had been usurpers, or were only to be relieved from that imputation by the admission of the principle that the estates of the kingdom had the right of electing the king from among the members of the royal family. The present question would have been at once decided by leaving this same right of election to the French, who were unanimous in their support of Philip of Valois. The peers of the kingdom had voted that the crown belonged to him; the Assembly of Paris had decreed the same thing; and the States General afterwards confirmed their judgment: and not only the whole nation, but all Europe, had recognized Philip. Edward himself, in 1331, had repeated his homage to him in a more satisfactory way than on the former occasion; and it was not till 1336 that he openly declared that the peers of France and the States General had acted rather like villains and robbers than upright judges; and that he would no longer submit to their decision, or recognise the French king, who had now reigned in peace more than seven years.† But the plain truth was, that

* Joan was married in 1310, during the reign of her first uncle, Philip V.; she was then only six years old, and certainly had not borne a son four years after (1322), when her second uncle, Charles IV., ascended the throne.

† Rymer.—Froissart.—Villaret, Hist. Fr.—Gaillard, Hist. de la Rivalité de la France et de l'Angleterre.—Edward repeatedly offered to give up his claims if Philip would abandon the cause of the king

Edward had not been able to shape his intrigues and make his preparations earlier; and now several concurring circumstances hurried him on. Philip had not only given an asylum to David Bruce, but was actually beginning to aid the Scottish patriots with ships, arms, and money. Edward, on his side, had given shelter to Robert of Artois, who was descended from the blood royal of France, who had married king Philip's sister, and who was supposed to have a strong party in France. On account of a disputed succession to the great fief of Artois, this Robert had been involved in a quarrel, that entailed disgrace on both parties, with his brother-in-law of France, who eventually had driven him into exile and hanged some of his adherents. Robert was a man of violent passions; his rage against the French king was boundless; and it is said that, before raising him up a formidable rival in the person of Edward of England, he had attempted his life by spells and witchcraft, and by the surer agency of the assassin's dagger. He was also gifted with great eloquence or powers of persuasion; he was skilful alike in the cabinet and the field, few princes enjoying a higher military reputation. Philip, who foresaw the consequences of his stay in England, threatened to fall upon Guienne, where, in fact, he had seized several castles, if Edward did not immediately dismiss him. There was not a sovereign in Europe so little likely to bear this insulting threat as the powerful English king, who sent over a commission, bearing date the 7th October, 1337, to the Earl of Brabant and others, to demand for him the crown of France as his indisputable right. The nation went along with the king; the coming war with France was most popular with all men; and having obtained subsidies, tallages, and forced loans,—having seized the tin in Cornwall and Devonshire, and the wool of the year all over the kingdom,—having even pawned the jewels of the crown, and adopted almost every possible means of raising money to subsidize his allies on the continent, Edward sailed from Orewell, in Suffolk, with a respectable fleet, and a fine but not large army, on the 15th of July, 1338. Four days after he landed at Antwerp, where he had secured himself a friendly reception. The Earl of Flanders was bound to his rival Philip; but this prince had scarcely a shadow of authority in the country, where the democratic party had triumphed over the nobles, and the inhabitants of the great trading cities had placed themselves under the government of James Von Artaveldt, a brewer of Ghent, who was in fact in possession of a more than sovereign authority in that rich and populous country,—an authority which he exercised rigorously enough, but on the whole with great wisdom. "To speak fairly," says Froissart, whose sympathies were enlisted on the other side, and who was all for knights and chivalry, "there never was in Flanders, nor in any other country, prince, duke, nor other, that ruled a country so peaceably as d'Artaveldt." Under this rule, industry, trade, and prosperity had wonderfully increased. The king of France was hated by the Flemings, as the declared enemy of this state of things, and the avowed protector of the expelled or humbled nobles; and when Edward, doing violence probably to his own feelings, did not hesitate to court their plebeian alliance, they forgot some old grudges against the English, and engaged to assist heart and hand in their wars. Edward's other allies were the emperor of Germany, the dukes of Brabant and Gueldres, the archbishop of Cologne, the marquis of Juliers, the counts of Hainault and Namur, the lords of Fauquemont and Bacquen, and some others, who, for certain subsidies, engaged to assist him with their forces. The English king, like his grandfather, Edward I., soon found how little reliance is to be placed on such coalitions. At the same time Philip of France allied himself with the kings of Navarre and Bohemia, the dukes of Brittany, Austria, and Lorraine, the palatine of the Rhine, and with several of the inferior princes of Germany. For the present, however, the operations in the field did not correspond with the magnitude of these preparations. The whole of this year, 1338, was passed in inactivity; and after granting trading privileges to the Flemings and Brabanters,* and spending his money among the Germans, all that Edward could procure from them was a promise to meet him *next* year in the month of July. But it was the middle of September, 1339, ere the English king could take the field, and then only fifteen thousand men-at-arms followed him to the siege of Cambray. On the frontiers of France the counts of Namur and Hainault abandoned him. Edward thanked them for their past services, and then advanced to Peronne and St. Quentin, burning all the villages and open towns. Here the rest of his allies halted, and refused to go farther. Edward then turned towards the Ardennes, and, as Philip avoided a battle, he found himself obliged to retire to Ghent, having spent all his money and contracted an enormous debt, without doing anything except inflicting ruin on some unoffending citizens and miserable French peasants. The pope, Benedict XII., made an attempt to restore peace; but Edward, unaffected by his failure, turned a deaf ear to his remonstrances, and immediately afterwards, by the advice, it is said, of Von Artaveldt, publicly assumed the title of king of France, and quartered the French lilies in his arms.* About the middle of February, 1340, he returned to England to obtain fresh resources, and the parliament, still sharing in his madness, voted him immense supplies. Before he could return to Flanders he was informed that Philip had collected a tremendous fleet, in the harbour of Sluys, to intercept him.

of Scots, and restore some places he had seized in Gascony. See Rymer.—Philip thought the claims too ridiculous to be worth any sacrifice of honour, and he was not captivated by Edward's proposal of intermarrying their children.

* Until he assumed the title of lawful king of France, many, even among the turbulent Flemings, had scruples; they cared nothing for Philip or his authority, but as vassals (nominal at least) they respected the name of king of France.

His council advised him to stay till more ships could be collected; but he would not be detained, and set sail, with such an English fleet as was ready, on the 22nd of June. On the following evening he came in sight of the enemy, who, on the morning of the 24th, drew out to the mouth of the harbour of Sluys. As Edward saw this movement he exclaimed—"Ha! I have long desired to fight with the Frenchmen, and now I shall fight with some of them by the grace of God and St. George."* The battle soon joined; stones were cast and arrows discharged from the decks; and then fastening their ships together with grappling-irons and chains, the enemies fought hand-to-hand with swords, and pikes, and battle-axes. The English gained a complete victory; nearly the whole of the French fleet was taken, and from ten to fifteen thousand of their mariners were killed or drowned. So dreadful was this disaster in the eyes of all of them, that none of Philip's ministers or courtiers dared to break the news to him. This task was left to his buffoon. "The English are but cowards," said the fool. "How so?" inquired the king; "because they had not the courage to leap into the sea like the French and Normans at Sluys," replied the fool.†

After this frightful loss of human life (and, besides the French, four thousand English had perished), Edward went to church to say his prayers and return thanks; and in the letter which he wrote to the bishops and clergy of England, he told them how, by heavenly grace and mercy, he had won so great a victory. This splendid success, and, still more, the great sums of money he carried with him, brought his allies trooping round his standard. Two hundred thousand men, in all, are said to have followed him to the French frontier; but again the mass of this incongruous host broke up without doing anything, and after challenging the French king to single combat, and spending all his money, Edward was obliged to agree to an armistice. The pope again laudably interfered, and endeavoured to convert the truce into a lasting peace; but Philip would not treat with his rival so long as he bore the lilies in his arms and took the title of King of France. Edward could not chastise his lukewarm allies, but he resolved to vent his spite on his ministers at home, who, he pretended, had not done their duty. One night, in the end of November, he appeared suddenly at the Tower of London, where no one expected him, and where there were very evident signs of a culpable negligence. The next morning he threw three of the judges into prison, displaced the chancellor, the treasurer, and the master of the rolls, and ordered the arrest of several of the officers who had been employed in collecting the revenue. Stratford, the Archbishop of Canterbury, who was president of the council of ministers, fled to Canterbury, and when summoned to appear, appealed for himself and his colleagues to the protection of Magna Charta, and issued the old excommunication against all such as should violate its provisions and the liberties of the subject by arbitrary arrests or the like. He would be tried, he said, by his peers, and would plead or make answer to no other persons or person whatsoever. The king then ordered a proclamation to be read in all the churches, accusing the archbishop of having appropriated, or irregularly applied to other purposes, the supplies voted by parliament for the king's use. The archbishop replied by a circular letter, exonerating himself, and stating that the taxes raised were mortgaged for the payment of debts contracted by the king in the preceding year. Edward rejoined, but as he fell into a violent passion in his letter, it has been fairly concluded that he had the worst of the argument; and in the end of this long quarrel, he was fairly beaten on constitutional grounds by the archbishop.* The king was now greatly distressed for money, and acting on that wise system, from the observance of which it has happened that the liberties of England have been purchased rather by the money than by the blood of the subject, parliament refused to pass the grants he wanted, unless he gave them an equivalent in the shape of a reform of past abuses and a guarantee against future ones.

In the course of the year 1341, the French king allowed David of Scotland, who had now attained his eighteenth year, to return to his own dominions. David, with his wife, landed at Inverbervie on the 4th of May, and was received with enthusiastic joy. Long before his coming the patriots had triumphed; they had taken castle after castle, and, in 1338, had again driven Baliol into England. They now enabled the young king to form a respectable government. The alliance with France was continued, and, within a year after his return, the Bruce made several successful inroads into the northern counties of England. Edward was so absorbed by his continental schemes that he delayed his vengeance, and was even glad to conclude a truce with the restored king of the Scots. This truce was prolonged till the end of the year 1344. Baliol, who had been driven three times from a throne, was provided for in the north of England, where for some years he did the duty of keeping watch and ward against the Scottish borderers.

As long as Edward fought with foreign mercenaries and from the side of Flanders, he was unsuccessful; but now he was about to try the effect of the arms of his native English, and circumstances soon opened him a new road into France, and enabled him to change the seat of the war from the Flemish frontier to Normandy, Brittany, and Poictou, the real scenes of his military glory. It was another disputed succession that occasioned the renewal of the war. John III., Duke of Brittany, died in 1341, and left no children though he had had three wives. Of his two brothers, Guy and John de Montfort, Guy, the elder, had died sometime before him,

* Froissart. † Wals.—Froissart.—Avesb.—Knyght.

* Rymer.—Rot. Parl.—Heming.

leaving only a daughter, Jane, surnamed *La Boiteuse* (or The Lame), who was married to Charles de Blois, nephew of the French king. A dispute then arose between the uncle and the niece, each claiming the duchy by the laws of inheritance. The uncle, John de Montfort, was by far the more active and the more popular of these two competitors: as soon as his brother was dead, he rode to Nantes, and caused his claim to be recognised by the majority of the bishops and nobles;—he got possession of the treasures of the late duke, besieged and took Brest, Vannes, and the other chief fortresses, and then crossed over to England, privately, to solicit the co-operation of Edward, being well assured that, with or without reference to the old laws of Brittany, Philip would protect his nephew. Charles de Blois, in effect, went to Paris with his wife, and having no party in Brittany, threw himself upon the protection of Philip, who received him in a manner that left no doubt as to his decision. John de Montfort soon returned from England, and when summoned to attend a court of peers and other magnates (all of them French) which Philip had convoked to try this great cause, he went boldly to Paris, accompanied by four hundred gentlemen of Brittany. Montfort's pleadings, which have been preserved, are remarkable specimens of the taste, the law, and the spirit of the times. The divine law, the natural law, the Roman law, and the feudal law, the canons of the church, and the ancient customs of Brittany were all put in requisition. He maintained, or his lawyers maintained for him, that the Salic law, excluding females, which obtained in France, must now be the law of Brittany, which was a fief of France,—that he was nearer in blood to the late duke, his brother, than Jane, who was only the daughter of another brother; but what was evidently considered the strongest ground of all was, the incapacity of females, and on this particular point heathen philosophers, Moses, and the Christian apostles were cited in most admired confusion. "We have," said he, "the example of the Blessed Virgin Mary, who never succeeded her son either in temporal or spiritual government; and it ought to appear that women cannot succeed to peerages, for the peers are counsellors of the king, and are bound at his coronation to put their hands to the sword; and what in sooth would become of us if all the peers of France were females?" To all this Charles de Blois replied, that Jane, his wife, had all the rights of her father,—that she was the last shoot of the elder branch,—that females had repeatedly inherited the duchy,—and that her sex did not exclude her from holding a French peerage, seeing that the Countess of Artois had shortly before been preferred to her nephew Robert, who had disputed the succession with her.* But this was a question where interests had more weight than arguments. Philip demanded of De Montfort the immediate surrender of the treasures of the late duke. This demand convinced John that the judgment of the French court would be against him;—he saw, or suspected, preparations for arresting him, and leaving his parchments and most of his friends behind him, he fled from Paris in disguise. A few days after his flight, sentence was pronounced in favour of his opponent. As Voltaire has remarked, the two parties here might be said to have changed sides: the King of England, who claimed the French crown through a female, ought to have sustained Jane and the rights of women; and the King of France, who was so deeply interested in the support of the Salic law, ought to have sided with De Montfort.* But law or right of any kind had little to do with these decisions, and neither Edward nor Philip was likely to be much embarrassed by a legal inconsistency.

After his escape from Paris, De Montfort repaired to London, and there did homage for his duchy to Edward as lawful King of France. At the same time Charles de Blois did homage to Philip, who furnished him with an army of six thousand men. Edward's assistance was not so prompt; but De Montfort, relying on the affection of the people of Brittany, returned to make head against the French invaders. Soon after, he was taken prisoner by treachery, and sent to Philip, who committed him to close confinement in the Tower of the Louvre. Charles de Blois then got possession of Nantes and other towns, and thought that the contest was over; but De Montfort's wife was still in Brittany, and the fair countess had "the courage of a man and the heart of a lion."† With her infant son in her arms, she presented herself to the people, and implored their assistance for the only male issue of their ancient line of princes. Such an appeal from a young and beautiful woman made a deep impression, and by eloquent discourse, by promising, and giving, she reanimated the courage of her party. As if expressly to refute the argumentations of her husband, she put her hand to the sword, put a steel casque on her head, and rode from castle to castle,—from town to town,—raising troops and commanding them like a hardy knight. She sent over to England to hasten the succour which Edward had promised her husband; and to be at hand to receive these auxiliaries, she threw herself into Hennebon, one of the strongest castles of Brittany, situated on the coast at the point where the small river Blavet throws itself into the sea, leaving what was then a convenient port at its mouth. Long before the English ships arrived at this port, she was besieged by the French under Charles de Blois. Within the walls she had the worst of enemies in a cowardly old priest, the Bishop of Leon, ‡ who was incessantly expatiating to the inhabitants on the horrors of a town taken by

* Daru, Hist. de la Bretagne. The original manuscripts quoted are preserved in the Archives of Nantes, and in the Bibliothèque du Roi at Paris.

* Essai sur les Mœurs. Philip, however, was so far right that, by the old usages of Brittany, women had succeeded; but then the other party could assert and prove that this had only been the case in default of males, or when there was no *near* male blood relation of the reigning family.

† Froissart.

‡ It is not quite clear whether this bishop was coward or traitor: he had a brother in the service of Charles de Blois.

assault, and showing them how prudent it would be to capitulate; but the young countess constantly visited all the posts, showed herself upon the ramparts, where the arrows of the enemy fell thickest, and repeatedly headed sorties against the besiegers. They could not be men who were not animated by this spectacle;—the women of the place caught the spirit of their chieftainess, and, without distinction of rank, dames, demoiselles, and others, took up the pavement of the streets and carried the stones to the walls, or prepared pots full of quicklime to throw over the battlements on the assailants. One day, during an assault which had lasted nearly ten hours, the fair countess ascended a lofty tower to see how her people defended themselves: looking beyond the walls, she saw that Charles de Blois had brought up nearly all his forces to the attack, and that his camp was badly guarded. She descended and, "armed as she was," mounted her war-horse; three hundred brave knights and squires sprang into the saddle to follow her, and issuing through a gate on the side opposite to that where the French were fighting, she galloped round, under cover of some hills and woods, and fell upon the camp, where she found none but horse-boys and varlets, who instantly fled. She set fire to the tents, and caused a wonderful disorder. When the lords of France saw their lodgings burning and heard the alarum, they ran back to the camp crying out, "Treason! treason!" and nobody remained to carry on the assault. Having thus relieved the town, the countess would have returned into it, but the besiegers threw themselves across her path, and obliged her to fly for safety into the open country. Louis d'Espagne, who was marshal, pursued the enemy without knowing that she was among them, and he killed several of her men-at-arms that were not well mounted; but the countess "rode so well" that she and a great part of her three hundred companions escaped unhurt, and soon after threw themselves into the castle of Aulray, which, according to the tradition of the Bretons, had been built by King Arthur. When the French knew that it was the countess who had done them all that mischief, they marvelled greatly. Within Hennebon it was not known for five whole days what had become of the brave lady; some thought she must be slain, and all were ill at ease on her account. But the wife of De Montfort had made good use of this time; she summoned her friends in the neighbouring country, and managed so well, that instead of three hundred, she had five hundred or six hundred companions, armed and well mounted. Leaving Aulray at midnight, she appeared at sunrise on the sixth morning under Hennebon, and dashing between the besiegers' camp and the ramparts, she got safely to a gate which was opened for her, and entered the town with the triumphant sounds of trumpets and horns, at all which the French host marvelled mightily, and then went to arm themselves.* "

At last, a scarcity of provisions began to be felt within these well-defended walls, and still the succours of Edward did not arrive. Day after day, anxious eyes were cast seaward, and still no fleet was seen. The Bishop of Leon renewed his dismal croaking, and at length was allowed to propose a capitulation. The countess, however, entreated the lords of Brittany, for the love of God, to conclude nothing as yet, and told them she was sure she should receive great help before three days passed. On the morrow, the garrison was wholly disheartened, the bishop again communicated with the enemy, and the French were coming up to take possession, when the countess, who was looking over the sea from a casement in the tower, suddenly cried out with great joy, "The English, the English! I see the succours coming." And it was, indeed, the English fleet she saw crossing the line of the horizon. It had been detained forty days by contrary winds, but it now came merrily over the waves with a press of sail. The people of Hennebon crowded the seaward rampart to enjoy the sight. All thoughts of surrendering were abandoned; in brief time the English ships, "great and small," shot into the port, and landed a body of troops, under the command of Sir Walter Manny, as brave a soldier as ever drew sword. The fair countess received her deliverers with enthusiastic gratitude, and with a refinement of courtesy. For the lords and captains she dressed up chambers in the castle with fine tapestry, and she dined at table with them. On the following day, after a good dinner, Sir Walter Manny said, "Sirs, I have a great mind to go forth and break down this great battering engine of the French, that stands so near us, if any will follow me." Then Sir Hugh of Tregnier said that he would not fail him in this first adventure; and so said Sir Galeran. The knights armed, and the yeomen of England, who really did the business, took their bows and arrows. Manny went quietly out by a postern with three hundred archers, and some forty men-at-arms. The archers shot "so thick together," that the French in charge of the engine could not stand it; they fled, and the machine was destroyed. Manny then rushed on the besiegers' tents and lodgings, set fire to them in many places, smiting and killing not a few, and then withdrew with his companions "fair and easily." The countess, who had seen the whole of this gallant sortie from the high tower, now descended, and came forth joyfully and kissed Sir Walter Manny and his comrades one after the other two or three times, like a brave lady.*

The French now despaired; and the very morning after this affair they raised the siege of Hennebon, and carried the war into Lower Brittany, where they took several towns. But soon after, they suffered a tremendous loss at Quimperlé, where an army, under the command of Don Louis d'Espagne, was cut to pieces almost to a man, by the English and the people of the countess. Some months after, however, Charles de

* Froissart.

* Froissart.

Blois re-appeared in great force before Hennebon, and began a fresh siege. Encouraged by the recollection of their former defence, and by the presence of their heroic countess and Sir Walter Manny, the people in the town cared little for the number of the besiegers, to whom they cried in mockery, from the walls, "You are not numerous enough yet; you are not enough! go, and seek your companions who sleep in the fields of Quimperlé." Another brilliant sortie, headed by Sir Walter, put an end to this second siege—the French retreating with disgrace. The wife of De Montfort then went over to England to press for further reinforcements which had been promised. Edward furnished her with some chosen troops, which were placed under the command of Robert of Artois, and embarked in forty-six vessels, most of which were small and weak. Off Guernsey, the ships encountered a French fleet of thirty-two tall ships, on board of which were a thousand men-at-arms, and three thousand Genoese crossbow-men. A fierce fight ensued, during which De Montfort's wife stood on the deck with a "stiff and sharp sword" and a coat of mail, fighting manfully; but the combat was interrupted by the darkness of night and a tremendous storm, and the English, after suffering some loss, got safely into a little port between Hennebon and Vannes. Robert of Artois landed the troops, and proceeded with the countess to lay siege to Vannes, which had been taken for Charles de Blois. Vannes was carried by a night assault, and then the lady returned to Hennebon. Soon after, Vannes was retaken by an immense host, led on by Olivier de Clisson and De Beaumanoir. Robert of Artois escaped with difficulty through a postern gate, but he was sorely wounded, and obliged to return to London, where, within a few weeks, he finished his stormy career, to the infinite joy of his loving brother-in-law the French king. Edward then determined to head the war in Brittany himself, and sailed to Hennebon with twelve thousand men. He marched to Vannes, and established a siege there; he then proceeded to Rennes, and thence to Nantes, wasting the country, and driving the French before him.

But Charles de Blois was reinforced by the Duke of Normandy, the eldest son of the French king, and then Edward retraced his steps to Vannes, which his captains had not been able to take. When the Duke of Normandy followed him with a far superior force he intrenched himself in front of Vannes, and then the French formed an intrenched camp at a short distance from him. Here both parties lay inactive for several weeks, during which winter set in. The Duke of Normandy dreaded every day that Edward would be reinforced from England; and it appears that an English fleet was actually on the way. On the other side, Edward dreaded that he should be left without provisions before it arrived. At this juncture, two legates of the Pope arrived at the hostile camps, and, by their good offices, a truce was concluded for three years and eight months. The English departed, boasting that the cardinals had saved the city of Vannes—the French vaunted that the truce had saved Edward.*

Never was a truce less observed. One of the conditions of it was, that Philip should release John de Montfort; but Philip kept him in closer imprisonment than before, and answered the remonstrances of the pope with a miserable quibble. The war was continued against the Bretons, who still fought gallantly under their countess, and hostilities were carried on, both by sea and land, between the French and English. The people of both nations were so exasperated against each other, that they seldom missed an opportunity of fighting, caring nothing for the armistice which their princes had sworn to. A savage deed threw an odium on King Philip, and roused the enmity of many powerful families. During a gay tournament, he suddenly arrested Olivier de Clisson, Godfrey d'Harcourt, and twelve other knights, and had their heads cut off in the midst of the *Halles*, or market-place of Paris. He sent the head of De Clisson into Brittany, to be stuck up on the walls of Nantes. Other nobles were disposed of in the same summary manner in Normandy and elsewhere. They were all said to have been guilty of a treasonable correspondence with England; but not one of them was brought to trial, or subjected to any kind of legal examination. A cry of horror ran through the land. The lords of Brittany, who had supported Charles de Blois, instantly went over to the countess; other lords, fearing they might be suspected, fled from the court, and *then* really opened a correspondence with Edward, and doomed Philip to destruction. But of all the enemies created by this atrocious act, none was so ardent as Jane de Belville, the widow of the murdered De Clisson—a daring woman, who soon rivalled the exploits of the Countess de Montfort, to whom she presented her son, a boy of seven years, that he might be brought up with the young De Montfort. Soon after these events, John de Montfort, who had been a captive for three years, and who now probably feared for his life, contrived to escape in the disguise of a pedlar, and to get over to England. Having renewed his homage to Edward, he received a small force, with which he repaired to Hennebon. The joy of his heroic wife was of short duration—for De Montfort sickened and died shortly after, appointing by will the king of England guardian to his son. Charles de Blois returned into the country, and renewed the war with greater ferocity than ever; but he had no chance of success, and Brittany remained an efficient ally of Edward. Whether he carried the war into Normandy or Poictou, it covered one of his flanks, and remained open to him as a place of retreat in case of a reverse. For some time, both he and Philip had been preparing for more extended hostilities. The latter had adulterated the coinage, had impoverished France with all manner

* P. Lobineau.—Daru.—Froissart.

of levies and taxes, and at this crisis he established the monopoly of salt. Edward declared that his rival now, indeed, reigned by *salic* law; Philip retorted by calling Edward a wool merchant.*

A. D. 1345. Sharing in the popular feeling, the English parliament recommended war, begging, however, that the king would not suffer himself to be duped by foreigners, and expressing their hope that he would finish the contest in a short time by battle or by treaty. An army was sent into Guienne, where the French had seized many towns, under the command of Edward's cousin, the brave and accomplished Earl of Derby. The earl fell like a thunderbolt among the French; beat them in a decisive battle near Auberoche; took many of their nobles prisoners, and drove them out of the country, leaving only a few fortresses in their hands. About the same time Edward went in person to Sluys, to treat with the deputies of the free cities of Flanders. As Louis, the Count of Flanders, though deprived of nearly all his revenues, and left with scarcely any authority, still refused to acknowledge the rights of the English king to the crown of France, Edward endeavoured, rather prematurely, to persuade the Flemings to transfer their allegiance to his own son. His old ally, James Von Artaveldt, entered into this view; and his exertions for Edward cost him his life. Many of the cautious burgomasters opposed this extreme measure, and set intrigues on foot; and Von Artaveldt's long and great power, however wisely used, in the main, for the good of the country, had raised him up numerous enemies. Bruges and Ypres assented to his proposals, but Ghent was in the worst of humours. As he rode into the town he saw the people, who were wont to salute him cap in hand, turn their backs upon him. Doubting some mischief, he got to his house, and made fast his gates. Scarcely had he done this, when the street in which he dwelt was filled from one end to the other by a furious mob, who presently proceeded to force his doors. With the help of his trusty servants he defended his house for some time, and killed and wounded several of the assailants; but the mob still increased, the mansion was surrounded, was attacked on all sides,—further resistance was hopeless. Then Von Artaveldt presented himself at a window bare-headed, and spoke with fair words. "Good people," said he, "what aileth you, and why are you so troubled against me?" "We want to have an account of the great treasures of Flanders which you have sent out of the country without any tittle of reason," cried the multitude as with one voice. Von Artaveldt replied very mildly, "Certes, gentlemen, of the treasures of Flanders never have I taken anything: return quietly to your homes, I pray you, and come here to-morrow morning, when I will give you so good an account that you must in reason be satisfied." But they cried "Nenny! Nenny! [No! No!] we will have it now; you shall not escape us; for we know that you have emptied the treasury, and sent the money into England without our assent; for which thing you must die." When Von Artaveldt heard these words he joined his hands together, and began to weep very tenderly, and said, "Gentlemen, what I am, you yourselves have made me: in other days you swore to defend me against all men, and now you would kill me without reason: do it you *can*, for I am but one man against so many. Take counsel of yourselves, for God's love, and remember the past. You would now render me a sorry reward for all the good I have done you. Do you not know how trade was ruined in this country, and how I recovered it. After that I governed you in so great peace; so that in time of my governing ye have had all things as you could wish—corn, oats, money, and all other merchandizes; by the which you have restored yourselves, and got into good condition." But the fury of the mob was unabated by this touching appeal, though the truth it contained was undeniable: they cried out, "Come down, and do not preach to us from such a height;" and they renewed their attack. Then Von Artaveldt shut the window, and intended getting out of his house the back way, to take shelter in a church adjoining: but his hotel was already broken into on that side, and more than four hundred fierce men were there calling out for him. At last he was seized, and slain without mercy: his death-stroke was given by a saddler who was named Thomas Denys. Thus, James Von Artaveldt finished his days;—the brewer of Ghent, who, in his time, had been complete master of Flanders. "Poor men first raised him, and wicked men killed him."*

The news of this great event gave great joy to the Count of Flanders, and great grief to King Edward, who sailed away from Sluys, vowing vengeance against the Flemings who had thus murdered his steady friend and most valuable ally. The free towns fell into great consternation,—their prosperity depended on their trade; their trade in a great measure depended on England. If Edward should shut his ports to their manufactured goods, or prohibit the exportation of English wool, they knew that they would be little better than ruined. Bruges, Ypres, Courtray, Oudenarde,—all the chief towns except Ghent,—sent deputies to London to soften the dangerous wrath of the English king, and to vow that they were guiltless of the murder. Edward waved his claim to the formal cession of Flanders to his son, and contented himself with other advantages and promises, among which was one that the Flemings would, in the course of the following year, pour an army into France, while Edward attacked that kingdom from another quarter.

In 1346 Edward collected a fine army, consisting solely of English, Welsh, and Irish, and landed with them on the coast of Normandy, near Cape la Hogue, about the middle of July. That

Most of Edward's grants were voted on wool—the great staple of England.

* Froissart.

province was defenceless, for Edward's attack had been expected to fall upon the south. In the latter direction the Duke of Normandy had fallen upon the gallant Earl of Derby, and was endeavouring, with the flower of the French army, to drive the English from Guienne. One of Edward's principal objects was to create an alarm which should draw the French out of that province, and, by crossing the Seine, to join his allies, the Flemings, who had actually passed the French frontier. Having taken Carenton, St. Lo, and Caen, and plundered and wasted the country, he marched to the left bank of the Seine, intending to cross that river at Rouen; but, when he got opposite that town, he found that Philip was there before him, that the bridge of boats was removed, and that a French army, in numbers far superior to his own, occupied the right bank. The English then ascended the river towards Paris by the left bank, the French manœuvring along the right, breaking down all the bridges, and preventing the enemy from passing the river. Edward burnt the villages, sacked the towns of Vernon and Mantes, and at last came to Poissy, within eight or nine miles of Paris. Here there was a good bridge, but it had been partially destroyed by order of Philip, who was as anxious to keep his enemy on the left bank as Edward was to get to the right. The English marched from Poissy to St. Germain, which they burnt to the ground: by seizing some boats on the river they were enabled to do still further mischief; and St. Cloud, Bourg-la-Reine, and Neuilly were reduced to ashes. Still, however, Edward's situation was critical; he was separated from his auxiliaries, and Philip was reinforced daily. Having examined the bridge at Poissy, Edward struck his tents, and advanced as if he would attack Paris, and his van really penetrated to the suburbs of that capital. This movement obliged the French to march over to the opposite bank, to the relief of that city. This was what Edward wanted: he then wheeled round, cleared the remains of the bridge of Poissy by means of his bowmen, repaired it, and crossed to the right bank with little loss. From the Seine he continued his way, by forced marches, towards the river Somme, burning the suburbs of Beauvais, and plundering the town of Pois. Philip now determined to prevent his crossing the Somme: by rapid movements he got to Amiens on that river, and sent detachments along the right bank to destroy the bridges and guard every ford. The English attempted to pass at Pont St. Remi, Long, and Pequigny, but failed at each place. Meanwhile, Philip, who had now one hundred thousand men, divided his force, and while one division was posted on the right bank to prevent the passage of the English, he marched with the other along the left, to drive them towards the river and the sea. So close was he upon his enemy, that he entered Airaines, where Edward had slept, only two hours after his departure. That evening the English reached Oisement, near the coast, where they found themselves cooped up between the sea, the Somme, and the division of the French army with Philip, which was six times more numerous than their whole force. The marshals of the army were again sent to see whether there were any ford, but they again returned with the sad news that they could find none. Edward then assembled all his prisoners, and promised liberty and a rich reward to any one of them that could show him where he, his army, and waggons might cross without danger. A common fellow, whose name was Gobin Agace, told him that there was a place, a little lower down, called Blanche-Taque, or the White Spot, which was fordable at the ebb of the tide. "The King of England," says Froissart, "did not sleep much that night, but, rising at midnight, ordered his trumpets to sound." Instantly the baggage was loaded, and everything got ready. At the peep of day the army set out from the town of Oisemont under the guidance of Gobin Agace, and soon came to the ford of Blanche-Taque; but Edward had the mortification to find not only that the tide was full, but that the opposite bank of the river was lined with twelve thousand men under the command of a great baron of Normandy called Sir Godemar du Fay. He was obliged to wait till the hour of "primes," when the tide was out. This was an awful suspense, for every moment he expected Philip in his rear. The French king, however, did not come up, as he certainly ought to have done; and as soon as it was reported that the river was fordable, Edward commanded his marshals to dash into the water, "in the names of God and St. George." Instantly the most doughty and the best-mounted spurred into the river. Half way across they were met by the cavalry of Sir Godemar du Fay, and a fierce conflict took place in the water. When the English had overcome this opposition they had to encounter another, for the French still occupied, in battle array, a narrow pass which led from the ford up the right bank. Among others posted there, was a strong body of Genoese crossbow-men, who galled them sorely; but the English archers "shot so well together," that they forced all their opponents to give way, upon which Edward cleared the bank of the river; and while part of his forces pursued Du Fay, he encamped with the rest in the pleasant fields between Crotoy and Crecy. Philip now appeared on the opposite side of the ford, where Edward had so long waited; but he was too late—the tide was returning and covering the ford; and, after taking a few stragglers of the English army who had not crossed in time, he thought it prudent to return up the river, to cross it by the bridge of Abbeville. On the following day Edward's marshals rode to Crotoy, in the harbour of which they found many vessels laden with wines from Poictou, Saintonge, and La Rochelle: the best of the wines they carried off as a seasonable refreshment to the army—the town they burnt.

Edward was now within a few days' march of the frontiers of Flanders, but nothing was seen or

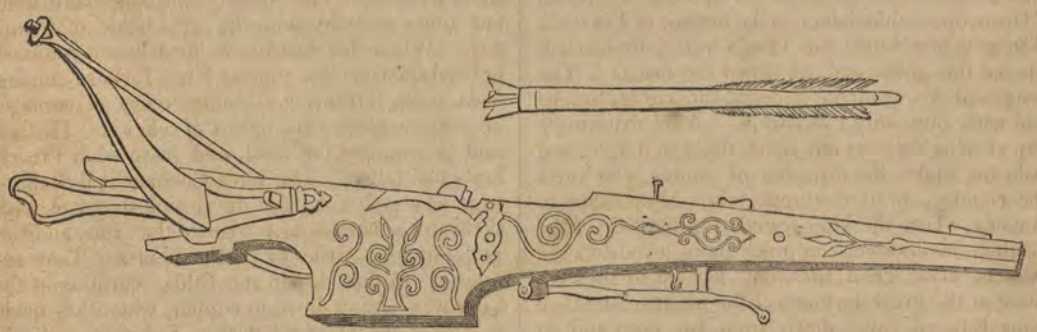
heard of his Flemish auxiliaries. He was probably tired of retreating, and encouraged by the result of the remarkable battle at Blanche-Taque, —or there might have been other strong motives with which we are unacquainted to induce him to stay where he was and fight the whole French army, with what, to most men, would have appeared a hopeless disparity of numbers. When told that Philip would still pursue him, he merely said, "We will go no farther; I have good reason to wait for him on this spot; I am now upon the lawful inheritance of my lady-mother,—upon the lands of Ponthieu, which were given to her as her marriage portion; and I am resolved to defend them against my adversary, Philip de Valois." As he had not the eighth part of the number of men that Philip had, his marshals selected an advantageous position on an eminence a little behind the village of Crecy. There the army set about brightening and repairing their armour, and the king gave a supper that evening to the earls and barons,—and he made good cheer. After supper he entered his oratory, and, falling on his knees, prayed God to bring him off with honour if he should fight on the morrow. Rising at early dawn, he and his son Edward heard mass, and communicated: the greater part of his people confessed, and put themselves in a comfortable state of mind. They had not been harassed for many hours; they had fared well; they had had a good night's rest, and were fresh and vigorous. After mass the king ordered the men to arm and assemble, each under his proper banner, on spots which had been carefully marked out during the preceding day. In the rear of his army he enclosed a large park near a wood, in which he placed all his baggage-waggons and all his horses; for every one, man-at-arms as well as archer, was to fight that day on foot. Then his constable and marshals went to look to the three divisions. The first division was under the command of his young son, with whom were placed the earls of Warwick and Oxford, Sir Godfrey d'Harcourt, Sir John Chandos, and other experienced captains; it consisted of about eight hundred men-at-arms, two thousand archers, and one thousand Welsh foot. A little behind them, and rather on their flank, stood the second division of eight hundred men-at-arms and twelve hundred archers, who were commanded by the earls of Northampton and Arundel, the lords De Roos, Willoughby, and others. The third division stood in reserve on the top of the hill; it consisted of seven hundred men-at-arms and two thousand archers. The archers of each division formed in front, in the shape of a portcullis or harrow. When they were thus arranged, Edward, mounted on a small palfrey, with a white wand in his hand, and a marshal on either side of him, rode gently from rank to rank, speaking to all his officers, exhorting them to defend his honour and his right; and he spoke so gently and cheerfully that those who were discomforted were comforted on hearing him and looking into his confident countenance. This courageous serenity was one of the greatest advantages that Edward had over his rival. At the hour of three he ordered that all his people should eat at their ease and drink a drop of wine; and they all ate and drank very comfortably: and when that was over, they sate down, in their ranks, on the ground, with their helmets and bows before them, so that they might be the fresher when their enemies should arrive.

After his march and counter-march, on the day of Blanche-Taque, Philip rested at Abbeville, and he lost a whole day there, waiting for reinforcements, among which were a thousand lances of the Count of Savoy, "and," says Froissart, "they ought to have been there, as the count had been well paid for them at Troyes in Champaign three months in advance." This morning, however, the French king marched to give battle, breathing fury and vengeance: his countenance was clouded,—a savage silence could not conceal the agitation of his soul,—all his movements were precipitate, without plan or concert. It seemed as if the shades of de Clisson and his murdered companions flitted before his eyes and obscured his vision. He marched rapidly on from Abbeville, and when he came in sight of the well-ordered divisions of Edward, his men were tired and his rear-guard far behind. By the advice of a Bohemian captain, he agreed to put off the battle till the morrow, and two officers immediately rode, one along the van and the other towards the rear, crying out, "Halt, banners, in the name of God and St. Denis!" Those that were in front stopped, but those behind rode on, saying that they would not halt until they were as forward as the first. When the van perceived the rear pressing on them they pushed forward, and neither the king nor the marshals could stop them, but on they marched without any order until they came near the English, when they stopped fast enough. Then the foremost ranks fell back at once in great disorder, which alarmed those in the rear, who thought there had been fighting. There was then room enough for those behind to pass in front had they been willing so to do: "some did so, and some remained very shy." All the roads between Abbeville and Crecy were covered with common people, who, while they were yet three leagues from their enemy, drew their swords, bawling out, "Kill! kill!" and with them were many great lords that were eager to make a show of their prowess. "There is no man," says Froissart, "unless he had been present, that can imagine or truly record the confusion of that day, especially the bad management and disorder of the French, whose troops were innumerable." If all these circumstances are borne in mind, the most marvellous parts of the story will be reconcileable to probability and truth. The kings, dukes, earls, barons, and lords of France, advanced each as he thought best. Philip was carried forward by the torrent, and, as soon as he came in sight of the English, his blood began to boil, and he cried out,

"Order the Genoese forward, and begin the battle, in the name of God and St. Denis!" These Genoese were famous crossbow-men, under the command of a Doria and a Grimaldi: according to

Genoese Archer, winding up or bending his Cross-bow.

Froissart, they were fifteen thousand strong. But they were quite fatigued, having that day marched six leagues on foot, completely armed and carrying their heavy cross-bows. Thus they told the constable that they were not in a state to do any great exploit of battle that day. The Count d'Alençon, King Philip's brother, hearing this, said, "See what we get by employing such scoundrels, who fail us in our need." The susceptible Italians were not likely to forget these hasty and insulting words, but they formed and led the van. They were supported by the Count d'Alençon, with a numerous cavalry, magnificently equipped. While these things were passing, a heavy rain fell, accompanied by thunder; and there was a fearful eclipse of the sun: and before this rain a great flight of crows, the heralds of the storm, had hovered in the air, screaming over both armies. About five in the afternoon, the weather cleared up and the sun shone forth in full splendour. His rays darted full in the eyes of the French, but the English had the sun at their backs. When the Genoese had made their approach, they set up a terrible shout to strike terror into the English; but the English yeomen remained motionless, not seeming to care for it: they sent up a second shout, and advanced, but still the English moved not; they shouted a third time, and advancing a little, began to discharge their cross-bows. Then the English moved, but it was one step forward, and they shot their arrows with such rapidity and vigour "that it seemed as if it snowed." These well-shot arrows pierced shield and armour; the Genoese could not stand them. On seeing these auxiliaries waver and then fall back, the King of France cried out in a fury, "Kill me those scoundrels, for they stop our way without doing any good!" and at these words the French men-at-arms laid about them, killing and wounding the retreating Genoese. All this wonderfully increased the confusion; and still the English yeomen kept shooting as vigorously as before into the midst of the crowd: many of their arrows fell among d'Alençon's splendid cavalry, and, killing and wounding many, made them caper and fall among the Genoese, "so that they could never rally or get up again." Many of these knights were despatched by Cornishmen and Welshmen, who had armed themselves with long knives for the purpose, and who crept through the ranks of the English archers and men-at-arms to fall upon the French, among whom they spared no one, killing earls and barons, knights and common men alike. Having got free from the rabble-rout, d'Alençon and the Count of Flanders skirted the English archers and fell upon the men-at-arms of the prince's battalion, where they fought fiercely for some time. The second division of the English moved to the support of the prince. The King of France was eager to support d'Alençon, but he could not penetrate a hedge of English archers which formed in his front. But without the king's forces, d'Alençon, with whom fought French, Germans, Bohemians, and Savoyards, seemed to all eyes more than a match for the prince. At a



Cross-bow and Quarrell.

moment when the conflict seemed doubtful, the Earl of Warwick sent to request a reinforcement from the reserve. Edward, who had watched the battle from a windmill on the summit of the hill, and who did not put on his helmet the whole day, asked the knight whether his son were killed, or wounded, or thrown to the ground? The knight replied, "No, Sire, please God, but he is hard beset." "Then," said the king, "return to those who sent you, and tell them that they shall have no help from me. Let the boy win his spurs, for I am resolved, if it please God, that this day be his, and that the honour of it be given all to him and to those to whose care I have intrusted him." When Sir Thomas Norwich reported this message, they were all greatly encouraged, and repented of having ever sent him. Soon after this, d'Alençon was killed, and his battalions were scattered. The King of France, who certainly showed no deficiency of courage, made several brilliant charges, but he was repulsed each time with great loss: his horse was killed under him by an English arrow, and the best of his friends had fallen around him. Night now set in, but not before he had lost the battle. At the hour of vespers he had not more than sixty men about him of all sorts. John of Hainault,* who had once remounted the king, now said,—"Sire, withdraw, it is time; do not sacrifice yourself foolishly: if you have lost this time, you may win on some other occasion," and so saying, he laid hold of his bridle-rein and led him away by force, for he had entreated him to retire before this, but in vain. The king rode away till he came to the castle of La Broye, where he found the gates shut, for it was dark night. He summoned the châtelain, who came upon the battlements and asked who called at such an hour. The king answered, "Open, open, châtelain, it is the fortune of France!" The governor knew the king's voice, descended, opened the gates, and let down the bridge. The king and his company entered the castle, but he had with him only five barons. After drinking a cup of wine, they set out again about midnight, and rode on, under the direction of guides who knew the country, until daybreak, when they came to Amiens, where the king rested. On the side of the English, matters went on much more joyously: the soldiers made great fires, and lighted torches because of the great darkness of the night. And then King Edward came down from his post, and, in front of his whole army, took the prince in his arms, kissed him and said, "Sweet son! God give you good perseverance! You are my true son, for loyally have you acquitted yourself this day, and worthy are you of a crown." Young Edward bowed very lowly, and, humbling himself, gave all the honour to the king his father.†

Such was the memorable battle of Crecy: it was fought on Saturday the 26th day of August, 1346. That night, however, Edward was scarcely aware of the extent of his victory; and on the following day he gained another, if that could be called a victory where there was no resistance made, the French falling like sheep in the shambles. On the Sunday morning a fog arose, so that the English could scarcely see the length of half an acre before them. The king sent out a detachment of five hundred lances and two thousand archers to reconnoitre and learn whether there were any bodies of French collecting near him. This detachment soon found themselves in the midst of a body of militia from Beauvais and Rouen, who, wholly ignorant of what had happened, had marched all night to overtake the French army. These men took the English for French, and hastened to join them.* Before they found out their mistake, the English fell upon them and slew them without mercy. Soon after, the same party took a different road, and fell in with a fresh force, under the Archbishop of Rouen and the Grand Prior of France, who were also ignorant of the defeat of the French, for they had heard that the king would not fight till the Sunday. Here began a fresh battle, for those two spiritual lords were well provided with stout men-at-arms. They could not, however, stand against the English; the two lords were killed, and only a few of their men escaped by flight. In the course of the morning the English found many Frenchmen, who had lost their road the preceding evening, and had lain all night in the open fields, not knowing what was become of the king or their own leaders. All these were put to the sword; and of foot soldiers sent from the municipalities, cities, and good towns of France, there were slain this Sunday morning more than four times as many as in the great battle of Saturday. When this destructive detachment returned to head-quarters, they found King Edward coming from mass, for during all these scenes of carnage, he never neglected the offices of religion. He then sent to examine the dead, and learn what French lords had fallen. The lords Cobham and Stafford were charged with this duty, and they took with them three heralds to recognize the arms, and two secretaries to write down the names. They remained all that day in the fields, returning as the king was sitting down to supper, when they made a correct report of what they had seen, and told him that they had found the bodies of eleven princes, eighty bannerets, twelve hundred knights, and about thirty thousand common men.

On Monday morning, the King of England ordered the bodies of the great knights to be taken from the ground, and carried to the monastery of Montenay, there to be buried in holy ground: and he made it known to the people of the country that he gave them three days' truce, that they might clear the field of Crecy and inter all the dead. He then marched off to the north, keeping near the

* This *preux* chevalier of Queen Isabella had quitted the English service, and entered the French, some time before. When first applied to by Philip, he urged that he had spent the flower of his youth in fighting for England, and that King Edward had always treated him with affection;—but he was not proof against a promise of increased pay.
Froissart.

* Some old French writers say that the English hoisted French colours, and so decoyed the militia.

coast, and passing through Montreuil-sur-mer. Among the princes and nobles that fell were Philip's own brother, the Count d'Alençon, the Dukes of Lorraine and Bourbon, the Counts of Flanders, Blois, Vaudemont, and Aumale. But the most remarkable victim was John de Luxembourg, King of Bohemia: he was old and blind, but on hearing that his son was dangerously wounded and forced to abandon the field, and that nothing could resist the Black Prince, he resolved to charge himself; and placing himself between two knights, whose bridles were interlaced on either side with his, he charged and fell. His crest, three ostrich feathers with the motto "*Ich dien*" (I serve), was adopted by Prince Edward, and has ever since been borne by the princes of Wales.*

On Thursday the 31st of August, five days after the great battle of Crecy, Edward sate down before Calais and began his famous siege of that strong and important place,—a siege, or rather a blockade, which lasted nearly a year, and which was enlivened by many brilliant feats of arms. An immediate consequence of his victory at Crecy was the withdrawing of the Duke of Normandy from Guienne, where the Earl of Derby was almost reduced to extremities notwithstanding the gallant assistance of Sir Walter Manny, who had removed a small body from Brittany to Gascony. As soon as the French army had cleared the country, Derby, with an inconsiderable force, left Bordeaux, and crossing the Garonne and the Dordogne, laid waste the land even as far as the walls of Poictiers, which rich city he took by storm and plundered. After these exploits, he returned loaded with booty to Bordeaux.

While Edward was occupied at Calais, Philip resorted to measures which he hoped would create such a confusion in England as to oblige his immediate return thither. Ever since his guest David Bruce had been reseated on the throne he had kept up an active correspondence with Scotland, and three successful inroads on the English frontier had arisen, not less from his suggestions than from the eagerness of the Scots for revenge and plunder. His communications were now more frequent, and, in the month of September, King David himself marched from Perth at the head of three thousand regular cavalry and about thirty thousand others, mounted on galloways. It is said that he was confident of success, seeing that nearly the whole chivalry of England was absent. He rode into Cumberland, took the peel, or castle, of Liddel on the 2nd of October, and then marched into the bishopric of Durham. While he lay at Bearpark, near the city of Durham, the English assembled an army in Auckland Park. Queen Philippa, according to Froissart, mounted a horse and rode among these troops, discoursing like a heroine, and recommending to their courage the safety of their country, and the honour of their absent king. She did not, however, he admits, like the Countess of Montfort and the other heroines in Brittany, take a part in the battle, but after recommending them to God and St. George, she withdrew to a safe place. But no old English writer mentions the presence of Philippa on this occasion; and we fear the story, however ornamental, must be reckoned among the fabulous embellishments of history. The Scots were ignorant of all the movements of the English: Douglas, the famous knight of Liddesdale, who had scoured the country as far as Ferry Hill, was intercepted on his return by the English at Sunderland Bridge. He cut his way through them, but lost five hundred of his best men. David, though taken by surprise, immediately formed his troops, and a decisive battle was fought at Nevil's Cross. The English counted among their forces three thousand archers, and these men as usual decided the affair. While the Scottish horse were crowded together, they let fly at them from under cover of hedges, and choosing their aim, they soon unhorsed many of their best knights. On this occasion David showed much of the courage of his father, but that great man's prudence and generalship were altogether wanting. After being twice wounded, and still disdaining to flee or surrender, he was forcibly made prisoner by one Copland, a gentleman of Northumberland, who carried him off the field to his tower of Ogle. Three earls and forty-nine barons and knights shared the fate of the king. The Earl of Monteith, who had accepted office under Edward, and the Earl of Fife, who had done homage to Edward Baliol, were condemned as traitors without any form of trial, by the king in council at Calais. Monteith was barbarously executed, but Fife was reprieved on account of his relationship, his mother having been niece to Edward I. King David was soon carried to London and safely lodged in the Tower. The battle of Nevil's Cross, which wonderfully elated the English, was fought on the 17th of October.*

In the meantime Edward's ally, the Countess of Montfort, continued to defend the inheritance of her infant son, being well supported by an English force of one thousand men-at-arms and eight thousand foot, under the command of Sir Thomas Dagworth. On the night of the 18th of June, 1347, while her bitter enemy, Charles de Blois, was lying before Roche-Derrien, which he was besieging with fifteen thousand men, he was suddenly attacked by the English. In the confusion of a nocturnal battle, Sir Thomas was twice taken prisoner, and twice released by his brave followers.

* Froissart.—Knyght.—Rymer.

* Froissart. He says that he had his accounts of the battle of Crecy, not only from Englishmen engaged in it, but also from the people of John of Hainault, who was near the person of the King of France the whole day. A contemporary writer, Giovanni Villani, in his 'History of Florence,' relates that cannon were used by the English at the battle of Crecy, and that four of these newly-invented engines which Edward planted in the front of his army did great execution. This circumstance is not mentioned by Froissart; nor is his account very consistent with the supposition that cannon were used. It seems unlikely, too, that he should have omitted so remarkable and so material a circumstance. It appears to be certain, however, that the use of cannon was introduced some years before the battle of Crecy. Ducange (art. 'Bombarda') shows that the French employed cannon at the siege of Puy Guillaume, in 1338; and a species of fire-arms at least, which Barbour in his 'Life of Bruce, calls "crakys of war," was used by the English in the expedition against Scotland, in 1327.

A sortie from the garrison finished this affair—the French were thoroughly beaten and dispersed; Charles de Blois was taken prisoner, and sent over to England, to add another royal captive to those already in Edward's power. He was confined in the Tower of London, as his rival, de Montfort, had been confined in the Tower of the Louvre. The affairs of Charles were hereby ruined; but his wife, Joan the Lame, fought some time for her captive husband, as the wife of de Montfort had fought for hers when he was a prisoner at Paris. This has been well called the age of heroines; in Brittany alone there were three ladies showing the firmness and valour of men; but, in the end, the Countess Joan was foiled, and the Countess of Montfort preserved the dominion for her son, who afterwards held the country, and transmitted it to his children.*

Edward, meanwhile, pressed the blockade of Calais, the garrison and inhabitants of which were neither won by his promises nor intimidated by his threats. As it was a place of incredible strength, he wisely resolved not to throw away the lives of his soldiers in assaults, but to reduce it by famine. He girded it on the land side by intrenchments, and he built so many wooden houses for the accommodation of his troops, that his encampment looked like a second town growing round the first: the old French writers, indeed, call it *La Ville de Bois.* At the same time his fleet blockaded the harbour, and cut off all communication by sea. John de Vienne, the governor of Calais, could not mistake Edward's plan, and, to save his provisions, he determined to rid himself of such as are called, in the merciless language of war, "useless mouths." Seventeen hundred poor people, of both sexes and of all ages, were turned out of the town and driven towards the English lines. Edward gave them all a good dinner, and then dismissed them into the interior of the country, even presenting them with a little money to supply their immediate wants. As provisions waxed low the governor made a fresh search for "useless mouths," and five hundred more of the inhabitants were thrust out of the town: but this time Edward was not so merciful, and all of them are said to have perished miserably between his lines and the town walls, as the governor would not re-admit them. A few Norman vessels eluded the vigilance of the English fleet, and conveyed some victuals into the town; but from that time the mouth of the port was quite blocked up, and the Earl of Warwick, with eighty "tall ships," constantly swept the Channel. Fresh squadrons of English ships were sent to sea from time to time, till at length their united number was prodigious.† A French fleet, attempting to relieve the place, was met by the Earl of Oxford, and carried to England. After this the hopes of the garrison began to fail them, and they wrote to King Philip that they had eaten their horses, their dogs, and all the unclean animals they could procure, and that nothing was left for them but to eat one another. This letter was intercepted by the English; but Philip knew the straits to which they were reduced, and resolved to make a great effort to save this important place. The "Oriflamme," the sacred banner of France, which was not to be used except against infidels, was unfurled; the vassals of the crown were summoned from all parts; and, in the month of July, Philip marched towards Calais. That town, however, was only approachable by two roads—the one along the sea-shore, the other over bogs and marshes: and Edward guarded both—the one with his ships and boats, which were crowded with archers; the other by means of towers, fortified bridges, and a great force of men-at-arms and archers, under the command of the brave Earl of Derby, who, as well as Sir Walter Manny, had come from Gascony for this great enterprise. Philip was not bold enough to attempt either passage; and after a fruitless attempt at negotiation, and an idle challenge, he withdrew his army, and left Calais to its fate. When the faithful garrison had witnessed his departure, they hung out the flag of England, and asked to capitulate. Edward, enraged at their obstinate resistance, and remembering, it is said, the many acts of piracy they had formerly committed upon the English, refused them any terms, saying that he would have an unconditional surrender. Sir Walter Manny, and many barons who were then present, pleaded in favour of the men of Calais. "I will not be alone against you all," said the king. "Sir Walter, you will tell the captain that six of the notable burgesses must come forth naked in their shirts, bare-legged, with halters round their necks, and the keys of the town and castle in their hands. On these I will do my will, and the rest I will take to my mercy." When Sir Walter Manny reported this hard condition to John de Vienne, that governor went to the market-place and ordered the church bells to be rung: the people—men, women, and children—repaired to the spot, and, when they had heard Edward's message, they all wept piteously, and were incapable of forming any resolution. Things were in this state when the richest burgess of the town, who was called Messire Eustace de St. Pierre, rose up and said, before them all,—"Gentlemen, great and little, it were great pity to let these people perish,—I will be the first to offer up my life to save theirs." After him another notable burgess, a very honest man, and of great business, rose and said that he would accompany his compeer, Messire Eustace; and this one was named Messire Jehan

* After nine years' captivity, Charles de Blois was liberated on a ransom, which he never paid; and he was killed in 1364, at the battle of Aulray, or Auray, where the young Count de Montfort, and his English allies, gained a great victory.

† Hakluyt has printed the roll of these fleets, extant, in his time, in the king's great wardrobe. The south fleet consisted of 493 sail, and 9630 men; the north of 217 sail, and 4521 men. There were 38 foreign ships, among which was included 1 from Ireland; the others were, 15 from Bayonne, 7 from Spain, 14 from Flanders, and 1 from Guelderland. Most of these vessels must have been very small; but there were some carrying crews of 100 to 200 men each. —Hackluyt, Southey's Nav. Hist.

d'Aire. After him rose up Jaques de Wisant, who was very rich in goods and lands, and said that he would accompany his two cousins, as did Peter Wisant, his brother: then the fifth and the sixth offered themselves, which completed the number the king demanded. The governor, John de Vienne, mounted a small hackney, for his wounds prevented him from walking, and conducted them to the gate. The English barriers were opened, and the six were admitted to the presence of Edward, before whom they prostrated themselves, and, presenting the keys, begged for mercy. All the barons, knights, and others who were there present, shed tears of pity, but the king eyed them very spitefully, for much did he hate the people of Calais; and then he commanded that their heads should be struck off. Every Englishman entreated him to be more merciful, but he would not hear them. Then Sir Walter Manny said, "Ha! gentle sire, let me beseech you to restrain your wrath! You are renowned for nobleness of soul, —do not tarnish your reputation by such an act as this. These worthy men have, of their own free will, nobly put themselves at your mercy, in order to save their fellow-citizens." Upon this the king made a grimace, and said, "Let the headsman be summoned." But the Queen of England, who was far advanced in her pregnancy, fell on her knees, and, with tears, said, "Ah! gentle sire! since I have crossed the sea with great danger, I have never asked you anything: now, I humbly pray, for the sake of the son of the Holy Mary and your love of me, that you will have mercy of these six men." The king looked at her, and was silent awhile: then he said, "Dame, I wish you had been somewhere else; but I cannot refuse you—I put them at your disposal." Philippa caused the halters to be taken from their necks, gave them proper clothes and a good dinner, and then dismissed them with a present of six nobles each.*

* Froissart.

Queen Philippa interceding for the Burgesses of Calais.—Bird.

On the following day, August 4th, 1347, the king and queen rode towards the town, which they entered to the sound of trumpets, drums, and all kinds of warlike instruments. They remained there until the queen was delivered of a daughter, who was called Margaret of Calais; and after that

they returned to England, Edward having agreed to a truce with Philip, which was gradually prolonged for six years. The French king's finances were completely exhausted; but it appears that neither he nor his rival would have suspended hostilities had it not been for the interference of the pope, who had never ceased to implore for peace.

Encouraged by his brilliant successes, the parliament had hitherto voted grants to the king with great liberality, but now the weight of taxation began to be felt, and people, as usual, wearied of the war for which they had been so eager. The wealth brought into the country by the plunder of France was probably far from being equal to that which was taken out of it, though, in numerous instances, the scenes of the Conquest were reversed, and men who went "poor wights" out of England returned rich lords; and though, what with prizes made by sea and pillages by land, the country was stocked with French goods and furniture of all kinds. The siege of Calais had cost immense sums, and Edward on his return was greatly in want of money. On the 14th of January, 1348, he asked the advice of his parliament touching the prosecution of the war with France. The commons, suspecting that this was but a prelude to the demand of a subsidy, declined giving any answer. When the parliament met again, on the 17th of March, the king told them that the French were making mighty preparation to invade England, and he demanded an aid on that account. In real truth, there was no danger whatever; but, after bitter complaints of taxation, and consequent poverty, three fifteenths were voted to be levied in three years. In the course of this year, an attempt made by the French to recover Calais, by bribing the governor, gave Edward an opportunity of displaying his personal valour and generosity; and in the following year he commanded in a naval battle against the Spaniards belonging to the ports of the Bay of Biscay, who had given him many causes of discontent by joining the French and by plundering his trading vessels. The battle was fought within sight of the hills behind Winchelsea, whence the queen's servants watched it with an anxious eye. Edward and the Prince of Wales were never in such danger: the king's ship was sinking, when the brave Earl of Derby, recently created Duke of Lancaster, came to his assistance, and in the end they gained a brilliant victory, taking fourteen of the Spanish ships, but not without great loss of knights and men. About this time Philip of France died, and was succeeded by his son, the Duke of Normandy, now John I. This new king gladly consented to prolong the truce, which, however, was but indifferently observed, the English and French frequently fighting at sea, in Brittany, and in the south of France.

As if in mockery of the petty carnage of men, who, doing their most, could only sacrifice a few thousand lives at a time, and on a given spot, the plague now invaded Europe, destroying its hundreds of thousands, and depopulating hundreds of towns and cities at one and the same time. From the heart of China, this pestilence, sweeping across the desert of Cobi and the wilds of Tartary, found its way through the Levant, Egypt, Greece, Italy, Germany, France, and at last embraced the western coast of England, whence it soon spread all over the land. It appeared in London in November, 1348, and there committed the most frightful ravages. According to some historians one-half of the whole population of England was swept away, and the dreadful malady affected the cattle in an equal degree. The poor suffered most; and, at the end of the great pestilence, there were not hands enough left to till the soil.

Edward repeatedly complained to his parliament of the bad faith of the French, and got money from them to provide against their reported preparations for a renewal of the war; but this money was not thrown away, for at nearly every grant some concession favourable to the liberty of the subject was asked and obtained from this warlike king. In part probably from a desire to reduce the Scots, who maintained their independence in spite of the captivity of their king, he several times made offers of peace to John of France, on condition of renouncing his pretensions to the French crown in exchange for the absolute sovereignty of Guienne, Calais, and the other lands which had been held as fiefs by the former kings of England. The pride of the French people, however, revolted at this notion; and after their king had committed his honour, and promised, at the congress of Guisnes, to accede to Edward's propositions, they drove him into a most unfortunate war.*

In 1355, Prince Edward opened the campaign in the south of France with an army of sixty thousand men, only a small part of whom were English. From Bordeaux he marched to the foot of the Pyrenees, burning and destroying: from the Pyrenees he turned northward, and ravaged the country as far as Toulouse; he then proceeded to the south-east, to the wealthy cities of Carcassonne and Narbonne, both which he plundered and burnt. Loaded with booty, his destructive columns got safely back to Bordeaux. A simultaneous movement made by his father in the north of France proved a failure; for the country was cleared of everything before his approach, King John, though at the head of a numerous army, would not fight, and Edward was obliged to turn back upon Calais through want of provisions; and there he was amused by a sort of challenge to a general battle, to take place some day or other, till the Scots retook their town of Berwick, and rushed across the borders in hopes of rescuing their captive king, or of retrieving the honour they had lost at Nevil's Cross. At this news Edward hurried to meet his parliament, which assembled on the 23rd of November, and promptly voted him supplies for this emergency.

It was the middle of January, 1356, before Edward could appear at Berwick; but, at his ap-

* Rymer.—Mezeray.

proach, as the Scots had only got possession of the town, and not of the castle, they withdrew. Edward was now fully resolved to put an end to the interruptions which the Scottish wars had so frequently offered to his wars in France, and to effect a final conquest of the kingdom. His army was immense, and composed in great part of tried soldiers, men elated by the many victories they had obtained on the continent. As if nations were to be bought and sold, and made over by sheets of parchment, he purchased, at Roxburgh, on the 20th of January, all Edward Baliol's rights to the Scottish throne for 5000 marks, and a yearly annuity of 2000*l.*—a vast deal more than they were worth—for Baliol had no rights acknowledged by the nation, which had thoroughly expelled and renounced him ever since the year 1341. With these parchments in his chest, the King of England marched through the Lothians, burnt Haddington and Edinburgh, and wasted the neighbouring country. But here again he was compelled to retreat, by want of provisions: the Scots, who could not meet him in the field, harassed his retiring forces, and inflicted a dreadful vengeance on the rear, and on all stragglers, for the horrible devastations they had committed. The Scots called this inroad the "burnt Candlemas;" and many an English village afterwards was made to blaze for the fires which Edward had kindled. From this time Edward Baliol drops out of notice, and he died a childless and a childish old man, at Doncaster, in the year 1363.

From causes which are not explained, but at which it is not difficult to guess, Edward neither renewed the war in Scotland, nor reinforced his son in France; for the Black Prince,* as late as July in the following year, took the field with only twelve or fourteen thousand men, few of whom were English, except a body of archers, the rest being chiefly Gascons. The prince's plan seems to have been merely to repeat the plundering, devastating expedition of the preceding year. By rapid marches, he overran the Agenois, the Limousin, and Auvergne, and penetrated into Berri, in the very heart of France, burning, destroying, and plundering. He advanced so far, that he "came to the good city of Bourges, where there was a grand skirmish at one of the gates." He found Bourges, and afterwards Issodun, too strong for him, but he took Vierson by storm, and burnt Romorantin, a town about ten leagues from Blois. The King of France advanced from Chartres, and, crossing the Loire, at Blois, made for the city of Poictiers. Edward, it appears, had so exasperated the French by his destructive proceedings, that not a man could be found to give him information of John's march; and, in utter ignorance, he turned to the south-west, and marched also for Poictiers. On the 17th of September, the English van came unexpectedly upon the rear of the great French army at a village within two short leagues of Poictiers; and Edward's scouts soon after discovered that the whole surrounding country swarmed with the enemy, and that his retreat towards Gascony was cut off. "God help us!" said the Black Prince; "we must now consider how we can best fight them." He quartered his troops for the night in a very strong position, among hedges, vineyards, and bushes. On the following morning, Sunday, the 18th of September, John drew out his host in order of battle: he had, it is said, sixty thousand horse, besides foot; while the whole force of the Black Prince, horse and foot, did not exceed ten thousand men. But Edward had chosen a most admirable position, and the issue of this battle, indeed, depended on his "military eye" and on "the sinewy arms of the English bowmen."† When the battle was about joining, a legate of the pope, the Cardinal Talleyrand, arrived on the field, and implored the French king to avoid the carnage which must inevitably ensue. John reluctantly consented to let the cardinal-legate go to the English camp, and represent to the English prince the great danger in which he stood. "Save my honour," said the Black Prince, "and the honour of my army, and I will listen to any reasonable terms." The cardinal answered, "Fair son, you say well, and I will endeavour to procure you such conditions." If this prince of the church failed, it was no fault of his; for all that Sunday he rode from one army to the other, exerting himself to the utmost to procure a truce. The prince offered to restore all the towns and castles which he had taken in this expedition, to give up all his prisoners without ransom, and to swear that he would not, for the next seven years, bear arms against the king of France. But John, too confident in his superiority of numbers, would not agree to these terms, and, in the end, he sent, as his ultimatum, that the prince and a hundred of his best knights must surrender themselves prisoners, or he would not allow them to pass. Neither the prince nor his people would ever have agreed to such a treaty. All Sunday was spent in these negotiations. The prince's little army were but badly off for provisions and forage; but, during the day, they dug some ditches, and threw up some banks round their strong position, which could only be approached by one narrow lane. They also arranged their baggage-waggons so as to form a rampart or barricade, as had been done at Crecy. On the following morning, Monday, September 19th, the trumpets sounded at earliest dawn, and the French again formed in order of battle. Again Cardinal Talleyrand spoke to the French king; but the Frenchmen told him to return whence he came, and not bring them any more treaties or pacifications, lest worse should betide him. The cardinal then rode to Prince Edward, and told him he must do his best, for that he could not move the French king. "Then God defend the right," said Edward, preparing with a cheerful counte-

* It appears to be now that the younger Edward was first called the "Black Prince," from the colour of his armour, which, says the Père d'Orleans, "gave eclat to the fairness of his complexion, and a relief to his *bonne mine*."

* Sir J. Mackintosh.

nance, like his father at Crecy, for the unequal conflict. A mass of French cavalry charged along the lane to force his position, but such a flight of arrows came from the hedges, that they were soon brought to a pause, and at last were compelled to turn and flee, leaving the lane choked up with their dead and wounded and their fallen horses. Of the two marshals of France who led this attack, Arnold d'Andreghen was wounded, and taken prisoner; and Clermont, the other, was killed, by the stout bowmen of England. After this success, Edward became the assailant. Six hundred English bowmen making a circuit, suddenly showed their green jackets and white bows on the flank and rear of John's second division. "To say the truth," quoth Froissart, "these English archers were of infinite service to their army, for they shot so thickly and so well that the French did not know which way to turn themselves." The second division scarcely waited to feel the points of their arrows: the knights becoming alarmed for their horses, which they had left in the rear, quitted their banners. Eight hundred lances were detached to escort the French princes from this scene of danger, and presently after the whole division dispersed in shameful disorder. At this pleasant sight the knights and men-at-arms under the Black Prince, who had as yet done nothing but look on, mounted their horses. As soon as they were mounted, they gave a shout of "St. George for Guienne!" and Sir John Chandos said to the prince, "Sire, ride forward, the day is yours! let us address ourselves to our adversary, the King of France; for in that part lies all the strength of the enterprise. Well I know that his valiancy will not permit him to flee, and he will remain with us, please God and St. George." Then the prince said to his standard-bearer, "Advance banners, in the name of God and St. George!" They went through the lane,—charged across the open moor where the French had formed their battalia,—and the shock was dreadful. The Constable of France stood firm with many squadrons of horse, his knights and squires shouting, "Mountjoy, St. Denis!" but man and horse went to the ground, and the duke was slain, with most of his knights. The Black Prince then charged a body of German cavalry, who were soon put to flight. But even here it seems to have been rather the arrow of the English yeomanry than the lance of the knight that gained the advantage. A strong body of reserve, under the command of the Duke of Orleans, fled without striking a blow. But Chandos was not mistaken as to the personal bravery of John; that king led up a division on foot, and fought desperately with a battle-axe; and when nearly all had forsaken him, his youngest son, Philip, a boy of sixteen, fought by his side. John received two wounds in the face, and was beaten to the ground; but he rose and still strove to defend himself, while the English and Gascons pressed upon him, crying, "Surrender, or you are a dead man!" They would have killed him, but a young knight from St. Omer, named Sir Denis, burst through the crowd and said to the king in good French, "Sire, surrender!" The king, who found himself in desperate case, said, "To whom shall I surrender? Where is my cousin, the Prince of Wales?" "He is not here," replied Sir Denis; "but surrender to me and I will conduct you to him." "But who are you?" said the king. "Denis de Morbecque," he answered, "a knight of Artois; but I serve the king of England because I cannot belong to France, having forfeited all I had there."* King John then gave him his right-hand glove, and said, "I surrender to you." There was much crowding and struggling round about the king, for every one was eager to say—"I took him." At last John was removed out of a situation of great danger (for the English had taken him by force from Sir Denis, and were quarrelling with the Gascons) by the Earl Warwick and the Lord Cobham, who saluted him with profound respect, and conducted him, with his youngest son Philip, to the Prince of Wales.†

Edward received his illustrious captive with the greatest modesty and respect, treating him with all the courtesy of the most perfect chivalry. He invited him to supper, waited on him at table as his superior in age and dignity, soothed his grief, and praised his matchless valour, which had gained the admiration of both armies. The day after this victory, Edward continued his march; he passed through Poictou and Saintonge without meeting with any resistance, for the French no where rallied to rescue their king, and, coming to Blaye, he crossed the Garonne, and presently came to the good city of Bordeaux, where he safely lodged all his prisoners. He then concluded a truce for two years with the Dauphin Charles, now appointed Lieutenant of France, and in the spring he returned to England, taking King John and Prince Philip with him. Their entrance into London (24th April, 1357) was magnificent; the King of France was mounted on a cream-coloured charger, richly caparisoned; the Prince of Wales rode by his side, as his page, on a small black palfrey; but the former could scarcely be flattered by being made the principal figure in such a procession. The King of England received John with all the honours due to a crowned head; and yet, if Edward's pretensions to the French crown were well founded, what was John but a rebel and usurper? The truth, however, seems to be that, even in his own eyes, these pretensions, as also those to the crown of Scotland, appeared, if not unreasonable in themselves, at least surrounded by too many difficulties of execution, and Edward soon showed an inclination to renounce his French scheme, and to follow up the Scottish project by other means than those of conquest. As early as the year 1351, he had opened negotiations with the Scots for the liberation of their king, but the ransom he then fixed was ex-

* Sir Denis, it appears, had been banished from France for killing a man in an affray.

† Froissart.

travagantly high; in 1354, these negotiations were renewed, and the Scots consented to pay ninety thousand marks in nine years; but their allies, the French, induced them to depart from this agreement, and, leaving their king a prisoner, they prepared to invade England. Edward's "burnt Candlemas" and the victory over their allies at Poictiers made them willing to treat again, and the English king, in spite of those successes, was not in a condition to renew a war in the north. On the 3rd of October, 1357, a treaty was concluded, the Scots agreeing to pay one hundred thousand marks in ten years, and to give hostages as security for such payments; and in the month of November, David, after a captivity of eleven years, recovered his liberty and returned to Scotland.* It was soon made to appear that his long residence in England and his intimate association with Edward had produced their effect on the weak mind of David Bruce, and that Edward, in discontinuing the struggle by arms, had not renounced his ambitious hopes. In 1362, David's wife died childless, and, in a parliament held at Scone in the following year, David coolly proposed that they should choose Lionel Duke of Cambridge, Edward's third son, to fill the throne in the event of his dying without issue. At this time the next heir in the regular line was the Stewart of Scotland, the son of David's elder sister. David hated his nephew, and this feeling may have had a great share in influencing him to make this strange proposal, and it also appears probable that Edward had bound him by some secret compact before he consented to his release. But the parliament of Scotland rejected the project with indignation. The death of Edward Baliol without children, which happened soon after this conference at Scone, made David less careful in his proceedings: he went to London and agreed, in a secret conference with Edward, that, in default of the King of Scots and his issue male, the King of England for the time being should succeed to the throne of Scotland. Edward could not be blind to the difficulties that stood in the way of this project, and the unworthy son of the great Bruce was instructed to sound the inclinations of his people, and to keep Edward and his council informed of the result. The king of England took advantage of the debt owing to him for David's ransom, to trouble and insult the Scots on many occasions, and the intrigues of his agents added to the unhappiness of that people; but David remained steady to his purpose, and, probably to escape the reproaches of his subjects, spent a good deal of his time in England. When Edward was engaged abroad, the Scots breathed more freely: in 1365, it was agreed that the truce between the two countries (for it had been repeatedly renewed, and as yet there was no treaty of peace) should be prolonged till 1371; and four years later a reduction was made on the amount of the money due for the ransom. King David died in February, 1371, and his project died with him: his nephew, the Stewart of Scotland, ascended the throne without opposition, taking the title of Robert II.; and though Edward at one moment seemed inclined to undertake another Scottish war, old age, the loss of his son the Black Prince, and other misfortunes, prevented his so doing. Of all his conquests in Scotland, none were permanent except that of the town of Berwick. The house of Stewart held the independent crown of Scotland for two hundred and thirty-two years, and then James VI. succeeded by inheritance to the throne of England, thus laying a better foundation for the happy union between the two countries than could ever have been effected by conquest. Edward's proceedings with his other kingly captive may be briefly related. Two legates of the pope followed John and the Prince of Wales to London, where they laboured to promote an amicable arrangement between England and France. Edward readily consented to waive his absurd claim to the French crown, and to liberate John, on condition of receiving an enormous ransom, and the restoration of Normandy, of the heritage of Eleanor of Aquitaine, and of all the provinces which had belonged to Henry II., to be held in separate sovereignty without any feudal dependance on the French king.* John hesitated and tried to gain time, but time only increased the wretchedness and weakness of his kingdom, which fell into a frightful state of anarchy. The king of Navarre, who descended from the royal family of France, defied the authority of Charles the Dauphin, and was in close alliance with the citizens of Paris, who were engaged, as they had been for some years, in a laudable attempt to put constitutional checks on the arbitrary power of their kings. These men acted imprudently and impetuously: after being led into bloody excesses, they were betrayed and abandoned by the King of Navarre and their other royal and noble allies; but still their original project was worthy of all praise; its unfortunate failure delayed for centuries the march of a rational liberty in France, and the English writers who denounce the attempt as altogether base and treasonable, must have been ignorant of the subject, or void of sympathy for the glorious struggle which had taken place in their own country. By breaking their faith with the people, the Dauphin and his nobles provoked the excesses of which they afterwards complained, and John himself had left behind him a mass of unsatisfied revenge by certain illegal executions resembling those of his father Philip. The streets of Paris ran with blood; and, on the 22nd of February, 1358, Stephen Marcel, the provost of the merchants, killed two of the Dauphin's counsellors, Robert de Clermont and John de Conflans, so near that prince that their blood sprinkled his robes; and at the same time the people obliged the Cardinal de la Forest, chancellor and chief minister, to resign his places and flee for his life. The nobles, not excepting those who had been in the league, grew jealous of the citizens; and then the peasants, or serfs, who had been treated like

* Rymer. Hailes.

* Rymer.

beasts of burden for many ages, even until they had almost lost the qualities of humanity, rose against their oppressors, plundered and burnt their castles, and massacred the nobles, men, women, and children, wherever they could find them. This horrible Jacquerie,* which was but faintly imitated in England during the next reign (by Wat Tyler and Jack Straw), lasted the greater part of the years 1357 and 1358, and was not suppressed without slaughter equally atrocious on the part of the government. On one occasion, the Dauphin killed more than twenty thousand peasants: the Sire de Couci made such a butchery of them in Picardy and in Artois that the country was soon cleared of them. They were cut down in heaps,—crushed to death,—slaughtered like beasts, by the knights and men-at-arms. No quarter was given; no prisoners were taken except a few hundreds to furnish an exhibition and expire in horrible tortures. This dreadful state of things conquered the pride of John, and he signed the treaty of peace as dictated by Edward; but the French nation, divided as it was, unanimously rejected it. Edward, enraged at what he termed the bad faith of the enemy,—for he thought that the signature of a king was everything, and the will of the nation nothing,—passed over into France in the autumn of 1359 with an army more numerous than any which he had hitherto employed on the continent. From his convenient landing-place at Calais, he poured his irresistible forces through Artois and Picardy, and laid siege to Rheims, with the intention, it is said, of being crowned King of France in that city, where such ceremony was usually performed. But the winter season and the strength of the place baffled his efforts: after losing seven or eight weeks, he raised the siege, and fell upon Burgundy. The duke was forced to pay fifty thousand marks, and to engage to remain neutral. While Edward was in Burgundy, a French fleet took and plundered the town of Winchelsea, committing great barbarities, which the English soon after retaliated on the French coast. From Burgundy Edward marched upon Paris, and, on the last day of March, 1360, the English encamped in front of that capital. He, however, was not strong enough to besiege Paris; the Dauphin wisely declined a challenge to come out and fight; and in the month of April, a want of provisions compelled Edward to lead his army towards Brittany.† His route was soon covered by men and horses, who died from want or dropped from the severe fatigues they had undergone in this winter campaign. Edward's heart was touched; but it was a terrific tempest of thunder, lightning, wind, hail, and rain, which he encountered near Chartres, and which reminded him of the day of judgment, that completely subdued his resolution. "Looking towards the church of Notre-Dame, at Chartres, he took a vow; and he afterwards went devoutly to that church, confessed himself, and promised (as he afterwards said) that he would grant peace; and then he went to lodge at a village near to Chartres called Bretigny."*

An armistice was arranged, and, on the 8th of May, 1360, the great peace was concluded by the treaty of Bretigny. "The King of England, Lord of Ireland and of Aquitaine," as Edward was now content to style himself, renounced his pretensions to the crown of France, and his claim to Normandy, Anjou, and Maine, with some other territories that had belonged to his ancestors: he restored all the conquests made by himself and his son, with the exception of Calais and Guisnes, and reserved to himself Guienne and Poictou, with their dependencies Saintonge, Agenois, the Limousin, Perigord, Thouars, and other districts in the south, and the county of Ponthieu in the north-west, the inheritance of his mother. The Dauphin of France† agreed that Edward and his heirs for ever should have full and free sovereignty of the countries ceded by this treaty; that three million crowns of gold should be paid in six years as John's ransom, and that sixteen of the prisoners taken at Poictiers, twenty-five French barons, and forty-two burghers chosen in the richest cities of France, should be constituted hostages for the faithful fulfilment of the articles. In July, John was sent over to Calais that he might ratify the treaty. Three months were spent in explanations and attempts at mutual deception, and then this treaty was ratified at Calais on the absurd condition that the really important clauses should remain in suspense and not be executed till the Feast of the Assumption, or that of St. Andrew, in the following year.‡ On the 24th of October, 1360, there was a solemn interchange of oaths in the church of St. Nicholas at Calais: King John with twenty-four French barons swore to be true to the treaty, and Edward swore to the same effect with twenty-seven English barons. On the following day, King John was set at liberty, and Edward returned to England.

John, with all his faults and vices (and these were so numerous that we wonder how he ever obtained the surname of "the good"), was sensitive on the point of honour, and a scrupulous observer of his word, but the impoverished condition of his country, and the decided opposition of

* So called from *Jacques Bon-homme*, or *James Good-man*, a name applied in derision to the French peasantry.

† Petrarca, who visited Paris about this time (in 1360), has left a lamentable picture of the state of the country, the consequence of the English war, and of internal anarchy. "I could not believe," says the Italian poet, "that this was the same kingdom which I had once seen so rich and flourishing. Nothing presented itself to my eyes but a fearful solitude, an extreme poverty, lands uncultivated, houses in ruins. Even the neighbourhood of Paris manifested everywhere marks of destruction and conflagration. The streets are deserted,—the roads overgrown with weeds;—the whole is a vast solitude." According to Mezeray, the French bore all these calamities with their usual light-heartedness,—"Misfortunes did not correct them,—pomps and games and tournaments continued all the while. The French danced, so to speak, over the dead bodies of their relations; they seemed to rejoice at the burning of their castles and houses, and at the death of their friends. While some were getting their throats cut in the country, others amused themselves in the towns. The sound of the violin was not interrupted by the blast of the trumpet; and the voices of those who sang and rejoiced at balls and festivals, and the piteous cries of those who perished in the flames, or by the edge of the sword, were heard at one and the same time."

* Froissart.—Knyght.—Rymer.

† John, as a prisoner, was at first no party to the compact, but when he went to Calais, on parole, he was considered as a free agent.

‡ That is, the 15th of August or the 30th of November, 1361.

his sons and great nobles, prevented his fulfilling any of the important parts of the treaty. There was no money to pay the heavy ransom, and, whenever he mentioned the renunciation of the suzerainty of his crown over the provinces ceded to Edward, he encountered a violent opposition. It is not so written in the annals of France, but it appears to us pretty evident, that the uncomfortable life he led in his own dominions had a good deal to do with what followed. The Duke of Anjou dishonourably broke his parole, and, flying from Calais, where he was living as one of the hostages, repaired to Paris. His father was much affected by this breach of honour, and he felt that part of his own conduct since his return required explanation. It is said that he also hoped to obtain some modification of the treaty of Bretigny, and to speak with Edward about a new crusade. The French courtiers laughed at his scruples, but, to their astonishment, he went over to London, where Edward received him with every token of affection. It was then said, in France, that it was his violent love for an English lady, and not his honour, that induced him to put himself again in the power of his enemy. John quietly took up his old quarters in the Savoy; but soon after his arrival, and before any business was transacted, he fell dangerously ill. He died at London in the month of April, 1364, much regretted, it is said, by Edward and the English nobles.*

The Dauphin, now Charles V., held the treaty of Bretigny in the same state of suspense, and complained bitterly of the ravages committed in his dominions by the "companies of adventure" which had been in the service of the Black Prince. The truth was, that many of these lawless bands had been in the pay of France, so that Edward was not accountable for the whole of the mischief. The "free companions," as they called themselves, were mercenaries, vagabonds, and adventurers, from nearly every country in Europe, who sold their services to the best payers, and as Edward was by far the wealthier of the two kings, he certainly had the greater number of them. When peace was concluded between the sovereigns, they associated together, chose skilful captains, took or retained castles which they had been paid to garrison, and carried on a war on their own account. They defeated a royal army led against them by John de Bourbon, who was mortally wounded in that action. They made Charles tremble in Paris, and the pope at Avignon.† Edward engaged to clear the country of them, but Charles had no wish to see another English army in his territory. Events in Spain afforded opportunities of getting rid of the marauders. Pedro IV., called the "Cruel," was then legitimate king of Castile, but his atrocities provoked an insurrection. He was, however, strong enough to defeat the insurgents, who fled for refuge to the king of Arragon. The latter sovereign was unable to resist the arms of the tyrant, who made war upon him; and then the Castilian exiles, among whom were two illegitimate half-brothers of Pedro,—Enrique, Count of Trastamara, and Tello, Count of Biscay, —fled into France. Among his many recent murders, Pedro the Cruel had poisoned his wife, a French princess. It occurred to Enrique of Trastamara, or probably it was suggested to him by the French court, that he might collect among the veteran "companies" such a force as would give him a decided superiority over his half-brother Pedro. The king of France gave money; the pope gave more;* and thirty thousand of the adventurers put themselves under the command of the celebrated warrior Dugueselin and of Don Enrique, and, marching across the Pyrenees, drove the tyrant from his throne. Don Pedro, who had not even the satisfaction of fighting a battle in his defence, fled through Portugal to Coruña, where he embarked in the first ship he found, and sailed with his daughters for Bordeaux. The Black Prince, to whom his father had ceded all his dominions in the south, was residing at Bordeaux, and there gave the tyrant a most friendly reception, considering him as an unfortunate *legitimate* sovereign, and his half-brother Don Enrique as a usurper. His father took the same view; and it was soon determined to restore the fugitive king by force of arms. Charles of France at the same time took measures to support Don Enrique; but his means were very limited. The Black Prince had been married some time to a beautiful widow, —his second cousin,—Joan, Countess of Kent,‡ who had been familiarly and endearingly called "the Fair Maid of Kent;" but the arrival of Pedro's daughters was not without its effect; and the marriage of two of them to Edward's brothers, the Duke of Lancaster and the Earl of Cambridge, which took place a few years after, gave rise to the claim of an English prince to the throne of Castile, —a ridiculous claim, like many others of those times, but which did not the less cost England some blood and treasure. For the present the fair Spaniards remained at the gay and splendid court of Bordeaux, while their father and the Black Prince and the Duke of Lancaster raised their banners of war. Among the adventurers who had taken service under Don Enrique, there were several English captains; and such was Prince Edward's popularity among the companions gene-

* Rymer.—Froissart.—Continuator of Nangis.—Villaret.

† On one occasion a troop of these banditti, commanded by Arnaldo di Cervola, forced the pope to redeem himself in Avignon by the payment of 40,000 crowns.

* At first the pope wanted Dugueselin to remain satisfied with his blessing, but the bold adventurer assured his holiness that the companies could make shift without absolution, but not without money. —See Hist. Dugueselin, a very curious old book.

† The history of this fair lady, the mother of the unfortunate Richard II., as of an elder brother (Edward) who died in infancy, is rather curious. She was daughter and heiress to the Earl of Kent, uncle to Edward III., who had been put to death at the beginning of the present reign, by Mortimer and Isabella. She was married when very young to Montacute, Earl of Salisbury, from whom she was divorced; she then espoused Sir Thomas Holland, who assumed in her right the title of Earl of Kent, and was summoned to parliament as such. By this second husband she had two sons,—Thomas Holland, who inherited the honours of his father, and John Holland, who was afterwards created Earl of Huntingdon and Duke of Exeter. They will both appear in the sequel—John as the perpetrator of a savage murder. Her second husband had scarcely been dead three months when she married the Black Prince.

rally, that as soon as they knew what was preparing, twelve thousand men, under the command of Sir John Calverly and Sir Robert Knowles, abandoned their new master, and returned with all speed to join Edward in Guienne. As Pedro's promises were most liberal, and the fame of Edward so prevalent, they soon marched with thirty thousand men. The king of Navarre, who was master of that pass of the Pyrenees, was bought over; and in the midst of winter, snow storms, and tempests, the Black Prince led his army in safety through Roncesvalles, the famed scene of the "dolorous rout" of Charlemagne and all his paladins—the deep and dangerous valley, which, at the distance of four centuries and a half, was threaded in a contrary direction by a victorious English army under the Duke of Wellington.

On the 3rd of April, 1367, Don Enrique met the invaders in the open plains between Navarete and Najara, with an army which is represented as being three times as numerous as that of Prince Henry and Don Pedro. The battle was begun by the young Duke of Lancaster, who was emulous of the military fame of his brother Edward, and who probably entertained already the hope that the plains over which he was charging would one day acknowledge him as their king. When the Black Prince charged Don Tello, the brother of Don Enrique, that prince wheeled about, and fled in disorder with his whole division, without striking a blow. After this, Edward advanced against the main division, which was commanded by King Enrique in person: and now the fight began in earnest. The Castilians had slings, with which they threw stones with such force as to break helmets and skull-caps: the English archers, "as was their wont," shot briskly with their bows, "to the great annoyance and death of the Spaniards," who, feeling the sharpness of the English arrows, soon lost all order. In the end the Black Prince gained a complete victory; Enrique fled, and Don Pedro re-ascended the throne.* Misfortune had not taught him mercy; Pedro wanted to massacre all his prisoners, but this Prince Edward prevented. Now came the time for the tyrant to show his gratitude; but he was alike unable and unwilling to keep his engagements; and after being half-starved in the country he had won for another, and contracting heavy debts and a malady from which he never recovered, Edward was obliged to lead his army with all haste back to Guienne, where he arrived in the month of July, 1367. Pedro, however, had soon cause to deplore his departure: in a little more than a year his bastard half-brother returned to Castile, and defeated him in battle. A conference was arranged, but, as soon as the two brothers met, they flew at each other with the fury of wild beasts, and in the struggle Don Enrique killed Pedro with his dagger. The bastard, who was still supported by Charles of France, again took possession of the throne.†

* Froissart.

† Froissart.—Walsing.—Mariana.—Edward's assisting the monster Don Pedro has been attributed to a defect in chivalrous morality; but it seems to us that chivalry had nothing to do with it. Pedro was, not only by treaty, but also by blood, an ally of England; but what still more powerfully urged King Edward and his son was Enrique de Trastamara's throwing himself into the French interests. Had there been no French interference, it is *probable* that Edward would never have undertaken to restore the tyrant.

The wary Charles had been recovering strength while the English were losing it; he was now almost ready for an open war, and he bound Enrique by treaty to assist him as soon as he should declare it. At the same time he conciliated the King of Navarre, and entered into a secret understanding with the disaffected lords, vassals of the Black Prince, whose lands lay near the Pyrenees. For seven years the treaty of Bretigny had been little more than a dead letter: John's ransom had never been paid;* many of the hostages, breaking their parole, had returned to France; some of the territory stipulated had never been ceded; the sovereign title to the whole had been withheld by Charles, who had watched with a keen eye the decaying vigour of King Edward, now an old man, and the shattered health of the Black Prince, who, melancholy and spirit-broken, was evidently sinking to a premature grave. The expedition for Don Pedro proved a curse in more ways than one, —it so embarrassed the prince that he was obliged to impose additional taxes upon his subjects of Guienne, in order to obtain the means of paying his army. Upon this the Count of Armagnac, and other Gascon lords, already in the interest of France, went to Paris, and appealed to the King of France, as the lord paramount. Charles had waited patiently for years, but he now thought that circumstances, and, above all, the deplorable state of the prince's health, would allow him to declare himself. He summoned Edward, as Prince of Aquitaine and his vassal (which he was not since the treaty of Bretigny), to appear in his court at Paris to answer to the complaints of the Gascon lords. The prince knew what this meant; and he replied that he would go, indeed, to Paris, but it should be at the head of sixty thousand men. His father, however, was less violent, or probably only better acquainted with the increasing difficulties of raising money in England for such purposes; and, lowering his claims, the elder Edward, setting aside some territory which had been included in the treaty of Bretigny, said he would content himself with the separate sovereignty of Guienne and Poictou, with the adjoining provinces, which he actually possessed. But Charles took this moderation as a certain proof of weakness, and, declaring the Prince of Aquitaine to be contumacious, he poured his troops into his territories. In Poictou, and still more in Guienne, his arms were assisted by the people, who never had been steady to either party: when united with the French they complained of an arbitrary and excessive taxation, and of checks put upon the freedom of trade; and when united with the English they complained of the insolence and arrogance with which they were treated by the proud islanders.

* It appears that Edward received about a fourth of the sum promised.

Edward now re-assumed his title of King of France, and offered lands and honours in that kingdom to any soldier of fortune that could conquer them with his good sword. He sent reinforcements to the Black Prince in the south; and at the same time despatched his other brave son, the Duke of Lancaster, with a gallant army from Calais. The duke marched through the north-western provinces, but the French would not risk an engagement with him; and, while he laid waste the open country, Charles gradually extended his conquests in the south, where some towns and castles were taken, and still more delivered up by the garrisons and inhabitants. The Black Prince was sick almost to death, but when he heard that the dukes of Anjou and Berri were marching against him from opposite points, he roused himself and took the field. The royal dukes had not heart to meet him,—they both retreated with precipitation; and, after garrisoning the places they had acquired, they disbanded their army. Limoges, the capital of the Limousin, had been betrayed to the dukes by the bishop and the inhabitants; and the prince was the more sensible to this treachery, as it was a place upon which he had conferred many honours and benefits, so that he had counted on the gratitude and affection of the people. He swore, by the soul of his father, that he would have the town back again,—that he would not move or attend to any other thing until he got it,—and that, then, he would make the traitors pay dearly for their perfidy. He was now so ill that he could not mount his horse, but he caused himself to be carried on a litter from post to post, and he pressed the siege with a savage fury which had not hitherto been observed in him. After a month's labour a part of the works was undermined, and a wide breach made in the walls, apparently by the explosion of gunpowder: the besiegers rushed through the breach, with orders, which were but too faithfully obeyed, to massacre all they found. Men, women, and children threw themselves on their knees before the prince, crying "Mercy! Mercy!" but he would not hear them; although, as the chronicler remarks, most of the poor and humble class could have had nothing to do with the betraying the town to the French. They were all murdered,—upwards of three thousand. "God have mercy on their souls!" says Froissart, with more feeling than usual, "for they were veritable martyrs." John de Villemur, Hugh de la Roche, and the other knights whom the dukes had thrown into Limoges, in all about eighty persons, retreated to one of the squares, placed themselves with their backs to an old wall, and with their banners before them, resolved to sell their lives dearly, as good knights ought. The English knights, as soon as they saw them thus, dismounted, and attacked them on foot. The French fought with the courage of despair against very superior numbers. The prince, who came up in his litter, looked on with admiration at their feats, and he became mild and merciful at the sight of such gallantry. Three of the French knights, looking at their swords, said, "We are yours—you have conquered—treat us according to the laws of arms." Edward relented; and, instead of being massacred, they were received as prisoners, and their lives were spared in the midst of that universal butchery. But no mercy was shown to any of the meaner sort—the whole city of Limoges was ransacked, and then burnt to the ground.* The massacre of Limoges was the last military exploit of the Black Prince. Hoping that the air of his native country might benefit his ruined constitution, he returned to England, leaving the command in the south to his brother John of Gaunt, the Duke of Lancaster.

Soon after his departure the Duke of Lancaster, having now married the Lady Constance, eldest daughter of Don Pedro, assumed in her right the arms and title of King of Castile and Leon,† an imprudent step, which complicated the difficulties of the English, for Pedro's bastard brother, Don Enrique, who was firmly seated on the throne, drew the bonds of his alliance with France still closer, and prepared to take an active part in the war. In the month of June, 1372, when the Earl of Pembroke came off Rochelle with a fleet carrying reinforcements to the duke, he found a Spanish fleet, consisting of ships far larger than his own, and furnished with engines,—probably cannons,—lying between La Rochelle and the Isle of Rhé. The inhabitants of the town and coast, though they were as yet subjects of the English, assisted the Spaniards in every possible manner. Pembroke either could not or would not avoid a battle: he fought desperately the whole day, and renewed the unequal combat on the morrow; but at last, his ship was grappled by four Spanish ships at once, and boarded on every side: he was made prisoner, and not a single sail of his fleet escaped. Many of them went down with their flags flying; and a ship carrying the military chest, with 20,000*l.* in it, sank with the rest.‡ This was a heavy blow to the king and to the whole nation, who had already begun to consider the sea as their proper element. And from this time, one ill success followed another with amazing rapidity. Charles V., who not without reason was called "the Wise," had determined not to hazard a general battle with the English; and he did not alter this resolution when he appointed Duguesclin, that consummate general, to be constable of France and leader of his armies. The war became a succession of surprises and sieges, the French general advancing slowly and methodically, but surely, leaving no strong fortress in his rear, and retreating whenever the English showed themselves in force. Charles established the same system everywhere, and Edward, in his old age, was often heard to say, that he had never known a

* The Bishop of Limoges, the real offender, escaped death through the management of the Duke of Lancaster.

‡ Froissart.

king fight so little and yet give so much trouble. Sir Robert Knowles swept the whole of France from Calais to the walls of Paris, which he insulted; and the Duke of Lancaster marched through France from one end to the other without meeting any opposition; but they found all the important fortresses and great towns well guarded, and they both lost many men from want of provisions, while every straggler from their army was cut to pieces. Benon, Surgère, Saint Jean d'Angely, and Saintes were taken by the constable. The fortune of the war seemed to lie for some time within the walls of Thouars, but after an unsuccessful attempt made to relieve it, that place fell before the arms and engines of Duguesclin; and Niort, Aunay, and other towns soon shared the same fate. The Duke of Lancaster marched and counter-marched, but could never bring the French to a battle. He concluded a truce with the Duke of Anjou, and departed for England; but as soon as he had gone Charles broke the armistice. Of all Edward's allies none proved true to him except young De Montfort, and he had enough to do to maintain himself in Brittany, where there was a strong French party, headed by de Clisson.

A.D. 1374.—The pope had never ceased his endeavours to procure a lasting peace; his legates had followed the army of the Duke of Lancaster in all his last campaign, and other envoys were constantly about the court of Charles. When the French had gained almost all they could hope to get, and when Edward's confidence in his own resources was broken by long disappointment, the arrangement for a treaty was commenced at the town of Bruges, whither the Duke of Burgundy, who negotiated for France, carried some of the real blood of our Saviour to give greater solemnity to the contract.* After months of negotiation, a truce was concluded for one year only; but this was subsequently renewed, and lasted till the death of Edward. At this time all that the English king retained of his continental dominions was Bordeaux, Bayonne, a few towns on the Dordogne, and his own important conquest of Calais, with a strip of territory round it.

On his return to England, the Black Prince embraced a course of popular opposition in parliament, and if he irritated his old father thereby, he had the good fortune to please the nation, whose idol he had ever been. But the state of his health obliged him to seek quiet and retirement, and then his unpopular brother, the Duke of Lancaster, monopolized all the authority of government, for the king had become indolent and reckless, and, like other heroes in their old age, a slave to a young and beautiful woman. In the spring of 1376 the Black Prince rallied and took part in public affairs, or at least it is supposed that he directed the measures now adopted by parliament. Peter de la Mare, as Speaker of the Commons, complained of taxation, venality, and corruption, and impeached nearly all the ministers, who were little more than agents of the Duke of Lancaster. The Lord Latimer was expelled from the king's council and thrown into prison; the Lord Nevil was deprived of all his employments; and certain farmers of the customs were arrested and put at the king's mercy. Not stopping here, the Commons raised their voice in accusation against the royal mistress. Philippa, Edward's excellent wife, had died seven years before, and the fortunes of her husband were overcast from the day of her death. Alice Perrers, a married woman, whose wit is said to have equalled her beauty, and who had been a lady of the bed-chamber to the queen, so captivated Edward that he could refuse her nothing, and was never happy except when he was in her company. Among other presents, he gave her the late queen's jewels, and these Alice was vain enough to show in public. She soon became an object of popular outcry; but the Commons stopped short with this significant ordinance,—"Whereas complaints have been laid before the king that certain women have pursued causes and actions in the king's courts by way of maintenance, and for hire and reward, which thing displeases the king, the king forbids that any woman do it for the future, and in particular Alice Perrers, under the penalty of forfeiting all that she, the said Alice, can forfeit, and of being banished out of the realm." It is said that the mistress was removed from about the king's person; but the reformers do not appear to have carried their severity so far:—at all events, she was with him at his last moments if a revolting story be true.*

But the nation lost all thoughts of Alice Perrers in the great event which now took place: the Black Prince died on Trinity Sunday, the 8th day of June, 1376. It will appear, from our unadorned narrative of facts, that this extraordinary man, though generally both merciful and generous, was not wholly exempt from the vices and barbarity of his times; but it is clear, from the universal popularity which he enjoyed at home, and from the frequent praises extorted from his bitterest enemies abroad, that he had endearing qualities, and many virtues beside those of gallantry and courage, in which he was probably never surpassed by a mortal being. So entirely had the nation been accustomed to look up to him, that though the melancholy event had long been expected, his death seemed to toll the knell of the country's glory. "The good fortune of England," says a contemporary, "as if it had been inherent in his person, flourished in his health, languished in his sickness, and expired in his death; for with him died all the hopes of Englishmen; and during his life they had feared no invasion of the enemy nor encounter in battle."† His body was carried in a stately herse, drawn by twelve horses, to Canterbury, the whole court and Parliament attending it in mourning through the city, and he was buried with great pomp on the south side of the cathedral near to the shrine of St. Thomas Becket.

Effigy of Edward the Black Prince. From the Tomb in Canterbury Cathedral.

The nation seemed well inclined to transfer all their affection to Prince Edward's only surviving legitimate son, Richard of Bordeaux, who was only in his tenth year; and a few days after the funeral, Parliament petitioned the king to introduce the young prince among them, that he might receive the honours due to him as heir to the crown. The dislike of Prince Richard's uncle, the Duke of Lancaster, who was suspected of aiming at the throne, no doubt hastened this measure. With the full consent of the old king, the Archbishop of Canterbury presented the young prince to the two houses as "the fair and perfect image of his father," and the successor to all his rights. Lancaster, however, resumed all his former power; and as soon as the Black Prince was dead, the whole efficacy of the parliamentary opposition which he had directed ceased. Sir Peter de la Mare, the speaker of the Commons, was arrested, and William of Wickham, the celebrated Bishop of Winchester, was deprived of his temporalities without trial, and dismissed the court. In the next parliament, which met on the 27th of January, 1377, the duke had a strong majority; and Sir Thomas Hungerford his steward was appointed speaker of the Commons. It appears to have been the object of Lancaster to conciliate the doating king and the royal mistress; for parliament drew up a petition, imploring that the Lord Latimer, Alice Perrers, and others, might be freed from the censures and restrictions passed upon them, and restored to their former state. Although forming a very weak minority, there still existed an opposition with spirit enough to speak and remonstrate; and while the Commons demanded, in right of the great charter, that Sir Peter de la Mare should be liberated or put upon his trial, the bishops demanded the same thing in behalf of their brother of Winchester. Wycliffe, a poor parish priest, the precursor of Huss, Luther, Calvin, and the great men who effected the Reformation, had long been preaching and writing against the abuses of the Catholic clergy, and his party, though small, already included some persons of the highest rank in England. It is generally stated that the Duke of Lancaster took up the cause of Wycliffe, who was lying under a dangerous prosecution, merely to spite the bench of bishops. On the day of trial, when the English reformer stood up to plead in the great church of St. Paul's, before Courtenay, bishop of London, he was accompanied and supported by the duke, and by his friend, the Lord Percy, marshal of England. These two great laymen were so ardent, that a violent altercation ensued in the church between them and the bishops: Lancaster, it is said, even threatened to drag the prelate out of the church by the hair of his head. The Londoners hotly resented the insult offered to their bishop. On the following morning a mob broke open the Lord Marshal's house, and killed an unlucky priest whom they mistook for Earl Percy in disguise: they then proceeded to the Savoy, the duke's palace, and gutted it. The duke and Percy, who were dining at the time in the house of a great Flemish merchant, ran to the water-side, got into a boat, and rowed themselves over to Kennington, where young Prince Richard and his mother were residing. The Bishop of London put down the riot by his admonitions; but to show their hatred, the people reversed the duke's arms as those of a traitor.* The riot was so terrible that it interrupted the debates in Parliament; and one of the last audiences of the great Edward was given at Shene (now Richmond) to the lord mayor and aldermen of the city of London, who were brought there to submit themselves to the duke, and crave pardon for their grievous offence. But neither their submission nor their protestations of innocence saved them from Lancaster's wrath; they were all "ousted," and creatures of the Duke put into their places.

When parliament resumed business, they took into consideration the circumstance that the truce with France was on the point of expiring; and to provide for a renewal of the war, which seemed probable, they granted an aid in the shape of a poll-tax—a disastrous precedent. All beneficed clergymen were taxed at a shilling a head, and all other individuals in the kingdom, male or female, above the age of fourteen—common beggars excepted—were to pay fourpence a head. In the month of February the king had completed the fiftieth year of his reign, and he published a general amnesty for all minor offences—from which, however, the Bishop of Winchester, who seems to have committed no offence at all, was excepted by name.† This was Edward's last public act: he

* Walsing.—Murim.—Stow.

† In the month of June, the bishop got back the revenues of his see, by making a rich present to the mistress.

spent the remaining four months of his life between Eltham Palace and the beautiful manor of Shene. Decay had fallen alike on body and spirit; he was incapable of doing much, and he did nothing. The ministers and courtiers crowded round the Duke of Lancaster or round Prince Richard and his mother: the old man was left alone with his mistress: and even she, it is said, after drawing his valuable ring from his finger, abandoned him in his dying moments. What followed was not unusual—indeed it seems generally to have happened at the demise of a king;—his servants left his chamber to plunder the house: but a priest was not unmindful of his duty, he went to the deserted bed-side, presented a crucifix, and stood there till the great sovereign was no more. Edward died at Shene, on the 21st of June, 1377, in the sixty-fifth year of his life, and the fifty-first of his reign.*

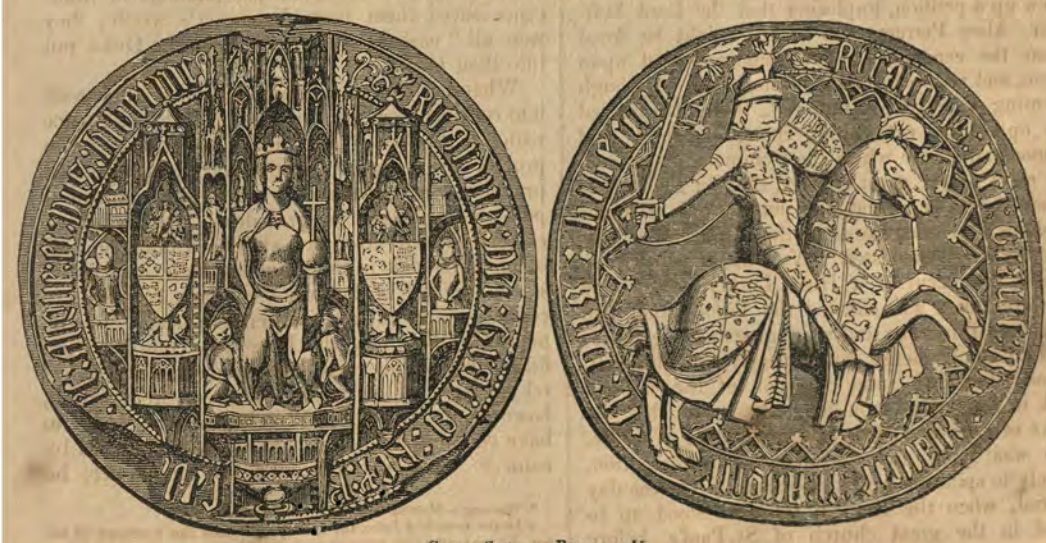
RICHARD II. (SURNAMED OF BORDEAUX.)

RICHARD II. From a Painting in the Old Jerusalem Chamber in the Palace at Westminster.



GREAT SEAL OF RICHARD II.

A.D. 1377.—The reign of this young king was counted to begin on the feast of St. Alban, the 22nd of June, the day after the death of his grandfather; on which day the great seal was delivered to the king, and by him intrusted to Sir Nicholas Bonde until the return of the Bishop of Ely, the chancellor, who was engaged in business beyond sea, but who returned on the 26th of the same month, and opened the purse containing the seal and divers letters patent in his chapel at his house in Fleet-street, London.* The funeral obsequies of the late king occupied some time, but on the 16th of July Richard was crowned in Westminster Abbey. The ceremony was unusually splendid, but the fatigue and excitement were too much for the royal boy, who, after being anointed and crowned, was so completely exhausted that they were obliged to carry him in a litter to his apartment. After some rest he was summoned to the great hall, where he created four earls and nine knights, and partook of a magnificent banquet, which was followed by a ball, minstrelsy, and other somewhat turbulent festivities of the time.† Considerable pains were taken to spoil this young king from the first; such adulation and prostrations had not been seen before in England; and if the bishops and courtiers did not preach to the boy the "divine right," they seem to have made a near approach to that doctrine; and they spoke gravely of the intuitive wisdom and of the heroism of a child not yet eleven years old. These men were indisputably answerable for much of the mischief that followed; but now the beauty of the young king's person, and the memory of his father, endeared him to his people, and a long time passed before they would think any ill of the son of their idol, the Black Prince. The Duke of Lancaster, the titular king of Castile, more popularly known under the name of "John of Gaunt,"‡ had long been suspected of the project of supplanting his nephew; but his unpopularity was notorious, and he yielded with tolerably good grace to the force of circumstances. As if on purpose to exclude the duke, no regular regency was appointed; but the morning after the coronation the prelates and barons chose, "in aid of the chancellor and treasurer," twelve permanent counsellors, among whom not one of the king's uncles was named. John of Gaunt withdrew to his castle of Kenilworth, and, it is said, in some discontent with the advisers of the young king, who had taken from him the castle of Hereford. But nothing could remove the popular belief that the duke aimed at the throne, and prophecies were afloat which probably helped to work their own fulfilment a few years later, when his son, Henry of Bolingbroke, dethroned his cousin Richard.

The French were not slow in trying to take the usual advantage of a minority. The truce expired before the death of Edward, and Charles refused to prolong it. In close union with Henry of Trastamara, who was provoked by the Duke of Lancaster continuing to assume the title of king of Castile, he got together a formidable fleet, and insulted the English coast before Richard had been a month on the throne. In August the whole of the Isle of Wight, with the exception of Carisbrook Castle, was plundered and wasted, and the town of Hastings was burnt, as that of Rye had been a short time before. The town of Winchelsea made a good resistance, and at Southampton the French and Spaniards were repulsed with great loss by the Earl of Arundel. But the combined fleets, which were occasionally joined by marauders of other nations, were strong enough to interrupt the foreign commerce of the country, and, as this had become considerable, the injury was a very serious one.* A parliament was assembled while the impression of these injuries was fresh; and in order to obtain supplies of money (the treasury being exhausted) it was stated that the realm was in greater danger than it had ever been. Supplies were voted, and, by borrowing greater sums of the merchants, government was enabled to put to sea a considerable fleet under the command of the Earl of Buckingham, one of the Duke of Lancaster's brothers. Buckingham met with little success, and his failure, however unfairly, added to the unpopularity of the Lancastrian party. In this very parliament, the first which Richard held, and before the Earl of Buckingham took the command of the fleet, it was made evident how much the Duke of Lancaster had declined in power. The majority of the house of commons consisted of the very men who had driven his party from office in 1376, and the new speaker was his old enemy Sir Peter de la Mare, whom he had arbitrarily thrown into prison soon after the death of the Black Prince. When the Archbishop of Canterbury, who had been made chancellor, requested the advice of the commons as to how the enemies of the kingdom might be opposed with the least expense and the most honour, the commons replied that they could not of themselves answer so great a question; and they asked for the aid of twelve peers, with "my Lord of Spain" at their head. The duke complained of the reports circulated against him, and said that the commons had no claim on him for advice or assistance. They had charged him, the most loyal of men, with that which amounted to treason; but let his accusers declare themselves, and he would meet them as if he were the poorest knight of England, either in single combat or in any other way. After a great ferment, the bishops and lords declared that no living mortal would credit the scandalous reports; the commons asserted their belief of his innocence; and a reconciliation took place without any immediate increase of Lan-

† Walsingham.—He gives an elaborate account of the coronation.

‡ He was so called from the town of Ghent or Gaud (then pronounced Gaunt), the place of his birth.

* Not long after several places on the coast of Sussex and Kent were plundered. A fleet even ascended the Thames, and burned the greater part of the town of Gravesend. These irritating circumstances were recent at the time of Wat Tyler's rebellion (as it is called), and they helped to hasten that terrible outbreak.

caster's power. The commons, indeed, insisted that, as so much money had been wasted, two citizens, John Philpot and William Walworth, both merchants of London, should be appointed to receive the monies now voted for the defence of the country; and this important point was yielded to them. In other pretensions, which would have given them the appointment of all the justices, ministers, and court functionaries, they were only partially defeated.* In this same session of parliament Alice Perrers was prosecuted, and being abandoned by her former ally, the Duke of Lancaster, she was sentenced to banishment and the forfeiture of all her property.

A.D. 1378.—John of Gaunt, however, obtained the command of the fleet, with nearly all the money which had been voted. He detached a squadron under the earls of Arundel and Salisbury, who, in crossing the Channel, fell in with a Spanish fleet, and suffered considerable loss. The two earls, however, succeeded in their main object, and took possession of the town and port of Cherbourg, on the coast of Normandy, which were ceded to England by the king of Navarre, who was again engaged in a war with the French king, and who was glad to purchase the assistance of England at any price. Nine large ships, which the duke had hired at Bayonne, on their way to England, met a Spanish fleet of merchantmen, and took fourteen ships laden with wine and other goods. In the month of July the duke sailed with the great fleet for the coast of Brittany, where the conquests of the French had reduced another ally of England almost to despair. The Duke of Brittany, the son of the heroic Countess of Montfort, ceded to the English the important town and harbour of Brest, which Lancaster secured with a good garrison. The duke then invested St. Malo, but the Constable Duguesclin marched with a very superior force to the relief of that place, and compelled the duke to return to his ships: the great fleet then came home. The possession thus obtained of Cherbourg and of Brest was an immense advantage: it deprived the French of two ports, whence they could best attack England, and it gave the English two other keys to France; but the places had been given up by friendly treaty, and not gained by arms; and the people, who were evidently disinclined to allow Lancaster any merit, said that he had wasted the money and done nothing. A striking circumstance which had occurred did not tend to brighten the duke's laurels. The Scots receiving their impulse from France, renewed the war, surprised the castle of Berwick, made incursions into the northern counties, and equipped a number of ships to cruize against the English. Berwick was recovered soon after by the Earl of Northumberland; but one John Mercer, who had got together certain sail of Scots, French, and Spaniards, came to Scarborough, and made prize of every ship in that port. Upon learning the injuries done, and the still greater damage apprehended from these sea-rovers, John Philpot—"that worshipful citizen of London"—lamenting the negligence of those that should have provided against such inconveniences, equipped a small fleet at his own expense, and, without waiting for any commission from the government, went in pursuit of Mercer. After a fierce battle, the doughty alderman took the Scot prisoner, captured fifteen Spanish ships, and recovered all the vessels which had been taken at Scarborough. On his return, Philpot was received in triumph by his fellow-citizens; but he was harshly handled by the council of government for the unlawfulness of acting as he had done without authority, he being but a private man. The alderman, who was backed by the people, replied very boldly: according to an old historian, "he incurred the hard censure of most of the noblemen, from whom he seemed to have snatched, by this his fortunate attempt, the native cognizance of true nobility;" but the council dared not proceed further than a reprimand.*

In the month of October, the parliament met at Gloucester, and in a very bad humour: the government wanted money—the commons a reform of abuses. The disputes ended in a compromise—the commons being allowed to inspect the accounts of the treasurers, which was granted as a matter of favour, but not of right, nor were they to consider it as a precedent: they also obtained copies of the papers, showing how the monies they had voted had been raised; but this also was granted as if proceeding from the king's good pleasure. In the end, they granted a new aid by laying additional duties on wool, wool-fells, hides, leather, and other merchandize. John de Montfort, the Duke of Brittany, had been driven to seek refuge in England, and the French king annexed his dominions to the crown of France. This premature measure reconciled all the factions in the country; and John was recalled by the unanimous voice of the Bretons. Leaving his wife, an aunt of King Richard,† in England, he embarked with one hundred knights and men-at-arms, and two hundred archers. St. Malo opened its gates at his approach; the nobles, including even many who had helped to expel him, rushed into the water chin-deep to meet him; the people hailed his return with transports of joy; and the States, meeting at Rennes, wrote respectfully to the king of France, for per-

* The commons had petitioned that eight new counsellors, the great officers of state, the chief justices, and all the household of the king, should be named by the lords in concurrence with the commons,—or, at least, it was asked that the lords should certify all such appointments to the commons in parliament. The lords, in the king's name, appointed a new council, consisting of nine persons of different ranks,—three bishops, two earls, two bannerets, and two knights bachelors, who were to continue in office for one year; to these the lords added eight others, at the request of the commons. The lords reserved to themselves the appointment of the chancellor, chamberlain, and steward of the household, during the minority. Even by this arrangement nearly the whole executive government was transferred to the two houses of parliament.—Hallam, Mid. Ages.—Lingard, Hist.—Rot. Parl.

* Trussell, Contin. of Daniel's Hist.—Southey, Nav. Hist.—Walsing.

† De Montfort married Mary, the fourth daughter of Edward III and Queen Philippa.

mission to retain their native prince.* Instead of consenting, Charles instantly prepared to send a French army into Brittany, and then the duke implored the assistance of a force from England. A considerable army was raised, and sent to his relief, under the command of the Earl of Buckingham, one of the king's uncles. Buckingham landed at Calais, which the English had rendered stronger than ever; and from Calais he marched through Artois, Picardy, Champagne, and other inland provinces of France, plundering and devastating the open country. His progress was watched by far superior forces, but, firm to the system which the cautious Charles had adopted, the French would not risk a battle, and the English, after a circuitous march, reached the frontiers of Brittany without meeting any resistance. But the Earl of Buckingham was scarcely there when the King of France died, and the Bretons, who knew that a boy was to ascend the throne, thinking that they should no longer stand in need of their assistance, began to entertain as much jealousy and hatred of the English as they had hitherto done of the French. De Montfort, though certainly inclined to maintain his close alliance with England, was unable to resist the wishes of his subjects, and as the uncles of the young King Charles VI., who formed the regency, were willing to treat and to recognise his restoration, he concluded a peace with France, and engaged wholly to abandon the interests of England. Buckingham owed his safety only to the brave men he had about him and to the supplies of provisions he received from home, and he returned in the following spring, glad to escape from the hostility of the Bretons. The English complained of the treachery and unsteadiness of the Bretons; the Bretons complained of the pride and rapacity of the English.† These proceedings, though they were considered as failures, had certainly given the French occupation in their own country, and had kept them from our shores; but they had cost large sums of money, and the nation was sorely harassed by taxation, or by the way in which the taxes were levied. In an evil hour, parliament passed a capitation tax: this was a repetition of the tax imposed in the last year of the preceding reign, but slightly modified, so as to make it fall less heavily on the poor. Every male and female of fifteen years of age was to pay three groats; but in cities and towns the aggregate amount was to be divided among the inhabitants according to their abilities, or in such a way that no individual should pay less than one groat, or more than sixty groats for himself and his wife. Where there was little or no registration, the fixing of the age was sure to lead to disputes: the collectors might easily take a boy or girl of fourteen to be fifteen, and poverty would induce many of the poor knowingly to make a mis-statement of the opposite kind. But the levying of this awkward tax might have passed over with nothing more serious than a few riots between the people and the tax-gatherers, had it not been for other circumstances involved in the mighty change which had gradually been taking place in the whole body of European society. The peasantry had been gradually emerging from slavery to freedom, and began to feel an ambition to become men, and to be treated as such by their superiors in the accidental circumstances of rank and wealth. In this transition state there were mistakes and atrocious crimes committed by both parties; but ignorance may be particularly pleaded in exculpation of the people, while that very ignorance and the brutalised state in which they had been kept were crimes and mistakes on the part of the upper classes, who had now to pay a horrible penalty. The enfranchisement of the peasantry, which was the real motive of the movement, for the rest was an after-thought, begotten in the madness of success and the frenzy inspired in unenlightened minds by the first consciousness of power, was so sacred an object that nothing could disgrace or eventually defeat it. "Their masters in some places (*we believe in all*) pulled them back too violently; they were themselves impatient of the time which such an operation requires. Accidental provocations—malignant incendiaries—frequently excited them to violence; but in general the commotions of that age will be found to be near that point in the progress of slaves towards emancipation when their hopes are roused and their wrongs not yet redressed."* In Flanders, notwithstanding that there the more respectable burghers took a share in the insurrection, many frightful excesses had been committed upon the aristocracy, and in France the recent Jacquerie had been little else than a series of horrors. The attempt of the French peasantry offered a discouraging example to their neighbours in England; but the democratic party had had a long triumph in Flanders; and at this very moment the son of Von Artaveldt, the brewer of Ghent, with Peter du Bois, was waging a successful war against their court, their nobles, and the whole aristocracy of France. From the close intercourse between the two countries, many of the English must have been perfectly acquainted with all that was passing in Flanders, and may have derived encouragement therefrom. A new revolt had also commenced in France headed by the burghers and inhabitants of the towns: it began at Rouen, where the collectors of taxes and duties on provisions were massacred, and it soon spread to Paris and other great cities. Many of our historians have attributed part of the storm which was now gathering in England to the preaching of Wycliffe's disciples, but their original authorities seem to have been prejudiced witnesses against the church reformer. The convulsion is sufficiently accounted for by the actual condition of the people of England at this period, considered in connexion with the particular point in its progress at which society had arrived. That condition, though far superior to the state of the

* Daru, Hist. de la Bretagne.
† Froissart.—Archives de Nantes, quoted by Daru.

* Sir J. Mackintosh, Hist.

French people, was sufficiently wretched and galling. A considerable portion of the peasantry were still serfs or "villains," bound to the soil, and sold or transmitted with the estates of the nobles and other landed proprietors. With the exception of some of the lower order of the secular clergy, there were but few persons disposed to consider or treat them as fellow-creatures. The discontents and sufferings of the classes immediately above these serfs,—the poor towns-people on the coast, more particularly, who had been plundered by the foreign fleets,—no doubt contributed to hurry on the sanguinary crisis; but it was the poll-tax that was the proximate cause of the mischief. At first the tax was levied with mildness; but, being farmed out to some courtiers who raised money upon it from Flemish and Lombard merchants, it was exacted by their collectors with great severity, and this severity increased as it became more and more evident that the receipts would in no case come up to the amount calculated. But the obstinacy of the people kept pace with the harshness of the collectors; many of the rural districts refused payment. The recusants were handled very sorely and uncourteously, "almost not to be spoken," in various places in Kent and Essex, "which some of the people taking in evil part, secretly took counsel together, gathered assistance, and resisted the exactors, rising against them, of whom some they slew, some they wounded, and the rest fled." Alarmed at these proceedings, government sent certain commissioners into the disturbed districts. One of these commissioners, Thomas de Bampton, sat at Brentwood in Essex: the people of Fobbing, on being summoned before him, said that they would not pay one penny more than they had done, "whereupon the said Thomas did grievously threaten them, having with him two serjeants-at-arms of the king." These threats made matters worse, and when Bampton ordered his serjeants to arrest them, the peasants drove him and his men-at-arms away to London. Upon this Sir Robert Belknape, Chief Justice of the Common Pleas, was sent into Essex to try the offenders; but the peasants called him traitor to the king and realm, forced him to flee, and chopped off the heads of the jurors and clerks of the commission. They stuck these heads upon poles and carried them through all the neighbouring townships and villages, calling upon all the poor to rise and join them. Sir Robert Hales, prior of the knights of St. John of Jerusalem, who had recently been created Lord Treasurer of England, was an especial object of the popular fury. He had a goodly and delectable manor in Essex, "wherein were ordained victuals and other necessaries for the use of a chapter-general, with great abundance of fair stuff of wines, arras, cloths, and other provisions for the knights brethren." "The commons of England" (for so the peasants called themselves, and were called by others) ate up all the provisions, drank all the wine, and then destroyed the house. Nothing was wanting but a leader, and this they soon found in the person of a "riotous priest," who took the name of Jack Straw. Messages and letters were sent in all directions; and in a few days, not only the whole agricultural population of Essex was up in arms, but their neighbours in Kent, Suffolk, and Norfolk were following the example. In Kent, an act of brutality on the part of a tax-gatherer, and an act of great imprudence (considering the prevailing excitement) on the part of a knight, fanned the flames of revolt. One of the collectors of the poll-money went to the house of one Walter the Tyler, in the town of Dartford, and demanded the tax for a young maiden, the daughter of Walter. The mother maintained that she was but a child, and not of the womanly age set down by the act of parliament: the collector said he would ascertain this fact, and he offered an intolerable insult to the girl; "and in many places they made the like trial." The maiden and her mother cried out, and the father, who was tiling a house in the town, ran to the spot and knocked out the tax-gatherer's brains. The neighbours applauded the deed, and every one prepared to support the Tyler. About the same time Sir Simon Burley* went to Gravesend with an armed force, and claimed an industrious man living in that town as his escaped bondsman. A villain, according to the law, acquired his freedom by a residence of a year and a day in a town; but in this case Burley demanded the great sum of thee hundred pounds of silver for the surrender of his claim to the man; and when this was refused, he carried him off a prisoner to Rochester Castle. The commons of Kent now rose as one man, and being joined by a strong body of the men of Essex, who crossed the Thames, they fell upon Rochester Castle, and either took it or compelled the garrison to deliver up Sir Simon's serf with other prisoners. In the town of Maidstone, the insurgents appointed Wat the Tyler their captain, and then took out of prison, and had for their chaplain or preacher, "a wicked priest called John Ball," who had been several times in confinement, and who was then under prosecution by the archbishop for irregularity of doctrine.

On the Monday after Trinity Sunday, 1381, Wat Tyler entered Canterbury, denouncing death to the archbishop, who, however, was absent: after terrifying the monks and the clergy of the cathedral, he forced the mayor, aldermen, and commons of the town to swear to be true to Richard and the lawful commons of England: then beheading three rich men of Canterbury, Wat marched away towards London, followed by five hundred of the poor towns-folk. On his march recruits came to him from all quarters of Kent and Sussex; and by the time he reached Blackheath (11th June) there were, it is said, one hundred thousand desperate men obeying the orders of Wat Tyler. While at this spot the widow of the Black Prince, the young king's mother, fell into their hands; but, in the

* This knight was tutor or guardian to the young king, and possessed great influence at court. His melancholy end will be noticed presently.

midst of their fury, they respected her, and after granting a few kisses to some dirty-faced and rough-bearded men, she was allowed, with her retinue and maids of honour, to proceed quietly to London, the leaders even engaging to protect her and her son. While this host was bivouacked about Blackheath and Greenwich, John Ball, the priest of Kent, kept them to their purpose by long orations or sermons, in which he insisted that all men were equal before God, and ought to be so before the laws,—and so far he was right; but it appears that he went on to recommend an equality of property, which is impracticable, and a destruction of all the upper classes, which was monstrous. It has been suspected, and not without probability, that Ball's real views may have been somewhat misrepresented by his enemies, but the nature of his discourses may be collected from his standing text, which was—

> When Adam delved, and Eve span,
> Who was then a gentleman?

His eloquence had such an effect on the multitude, that, forgetting his own doctrines of equality, they vowed that they would make him primate and chancellor of England. They occupied all the roads, killed all the judges and lawyers that fell into their hands, and made all the rest of the passengers swear to be true to King Richard and the commons, to accept no king whose name was "John,"* and to pay no tax except the fifteenths which had been paid by their forefathers. The young king with his mother, with his cousin Henry of Bolingbroke, with Simon, archbishop of Canterbury and chancellor, Sir Robert Hales, treasurer, and some other members of the government, threw himself into the Tower of London. The Duke of Lancaster was in Scotland negotiating a peace, and Gloucester and York, the other uncles of the king, were absent. Some of the council were of opinion that Richard should go and speak with the insurgents, but the archbishop and the treasurer strongly objected to this measure, and said that nothing but force should be used "to abate the pride of such vile rascals." On the 12th of June, however, Richard got into his barge, and descended the river as far as Rotherhithe, where he found a vast multitude drawn up along shore, with two banners of St. George and many pennons. "When they perceived the king's barge," says Froissart, "they set up shouts and cries as if all the devils from hell had come into their company." Startled and terrified, the persons with the king put about the boat, and, taking advantage of the rising tide, rowed back with all speed to the Tower. The commons, who had always professed the greatest attachment to Richard's person, now called aloud for the heads of all the ministers; and marching along the right bank of the river to Southwark, and then to Lambeth, destroyed the Marshalsea and King's Bench, and burned the furniture and all the records and books in the palace of the primate. At the same time the men of Essex advanced along the left bank of the river, and after destroying a mansion of the lord treasurer's at Highbury, threatened the north-eastern part of London. Walworth, the mayor, caused the moveable part of London-bridge to be drawn up, to prevent the men of Kent from crossing the river; but on the following day a passage was yielded to them through fear, and the insurgents entered the city, where they were presently joined by all the rabble. At first their demeanour was most moderate;—"they did no hurt, they took nothing from any man, but bought all things they wanted at a just price." But the madness of drunkenness was soon added to political fury. The rich citizens, hoping to conciliate the mob, had set open their wine-cellars for them, to enter at their pleasure, and, when the peasants had once tasted of this rare luxury, they thought they never could have enough of it, and seized it and other strong drinks by force wherever they could find them. Thus excited, they went to the Savoy, the house of the Duke of Lancaster, "to which there was none in the realm to be compared in beauty and stateliness." They broke into this palace, and set fire to it. To show that plunder was not their object, the leaders published a proclamation ordering that none, on pain of death, should secrete or convert to his own use anything that might be found there, but that plate, gold, and jewels should all be destroyed: and so particular were they on this head, that a fellow who hid a silver cup under his clothes was thrown into the Thames, cup and all. It would have been well had the prohibition extended to the duke's wines; but they drank there immoderately, and thirty-two of the rioters, engaged in the cellars of the Savoy, were too drunk to remove in time, and were buried under the smoking ruins of the house. Newgate was then demolished; and the prisoners who had been confined there and in the Fleet joined in the work of havoc. The Temple was burnt, with all the books and ancient and valuable records it contained; and about the same time a detachment set fire to the priory of St. John of Jerusalem, in Clerkenwell, which had been recently built by Sir Thomas Hales, the prior of the order, and treasurer of the kingdom. They now also proceeded to the shedding of blood: to every man they met they put their watchword—"For whom holdest thou?"—the answer was—"With King Richard and the true commons:" and whosoever knew not that watchword, off went his head. They probably felt that antipathy to foreigners common to uneducated people; but against the Flemings, who it was popularly said fattened on their miseries, they bore the most deadly rancour. The sanctuary of the church was disregarded, and thirty Flemings were dragged from the altar into the streets, and beheaded amidst shouts of triumph and savage joy; thirty-two more were seized in the Vintry,

* John was an unhappy name in English history; and John of Gaunt, Duke of Lancaster, the king's uncle, was held guilty of all the oppressions the people had recently suffered. The notion, moreover, of his having designs on the crown was as prevalent as ever.

RUINS OF THE SAVOY PALACE, STRAND. 1711.

and underwent the same fate. Many of the rich citizens were massacred in attempting to escape: those who remained did nothing for the defence of the city; and all that night London was involved in fire, murder, and debauchery.

On the morning of the 14th it was resolved to try the effect of concession, and of promises which the court had no intention of keeping, nor had it the power of so doing, had the will been ever so strong. A proclamation was issued to a multitude that crowded Tower-hill, preventing the introduction of provisions into the fortress, and clamouring for the heads of the chancellor and treasurer; and they were told that, if they would retire quietly to Mile End, the king would meet them there, and grant all their requests. The gates were opened, the drawbridge was lowered, and Richard rode forth with a few attendants without arms. The commonalty from the country followed the king: "but all did not go, nor had they the same objects in view." On the way Richard's half-brothers, the Earl of Kent and Sir John Holland, alarmed for their own safety, put spurs to their horses, and left him. On arriving at Mile End, Richard saw himself surrounded by upwards of sixty thousand peasants; but their demeanour was mild and respectful, and they presented no more than four demands, three of which were wise and moderate, and the exceptionable one, which went to fix a maximum for the price of land, was not more absurd than an act of their rulers in the preceding reign, which fixed the maximum price of agricultural labour. These four demands of the peasants were—1. The total abolition of slavery for themselves and their children for ever. 2. The reduction of the rent of good land to fourpence the acre. 3. The full liberty of buying and selling, like other men, in all fairs and markets. 4. A general pardon for all past offences. The king, with a gracious countenance, assured them that all these demands were granted; and, returning to town, he employed upwards of thirty clerks to make copies of the charter containing the four clauses. In the morning these copies were sealed and delivered, and then an immense body of the insurgents, consisting chiefly of the men of Essex and Hertfordshire, quietly withdrew from the capital: but more dangerous men remained behind. The people of Kent, who had been joined by all kinds of miscreants, had committed some atrocious deeds on the preceding day, while the king was marching to Mile End. Almost as soon as his back was turned, with a facility which excites a suspicion of treachery or disaffection on the part of the garrison,* they got into the Tower, where they cut off the heads of the Archbishop of Canterbury, the chancellor; Sir Robert Hales, the treasurer; William Apuldore, the king's confessor; Legge, one of the farmers of the tax, and three of his associates. The Princess of Wales, who was in the Tower, was completely at their mercy; but the *ci-devant* "Fair Maid of Kent" was again quit for a few unsavoury kisses. The horror of the scene, however, overpowered her; and she was carried by her ladies in a senseless state to a covered boat, in which she was rowed across the

* There were six hundred men-at-arms, and as many archers, in the Tower. The rebels or insurgents were miserably armed and equipped. "Of those commons and husbandmen," says Holinshed, "many were weaponed only with sticks.....Among a thousand of that kind of persons ye should not have seen one well armed."

river. As soon as he could the king joined his mother, who had been finally conveyed to a house called the Royal Wardrobe, in Carter-lane, Bernard's Castle Ward.

Wat Tyler and the leaders with him rejected the charter which the men of Essex had so gladly accepted. Another charter was drawn up, but it equally failed to please, and even a third, with still larger concessions, was rejected with contempt.* The next morning the king left the Wardrobe, and went to Westminster, where he heard mass and paid his devotions before a statue of "our Lady" in the abbey, which had the reputation of performing many miracles, particularly in favour of English kings. After this he mounted his horse, and with a retinue of barons and knights rode along the "causeway" towards London. On coming into West Smithfield, he met Wat Tyler, who was there with a great multitude. The mayor and some other city magistrates had joined the king, but his whole company, it is said, did not exceed sixty persons, who were all on horseback. In the front of the Abbey of St. Bartholomew, Richard drew rein, and said that he would not go thence until he had appeased the rioters. Wat Tyler, on seeing him, said to his men, "Here is the king! I will go speak with him. Move not hand or foot unless I give you a signal." Wat, who had procured arms and a horse, rode boldly up to Richard, and went so near that his horse's head touched the flank of Richard's steed. "King!" said he, "dost thou see all those men there?" "I see them," replied the king, "why dost thou ask?" "Because they are all at my will, and have sworn by their faith and loyalty to do whatsoever I should bid them." During this parley the Tyler played with his dagger, and, it is said by some, laid hold of Richard's bridle. It is probable that this uneducated man, intoxicated by his brief authority, was coarse and insolent enough; but to suppose that he intended to kill the king is absurd. Some say that Richard ordered his arrest; others that John Walworth, the lord mayor, thinking that he intended to stab the king, rode up, and plunged a short sword into his throat without any orders. All accounts agree in stating that, whether with sword, dagger, or mace, it was the mayor that struck the first blow. Wat Tyler turned his horse's head to rejoin his men, but Ralph Standish, one of the king's esquires, thrust his sword through his side, "so that he fell flat on his back to the ground, and beating with his hands to and fro for a while, gave up his unhappy ghost." When the men of Kent saw his fall they cried out, "We are betrayed! They have killed our captain and guide!" and the foremost men in that disordered array began to put their arrows on the string. The personal intrepidity of the royal boy—for Richard was only in his

* According to Knyghton, Wat Tyler insisted on the total repeal of the forest or game laws, and that all warrens, waters, parks, and woods should be common, so that the poor as well as the rich might freely fish in all waters, hunt the deer in forests and parks, and the hare in the field.

Death of Wat Tyler.—Northcote.

fifteenth year—saved his life. He rode gallantly up to the insurgents and exclaimed, "What are ye doing, my lieges? Tyler was a traitor—I am your king, and I will be your captain and guide." On hearing these words, many slipped away—others remained; but, without a leader, they knew not what to do. The king rode back to his lords, and asked what steps he should take next. "Make for the fields," said the lord mayor: "if we attempt to retreat or flee, our ruin is certain; but let us gain a little time, and we shall be assisted by our good friends in the city, who are preparing and arming with all their servants." The king and his party made for the northern road, and the mob, wavering and uncertain, followed him to the open fields about Islington. Here 1000 men-at-arms (Froissart says from 7000 to 8000) joined the king, under the command of Sir Robert Knowles. The insurgents now thinking their case hopeless, either ran away through the corn fields, or, throwing their bows on the ground, knelt and implored for mercy. "Sir Robert Knowles was in a violent rage because they were not attacked and slain in a heap, but the king would not consent, saying that he would have his full revenge on them in another way, which in truth he afterwards had."

While these events were passing in London and its neighbourhood, the servile war had spread over a great part of England—on the southern coast, as far as Winchester, on the eastern as far north as Scarborough. As the nobles shut themselves up in their strong castles, but little blood was shed. Henry Spencer, the bishop of Norwich, despised this safe course; he armed his retainers, collected his friends, and kept the field against the insurgents of Norfolk, Cambridge, and Huntingdon. He surprised several bodies of peasants, and cut them to pieces: others he took prisoners. Then, putting off the complete armour which he wore, and laying down the sword, he took up the crucifix, confessed his captives, gave them absolution, and sent them straight to the gibbet or the block.*

Soon after the death of Wat Tyler, Richard found himself at the head of 40,000 horse, and then he told the villains that all his charters meant nothing, and that they must return to their old bondage. The men of Essex, whose conduct had been the mildest and most rational, made a stand, but they were defeated with great loss. Then courts of commission were opened in different towns to condemn rather than to try the chief offenders. Jack Straw and John Ball, the strolling preachers, Lister and Westbroom, who had taken to themselves the titles of kings of the commons in Norfolk and Suffolk, with several hundred more, were executed. At first they were beheaded: afterwards they were hanged and left on the gibbet, to excite horror and terror; but their friends cut down the bodies, and carried them off; upon which the king ordered that they should be hanged in strong iron chains.†

According to Holinshed the whole number of executions amounted to 1500.

When parliament assembled, it was seen how little the upper classes of society were prepared for that recognition of the rights of the poor, to which in the present day no one could demur without incurring the suspicion of insanity. In truth, it would have belied all history and all experience if the victorious party in such a contest should have immediately followed up their success by giving in to the demands of their opponents. The king had annulled, by proclamation to the sheriffs, the charters of manumission which he had granted to the insurgents, and this revocation was warmly approved by both lords and commons, who, not satisfied with saying that such enfranchisement could not be made without their consent, added, that they would never give that consent, even to save themselves from perishing altogether in one day. There was a talk indeed about the propriety and wisdom of abolishing villainage; but the notion was scouted, and the owners of serfs showed that they neither doubted the right by which they held their fellow-creatures in a state of slavery, nor would hesitate to increase the severity of the laws affecting them. They passed a law by which "riots, and rumours and other such things," were turned into high treason,* a law most vaguely expressed, and exceedingly likely to involve those who made it in its fangs. But this parliament evidently acted under the impulses of panic and of revenge for recent injuries. The commons presented petitions calling for redress of abuses in the administration: they attributed the late insurrection to the extortions of purveyors, to the venality and rapacity of the judges and officers of the courts of law, to the horrible doings of a set of banditti called Maintainers, and to the heavy weight of recent taxation; but they said not a word about that desire for liberty which was in fact the main torrent in that inundation, the others being but as tributary streams swelling its waters. When the king demanded a supply, the commons refused, averring that a new tax would provoke a new insurrection. When the commons, in their turn, asked for a general pardon, *not* for the insurgents, but for themselves and others, for *illegal* acts committed by them *in putting down the rebels*, the king gave them to understand that the commons must make their grants before he dispensed his favours. This discussion was curious: when the king pressed again for money, they told him that they must have time for consideration; and then the king told the commons that he too must have time to deliberate on their petition of pardon. The commons gave way first, and voted that the tax upon wool, woolfells, and leather should be continued for five years. The obnoxious poll-tax was not mentioned. The king then gave the general pardon requested, *for all loyal subjects;* and this grace was a few weeks later extended to the peasantry.†

A.D. 1382. The king being now in his sixteenth

* Stat. Rich. ii. c. 7. † Rot. Parl.

year, was married to Anne of Bohemia, daughter of the late Emperor Charles IV., an accomplished and excellent princess, who deserved a better and a wiser husband. A few days after the marriage, on January the 24th, parliament re-assembled, and Lancaster, yearning after his kingdom of Castile, proposed carrying an army into Spain. He only wanted sixty thousand pounds, but after a warm debate, the duke was defeated.

At this time there were two popes, Urban VI., an Italian, and Clement VII., a Frenchman. When there was no schism, the pope was generally a peace-maker; but on occasions like the present, each of the rival pontiffs tried to arm Europe in his cause. France, Scotland, Spain, Sicily, and Cyprus were for Clement; England, Flanders, and the rest of Europe for Urban, who, on good grounds, considered France his greatest enemy. The Italian pope, after looking about for a brave and sure champion, fixed his eyes on the warlike Bishop of Norwich, who had so lately distinguished himself in the servile war of England. At the same time, the Flemings, who were devoted adherents of Urban, were sorely pressed by the French; and they renewed their applications to England for assistance.* After preaching a sort of crusade, the Bishop of Norwich asked in the pope's name a tenth on church property, obtained the produce of a fifteenth on lay property, and raised two thousand five hundred of the best lancers in the land, and about an equal number of archers, and so passed over the Channel to make war, "for he was young and adventurous, and loved the profession of arms above all things."† The war in which this military churchman engaged, presented two aspects: under one, it was a sacred crusade for the pope, but under the other, it was a conflict waged in union with, and for the rights and independence of the burghers and commons of Flanders against the aristocracy. He was so fond of war, that he probably cared little how he indulged in it. After the murder of James Von Artaveldt, the cause of democracy declined; and thirty-six years after that event, the Flemings were almost reduced to extremities. In this state they fixed all their hopes on Von Artaveldt's son, who had been named Philip, after his godmother Philippa, the wife of Edward III. Philip Von Artaveldt, warned by his father's fate, had passed his life in a quiet and happy retirement; and in 1381 he was dragged, with his eyes open to the worst consequences, to head the council and lead the armies of the dispirited people. His character and his fate form one of the most interesting episodes in the history of modern Europe. For about fifteen months, which included the whole of his public life, his career was as brilliant as a romance: he forced the enemy to raise the siege of Ghent, the centre and soul of the confederacy; with the weavers and other artisans of Ghent he defeated the French, the count, and the whole chivalry of Flanders; he took Bruges, burnt Elchin, a town in France, and laid siege to the strong fortress of Oudenarde; but in the month of November, 1382, he was defeated in the sanguinary battle of Rosebecque, and (in this more fortunate than his father) was killed by the enemy. After that dreadful defeat, the cause of the commons again declined: many towns submitted, and Ghent was besieged or threatened, but without effect.*

Affairs were in this state at the arrival of the English force, whose main object it was to assist the free burghers of Ghent. The Bishop of Norwich led his little army to Gravelines, which he stormed and took: he next defeated an army of the Count of Flanders, took the town of Dunkirk, and occupied the whole coast as far as Sluys: he then marched with an impetuosity which astonished more regular warriors to lay siege to Ypres, where he was joined by twenty thousand of the men of Ghent. Meanwhile, the count implored the protection of the young King of France, who, convoking the ban and the arriere ban, sent a splendid army, in which were counted twenty-six thousand lances, across the frontier. The bishop made one furious assault; but, on the approach of the French, he ran back to the coast more rapidly than he had advanced from it. A part of his army got back with considerable booty to Calais; the bishop, with the rest, threw himself into Gravelines—where the French were glad to be rid of him, by permitting him to destroy the fortifications of the place, and then embark with bag and baggage. The French chroniclers say that he made but a bad use of the pope's money, and that the issue of the expedition was owing to his own folly and precipitation; but in England his failure was attributed to the jealousy of the Duke of Lancaster. The bishop, on his return, was prosecuted by parliament, and was for some time deprived of his temporalities. At the same time, four of his principal officers were condemned for having sold stores and provisions to the enemy.

A.D. 1384. In her jealousy of the powers of his uncles, the Princess of Wales had surrounded her son with ministers and officers who were chiefly men of obscure birth and fortune. Richard, who lived almost entirely in the society of these individuals, contracted an exclusive affection for them, and, as soon as he was able, he began to heap wealth and honours upon them. Hence there arose a perpetual jealousy between the favourites and the king's uncles, and a struggle in which both parties seem to have resorted to the most nefarious proceedings. A dark mystery will for ever hang over most of these transactions. Once the Duke of Lancaster was obliged to hide himself in Scotland, and he would not return until Richard publicly proclaimed his conviction of his innocence, and allowed him to travel always with a strong body-guard. In the month of April of this year, just after the duke had done good service against the Scots, the

* In the preceding year they had shown themselves bad negociators, for, at the moment of soliciting a favour, they demanded payment of two hundred thousand florins, a debt of Edward III., which they asserted had been due to them forty years.

† Froissart.

* Froiss.—Barante, Hist. des Ducs de Bourgogne.

parliament met at Salisbury. One day during the session, John Latimer, a Carmelite friar, a native of Ireland, gave Richard a parchment, containing the particulars of a conspiracy to place the crown on the head of his uncle. The king communicated the contents to Lancaster, who swore that they were all utterly false,—offered to fight in proof of his innocence, and insisted that his accuser should be placed in safe custody to be examined by the council. The monk was accordingly committed to the care of John Holland, the king's half-brother, who is said to have strangled him with his own hands during the night. The king's friends asserted that the friar had killed himself. The Earl of Buckingham swore that he would kill any man that dared to accuse his brother Lancaster of treason. The Lord Zouch, whom the friar had named as the author of the memorial, declared upon his oath that he knew nothing about it, and the matter dropped. Some suspicions, however, lingered in the mind of Richard, and an attempt was made some time after to arrest Lancaster. But the duke threw himself into his strong castle of Pontefract, and stayed there till the king's mother brought about a reconciliation, and obtained a pardon for her own son, Sir John Holland.

Truces with Scotland which had been negotiated by the Duke of Lancaster, were prolonged till the month of May, 1385, when the French, in order to bring about the renewal of hostilities, sent John de Vienne, lord admiral of France, with one thousand men-at-arms, and forty thousand francs in gold, and other supplies to induce the Scots to make an inroad into England. The French knights soon complained bitterly of the pride of the Scots, the poverty of the land, and the lack of amusements, such as banquets, balls, and tournaments. The common soldiers were not sufficiently respectful to the women; and, on the whole, these allies agreed very badly. At last, however, the French and Scots broke into Northumberland; but Richard, who now took the field for the first time, came up from York, and forced them to retire. With eighty thousand men, Richard crossed the borders, burnt Edinburgh, Perth, and other towns; but then he was obliged to retreat—for information was brought that John de Vienne had crossed the Solway Frith, and was besieging Carlisle. The French and Scots marched off by the west, and returned towards Edinburgh, boasting that they had done as much mischief in England as the English had done in Scotland. Richard then disbanded his army, without ever having had an opportunity of measuring swords with the enemy. During this campaign, the royal quarters had been disgraced by a vile murder, and by frequent quarrels between the king's uncles and his favourites. At York, during the advance, Sir John Holland assassinated one of the favourites, and the grief, shame, and anxiety, caused by this event broke the heart of the Princess of Wales, who died a few days after. On the retreat from Scotland, Sir Michael de la Pole, another of the favourites, who was then chancellor, excited some fresh jealousy in the mind of Richard, who thereupon had a violent and indecent altercation with his uncle Lancaster. After the campaign the king made great promotions to quiet the jealousy of his relations;—honours fell upon them, but these were nothing compared to the honours and grants conferred on the king's minions. Henry of Bolingbroke, Lancaster's son, was made Earl of Derby; the king's uncles, the Earls of Cambridge and Buckingham, were created Dukes of York and Gloucester; Michael de la Pole was created Earl of Suffolk; and Robert de Vere, a still more influential favourite, Marquis of Dublin, receiving, at the same time, the extraordinary grant of the whole revenue of Ireland, out of which he was to pay a yearly rent of five thousand marks to the king. He was soon after made Duke of Ireland. As Richard had no children, he declared at the same time that his lawful successor would be Roger, Earl of March, the grandson of Lionel, Duke of Clarence.*

Soon after these arrangements, the Duke of Lancaster was enabled to depart to press his claim to the throne of Castile by force of arms. A disputed succession in Portugal, and a war between that country and Spain, seemed to open a road for him. The king was evidently glad to have him out of England. Parliament voted supplies, one half of which were given to the duke; and in the month of July, he set sail for the Peninsula, with an army of ten thousand men. Lancaster landed at Coruña, opened a road through Gallicia into Portugal, and formed a junction with the king of that country, who married Philippa, the duke's eldest daughter by his first wife. At first, the duke was everywhere victorious; he defeated the Spaniards in a pitched-battle, and took many towns; but, in a second campaign, his army was almost annihilated by disease and famine; and his own declining health forced him to retire to Guienne. In the end, however, he concluded an advantageous treaty. His daughter Catherine, the granddaughter of Peter the Cruel, was married to Henry, Prince of Asturias, the heir of the reigning King of Castile. Two hundred thousand crowns were paid to the duke for the expenses he had incurred; and the King of Castile agreed to pay forty thousand florins by way of annuity to the Duke and Duchess of Lancaster. The issue of John of Gaunt reigned in Spain for many generations.

Encouraged by the absence of the duke with so many choice warriors, the French determined to invade England. Never had that nation made such mighty preparations. Upwards of a hundred thousand men, including nearly all the chivalry of France, were encamped in Flanders, and an immense fleet lay in the port of Sluys ready to carry them over. This fleet was composed of ships collected in all maritime countries from Cadiz to Dantzic. Charles VI., who determined to take a part in the expedi-

* Froissart.—Walsing.—Knyght.—Rot. Parl.—Rymer.

tion, went to Sluys, and even embarked; but this young king was entirely in the power of his intriguing and turbulent uncles, who seem to have determined (not unwisely, perhaps) that the expedition should not take place. There were other impediments and causes of delay, and in the end the army was disbanded. The fleet was dispersed by a tempest, and many of the ships were taken by the English. The expenses incurred by France in these preparations were enormous, and ground the people who had to pay them to the very dust. That country indeed was so exhausted by the outlay that there was no fear of its making any such great attempt for many years to come.

Richard gained no increase of comfort by the absence of Lancaster, whose younger brother, the Duke of Gloucester, was far harsher than John of Gaunt had ever been. At the meeting of parliament, in the month of October, the Duke of Gloucester headed an opposition which determined to drive Richard's favourites de la Pole and de Vere from office. . .They began with de la Pole, who, after a weak attempt to save him, was dismissed.* After his expulsion, the commons impeached him of high crimes and misdemeanors, and he was sentenced to pay a heavy fine and to be imprisoned. Gloucester and his party then said that no good government could be expected until a permanent council was chosen by parliament to reform the state of the nation—a council like those which had been appointed in the reigns of John, Henry III., and Edward II. Richard said he would never consent to any such measure, and threatened to dissolve the parliament. The commons then coolly produced the statute by which Edward II. had been deposed; and while he was agitated by this significant hint, one of the lords reminded him that his life would be in danger if he persisted in his refusal. Upon this Richard yielded, and the government was substantially vested for a year in the hands of eleven commissioners, bishops and peers, to whom were added the three great officers of the crown. At the head of all was placed his uncle Gloucester, whom from that moment he hated with an intensity which seems almost incompatible with his light, frivolous character.†

The king was now twenty years of age, but he was reduced to as mere a cipher as when he was but eleven. In the month of August in the following year, 1387, acting under the advice of De la Pole and Tresilian, the chief justice, he assembled a council at Nottingham, and submitted to some of the judges who attended it this question,—whether the commission of government appointed by parliament, and approved of under his own seal, were legal or illegal? These judges certified under their hands and seals that the commission was illegal, and that all those who introduced the measure were liable to capital punishment; that all who supported it were by that act guilty of high treason; and in short, that both lords and commons were traitors. On the 11th of November following, the king, who had returned to London, and who seems thus early to have formed the absurd idea of governing the country by a junta or council of his own choosing, was alarmed by the intelligence that his uncle Gloucester and the Earls of Arundel and Nottingham, the constable, admiral, and marshal of England, were approaching the capital with 40,000 men. The decision of the judges had been kept secret, but one of the number betrayed it to a friend of Gloucester. As soon as Richard's cousin the Earl of Derby, Lancaster's son and heir, learned the approach of his uncle of Gloucester, he quitted the court with the Earl of Warwick, went to Waltham Cross, and there joined him. The members of the Council of Eleven were there already. On Sunday the 17th of November the duke entered London with an irresistible force and "appealed" of treason the Archbishop of York, de Vere, now Duke of Ireland, de la Pole, Earl of Suffolk, Robert Tresilian, chief justice, and Sir Nicholas Brember, Knight, and lord mayor of London. The favourites instantly took to flight. De la Pole, the condemned chancellor, who had returned to court, and seemed dearer than ever to his master, succeeded in reaching France, where he died soon after; de Vere, the Duke of Ireland, got to the borders of Wales, where he received royal letters authorizing him to raise an army, and begin a civil war. He collected a few thousand men, but was met on the banks of the Isis, near Radcot, and thoroughly defeated by Gloucester and Henry of Bolingbroke. He then fled to Ireland and afterwards to Holland, where he died about four years after. The Archbishop of York was seized in the north, but was allowed to escape by the people: he also finished his days not long after, in the humble condition of a parish priest in Flanders. Tresilian and Brember remained concealed in or about London. After the defeat of his army under de Vere, Richard, who was only courageous by fits and starts, lost all heart, and retired into the Tower. His uncle Gloucester, who believed on pretty good grounds that the king and the favourites had intended to arrest him secretly and put him to death, showed little mercy. He drove every friend of Richard, even down to his confessor, away from the court, and threw some ten or twelve of them into prison. The "wonderful parliament," which met in the beginning of the year 1388, carried out the impeachments he had made, and gave him their full support. The five obnoxious councillors were found guilty of high treason, their property was confiscated, and Tresilian and Brember the mayor, who were discovered, were executed, to the joy of the people.

With the cause of Brember's great unpopularity we are not acquainted; but the chief justice had made himself odious by his "bloody circuit" against the peasants who had been engaged in

* According to Knyghton, when Richard first received the message of Parliament, requesting that De la Pole Earl of Suffolk and chancellor might be removed, he replied with boyish petulance, that he would not for them remove the meanest scullion from his kitchen.

† Rot. Parl.

the insurrection. The judges who had signed and sealed the answer at Nottingham were next impeached. Their only plea was, that they had acted under terror of the king and the favourites: they were capitally convicted; but the bishops interceded in their behalf, and, instead of being sent to the scaffold, they were sent into exile for life to Ireland. Blake, however, who had drawn up the questions at Nottingham, was executed, and so was Usk, who had been secretly appointed under-sheriff to seize the person of the Duke of Gloucester. The king's confessor, who swore that no threats had been used with the judges at Nottingham, was also condemned to exile in Ireland. It was hoped that the shedding of blood would stop here, but such was not the intention of Gloucester. After the Easter recess he impeached four knights, and these unfortunate men were all convicted and executed. Of these, the fate of Sir Simon Burley excited most sympathy: he had been the much-esteemed friend of Edward III. and the Black Prince; he had acted as guardian to Richard; had negotiated his marriage; and was tenderly loved both by the king and the queen. Richard was not so base as to abandon this worthy knight without making an effort; but his uncle Gloucester told him that his keeping the crown would depend on the immediate execution of this individual. The young queen—the "good Queen Anne," as she was called by the people—in vain begged on her knees that he might be spared: in vain Henry of Bolingbroke, who had been Gloucester's right hand in this enterprise, added his most earnest solicitations. The iron-hearted Gloucester had a violent quarrel on this occasion with his nephew Henry, who never forgave him.*

For about twelve months Richard left the whole power of government in the hands of his uncle and of the council or commission. It was during this interval that the battle of Otterbourne, famous in song under the name of Chevy Chase, was fought (15th August, 1388) between the Scottish Earl Douglas, and the Lord Harry Percy, the renowned Hotspur. Douglas was slain, but the English were in the end driven from the field, after both Hotspur and his brother, Lord Ralph Percy, had been taken prisoners. At length Richard gave a proof of that decisive promptitude which visited his mind at uncertain intervals. In a great council held in the month of May, 1389, he suddenly addressed his uncle—"How old do you think I am?" "Your highness," replied Gloucester, "is in your twenty-second year." "Then," added the king, "I am surely of age to manage

* Rot. Parl.—Knyght.

FIELD OF THE BATTLE OF CHEVY CHASE.—Bird.

my own affairs. I have been longer under the control of guardians than any ward in my dominions. I thank ye, my lords, for your past services, but I want them no longer." Before they could recover from their astonishment he demanded the great seals from the archbishop, and the keys of the Exchequer from the Bishop of Hereford; and within a few days he drove Gloucester from the council, and dismissed most of the officers he had appointed without meeting with any opposition. He informed the people, by proclamation, that he had now taken the reins of government into his own hands; but, in fact, this was far from being the case. Richard had not the needful application to business, and the chief administration of affairs was left to another uncle, the Duke of York, and to his cool-headed and calculating cousin, Henry of Bolingbroke, Earl of Derby.*

For some years this government was undisturbed and the nation tranquil; but Richard was evidently simulating or dissimulating the whole time. Lancaster returned from the continent after an absence of more than three years, and, from circumstances with which we are not sufficiently acquainted, he became all at once exceedingly moderate and popular. He conducted his brother Gloucester and the nobles of his party to court, where an affecting reconciliation took place, the king playing his part so ably that nobody seems to have doubted the sincerity with which he embraced his "dear uncle" Gloucester. The duke was readmitted into the council; Lancaster was created Duke of Aquitaine for life,† and intrusted with the negotiation of a peace with France, the parliament voting a liberal sum to defray his expenses at a sort of congress held at Amiens. Hostilities had been suspended by a succession of armistices, and in 1394 a truce was concluded for four years. This truce also embraced Scotland, the king of which country, Robert II., had died the 19th of April, 1390, leaving the crown to his eldest son John, Earl of Carrick, who took the name of Robert III.‡

A.D. 1394.—After the death of the good Queen Anne, which happened at Shene, on Whit Sunday, the king collected a considerable army, and crossed over to Ireland, where the native chiefs had been for some time making head against their English oppressors, and where some of the English themselves had revolted. This campaign was a bloodless one: the Irish chiefs submitted; Richard entertained them with great magnificence, knighted some of them, and, after spending a winter in the country, and redressing some abuses, he returned home, and was well received by his subjects. Although the council was divided on the matter, Richard at last decided on contracting a matrimonial alliance with France; and in the month of October, 1396, he passed over to the continent, and married Isabella, the daughter of Charles VI. —a princess, a miracle of beauty and of wit, according to Froissart, but who was little more than seven years old. The blessing of a peace, or at least of a truce, for twenty-five years, was the consequence of this union, and yet the marriage was decidedly unpopular in England. The Duke of Gloucester had always opposed it; and the people, whose favour he had never forfeited, now considered him in the light of a champion for the national honour. "Our Edwards," said the duke, "struck terror to the heart of Paris, but under Richard we court their alliance, and tremble at the French even in London." It is said that the duke's declamations were the more vehement, because he suspected what would follow to himself; and it is certain that Richard asked assistance from Charles VI., to be given in case of need, and that this alliance with France gave him courage to undertake a scheme which his deep revenge had nourished for many years. The year after his marriage, in the month of July, Richard struck his blow with consummate treachery: after entertaining him at dinner, in his usual bland manner, he arrested the Earl of Warwick. Two days after he craftily induced the primate to bring his brother, the Earl of Arundel, to a friendly conference; and then Arundel was arrested. He had thus got two of his victims: to entrap the third, and the greatest of all, he went with a gay company to Pleshy Castle, in Essex, where his uncle Gloucester was residing with his family. The duke, suspecting no mischief, came out, with all his household, to meet the royal guest, and, while Richard entertained the duchess with friendly discourse, Gloucester was seized by the earl marshal, carried with breathless speed to the river, put on board ship, and conveyed to the castle of Calais. A report ran that the duke was murdered: to quiet the agitation, Richard issued a proclamation stating that the recent arrests had been made by the assent of the chief officers of the crown, and with the knowledge and approbation of his uncles of Lancaster and York, and his cousin Henry, Earl of Derby.*

A few days after Richard went to Nottingham Castle, and there, taking his uncles Lancaster and York, and his cousin Henry, by surprise, he made them, with other noblemen, put their seals to a parchment, by which Gloucester, Arundel, and Warwick were "appealed" of treason in the same manner that they (with Henry of Bolingbroke among them) had appealed the king's favourites ten years before. A parliament was then summoned to try the three traitors, for so they were now called by men, like Henry of Bolingbroke, who had been partakers in all their acts, and by others who had supported them in their boldest measures. These men can only escape the suspicion of being a set of fickle and unprincipled scoundrels by our admitting that many circumstances remain untold; and

* Walsing.—Knyght.—Rot. Parl.

† This grant was subsequently recalled.

‡ The same popular prejudice against the name of John, at least for a king, which we have seen displayed by the English followers of Wat Tyler, was also entertained at this time by the Scots. It is commonly traced to the unfortunate reigns of John of England, John of France, and John Baliol.

* Rot. Parl.—Rymer.

indeed the contemporary accounts of the transaction are unusually vague and unsatisfactory. One great key to the secret might be found in the terror inspired by Richard's masterly craft and his display of military force. On the 17th of September, he went to parliament with six hundred men-at-arms wearing his livery, and a body-guard of choice archers. The Commons, who had received their lesson, began by impeaching Thomas Arundel, Archbishop of Canterbury, of high treason. Fearing the primate's eloquence, Richard artfully prevented his attending in the Lords, and he was, at the king's will, banished for life. On the following day his brother, the Earl of Arundel, who offered to prove his innocence by wager of battle, who challenged a trial by jury, and who at last pleaded a general and particular pardon, was condemned and immediately beheaded on Tower Hill. On the 21st of September, a writ was issued to the Earl Marshal, governor of Calais, commanding him to bring the body of his prisoner, the Duke of Gloucester, before the king in parliament, that he might answer to the lords who had appealed him of treason. On the 24th (and three days were probably then scarcely enough for a king's messenger to travel to Calais and back) an answer was returned to the Lords, that the Earl Marshal could not produce the duke, for that he, being in custody in the king's prison in Calais, had died there. This parliament, which was assembled to procure his death, cared little how he had died, and made no inquiries. The Lords appellants demanded judgment; the Commons seconded their demand, and the dead duke was declared to be a traitor, and all his property was confiscated to the king. On the next day a document, purporting to be Gloucester's confession taken by Sir William Rickhill, one of the justices who had been sent over to Calais in the preceding month for that sole purpose, as was pretended, was produced and read in parliament.* On the 28th, Gloucester's friend, the Earl of Warwick was brought before the bar of the House: the earl pleaded guilty, but his sentence was commuted into perpetual imprisonment in the Isle of Man. In passing sentence on these nobles, there were many who condemned themselves. The Duke of York, the Bishop of Winchester, and Sir Richard Scroop had been members of the commission of eleven; the Earl of Derby and the Earl of Nottingham had been two out of the five who entered London in arms and appealed the favourites of treason. After their recent experience of the king, nothing but fatuity could make them repose confidence in any of his assurances, or in the steadiness of parliament; but for want of any better security, they extracted from Richard a declaration of their own innocence in regard to all past transactions. This declaration was made in full parliament. After this the king, who was very fond of high-sounding titles, and a great conferrer of them, made several promotions of his nobles. Among these, his cousin Henry Bolingbroke was created Duke of Hereford; Mowbray, the Earl of Nottingham, Duke of Norfolk; and the king's half-brother, John Holland, who had committed the murder at York, was made Duke of Exeter.*

Gloucester's "wonderful" parliament of 1386 had taken an oath that nothing there passed into law should be changed or abrogated; and now the very same men, with a few exceptions, took the same oath to the decisions of the present parliament, which undid all that was then done. The answers of the judges to the questions put at Nottingham, which had then been punished as acts of high treason, were now pronounced to be just and legal. It was declared high treason to attempt to repeal or overturn any judgment now passed; and the issue male of all the persons who had been condemned were declared for ever incapable of sitting in parliament or holding office in council. "These violent ordinances, as if the precedent they were then overturning had not shielded itself with the same sanction, were sworn to by parliament upon the cross of Canterbury, and confirmed by a national oath, with the penalty of excommunication denounced against its infringers. Of those recorded to have bound themselves by the adjuration to Richard, far the greater part had touched the same relics for Gloucester and Arundel ten years before, and two years afterwards swore allegiance to Henry of Lancaster."† Before this obsequious parliament separated, it set the dangerous precedent of granting the king a subsidy, *for life*, upon wool; and a commission was granted for twelve peers and six commoners, "all persons well affected to the king," to sit after the dissolution, and examine and determine certain matters as to them should seem best. These eighteen commissioners usurped the entire rights of the legislature: they imposed a perpetual oath on prelates and lords to be taken before obtaining possession of their estates, that they would maintain the statutes and ordinances made by this parliament, or afterwards by the lords and knights, having power committed to them by the same; and they declared it to be high treason to disobey any of their ordinances. Thus, with the vote of a revenue for life, and with the power of parliament notoriously usurped by a junto of his creatures, Richard was not likely soon to meet his people again, and he became as absolute as he could wish. Some people, admitting the follies and extravagances of this king, profess to be blind to any serious state crime in him that can justify the contempt and hatred in which he was held by his subjects; but we think that the few preceding lines are sufficient to clear their vision in this respect.

Richard was elated with his success, and he

* Rickhill saw the Duke alive, at Calais on the 7th of September. The real object of his mission, and the real circumstances of Gloucester's death, are involved in a mystery never likely to be cleared up. But it seems that the universal impression, not only in England but also on the continent, was correct, and that he was secretly murdered, and in a manner not to disfigure the corpse, which was afterwards delivered to his family.

* Rot. Parl.—Froiss.—Knyght.
† Hallam. Midd. Ages, iii. 115.

gloried in his dissimulation, which he fondly hoped had overthrown all opposition. He began to reign much more fiercely than before. "In those days," says Froissart, "there was none so great in England that durst speak against anything that the king did. He had a council suitable to his fancies, who exhorted him to do what he *list:* he kept in his wages ten thousand archers, who watched over him day and night." This high and absolute bearing was, however, of short duration. The people, a share of whose attachment or respect had been preserved by Gloucester even in his worst moments, because he always showed a concern for the public interest, were soon disgusted with Richard, who appeared only to crave power and money that he might lavish them on his minions and indulge himself in an indolent and luxurious life. His grandfather, Edward III., had maintained a magnificent court; but his was a homely affair compared to that kept by Richard. Never had the nation seen—nor did it see for long after—such gorgeousness in furniture and apparel, such pageants, such feasting, and such Apician extravagance and delicacy in repasts. Putting aside the tailors, the drapers, and the hosts of servants, all clad in costly liveries, Richard's cooks and adjutants of the kitchen alone formed a little army. In some respects his taste and magnificence might have benefited the nation, but they were carried to excess, and the spectators of his riotous living were but too often a beggared and a starving people.

A general murmur was soon raised against the late parliament: people said that it had not been freely chosen; that it had with bad faith and barbarity revoked former pardons and connived at illegal exactions; that it had been a party to the shameful impunity of the murderers of Gloucester; and that it had assisted the king in destroying the liberties of the kingdom. Matters were approaching this state when the mutual distrusts of two great noblemen, and the fears they both entertained of the cunning and vindictive spirit of the king, hurried on the catastrophe. Henry of Bolingbroke, now Duke of Hereford, and Mowbray, now Duke of Norfolk, were the only two that remained of the five appellants of 1386. To all outward appearance they enjoyed the favour and confidence of the king; but they both knew that their original sin had never been forgiven. The Duke of Norfolk, who, much to his honour, had shown a reluctance to join in the prosecution of his former friends, seems to have been the more alarmed or the more communicative of the two. Overtaking the Duke of Hereford, who was riding on the road between Windsor and London, in the month of December, during the recess of parliament, Mowbray said, "We are about to be ruined." Henry of Bolingbroke asked "For what?" and Mowbray said, "For the affair of Radcot bridge." "How can that be after his pardon and declaration in parliament?" "He will annul that pardon," said Mowbray, "and our fate will be like that of others before us. It is a marvellous and treacherous world this we live in!" And then he went on to assure Hereford (what must have been unnecessary) that there was no trust to be put in Richard's promises or oaths, or demonstrations of affection, and that he knew of a certainty that he and his minions were then compassing the deaths of the Dukes of Lancaster, Hereford, Albemarle, and Exeter, the Marquis of Dorset, and of himself. Henry then said, "If such be the case, we can never trust them;" to which Mowbray rejoined, "So it is, and though they may not be able to do it now, they will contrive to destroy us in our houses ten years hence."*

This reign, as abounding in dark and treacherous transactions, is rich in historical doubts. It is not clear how this conversation was reported to Richard, but the damning suspicion rests upon Henry of Bolingbroke. When parliament met, after the recess, in the month of January, 1398, Hereford was called upon by the king to relate what had passed between the Duke of Norfolk and himself, and then Hereford rose and presented in writing the whole of the conversation as we have related it. Norfolk did not attend in parliament, but he surrendered on proclamation, called Henry of Lancaster a liar and false traitor, and threw down his gauntlet. Richard ordered both parties into custody, and instead of submitting the case to parliament, referred it to a court of chivalry, which, after many delays, awarded that wager of battle should be joined at Coventry on the 16th of September. As the time approached, Richard was heard to say, "Now I shall have peace from henceforward;" but, on the appointed day, when the combatants were in the lists, and had couched their lances, throwing down his warder between them, he took the battle into his own hands. After consulting with the committee of parliament—the base eighteen (who had just been appointed)—to the surprise and bewilderment of all men, he condemned Hereford to banishment for ten years, and Norfolk for life. Hereford, apparently confident in his abilities and many resources, went no farther than France: Norfolk made a pilgrimage to Jerusalem, and not long after died broken-hearted at Venice. On the death of the Duke of Lancaster, which happened about three months after the exile of his son Hereford, Richard seized his immense estates and kept them, notwithstanding his having, before his departure out of England, granted letters patent to Hereford, permitting him to appoint attorneys to represent him and take possession of his lawful inheritance.† The illegality and dishonour of this proceeding did not prevent the court lawyers from justifying it. But now there was no law in the land except what proceeded from the will of Richard, who, after ridding himself, as he fancied, for ever, of the two great peers whom he feared and hated, set no limits to his despotism. He raised money by forced loans;

* Rot. Parl. This is the account which Hereford gave in parliament.

† Rot. Parl.—Rymer.

he coerced the judges, and in order to obtain fines he outlawed seventeen counties by one stroke of the pen, alleging that they had favoured his enemies in the affair of Radcot bridge. He was told by some friends that the country was in a ferment, and that plots and conspiracies were forming against him; but the infatuated man treated them with contempt, and chose this very moment for leaving England. In the end of the month of May, 1399, he sailed from Milford Haven with a splendid fleet, which however conveyed more courtiers and parasites than good soldiers. After some delay he took the field against the Irish on the 20th of June, and a fortnight after his cousin, the Duke of Hereford, landed at Ravenspur in Yorkshire. The duke had not escaped from France without difficulty, and all the retinue he brought with him consisted of the exiled Archbishop of Canterbury, the son of the late Earl of Arundel, fifteen knights and men-at-arms, and a few servants.

But the wily Henry was strong in the affections of the people: he knew by the grief shown when he set out on his exile that many thousands would be glad to see him back; and both he and the archbishop had many personal friends among the nobles. As soon as he landed, he was joined by the great Earls of Northumberland and Westmoreland; and as he declared that he only came for his right, or for the estates belonging to his father, he was speedily reinforced by many who did not foresee, and who, at that stage, would not have approved his full and daring scheme. He marched with wonderful rapidity towards the capital, and arrived there at the head of sixty thousand men. His uncle, the Duke of York, having no confidence in the Londoners, quitted the city before his approach, and, as regent of the kingdom during Richard's absence, raised the royal standard at St. Alban's. The Londoners received Hereford as a deliverer, and still further strengthened his army. A general panic prevailed among the creatures of Richard, some of whom shut themselves up in Bristol Castle. The Duke of York, with such forces as he could collect, moved towards the west, there to await the arrival of Richard, to whom messengers had been dispatched. After staying a few days in London, Henry of Bolingbroke marched in the same direction, and so rapid was his course that he reached the Severn on the same day as the regent. The Duke of York had discovered before this that he could place no reliance on his troops: he was himself a man of no energy, and probably his resentment for the murder of his brother Gloucester was greater than his affection for his nephew Richard. Henry of Bolingbroke was also his nephew, and when he agreed to meet that master-mind in a secret conference, the effect was inevitable. York joined his forces to those of Henry, turned aside with him, and helped him to take Bristol castle. Three members of the standing committee of eighteen, the Earl of Wiltshire, Bussy, and Green were found in the castle, and executed, without trial, but to the infinite joy of the people, who had clamoured for their deaths. Henry then marched towards Chester, but York stopped at Bristol.*

For three weeks Richard remained ignorant of all that was passing. Contrary winds, and storms, are made to bear the blame of this omission, but it is probable that some of the messengers had proved unfaithful. When he received the astounding intelligence, his first remark was, that he sorely regretted not having put Henry to death, as he might have done. From Dublin he dispatched the Earl of Salisbury with part of his forces, and then he repaired himself to Waterford, with the intention of crossing over with the rest. Salisbury landed at Conway, and was reinforced by the Welsh; but the king did not appear so soon as was expected, and the earl was soon deserted by his whole army, both Welsh and English. A few days after, when Richard at last arrived at Milford Haven, he was stunned by bad news of every kind; and on the second day after his landing, the few thousands of troops which he had brought with him from Ireland deserted him almost to a man. At midnight, disguised as a priest, and accompanied only by his two half-brothers, Sir Stephen Scroop, his chancellor, the Bishop of Carlisle, and nine other individuals, he fled to Conway, to seek refuge in the strong castle there. At Conway he found the Earl of Salisbury and about one hundred men, who, it appears, had already consumed the slender stock of provisions laid up in the fortress. Richard then dispatched his two half-brothers to Chester, Henry's head-quarters, to ascertain what were his intentions. Henry put them under arrest. Soon after sending them, Richard rode to the castles of Beaumaris and Caernarvon: they were both bare of provisions, and he returned in despair, and probably in hunger, to Conway Castle. A romantic and touching story is usually told, on the faith of two anonymous manuscripts, according to which, Richard was lured from his stronghold by the ingenious treachery of the Earl of Northumberland; but we are inclined to believe that famine drove him from Conway castle, and that, in a hopeless state, he surrendered to Northumberland, who, however, very probably offered him delusive terms.† At the castle of Flint, Henry of Bolingbroke met him, and bent his knee, as to his sovereign. "Fair cousin of Lancaster," said Richard, uncovering his head, "you are right welcome." "My lord," answered Henry, "I am come somewhat before my time; but I will tell you the reason. Your people complain that you have ruled them harshly for twenty-two years; but if it please God I will help you to rule them better." The fallen king replied, "Fair cousin, since it pleaseth you, it pleaseth me well." The trumpets then sounded to horse, and, mounted on a miserable hackney, Richard rode a prisoner to Chester. No

* Walsing.

† It is said that the sea was open to him, and that he might have escaped to Guienne; but it is by no means clear that, at this moment, he had either a ship or provisions for such a voyage. Besides, after such repeated desertions, he may well have feared trusting himself in the hands of a few sailors. And then, again, he knew that quitting his kingdom at this moment would be equivalent to an abdication.

Meeting of Richard and Bolingbroke at Flint Castle.*
(Richard is disguised as a Priest, and Bolingbroke is represented in mourning for the death of his father, John of Gaunt.)

one appeared to pity his fate; and if we are to believe Froissart, his very dog left his side to fawn upon his destroyer. At Lichfield, while on the way from Chester to the capital, the king eluded the vigilance of his guards, and escaped out of a window; but he was retaken, and from that time treated with greater severity. On their arrival in London, Richard was cursed and reviled by the populace, and thrown into the Tower. Henry was received by the mayor and the principal citizens; while at Chester, writs were issued in Richard's name for the meeting of parliament on the 29th of September. On the day of that meeting, a deputation of lords and commons, which included the Archbishop of Canterbury, the Earl of Northumberland, two justices, two doctors of laws, with many others, ecclesiastics and laymen, waited on the king in the Tower, who there, *according to the reporters*, made, "with a cheerful countenance," a formal renunciation of the crown, acknowledged his unfitness for government, absolved all his subjects from homage and fealty, gave his royal ring to his cousin Henry, and said, that he of all men should be his successor, if he had the power to name one. Whether all this passed as thus stated by the triumphant party of Lancaster is of little consequence, and Henry was too sagacious to rest his title to the crown upon what could never be considered in any other light than that of a compulsory resignation. The only right that Henry could pretend, was a concise and obvious one; but in his "abundant caution, and to remove all scruple," he determined to prop himself with all sorts of devices, and to heap title upon title. Of these accumulated pretensions, some were nugatory or conflicting, and in reality weakened instead of strengthening his claim; but the lawyers were gratified, and possibly some delicate consciences were tranquillized by each of the clauses. On Tuesday, the 30th day of September, the parliament having met in Westminster Hall, the resignation of Richard was read. All the members then stood up, and signified their acceptance of it, and a great concourse of people outside the hall shouted with joy. Thirty-three articles of impeachment against Richard were afterwards read, and being declared guilty on every charge, his deposition was pronounced; thus a deposition was

* From the Harleian MS. 1319, a History of the Deposition of Richard II., in French verse, professing to be "composed by a French gentleman of mark, who was in the suite of the said king, with permission of the King of France." "The several illuminations contained in this book," says a MS. note by Bishop Percy, appended to the volume, "are extremely valuable and curious, not only for the exact display of the dresses, &c. of the time, but for the finished portraits of so many ancient characters as are presented in them." These interesting and beautiful illuminations are sixteen in number; our copies of three of them, which have been carefully traced from the originals, will convey some notion of the style of minute and high finish in which they are executed. The whole have been engraved in the 20th volume of the Archæologia, where the poem is printed with an English translation, and ample explanatory notes, by the Rev. John Webb, M.A., F.A.S., Rector of Tretire, in Herefordshire; pp. 1—423.

BOLINGBROKE CONDUCTING RICHARD II. INTO LONDON. Harl. MS. 1319.

added to an act of abdication. Only one voice was raised in his favour. Thomas Merks, Bishop of Carlisle, spoke manfully in vindication of his character; but as soon as he sate down, he was arrested and removed to the abbey of St. Albans.*

* Among the many doubts that beset this remarkable part of our history, it is doubted whether Bishop Merks's speech be not a fabrication.

During these proceedings Henry remained seated in his usual place near to the throne, which was empty, and covered with a cloth of gold. As soon as eight commissioners had proclaimed the sentence of deposition, he rose, approached the throne, and having solemnly crossed himself, said, "In the name of God the Father, Son, and Holy Ghost, I, Henry of Lancaster, challenge this realm of England,

PARLIAMENT ASSEMBLED FOR THE DEPOSITION OF RICHARD II. Harl. MS. 1319.
(The Earl of Westmoreland on the right of the Throne; the Earl of Northumberland of the left; Henry of Bolingbroke behind the latter.)

because I am descended by right line of blood from the good lord King Henry III., and through that right, that God of his grace hath sent me, with help of my kin and of my friends, to recover it; the which realm was in point to be undone for default of government and undoing of the good laws." He knelt for a few minutes in prayer on the steps, and then was seated on the throne by the Archbishops of Canterbury and York.*

The history of Scotland during this period is so intermixed with that of England, and has necessarily in consequence been so fully detailed in the preceding narrative, that no further summary of it is required. The reign of the meek and pious, but feeble-minded Robert III. continued down to the date at which we are now arrived, without furnishing any events beyond what have been above related.

CHAPTER II.

THE HISTORY OF RELIGION.

THE papal dominion in Europe reached its height about the beginning of the thirteenth century, and maintained itself with little outward evidence of decline nearly throughout the century. Boniface VIII. was as arrogant an assertor of the supremacy of the successor of St. Peter over all other earthly powers and principalities, as his predecessor Innocent III., but he was not so fortunate in the time and circumstances in which he attempted to compel submission to his high pretensions. In truth, it was not in the nature of things that such a dominion should last; it was thrown up, as it were, into the air, by a violent, volcanic force; and the greater the height it had attained, the nearer it was to the commencement of its descent and downfal. The very success of Innocent, by the extravagance of the assumptions to which it gave rise in himself and those who came after him, and the dream of security in which it lulled them, was more fatal than anything else could have been to the stability of their colossal sovereignty; its pressure, thus aggravated, awoke and gradually diffused a spirit of resistance both among kings and people; till at length Philip le Bel began, and Wycliffe, nearly a hundred years later, carried forward, the great rebellion, which after little more than another hundred years was to be fought out triumphantly by Luther. But for nearly a century before the time of Philip le Bel the causes which were preparing this conflict were in active though hidden operation, and the proud pontificate of Innocent may be properly fixed upon as the culmination of the papacy—the point at which it both attained its highest rise and commenced its decline. From the time of Boniface the decline became apparent, and has been progressive to our own day. "Slowly," as it has been finely said, "like the retreat of waters, or the stealthy pace of old age, that extraordinary power over human opinion has been subsiding for five centuries."*

In no country were the exactions and encroachments of the Roman pontiffs, in the thirteenth century, carried to a more exorbitant extent than in England. The good nature of the people, and something perhaps of a turn for superstition in their temper or their habits, their insular separation from the rest of Europe, and their wealth, which even at this period was considerable, concurred with the political circumstances of the country, which from the latter years of Henry II. had been eminently favourable to the spread of this foreign usurpation, in making England the great field of papal imposition and plunder. Throughout this century the bishoprics were filled either by the direct nomination of the pope, or, what was perfectly equivalent, by his arbitration in the case of a disputed election. The course that was taken in regard to this matter may be illustrated by the history of the succession of the archbishops of Canterbury. On the death of Cardinal Langton, in 1228, the chapter chose as his successor one of their own number, Walter de Hemesham; but both the king and the bishops of the province having appealed to Rome against this election, the pope annulled it, and appointed Richard le Grand, or Weathershead, chancellor of Lincoln, to be archbishop. Le Grand died in 1231, on which three successive elections were made by the chapter and set aside by the pope; and at last Edmund Rich, treasurer of Salisbury, whom the pope recommended, was chosen and consecrated. Archbishop Edmund died in 1242, when King Henry first compelled the chapter by threats, and almost by force, to nominate Boniface of Savoy, the queen's uncle, and then purchased the confirmation of the election at Rome. On occasion of the preceding vacancy the pope had made no scruple in setting aside the original selection of the chapter, although the king had concurred in it. On the death of Boniface, in 1270, William Chillenden, their sub-prior, was elected by the chapter; but the pope nominated Robert Kirwarby, and he became archbishop. Exactly the same thing was repeated in 1278, when Kilwarby resigned on being made a cardinal; the monks elected Robert Burnel, bishop of Bath and Wells, but John Peckham, a Franciscan friar, was nevertheless appointed to the see by the pope of his own authority. The next time the chapter at once elected the person who it was understood would be agreeable to the pope, namely, Robert Winchelsey, who succeeded Peckham in 1293, and fought the battle of the clergy against the crown with great valour during a twenty years' occupation of the see. The right of nominating to inferior benefices was seized in a still more open manner. It had been a frequent practice of the popes to request

* Hallam, Middle Ages, ii. 329.

bishops to confer the next benefice that should become vacant on a particular clerk. Gradually these recommendations, which were called mandats, became more frequent; but it was not till the time of Gregory IX. (A.D. 1227—1241) that they were distinctly avowed to be of an authoritative character. Even that pope claimed, in words, no more than the right of nominating one clerk to a benefice in every church. But he and Innocent IV. are asserted to have, in fact, placed Italian priests by their mandatory letters in all the best benefices in England. In the three last years of Gregory IX. it is said that three hundred Italians were sent over to this country to be provided for in the church. It was solemnly stated by the English envoys to the council of Lyons (held in 1245) that Italian priests drew from England at this time sixty or seventy thousand marks every year—a sum greater than the whole revenue of the crown. Nor did these foreigners even spend their incomes in the country. Most of them continued to reside at Rome, or elsewhere in Italy, where, in general, they held other preferments: it is affirmed that in some cases fifty or sixty livings were accumulated in the possession of one individual. At length the universal right of nomination to church livings was asserted in plain terms by Clement IV., in a bull published in 1266. Nor was even this the utmost extent to which the claim was carried. By what was called a reservation, the pope assumed the power of reserving to himself the next presentation to any benefice he pleased which was not at the time vacant; or by another instrument, called a provision, he at once named a person to succeed the present incumbent. In this way all the benefices in the kingdom, both those that were vacant and those that were not, were turned to account, and made available in satisfying the herd of clamorous suitors for preferment and dependants on the holy see. In a letter addressed to the pope by the king, the prelates, and barons of England, in 1246, complaint is made that the foreigners upon whom livings were thus bestowed not only did not reside in the country, nor understand its language, but, even in their absence and incompetency, appointed no substitutes to perform their duties. In the numerous churches filled by them, it is declared there was neither almsgiving nor hospitality, nor any preaching or care of souls whatever. The Italians, it is moreover affirmed, were invested with their livings without trouble or charges, whereas the English were obliged to prosecute their rights at Rome at a great expense. The letter also touches upon some of the other vexatious modes by which the holy see laboured to extend its power or to gratify its rapacity, particularly the great grievance of drawing all causes of importance to be heard and decided at Rome. This was a material part of the scheme for bringing the civil under subjection to the ecclesiastical power, which had been pursued with such pertinacity from the time of Anselm and the first Henry. It was also a means of drawing much wealth from the country, and augmenting the ample stream, fed by multiplied contrivances of exaction and drainage, that was constantly flowing thence into the papal treasury. The entire taxation or tribute annually paid, under a variety of names, by England to Rome, must have amounted to an immense sum. Gregory IX. is said to have, in one way and another, extracted from the kingdom, in the course of a very few years, not less than nine hundred and fifty thousand marks,—a sum which Mr. Hallam estimates as equivalent to fifteen millions at present.*

In 1376, the commons, in a remonstrance to the king against the intolerable extortions of the court of Rome, affirmed that the taxes yearly paid to the pope out of England amounted to five times as much as all the taxes paid to the crown. A considerable portion, indeed, of the revenue thus extracted by the Roman pontiff was levied directly from the clergy themselves, in the form of Peterpence, annates, or first-fruits, fees upon institution to benefices, &c.; but it did not the less on that account come ultimately out of the property and industry of the nation. The church was but the vast conduit or instrument of suction by which the money was drawn from the country. It is calculated, from a statement of the historian Knyghton, that in the early part of the fourteenth century the annual revenue of the church amounted to the enormous sum of seven hundred and thirty thousand marks, which was more than twelve times the amount of the whole civil revenue of the kingdom in the reign of Henry III.† Very nearly one-half of the soil of England was at this period in the possession of the church. At the same time, as we have seen, all the richest benefices were in the hands of foreigners. Where a cure thus held by a non-resident incumbent was served at all, it was intrusted to a curate, who appears to have been usually paid at the most wretched rate. In his account of the great pestilence of 1349, Knyghton observes, that before that plague a curate might have been hired for four or five marks a-year, or for two marks and his board; but that so many of the clergy were swept away by it, that for some time afterwards no one was to be had to do duty for less than twenty marks or pounds a-year. To remedy this evil a constitution or edict was published a few years afterwards by the authority of the Archbishop of Canterbury, forbidding any incumbent to give, or any curate to demand, more than one mark a-year above what had been given to the curate of the same church before the plague.

The extensive and more systematic form given to the canon law in the course of the thirteenth century considerably aided the pope and the church in their contest with the civil power. We extract from Mr. Hallam the following summary of the additions made during this period to the Decretum of Gratian, originally the great text-book of that

* Mid. Ages, ii. 396.
† Macpherson, An. of Com. i. 519.

jurisprudence.* "Gregory IX. caused the five books of Decretals to be published by Raimond de Pennafort in 1234. These consist almost entirely of rescripts issued by the later popes, especially Alexander III., Innocent III., Honorius III., and Gregory himself. They form the most essential part of the canon law, the Decretum of Gratian being comparatively obsolete. In these books we find a regular and copious system of jurisprudence, derived, in a great measure, from the civil law, but with considerable deviation, and possibly improvement. Boniface VIII. added a sixth part, thence called the Sext, itself divided into five books, in the nature of a supplement to the other five, of which it follows the arrangement, and composed of decisions promulgated since the pontificate of Gregory IX." "The canon law," proceeds Mr. Hallam, "was almost entirely founded upon the legislative authority of the pope; the decretals are in fact but a new arrangement of the bold epistles of the most usurping pontiffs, and especially of Innocent III., with titles or rubrics comprehending the substance of each in the compiler's language. The superiority of ecclesiastical to temporal power, or, at least, the absolute independence of the former, may be considered as a sort of key-note which regulates every passage in the canon law. It is expressly declared that subjects owe no allegiance to an excommunicated lord, if after admonition he is not reconciled to the church. And the rubric prefixed to the declaration of Frederic II.'s deposition in the Council of Lyons asserts that the pope may dethrone the emperor for lawful causes. These rubrics to the decretals are not perhaps of direct authority as part of the law; but they express its sense, so as to be fairly cited instead of it. By means of her new jurisprudence, Rome acquired in every country a powerful body of advocates, who, though many of them were laymen, would, with the usual bigotry of lawyers, defend every pretension or abuse to which their received standard of authority gave sanction."†

But a still higher power assumed by the popes than even that of declaring or making the law was that of dispensing with its strongest obligations in any particular case at their mere will and pleasure. They assumed and exercised this power in particular in regard to the canonical impediments to marriage, and in regard to oaths. By the ancient laws of the church, marriages were forbidden both between blood relations and relations by affinity within the seventh degree. "It was not until the twelfth century," says Mr. Hallam, "that either this or any other established rules of discipline were supposed liable to arbitrary dispensation; at least the stricter churchmen had always denied that the pope could infringe canons, nor had he asserted any right to do so. But Innocent III. laid down as a maxim, that out of the plenitude of his power he might lawfully dispense with the law; and accordingly granted, among other instances of this prerogative, dispensations from impediments of marriage to the Emperor Otho IV. Similar indulgences were given to his successors, though they did not become usual for some ages. The fourth Lateran Council, in 1215, removed a great part of the restraint, by permitting marriages beyond the fourth degree, or what we call third cousins; and dispensations have been made more easy when it was discovered that they might be converted into a source of profit. They served a more important purpose, by rendering it necessary for the princes of Europe, who seldom could marry into one another's houses without transgressing the canonical limits, to keep on good terms with the court of Rome, which, in several instances that have been mentioned, fulminated its censures against sovereigns who lived without permission in what was considered an incestuous union."* And as uncanonical unions could be legalized by the pope, so it was held, and equally to the benefit of the holy see, that any illegitimacy of birth could be entirely removed by the same authority. With regard to oaths, again, it was expressly laid down as the law, not only that any oath extorted by fear might be annulled by ecclesiastical authority, but that an oath disadvantageous to the church was essentially, and from the first, without any force, whether it were formally dispensed with or not. These convenient principles required very little ingenuity to be so applied as to get rid of the obligation of any oath whatever.

As in preceding ages, new monasteries still continued to be founded, and additions to be made, by the gifts and bequests of the pious, to the landed property of the clergy; although in England the zeal which displayed itself in these ways perhaps rather declined after the twelfth century. Indeed, independently of the restraints which, as we shall presently see, the law now began to place upon the disposition to make over estates to the church, both the motive and the means of that kind of liberality were of course diminished by the extent to which it had been already carried. When the clergy were in possession of nearly half the land of the kingdom, it must have appeared to the most excited devotee less necessary than it formerly might have been to augment their endowments. But the rise in the thirteenth century of the new religious orders of the Mendicant Friars amply compensated for any falling off in the old rate of increase of the houses of the regular monks. The Dominicans or Black Friars (called also Friar Preachers), instituted by St. Dominic de Guzman, and the Franciscans or Gray Friars (called also Cordeliers), founded by St. Francis of Assisa, were formally established by the authority of Pope Honorius III., in 1216 and 1223. Of many other orders which soon sprung up in imitation of these, all were eventually suppressed except two,—the Carmelites, or White Friars, and the Augustines, also known, as well as the Franciscans, by the name of Gray Friars, from the colour of their cloaks. The success of this novel mode of appeal to the religious passions of

* See ante, p. 610. † Mid. Ages, ii. 289.

* Mid. Ages, 296.

Dominican, or Black Friar.

Franciscan or Grey Friar.

the time was prodigious. The profession of poverty, the peculiar distinction of the Mendicant Friars, was well calculated to work a powerful effect, thus exhibited in contrast with the wealth and grasping spirit of the other clergy of all degrees and kinds—secular and regular, priests and monks, alike. It is true the poverty of the Mendicants like the same vow of the elder orders of monks, in no long time became, in so far as the community of the brethren was concerned, a profession merely, and their establishments gradually accumulated extensive estates and ample revenues; but it served its purpose in the first instance, as well as if it never was to give way to this corruption. And the individual friar mendicant always continued, it is to be remembered, to present the show, and, it must be admitted to a great extent, the reality, also, of destitution and a hard rule of life. The very name of the mendicants was a standing proclamation of their sympathy with the humbler and more numerous classes, and their indifference to the pomp and pre-eminence which appeared to be so much coveted by the other clergy. Meanwhile their activity in preaching, and in all the ministrations of religion, and the pains they took to win the favour of the multitude, completely distanced whatever had been before attempted in the same line. Nor must it be omitted, that among the means of influence of which they availed themselves, while some were perhaps less creditable, others were of the highest and most legitimate description; for it was not long before the Franciscans and Dominicans became the most distinguished of the clergy in all the learning of the age, and numbered in their ranks the most eminent names in every department of such scholarship and philosophy as were then in vogue. With all these arts and real merits, it was impossible that, with the support of authority, the concurrence of favouring circumstances, and wise management in the direction of their proceedings, they should have failed to be at once taken up and borne along by a gale of popular enthusiasm. Accordingly we find the historian, Matthew Paris, in the middle of the thirteenth century, already complaining that nobody confessed except to these new-fashioned monks-errant, and that the parish churches were deserted. But in course of time, many of the parochial cures came to be served by mendicant friars, to whose communities the advowsons of the livings had been made over by admirers of the order. So rapidly did the members of these new orders increase, that in less than ten years after the institution of that of the Franciscans the delegates to its general chapter formed alone a multitude of more than five thousand persons. "And by an enumeration in the early part of the eighteenth century, when the Reformation must have diminished their amount at least one-third, it was found that even then there were twenty-eight thousand Franciscan nuns in

nine hundred nunneries, and one hundred and fifteen thousand Franciscan friars in seven thousand convents, besides very many nunneries, which, being under the immediate jurisdiction of the ordinary, and not of the order, were not included in the returns."*

All these troops of religious persons were bound in their whole interests and affections to the church, not only by their voluntary vows, but by the strong incorporating tie of celibacy, the practice of which, in conformity to what had certainly been the distinctly-declared law of the church from very early times, was now also enforced upon all descriptions of the clergy with a strictness greatly beyond what it had heretofore been found possible to maintain. In the reign of Henry I. it is stated that more than half the English clergy were married; but after the twelfth century, although a few occasional violations of the rule may have still occurred, celibacy was certainly the general practice as well as the law of the church.

The rise of the Mendicant orders probably more than made up to the church for the destruction of the Templars in the beginning of the next century; it was the substitution of a force strong with the inspiration of a new principle, and happily adapted to the time, for another, the first vigour of which, as well as its fit occasion, was in a great degree worn out. And as to the era of the Templars belonged the Crusades, so with the Mendicant Friars appeared the Inquisition, of which, indeed, St. Dominic is commonly reputed the founder, or at least the first suggester. The crusades which took place in this age were animated by little or nothing of the old spirit. In the preceding Book we noticed the fourth, which was undertaken in 1203, but which was eventually diverted from an expedition against the infidels in Palestine to a war with the Greeks in Constantinople. Both this and the fifth crusade (A.D. 1218) were undertaken at the instigation of the energetic Innocent III.; but even his breath was impotent to blow up again into a blaze the dying fire. As Gibbon observes, "except a king of Hungary, the princes of the second order were at the head of the pilgrims; the forces were inadequate to the design; nor did the effects correspond with the hopes and wishes of the pope and the people." Of the sixth and seventh crusades, both conducted by St. Louis, the former (which set out in 1248) issued in the captivity, the latter (in 1270) in the death of the enthusiastic monarch: and ere the century had closed the Christians were driven for ever from their last narrow footing in the Holy Land. Meanwhile, in the midst of these abortive attempts to revive crusading in the East, a new species of crusades, as they were also called, was introduced in the West,—namely, military expeditions against the unconverted heathens in various parts—against the Jews, against the Albigenses, and other heretics; the object being in each case to extirpate indifferently either the misbelief or the misbelievers. Here, then, was exactly the object of the Inquisition, to which, therefore, these expeditions may be regarded as the natural transition from the original crusades. Both the crusades and the inquisition equally operated, though in different ways, to uphold for their season the fabric of the papal ascendancy.

It was in the nature, however, of most, if not of all of these stimulants, to contribute something to the weakening, in the end, of the system upon which they apparently bestowed an immediate strength. Even the strict celibacy of the clergy, if it invigorated the internal organization of the church, tended to loosen its roots in the genera soil of human society. Nor did the Mendicant orders themselves always continue to be the same manageable and subservient allies of the papal power which they were at first; when certain questions came to be debated between the church and the people, the constitution and position of these bodies inevitably led them to a great extent to side with the latter. But especially the various usurpations and extravagant assumptions of the church, whatever temporary advantages may have accrued from them, all proved incumbrances and sources of debility in the long run, and, by the manner in which they outraged the natural feelings and common sense of men, became the main provocatives of the alienation and hostility under which this once sovereign power in human affairs gradually sunk. Excommunications, interdicts, dispensations, the inquisition, the arrogant pretensions of the ecclesiastical courts, the oppressive exactions of the popes, the enormous wealth of the clergy, and their still unsatisfied rapacity, had all been long preparing the elements of the mighty explosion to which indulgences and Luther at last set the match.

Meanwhile many less violent efforts were made to shake off the yoke, or at least to mitigate its pressure. In our own country, as we have already seen, from the time of Henry I., and more especially from that of Henry II., both the crown and the parliament had repeatedly attempted, with various success, to check the encroachments of the ecclesiastical power. In the course of the period now under review some important measures were adopted against the more glaring and intolerable evils of this foreign tyranny. Even during the feeble reign of Henry III. considerable progress was made in restraining the jurisdiction of the ecclesiastical tribunals. "The judges of the king's courts," says Mr. Hallam, "had until that time been themselves principally ecclesiastics, and consequently tender of spiritual privileges. But now, abstaining from the exercise of temporal jurisdiction, in obedience to the strict injunctions of their canons, the clergy gave place to common lawyers, professors of a system very discordant from their own. These soon began to assert the supremacy of their jurisdiction, by issuing writs of prohibition whenever the ecclesiastical tribunals passed the boundaries which approved use had established. Little accustomed to such control,

* Southey, Book of the Church, i. 325.

the proud hierarchy chafed under the bit; several provincial synods reclaim against the pretensions of laymen to judge the anointed ministers whom they were bound to obey; the cognizance of rights of patronage and breaches of contract is boldly asserted; but firm and cautious, favoured by the nobility, though not much by the king, the judges receded not a step, and ultimately fixed a barrier which the church was forced to respect."* In the next reign we find an archbishop of Canterbury unreservedly admitting the right of the King's Bench to issue prohibitions. The question was finally settled in the thirteenth year of Edward I., by the statute entitled 'Circumspecte agatis,' which, under the form of an order to the judges to respect the privileges of the spiritual jurisdiction, in fact restrained them, by express enumeration, within certain specified limits. Ten years before this, by the statute of Westminster the First, it had been provided that clerks charged with felony should be first indicted by solemn inquest in the King's Court, and that, being then delivered to the ordinary, if found guilty by such inquest, they should in no manner be let free without due purgation,—words which were afterwards construed to mean that their property, both real and personal, should be forfeited to the crown. In the seventh year of this reign, also, as will be more particularly noticed in the next chapter, the making over of lands to religious persons or societies was for the first time effectually restrained, by what is commonly called the first statute of mortmain. By another statute, passed in the thirty-fifth year of his reign, Edward prohibited all abbots, priors, or other religious persons of whatsoever condition, from henceforth sending any money, under any name or pretence whatsoever, as a payment to their superiors beyond the sea. It is also stated that one of this king's subjects having obtained a bull of excommunication against another, Edward ordered him to be executed as a traitor, according to the ancient law and was only induced to commute the punishment into banishment out of the realm on a representation made by the chancellor and treasurer, on their knees, that the law in question had not for a long time been put in execution.*

* Middle Ages, ii. 317.

* See Blackstone, by Coleridge, iv. 110, and the authorities there quoted.

Archbishop reading a Papal Bull. Harl. MS. 1319.

One of the principal charges made by the parliament against Edward II., on his deposition, was, that he had given allowance to the bulls of the see of Rome. "But Edward III.," says Blackstone, "was of a temper extremely different; and to remedy these inconveniences first by gentle means, he and his nobility wrote an expostulation to the pope; but receiving a menacing and contemptuous answer, withal acquainting him that the emperor, and also the king of France, had lately submitted to the holy see, the king replied, that if both the emperor and the French king should take the pope's part, he was ready to give battle to them both in defence of the liberties of the crown. Hereupon more sharp and penal laws were devised against provisors, which enact, severally, that the court of Rome shall not present or collate to any bishopric or living in England; and that whoever

disturbs any patron in the presentation to a living by virtue of a papal provision, such provisor shall pay fine and ransom to the king at his will, and be imprisoned till he renounces such provision; and the same punishment is inflicted on such as cite the king, or any of his subjects, to answer in the court of Rome. And when the holy see resented these proceedings, and Pope Urban V. attempted to revise the vassalage and annual rent to which King John had subjected his kingdom, it was unanimously agreed by all the estates of the realm in parliament assembled, 40 Edw. III., that King John's donation was null and void, being without the concurrence of parliament and contrary to his coronation oath; and all the temporal nobility and commons engaged, that if the pope should endeavour, by process or otherwise, to maintain these usurpations, they would resist and withstand him with all their power.* By subsequent statutes, passed in the reign of Richard II., it was enacted that no alien should be capable of being presented to any ecclesiastical preferment, and that all liegemen of the king accepting of a living by any foreign provision should forfeit their lands and goods, and be banished from the realm, and the benefice made void. It was also provided that any person bringing over any citation or excommunication from beyond sea, on account of the execution of the above-mentioned statutes, should "be taken, arrested, and put in prison, and forfeit all his lands and tenements, goods and chattels, for ever, and incur the pains of life and of member." Finally, by the famous statute commonly called the Statute of Præmunire,† passed in 1392, it was "ordained and established," in still more comprehensive terms, that any person purchasing in the court of Rome or elsewhere, any provisions, excommunications, bulls, or other instruments whatsoever, and any person bringing such instruments within the realm, or receiving them, or making notification of them, should be put out of the king's protection; that their lands and goods should be forfeited; and that they themselves, if they could be found, should be attached and brought before the king and council, there to answer for their offence. The popes maintained the struggle for some time, even after the passing of this statute, continuing at least to present, as before, to all English benefices the incumbents of which had died at Rome; but the king and the parliament were resolute and steady in their resistance; in no instance were these foreign presentations permitted to have effect; and at last, although the Roman pontiff still formally conferred many of the chief benefices by presentations and provisions, these instruments were issued only in favour of persons who had been previously nominated by the crown. The victory, therefore, obtained by the civil over the ecclesiastical power, in this great battle, was complete.

These efforts of the legislature, however, were only one of the forms in which a spirit expressed itself that was now extensively diffused over the nation. While the king, lords, and commons were repelling the encroachments of the papal power by the statutes of provisors and præmunire, a great reformer and his disciples were shaking the church at once in its doctrine, its discipline, and the whole fabric of its polity. This was John de Wycliffe, whom we have already had occasion to mention in the preceding Chapter. He was born about the year 1324, in the parish from which he takes his name, in Yorkshire; and having previously distinguished himself at Oxford by an extraordinary proficiency in almost every branch of learning then cultivated, he had so early as 1356, in a treatise entitled 'Of the Last Age of the Church,' assailed the high-flown notions then commonly held on the subject of the authority of the pope. A few years later he began to direct his attacks against the Mendicant orders; but it was not long before the church in general, and all orders in it, became the subject of his unsparing and indiscriminate invective. In one of his works we find him enumerating twelve classes of religious persons, beginning with the pope and ending with the mendicant friars, all of whom he denounces as anti-Christs and the proctors of Satan. This general corruption of the church Wycliffe traced chiefly to the profusion of wealth with which it had been endowed in later times: his favourite topic was the recommendation of the poverty of the first teachers of the Gospel; and by his own example, and that of a body of disciples whom he called his poor priests, and who, like himself, went about preaching his doctrines barefoot and clothed in the coarsest attire, he gave the strongest evidence of the reality of his convictions, and made a prodigious impression upon the popular mind. The coincidence of many of his views, also, with the objects of one of the political parties which divided the state, obtained for him the countenance and support of some of the greatest of the nobility. We have already related the circumstances of his appearance before the Bishop of London at St. Paul's, in the last year of the reign of Edward III., on which occasion he was supported by personages of no less consequence than the Duke of Lancaster, and Percy, the Lord Marshal.* A paralytic stroke terminated the stormy career of Wycliffe on the 31st of October, 1384, at his rectory of Lutterworth, in Leicestershire. During his life, those of his novel views that made the greatest apparent impression and progress were those respecting the constitution of the church, and the subject of ecclesiastical authority. When he latterly began to attack the doctrines of the church, he seems to have met, in the first instance, with less success even among the common people, and his patrons among the higher

* See Blackstone, iv. 111.

† This statute (the 16th Rich II. c. 5), and also the offence against which it is directed, are so called from the words "Præmunire," or "Præmonere facias," used to command a citation of the party in the writ for the execution of this and the preceding statutes respecting provisions. It does not clearly appear that the statute of Præmunire was ever regularly passed by the parliament; but it has been repeatedly recognised as a statute by subsequent acts of the legislature.

* See ante, p. 780.

ranks generally declined supporting him in that new course. But here, also, it was eventually found that he had awakened a spirit of inquiry by his preaching and his writings which did not die when he himself was taken from among men. What the opinions of Wycliffe really were on many points of theology has been matter of much disputation; and his own writings, voluminous as they are, seem scarcely to afford the materials for a complete and consistent exposition of his creed: his views enlarged or varied as he prosecuted his inquiries; and much that he has written is so obscure as to defy any very precise or satisfactory interpretation. But, whatever became of some of his peculiar notions, the principle of his mode of investigating the truths of Christianity took root and flourished, and in no long time came to bear abundant fruit. Wycliffe's fundamental position was, that the knowledge of the revealed will of God was to be found in the Scriptures only, and, moreover, was to be found there, not by the church alone, or its recognised heads, but by every private individual who should earnestly and humbly address himself to the search. English translations of many parts, perhaps of the whole, of the Scriptures existed before the time of Wycliffe, but they appear to have been entirely unknown to the great body of the people. In his writings and discourses the paramount authority of the Holy Books was acknowledged and inculcated in the most explicit terms; whatever he advanced he endeavoured to rest upon their testimony; and he at once familiarized the popular ear to many passages of the word of God to which it had never before listened, and excited, by these quotations, the anxious curiosity of men to obtain access to the whole of the sacred volume. It is Wycliffe's highest title to the gratitude of his countrymen and to everlasting renown, and at the same time the most conclusive vindication that now remains of the sincerity of his professions, as well as our best evidence of the true learning and laborious industry of the man, that, like his great successor Luther, he devoted several years of his life to the completion of a translation of both the Old and New Testaments into his native tongue. This is the oldest English version of the Scriptures that is now extant,—the next that has come down to us after the partial Saxon version attributed to Alfred.* Many copies of this translation are said to have been dispersed by the care of the author and his disciples; and the effects which it had produced became very perceptible not many years after the death of Wycliffe, when, under the new name of the Lollards, the inheritors of his opinions, in formidable numbers, again awoke the cry of reformation. The history of the Lollards, however, must be reserved for the next period, to which chiefly it belongs.

* Wycliffe's translation of the New Testament has been twice printed; first in folio, under the care of the Rev. J. Lewis, Lon. 1731; secondly, in 4to., edited by H. H. Baber, Lon. 1810. The translation of the Old Testament still remains in manuscript.

CHAPTER III.

HISTORY OF THE CONSTITUTION, GOVERNMENT, AND LAWS.

WE now emerge, as it were, from the twilight in which we have hitherto journeyed, and we enter upon a path illumined by, at least, some portion of the light of day; or, to lay aside figurative language, enter now upon the period of the commencement of the authentic legislative records of England, enacted by the great national council or parliament. Of the formation of the parliament, or rather of its settlement into the form which it still retains, we must first speak; though, while engaged with that part of our subject, we must still continue our course in comparative darkness.

As we have already seen, the Commune Concilium, or great council of the realm, was, in the first ages after the Conquest, composed only of the tenants in chief, or immediate vassals of the king. Of these, one portion consisted of the bishops and abbots, or heads of religious houses holding immediately of the crown. It has been the opinion of the most eminent English lawyers that these spiritual lords sat in parliament by virtue of their baronies. From this opinion Mr. Hallam dissents. "I think," says he, carrying his view back to the Saxon Witenagemote, "that this is rather too contracted a view of the rights of the English hierarchy, and, indeed, by implication, of the peerage. For a great council of advice and assent in matters of legislation or national importance was essential to all the northern governments. And all of them, except perhaps the Lombards, invited the superior ecclesiastics to their councils; not upon any feudal notions, which at that time had hardly begun to prevail, but chiefly as representatives of the church and of religion itself; next, as more learned and enlightened counsellors than the lay nobility, and in some degree, no doubt, as rich proprietors of land. It will be remembered, also, that ecclesiastical and temporal affairs were originally decided in the same assemblies, both upon the continent and in England. The Norman Conquest, which destroyed the Anglo-Saxon nobility, and substituted a new race in their stead, could not affect the immortality of church possessions. The bishops of William's age were entitled to sit in his councils by the general custom of Europe, and by the common law of England, which the Conquest did not overturn. Some smaller arguments might be urged against the supposition that their legislative rights are merely baronial; such as that the guardian of the spiritualities was commonly summoned to parliament during the vacancy of a bishopric, and that the five sees created by Henry VIII. have no baronies annexed to them; but the former reasoning appears less technical and confined."*

The lay portion of the great council consisted of the earls and barons, meaning by the latter those holding of the king. It is agreed that the only baronies known for two centuries after the Conquest arose from the tenure of land held immediately of the crown. As to the exact nature, however, of these baronies, the opinions of some of the most eminent legal antiquaries vary; Selden holding that every tenant *in capite*, or in chief, by knight service, was a parliamentary baron by reason of his tenure; Madox, on the other hand, that tenure by knight's service in chief was always distinct from that by barony, but in what the distinction consisted he has not clearly explained. "The distinction," says Mr. Hallam, "could not consist in the number of knight's fees, for the barony of Hwayton consisted of only three, while John de Baliol held thirty fees by mere knight service. Nor does it seem to have consisted in the privilege and service of attending parliament, since all tenants in chief were usually summoned. But whatever may have been the line between these modes of tenure, there seems complete proof of their separation long before the reign of John. Tenants in chief are enumerated distinctly from earls and barons in the charter of Henry I."†

It is evident, however, from a passage in the Great Charter of King John, that by that time at least all tenants in chief were entitled to a summons; the greater barons by particular writs, the rest through a writ directed to their sheriff;—without a summons a baron certainly could not sit by mere right of his tenure. It is not ascertained how long the inferior tenants in chief continued to sit personally in parliament; but the attendance of these, some of whom were too poor to have received knighthood, became intolerably vexatious to themselves and was not agreeable to the king. This led at last to the complete establishment of a practice from which the most important results were

* Middle Ages, vol. iii. p. 6.
† Ibid., vol. iii. p. 13.

to flow—the adoption of the principle of representation.

Among the few earlier instances of apparent representation which have been collected, the most remarkable belongs to the year 1255, the thirty-eighth of Henry III. In that year a writ was issued, which, after reciting that the earls, barons, and other great men, were to meet at London three weeks after Easter, with horses and arms, for the purpose of sailing into Gascony, required the sheriff to compel all within his jurisdiction, who held twenty pounds a-year of the king in chief, or of those in ward of the king, to appear at the same time and place; and that, besides those mentioned, he should cause to come before the king's council at Westminster, on the fifteenth day after Easter, two good and discreet knights of his county, whom the men of the county should have chosen for this purpose, in the stead of all and each of them, to consider, along with the knights of other counties, what aid they would grant the king in such an emergency.

At length, in the year 1265, the forty-ninth of Henry III., who was then a captive in the hands of Simon de Montfort, Earl of Leicester, Lord High Steward of England, writs were issued in the king's name to all the sheriffs, directing them to return two knights for their county, with two citizens or burgesses for every city and borough within it. In regard to the question whether the knights were elected by none but the king's tenants in chief, or by all freeholders without distinction, the legal antiquaries are divided.* But here the really great innovation is the appearance of the burgesses in the national assembly—an innovation destined to exercise a most momentous influence on the future destinies not only of England and Europe, but of the world.

Before the Norman Conquest several of the towns had been populous, rich, and of considerable importance. Immediately after that great revolution, as we have had occasion to show in a former Chapter,† a considerable decay seems to have taken place in most of them. The burgesses were grievously oppressed by the tallages and other exactions to which they were subjected by the king or other lord who was held to be the proprietor of the town. Although some of these payments were of fixed amount, others appear to have been levied at the discretion of the lord, and from such of the burgesses as he chose to select.

"One of the earliest and most important changes in the condition of the burgesses," says Mr. Hallam, "was the conversion of the individual tributes into a perpetual rent from the whole borough. The land was then said to be affermed, or let in fee-farm to the burgesses and their successors for ever."‡ This was called burgage-tenure, which is said by Littleton to be "tenure in socage,"* and is by Blackstone said to be "only a kind of town socage; as common socage, by which other lands are holden, is usually of a rural nature."†

Beginning with the reign of Henry I. the towns gradually rose in importance and independence. From that prince the city of London received a charter, which, besides other immunities, grants to the citizens the right of choosing their own sheriff and justice, to the exclusion of every external jurisdiction. The right of choosing magistrates began to be more generally given from the reign of John. In the mean time, however, the voluntary incorporations of the burgesses, which had existed in the Saxon times under the name of guilds (from *guildan*, to pay or contribute), had gradually acquired more and more of the character of associations for the protection and regulation of trade.

From the middle of the twelfth to that of the thirteenth century the trading towns greatly increased in prosperity. London was distinguished above the rest for the number and wealth of its citizens, who were remarkable for their free and insurgent spirit. They bore a part in deposing William Longchamp, the chancellor and justiciary of Richard I., as well as in the great struggle for Magna Charta, in which the privileges of their city are specially confirmed; and the mayor of London was one of the twenty-five barons to whom the maintenance of its provisions was delegated. Nevertheless, until the date of the writs above mentioned, of Simon de Montfort, Earl of Leicester,—namely, the 12th of December, 1264,—we have no clear evidence that the cities and boroughs had any regular place in the national councils. At the same time it is remarkable that no writer of the time notices the calling of the burgesses to parliament by De Montfort as an innovation, nor are the writs so expressed as to lead us to suppose that the practice was then introduced for the first time.

But though the trading part of the community held from this time a regular place in the national council, they appeared there at first in a very humble and unimportant character, scarcely daring to raise their eyes in presence of the haughty prelates and nobles. "To grant money," says Mr. Hallam, "was the main object of their meeting; and if the exigencies of the administration could have been relieved without subsidies, the citizens and burgesses might still have sat at home, and obeyed the laws which a council of prelates and barons enacted for their government. But it is a difficult question, whether the king and the peers designed to make room for them, as it were, in legislation, and whether the purse drew after it immediately, or only by degrees, those indispensable rights of consenting to laws which they now possess."‡

The business of the commons appears to have been, from the first, to petition for redress of grievances, as well as to provide for the necessities of the crown. And in fact the high court of par-

* Matthew Paris gives, for the first time, in 1246, the name of parliament to the great council of the barons. The word parliament, Barrington observes (On the Statutes, p. 56), seems anciently to have been used for any kind of conference.

† See Book III., Chapter vii.

‡ Middle Ages, iii. 32.

* Middle Ages, iii. 162. † Com. ii. 82. ‡ Ib. vol. iii. p. 52.

liament, as far as they at their first introduction into it, and for a considerable time after, were concerned, is to be viewed not so much in the light of a legislative council or assembly as in that of a court of justice, in which, on condition of paying certain fees, by no means very low ones, in the shape of subsidies, they enjoyed certain privileges in the capacity of suitors. Indeed, it is impossible to understand fully the character of the English parliament, especially in the earlier stages of its history, without viewing it more as a judicial than as a legislative establishment.

With regard to the question at what time parliament was divided into two houses, we extract the following passage from Mr. Hallam:—"It has been a very prevailing opinion that parliament was not divided into two houses at the first admission of the commons. If by this is only meant that the commons did not occupy a separate chamber till some time in the reign of Edward III., the proposition, true or false, will be of little importance. They may have sat at the bottom of Westminster Hall while the lords occupied the upper end; but that they were ever intermingled in voting appears inconsistent with likelihood and authority. The usual object of calling a parliament was to impose taxes; and these, for many years after the introduction of the commons, were laid in different proportions upon the three estates of the realm. Thus, in the twenty-third of Edward I., the earls, barons, and knights gave the king an eleventh, the clergy a tenth, while he obtained a seventh from the citizens and burgesses: in the twenty-fourth of the same king the two former of these orders gave a twelfth, the last an eighth: in the thirty-third year a thirtieth was the grant of the barons and knights and of the clergy, a twentieth of the cities and towns. In the first of Edward II. the counties paid a twentieth, the towns a fifteenth: in the sixth of Edward III. the rates were a fifteenth and a tenth. These distinct grants imply distinct grantors; for it is not to be imagined that the commons intermeddled in those affecting the lords, or the lords in those of the commons. In fact, however, there is abundant proof of their separate existence long before the seventeenth of Edward III., which is the epoch assigned by Carte, or even the sixth of that king, which has been chosen by some other writers. Thus the commons sat at Acton Burnell in the eleventh of Edward I., while the upper house was at Shrewsbury. In the eighth of Edward II. 'the commons of England complain to the king and his council,' &c. These must surely have been the commons assembled in parliament, for who else could thus have entitled themselves? In the nineteenth of the same king we find several petitions, evidently proceeding from the body of the commons in parliament, and complaining of public grievances. The roll of 1 Edward III., though mutilated, is conclusive to show that separate petitions were then presented by the commons, according to the regular usage of subsequent times; and, indeed, the preamble of 1 Edward III., stat. 2, is apparently capable of no other inference."*

Having thus put the reader in possession of the few leading facts, that have been established on sufficient evidence, respecting the formation of the legislative body, we shall proceed to give an account of the legislation itself during the present period of our history.

The principal legislative acts worthy of notice in the reign of Henry III. are his confirmation of the Great Charter and of the Charter of the Forest. "These," observes Sir Matthew Hale, "were the great basis upon which the settlement of the English laws stood in the time of this king and his son. There are also some additional laws of this king yet extant which much polished the common law,—namely, the statutes of Merton and Marlbridge, and some others." † To this reign belongs Bracton's Treatise, of which Sir Matthew Hale gives the following account:—"It yields us a great evidence of the growth of the laws between the times of Henry II. and Henry III. If we do but compare Glanville's book with that of Bracton, we shall see a very great advance of the law in the writings of the latter over what they are in Glanville. It would be needless to instance particulars. Some of the writs and processes do, indeed, in substance agree, but the proceedings are much more regular and settled as they are in Bracton above what they are in Glanville. The book itself, in the beginning, seems to borrow its method from the civil law. But the greatest part of the substance is, either of the course of proceedings in the law known to the author, or of resolutions and decisions in the courts of King's Bench and Common Bench, and before justices itinerant; for now the inferior courts began to be of little use or esteem." ‡

There are one or two statutes or ordinances of Henry III., upon which, though not acts of parliament, it seems proper to make a few remarks. And first in respect to the *Assisa Panis et Cervisiae*, the Assize of Bread and Ale, which, however, though generally given as a statute of 51 Henry III., is printed in the Record Commission edition of the Statutes as of uncertain date, what is remarkable is, that to the parliament or council at which it was passed, held at Winchester, were called not only "*omnes magnates terrae*," all the great men of the land, but "omnes uxores comitum et baronum qui in bello occisi fuerunt, vel captivorum,"—that is, all the WIVES of the earls and barons who were slain in battle or captive. §

The *Statutum de Scaccario*, the Statute of the Exchequer, which is usually attributed to the fifty-first year of Henry III., though printed by the Record Commission among the statutes of uncertain date, is remarkable, if we assume the common date, as being the first in the French language, and just two centuries after the Conquest. Barrington

* Middle Ages, vol. iii. pp. 54—56.
† History of the Common Law of England, chap. vii.
‡ Ibid.
§ Annal. Waverl., quoted by Barrington, On the Statutes, p. 41.

considers this fact as showing that the reason usually assigned for our laws being in the French language,—namely, that it was the will of the conquering Normans,—is by no means satisfactory; and he conceives the practice to have arisen from there "being a standing committee in parliament to receive petitions from the provinces of France which formerly belonged to the crown of England." "This conjecture," he adds, "seems to be strongly confirmed by the statutes having continued to be in English from the time in which we *fortunately* were dispossessed of the French provinces, as most of the statutes in the reign of Henry VI. continue to be in French." "Another reason," he proceeds, "for the statutes being in French arose from the general affectation which prevailed at this time of speaking the French language, insomuch that it became a proverb, that *Jack would be a gentleman if he could speak French.* It was very corrupt indeed, and therefore Chaucer says [of his Prioress, in the Canterbury Tales,—

Full well she sange the service divine,]
Entuned in her nose full swetely,
And French she spake full fair, and fetisly,*
After the school of Stratford atte Bow;
For *French of Paris* was to her unknow."

Barrington further says—"I cannot conclude these observations without taking notice that the present statute of Henry III., in French, is inserted between others in Latin; and that, during the same session of parliament, there is an instance in the statute of Westminster the Second (which is, properly speaking, a *Capitularium*)† of French chapters being inserted in the same law, preceded and followed by chapters in Latin. From a very diligent and attentive perusal of the Statute-Book, the best general rule which can be given with regard to an act of parliament being in Latin or French is, that where the interests of the clergy are particularly concerned the statute is in Latin. I do not, however, pretend to say that this rule is without exceptions." ‡

We may add to what has been said on this subject the following remark in the Introduction to the edition of the Statutes by the Record Commission:—"Nothing is known with certainty on this subject; and at the present day it is utterly impossible to account, in each instance, for the appearance of the statute in French or in Latin. It seems, on the whole, to be highly probable that, for a long period of time, charters, statutes, and other public instruments were drawn up indiscriminately in French or Latin, and generally translated from one of those languages into the other before the promulgation of them, which in many instances appears to have been made at the same time in both languages."

The title of *Capitalis Justitiarus Angliæ*, i.e., Chief Justiciary of England, ended in Philip Basset, (the third of his family who had held the office), who was advanced to that place in the forty-fifth of Henry III.; and the first who had the office of *Capitalis Justitiarius ad placita coram Rege tenenda*, i.e., Chief Justice of the King's Bench, was Robert de Bruis, appointed in the fifty-second of Henry III.*

The salary of the Justices of the Bench (*i.e.* of the Common Pleas) in the twenty-third year of this reign was 20*l.*; in the forty-third year, 40*l.* In the twenty-seventh year the Chief Baron of the Exchequer had 40 marks; the other barons 20 marks; and in the forty-ninth year, 40*l.* per annum. The salary of the Justices *Coram Rege* (of the King's Bench) was, in the forty-third year, 40*l.* per annum. The Chief Justice of the Common Pleas had, in the forty-fourth of Henry III., 100 marks per annum; and another who succeeded in this same year, had 100*l.* per annum. In the thirty-fifth of Henry III. the Chief Justice of the King's Bench had 100 marks per annum.†

We come now to the time of Edward I., who has been styled the English Justinian, not because he resembled that monarch in making either a digest or a code, but because, according to Sir Matthew Hale, "in his time the law, *quasi per saltum*, obtained a very great perfection."

We shall divide the enactments of this prince, to which we propose more particularly to call the reader's attention, into two classes—1. Those of a political or constitutional nature—2. Those that regard the rights of private property and the administration of justice between man and man. And we shall be guided in our notice of them not so much by the mere chronological order, as by what may appear their relative degree of importance.

I. The first in importance in the first class are the several confirmations of the Great Charter and of the Charter of the Forest.‡ In the thirteenth year of this reign the king was entreated by the parliament to confirm all former charters; a form of *inspeximus*§ and confirmation was accordingly agreed upon. In the twenty-fifth year there was a more solemn confirmation of the Great Charter in the statute called *Confirmatio Chartarum*. This statute ordained that the Charters of Liberties and of the Forest should be kept in every parish; and that they should be sent under the king's seal as well to the justices of the Forest as to others, to all sheriffs and other officers, and to all the cities in the realm, accompanied by a writ commanding them to publish the said charters, and declare to the people that the king had confirmed them in all points. All justices, sheriffs, mayors, and other ministers were directed to allow them when pleaded before them; and any judgment contrary thereto was to be null and void. The charters were to be sent under the king's seal to all cathedral churches throughout the realm, there to remain, and to be read to the people twice a-year. It was ordained that all archbishops and bishops

* "Neatly."—We have corrected the quotation, which is given by Barrington from a very bad text.
† That is, a collection of laws, and not a single law.
‡ Observ. on Stat. pp. 47, 48.

* Dugd. Orig. 38. † Ibid. 104.
‡ The Charter of the Forest was first granted in the 9th of Henry III. (A.D. 1224.)
§ That is, an *inspection* and ratification of the former *verbatim*.

should pronounce sentence of excommunication against those who, by word, deed, or counsel, did contrary to the aforesaid charters. It was likewise ordained that such aids and tasks as had been granted to the king by the people of his realm "beforetime towards his wars and other business, of their own grant and good will, however they were made," should not be drawn into custom or precedent. Moreover, the king granted for him and his heirs, that no aids or prises should be taken but by consent of the realm, saving the ancient aids and prises due and accustomed. Mr. Reeves remarks* that this is the first mention in the Statute-Book of a renunciation of right to levy money on the subject without consent of parliament. There had been a like declaration in the charter of John, but it was omitted in that of Henry III. Further, because there had been a particular outcry against a tax of forty "*soudz*"† upon every sack of wool, it was declared that this should not be again levied without the "common assent and good will of the commonalty of the realm."

The next notice of the two charters of liberties is in the preamble to the statute *De finibus Levatis*, 27 Edw. I., where the king refers to the former confirmations of them, and again solemnly ratifies them. In this ratification, however, there is a somewhat ominous clause, "saving always our oath, the right of our crown, and our exceptions and challenges, and those of all other persons."

In the next year something more was done for the confirmation of the charters in the statute of *Articuli super Chartas*, 28 Edw. I. This Act mentions that the charters, notwithstanding the several confirmations of them, were not observed, and this is attributed to there being no specific penalty prescribed for the violation of them. To remedy this the charters are directed to be delivered to every sheriff in England, under the king's seal, to be read four times a-year before the people in the full county. For the punishing of offenders it is enacted that "there shall be chosen, in every shire court, by the commonalty of the same shire, three substantial men, knights, or other lawful, wise, and well-disposed persons, which should be justices sworn and assigned by the king's letters patent under the great seal, to hear and determine without any other writ, but only their commission, such plaints as shall be made upon all those that commit or offend against any point contained in the foresaid charters, in the shires where they be assigned, as well within franchises as without, and as well for the king's officers out of their places as for others; and to hear the plaints from day to day without any delay, and to determine them, without allowing the delays which be allowed by the common law. And the same knights shall have power to punish all such as shall be attainted of any trespass done contrary to any point of the foresaid charters, where no remedy was before by the common law, as before is said, by imprisonment, or by ransom, or by amerciament, according to the trespass." The statute expressly declares that this special proceeding shall only be in cases where there was no remedy before by the common law. If the three commissioners could not attend, two were declared sufficient. The king's sheriffs and bailiffs were to be attendant on these commissioners.

The next public Act upon the subject of the charters is the *Ordinatio Forestæ*, 33 Edw. I., containing some regulations respecting the purlieus of the forests. In the following year there was another "Ordinance of the Forest."

The famous statute *de Tallagio non concedendo* was first passed in the year 1297 (the 25th of Edward I.), but in more explicit terms, and in the form in which it was always afterwards referred to, in 1306, the last year but one of the reign. This statute was occasioned by the question about levying money for foreign wars. In its latter and more complete form it declares that no tallage or aid (which Mr. Reeves thinks* included those feudal aids that had been excepted in the statute of *Confirmatio Cartarum*) should be imposed or levied by the king or his heirs without the will and assent of the archbishops, bishops, earls, barons, knights, burgesses, and other freemen of the land. Nothing was to be taken by way of male-tolt† of sacks of wool. In regard to purveyance, it was declared that no officer of the king should take any corn, leather, cattle, or other goods, of any one without the consent of the owner. The following general declaration was also made in favour of the liberties of the subject: "That all men, both clerks and laymen, should have their laws, liberties, and free customs, as largely and wholly as they had used to have the same at any time when they had them best; and if any statutes had been made by the king, his ancestors, or any customs brought in contrary to them, or any manner of article contained in the present charter, that such manner of statutes and customs should be void and frustrate for evermore." Finally, all archbishops and bishops, for ever, were directed to read the statute in their cathedral churches, and openly pronounce a curse against all those who violated it in any point. The king put his seal to this statute or charter, as did the archbishops, bishops, and others, who all voluntarily swore to observe the tenor of it,—a sanction attended with the same solemnities as the several confirmations of the charters of liberties.

Of the same nature with the political statutes already mentioned were the *Statuta Walliæ*, 12 Edw. I., by which Wales was in a great measure put on the same footing as England with respect to its laws and their administration.

* Hist. of Eng. Law, vol. ii. p. 102.

† This word is put 'shillings' in the translation, but it could hardly be that; it was more probably 'pence' or 'halfpence,'—*sous*.

* Hist. Eng. Law, vol. ii. p. 105.

† Otherwise male-tent, and male toute. It is supposed by some to have been a kind of excise; by others, an impost laid on by the royal authority without consent of Parliament. Others conceive that the male-tolt was a duty upon malt—a notion which the act mentioned in the text is sufficient to confute.

II. The other statutes of this king relate more particularly to the administration of justice between subjects; and though they contain many chapters and clauses which may be considered as bearing upon the general or political interests of the country at large, as indeed in a certain sense all law may be viewed as doing, yet it will be convenient to class them under a separate head, as we previously intimated. Of these the principal are, the Statute of Westminster the First, Statute of Gloucester, Statute of Westminster the Second, of Westminster the Third, and *Articuli super Chartas*.

The statute 3 Edw. I., or of Westminster the First (so called to distinguish it from subsequent statutes, likewise named from parliaments held at Westminster in this reign), contains fifty-one chapters on a variety of subjects, and was made, says the preamble, "because the state of the holy church had been evil kept, and the prelates and religious persons of the land grieved many ways, and the people otherwise intreated than they ought to be, and the peace less kept, and the laws less used, and the offenders less punished than they ought to be." This collection of statutes, though usually termed the 'Statute of Westminster the First,' is, in fact, as we before observed, not one law but a body of laws, made at Westminster in Edward's first parliament. The same remarks will apply to the other *capitularia*, called the Statutes of Westminster, as well as to other documents, each of which is not a statute but a body of statutes, each chapter being a distinct law, generally on one subject, though sometimes the same chapter refers to different subjects. Technically, however, all the Acts passed in any one session of parliament are considered as forming only one statute, of which they are severally the chapters. A few of the subjects treated in the Statutes of Westminster the First more especially demand our attention here.

Chapter V. is as follows:—"And because elections ought to be free, the king commandeth, upon great forfeiture, that no man by force of arms, nor by malice, or menacing, shall disturb any to make free election." It has been supposed by some that this law referred rather to the election of sheriffs, coroners, and other officers, than to any representatives of the people in the parliament. However, it is admitted by the same parties that, as it is in general words, it may have a construction which will extend it to elections that have been appointed since for any purpose whatever.

Concerning wrecks of the sea, it is agreed, says Chapter IV., that when a man, a dog, or a cat escape quick (alive) out of the ship, such ship or barge, or anything therein, shall not be adjudged wreck; but the goods shall be saved and kept by view of the sheriff, coroner, or king's bailiff, and delivered into the hands of such as are of the town where the goods were found; so that, if any within a year and a day sue for them, and prove them to be his, or his lord's, and that they perished in his keeping, they shall be restored; if not, they shall remain to the king; and where wreck belongeth to another than to the king, he shall have it in like manner.

Chapter XII. of this statute deserves consideration on account of the discussion to which it has given rise, some being of opinion that the *peine forte et dure* (which will be explained presently) arose out of it. The words of the Chapter are, "That notorious felons, and which openly be of evil name, and will not put themselves in enquests of felonies that men shall charge them with before the justices at the king's suit, shall have strong and hard imprisonment (*prison forte et dure*), as they which refuse to stand to the common law of the land: but this is not to be understood of such prisoners as be taken of light suspicion."*

Britton describes this penance in the following terms:—"If they will not put themselves upon the country, let them be put to their penance until they pray to do it; and let their penance be this: that they be bare-footed, ungirded, and bare-headed, in their coat only, in prison upon the bare ground, continually, night and day; that they eat only bread made of barley and bran; that they drink not the day they eat, nor eat the day they drink; nor drink anything but water the day they do not eat; and that they be fastened down with irons."†

Lords Chief Justices Coke ‡ and Hale § have both given their opinion, that the *peine forte et dure*,—the punishment of pressing to death,—was anciently a punishment by the common law, and not such as any judges could have framed upon the general direction of this Act. But they both seem to have supposed that, though the statute could not, from the generality of its terms, have established that terrible punishment, it referred to that punishment already established and well known, which is proved by Barrington,‖ from a record in Rymer, not to have been the case, the statute meaning nothing more than confinement after the mode above described by Britton, as the word *prison* implies. As to the mode in which the *peine forte et dure* arose out of it, Barrington has the following ingenious conjecture:—"I should conceive, upon the whole, that the words in the present statute, which have occasioned these observations, namely, *prison forte et dure*, have been misconstrued, by substituting in the room of *prison* the word *peyne*. The record cited from Rymer proves beyond a possibility of doubt that, soon after this statute, the punishment was merely imprisonment, and an injunction to the officers, in whose custody the criminal was, not to provide him with any nourishment. I should imagine that the alteration in this punishment, by the different tortures afterwards used, arose from justices in eyre and justices of gaol-delivery not staying above two or three days in a county town, and who therefore could not wait for this tedious method of forcing the criminal to plead; as the record from Rymer shows that, in the instance already observed upon, the criminal

* Chap. xii. † Britton, iv. 11. ‡ 2 Inst. 178, 179.
§ Hist. of the Pleas of the Crown, c. 43, *sub fin.*
‖ Obs. on Stat. p. 59.

had been forty days in this close confinement. It seems likewise clear that, whatever this punishment might have been by the common law, this statute hath superseded it; and it is a presumption (against even such great authorities as Lord Chief Justice Coke and Lord Chief Justice Hale) that there was no such punishment by the common law, as it is admitted that a traitor cannot receive this punishment, because the words of the statute confine it to the case of felons; the argument is also very strong, that, if felons were subjected to this sentence, traitors would still less have escaped it."*

The judgment of *peine forte et dure*, which, as latterly administered, consisted in pressing the prisoner to death by loading him with heavy weights,—a sharp stone, or piece of timber, being also sometimes, *by way of favour*, laid under his back,—to accelerate the extinction of life, was submitted to with the object of avoiding the corruption of blood and escheat of lands which would have followed conviction after a plea. Instances of the application of this torture, or of the preliminary and warning process of tying the thumbs together with whipcord, which appears to have been introduced in later times, from motives of humanity, without any statutory sanction, occur down to a comparatively recent period. A prisoner was forced to plead at the Old Bailey, by tying his thumbs together, in the year 1734. At last, however, the *peine forte et dure* was in effect abolished by the statute 12 Geo. III. c. 20, which enacted that every prisoner who, being arraigned for felony, should stand mute or not answer directly to the offence, should be convicted of the same, and the same judgment and execution thereupon awarded as if he had been convicted by verdict or confession of the crime.

The Statute of Gloucester consists of fifteen chapters, most of which relate to the amendment of the common law as then practised. One of its chapters (the 8th) enacts that the cause of action in the king's superior courts shall amount at the least to forty shillings.

In the next year was passed the famous statute 7 Edw. I., entitled *De Viris Religiosis*, and commonly referred to as the first statute of mortmain. The object of this law was to enforce and to extend a provision of Magna Charta, which prohibited all gifts of land to religious societies without the consent of the lord of the fee. Notwithstanding that provision, religious men continued to appropriate lands, whereby services due for such lands were withdrawn and the incidents of tenure were diminished. The statement of Baker in his Chronicle, even allowing for a little exaggeration, that the number of monasteries built in the reign of Henry I. was so great that almost all the labourers of the country became bricklayers and carpenters, conveys an idea of the extent to which this had proceeded. It was now ordained, in the most comprehensive expressions that could be devised, that no person, religious or other, should buy or sell, or under the colour of any gift or lease, or by any other "craft or engine," appropriate to himself any lands or tenements, so as such lands should anywise come into mortmain,* under pain of forfeiture of the same. Notwithstanding the care with which this statute was worded, a method of evading it was soon discovered by the ecclesiastics; for, as the statute extended only to gifts and conveyances between the parties, the religious houses set up a fictitious title to the land which they wished to have, and brought an action to recover it against the tenant, who by fraud and collusion made no defence, and thereby judgment was given for the religious house, which then *recovered* the land by sentence of law upon a supposed prior title. "And thus," observes Blackstone, "they had the honour of inventing those fictitious adjudications of right which are since become the great assurance of the kingdom under the name of *Common Recoveries*."† This was also again defeated by another provision in 13 Edw. I. c. 32. Another provision was made, by statute 35 Edw. I., to check the waste suffered by religious possessions being drained into foreign countries. It is thereby ordained that no abbot, prior, master, warden, or other religious person of whatsoever condition, shall convey any tax imposed by them or their superiors upon their respective religious houses out of the kingdom under heavy penalties.

We now come to the famous collection of laws passed in the 13th of Edward I., commonly known by the name of the Statute of Westminster the Second. The first chapter of this, entitled *De Donis Conditionalibus*, has given rise to more discussion perhaps than any other enactment in the Statute Book. A conditional fee was a fee or gift restrained to some particular heirs, to the exclusion of others. "It was called a conditional fee," says Blackstone, "by reason of the condition expressed or implied in the donation of it, that, if the donee died without such particular heirs, the land should revert to the donor." "Now," he proceeds, "with regard to the condition annexed to these fees by the common law, our ancestors held that such a gift (to a man and the heirs of his body) was a gift upon condition that it should revert to the donor if the donee had no heirs of his body; but if he had, it should then remain to the donee. They therefore called it a fee-simple on condition that he had issue; so that, as soon as the grantee had any issue born, his estate was supposed to become absolute by the performance of the condition, at least for three purposes:—1. To enable the tenant to alien the land, and thereby to bar not only his

* Obs. on Stat. pp. 61, 62.

* In "mortuam manum,"—literally, into a dead hand. Lands made over to corporate bodies of any description, whether clerical or civil, are now said to go into mortmain; but the term seems at first to have been used only in reference to religious bodies, which indeed were formerly the only corporations. As religious or professed persons were considered dead in law, lands coming to them were said to pass into dead hands. In the preamble to the present statute the reference is exclusively to religious corporations, and the effect of lands passing into their possession is described to be that thereby "the services that are due of such fees, and which at the beginning were provided for defence of the realm, are wrongfully withdrawn, and the chief lords do lose their escheats of the same."

† Com. ii. 271.

own issue but also the donor of his interest in the reversion; 2, to subject him to forfeit it for treason, which he could not do till issue born longer than for his own life, lest thereby the inheritance of the issue, and reversion of the donor, might have been defeated; 3, to empower him to charge the land with rents, commons, and certain other incumbrances, so as to bind his issue. However, if the tenant did not, in fact, alien the land, the course of descent was not altered by this performance of the condition; for which reason, in order to subject the lands to the ordinary course of descent, the donees of these conditional fee-simples took care to alien as soon as they had performed the condition by having issue, and afterwards repurchased the lands, which gave them a fee-simple absolute, that would descend to the heirs general, according to the course of the common law."* Now the feudal aristocracy, to put a stop to this practice, obtained the chapter *De Donis* in the statute of Westminster the Second, which enacted that thenceforth the will of the donor be observed; and that the tenements so given (to a man and the heirs of his body) should at all events go to the issue, if there were any; or, if none, should revert to the donor. "Upon the construction of this Act of parliament," proceeds Blackstone, "the judges determined that the donee had no longer a conditional fee-simple, which became absolute and at his own disposal the instant any issue was born; but they divided the estate into two parts, leaving in the donee a new kind of particular estate, which they denominated a *fee-tail*;† and vesting in the donor the ultimate fee-simple of the land, expectant on the failure of issue, which expectant estate is what we now call a reversion."

"The perpetuities," says Barrington, "established by this statute, in process of time, had so much contributed to the increase of power in the great barons that, about two centuries afterwards, it was in a great measure evaded by the invention of what is called a *common recovery*" (of which we shall speak in the proper place): "it was impossible for the crown to procure a repeal of the law in the House of Lords, and therefore the judges had probably an intimation that they must, by *astutia*, as it is called, render a statute of no effect, which the king could not extort an alteration of from one part of the legislature."‡ Barrington adds, in a note, that the statute of Westminster the Second, in reference to Chapter I. of it, has been called the Statute of Great Men.

A considerable portion of this statute, which consists of fifty chapters, treats of improvements in the administration of justice, as far as the jurisdiction of the courts and the course of proceeding are concerned.

The 30th chapter contains the law respecting the justices of *nisi prius*, which has since been called the Statute of *Nisi Prius*. It ordained that two justices sworn should be assigned, before whom only, associated with one or two of the discreetest knights of the shire into which they came, should be taken all assizes of novel disseisin, mortdauncestor, and attaints. It was also ordained that no inquest should be taken before any of the justices of the bench, *unless* a certain day and place were appointed in the county, in presence of the parties, and the day and place inserted in a judicial writ, in certain prescribed words, declaring that the inquest should be taken at Westminster unless (*nisi*) certain persons named (namely, the judges of assize) should come to those parts before a certain day,—by which day the said judges, however, were sure to be there. Thus, the trial in the county was in later times, from the clause in the writ, said to be at *nisi prius* (unless first), though in the form given in the statute the word *prius* is not inserted, as it now is, and indeed was usually at that time. It is proper here to add, that these justices have, by virtue of several statutes, a criminal jurisdiction also. These judges of assize and *nisi prius* superseded the ancient justices in eyre, *justitiarii in itinere*.

There were other improvements made in the administration of justice by this statute, such as an execution given against land by the writ called *Elegit*, the introduction of bills of exception, and the proceeding by *scire facias*, to revive a judgment of a year's standing. These we shall only name, partly because our space is limited, and partly because a satisfactory explanation of them would be difficult, if not impossible, in a popular work. The mere mention of them, however, will help to convey some idea of the importance of this statute of Westminster the Second in the history of English law.

The next statute of this year, 13 Edw. I., is the Statute of Winchester, containing some provisions for enforcing the ancient police, and ordaining some new regulations. This statute throws considerable light on the state of society then existing. The preamble recites, that when robberies, murders, &c. were committed, the inhabitants of the county were more willing to excuse the offender than to punish for the injury to a stranger; and that if the felon was not himself an inhabitant of the county, yet the receiver of the stolen goods frequently was so, which produced the same partiality in juries, who did not give proper satisfaction in damages to the party robbed.* To remedy this, a penalty is established by the statute, making the people of the county answerable for the felonies done among them. It further directs that *cries*, that is the *hue*† and *cry*, should be solemnly made in all counties, hundreds, markets, &c., so that none might excuse himself by ignorance. It also directs that the walls of the great towns shall be shut from sun-setting to sun-rising, and that watch-

* Com. ii. 110, 111.
† From the French *tailler* or the barbarous Latin *taliare*, to cut.
‡ Obs. on Stat. p. 92.

* We give this preamble from Barrington, who observes in a note, "I have given the substance of this preamble, which is absolutely unintelligible in the common translation."—P. 105.
† Barrington thinks that *hue* comes from the word *huer* to *pursue*; and therefore that *hue* and *cry* will mean pursuit and cry.

men shall be set; that the highways shall be cleared of wood to the breadth of two hundred feet, in order to prevent the felon's concealing himself; and that every man, according to his substance, shall have arms in his house, in order to pursue the felon effectually.

The statute called *Quia Emptores*, from the two first words of it, belongs to the 18th Edw. I. It was occasioned by the consequences of the restraint imposed on the alienation of land. "For-as-much," says the Act, "as purchasers of lands and tenements of the fees of great men and other lords have entered into their fees, to the prejudice of the lords, the freeholders of such great men having sold their lands and tenements to be holden in fee of their feoffors, and not of the chief lords of the fees, whereby the same chief lords have many times lost their escheats, marriages, and wardships of lands and tenements belonging to their fees," it is ordained, "that from henceforth it shall be lawful to every freeman to sell at his own pleasure his lands and tenements, or part of them, so that the feoffee shall hold the same lands or tenements of the chief lord of the same fee, by such service and customs as his feoffor held before." This, therefore, was a permission to alienate in such a manner that the new holder of the land became the immediate vassal of the chief lord, but a prohibition of subinfeudation, by which the new holder of the land became the immediate vassal of the former tenant, who thus constituted himself what was called a mesne, that is, an intermediate, lord.

Another Act usually printed as of this year, though inserted by the Record Commission among the statutes of uncertain date, is the *Modus levandi Fines*, stating the course to be pursued in *levying a fine*. "A fine," says Blackstone, "is sometimes said to be a feoffment of record, though it might with more accuracy be called an acknowledgment of a feoffment of record; by which is to be understood that it has at least the same force and effect with a feoffment in the conveying and assuring of lands, though it is one of those methods of transferring estates of freehold by the common law, in which livery of seisin is not necessary to be actually given, the supposition and acknowledgment thereof in a court of record, however fictitious, inducing an equal notoriety. But, more particularly, a fine may be described to be an amicable composition or agreement of a suit, either actual or fictitious, by leave of the king or his justices, whereby the lands in question become, or are acknowledged to be, the right of one of the parties. In its original it was founded on an actual suit, commenced at law for recovery of the possession of land or other hereditaments; and the possession thus gained by such compositions was found to be so sure and effectual that fictitious actions were, and continued to be, every day commenced, for the sake of obtaining the same security."*

A *fine* (from the Latin *finis*, an end) is so called, says the statute 18 Edw. I., because it puts an end to all suits concerning the matter in question. The statute 18 Edw. I., *Modus levandi Fines*, did not originate fines, but declared and regulated the manner in which they should be levied or carried on. Upon the detail of these technical minutiæ, however, we cannot enter here; but we shall have occasion to return in a future chapter to the subject of fines, which makes an important figure in the history of English tenures.

It remains to give some account of the jurisdiction of the various courts in this reign.

The different courts are mentioned by Fleta in the following order: 1. The High Court of Parliament, of which, having already spoken, and having again to speak, we shall not say more here. 2. The Court of the Seneschal, Dapifer, or Steward of the Household, who is described by Fleta* as filling the place of the chief justiciary (an office, as was before observed, abolished in the last reign), who used to determine the king's own causes, and administer justice without writ. The jurisdiction of this court both before and after the passing of the statute, may be learned from the 3rd chapter in the statute, *Articuli super Chartas*, 28 Edw. I., expressly made to limit it. It is thereby ordained that this court "from henceforth shall not hold plea of freehold, neither of debt nor of covenant, nor of any contract made between the king's people, but only of trespass done within the house, and of other trespasses done within the verge, and of contracts and covenants that one of the king's house shall have made with another of the same house, and in the same house, and none other where. And they shall plead no plea of trespass, other than that which shall be attached by them before the king depart from the verge where the trespass shall be committed; and shall plead thence speedily from day to day, so that they may be pleaded and determined before that the king depart out of the limits of the same verge where the trespass was done. And if it so be that they cannot be determined within the limits of the same verge, then shall the same pleas cease before the steward, and the plaintiffs shall have recourse to the common law." The verge or bounds of the household contained twelve miles,† which circuit or space, was called the *virgata regia*, because it was within the government of the marshal, who carried a *virga* (rod) as the badge of his office. Before the passing of the statute above quoted, the steward of the household appears to have exercised a very considerable portion of the powers of the chief justiciary, and to have been virtually the high steward (of which officer we hear little or nothing, he being, for the reasons mentioned in last Book, probably considered as in a state of abeyance). The judicial functions which, as shown in last Book, the chief justiciary had borrowed from the steward on the extinction of the

* Com. ii. 249.

* Fleta, 66. † Ibid., 66.

office of the former, appear to have returned again to the latter.

3. The next court of the king mentioned in Fleta, is that held in his Chancery, over which, says Fleta, was set some discreet person, as a bishop, or other dignified ecclesiastic; and to him was committed the keeping of the great seal. 4. After this, he places a court held before auditors specially appointed *a latere regis*, as it was called, that is, from the persons usually in attendance upon the king. The business of these auditors was, not to determine, but to report to the king what they had heard. 5. His justices, before whom, and no others, (except himself and his council, or special auditor,) false judgments and errors of justices were reversed and corrected. 6. Next to these, are ranked "the justices sitting at the Exchequer;" and 7, those in *banco* at Westminster. 8. The justices of gaol-delivery. 9. Those assigned to take assizes, jurors, inquisitions, certificates, and attaints. 10. The justices itinerant or in eyre, "appointed to the first assizes for hearing and determining all pleas criminal and civil." 11. The justices itinerant for pleas of the forest. All these were the king's courts. There were, besides, the county, town, and hundred courts; those in the king's manors, and those in cities and boroughs.*

Some account has already been given in last Book of the trial by jury, or rather of what it originally was. It appears from Fleta and Britton, that at the time of which we are now writing, the jurors were still considered as *witnesses;* and to call witnesses before them would have been contrary to the supposition by which they sat as jorors, viz., that they knew more about the matter in question than any other equal number of men. Coming from the vicinage where the fact took place, they were better able than any others to *speak the truth*, as they were sworn to do, and that from their own knowledge, and not from testimony brought before them in court. When the condition of society was so changed, that, notwithstanding the supposition of their personal knowledge of the fact, they were in reality wholly ignorant of it; and it was necessary that evidence should be brought before them, before they could pronounce on the guilt or innocence of the party; then the old proceeding became productive of injustice and oppression, till it was at length reformed by the calling of witnesses to furnish the twelve jurors with the necessary information. But this last improvement was not thoroughly effected till the time of Edward VI. and Queen Mary. The first evidence admitted consisted of written evidence; such as depositions, informations, and examinations, taken out of court: this led gradually to a sparing use of oral testimony.†

"The inclination in favour of juries," says Mr. Reeves, "had gone so far in this reign, that there seemed a backwardness to allow the trial by duel, when a defendant insisted upon it as his right; which could only be in an appeal. Should there be any slip in the proceedings of which the defendant had omitted to avail himself, the judge was *ex officio* to examine and point it out, in order to stop the duel. Fleta says that this was a trial not to be resorted to rashly, if by any possible means it could be avoided. Another alteration in our criminal proceedings was, that the eyre was no longer to be a time of limitation for the prosecution of offenders; but they might be prosecuted at any distance of time."* The eyres were every seven years, and sometimes at shorter intervals: no one could be indicted for anything done before the preceding eyre.

We shall conclude our account of the state of the law in this reign with some remarks by Lord Chief Justice Hale, on various points not included in what has preceded. With regard to the rolls of judicial proceedings, especially those in the King's Bench and Common Pleas, and in the eyres, he says, "I have read over many of them, and do generally observe—1. That they are written in an excellent hand. 2. That the pleading is very short, but very clear and perspicuous; neither loose or uncertain, nor perplexing the matter either with impropriety, obscurity, or multiplicity of words: they are clearly and orderly digested—effectually representing the business that they intend. 3. That the title and the reason of the law upon which they proceed (which many times is expressly delivered upon the record itself) is perspicuous, clear, and rational. So that their short and pithy pleadings and judgments do far better render the sense of the business, and the reasons thereof, than those long, intricate, perplexed, and formal pleadings, that oftentimes of late are unnecessarily used."†

With regard to the reports, he says, "they are VERY GOOD, but VERY BRIEF. Either the judges then spoke less, or the reporters were not so ready-handed, as to take all they said. Some of these reports, though broken, yet the best of their kind, are in Lincoln's Inn library."‡ With respect to the law treatises written in this reign, such as those books known by the names of Fleta, the Mirror, Britton, and Thornton, he says that, by comparing them with Bracton, "there appears a growth and a perfecting of the law into a greater regularity and order." Lord Chief Justice Coke observes, that "in the reign of Edward II., Edward I., and upwards, the pleadings were plain and sensible, but nothing curious; evermore having chief respect to the matter, and not to forms of words."§

We have mentioned the title of Capitalis Justitiarius (or chief justice) as having been borne by the chief of the King's Bench, in the latter part of the reign of Henry III. The first mention of *capitalis justitiarius* of the bench (Common Pleas) is in the first year of Edward I.

§ 1 Inst. 304. a.

In the reign of Edward II. begin the year-books, so called because they were published annually from the notes of certain persons who were paid a stipend by the crown for the work. These contain reports of cases adjudged from the beginning of this reign to the end of Edward III., and from the beginning of Henry IV. to the end of Henry VIII. It may be useful to add a short explanation of the technical meaning of the terms "report" and "record." A record is a concise entry of all the effective steps made in a judicial proceeding. A report is a short note of the progress towards making those steps; of the debate in court concerning some of them; the decision and the grounds on which it is supported.

We may here notice the compilation entitled the 'Mirror of Justices,' about the antiquity of which much difference of opinion has existed; some pronouncing it older than the Conquest—others ascribing it to the time of Edward II.; both which opinions may be partly right. A work as old as the earlier date may have been taken up in the reign of Edward II., and worked into the present form, which partakes somewhat of the marvellous, or even the monstrous. "This book," observes Mr. Reeves, "should be read with great caution, and some previous knowledge of the law as it stood about the same period; for the author certainly writes with very little precision. This, with his assertions about Alfred, and the extravagant punishments inflicted by that king on his judges, has brought his treatise under some suspicion."*

Mr. Reeves gives the following account of the foundation of Lincoln's Inn:—

"There is nothing but a vague tradition to give us any trace of the places where the practisers and students of the law had their residence before the reign of this king. But in the reign of Edward II. we are informed that such places were called *hostels*, or *inns of court*, because the inhabitants of them belonged to the king's courts. It is reported that William, *Earl of Lincoln*, about the beginning of this reign, being well affected to the study of the laws, first brought the professors of them to settle in a house of his, since called *Lincoln's Inn*. The earl was only lessee under the bishops of Chichester; and many succeeding bishops, in after times, let leases of this house to certain persons, for the use and residence of the practisers and students of the law; till, in the 28th year of the reign of Henry VIII., the Bishop of Chichester granted the inheritance to Francis Sulyard and his brother Eustace, both students; the survivor of whom, in the twentieth year of Queen Elizabeth, sold the fee to the benchers for 520*l.*"†

Since the separation of the Chancery from the *Aula Regis*, the rolls and records of the former had been kept separate, and of late they had greatly multiplied. To relieve the chancellor of that duty, a particular officer was appointed for the keeping of them. With the consent of the chancellor, John de Sandale, William de Armyn was appointed *keeper*, or *master of the rolls*, in the twentieth year of this reign.*

As we have before observed, the reign of a single weak prince interpolated here and there in the course of a long line of princes, most of whom are energetic and able, will finally be found to advance the liberty of the subject. Thus, compare the state of things under Henry II. or Richard I., with that under Edward I., and we find the effect of the interpolation of the two feeble princes John and Henry III. The royal prerogative had declined considerably from Henry II. to Edward I.: and when we again compare the reign of Edward III. with that of Edward I., we are struck with the change, produced no doubt in great part by the feeble reign of Edward II. When we come to look at the state of things under Edward III., notwithstanding his vigorous and warlike character, and notwithstanding even his great victories over the French, and the *prestige* of military glory attached to his name, we find the royal prerogative sensibly declining, as exemplified in the statutes respecting purveyance, the jurisdiction of the steward's and marshal's courts, the power of alienation accorded to the king's tenants *in capite*, &c. The Great Charter and the Charter of the Forest were confirmed no less than *fifteen* times in this reign. This has by some, indeed, been taken as an indication rather of the king's disposition to break them than of anything else. However, it also indisputably showed a power in the parliament, to which the king deemed it convenient to manifest a semblance of respect. To these two charters was sometimes added a confirmation of all franchises and privileges enjoyed by cities, boroughs, or individuals. Besides this, particular parts of Magna Charta were especially re-enacted. Thus, it was declared by stat. 5 Edw. III. c. 9, that no man should from thenceforth be attached on any accusation, nor forejudged of life or limb, nor his lands, tenements, goods, nor chattels, seized into the king's hands, against the form of the Great Charter and the law of the land; and again, by stat. 28 Edw. III. c. 3, that no man, of what estate or condition soever, should be put out of land or tenement, nor taken, nor imprisoned, nor disinherited, nor put to death, without being brought in to answer by due process of law. It may be presumed to have been in the same spirit that the stat. 4 Edw. III. c. 14 was made, ordaining that "a parliament should be holden every year once, and more often if need be;" which enactment was renewed by stat. 36 Edw. III. st. 1, c. 10. It is true that these constant renewals of important laws which we meet with in our earlier reigns, show very lax notions as to the binding force of laws; and, indeed, our earlier kings do not seem to have considered any laws of their predecessors which seemed against their own interests binding on them till they had specially confirmed them; and more-

* Hist. of Eng. Law, vol. ii. 359.
† Ibid., vol. ii. p. 366.

* Reeves, vol. ii. p. 362.

over did not scruple to use the meanest subterfuges to evade them. But sincerity and love of truth are among the last virtues learned by civilized men; and it is vain to look for them in the earlier stages of any people's social progress.

"The statutes now," (14 Edw. III.) observes Barrington, "begin to appear in a new and more regular form; the titles henceforward are almost always English;" (though the body of the statutes continues to be in the French language;) "and the session of parliament is generally held at Westminster, whilst the preamble in every instance makes express mention of the *concurrence of the commons.*"*

The most important statute of this reign—at least that which most demands notice in a work like the present—is the Statute of Treasons, the 25th Edw. III. st. 5, c. 2.† It defines far more particularly than had been done before what should be considered as treason. The treasons declared are under the following heads:—To compass or imagine the death of the king, queen, or that of their eldest son and heir; to violate the king's companion, or the king's eldest daughter unmarried, or the wife of the king's eldest son and heir; to levy war against the king in his realm, or be adherent to the king's enemies in his realm, giving to them aid and comfort in the realm, or elsewhere; of which a man must be provably attainted of open deed by people of his own condition; to counterfeit the king's great or privy seal, or his money; to bring into the realm false money counterfeit to the money of England, or the money called *Lushburgh*, or other, like to the money of England, knowing it to be false, to merchandise, or make payment in deceit of the king and his people; to slay the chancellor, treasurer, or the king's justices of the one bench or of the other, justices in eyre or of assize, or any other justices assigned to hear and determine, being in their places, doing their offices. All the above cases, says the statute, shall be judged treason that extends to our lord the king and his royal majesty; and of such treasons the forfeiture of the escheats belongs to the king, as well of lands and tenements holden of another as of himself. Moreover (the statute goes on to say), there is another manner of treason, viz.—when a servant slays his master, a wife her husband, or when a man, secular or religious, slays his prelate, to whom he owes faith and obedience: in these treasons the forfeiture is to go to the lord of the fee. And thus this act divides treasons into *high* and *petit*—the distinction by which they have since been known.

There have been many comments on the words *compass* and *imagine;* and it does not seem probable that any comments would be able to render them very precise. Mr. Barrington observes, "I have looked into the laws of most countries in Europe on this head, which in general are much more loosely worded than the present statute."*

By the statute 36 Edw. III. stat. 1, c. 15, it was ordered that henceforth pleas should be pleaded in the English tongue, and inrolled in Latin. The reasons stated for this alteration we shall give in the words of the statute (with which reasons, by the by, the French, in which the statute is worded, seems strangely at variance):†—"Because it is often showed to the king by the prelates, dukes, earls, barons, and all the commonalty, of the great mischiefs which have happened to divers of the realm; because the laws, customs, and statutes of this realm be not commonly holden and kept in the same realm, for that they be pleaded, showed, and judged in the French tongue, which is much unknown in the said realm; so that the people which do implead, or be impleaded, in the king's courts, and in the courts of other, have no knowledge nor understanding of that which is said for them or against them by their serjeants and other pleaders;" and because the king, the nobles, and others who have been in divers regions and countries have observed that they are better governed, because their laws are in their own tongue. The same enactment contains the following clause:—"That, by the ancient terms and forms of the declarations, no man be prejudiced, so that the matter of the action be fully showed in the declaration and in the writ."

Though the language of the courts in all arguments and decisions was henceforward to be English, the *written* language of the laws still continued French, and so continued for some centuries. Moreover, many significant terms and phrases of that language were still retained in debate and conversation upon topics of law.

The history of the courts of justice throws more light perhaps than the discussion of any other question, on the subject of constitutional law. It is for this reason that we have already devoted so much attention to the investigation of the real position and character of the great officers of the king's court:—and, for the same reason we shall continue throughout to devote as much of our space as we can spare to the discussion of the nature and jurisdiction of the respective courts.

In the earlier stages of its history, the parliament appears to have partaken considerably more of the character of a supreme court of judicature than it afterwards did; for not only were suits depending in the courts below brought into parliament by petition of the parties, but also on the motion of the judges themselves, who, in cases of difficulty, would rather take the advice of the parliament than hazard their own judgment. It was

* Obs. on Stat. p. 192.

† Barrington says, with regard to this, "I shall take a very extraordinary liberty with regard to the title of this statute, which I have altered from the *Statute of Purveyors*, to that of the *Statute of Treasons*."—Stat. p. 211. The first chapter related to purveyance as well as the fifteenth.

* Obs. on Stat. p. 213.

† In 18 Edw. III. stat. 2, there is a still more striking instance of this. The *French* preamble of this statute recites that the French king "s'afforce tant come il poet a destruir notre dit seigneur le roi, ses alliez, et subgitz, terres et lieus, et LA LANGE D'ENGLETERRE" (enforceth himself as much as he may to destroy our said sovereign lord the king, and his allies, subjects, lands, and places, and the tongue of England).

in this spirit that the statute of treasons (25 Edw. III.) ordains, that when any new case of supposed treason should arise, not expressly within the terms of that act, the judges should not proceed upon their own conceptions of the case, but should take the opinion of the parliament.

Towards the latter end of this reign the commons first began to appear as prosecutors, and, among their other petitions, to exhibit accusations for crimes and misdemeanors against offenders who were thought to be out of the reach of the ordinary course of the law. In these prosecutions the king and lords were considered as judges. Thus began prosecution by impeachment of the commons.

The tribunal next in authority to the parliament was the *council*. As the parliament was often called by this name, much difficulty has arisen in distinguishing them. The king had a council which consisted of all the lords and peers of the realm. This was called the *grand council*, as well as the parliament (being probably the original *commune concilium regni*, before the commons were summoned thither), and was thereby distinguished from the other *council*, which the king had most commonly about him for advice in matters of law. This last council (corresponding somewhat to what has since been called the *Privy Council*) consisted of the treasurer, chancellor, justices, keeper of the rolls, justices in eyre, &c. The method of address to the two councils was, like that to the parliament, by petition.* In consequence of the jealousy entertained of the arbitrary authority of these councils of the king, several statutes were made in this reign to regulate and check it. But, as we shall see in the sequel, it was not to be effectually checked yet for several centuries.

There is nothing more indicative of the form the English government and constitution were gradually assuming, than the decline of the court of the steward and marshal—a tribunal which, when the king was everything, and the nation and the law nothing, was of great power and importance; but now, that there were other powers in the country than that of the king, and when the common law had attained a considerable degree of perfection, was sinking both in jurisdiction and importance. This might be not altogether because lawyers did not preside in this court (for Littleton was at one time steward or judge of this court†), but rather from an idea that the rules of decision of the court were framed more upon the king's pleasure than the rules of law.

A large portion of the original power of the court of the steward of the king's household passed to the court of King's Bench. By statute 5 Edw. III. c. 2, it was ordained, that if any one would complain of error in the former court, he should have a writ to remove the record and process before the 'king in his place, that is, in the King's Bench. The court of the steward was originally the court of the king in his place, since the steward was originally the king's immediate representative. The above provision was re-enacted in statute 10 Edw. III. st. 2, c. 1. "So that," observes Mr. Reeves, "the King's Bench was confirmed in that appellate jurisdiction, which the court of the steward and marshal possessed once over the other courts."*

As the law became complicated and voluminous, it became necessary to have professional lawyers to administer it; and, as shown in the preceding note, the business of the steward of the household's court came to be performed by a deputy, who was a lawyer, and was called the steward of the court of the marshalsea of the household. In like manner it is at least highly probable that the marshal of the marshalsea of the King's Bench was originally the deputy of the marshal of the king's household, who was originally the same as the earl marshal, as appears from a passage of Britton quoted in the preceding Book of this History.

In this reign several regulations were made for the keeping of the peace. Statute 1 Edw. III. c. 16, ordained, "for the better keeping and maintenance of the peace, that in every county, good men and lawful, that were no maintainers of evil, or barrators in the county should be assigned to keep the peace." Three years after, these officers were intrusted with greater powers, having the additional authority to take indictments.†

In the eighteenth year of this reign they were empowered to *hear and determine* felonies and trespasses done against the peace in the same counties, and to inflict punishment according to law and reason, and the circumstances of the fact.‡ The statute 34 Edw. III. c. 1, enacts, that in every county there should be assigned for the keeping of the peace, one lord, and three or four of the most worthy in the county, with some learned in the law. These were to have power to restrain offenders, rioters, &c., and chastise them according to their trespass or offence. "They were," says the act, "to take of all them that be not of good fame, where they shall be found, sufficient surety and mainprise of their good behaviour towards the king

* Reeves's Hist. of Eng. Law, vol. ii. p. 415.

† Coke says (2 Inst. 548), that "the steward of the court of the marshalsea of the household is ever a professor of the common law;" and that in the statute *Articuli super Chartas*, c. 3, the words "des seneschals et marshals," are to be "understood of the steward of the court of the marshalsea of the household, and not of the steward of the king's household." This, we apprehend, is incorrect. Various statutes, for example (5 Edw. III. c. 2, and 10 Edw. III. st. 2, c. 1,), expressly call that officer "steward of the king's house" (*seneschal del hostiel le roi*) in the singular. Indeed, in the Record Commission edition of the statutes, seneschal is singular, not plural, in the passage commented on by Coke in the *Art. sup. Chart.* c. 3. In point of fact, the steward spoken of by Coke as a professor of the common law, was merely the steward of the household's acting deputy. Coke's object always was to magnify the Court of King's Bench, of which he had been chief justice; and if he knew—which is doubtful—he would not like to acknowledge the real magnitude of the original authority of the lord steward's court, from which, as shown in the text, was borrowed the appellate jurisdiction of the Court of King's Bench over the other courts. Coke calls the grand justiciary (the mighty *Capitalis Justitiarius Anglie*) merely Chief *Justice* of England; and he bestows upon himself (Sir E. Coke) the same title, instead of his proper one, that of Chief Justice of the King's Bench.

* Hist. of Eng. Law, vol. ii. p. 420.

† 4 Edw. III. c. 2.

‡ 18 Edw. III. st. 2, c. 2.

and his people." On this clause Mr. Reeves remarks, "This was the first authority they had to take sureties for good behaviour; and, indeed, the first mention of it in any statute or law book."* In the statute 36 Edw. III. st. 1, c. 12, the keepers of the peace are for the first time distinguished by the name, which is now so well known, of "justices of the peace." The words of the French statute are, "*justices de la pees.*" And thus, at the close of the reign, the keepers of the peace were become justices, presiding over a court.

In the reign of Richard II. the only act of legislation that peculiarly seems to demand attention is the famous statute of Præmunire; and of that, as well as of the other acts of a similar tendency by which it was preceded, an account has already been given in the preceding Chapter.

The subject of the royal revenue now becomes more closely connected than in earlier times with that of the constitution and government, inasmuch as in the present period the king came to be dependent for his income chiefly upon parliamentary grants. The several charters of liberties had considerably curtailed the ancient pecuniary resources of the crown, by the abridgment of the prerogative; and the greater part even of the hereditary estates that survived the reigns of Richard and John was dissipated by the weak profusion of Henry III. This prince was reduced by his own folly, and the circumstances in which he was placed, to the most pitiable state of destitution. From the terms on which he stood with his barons, their assistance in raising money was very grudgingly afforded; and the only extraordinary aids levied by him during his long reign were two-fifteenths, one-thirtieth, and one-fortieth for himself, and one-twentieth for the relief of the Holy Land. According to Matthew Paris, his entire income did not amount, on an average for the whole reign, to more than 24,000 marks, or about 16,000*l.* per annum. His principal resource in his later years was the plunder of the clergy, which he was enabled to effect through the assistance of his friend Pope Alexander IV. In 1256, a tenth part of all ecclesiastical benefices was ordered to be paid for five years into the royal exchequer. The Jews were another still more defenceless class of his subjects from whom he repeatedly extorted larger sums of money. Matthew Paris records that, in the year 1241 alone, they were forced to pay no less than twenty thousand marks; and scarcely a year seems to have passed in which they were not subjected to exactions of the like arbitrary character, though not perhaps to the same amount. One individual, Aaron of York, from whom four thousand marks had been wrung in 1243, was again, in 1250, condemned, on pretence that he had been guilty of forgery, to pay a fine of thirty thousand. Altogether, in the course of his reign, Henry is said to have obtained four hundred thousand marks from the Jews. But this, and all his other sources of income, regular and irregular, were insufficient to supply the waste occasioned by his imprudent management, his donations to his minions, and the foolish and expensive projects in which he engaged. Towards the end of his reign his debts were declared by himself to amount to nearly three hundred thousand marks. In order to raise money, he was sometimes obliged to pawn the jewels of the crown, and to sell the very furniture of his palace; at other times he went from place to place personally soliciting contributions almost in the fashion of one asking alms.

The reign of Edward I. is an important era in the history of English taxation. The popularity of this monarch's Scottish wars long induced the parliament to be liberal in their supplies, and even made the nation submit without much murmuring to many arbitrary exactions. The church and the Jews (till they were finally expelled from the kingdom in 1290) continued to yield large returns to the royal exchequer. It was upon the liberality of his parliament, however, that Edward wisely placed his chief reliance: this assembly, by the complete establishment of county and borough representation, was now become a national organ; and when the statute *De Tallagio non Concudendo* was passed in 1297, the first decided step may be considered to have been taken towards the great constitutional object of subjecting the public income and expenditure to the public control. It was not, however, till after a long struggle that this object was practically accomplished even to the extent to which it was aimed at by the present statute. The concession of the statute was extorted from Edward, and he made repeated attempts to evade a restriction to which he never had intended to yield further compliance than the pressure of the moment might render convenient. One source of revenue which was greatly improved in the reign of Edward I. was that afforded by the customs on the export and import of goods. Edward considerably raised the rate of these ancient duties by his own authority, and also imposed certain additional duties upon foreign merchants, which came to be distinguished by the name of the new or alien customs. But Edward did not satisfy himself with mere taxation. On pressing emergencies he did not hesitate openly to seize the goods of merchants and the property of his other subjects whenever he could lay his hands upon it. Forced loans formed another of his occasional resources. In short, although the foundations of parliamentary taxation were laid in this reign, by the establishment of the practice of regularly summoning to parliament representatives of the shires and boroughs, and by the passing of the statute *De Tallagio*, most of the old arbitrary modes of raising money by the crown continued to be exercised throughout the whole of it, in the face, indeed, of considerable dissatisfaction and outcry, but without encountering, except in a few instances, any effectual resistance. The old method of taxation by scutages fell into disuse in

* Hist. of Eng. Law, vol. ii. p. 473.

this reign; and taxes upon personal property, which had not been known in the first ages after the Conquest, came to be common. Edward, notwithstanding the heavy expenses of his military operations, never was reduced to anything resembling the pecuniary difficulties that his father had suffered. The vigour of his character and his general popularity enabled him, in addition to his arbitrary exactions, to obtain vastly more ample supplies from parliament than had been granted to Henry; and in one way and another the amount of money which he raised, in the course of his long reign, must have been very great. At his death he is said to have left a hundred thousand pounds of accumulated treasure, which he had intended to devote to the prosecution of the Scottish war.

One benefit which the country reaped from the feeble and otherwise calamitous rule of Edward II. was a great reduction of taxation. The law, called the New Ordinances, enacted by the parliament which met in August, 1311,* altogether abolished the new customs. Very few grants were made by parliament in this reign.

The fifty years of the reign of Edward III., on the contrary, were a period both of parliamentary taxation on a large scale, and also of many illegal imposts. The grants by parliament, indeed, now became almost annual, being generally in the form of a certain portion, varying from a fiftieth to a seventh, of the value of the moveable property of persons of all ranks. These repeated grants tended no doubt to establish the practice of the crown coming for supplies to parliament; but Edward also resorted to many arbitrary methods of raising money. Besides granting monopolies, a practice which he is said to have been the first to introduce, and compelling all persons having estates of a certain value to accept of knighthood, he renewed the old practice of imposing tallages on cities and boroughs; he extorted money from the clergy and others by what were called forced loans; he even made direct seizures of merchandise and other property on some occasions, just as his grandfather had done. In 1339 he restored, by his own authority, the new customs which had been abolished in the preceding reign; and all the opposition of the parliament could not prevail upon him to renounce the right he claimed to collect these duties, although he at last consented not to continue them longer than two years. They were maintained, in fact, for a considerably longer period. Another duty which was now regularly levied was that afterwards called the tonnage and poundage duty, being an assessment of two shillings on every tun of wine imported, and of sixpence on every pound of other merchandise either imported or exported, which was originally granted, not by the full parliament, but by annual vote of the representatives of the cities and boroughs only. From 1373, however, it came to be granted by both houses in the usual form. The first parliamentary grant of a specific sum is said to have been made in 1371, when a subsidy of 50,000*l.* was voted to be raised by an average assessment of twenty-two shillings and fourpence on each parish, the number of parishes being taken at forty-five thousand, whereas they turned out to be only eight thousand six hundred, on which the assessment was afterwards raised to one hundred and sixteen shillings on each.* It was also in this reign that the first poll-tax was granted. A pell, or exchequer roll, of the year 1347, makes Edward's entire revenue for that year to have amounted to 154,139*l.* 17*s.* 5*d.* It is probable, however, that this sum does not include many irregular payments. Notwithstanding his numerous resources, Edward was constantly in want of money and oppressed by debts. The straits in which he was involved were occasionally so extreme as to force him to the most painful and degrading expedients. At one time Queen Philippa was obliged to pawn her jewels; on another occasion the crown itself was given in pledge, and remained unredeemed for eight years.

A tax imposed in the second year of the reign of Richard II. is said to be the first that was distinguished by the name of a Subsidy, which afterwards became the common name for a parliamentary grant to the crown. It was in fact a poll or capitation tax, graduated according to the rank and property of each individual. This was followed the same year by the famous poll-tax which occasioned the insurrection of Watt Tyler. This, also, was to be regulated according to each person's ability, it being arranged that no one should pay for himself and his wife less than one groat, or more than sixty. The entire sum proposed to be raised was 160,000*l.* Richard's expenditure, in the latter part of his reign, was extravagantly lavish, and was sustained by various arbitrary exactions, and also by liberal grants almost annually made by a servile parliament. Much of what he thus obtained was wasted in the mere maintenance of his household, which is affirmed to have consisted of ten thousand persons, of whom three hundred were employed in the royal kitchens. The first parliamentary grant for life was made to Richard II.; it consisted of a duty on the exportation of wool, woolfels, and leather. In 1382, also, the parliament passed an act (the 5th Rich. II. stat. 2, c. 2) offering a certain discount from the duties on the exportation of wool, woolfels, and hides, to all merchants who would pay the Calais duties beforehand, which is supposed to be the first attempt ever made to anticipate the revenue;—a practice which, in later times, gave rise to the national debt.

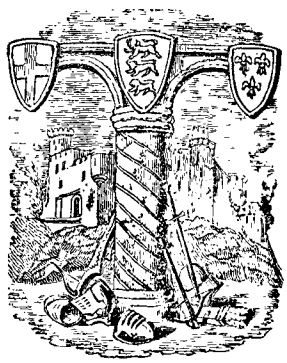
CHAPTER IV.

HISTORY OF THE NATIONAL INDUSTRY.



THE history of English commerce during the thirteenth and fourteenth centuries is in great part the record of a course of legislative attempts to annul the laws of nature, such as probably never was outdone in any other country. A full detail, if our limits would allow us to give it, would serve no useful purpose here; but a few samples will be found both curious and instructive.

A term which makes a great figure in the commercial regulations of this period is that of the Staple. The word, in its primary acceptation, appears to mean a particular port or other place to which certain commodities were obliged to be brought to be weighed or measured for the payment of the customs, before they could be sold, or in some cases exported or imported. Here the king's staple was said to be established. The articles of English produce upon which customs were anciently paid, were wool, sheep-skins, or woolfels, and leather; and these were accordingly denominated the staples or staple goods of the kingdom. The persons who exported these goods were called the merchants of the staple: they were incorporated, or at least recognized as forming a society with certain privileges, in the reign of Edward II., if not earlier. Hakluyt has printed a charter granted by Edward II., the 20th of May, 1313, to the mayor and council of the merchants of the staple, in which he ordains that all merchants, whether natives or foreigners, buying wool and woolfels in his dominions for exportation, should, instead of carrying them for sale, as they had been wont to do, to several places in Brabant, Flanders, and Artois, carry them in future only to one certain staple in one of those countries, to be appointed by the said mayor and council. It appears that, upon this, Antwerp was made the staple. But although the power of naming the place, and also of changing it, was thus conferred upon the society, this part of the charter seems to have been very soon disregarded. In subsequent times the interferences of the king and the legislature with regard to the staple, were incessant. In 1326 it was, by the royal order, removed altogether from the continent, and fixed at certain places within the kingdom. Cardiff, in Wales, a town belonging to Hugh Despenser, is the only one of these new English staples the name of which has been preserved. It may be noted, also, that tin is now mentioned as one of the staple commodities. In 1328 (by the statute 2 Edw. III. c. 9.) it was enacted, "that the staples beyond the sea and on this side, ordained by kings in times past, and the pains thereupon provided, shall cease, and that all merchant strangers and privy (that is, foreigners and natives) may go and come with their merchandizes into England, after the tenor of the Great Charter." In 1332, however, we find the king ordaining, in the face of this act, that staples should be held in various places within the kingdom. Acts of parliament, indeed, on all kinds of subjects were as yet accustomed to be regarded by all degrees of people as little more than a sort of moral declarations or preachments on the part of the legislature—expressions of its sentiments—but scarcely as laws which were compulsory like the older laws of the kingdom. Most of them were habitually broken, until they had been repeated over and over again; and this repetition, rather than the exaction of the penalty, appears to have been the recognized mode of enforcing or establishing the law. In many cases, indeed, such a way of viewing the statute was justified by the principle on which it was evidently passed; it was often manifestly, if not avowedly, intended by its authors themselves as only a tentative or experimental enactment, the ultimate enforcement of which was to depend upon the manner in which it was found to work. The Act of parliament was frequently entitled, not a statute, but an ordinance; and in that case it seems to have been merely proposed as an interim regulation, which was not to become a permanent law until some trial should have been had of it, and such amendments made in it as were found by experience to be necessary.* In other cases, again, and those of no rare occurrence, the law was of such a nature that it could not be carried into execution; it was an attempt to accomplish what was impossible. These considerations may account for the numerous instances in which our old laws are merely confirmations, or in other words, repetitions of some preceding law, and also for the extraordinary multiplication which we find of fluctuating or contradictory laws. Of this latter description, those relating to the staple afford an eminent example. In 1334, all the lately established staples were again abolished by

* See on this subject Hallam's Middle Ages, iii. 72—75.

the king in a parliament held at York. In 1341, the staple was re-established by a royal act at Bruges, in Flanders. In 1348, again, after the capture of Calais, that town was made the staple for tin, lead, feathers, English-made woollen cloths, and worsted stuffs, for seven years. All the former inhabitants of Calais, with the exception, it is said, of one priest and two lawyers, had been removed, and an English colony, of which thirty-six merchants from London were the principal members, had been settled in their room. In 1353, by the statute called the Ordinance of the Staples (27 Edw. III. st. 2, c. 1), the staple for wool, leather, woolfels, and lead, was once more removed from the continent by act of parliament, and ordered to be held for ever in the following places, and no others—namely, for England, at Newcastle-upon-Tyne, York, Lincoln, Norwich, Westminster, Canterbury, Chichester, Exeter, and Bristol; for Wales, at Carmarthen; and for Ireland, at Dublin, Waterford, Cork, and Drogheda. The "for ever" of this statute remained in force for ten years, and no longer. From the preamble of the statute 43 Edw. III., it appears that it had been ordained, for the profit of the realm, and ease of the merchants of England, that the staple of wools, woolfels, and leather, should be holden at Calais; and that there accordingly it had been holden since the 1st of March, 1363. By this last-mentioned act, however, passed in 1369, it was again, in consequence of the renewal of the war with France, fixed at certain places within the kingdom—being for Ireland and Wales the same that have been just mentioned, but with the substitution in the case of England, of Hull, Boston, Yarmouth, and Queenburgh, for Canterbury, York, Lincoln, and Norwich. In 1376 nevertheless, on the complaint of the inhabitants of Calais, that their city was declining, the staple was restored to that place; and it was now made to comprehend, not only the ancient commodities of wool, woolfels, and leather, and those more recently added, of lead, tin, worsted stuffs, and feathers, but also cheese, butter, honey, tallow, peltry (or skins of all kinds), and what are called "gaulæ," which have been supposed to mean osiers for making baskets; these different articles probably comprehending all the ordinary exports from the kingdom. But this restriction of the whole export trade to one market was soon relaxed. In 1378 (by the 2nd Rich. II. stat. 1, c. 3), it was enacted, that all merchants of Genoa, Venice, Catalonia, Arragon, and other countries toward the West, that would bring their vessels to Southampton, or elsewhere within the realm, might there freely sell their goods, and also recharge their vessels with wools, and the other merchandises of the staple, on paying the same customs or duties that would have been payable at Calais; and in 1382 (by the 5th Rich. II. stat. 2, c. 2), all merchants, whether foreigners or natives, were permitted to carry wool, leather, and woolfels, to any country whatever, except France, on payment of the Calais duties beforehand. In 1384, we find the wool-staple altogether removed from Calais, and established at Middleburgh. In 1388 (by the statute 12 Rich. II. c. 16), it was ordered to be fixed once more at Calais; but in 1390 (by the 14th Rich. II. c. 1), it was brought back to the same English towns in which it had been fixed in 1353. The very next year, however, it was enacted, that instead of these towns, the staple should be held at such others upon the coast as the lords of the council should direct; and it would even appear (from the 15th Rich. II. c. 8), that, at least for a part of the year, the staple of wool and also of tin was still at Calais. "Staples and restraints in England, and a second staple and other restraints at the same time on the continent!" exclaims the historian of our commerce, in noting this fact: "the condition of the merchants who were obliged to deal in staple goods was truly pitiable in those days of perpetual changes."* It is not quite clear, however, that the English staples were still continued; it is perhaps more probable that they had been abolished when the staple was restored to Calais. However this may be, it appears from the statute 21 Rich. II. c. 17, passed in 1398, that at that time Calais was the only staple; and such it continued to be from this time till it was recovered by the French in 1538, when the staple was established at Bruges. The old staple laws, however, had been considerably relaxed in the course of that long interval.

The history of the staple is an important part of the history of our early foreign commerce, of which it in some degree illustrates the growth and gradual extension from the progressive development of the resources of the country, as well as the artificial bonds and incumbrances against the pressure and entanglement of which the principle of that natural growth had to force its way. We now proceed to quote some further instances of the perplexities, the blunders, and the generally oppressive or annoying character of our ancient commercial legislation.

One of the prerogatives assumed by the crown in those days, somewhat similar in its nature to that of fixing the staple of the foreign trade of the kingdom, was the right of restricting all mercantile dealings whatever, for a time, to a certain place. Thus, Matthew Paris tells us that, in the year 1245, Henry III. proclaimed a fair to be held at Westminster, on which occasion he ordered that all the traders of London should shut up their shops, and carry their goods to be sold at the fair, and that all other fairs throughout England should be suspended during the fifteen days it was appointed to last. The king's object, no doubt, was to obtain a supply of money from the tolls and other dues of the market. What made this interference be felt as a greater hardship was, that the weather, all the time of the fair, happened to be excessively bad; so that not only the goods were spoilt, exposed as they were to the rain in tents

* Macpherson, Annals of Com. i. 604.

only covered with cloth, and that probably imperfectly enough; but the dealers themselves, who were obliged to eat their victuals with their feet in the mud, and the wind and wet about their ears, suffered intolerably. Four years afterwards the king repeated the same piece of tyranny, and was again seconded by the elements in a similar fashion. This time, too, the historian tells us, scarcely any buyers came to the fair; so that it is no wonder the unfortunate merchants were loud in expressing their dissatisfaction. But the king, he adds, did not mind the imprecations of the people.

There was nothing that more troubled and bewildered both the legislature and the popular understanding, during the whole of this period, than the new phenomena connected with the increasing foreign trade of the country. The advantages of this augmented intercourse with other parts of the world were sensibly enough felt, but very imperfectly comprehended; hence one scheme after another to retain the benefit upon terms wholly inconsistent with the necessary conditions of its existence. Of course, in all exchange of commodities between two countries, besides that supply of the respective wants of each which constitutes the foundation or sustaining element of the commerce, a certain portion of what the consumer pays must fall to the share of the persons by whose agency the commerce is carried on. It is this that properly forms the profits of the commerce, as distinguished from its mere advantages or conveniences. The general advantages of the commerce, apart from the profits of the agents, are alone the proper concern of the community: as for the mere profits of the agency, the only interest of the community is, that they shall be as low as possible. From the course, however, that the popular feeling has at all times taken, it might be supposed that the very contrary was the case; for the cry has constantly been in favour of making this agency, as far as possible, a monopoly in the hands of the native merchants, although the effect of the exclusion of foreign competition, if it could be accomplished, really could be nothing else than an enhancement of the profits of the agency, and consequently of the charge upon the consumer. In fact, if the exclusion were not expected to produce this effect, it never would be sought for by the native merchants. That it should be sought for by them is natural enough, but that they should be supported in this demand by the community at large is only an instance of popular prejudice and delusion. In all commerce, and especially in all foreign commerce, a body of intermediate agents, to manage the exchange of the commodities, is indispensable; the goods must be brought from the one country to the other, which makes what is called the carrying trade; they must be collected in shops or warehouses for distribution by sale; even their original production, in many cases, cannot be efficiently accomplished without the regular assistance of a third class of persons,—namely, dealers in money or in credit. But to the public at large it is really a matter of perfect indifference whether these merchants, shipowners, and bankers or other capitalists, be natives or foreigners. Not so, however, thought our ancestors in the infancy of our foreign commerce. The commerce itself was sufficiently acceptable; but the foreigners, by whose aid it was necessarily in part carried on, were the objects of a most intense and restless jealousy. Whatever portion of the profits of the commerce fell to their share was looked upon as nothing better than so much plunder. This feeling was even in some degree extended to the whole of the foreign nation with which the commerce was carried on; and in the notion that all trade was of the nature of a contest between two adverse parties, and that whatever the one country gained the other lost, the inflammation of the popular mind occasionally rose to such a height that nothing less would satisfy it than an abjuration of the foreign trade altogether. But it never was long before this precipitate resolution was repented of and revoked.

In the wars between Henry III. and his barons, the latter endeavoured to turn to account against the king the national jealousy of foreigners, which his partiality to his wife's French connexions had greatly exasperated. In 1261 they passed a law which may be regarded as the first attempt to establish what has been called, in modern times, the manufacturing system. It prohibited the exportation of wool, the chief staple of the country, and ordained that no woollen cloths should be worn except such as were manufactured at home. Whatever may be thought of the policy of nursing the infancy of domestic manufactures in certain circumstances by protections of this description, the present attempt was undoubtedly premature, and its authors confessed as much by appending to their prohibition against the importation of foreign cloth an injunction or recommendation that all persons should avoid every superfluity in dress. What were thus denounced as extravagant superfluities were evidently those finer fabrics which could not yet be produced in England. The effect of this law, in so far as it was enforced or obeyed, could only have been to add to the general distress, by embarrassing more or less all classes of persons that had been ever so remotely connected with the foreign trade, and above all others the chief body of producers in the kingdom. If the wool was not to go out of the country, much wealth both in money and in goods would be prevented from coming in, and all the branches of industry which that wealth had hitherto contributed to sustain and feed, would suffer depression.

It would appear that, either from want of skill or a scarcity of woad, in consequence of the usual importations from the continent being checked, dyed cloths could not be obtained in sufficient quantity in England a few years after this time; for it is recorded that many people were now wont to dress themselves in cloth of the natural colour of the wool. Simon de Montiord, it seems, professed to

be an admirer of this plainness of apparel, and was accustomed to maintain that foreign commerce was unnecessary, the produce of the country being fully sufficient to supply all the wants of its inhabitants. And so no doubt it was, and would be still, on this principle of rigidly eschewing all superfluities; but that is the principle of the stationary and savage state, not of civilization and progressive improvement.

The prohibition against the importation of foreign cloth, however, appears to have been soon repealed. In 1271, when disputes broke out between Henry and the Countess of Flanders, we find it renewed in terms which imply that the trade had for some time previous been carried on as usual. This second suspension, also, was of short duration; and on various subsequent occasions on which the attempt was made to break off the natural commercial intercourse between the English producers and the Flemish manufacturers, the result was the same; the inconvenience was found to be so intolerable to both countries that it never was submitted to for more than a few months or weeks.

Absurd regulations, however, were from time to time imposed on the trade carried on by foreigners, the temper and principle of which would, if carried out, have led to its complete extinction, and which, half measures as they were, could only have had the effect of diminishing its natural advantages. In 1275, for instance, an order was issued by Edward I., obliging all foreign merchants to sell their goods within forty days after their arrival. If foreigners continued to resort to the country in the face of the additional risks created by this law,—risks of inadequate returns if they complied with it, of detection and punishment if they attempted to evade it,—we may be certain they exacted a full equivalent in the shape of higher prices for their goods; or, if they failed to do this, they must soon have been forced to give up the trade altogether, for there was no other way by which it could be made to yield its usual profits.

No foreign merchants were in those days allowed to reside in England except by special license from the king; and even under this protection, they were subjected to various oppressive liabilities. It was not till 1303 that a general charter was granted by Edward I., permitting the merchants of Germany, France, Spain, Portugal, Navarre, Lombardy, Tuscany, Provence, Catalonia, Aquitaine, Toulouse, Quercy, Flanders, Brabant, and all other foreign countries, to come safely to any of the dominions of the English crown with all kinds of merchandize, to sell their goods, and to reside under the protection of the laws. But even this general toleration was clogged with many restrictions. The goods imported, with the exception of spices and mercery, were only to be sold wholesale. No wine was to be carried out of the country without special license. Above all, no relaxation was granted of the ancient grievous liability under which every resident stranger was placed of being answerable for the debts and even for the crimes of every other foreign resident. It appears from the records of the Exchequer that, in 1306, a number of foreign merchants were committed to the Tower, and there detained until they consented severally to give security that none of their number should leave the kingdom, or export anything from it, without the king's special license. Each of them was at the same time obliged to give in an account of the whole amount of his property, both in money and goods. Security against being subjected to this kind of treatment had been accorded in a few particular instances; but it was not till the year 1353 that the law was formally altered by the Statute of the Staple already mentioned, and the ancient practice was not wholly discontinued till long afterwards.

The general charter of 1303 was followed within four years by a still more extraordinary attempt than any that had yet been made to control the natural course of commerce. In 1307, Edward issued an order prohibiting either coined money or bullion to be carried out of the kingdom on any account. The merchants, therefore, who came from other countries, were now reduced to the necessity of either directly bartering their commodities for the produce of the kingdom, or, if they sold them for money in the first instance, of investing the proceeds in other goods before they could be permitted to return home. This was a restriction so thoroughly opposed to every commercial principle that it could not be rigidly maintained; the very year following its promulgation, an exemption from it was accorded to the merchants of France by the new king, Edward II., and similar relaxations of it were afterwards permitted in other cases. But, although from its nature it did not admit of being strictly enforced, it long continued to be regarded as the law of the country, and repeated attempts were made to secure its observance. In 1335, by the 9th Edw. III. st. 2, it was enacted that no person should henceforth carry out of the kingdom either money or plate without special license, upon pain of forfeiture of whatever he should so convey away. Sworn searchers were appointed to see that the law was observed at all the ports; and it was further ordered that the inn-keepers at every port should be sworn to search their guests: the fourth part of all forfeits was assigned as the reward of the searchers. In 1343, by the 17th Edw. III., nearly the same regulations were repeated, the principal variation being that, to induce them to do their duty more diligently, the reward of the searchers was now raised to a third part of the forfeits, and penalties were provided for their neglect or connivance. We may gather from all this that the law had been extensively evaded. At length permission was given generally to foreign merchants to carry away one half of the money for which they sold their goods; the law is thus stated in the 14th Rich. II. c. 1, passed in 1390, and more explicitly in the 2nd Hen. IV. c. 5,

passed in 1400; but it is still expressly ordered by the former of these statutes that every alien bringing any merchandise into England shall find sufficient sureties before the officers of the customs to expend the value of half of what he imports, at the least, in the purchase of wools, leather, woolfels, lead, tin, butter, cheese, cloths, or other commodities of the land.

The ignorance and misconception from which all this legislation proceeded, are exhibited in a striking point of view by the fact that the above-mentioned original order of Edward I., prohibiting the exportation of money, expressly permits the amount of the money to be remitted abroad in bills of exchange. And at all times, while the exportation of money was forbidden, the remittance of bills seems to have been allowed. But a bill of exchange remitted abroad is merely an order that a certain party in the foreign country shall receive a sum of money which is due to the drawer of the bill, and which would otherwise have to be sent to the country where he resides; if no such money were due, the bill would not be negotiable; every such bill, therefore, if it did not carry money out of the country, produced precisely the same effect by preventing money from coming in. It was fit and natural enough, however, that this simple matter should fail to be perceived in times when it was thought that a great advantage was gained by compelling the foreign merchant to sell his goods for produce instead of for the money which the produce was worth; indeed it may be fairly said, instead of for less money than the produce was worth, for all restraints of this description inevitably operate to enhance the price of what is prevented from being openly bought and sold on the terms that would be naturally agreed upon between the parties themselves.

Another strange attempt of the English commercial legislation of those times was to impose a certain measure upon all foreign cloths brought to the country. By the Act 2 Edw. III. c. 14, passed in 1328, it was ordered that, from the Feast of St. Michael ensuing, all cloths that were imported should be measured by the king's aulnagers, and that all those that were not found to be of a certain specified length and breadth should be forfeited to the king. The dimensions fixed by the statute were, for cloth of ray (supposed to mean striped cloth), 28 yards in length by 6 quarters in breadth; and for coloured cloth, 26 yards in length by 6½ quarters in breadth. The regulation of weights and measures within the kingdom was a proper subject of legislation, and had necessarily engaged attention long before this date; although at a period when science was unknown, the methods resorted to were necessarily very inartificial, and sometimes singular enough; Henry I., for example, soon after he came to the throne, in ordaining that the ell or yard should be of uniform length throughout the kingdom, could find no better standard for it than the length of his own arm. It might also have been found expedient, both for fiscal and other purposes, to direct that all cloth made for sale within the kingdom should be of certain specified dimensions; regulations to that effect have at least been usual down to our own day. But it was to stretch legislation on such matters beyond all reasonable limits to attempt to fix a measure for the cloth made in all foreign countries. Such a law, in so far as it was enforced, could only have the effect of diminishing the supply,—in other words, of raising the prices of foreign goods. But like most of the other absurd restrictions of the same character, the maintenance of this regulation was soon found to be impracticable: if it had been rigorously insisted upon, it would have excluded the manufactured goods of certain foreign countries from the English market altogether; and accordingly, after giving a great deal of useless annoyance both to foreign merchants and their English customers, and after special exemptions from it had been granted to several nations, it was at last repealed by the 27 Edw. III. st. 1, c. 4, passed in 1353, which provided that, "whereas the great men and commons have showed to our lord the king how divers merchants, as well foreigners as denizens, have withdrawn them, and yet do withdraw them, to come with cloths into England, to the great damage of the king and of all his people, because that the king's aulnager surmiseth to merchant strangers that their cloths be not of assize," therefore no foreign cloths should in future be forfeited on that account, but when any was found to be under assize, it should simply be marked by the aulnager, that a proportionate abatement might be made in the price.

This was also the era of various statutes against the supposed mischiefs of forestalling. The statute "De Pistoribus" (attributed by some to the 51st year of Hen. III., by others to the 13th of Edw. I.) contains the following empassioned description and denouncement of this offence: "But especially be it commanded, on the behalf of our lord the king, that no forestaller be suffered to dwell in any town, which is an open oppressor of poor people, and of all the commonalty, and an enemy of the whole shire and country; which for greediness of his private gains doth prevent others in buying grain, fish, herring, or any other thing to be sold coming by land or water, oppressing the poor and deceiving the rich; which carrieth away such things, intending to sell them more dear; the which come to merchants strangers that bring merchandise, offering them to buy, and informing them that their goods might be dearer sold than they intended to sell, and an whole town or a country is deceived by such craft and subtlety." It might be supposed from all this that the forestaller bought the commodity for the purpose of throwing it into the sea or otherwise destroying it; it seems to have been forgotten that, like all other dealers, he bought it only that he might sell it again for more than it cost him, that is to say, that he might preserve it for a time of still higher demand and greater necessity. But for him, when that time of greater

scarcity came, there would be no provision for it; if the people were pinched now, they would be starved then. The forestaller is merely the economical distributor, who, by preventing waste at one time, prevents absolute want at another; he destroys nothing; on the contrary, whatever he reserves from present consumption, is sure to be reproduced by him in full at a future day, when it will be still more needed. Were it otherwise, forestalling would be the most losing of all trades, and no law would be required to put it down. The English laws against forestalling, regrating, and engrossing, however, cannot well be made a reproach to the thirteenth century, seeing that they were formally renewed and extended in the sixteenth,* and were not finally removed from the Statute Book till towards the end of the eighteenth.†

A still more direct attempt to derange the natural balance of supply and demand was made by parliament in 1315, when, with the view of relieving the people from the pressure of a severe famine, it was enacted that all articles of food should be sold at certain prescribed prices. It was strangely forgotten that the evil did not lie in the high prices, but in the scarcity, of which they were the necessary consequence. That scarcity, of course, the act of parliament could not cure. In fact, food became more difficult to procure than ever; for even those who had any to sell, and would have brought it to market if they could have had a fair price for it, withheld it rather than dispose of it below its value. What was sold was for the most part sold at a price which violated the law, and which was made still higher than it would otherwise have been by the trouble and risk which the illegality of the transaction involved. Butcher-meat disappeared altogether; poultry, an article of large consumption in those times, became nearly as scarce; grain was only to be had at enormous prices. The result was, that the king and the parliament, after a few months, becoming convinced of their mistake, hastened to repeal the act.

The same thing in principle and effect, however, was repeated not many years after, by acts passed to fix the wages of labourers,—in other words, the price of the commodity called labour. In 1349 (the twenty-third of Edward I.), after a pestilence which had carried off great numbers of the people, was issued (apparently by the authority of the king, although it is printed as a statute) "an ordinance concerning labourers and servants;" which directed, first, that persons of the class of servants should be bound to serve when required; and secondly, that they should serve for the same wages that were accustomed to be given three years before. This ordinance, indeed, further proceeded to enjoin that all dealers in victual should be bound to sell the same "for a reasonable price," and inflicted a penalty upon persons offending against that enactment—although it did not presume expressly to fix a maximum of prices. The next year, by the 25 Edw. III., st. 2,* after a preamble, declaring that servants had had no regard to the preceding ordinance, "but to their ease and singular covetise," the parliament established a set of new provisions for effecting its object: this act, however, contains nothing on the subject of the prices of provisions. The statute of labourers was confirmed by parliament in 1360 (by the 34 Edw. III. c. 9), and its principle was long obstinately clung to by the legislature, notwithstanding the constant experience of its inefficiency, and indeed of its positive mischief, and its direct tendency to defeat its own proposed object; for a law is rarely harmless because it is of impracticable execution; the unskilful surgery of the body politic, as of the body natural, tears and tortures when it does not cure, and fixes deeper and more firmly the barb which it fails to extract. By the 13 Rich. II. st. 1, c. 8 (passed in 1389-90), it is ordained that, "forasmuch as a man cannot put the price of corn and other victuals in certain," the justices of peace shall every year make proclamation "by their discretion, according to the dearth of victuals, how much every mason, carpenter, tiler, and other craftsmen, workmen, and other labourers by the day, as well in harvest as in other times of the year, after their degree, shall take by the day, with meat and drink, or without meat and drink, and that every man obey to such proclamations from time to time, as a thing done by statute." It is also ordered that victuallers "shall have reasonable gains, according to the discretion and limitation of the said justices, and no more, upon pain to be grievously punished, according to the discretion of the said justices." Finally, provision is made for the correct keeping of the assize (or assessment from time to time) of the prices of bread and ale. The earliest notice of an assize in England is found in the rolls of parliament for 1203, the 5th of John; but the first introduction of the practice is probably of older date. The most ancient law upon the subject that has been preserved is that entitled the Assisa Panis et Cervisiæ, commonly assigned to the 51st Hen. III. (A.D. 1266.) The assize of bread and ale, it is to be remembered, determined the prices of these commodities, not arbitrarily, but by a scale regulated according to the market prices of wheat, barley, and oats, so that the prices that were really fixed were those of baking and of brewing. The assize of bread was re-enacted so lately as the beginning of the last century, and was only abolished in London and its neighbourhood about twenty years ago: in regard to other places, although it has fallen into disuse, the old law still remains unrepealed. But various other articles, such as wine, fish, tiles, cloths, wood, coal, billets, &c., have at different times been made subject to assize; and in the case of most of these the assize was a perfectly arbitrary determination of the price. The present period

* By the 5 and 6 Edward VI. c. 14 and 15.
† By the 12 Geo. III. c. 71.

* Commonly entitled Statute the First.

furnishes us with a curious example of the manner in which some of these attempts operated. By an ordinance issued in 1357 (commonly called the 31 Ed. III. st. 2), it was directed that no herrings should be sold for a higher price than forty shillings the last. But, in 1361, we find the king and his council, in a second ordinance (commonly called the statute 35 Edw. III.), frankly confessing that the effect of the attempt to fix prices in this case had been, "that the sale of herring is much decayed, and the people greatly endamaged, that it to say, that many merchants coming to the fair, as well labourers and servants as other, do bargain for herring, and every of them, by malice and envy, increase upon other, and if one proffer forty shillings, another will proffer ten shillings more, and the third sixty shillings, and so every one surmounteth other in the bargain, and such proffers extend to more than the price of the herring upon which the fishers proffered it to sell at the beginning." The ordinance promulgated with the intention of keeping down the price of herrings, had actually raised it. Wherefore "we," concludes the new statute, "perceiving the mischiefs and grievances aforesaid, by the advice and assent of our parliament, will and grant, that it shall be lawful to every man, of what condition that he may be, merchant or other, to buy herring openly, and not privily, at such price as may be agreed betwixt him and the seller of the same herring." This failure, however, did not deter the parliament two years after from fixing a price for poultry (by the stat. 37 Edw. III. c. 3); but the next year, that also was repealed by the 38 Edw. III. st. 1, c. 2, which ordained that all people, in regard to buying and selling and the other matters treated of in the preceding statute, should be as free as they were before it passed, and as they were in the time of the king's grandfather and his other good progenitors.

Notwithstanding, however, the impediments and embarrassments occasioned by all this blind and contradictory legislation, English commerce undoubtedly made a very considerable progress in the course of the space of nearly two centuries included within the present period.

The directing property of the magnet, and its application in the mariner's compass, appear to have become known in Europe towards the end of the twelfth century, and the instrument was probably in common use among navigators soon after the middle of the thirteenth. Both Chaucer the English, and Barbour the Scottish poet, allude familiarly to the compass in the latter part of the fourteenth century. Barbour tells us that Robert Bruce and his companions, when crossing, during the night, from Arran to the coast of Carrick, in 1307,* steered by the light of the fire they saw on the shore,—"for they na needle had nor stane:" the words seem to imply rather that they were by accident without a compass, than that the instrument was not then known. Chaucer, in his prose treatise on the Astrolabe, says that the sailors reckon thirty-two parts (or points) of the horizon; evidently referring to the present division of the card, of which the people of Bruges are said to have been the authors. Gioia, of Amalfi, who flourished in the beginning of this century, is supposed to have been the first who attached a divided card to the needle; but his card seems to have had only eight winds or points drawn upon it.

The contemporary chroniclers have not recorded the effects produced by the introduction of the compass on navigation and commerce; but it must have given a great impulse to both. A few interesting facts, however, connected with English shipping during the present period have been preserved. Henry III. appears to have had some ships of his own. One of the entries in the Liberate Roll of the tenth year of his reign is as follows:—"Henry, by the grace of God, &c.—Pay out of our treasury to Reynold de Bernevall and Brother Thomas, of the Temple, twenty-two marks and a half, for repairs, &c. of our great ship; also pay to the six masters of our great ship, to wit, to Stephen le Vel, one mark; Germanus de la Rie, one mark; John, the son of Sampson, one mark; Colmo de Warham, one mark; Robert Gaillard, one mark; and Simon Westlegrei, one mark. Witness ourself at Westminster, the 17th day of May, in the tenth year of our reign. For the mariners of the great ship."* The vessel here referred to is, we suppose, the large ship called the Queen, which, in 1232, Henry chartered to John Blancbally, for the life of the latter, for an annual payment of fifty marks.† In an order of the same king to the barons of the Cinque Ports, in 1242, mention is made of the king's galley of Bristol, and of the king's galleys in Ireland. Edward I. probably had a much more numerous navy. When he was preparing for his war with France, in 1294, this king divided his navy into three fleets, over each of which he placed an admiral, this being the first time that that title is mentioned in English history. We are not, however, to suppose that all the ships forming these three fleets were the property of the king; the royal navy was still, as it had heretofore been, chiefly composed of vessels belonging to private merchants which were pressed for the public service. The names of the following king's ships are mentioned in an Issue Roll of the ninth of Edward II.:—the Peter, the Bernard, the Marion, the Mary, and the Catherine; all of Westminster.‡ In the reign of Edward III. we find many ships belonging to Yarmouth, Bristol, Lynne, Hull, Ravensere, and other ports, distinguished as ships of war; but this designation does not seem to imply that they were royal or public property.

† Madox's Hist. of Excheq., c. 13, § 11.

‡ Issues of Exchcq., ut supra. The editor adds—"The names of other ships are also mentioned."

The dominion of the four seas appears to have been first distinctly claimed by Edward III. At this time the Cinque Ports were bound by their charter to have fifty-seven ships in readiness at all times for the king's service; and Edward also retained in his pay a fleet of galleys, supplied, according to contract, by the Genoese. By far the greater number, however, of the vessels employed in every considerable naval expedition of those times consisted, as we have said, of the private merchantmen. The English mercantile navy was now very considerable. When Henry III., in 1253, ordered all the vessels in the country to be seized and employed in an expedition against the rebel barons of Gascony, the number of them, Matthew Paris tells us, was found to be above a thousand, of which three hundred were large ships. The foreign as well as the English vessels, however, are included in this enumeration; the former as well as the latter were subject to be thus pressed. According to an account given in one of the Cotton manuscripts of the fleet employed by Edward III. at the siege of Calais, in 1346, it consisted of 25 ships belonging to the king, which carried 419 mariners; of 37 foreign ships (from Bayonne, Spain, Flanders, and Guelderland), manned by 780 mariners; of one vessel from Ireland, carrying 25 men; and of 710 vessels belonging to English ports, the crews of which amounted to 14,151 persons. These merchantmen were divided into the south and the north fleet, according as they belonged to the ports south or north of the Thames. Among the places that supplied the greatest numbers of ships and men were the following:—London, 25 ships with 662 men; Margate, 15 with 160; Sandwich, 22 with 504; Dover, 16 with 336; Winchelsea, 21 with 596; Weymouth, 20 with 264; Newcastle, 17 with 414; Hull, 16 with 466; Grimsby, 11 with 171; Exmouth, 10 with 193; Dartmouth, 31 with 757; Plymouth, 26 with 603; Looe, 20 with 325; Fowey, 47 with 170; Bristol, 24 with 608; Shoreham, 20 with 329; Southampton, 21 with 572; Lynne, 16 with 482; Yarmouth, 43 with 1095; Gosport, 13 with 403; Harwich, 14 with 283; Ipswich, 12 with 239; and Boston, 17 with 361. These, therefore, it may be assumed, were at this time the principal trading towns in the kingdom.

It will be perceived that the vessels, if we may judge from the numbers of the men, were of very various sizes; and none of them could have been of any considerable magnitude. A ship, manned by thirty seamen, which the people of Yarmouth fitted out, in 1254, to carry over Prince Edward, afterwards Edward I., to the continent, is spoken of with admiration by the writers of the time for its size as well as its beauty. Some foreign ships, however, were considerably larger than any of the English at this period. Thus, one of the vessels which was lent by the Republic of Venice to St. Louis, in 1270, when he set out on his second crusade, measured 125 feet in length, and carried 110 men. But this was

SHIPS OF THE TIME OF RICHARD II. Harl. MS. 1319

reckoned a vessel of extraordinary size even in the Mediterranean. In 1360, Edward III., in an order for arresting all the vessels in the kingdom for an expedition against France, directed that the largest ships should carry 40 mariners, 40 armed men, and 60 archers. A ship which was taken from the French in 1385, is said to have been, a short time before, built for the Norman merchants in the East country at a cost of 5000 francs (above 830*l.* sterling), and to have been sold by them to Clisson, the constable of France, for 3000 francs. This was one of eighty vessels of various kinds, ships, galleys, cogs, carracks, barges, lines, balingars, &c., which were captured this same year by the governor of Calais and the seamen of the Cinque Ports. "There were taken," says the historian Walsingham, "and slain in those ships, 226 seamen and mercenaries. Blessed be God for all things." One ship taken by the Cinque Port vessels was valued—her cargo no doubt included—at 20,000 marks. But half a century before this, we read of Genoese galleys, loaded with wool, cloth, and other merchandise, which were reckoned to be worth 60,000*l.* and 70,000*l.* in the money of Genoa.

Some notices that have been preserved of the shipping of Scotland during this period prove its amount to have been more considerable than might be expected. Indeed, that country seems to have had some reputation for ship-building even on the continent. Matthew Paris relates that one of the great ships in the fleet that accompanied St. Louis on his first crusade, in 1249, had been built at Inverness, for the Earl of St. Paul and Blois. The historian calls her "a wonderful ship," in allusion, apparently, to her magnitude. Mention is made in an ancient charter, of one ship which belonged to the Scottish crown in the reign of Alexander III., who died in 1286; and Fordun states that, at this time, the King of Man was bound to furnish his liege lord, the King of Scots, when required, with five warlike galleys of twenty-four oars, and five of twelve oars; and that other maritime vassals contributed vessels in proportion to their lands. One of Alexander's commercial laws was of a singular character, if we may believe this historian. In consequence of several merchant vessels belonging to his subjects having been taken by pirates or lost at sea while voyaging to foreign parts, he prohibited the merchants of Scotland from exporting any goods in their own vessels for a certain time. The consequence, it is affirmed, was, that before the end of a year, numerous foreign vessels arrived with goods of all kinds; and the kingdom obtained a cheaper and more abundant supply of the produce of other countries than it had ever before enjoyed. If any such effect as this was produced, the law, at the same time that it restrained the native shipowners from importing goods, probably removed some restrictions that had previously been imposed on the entry into the kingdom of foreign merchants. In the wars between England and Scotland, in the reign of Edward III., the latter country frequently made considerable naval exertions, sometimes by itself, sometimes in conjunction with its allies. In 1335, a vessel belonging to Southampton, laden with wool and other merchandise, was taken by some Scottish and Norman privateers in the mouth of the Thames; and in the following year, a numerous fleet of ships and galleys equipped by the Scots, attacked and plundered Guernsey and Jersey, and captured several English vessels lying at anchor at the Isle of Wight. In the autumn of 1357, again, three Scottish ships of war, carrying 300 chosen armed men, are stated to have cruised on the east coast of England, and greatly annoyed the trade in that quarter, till the equinoctial gales drove them, along with a number of English vessels, into Yarmouth, where they were taken. These appear to have been unauthorised private adventurers—there being at this time a truce between the two countries. The bold enterprise of the Scottish captain, John Mercer, in 1378, till a stop was put to his career by the public spirit of a citizen of London, John Philpot, has been mentioned in a former page.* Mercer is said to have been the son of a burgess of Perth, one of the most opulent merchants of Scotland, who, the year before, when returning from abroad, had been driven by stress of weather upon the English coast, and there seized and confined for some time in the castle of Scarborough. It was to revenge this injury that the son fitted out his armament. A few years after this, some privateers of Hull and Newcastle captured a Scottish ship, the cargo of which, according to Walsingham, was valued at 7000 marks.

The most ancient record, which presents a general view of the foreign trade of England, is an account preserved in the Exchequer of the exports and imports, together with the amount of the customs paid upon them, in the year 1354. The exports here mentioned are, 31,651½ sacks of wool at 6*l.* per sack; 3036 cwt. (120 lbs.) of wool at 40*s.* per cwt.; 65 woolfels, total value 21*s.* 8*d.*; hides to the value of 89*l.* 5*s.*; 4774½ pieces of cloth at 40*s.* each; and 8061½ pieces of worsted stuff at 16*s.* 8*d.* each:—total value of the exports, 212,338*l.* 5*s.*, paying customs to the amount of 81,846*l.* 12*s.* 2*d.* Wool, therefore, would appear, by this account, to have constituted about thirteen-fourteenths of the whole exports of the kingdom. The customs would seem to have been almost entirely derived from wool; the amount paid by the hides and cloth exported amounts only to about 220*l.* The duty on the export of wool exceeded 40 per cent. on the value. The imports mentioned are, 1831 pieces of fine cloths, at 6*l.* each; 397¾ cwt. of wax at 40*s.* per cwt.; 1829½ tuns of wine at 40*s.* per tun; and linens, mercery, grocery, &c., to the value of 22,943*l.* 6*s.* 10*d.*:—making a total value of 38,383*l.* 16*s.* 10*d.* The great excess, according to this statement, of the exports over the imports, has been regarded as evincing the moderation and sobriety of our ancestors. "But when we look at the articles," it has been well observed,

* See ante, p. 782

"and find that of raw materials for manufactures which constitute so great a part of the modern imports, there was not one single article imported, and that, on the other hand, the exports consisted almost entirely of the most valuable raw materials, and of cloths in an unfinished state, which may, therefore, also be classed among raw materials, we must acknowledge that it affords only a proof of the low state of manufactures and of commercial knowledge among a people who were obliged to allow foreigners to have the profit of manufacturing their own wool, and finishing their own cloths, and afterwards to repurchase both from them in the form of finished goods."*

This account is probably to be considered as comprehending only those articles from which the revenue of the customs was derived. We know that several other articles besides those mentioned were, at least occasionally, exported. A demand for the tin of Britain, for instance, appears to have always existed on the continent. A Cornish miner, indeed, who had been banished from his native country, is said to have, in the year 1241, discovered some mines of tin in Germany, the produce of which was so abundant that the metal was even imported into England, by which the price in this country was considerably reduced. But this competition certainly did not permanently destroy either the domestic or the export trade in British tin. In 1338 we find Edward III. ordering all the tin in Cornwall and Devonshire, including even what might have been already sold to foreign merchants, to be seized and sent to the continent, there to be sold on his account, the owners being obliged to accept of a promise of payment in two years. In 1348, it is recorded that the merchants and others complained to the parliament that all the tin of Cornwall was bought and exported by Tidman of Limburgh, so that no Englishman could get any of it; they therefore prayed that it might be freely sold to all merchants; but they received for answer that it was a profit belonging to the prince, and that every lord might make his profit of his own. Cornwall had, in 1337, been erected into a duchy in favour of the Black Prince, and settled by Act of parliament on the eldest son of the king, as it still remains. The export of tin is mentioned, in 1390, in the statute 14 Rich. II. c. 7, which declares Dartmouth the only port at which it shall be shipped; and also in the following year, in the 15th Rich. II. c. 8, which repeals the last-mentioned, and allows the exportation of the commodity from any port, but provides that it shall be carried only to Calais, so long as wool shall be carried to that place. Lead, butter, and cheese are likewise, as we have seen, enumerated among the "commodities of the land," in which foreign merchants were compelled, by the 14th Rich. II. c. 1, to invest half the money which they should receive for the commodities they imported. The exportation of lead in particular is repeatedly alluded to in the regulations respecting the staple, and other acts of parliament; and considerable quantities of that metal are supposed to have been now obtained from the Welsh mines. It may be presumed, also, that iron was occasionally exported during this period, from the statute 28 Edw. III. c. 5 (passed in 1354), which enacts that no iron, whether made in England or imported, shall be carried out of the country. Salted fish, and especially herrings, formed another article of export, at least from the commencement of the thirteenth century, and probably from a much earlier date. Corn appears to have been sometimes exported, sometimes imported, but apparently never without the special license of the crown. Thus we find Edward III., in 1359, granting liberty to the Flemings to trade in England, and to export corn and other provisions from the country on obtaining his special license and paying the customs. In 1376, on the other hand, a permission is recorded to have been granted to import 400 quarters of corn from Ireland to Kendal in Westmoreland. In 1382 a general proclamation was issued, prohibiting, under penalty of the confiscation of the vessel and cargo, the exportation of corn or malt to any foreign country, except to the king's territories in Gascony, Bayonne, Calais, Brest, Cherbourg, Berwick-upon-Tweed, and other places of strength belonging to the king. But twelve years afterwards, by the statute 17 Rich. II. c. 7, all English subjects were allowed to export corn to any country not hostile, on paying the due customs; a power, however, being still reserved to the king's council to stop the exportation if necessary. The introduction of the use of coal as an article both of foreign trade and of domestic consumption is probably to be assigned to this period, though some have been disposed to carry it farther back. The earliest authentic document in which coal is distinctly mentioned is an order of Henry III., in 1245, for an inquisition into trespasses committed in the royal forests, in which inquiry is directed to be made respecting sea-coal ("de carbone maris") found in the forests. This expression appears to imply that coals had before this time been brought to London by sea, and probably from Newcastle. Sea-coal Lane, between Skinner Street and Farringdon Street, is mentioned by that name in a charter of the year 1253. Regulations are laid down for the sale of coals in the statutes of the guild of Berwick-upon-Tweed, which were established in 1284. There is extant a charter of William of Obervell, in 1291, granting liberty to the monks of Dunfermline, in Scotland, to dig coals for their own use in his lands of Pittencrief, but prohibiting them from selling any. It is probable, however, that this description of fuel was not as yet much used for domestic purposes; for the smoke, or smell, of a coal fire was at first thought to be highly noxious. "This same year (1306)," says Maitland, in his History of London, "sea-coals being very much used in the suburbs of London by brewers, dyers, and others requiring great fires, the nobility and gentry resorting thither

* Macpherson, Ann. of Com. i. 554.

complained thereof to the king as a public nuisance, whereby they said the air was infested with a noisome smell, and a thick cloud, to the great endangering of the health of the inhabitants; wherefore a proclamation was issued, strictly forbidding the use of that fuel. But little regard being paid thereunto, the king appointed a commission of Oyer and Terminer to inquire after those who had contumaciously acted in open defiance to his proclamation, strictly commanding all such to be punished by pecuniary mulcts; and for the second offence, to have their kilns and furnaces destroyed." What would these sensitive alarmists of the fourteenth century have said if they could have been informed that the day would come when London should have constantly some ten or twelve tons of coal-dust suspended over it? The prejudice against coal fires, however, seems to have, in no long time, died away. In 1325 we find mention made of the exportation of coals from Newcastle to France; and the first leases of coal-works in the neighbourhood of that town of which there is any account are dated only a few years later. They were granted by the monks of Tynemouth to various persons at annual rents, varying from two to about five pounds. Ten shillings' worth of Newcastle coals are recorded to have been purchased for the coronation of Edward III. in 1327. Before the end of the fourteenth century there is reason to believe that an active trade was carried on in the conveyance of Newcastle coal by sea to London and elsewhere.

Wool, however, was, during the whole of this period, as for a long time afterwards, the great staple of the kingdom. In 1279, in a petition to Edward I., the nobles asserted that the wool produced in England, and mostly exported to Flanders, was nearly equal to half the land in value. English wool appears also to have been in great request in France, in which country, as well as in Flanders, the manufacture of woollen cloth was early established. Little cloth, as we have already had occasion to observe, was made in England, and that little only of the coarsest description, till the wise policy of Edward III., by a grant dated in 1331, invited weavers, dyers, and fullers, from Flanders, to come over and settle in the country, promising them his protection and favour on condition that they should carry on their trades here, and communicate the knowledge of them to his subjects. The first person who accepted of this invitation was John Kempe, a weaver of woollen cloth; he came over with his goods and chattels, his servants and his apprentices. Many of his countrymen soon followed: a few years later other weavers came over from Brabant and Zealand; and thus was established certainly the first manufacture of *fine* woollen cloths in England. It was many years, however, as we have seen, before this infant manufacture was able even to supply the domestic demand, far less to maintain any export trade in woollens. The cloths of the continent, in spite of various legislative attempts to exclude them, long continued to be imported in considerable quantities. The 4774½ pieces of cloth exported in 1354 were evidently, from their price, of the old coarse fabric of the country. Large quantities of the English wool also continued annually to go abroad. With the view of keeping up the price of the article,* it was enacted by the statute 14 Rich. II. c. 4, passed in 1390, that no denizen of England should buy wool except of the owners of the sheep, and for his own use; in other words, the entire export trade in the commodity was made over to the foreign merchant, and he was at the same time confined to the export trade. The object obviously was to secure to the grower not only his proper profits, but in addition those of the wool-merchant and retailer, in so far as regarded the domestic consumption. But, besides the injury to the native merchant by his exclusion from the export trade, it was strangely forgotten that the monopoly of that trade secured to the foreigner must have deprived the grower of perhaps half his customers,—namely, of all the English dealers who would have purchased the article for exportation; and must thus, by diminishing competition, have tended to depress prices instead of raising them. Such, accordingly, is stated to have been the effect produced. The contemporary historian Knyghton tells us that, in consequence of this prohibition of the export of wool by English merchants, the article lay unsold in many places for two and three years, and many of the growers were reduced to the greatest distress. In 1391, however, although the quantity of wool exported is affirmed to have been that year much less than formerly, the customs on it amounted to 160,000*l.* According to Robert of Avesbury, who is supposed to have died about 1356, the annual exportation of wool from England had, in his day, reached to above a hundred thousand sacks; the customs on which, at the duty of 50*s.* on the sack, would produce a revenue of above 250,000*l.* This estimate, however, is very inconsistent with the official account already quoted of the entire exports and imports for 1354. If it is to be at all received, it ought probably to be assigned to a date considerably later than that at which Avesbury is commonly assumed to have died.

The principal society of foreign merchants at this time established in England appears to have been that of the merchants of Cologne. They had a hall or factory in London called their Gildhall, for the saisine (or legal possession) of which they paid thirty marks to the crown in A.D. 1220. "It seems probable," says Macpherson, "that this Gildhall, by the association of the merchants of other cities with those of Cologne, became in time the general factory and residence of all the German merchants in London, and was the same that was afterwards known by the name of the German Gildhall (*Gildhalla Teutonicorum*). It appears that the merchants of Cologne were bound

* Por meutz garder le haut pris des leyns.

to make a payment of two shillings, probably a reserved annual rent (for we are not told upon what occasions it was payable) out of their Gildhall, besides other customs and demands, from all which they were exempted in the year 1235, by King Henry III., who moreover gave them permission to attend fairs in any part of England, and also to buy and sell in London, saving the liberties of the city."* The principal part of the foreign trade, however, seems to have been in the hands of the merchants of the Staple, otherwise called the Merchants of England, who, as noticed above, were incorporated at least as early as the year 1313. This society was composed of native merchants.

It has also been affirmed that there existed, so early as the middle of the thirteenth century, an assosiation of English merchants for trading in foreign parts, called the Brotherhood of St. Thomas Becket of Canterbury, from which originated the afterwards celebrated company of the Merchant Adventurers of England; but this story does not rest on any sufficient authority.†

The historian Walsingham has preserved the record of a remarkable proposal which was made in 1379 to Richard II. by an opulent merchant of Genoa. This foreigner, it is said, submitted to the English king a plan for raising the port of Southampton to a pre-eminence over every other in the west of Europe, by making it the deposit and mart of all the oriental goods which the Genoese used to carry to Flanders, Normandy, and Bretagne, which countries would thenceforth be supplied with these commodities from England. All that the Genoese merchant asked, according to Walsingham, was, that he should be allowed to store his goods in the royal castle of Southampton. It is probable, however, that this was only one of the minor features of his plan, which must have been chiefly dependent for its success upon the resources and connexions of its author, the spirit with which it was taken up and supported by the English king, and the natural aptitude of the port of Southampton to serve as a reservoir of the oriental trade. As yet, it is to be remembered, no direct trade existed between India and Europe; all the produce of the former that found its way to the latter was procured by the merchants of Venice, Genoa, and other cities of Italy, from the emporia in the eastern parts of the Mediterranean, of which the principal at this time were Acre, Constantinople, and Alexandria. It is not very obvious what advantage the Italian importers were to expect from bringing all their goods in the first instance to Southampton, instead of proceeding with them directly to the continental markets. Walsingham says it was expected, if the plan had been carried into execution, that pepper would have been sold in England at four pennies a pound, and other spices at a proportionably low rate. Silk was now manufactured, and the silkworm reared, in Italy and other countries of the south of Europe, and little, if any, was brought from Asia; so that spiceries and fruits seem to have been the principal commodities which were received from the eastern trade. The cargo of a Genoese ship, which was driven ashore at Dunster, in Somersetshire, in 1380, consisted of green ginger, ginger cured with lemon-juice, one bale of arquiñetta,* dried grapes or raisins, sulphur, 172 bales of wadde (perhaps woad), 22 bales of writing paper, white sugar (perhaps sugar-candy), 6 bales of empty boxes, dried prunes, 8 bales of *risæ* (probably rice), 5 bales of cinnamon, 1 pipe "pulveris salvistri," the meaning of which is unknown, and 5 bales of bussus (probably fine Egyptian flax). Some Genoese cogs and carracks, however, bound for Flanders, that were seized on the coast of Kent in 1386, are said to have been laden, not only with spices, but with wines, stuffs of gold and silk, gold, silver, precious stones, &c. The scheme of the Genoese merchant with regard to Southampton was put an end to by its author being murdered in the streets of London by assassins, whom some English merchants are charged with having hired, in the apprehension that his proposal was calculated to be injurious to their interests. It seems to have been one of those bold designs which have more in their character of the prophetic than of the practical; it was a conception that shot ahead of the age, and the attempt to realise it at that time would probably, in the most favourable circumstances, have proved a failure; but this selection of Southampton for a great European emporium in the fourteenth century may be regarded as in some degree an anticipation of the project which promises to be accomplished in the nineteenth, of bringing that place within two or three hours' distance of London by means of a railway, and thus turning the natural advantages of its position to full account by making it one of the ports of the metropolis.

A few facts remain to be added respecting the commerce of Scotland during this period, in addition to those that have already been incidentally noticed. The chief seat of the Scottish foreign trade continued to be at Berwick till the capture of that town by Edward I. in 1296. A society of Flemish merchants, similar, apparently, to the Teutonic Gildhall of London, was established in that place: the gallantry with which they defended a strong building, called the Red Hall, which was their factory, has been mentioned in the account of the siege.† Berwick, before this catastrophe, is described in the contemporary chronicle of Lanercost as a second Alexandria, for the number of its inhabitants and the extent of its commerce. The sea, it is added, was its wealth; the waters were its walls; and the opulent citizens were

* Annals of Com., i. 383.

† See Wheeler's Treatise of Commerce, pp. 10 and 14; and Macpherson, i. 397 and 560.

* Both Anderson and Macpherson quote this term from the original statement in the Fœdera (vii. 233), without either explanation or question. We have not been able to discover the meaning of the word.

† See ante, p. 718.

very liberal in their donations to religious houses. The customs of Berwick were rented from Alexander III. by a merchant of Gascony for 2197*l.* 8*s.*, a sum which would in those days have bought about 16,000 quarters of wheat. "By the agency of the merchants of Berwick, the wool, hides, woolfels, and other wares, the produce of Roxburgh, Jedburgh, and all the adjacent country, were shipped for foreign countries, or sold upon the spot to the Flemish company. The exportation of salmon appears to have been also a considerable branch of their trade, as we find it some time after an object of attention to the legislature of England, and the regulation of it entrusted to the great officers of the government. When Edward III. wanted two thousand salmon for his own use in the year 1361, he sent orders to procure them for him at Berwick (then belonging to England) and Newcastle—no doubt the places most famous for them in his dominions."* Berwick, however, never recovered from the blow given to its prosperity by the destructive sack of 1296. In the middle of the following century we find the Scottish pearls still exported to the continent. In the statutes of the goldsmiths of Paris, drawn up in 1355, it is ordered that no worker in gold or silver shall set any Scottish pearls along with oriental ones, except in large jewels (that is, figures adorned with jewellry) for churches. The Scottish greyhounds were also at this time in request in other countries. "The trade of driving cattle from Scotland for sale in England, which has continued down to the present day," Mr. Macpherson observes, "is at least as old as the times now under our consideration; for we find a letter of safe conduct granted (12th January, 1359) to Andrew Moray and Alan Erskine, two Scottish drovers, with three horsemen and their servants, for travelling through England or the king's foreign dominions for a year, with horses, oxen, cows, and other goods and merchandise."† An act of the Scottish parliament in 1367 orders the strict levying of the duties formerly imposed of forty pennies in the pound on the price of all horses, and twelve pennies on that of all oxen and cows carried out of the country. Both corn and malt were often imported into Scotland at this period from England and other countries.

From Ireland there was now a considerable exportation both of raw produce and of manufactured goods. In the records of the Exchequer for the first year of Edward I. a notice occurs of some cloth of Ireland having been stolen at Winchester in the preceding reign, along with some cloth of Abingdon, and some cloth of London called burrel. Mention has already been made of the supplies of corn that appear to have been occasionally obtained from Ireland. It seems to have been exported to the continent as well as to England, till an ordinance was issued in 1288, prohibiting corn and other victuals and merchandise from being carried from Ireland anywhere except to England and Wales. Yet, in 1291, we find some Flemish merchants mentioned as being in the ports of Waterford, Youghall, and Cork. In 1300, while Edward I. was in Scotland, the people of Drogheda sent him a present of eighty tuns of wine to Kirkcudbright in a vessel belonging to their own port; and the same year several cargoes of Irish wheat, oats, malt, and ale were brought to him, and mostly by the merchants of Ireland and in Irish vessels. In 1322, we find Edward II., when preparing to march into Scotland, giving orders for 9000 quarters of wheat and other grain to be sent from Ireland. By the statute 34 Edward III c. 17, 18, passed in 1360, liberty was given to all merchants and others, whether aliens or natives, to trade freely to and from Ireland, on paying the ancient customs and duties. "At this time," says Macpherson, "there were some considerable manufactures in Ireland. The stuffs called *sayes* made in that country were in such request, that they were imitated by the manufacturers of Catalonia, who were in the practice of making the finest woollen goods of every kind; they were also esteemed in Italy, and were worn by the ladies of Florence, a city abounding with the richest manufactures, and in which the luxury of dress was carried to the greatest height. The annual revenue derived from Ireland, which amounted to nearly 10,000*l.*, gives a very respectable idea of the balance drawn into that country by its commerce and manufactures, though we know next to nothing of the particular nature of them; unless we suppose a great part of the money to have been drawn from the mines, for which, I believe, there is neither authority nor probability."* This year King Edward, understanding, as the record in the 'Fœdera' says, that there were various mines of gold and silver in Ireland, which might be very beneficial to himself and the people of that country, had commissioned his ministers there to order a search for the mines, and to do what would be most for his advantage in the matter. The statute 50 Edw. III. c. 8 (A.D. 1376) makes mention of cloth called frise as being made in Ireland, and also of cloth manufactured in England from Irish wool.

The denominations and relative values of the different kinds of English money continued the same in this as in the preceding period. The coinage had been greatly corrupted, partly by clipping, partly by the issue of counterfeits, in the early part of the reign of Henry III.; in consequence of which that king, in the year 1247, called in the old coin, and issued a new penny of a different stamp. In the exchange a deduction of thirteen pence in the pound was made from the nominal value of the old coin, which occasioned great complaints; but the new coin was not depreciated, or made of a less quantity of silver than formerly. The pennies of Henry III. are very common, and there also exist silver halfpence and farthings of his coinage. All the money was now made round. It is also said

* Macpherson, i. 446. † Ibid., i. 561.

* Ibid., i. 562, where the authorities are quoted.

that, in 1257, Henry issued a gold coin of the weight of two silver pennies, which was ordered to pass for twenty pennies of silver. It was however soon recalled, on the complaint of the citizens of London that gold was rated above its value, in being thus made equal to ten times its weight in silver; and no specimens of this earliest English coinage of gold are now known to exist.

PENNY OF HENRY III.

Soon after the accession of Edward I. the country was again found to be inundated with base or light money, consisting chiefly of pieces fabricated on the continent, and known, from their impresses, by the names of mitres, lionnes, pollards, crockards, rosaries, staldings, steepings, and eagles,—some being imitations of English money, others professing to be foreign coins. Various laws were made both against the importation of this counterfeit money, and against the clipping of the proper coinage of the realm. The severity with which these crimes were visited upon the Jews in particular has been already recorded.* Edward himself, however, in the latter part of his reign began the pernicious practice of depreciating the coin by diminishing its legal weight. In 1301 he issued a coinage of pennies, of which 243 (instead of 240, as formerly) were coined out of the pound of silver. In 1279 Edward had issued a new silver coin in imitation of one which had been introduced in France, being of the value of four pennies, and called a gross or groat, that is, a great penny. This coinage of groats seems to have been a small one, but some specimens are still extant.

* See ante, p. 693.

PENNY OF EDWARD I.

No coins of Edward II. are certainly known to exist, though it is possible that some of those that have been attributed to his father may be of his coinage; for it was still usual to omit on the legend the numerical distinction of the king's name.

PENNY (SUPPOSED) OF EDWARD II.

Edward III., in 1344, issued no fewer than six different gold coins,—namely, by one coinage, pieces marked with two leopards to pass for six shillings, others of half that weight and value marked with one leopard, and others marked with a helmet, of half the value of the last; and by a second, nobles of the value of six shillings and eight pence, and halves and quarters of nobles. The second coinage was made necessary by the refusal of the people to take the coins first issued at the value placed upon them. This king also carried the depreciation of the coin much farther than his grandfather had done, by an issue this same year of silver pennies, of which 266 were made out of the pound. Two years after he coined 270 pennies out of the pound of silver; and in 1351 he issued a new groat to be current at the old rate of fourpence, although it scarcely weighed

PENNY OF EDWARD III.

GROAT OF EDWARD III.

HALF-GROAT OF EDWARD III.

more than three pennies and a half even of his last diminished money. There are two groats of Edward III., one with the title of King of France, the other without. It is upon his coins also that we first read the motto *Dieu et mon droit* (God and my right), which was originally adopted in allusion to the claim to the French crown. He also coined half groats.

The coins of Richard II., which are nobles, half nobles, quarter nobles, groats, half groats,

pence, and halfpence, are of the same real values with those last coined by his grandfather. It is sometimes difficult to distinguish his silver money, from the want of the numerals, from that of Richard III.

The Scottish money was deteriorated in the course of this period to a still greater extent than the English; the parliament in 1367 having ordered that 352 pennies should be made out of the pound of silver. It is supposed that gold money was first coined in Scotland in the reign of Robert II. (A.D. 1371—1390). There were repeated coinages of money in Ireland; but in 1339 we find a species of coin of inferior quality, and apparently of foreign fabrication, authorised to pass current in that country, on the ground of the insufficient amount of good money. These base pieces were called turneys, or black-money, or sometimes black-mail, from the French word *maille*, anciently used for a piece of money.

Even the legal coins of this period are generally rude in workmanship, and by no means of uniform weight. The standard of weight at this time was scarcely more artificial than that which Henry I. established for measures of length, when he ordered that the ell should be as long as the royal arm. The statute called the Assize of Weights and Measures, which is attributed, in some copies, to the reign of Henry III., in others to that of Edward I., states that, "by consent of the whole realm, the king's measure was made so that an English penny, which is called the sterling, round without clipping, shall weigh *thirty-two grains of wheat dry in the midst of the ear.*" This is the origin of the weight still called a pennyweight, though it now contains only twenty-four grains. The process of coining was equally rude. First, the metal, as appears from an entry in the Red Book of the Exchequer in the reign of Edward I., "was cast from the melting-pot into long bars; those bars were cut with shears into square pieces of exact weights; then with the tongs and hammer they were forged into a round shape; after which they were blanched, that is, made white or refulgent by nealing or boiling, and afterwards stamped or impressed with a hammer, to make them perfect money. And this kind of hammered money continued through all the succeeding reigns, till the year 1663, when the milled money took place."*

The various necessary and useful arts continued in much the same state throughout the present as in the previous period. With regard, however, to the state of the important art of agriculture in particular, we now derive from various authentic sources much more detailed information than we have hitherto possessed.

Sir T. Cullum, in a history of the parish of Hawsted, in Suffolk, has, from books of accounts, inquisitions, and other documents, given as complete a view of the ancient practices of husbandry in England as can be expected, considering the difficulties of such an inquiry; and we shall now proceed to extract some of the most material statements from his work. In the reign of Edward I., there were fifty messuages or houses in the parish, being only two less than in 1784. Two-thirds of the land in the parish was held by seven persons, and the remaining third was occupied by twenty-six persons. In 1831, when the last census was taken, the number of occupiers in the same parish was only eleven, being one-third only of the number five centuries before. Several of the ancient occupiers were apparently merely labourers, for whom there was no continuous employment, but who, by this occupancy of a small piece of land, were enabled to eke out a subsistence. The traces of cultivation which have been most probably left

* Leake's Historical Account of English Money, 2nd Edit. p. 77.

by this class of the rural population are still visible in many of the southern counties on land now converted into pasture. The manor-house was surrounded by a moat, and occupied a large site, as it comprised three gardens and two court-yards. A pigeon-house, fish-ponds, and a rabbit-warren were the usual appendages of a manorial residence. The rabbit-warren supplied not only food, but materials of dress in common use; and on fast-days the fish-ponds were a valuable resource. From two successive surveys of the manor of Hawsted which are recorded within the present period, it appears that a change was taking place in the proportion of meadow and arable land, the former being to the latter as 24 to 1, at the time of the first survey, and only as about 11 to 1 at the time of the second. This effect is to be attributed to the increasing value of wool, which rendered sheep a profitable stock. The quantity of woodland was only 68 acres in the whole parish of Hawsted; but it is surmised that the hedge-rows and borders of the fields were broad, and interspersed with timber, and also contained patches which furnished a considerable addition to the quantity of fodder. The lord of the manor retained in his own hands 572 acres of arable and 50 of meadow land; pasture for 24 cows, 12 horses, and as many oxen; and 40 acres of woodland. The live stock consisted of 10 horses and 10 oxen, 1 bull, 20 cows, 6 heifers, 6 calves, 92 sheep, 200 two-year-old sheep, 5 geese, 30 capons, 1 cock, and 26 hens. The number of tenants who did suit and service in the manorial court was 32. They performed various services in husbandry, according to the tenure under which they occupied their land, and received from the lord payments in kind and in money, but chiefly in the former. One tenant occupied only three acres, and his condition probably bore a strong resemblance to the Irish cottier of the present day. Plenty was, at least, to be found in the manor-house, and it was occasionally dispensed with a liberal hand. In the reign of Edward II. the estate of the elder Spenser was ravaged by his enemies, who are asserted to have carried away, among other things, 28,000 sheep, 1000 oxen and heifers, 1200 cows with their calves for two years, 500 cart-horses, and 2000 hogs.

The diet of the labourers in husbandry usually consisted, in harvest, of herrings, a loaf of bread, and beer. The principal meals were two—dinner at nine, and supper at five. In the parish of Hawsted the allowance of food to the labourer in harvest was, two herrings per day, milk from the manor dairy to make cheese, and a loaf of bread, of which fifteen were made from a bushel of wheat. Messes of pottage made their frequent appearance at the rustic board. When the crops were harvested, the portions of the produce to which each tenant was entitled would be distributed, and the quantity which he obtained at this period was intended to last until the next harvest. In ancient valuations, both in towns and in rural districts, the inhabitants are mentioned as having stores of corn of various kinds. Those who purchased corn would do so immediately after harvest; but grain was not an object of internal commerce to any great extent. The famines which occurred during this and the preceding period arose in a great measure from the improvident consumption which ensued immediately after harvest. In 1317 the harvest was all secured by the 1st of September, and wheat fell to one-twelfth of the price at which it had been sold a few weeks before. In the poem called the 'Visions of Pierce Plowman,' written in the time of Edward III., it is said that when the new corn began to be sold,—

> "Would no beggar eat bread that in it beanes were,
> But of cockit and clemantyne, or else clene whete."

Draget and siligo were common crops. The former consisted of a mixture of oats and barley, and the latter was a light description of wheat, about one-half the price of wheat.

Many documents relating to the occupancy of land during this period do not contain any clauses binding the tenant to pursue a particular course of husbandry; but in some of them a stipulation is made that the landlord shall not interfere with the mode of culture. There was much jealousy on both sides, each party surrounding himself with various precautions. Two days of grace were allowed for the payment of the rent, and if it were not made within a fortnight the landlord could distrain; and if the rent remained unpaid a month after becoming due, he could re-enter upon the possession of the land. There are records extant showing the value of estates; but as the services of the tenantry were included, the price of the land alone cannot perhaps be accurately determined. Sir T. Cullum supposes 4*d.* an acre to have been about the average rate at which land was let towards the close of the thirteenth century; and that the average price of wheat per quarter was 4*s.* 6*d.*, and the average produce about twelve bushels per acre. Attention appears to have been paid to the quality of the seed; and an item occurs in one year of 3*s.* 4*d.* for exchange of barley seed. A century earlier, according to the law-book entitled 'Fleta,' which contains various notices on agricultural affairs, land often yielded only three times the quantity sown. At a later period, 61 acres in the manor of Hawsted produced 70 quarters of wheat, on an average of three years. The cows belonging to the manor of Hawsted (26 in number) were let to a dairyman for 8*l.* per annum; and even the lactage of the ewes was let at 1½*d.* each for the season. The milk was mixed with that of the cows, and made into cheese. In 'Fleta' directions are given for the collection of manure, the value of which was generally appreciated; but the fertile properties of the soil were most likely exhausted by taking off successive crops of the same kind. The tenants on many manors were not permitted to fold their flocks on their own enclosures, but were compelled to drive them on the lord's demesne land. On a manor in Norfolk all copyholders were

obliged to have sheep in their lord's fold from Pentecost to St. Martin. The tenants who enjoyed the right of foldage were of a superior class. Many of the smaller tenants had no pasture or meadow land, and could therefore scarcely keep any live stock unless where common rights existed. Under these circumstances they would with difficulty derive the means of a scanty subsistence from their allotments. On the manorial farms the case would be somewhat better. In 1386, the produce of the Hawsted manor farm was 69 qrs. of wheat, 54 qrs. of barley, 11 qrs. of pease, 29 qrs. of haras (horses' food), and 65 qrs. of oats. In 1387 the quantity of land sown with wheat was 66 acres, 2 bushels to an acre; barley 26 acres, 4 bushels to the acre; pease 25 acres; haras 25 acres; oats 62 acres, 2½ bushels to the acre.

The persons employed on a manorial farm were, the steward, the bailiff, the head harvest-man, carters, ploughmen, plough-drivers, shepherds, swineherds, and deyes; which last were the lowest order of agricultural labourers. The steward held the manor-courts, and saw that the manorial privileges did not become obsolete. He kept accounts of the farming-stock and of the consumption of the family, and the domestics were under his care. The steward's accounts for the manor of Hawsted are regularly audited, and written out in Latin, probably by the auditor, who, it is supposed, was an ecclesiastic. The bailiff was next in authority, and was, in fact, a practical farmer, who superintended the cultivation of the demesne. The head harvest-man was, in the manor of Hawsted, annually elected by the tenantry from amongst themselves, and was presented by them to the lord. During the year of his appointment he enjoyed an exemption from various services, and obtained other privileges. He had his meals at the lord's table, if he kept house, and if not, a livery of corn, and a horse was kept for him in the lord's stable. In 1283, when 'Fleta' was written, the plough-driver was accustomed to sleep in the same building with his cattle. Women took part in the lighter labours of husbandry. For winnowing corn and tending the young cattle, as also the geese and poultry belonging to the Hawsted manor-farm, for fourteen weeks, a woman received eight bushels of siligo. It has been already observed, that the labours of the field did not proceed so uninterruptedly as at a later period. Except in seed-time, the weeding season, and the hay and corn harvests, there must have been a real lack of occupation. It seems to have been an object to finish harvest in the shortest possible time; and the business of seed-time must have been conducted with equal rapidity. There are items in the Hawsted accounts showing that sixty persons were paid for one day, at 2*d.* each, to weed the corn. Harvest was a scene of still greater animation. In one year, 520 persons were hired for one day; in another year, 533; and in a third, 538; and yet the number of acres to be reaped did not exceed 200. The old and young of both sexes must have been a-field. The termination of the harvest was followed by those festivities which are not yet altogether obsolete.

A list of the various trades and handicrafts of the time will afford as good an idea of the general state of the useful arts as more detailed notices of the minute operations of each. Before the 50th Edward III. (1376), the "mysteries," or trades of London, who elected the common council of the city, were thirty-two in number, but they were increased by an ordinance of the above year to forty-eight, which were as follow: — Grocers, masons, ironmongers, mercers, brewers, leather-dressers, drapers, fletchers, armourers, fishmongers, bakers, butchers, goldsmiths, skinners, cutlers, vintners, girdlers, spurriers, tailors, stainers, plumbers, saddlers, cloth-measurers, wax-chandlers, webbers, haberdashers, barbers, tapestry-weavers, braziers, painters, leather-sellers, salters, tanners, joiners, cappers, pouch-makers, pewterers, chandlers, hatters, woodmongers, fullers, smiths, pinners, curriers, horners.

The incorporation of several of the great city companies took place in this period. Many of them had long subsisted as gilds and fraternities, but now obtained additional powers for regulating their respective crafts. To the goldsmiths, for instance, was assigned the assaying of metals; to the vintners the gauging of wines; and to the fishmongers the inspection of fish. In 1298 the trades of London got up a pageant in honour of the return of Edward III. from Scotland; and at all times when the honour and dignity of the city was concerned, they took from this time a most important share in the proceedings. In the reign of Edward III. there were but two earls and one bishop amongst the honorary members of the Merchant-Tailors' Company; but in the following reign there were four royal dukes, ten earls, ten barons, and five bishops enrolled in the company. Edward III. became a member of the fraternity of linen-armourers, a sort of tailors, who made the padding and lining of armour.*

A large portion of the trade of the country was transacted at fairs and markets. The tradesmen of London had shops in the Cheap, which resembled sheds, and many of them had simply stalls; and travelling occasionally from place to place, they may be considered as having been pedlers as well as tradesmen. The mercers dealt in toys, drugs, spices, and small wares generally; their stocks being of the same miscellaneous description as that which is kept at a village-shop in the present day. The station of the mercers of London was between Bow Church and Friday-street; and here, around the old cross of Cheap, they sold their goods at little standings or stalls, surrounded by those belonging to other trades. The scene would resemble a market or fair. The places at which they transacted their business were let at rates varying from 11*s.* to 28*s.* per year.† The trade of

* Herbert's Hist. of the Livery Companies of London.

† Stowe.

the modern grocer was preceded by that of the pepperer, which was often in the hands of Lombards and Italians, who dealt also in drugs and spices. The drapers were originally manufacturers of cloth: to drape signified to make cloth. The trade of the fishmonger was divided into two branches, the persons belonging to one of which dealt chiefly or altogether in salted fish, then a common article of diet. The skinners were incorporated during the present period. They were in the habit of attending the fairs, particularly those of Stamford and Winchester. The goldsmiths were also incorporated about the same time. They existed previously as a gild; and all those who were members of the fraternity had their shops in the street of Cheap; but fraudulent traders set up shops in obscure lanes, where they endeavoured to sell goods of inferior metal. Many of the goldsmiths were foreigners. Tailors were employed in making women's garments. The haberdashers dealt in a great number of articles. The dealers in hats were called haberdashers of hats; and those who sold ribbons, &c., haberdashers of small wares. They dealt in articles of dress brought from Milan; and a distinct branch arose out of this trade, the persons engaged in it being called milliners. The vintners were anciently known as the Merchant Vintners of Gascony; and the retail dealers in wine as the Wine-tunners. The division of employments was most complete in connexion with the woollen manufacture.

In the provincial towns, trade was of course conducted on a smaller scale than in London. The exchange of commodities was effected to a great extent at the fairs and at the markets, and they gave an air of animation and life which would strongly contrast with the dulness by which they were preceded and followed. In the reign of Edward III. Colchester contained 359 houses, some built of mud, others of timber, and none having any but latticed windows; and yet there were only about nine towns in England of greater importance. The number of inhabitants was about 3000. In the year 1301 all the moveable property of the town, including the furniture and clothing of the inhabitants, was worth only 518*l.* Colchester was the centre of resort for a large district, and the trades carried on in it were the twenty-nine following:—baker, barber, blacksmith, bowyer, brewer, butcher, carpenter, carter, cobbler, cook, dyer, fisherman, fuller, furrier, girdler, glass-seller, glover, linendraper, mercer and spice seller, miller, mustard and vinegar seller, old clothes' seller, tailor, tanner, tiler, weaver, wood-cutter, and wool-comber. The tools of a carpenter at Colchester consisted of a broad-axe, value 5*d.*; another 3*d.*; an adze 2*d.*; a square 1*d.*; a navegor (probably a spoke-shave) 1*d.*; making the total value of the implements of his art only 1*s.* The tools and stock of a blacksmith were valued at only a few shillings, the highest sum being 12*s.* The stock in trade and household goods of a tanner were estimated at 9*l.* 17*s.* 10*d.* A mercer's stock was valued at 3*l.*; his household property at 2*l.* 9*s.* The mustard and vinegar seller was a necessary trade when so much meat was eaten in a salted state. Several trades, including those of the brewer, the baker, and the miller appear to have been carried on by women as well as by men.*

* Eden's State of the Poor, i. 19—24.

CHAPTER V.

THE HISTORY OF LITERATURE, SCIENCE, AND THE FINE ARTS.

AFTER the detailed account given in the last Book of the various branches of science and learning cultivated in the eleventh and twelfth centuries, a very few additional remarks will suffice to indicate the state of knowledge in the thirteenth and fourteenth. The study of elegant literature was now nearly altogether abandoned in the passion which everywhere raged for metaphysical disputation. Almost the only writer of this period who can be regarded as belonging to the same class with the numerous Latin poets of the preceding age, is William the Breton, the author of the epic on the actions of Philip Augustus, to which we have more than once referred. In the University of Paris, and it was doubtless the same elsewhere, from the beginning of the thirteenth century, the ancient classics seem nearly to have ceased to be read; and all that was taught of rhetoric, or even of grammar, consisted of a few lessons from Priscian. The habit of speaking Latin correctly and elegantly, which had been so common an accomplishment of the scholars of the last age, was now generally lost: even at the universities, the classic tongue was corrupted into a base jargon, in which frequently all grammar and syntax were disregarded. This universal revolt from the study of words and of aesthetics to that of thoughts and of things is the most remarkable event in the intellectual history of the species. Undoubtedly all its results were not evil. On the whole, it was most probably the salvation even of that learning and elegant literature which it seemed for a time to have overwhelmed. The excitement of its very novelty awakened the minds of men. Never was there such a ferment of intellectual activity as now sprung up in Europe. The enthusiasm of the crusades seemed to have been succeeded by an enthusiasm of study, which equally impelled its successive inundations of devotees. In the beginning of the fourteenth century there were thirty thousand students at the University of Oxford; and that of Paris could probably boast of the attendance of a still vaster multitude. This was something almost like a universal diffusion of education and knowledge. The studies of the former age, exacting as they did a long and laborious course of preparation, and the culture of the taste to the most delicate degree of refinement, were essentially unsuited either to produce such a state of things or to satisfy its demands after it was produced; it required something of a coarser or homelier fabric, something that tasked rather the native vigour of men's minds than their artificial resources and accomplishments, and appealed to passions or senses of a much lower and more common order than those connected with the imagination or the taste. The new studies at once tempted men's curiosity and flattered their vanity; they seemed to promise a positive accession of knowledge and power, instead of a mere barren intellectual gratification. And they did undoubtedly tend to sharpen and strengthen various faculties which were scarcely at all called into exercise by the old mode of education and mental culture. It was no doubt a barbarous mistake to assume that nothing was worth studying except things and notions,—of the three great departments of the intellectual world, the physical, the metaphysical, and the imaginative, to overlook altogether the widest and highest—not to speak of the very partial view that was taken of the two others. But essentially defective and perishable also was the opposite system, which left both the latter wholly unregarded. The brief revival of elegant literature in the twelfth century was a premature spring, which could not last. The preliminary processes of vegetation were not sufficiently advanced to sustain any general or enduring efflorescence; nor was the state of the world such as to call for or admit of any extensive diffusion of the kind of scholarship then cultivated. The probability is, that even if nothing else had taken its place, it would have gradually become feebler in character, as well as confined within a narrower circle of cultivators, till it had altogether evaporated and disappeared. The excitement of the new learning, turbulent and in some respects debasing as it was, saved western Europe from the complete extinction of the light of scholarship and philosophy which would in that case have ensued, and kept alive the spirit of intellectual culture, though in the mean while imprisoned and limited in its vision, for a happier future time when it should have ampler scope and full freedom of range.

Almost the only studies now cultivated by the common herd of students were the Aristotelian logic and metaphysics. Yet it was not till after a struggle of

some length that the supremacy of Aristotle was established in the schools. The most ancient statutes of the University of Paris that have been preserved, those issued by the pope's legate, Robert de Courçon, in 1215, prohibited the reading either of the metaphysical or the physical works of that philosopher, or of any abridgment of them. This, however, it has been remarked, was a mitigation of the treatment these books had met with a few years before, when all the copies of them that could be found were ordered to be thrown into the fire.* Still more lenient was a decree of Pope Gregory IX. in 1231, which only ordered the reading of them to be suspended until they should have undergone correction. Certain heretical notions in religion, promulgated or suspected to have been entertained by some of the most zealous of the early Aristotelians, had awakened the apprehensions of the church; but the general orthodoxy of their successors quieted these fears; and in course of time the authority of the Stagyrite was universally recognised both in theology and in the profane sciences.

Some of the most distinguished of the scholastic doctors of this period were natives of Britain. Such, in particular, were Alexander de Hales, styled the Irrefragable, an English Franciscan, who died at Paris in 1245, and who is famous as the master of St. Bonaventura, and the first of the long list of commentators on the Four Books of the Sentences; the Subtle Doctor, John Duns Scotus, also a Franciscan and the chief glory of that order, who, after teaching with unprecedented popularity and applause at Oxford and Paris, died at Cologne in 1308 at the early age of forty-three, leaving a mass of writings, the very quantity of which would be sufficiently wonderful even if they were not marked by a vigour and penetration of thought which, down to our own day, has excited the admiration of all who have examined them; and William Occam, the Invincible, another Franciscan, the pupil of Scotus, but afterwards his opponent on the great philosophical question of the origin and nature of Universals or General Terms, which so long divided, and still divides, logicians. Occam, who died at Munich in 1347, was the restorer, and perhaps the most able defender that the middle ages produced, of the doctrine of Nominalism, or the opinion that general notions are merely names, and not real existences, as was contended by the Realists. The side taken by Occam was that of the minority in his own day, and for many ages after, and his views accordingly were generally regarded as heterodox in the schools; but his high merits have been recognised in modern times, when perhaps the greater number of speculators have come over to his way of thinking.

In the mathematical and physical sciences, Roger Bacon is the great name of the thirteenth century, and indeed the greatest that either his country or Europe can produce for some centuries after this time. He was born at Ilchester about the year 1214, and died in 1292. His writings that are still preserved, of which the principal is that entitled his *Opus Majus* (or Greater Work), shows that the range of his investigations included theology, grammar, the ancient languages, geometry, astronomy, chronology, geography, music, optics, mechanics, chemistry, and most of the other branches of experimental philosophy. In all these sciences he had mastered whatever was then known; and his knowledge, though necessarily mixed with much error, extended in various directions considerably farther than, but for the evidence of his writings, we should have been warranted in believing that scientific researches had been carried in that age. In optics, for instance, he not only understood the general laws of reflected and refracted light, and had at least conceived such an instrument as a telescope, but he makes some advances towards an explanation of the phenomenon of the rainbow. It may be doubted whether what have been sometimes called his inventions and discoveries in mechanics and in chemistry were for the greater part more than notions he had formed of the possibility of accomplishing certain results; but even regarded as mere speculations or conjectures, many of his statements of what might be done show that he was familiar with mechanical principles, and possessed a considerable acquaintance with the powers of natural agents. He appears to have known the effects and composition of gunpowder, which indeed there is other evidence for believing to have been then known in Europe. Bacon's notions on the right method of philosophizing are remarkably enlightened for the times in which he lived; and his general views upon most subjects evince a penetration and liberality much beyond the spirit of his age. With all his sagacity and freedom from prejudice, indeed, he was a believer both in astrology and alchemy; but, as it has been observed, these delusions did not then stand in the same predicament as now: they were "irrational only because unproved, and neither impossible nor unworthy of the investigation of a philosopher, in the absence of preceding experiments."* Another eminent English cultivator of mathematical science in that age was the celebrated Robert Grostête, or Greathead, Bishop of Lincoln, the friend and patron of Bacon. Grostête, who died in 1253, is the author of a treatise on the sphere, which had been printed. A third name that deserves to be mentioned along with these is that of Sir Michael Scott, of Balwirie, in Fife, famous in popular tradition as a practitioner of the occult sciences, but whom his writings, of which several are extant and have been printed, prove to have been possessed of acquirements both in science and literature, of which few in those times could boast. He is said to have been born about the beginning of the thirteenth century, and to have survived till the year 1290. Like Roger Bacon, Scott was addicted to the study of alchemy and astrology; but these were in his eyes also parts of

A Tower which formerly stood on the Bridge at Oxford, traditionally known as Roger Bacon's Study,—the "Bacon's mansion" alluded to by Johnson in his "Vanity of Human Wishes."

natural philosophy. Among other works, a Treatise on Physiognomy and a History of Animals are ascribed to him. He is said to have translated several of the works of Aristotle from the Greek into Latin, at the command of the Emperor Frederic II. He is spoken of as having been eminently skilled both in astronomy and medicine; and a contemporary, John Bacon, himself known by the title of Prince of the Averroists, or followers of the Arabian Doctor Averroes, celebrates him as a great theologian.*

These instances, however, were rare exceptions to the general rule. Metaphysics and logic, together with divinity—which was converted into little else than a subject of metaphysical and logical contention—so occupied the crowd of intellectual inquirers, that, except the professional branches of law and medicine, scarcely any other studies were generally attended to. Roger Bacon himself tells us that he knew of only two good mathematicians among his contemporaries—one John of Leyden, who had been a pupil of his own, and another whom he does not name, but who is supposed to have been John Peckham, a Franciscan friar, who afterwards became archbishop of Canterbury. Few students of the science, he says, proceeded farther than the fifth proposition of the first book of Euclid—the well-known asses' bridge. The study of geometry was still confounded in the popular understanding with the study of magic—a proof that it was a very rare pursuit. In arithmetic, although the knowledge of the Arabic numerals had found its way to Europe before the middle of the fourteenth century, they do not appear to have come into general use till a considerably later date. Astronomy, however, was sufficiently cultivated at the University of Paris to enable some of the members to predict an eclipse of the sun which happened on the 31st of January, 1310.* This science was indebted for part of the attention it received to the belief that was universally entertained in the influence of the stars over human affairs. And as astrology led to the cultivation and improvement of astronomy, so the other imaginary science of alchemy undoubtedly aided the progress of chemistry and medicine. Besides Roger Bacon and Michael Scott in the thirteenth century, England contributed the names of John Daustein, of Richard, and of Cremer, abbot of Westminster, the disciple and friend of the famous Raymond Lully, to the list of the writers on alchemy in the fourteenth. Lully himself visited England in the reign of Edward I., on the invitation of the king; and he affirms in one of his works, that in the secret chamber of St. Katherine in the Tower of London, he performed in the royal presence the experiment of transmuting some crystal into a mass of diamond, or adamant as he calls it, of which Edward, he says, caused some little pillars to be made for the tabernacle of God. It was popularly believed, indeed, at the time, that the English king had been furnished by Lully

* See an Article on Michael Scott in Bayle.

* Crevier, ii. 224.

with a great quantity of gold for defraying the expense of an expedition he intended to make to the Holy Land. Edward III. was not less credulous on this subject than his grandfather, as appears by an order which he issued in 1329, in the following terms:—"Know all men, that we have been assured that John of Rous and Master William of Dalby know how to make silver by the art of alchemy; that they have made it in former times, and still continue to make it; and, considering that these men, by their art, and by making the precious metal, may be profitable to us and to our kingdom, we have commanded our well-beloved Thomas Cary to apprehend the aforesaid John and William, wherever they can be found, within liberties or without, and bring them to us, together with all the instruments of their art, under safe and sure custody." The earliest English writer on medicine, whose works have been printed, is Gilbert English (or Anglicus), who flourished in the thirteenth century; and he was followed in the next century by John de Gaddesden. The practice of medicine had now been taken in a great measure out of the hands of the clergy; but the art was still in the greater part a mixture of superstition and quackery, although the knowledge of some useful remedies, and perhaps also of a few principles, had been obtained from the writings of the Arabic physicians (many of which had been translated into Latin) and from the instructions delivered in the schools of Spain and Italy. The distinction between the physician and the apothecary was now well understood. Surgery also began to be followed as a separate branch: some works are still extant, partly printed, partly in manuscript, by John Ardern, or Arden, an eminent English surgeon, who practised at Newark in the fourteenth century. A lively picture of the state of the surgical art at this period is given by a French writer, Guy de Cauliac, in a system of surgery which he published in 1363: "The practitioners in surgery," he says, "are divided into five sects. The first follow Roger and Roland, and the four masters, and apply poultices to all wounds and abscesses; the second follow Brunus and Theodoric, and in the same cases use wine only; the third follow Saliceto and Lanfranc, and treat wounds with ointments and soft plasters; the fourth are chiefly Germans, who attend the armies, and promiscuously use charms, potions, oil, and wool; the fifth are old women and ignorant people, who have recourse to the saints in all cases."

Yet the true method of philosophising, by experiment and the collection of facts, was almost as distinctly and emphatically laid down in this age by Roger Bacon, as it was more than three centuries afterwards by his illustrious namesake. Much knowledge, too, must necessarily have been accumulated in various departments by the actual application of this method. Some of the greatest of the modern chemists have bestowed the highest praise on the manner in which the experiments of the alchemists, or hermetic philosophers, as they called themselves, on metals and other natural substances appear to have been conducted. In another field, namely, in that of geography, and the institutions, customs, and general state of distant countries, a great deal of new information must have been acquired from the accounts that were now published by various travellers, especially by Marco Polo, who penetrated as far as to Tartary and China, in the latter part of the thirteenth century, and by our countryman, Sir John Mandeville, who also traversed a great part of the East about a hundred years later. Roger Bacon has inserted a very curious epitome of the geographical knowledge of his time in his 'Opus Majus.'

About the middle of the thirteenth century, both in England and elsewhere, the Universities began to assume a new form, by the erection of colleges for the residence of their members as separate communities. The zeal for learning that was displayed in these munificent endowments is the most honourable characteristic of the age. Within the present period the following colleges were founded at Oxford:—University Hall, by William, archdeacon of Durham, who died in 1249; Baliol College, by John Baliol, the father of King John of Scotland, about 1263; Merton College, by Walter Merton, Bishop of Rochester, in 1268; Exeter College, by Walter Stapleton, Bishop of Exeter, about 1315; Oriel College, originally called the Hall of the Blessed Virgin of Oxford, by Edward II. and his almoner, Adam de Brom, about 1324; Queen's College, by Robert Eglesfield, chaplain to Queen Philippa, in 1340; and New College, in 1379, by the celebrated William of Wykeham, Bishop of Winchester, the munificent founder also of Winchester College. In the University of Cambridge the foundations were, Peter House, by Hugh Balsham, sub-prior and afterwards Bishop of Ely, about 1256; Michael College (afterwards incorporated with Trinity College), by Herby de Stanton, Chancellor of the Exchequer to Edward II., about 1324; University Hall (soon afterwards burnt down), by Richard Badew, Chancellor of the University, in 1326; King's Hall (afterwards united to Trinity College), by Edward III.; Clare Hall, a restoration of University Hall, by Elizabeth de Clare, Countess of Ulster, about 1347; Pembroke Hall, or the Hall of Valence and Mary, in the same year, by Mary de St. Paul, widow of Aymer de Valence, Earl of Pembroke; Trinity Hall, in 1350, by William Bateman, Bishop of Norwich; Gonvil Hall, about the same time, by Edmond Gonvil, parson of Terrington and Rushworth, in Norfolk; and Corpus Christi, or Bennet College, about 1351, by the United Guilds of Corpus Christi and St. Mary, in the town of Cambridge. The erection of these colleges, besides the accommodations which they afforded in various ways both to teachers and students, gave a permanent establishment to the universities which they scarcely before possessed. The original condition of these celebrated seats of learning in regard to all the conveniences of teaching appears to have

The School of Pythagoras, Cambridge.
An ancient Hostel, said to have been used for the residence of Students, before the foundation of Colleges.

been humble in the extreme. Great disorders and scandals are also said to have arisen, before the several societies were thus assembled each within its own walls, from the intermixture of the students with the townspeople, and their exemption from all discipline. But when the members of the University were counted by tens of thousands, discipline even in the most advantageous circumstances must have been nearly out of the question. The difficulty would not be lessened by the general character of the persons composing the learned mob, if we may take it from the quaint historian of the University of Oxford. Many of them, Anthony à Wood affirms, were mere "varlets who pretended to be scholars:" he does not scruple to charge them with being habitually guilty of thieving and other enormities; and he adds, "they lived under no discipline, neither had any tutors, but only for fashion sake would sometimes thrust themselves into the schools at ordinary lectures, and when they went to perform any mischiefs, then would they be accounted scholars, that so they might free themselves from the jurisdiction of the burghers." To repress the evils of this state of things, the old statutes of the University of Paris, in 1215, had ordained that no one should be reputed a scholar who had not a certain master. Another of these ancient regulations may be quoted in illustration of the simplicity of the times, and of the small measure of pomp and circumstance that the heads of the commonwealth of learning could then affect. It is ordered that every master reading lectures in the faculty of arts should have his cloak or gown, round, black, and falling as low as the heels, "at least," adds the statute, with amusing *naïveté*, "while it is new." But this famous seminary long continued to take pride in its poverty as one of its most honourable distinctions. There is something very noble and affecting in the terms in which the rector and masters of the faculty of arts are found petitioning, in 1362, for a postponement of the hearing of a cause in which they were parties: "We have difficulty," they say, "in finding the money to pay the procurators and advocates, whom it is necessary for us to employ—*we whose profession it is to possess no wealth.*"* Yet when funds were wanted for important purposes in connexion with learning or science, they were supplied in this age with no stinted liberality. We have seen with what alacrity opulent persons came forward to build and endow colleges, as soon as the expediency of such foundations came to be perceived. In almost all these establishments more or less provision was made for the permanent maintenance of a body of poor scholars, in other words, for the admission of even the humblest classes to a share in the benefits of that learned education whose temples and priesthood were thus planted in the land. It is probable, also, that the same kind of liberality was often shown in other ways. Roger Bacon tells us himself that, in the twenty years in which he had been engaged in his experiments, he had spent in books and instru-

* Crevier, ii. 404.

ments no less a sum than two thousand French livres, an amount of silver equal to about six thousand pounds of our present money, and in effective value certainly to many times that sum. He must have been indebted for these large supplies to the generosity of rich friends and patrons.

Notwithstanding the general neglect of its elegancies, and of the habit of speaking it correctly or grammatically, the Latin tongue continued throughout this period to be in England as elsewhere the common language of the learned, and that in which books were generally written that were intended for their perusal. Among this class of works may be included the contemporary chronicles, many of which were compiled in the monasteries, and the authors of almost all of which were churchmen.

MATTHEW PARIS.
From a drawing by himself, in a MS. of the "Historia Major."

The most eminent English historian of the thirteenth century is Matthew Paris, who was a Benedictine monk of the monastery of St. Alban's, and was also much employed in affairs of state during the reign of Henry III. He died in 1259; and his principal work, entitled 'Historia Major,' (the Greater History,) begins at the Norman Conquest and comes down to that year. The portion of it, however, extending to the year 1235 is said to be copied from a work by Roger Windsor, or Wendover, a manuscript of which is in the Cottonian Library. Matthew Paris is one of the most spirited and rhetorical of our old Latin historians; and the extraordinary freedom with which he expresses himself, in regard especially to the usurpations of the court of Rome, forms a striking contrast to the almost uniform tone of his monkish brethren. Nor does he show less boldness in animadverting upon the vices and delinquencies of kings and of the great in general. These qualities have in modern times gained him much admiration among writers of one party, and much obloquy from those of another. His work has always been bitterly decried by the Catholics, who at one time, indeed, were accustomed to maintain that much of what appeared in the printed copies of it was the interpolation of its Protestant editors. This charge has now been abandoned; but an eminent Catholic historian of the present day has not hesitated to denounce the narrative of the monk of St. Albans as "a romance rather than a history," on the ground of the great discrepancy which he asserts he has found between it and authentic records or contemporary writers, in most instances when he could confront the one with the other.* The 'Historia Major' has been continued to the death of Henry III., by William Rishanger, a monk, as it is supposed, of the same abbey.† Among the other contemporary chroniclers of this period who wrote in Latin, the principal are, Thomas Wykes (in Latin, Vicanus or Wicelus), a canon regular of Osney, near Oxford, whose Chronicle extends from the Conquest to 1304; Walter Hemingford, a monk of Gisborough in Yorkshire, the author of a valuable history from the Conquest to 1347; Robert de Avesbury, register of the court of the Archbishop of Canterbury, whose History of the reign of Edward III. is esteemed for its accuracy, but comes down only to 1356; Nicholas Trivet, prior of a Dominican monastery in London, who wrote a history of national affairs under the title of 'Annals' from 1130 to 1307; Ralph Higden, a monk of St. Wesburg in Chester, whose 'Polychronicon,' which ends in 1357, was translated into English by John de Trevisa, a Cornish divine, before the end of the fourteenth century; Henry Knighton (or Cnitton, as he himself spells the name), a canon of Leicester, the author of a History from the time of King Edgar to 1395, and also of an account of the Deposition of Richard II.; and Adam Merimuth, a canon regular of St. Paul's, whose annals commence in 1302 and extend to 1380.‡ To these may be added various monastic registers, such as those of Mailros, ending in 1270; of Margan, ending in 1232; of Burton, ending in 1263; of Waverley, ending in 1291, &c. John Fordun, the earliest of

* Dr. Lingard, Hist. of Eng. iii. 160. Edit. of 1837.

† The History of Matthew Paris was first printed at London in 1571, in folio. The subsequent editions, also, all in folio, are Zurich, 1606; London, by Dr. W. Wats, 1640; Paris, 1644; and London, 1684. To the latter editions are appended some other historical pieces of the author, under the title of 'Additamenta.' There also exists, in manuscript, an abridgment of Matthew Paris's History, drawn up by himself, and generally referred to as the 'Historia Minor,' or the 'Chronica,' which last appears to have been the original title.

‡ All these have been published, either separately by Hearne and other editors, or in the collections of Gale and Twysden. See ante, p. 614.

the Scottish regular chroniclers, also flourished in the fourteenth century. His Scotichronicon brings down the history of Scotland to the year 1385.

Latin was also, throughout a great part of this period, the usual language of the law, at least in writing. All the charters of liberties are in Latin. So is every statute down to the year 1275. The first that is in French is the Statute of Westminster the First, passed in that year, the 3rd of Edward I. Throughout the remainder of the reign of Edward they are sometimes in Latin, sometimes in French, but more frequently in the former language. The French becomes more frequent in the time of Edward II., and is almost exclusively used in that of Edward III. and Richard II. Still there are statutes in Latin in the sixth and eighth years of the last-mentioned king. It is not improbable that, from the accession of Edward I., the practice may have been to draw up every statute in both languages. Of the law treatises, Bracton and Fleta are in Latin; Britton and the Miroir des Justices, in French.

Latin was the language in which not only all the scholastic divines and philosophers wrote, but which was also employed by all writers on geometry, astronomy, chemistry, medicine, and the other branches of mathematical and natural science. All the works of Roger Bacon, for example, are in Latin; and it is worth noting that, although by no means a writer of classical purity, this distinguished cultivator of science is still one of the most correct writers of his time. He was indeed not a less zealous student of literature than of science, nor less anxious for the improvement of the one than of the other: accustomed himself to read the works of Aristotle in the original Greek, he denounces as mischievous impositions the wretched Latin translations by which alone they were known to the generality of his contemporaries: he warmly recommends the study of grammar and the ancient languages generally; and deplores the little attention paid to the Oriental tongues in particular, of which he says there were not in his time more than three or four persons in western Europe who knew anything. It is remarkable that the most strenuous effort made within the present period to revive the study of this last-mentioned learning proceeded from another eminent cultivator of natural science, the famous Raymond Lully, half philosopher, half quack, as it has been the fashion to regard him. It was at his instigation that Clement V., in 1311, with the approbation of the Council of Vienne, published a constitution, ordering that professors of Greek, Hebrew, Arabic, and Chaldaic should be established in the universities of Paris, Oxford, Bologna, and Salamanca. He had, more than twenty years before, urged the same measure upon Honorius IV., and its adoption then was only prevented by the death of that pope. After all, it is doubtful if the papal ordinance was ever carried into effect. There were, however, professors of strange, or foreign, languages at Paris a few years after this time, as appears from an epistle of Pope John XXII. to his legate there in 1325, in which the latter is enjoined to keep watch over the said professors, lest they should introduce any dogmas as strange as the languages they taught.*

French, which had been the language of the court and of the nobility in England from the Conquest, and in some measure, indeed, from the accession of the Confessor, was now also extensively employed in literary compositions. There were at this time two great dialects of the French tongue, which were familiarly distinguished as the *Langue d'oc* and the *Langue d'oyl*, from the two words for *yes*, which were *oc* in the one, and *oyl*, afterwards *oy* or *oui*, in the other. The Langue d'oc was the popular speech of the southern; the Langue d'oyl, of the northern provinces; Thoulouse being accounted the capital of the former, Paris of the latter; and the river Loire forming (though by no means with strict accuracy) the general line of division.† The French which was brought over to England by the Norman conquerors was, of course, a dialect of the Langue d'oyl; and such accordingly our law French always continued to be. But the annexation to the English crown of Poitou and Aquitaine, on the accession of Henry II., immediately established as intimate a connexion between this country and that of the Langue d'oc, as had existed for a century before with that of the Langue d'oyl. The former had already for some time received a literary cultivation, and had been made to flow in song in the compositions of the troubadours, or professors of the *gay science*, as the Provençal poets called themselves. Duke William IX. of Aquitaine, the father of Henry's Queen Eleanor, had himself been one of the most distinguished of these sires of the minstrelsy of modern Europe, from whom sprung alike Dante, and his successors, the cultivators of the *Lingua volgare* of Italy, and the trouveurs, or first metrical writers in the dialect of northern France. It appears, at least, to be most probable (although some eminent authorities have maintained a different opinion) that the latter dialect was not made use of for poetical composition till a considerable time after that of the south had begun to be so employed; but it is certain that long poems were already written in it before the close of the twelfth century;

* Crevier, Hist. de l'Univ. de Paris, ii. 112 and 227.

† The Langue d'oc is also often called the *Provencal* tongue; and to the Langue d'oyl exclusively it has been usual to apply the names of the *old French* and the *Romance*, though the latter, at least, really belongs as rightfully to the Langue d'oc, meaning, as it does, nothing more than the Roman or Latin dialect, as the provincial Latin of Gaul was denominated, in contradistinction to the original Celtic language of the people. Both the Langue d'oyl and the Langue d'oc, therefore, were, properly speaking, Romance. They were also equally French in every respect except one, namely, that it is from the Langue d'oyl, certainly, that the modern French has been principally formed. In the proper sense of this term, however, it is applicable to neither; the French, or Franks, were a Teutonic people, speaking a purely Teutonic tongue, resembling the German, or more nearly the Flemish; and this tongue they continued to speak for several centuries after their conquest of Gaul. This old Teutonic French is denominated by philologists the *Frankish* or *Francic*, and it is altogether of a different family from the modern French, which has come to be so called only from the accident of the country in which it was spoken having been conquered by the French or Franks,—the conquerors, as in other cases, in course of time adopting the language of the conquered, and bestowing upon it their own name.

and, various circumstances now contributing to the depression of the Provençal troubadours, the poets of the Langue d'oyl ere long came to be still more famous than those of the Langue d'oc, and the former to be even generally accounted the idiom the most happily adapted for poetry. Most of these early poets in the language of the north of France were Normans or Englishmen. Yet the Provençal poetry, too, was undoubtedly well known and in high favour in England, especially after the accession of Richard Cœur de Lion. Of the principal poem attributed to that king,* there are two versions, one (that commonly given) in Provençal, the other in Norman; and it is disputed in which dialect it was originally composed.†

In speaking of the French literature of this period, it would be unpardonable to omit noticing its most remarkable product, or that at least of all its remains which has the most of an English interest, the Chronicle of the inimitable Sire Jean Froissart. Froissart was a native of Valenciennes, where he appears to have been born about 1337; but the four books of his Chronicle, which relate principally to English affairs, though the narrative embraces also the course of events in France, Flanders, Scotland, and other countries, comprehend the space from 1326 to 1400, or the whole of the reigns of our Edward III. and Richard II. Froissart, however, is rather of authority as a painter of manners than as an historian of events; for his passion for the marvellous and the decorative was so strong that the simple fact, we fear, would have little chance of acceptance with him in any case when it came into competition with a good story. In his own, and in the next age, accordingly, his history was generally reckoned and designated a romance. Caxton, in his 'Boke of the Ordre of Chevalrye or Knighthood,' classes it with the romances of Lancelot and Percival; and indeed the 'Roman au Chroniques' seems to have been the title by which it was at first commonly known. On the other hand, however, it is fair to remember that a romance was not in those days held to be necessarily a fiction. Froissart's Chronicle is certainly the truest and most lively picture that any writer has bequeathed to us of the spirit of a particular era; it shows "the very age and body of the time his form and pressure." In a higher than the literal sense, the most apocryphal incidents of this most splendid and imaginative of gossips are full of truth; they cast more light upon the actual men and manners that are described, and bring back to life more of the long-buried past than the most careful details of any other historian. The popularity of Froissart's Chronicle has thrown into the shade his other productions; but his highest fame in his own day was as a writer of poetry. His greatest poetical work appears to have been a romance entitled 'Meliader, or the Knight of the Sun of Gold;' and he also wrote many shorter pieces, chants royaux, ballads, rondeaux, and pastorals, in what was then called the New Poetry, which, indeed, he cultivated with so much success that he has by some been regarded as its inventor.* On his introduction to Richard II., when he paid his last visit to England in 1396, he presented that monarch, as he tells us, with a book beautifully illuminated, engrossed with his own hand, bound in crimson velvet, and embellished with silver bosses, clasps, and golden roses, comprehending all the pieces of Amours and Moralities which he had composed in the twenty-four preceding years. Richard, he adds, seemed much pleased, and examined the book in many places; for he was fond of reading as well as speaking French.

But while Latin was thus the language of the learned, and French of the noble, the body of the people kept to the expressive Teutonic speech of their ancestors—the Saxon or English. Notwithstanding the circumstances which even before the Norman conquest, and more especially after that event, operated to establish the partial use of the French tongue, it is certain that French never made any progress towards becoming the vernacular language of this country. On the contrary, it seems, from the first, to have lost rather than gained ground in the effort to maintain itself in competition with the Saxon, even as a separate speech. Although, however, it neither supplanted the Saxon in the mouths of the general population, nor even, as has been asserted, acquired the predominance in the mixture or fluctuation of the two languages, it unquestionably did, in course of time, infuse itself largely into the vocabulary of the old national tongue. But the essential forms and structure of that tongue it does not seem to have at all affected. So much of it as was received into the body of the Saxon was assimilated in the process, and converted into one substance with the soil which it enriched. The Saxon, however, even in its forms, underwent, undoubtedly, a very considerable change in the course of the eleventh and twelfth centuries. "But that these mutations," says a late able and learned writer, "were a consequence of the Norman invasion, or were even accelerated by that event, is wholly incapable of proof; and nothing is supported upon a firmer principle of rational induction, than that the same effects would have ensued if William and his followers had remained in their native soil. The substance of the change is admitted on all hands to consist in the suppression of those grammatical intricacies occasioned by the inflection of nouns, the seemingly arbitrary distinctions of gender, the government of prepositions, &c. How far this may be considered as the result of an innate law of the language, or some general law in the organization of those who spoke it, we may leave for the present undecided; but that it was in no way dependent upon external circumstances, upon foreign influence or political

* See ante, p. 509.

† For the most complete account of the Anglo-Norman poets see a series of papers by M. de la Rue, in the 12th, 13th, and 14th volumes of the Archæologia.

* See Warton, Hist. of Eng. Poetry, ii. 173 and 300.

disturbances, is established by this undeniable fact—that every branch of the Low German stock, from whence the Anglo-Saxon sprang, displays the same simplification of its grammar. In all these languages there has been a constant tendency to relieve themselves of that precision which chooses a fresh symbol for every shade of meaning, to lessen the amount of nice distinctions, and detect, as it were, a royal road to the interchange of opinion.*

The change here described may be considered as having been the first step in the passage of the Anglo-Saxon into the modern English; the next was the change made in the vocabulary of the language by the introduction of numerous terms borrowed from the French. Of this latter innovation, however, we find little trace till long after the completion of the former. For nearly two centuries after the Conquest the Saxon seems to have been spoken and written with scarcely any intermixture of Norman. It only, in fact, began to receive such intermixture after it came to be adopted as the speech of that part of the nation which had previously spoken French. And this adoption was plainly the cause, and the sole cause, of the intermixture. So long as it remained the language only of those who had been accustomed to speak it from their infancy, and who had never known any other, it might have gradually undergone some change in its internal organization, but it could scarcely acquire any additions from a foreign source. What should have tempted the Saxon peasant to substitute a Norman term, upon any occasion, for the word of the same meaning with which the language of his ancestors supplied him? As for things and occasions for which new names were necessary, they must have come comparatively little in his way; and, when they did, the capabilities of his native tongue were abundantly sufficient to furnish him with appropriate forms of expression from its own resources. The corruption of the Saxon by the intermixture of French vocables must have proceeded from those whose original language was French, and who were in habits of constant intercourse with French customs, French literature, and every thing else that was French, at the same time that they spoke Saxon. And this supposition is in perfect accordance with the historical fact. So long as the Saxon was the language of only a part of the nation (though that was always infinitely the most considerable part in respect of numbers), and the French, as it were, struggled with it for mastery, it remained unadulterated;—when it became the speech of the whole people, of the higher classes as well as of the lower, then it lost its old Teutonic purity (though only in its vocabulary, not in its forms or its genius), and received a large alien admixture from the alien lips through which it passed. Whether this was a fortunate circumstance, or the reverse, is another question. It may, however, be observed, that the Saxon, as has just been intimated, had already lost some of the chief of its original characteristics, and that, if left to its own spontaneous and unassisted development, it would probably have assumed a character resembling rather that of the Dutch or the Flemish than that of the German of the present day.

With the exception of several songs and other short poetical pieces—one of the most remarkable of which is a ballad in celebration of Simon de Montfort's victory at Lewes in 1264—a few metrical chronicles and romances, for the most part translated from the French, constitute the only compositions now remaining that can be said to be written in the English, as distinguished from the Anglo-Saxon language, before the end of the reign of Edward I.* The Chronicle of Robert of Gloucester, being a history of England from the landing of Brutus to the accession of Edward I., is a metrical, but anything rather than a poetical, version of the Latin History of Geoffrey of Monmouth. It is supposed to have been written about the year 1280. The similar performance of Robert Mannyng, often called Robert de Brunne (from his monastery of Brunne, or Bourn, in Lincolnshire), which was produced about twenty years later, is scarcely of any higher order of merit. It is translated from two French chronicles, one itself a translation from Geoffrey of Monmouth (and the same that Layamon had already translated into Saxon), by Wace of Jersey, who flourished in the middle of the twelfth century, the other written by Peter Langtoft, a monk of Bridlington in Yorkshire, who lived not long before Mannyng himself.† The language appears in these works in almost the rudest possible state, though Mannyng's style is somewhat less harsh and confused than that of his predecessor. Some improvement, however, is discernible in the next reign in the devotional poems, dull as they are, of Adam Davy, and still more in the romance entitled 'The Life of Alexander,' which has been improperly attributed to that writer. But of all the writers before Chaucer, the one in whose hands the language seems to have made the most remarkable advance in flexibility and correctness, was Laurence Minot, who flourished in the earlier part of the reign of Edward III., and wrote a series of poetical pieces on the warlike achievements of that king, which have gained for him, from an eloquent modern critic, the title of 'the Tyrtæus of his age."‡

Towards the close of the reign of Edward III.

* Preface, by Price, to Warton's Hist. of Eng. Poetry, p. 110.

* The celebrated romance of the Geste of King Horne, generally quoted as the earliest English romance, must be considered (whether it be translated or original) as rather a Saxon than an English poem, even in the form in which we now possess it. Its language appears to be of the same date with that of the Saxon translation of Wace's Le Brut, by Layamon, or the paraphrase of the Gospel histories, entitled 'Ormulum,' both of which are assigned to the reign of Henry II. The romance of Sir Tristrem, again, which has been supposed to be the production of the Scottish poet Thomas of Ercildown, or the Rymer, who lived in the thirteenth century, is now generally considered not to be, in its present form, of that antiquity.

† Hearne published Robert of Gloucester's Chronicle in 2 vols. 8vo. Oxford, 1724; and the second part of Mannyng's, under the title of 'Peter Langtoft's Chronicle,' 2 vols., 8vo., Oxford, 1725. Mannyng accordingly is usually quoted under the name of Langtoft. The first part of Mannyng's Chronicle has never been printed.

‡ Essay prefixed to Specimens of the British Poets, by T. Campbell, Esq.

Robert (or, as he ought more probably to be called, William) Langland wrote his singular poem entitled 'The Visions of (that is, concerning) Pierce Plowman,' in a diction and fashion of versification both of which seem to have been intended as imitations of a Saxon model. The lines here are constructed upon the principle, not of rhyme, but of alliteration; and instead of the introduction of any new words or forms of expression, the aim of the author evidently is to revive as many as possible of those that had become obsolete. In vigour, animation, and general poetical merit, however, Langland far excels any of the writers that have yet been named.

But he does not distance his predecessors nearly so far as he is himself distanced by his immortal contemporary, Geoffrey Chaucer, the true father of our English literature. Compared with the productions of this great writer, all that precedes is barbarism. It is curious that at the very time when the author of the 'Visions of Pierce Plowman' was labouring to reinvigorate the language by the restoration of its lost forms, another mind should have entered upon the work of its renovation by the opposite process, of moulding it to a spirit and manner of expression different, in various respects, from what it had ever before known. Yet it was no doubt the same feeling of dissatisfaction with its existing state that prompted the endeavours of both. The mightier genius, however, undoubtedly chose the wiser course. To Chaucer our language principally owes the foundations of its still enduring constitution, as well as the whole body of our poetry much of its peculiar and characteristic spirit. He is the father of our literature in a much higher and truer sense than in that of merely standing formally and by accident at its head. It has been made in great part what it is through the example which he set to his successors, and the influence and inspiration of the works which he bequeathed to them. But for two hundred years Chaucer had no successor; in that early morn of his language he produced compositions which the most gifted of his countrymen were scarcely able to appreciate, far less to rival, till after the commencement of altogether a new era of civilization. Nor has there even yet arisen among us any poet, Shakspeare alone excepted, surpassing, in the entire assemblage of his various qualities, this wonderful minstrel of the fourteenth century. Spencer's is a more aërial, Milton's a loftier song; but the poetry of neither of these displays anything of the rich combination of contrasted excellencies that gives so much life and splendour to that of Chaucer—the sportive fancy, painting and gilding everything, with the keen, observant, matter-of-fact spirit that looks through whatever it glances at,—the soaring and creative imagination, with the homely sagacity, and healthy relish for all the realities of things,—the unrivalled tenderness and pathos, with the subtlest humour and the most exuberant merriment,—the wisdom at once and the wit,—the all that is best, in short, both in poetry and in prose, at the same time. The comprehensiveness and manifold character of Chaucer's genius is evidenced by the very diversity of the springs of inspiration to which he resorted. The Provençal troubadours, the Norman romancers, the bright array of the stars of the young poetry of Italy, were all sought out by him, and made to yield light to his "golden urn." His works comprise translations or imitations of his predecessors or contemporaries, the restorers of poetry, in all these languages, and in all the various kinds of composition which they had made famous. No writer has taken a wider range in respect of subject and manner, or has evinced a more triumphant mastery over the whole compass of the lyre. His 'Canterbury Tales' alone, indeed, include nearly every variety of gay and serious poetry: in this crowning work his matured genius revels in the luxuriance of its strength, and seems to rejoice in multiplying proofs of its command over all the resources of its art.

Another name is commonly mentioned along with that of Chaucer—"the Moral Gower," as

JOHN GOWER.

his friend Chaucer himself has designated him.* And, in truth, he is more moral than poetical—though he wrote a great quantity of Latin and French verse, as well as English.

This is also the age of the birth of Scottish poetry. Two remarkable works in that dialect, the 'Bruce,' by John Barbour, Archdeacon of Aberdeen, and the 'Cronykil' of Andrew Wynton, Prior of Lochleven, remain, both of which are productions of the latter part of the fourteenth century. Barbour displays occasionally considerable poetical spirit. This writer, it may be remarked, calls his language English, as in truth it was; for the Lowland Scottish is undoubtedly nothing else than a dialect of the Saxon.

Of the English prose literature of the fourteenth

* In the 'Troilus and Creseide.'

Gower's Monument, St. Saviour's Church, Southwark.

century that has survived, the most remarkable specimens are Trevisa's translation of Higden, mentioned above, and Wycliffe's translation of the Scriptures. The Bible is said to have been also translated by Trevisa. An indenture, dated in 1343, has been referred to as the earliest known legal instrument in English. Although Edward III. ordered the pleadings in courts to be carried on in English in 1362, the earliest instance that occurs of the use of the language in parliamentary proceedings is in 1388.

Gothic architecture, which prevailed throughout the greater part of Europe from the twelfth century to the sixteenth, presents itself to our inquiries in a constant state of progression. One change is only a transition to another. It is also variously modified by the several countries which adopted it, and considerable differences occur even in the manner of its original transition from the Romanesque. The thirteenth century is the period of its nearest approach to general uniformity. It then diverges into different national characteristics, which are nowhere more strongly or distinctively marked than in England; and, finally, when a classical style of building is revived, as if by common consent among nations, each arrives at its object by a different path.

In no country has Gothic architecture produced more numerous or remarkable results than in Great Britain; for although our later style may want something of the grace and luxuriance of the Norman Gothic, and our religious and other public edifices may not equal the vastness of some of the German cathedrals, yet we possess structures displaying architectural combinations peculiarly our own, and pre-eminent in decorative effect and boldness of execution.

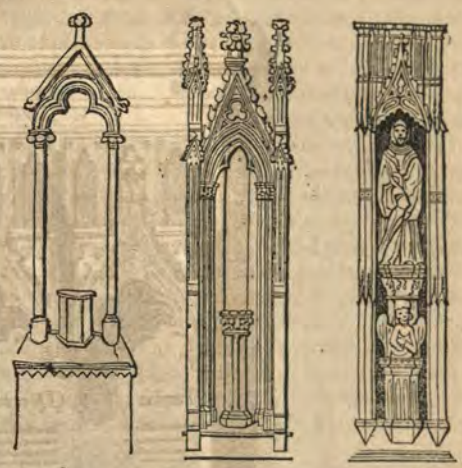
Gothic must not be considered merely as *differing* from classical architecture. It is diametrically opposed to it upon principles no less fixed and consistent than its own. In the two preceding Books we have traced the gradual disappearance of every distinguishing feature of regular architecture as it became applied to new purposes, and its parts formed into new combinations; and in this state architecture remained, destitute of any real principle, until the forms necessarily resulting from the

construction of the Christian Basilica, and the general introduction of vaulted roofs, appear to have suggested the predominance of the vertical line as the principle of composition.

Gothic architecture consists in the perfect development of this principle. It was in gradual progress during the last modification of the Romanesque, and was soon carried to its utmost extent: the pillars were clustered throughout to assimilate with the lofty and slender shafts supporting the vaulting of the nave; the capitals reduced, and their salient angles suppressed so as to produce the least possible interruption to the eye in its progress upward. The same tendency was observed in pointing the arch; and the distinct and deeply-cut mouldings which replaced the ancient archivolt, were calculated to continue the impression produced by the vertical lines of support. The buttress became an important feature both in composition and construction, being spread toward the base, and carried above the walls, in order to resist the thrust of the main vaulting, through the medium of the flying buttress—the boldest combination of strength and lightness ever imagined. Every horizontal member was reduced to comparative insignificance.

In every step of its progress Gothic architecture is based upon this general principle; but the modifications in its subordinate and decorative forms are such as unerringly to distinguish the Gothic of one period from that of another. Three styles arising from such modifications have been discriminated* in that peculiar to Great Britain, of which two appeared and passed away nearly within the limits of the historical period now under consideration, viz.—the *Lancet*, or *Early English Gothic*, extending through the reign of Edward I. and the *Decorated English* extending to nearly the end of the fourteenth century.†

I. The early English style, of which Salisbury Cathedral (founded in 1220 by Bishop Poore, on the removal of the see from Old Sarum) is the most complete and extensive example, maintains great simplicity in its composition. Pinnacles are little used, being confined to the principal angles of the edifice; and the buttresses, with which they were afterwards principally combined, finish with a triangular pediment. Arched pannelling is still used abundantly; and to this mode of decorating the walls we owe the introduction of niches and canopies, which make an early appearance in the west front of Salisbury, and are still farther advanced in the contemporary façade of Wells. As yet, however, they consist only of a deepened arch surmounted by a pediment, and a corbel, or very small pedestal, for the figure. Detached and banded shafts are a peculiar characteristic of the columns of this period. They are also much used in doorways, of which the larger sort are planned with a deep arch, composed of an immense cluster of mouldings, forming several planes of decoration,



NICHES.

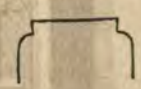
and inclosing a double entrance. These entrances are not always arched, but sometimes turned into a form peculiar to the period, being a square head with small rounded haunches. This sort of open-



ing is also common in smaller doorways and in domestic architecture. Segmental arches, as in the triforium of the south transept at York, and a depressed arch with a knee, are also very generally in use where a high pitch might be inconvenient. The latter occurs in the doorway to the south transept of Westminster Abbey.

The windows of this style, in its early stage, are tall and narrow, without any division or tracery, but generally combined in groups of two, three, five, or seven openings; thus, as in the beautiful example of the north transept of York, opening the whole compartment of the building in a manner analogous to the spacious windows shortly afterwards introduced.

This simple form was not long maintained; and the enlargement of the windows, their division into two or more lights within a single external arch, and the introduction of tracery, form a second division in the early English architecture. An early double window occurs in the south transept of York, founded in 1227; but in Westminster Abbey, begun by Henry III., in 1245, the plain lancet window is nearly laid aside, the openings being for the most part divided by a shaft, and the head of the arch occupied by a feathered circle. In the triforium of the same building the tracery is to be observed coinciding with the mouldings of the arch, differing in this respect from the earlier

* Rickman.

† As the world have agreed to understand the term Gothic, it has a good claim (to whatever objections it may be open) to be used until a better shall be established. Mr. Whewell has advanced good reasons for its use in a generic sense. The term English as applied to a species of Gothic is perfectly definite.

examples of York and Salisbury, where the openings are all merely independent quatrefoils, pierced through the blank space in the spandrils of the arches,—a certain indication of an early date.

Tracery in circles, varied only by multiplying its parts, may be followed down to the end of this period, when the increased breadth of the window, and the number of its subdivisions, led to a more minute and complicated manner of laying out the space above the springing of the arch.

With regard to the decorations of this period, the trefoil and quatrefoil were introduced and freely used in its earliest stage; but the most characteristic ornament, and one almost peculiar to the English Gothic, is the indentation known as the *dog's tooth*. This was soon improved into a sort of pyramidal four-leaved flower, in which shape it is used in the most extraordinary profusion, as in the south transept of York, where it not only fills most of the hollow mouldings inside and out, but follows the line of the pediments, the angles of the buttresses, and even the shafts which decorate the window-jambs. It appears to have been laid aside about the middle of the thirteenth century—being used more sparingly in the north transept, and not occurring in any part of Westminster Abbey. The Early English foliage is more easily understood from prints than from description. A trefoil leaf of peculiar character enters largely into its composition. It is always deeply cut, and in capitals turns over, so as frequently to resemble a volute. One great characteristic of this period is, the careful manner in which all the decorations are executed. There is much of the other styles (as Mr. Rickman observes), which appears to be the copy by an inferior hand of better workmanship elsewhere: this is remarkably the case in *Perpendicular* work, but is hardly anywhere to be found in the early English style.

The first step was made during this period toward that magnificent style of roofing peculiar to the English Gothic, by the addition of intermediate ribs to the arches and cross-springers of the early vaulting. In the continental Gothic the vaulting seldom advances beyond these simple elements—a circumstance which gives an appearance of baldness and want of consistency to some of its most splendid examples. This early improvement in the style of vaulting may be connected with the introduction of polygonal chapter-houses, in which it branches out in a rich cluster of moulded ribs from a central column. That of Lincoln is one of the earliest examples, exhibiting the lancet-window and the toothed ornament. It was followed by many others, particularly those of Westminster, Salisbury, York, Southwell, and Wells: the last-mentioned, however, is of a later style. The complete quadrangular cloister is another improvement made at this date, of which Salisbury remains among the earliest and most perfect examples.

Early English Capitals—York Cathedral.

Decorated English Capitals—York Cathedral.

In the general arrangement of the greater churches of this period, the suppression of the apsis must be noticed as one of the points in which the English style already diverged from that of the continent, where the apsis was always retained. It was caused probably by the innovation of adding the lady chapel to the eastern extremity of the building.

Parish churches are numerous in the early English style. It is probable that many of those erected before the Conquest may have fallen into decay, and been replaced about this time. The ancient plan of a nave and chancel without side ailes is still retained in those of the smaller class.

We must not quit this style without noticing the spire, which was introduced at a very early date. In fact, an example remains at Sleaford, in Lincolnshire, which evidently belongs to the transition. In its first form the spire retains something of its original character of a pointed roof, rising immediately from the projecting cornice of the tower; but though this form runs occasionally far into the succeeding style, a more graceful mode of construction was soon adopted by placing the spire within the parapet of the tower, and grouping it with the pinnacles at the angles, as in that of Chichester Cathedral, which may be assigned to this period, though perhaps completed somewhat later.* The spire of Old St. Paul's, rising to the height of 520 feet, was added to that structure as early as 1222.† It was, however, of timber, covered with lead.

II. The reign of Edward II. brings with it the *Decorated English* style, of which the most striking characteristics are furnished by the tracery of the windows. The great east and west windows were introduced into churches at this period—another striking deviation from the continental Gothic, in which the decoration of the west front is centred in its lofty and gorgeous portals, and wheel-windows. This latter form is comparatively rare in English churches; and, where it does occur, is confined to

Choir, York, transition to the Perpendicular.

the transepts, as in the cathedrals of York and Lincoln, which afford fine examples both of the Early and Decorated styles. The earliest style of tracery at this epoch is that known by the name of *Geometrical*, from its formation in regular figures, trefoils, quatrefoils, &c., instead of a combination of circles alone, though the latter figure is by no means abandoned, and frequently forms the leading line in the head of the window. Of this description are the windows of Exeter Cathedral, the work of the early part of the fourteenth century; but they are not without a mixture of compound curves, harmonizing the abrupt junction of the more formal geometrical shapes, in a manner which forms a natural transition to the flowing and ramified tracery of the time of Edward III. This latter style is displayed in its ultimate form in the magnificent nave and west front of York Cathedral,

completed about 1330. But its reign was short, and, if considered as analogous to the *Gothique flamboyant* of Normandy, it must be admitted to have been but imperfectly developed in this country; and it presents varieties which it is not always easy to reconcile or assimilate. It speedily passed into a transition ending in the *Perpendicular* style, in which the English Gothic finally diverged from that of the continent. The peculiarities of the latter style are strongly infused into the choir of York Cathedral, begun as early as 1361, though not completed till the beginning of the fifteenth century.

The other characteristics of the Decorated English may perhaps be best understood by a comparison with those of the preceding period. The buttresses are now finished by pinnacles, and their gradations marked by pediments highly enriched with crockets. In the early part of this style the

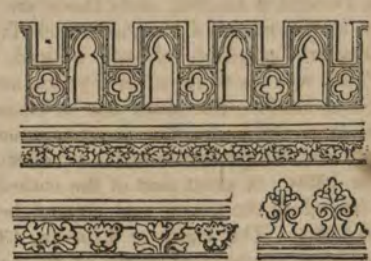
pediment is greatly increased in height and decorated with tracery; but, at a later period, the prevalence of the flowing line effects another revolution in its shape and proportion, and it is lowered and curved into the form of an ogee. During this transition the two pediments were frequently used one within the other, as in the abbey gateway at Bury St. Edmunds.

The shafts of the piers are no longer detached from the main columns, but are worked in the same stone, the whole forming an integral clustered pillar. The capitals are more varied than in the earlier style, and the form of the abacus alters from a circle to an octagon. The arch mouldings become bolder, and, in the latter part of the style, are often continued uninterruptedly down the column alternating with the shafts. Shafts are still used in the decoration of doors and windows, but in the composition of ornamental pannelling they begin to be superseded by slender buttresses and pinnacles. Niches make great progress early in this style, being much increased in size and importance. The screen to the west front of Exeter Cathedral, composed entirely of niches and tabernacles, is the work of Bishop Grandisson in 1330. In another stage of improvement, the canopies were thrown out beyond the face of the building, terminated with lofty finials, and decorated with clusters of pinnacles.

The cornices of this period are composed with a hollow moulding, in which large flowers, grotesque heads, and other forms are placed at intervals. Open parapets came at this time into use, but were gradually superseded by battlements, either plain or pierced with tracery, as the building is more or less decorated.



The foliage of this period is extremely rich and in a more natural style than the stiff, curled forms of the Early English. The ornament called "the ball flower" is altogether peculiar to this style. It is described by Rickman as "a small round bud of three or four leaves, which open just enough to show a ball in the centre." It is sometimes used in the same profusion as the toothed ornament in the Early English, and is a no less certain indication of the period to which it belongs. The vaulting continues to advance in decoration. At Exeter the spandrils of the roof have three intermediate ribs on each side, between the cross springers, forming a pendentive of great richness of effect, though without complication. In the nave of

York, the mouldings begin to be crossed and interlaced, a system which, in the choir of Gloucester, vaulted by Abbot Boyfield at the very close of the period, is carried to the point of confusion. The choir of Tewkesbury is an excellent specimen of this age and of the first step in the transition to fan-tracery.

The two styles occupying the present period contributed greatly to our national monuments of ecclesiastical architecture. Salisbury is, indeed, the only cathedral built entirely and uniformly in the early English Gothic, but important additions were made in that style to several others.

The presbytery at Winchester is to be noticed as one of the earliest examples of unmixed Gothic, being the work of Godfrey de Lucy, who held that see from 1189 to 1205. The transepts at York have already been mentioned incidentally. They are further deserving of attention as exhibiting two gradations of the style, the south having been begun at an early period and continued by Archbishop Grey in 1227, and the north being the work of John le Romayne about the middle of the century. To these examples may be added the presbytery of Ely and the nave and choir of Lichfield, both erected about 1235; the nave and choir of Wells, dedicated by Bishop Joscelin about 1240; and the nave of Durham, erected by Prior Melsonby between 1242 and 1290. Of Westminster Abbey, the eastern part only was completed by Henry III.; and its subsequent continuations, on a uniform design, furnish an interesting study of the progressive changes in detail. In Scotland, the Early English style prevails in the cathedrals of Glasgow and Aberdeen, in the magnificent ruins of Elgin, and the abbey of Holyrood.

Of the Decorated English style there are early examples in the ruins of Croyland and Tintern, and in Exeter Cathedral, already noticed. The nave of York was the work of forty years, and was completed in 1330. The south isle of Gloucester Cathedral, remarkable for the peculiar tracery of its windows and the profusion of the "ball-flower," dates from 1320. A great part of the cathedral of Bristol, including the tower, was erected between 1320 and 1363. The choir of Lincoln, 1324, is one of the most magnificent works of the age, but rather peculiar in style, and retaining in an unusual degree some characteristics of an earlier date. The chapel of St. Stephen, at Westminster, begun in 1330, was remarkable as a complete work of the period, and also for the transcendent splendour of its decorations. The unrivalled lantern of Ely was begun in 1328; the nave of the cathedral of Beverley, the choir of that of Rippon, and the east end of that of Carlisle, all date between 1330 and 1370, during the period when ramified tracery was in its greatest perfection. The great window in the last surpasses every other English example in the same style. The choir of York has been already referred to: the central tower is of the same date and character, and was erected by Walter Skirlaw in 1372. The choir of St. Nicolas at Aberdeen, the College Church at Edinburgh, and the celebrated Abbey of Melrose, may be cited as beautiful examples of this style in Scotland. The High Church of Edinburgh is of the same period, but modern alterations have left little of its original character visible.

The spires of this period are numerous and magnificent. Among them stands that of Salisbury, added to the structure in 1331, pre-eminent in height and graceful proportions: that of St. Mary's, Oxford, 1340, is remarkable for the rich clustered group formed by the surrounding pinnacles. Many spires of this date are lighted by a graduated series of windows, crowned by the high pediment peculiar to the style, as at Newark and St. Mary's, Stamford. None of these examples are crocketted, though the angles of that of Salisbury are thickly studded with knobs; but the crocketted spire became common before the end of the period.

Parish churches in the Decorated English style are numerous and splendid, particularly in Lincolnshire, where ecclesiastical architecture appears to have flourished in an especial manner during the fourteenth century.

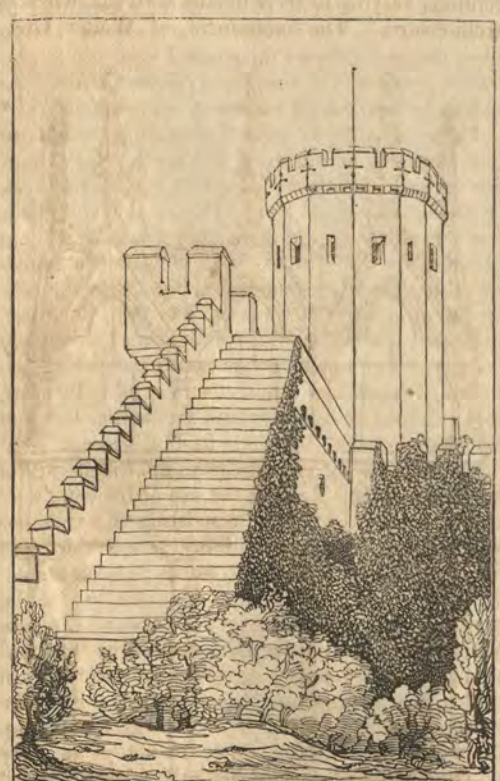
The foregoing list of examples might be greatly increased, but instead of extending a catalogue of names, we have endeavoured to comprise everything that can interest the general reader in a progressive series of examples selected from the buildings best known and most easily referred to.*

There is little to record respecting castellated and domestic architecture during the Early English period. Castle building had received a check at the accession of Henry II. by the enactment that no subject should fortify his residence without a license from the crown. Of domestic architecture there are fewer remains of the thirteenth century than of any other period since the Conquest, and those few (to use Walpole's words) still imply the dangers of society rather than its sweets. Additions, bespeaking some advance in refinement, began indeed to collect round the sullen keeps of the Norman era; and we find a precept from Henry III. for the erection of an apartment within the castle of Guildford for the use of his daughter-in-law, Eleanor of Castile, consisting of a chamber with a raised hearth and chimney, a wardrobe, and other conveniences, and an oratory; and it is particularly specified that the windows are to be glazed. But with the reign of Edward I. a new era commences, and the castles raised by that monarch for the security of his new dominion in Wales are among the first which combine the fortress and the palace in an integral structure. Conway Castle includes two courts within the body of the building, the great hall (thenceforward indispensable in every royal and noble habitation) occupying one side of the lower area. The separate apartments of the king and queen are to be distinguished, both at Conway and Caernarvon. In

* See Britton's Cathedrals and Architectural Antiquities,—Storer's Cathedrals,—Carter's Antiquities,—Halfpenny's York,—and the publications of the Antiquarian Society.

the former, tradition points out the "Queen's Oriel," a room with some pretensions to elegance, opening upon a terrace, and commanding a beautiful view of the surrounding scenery. Still the domestic conveniences of the buildings of this age by no means keep pace with their increased extent; and the room in which Edward II. was born, at Caernarvon, is a confined cell, dark and misshapen.

From these innovations in the plan of constructing castles, new architectural features are naturally developed, of which the most striking is the grouping of the numerous and variously-shaped towers, those flanking the gateway being usually conspicuous by their size and lofty proportion. The grand and picturesque combinations of which this style of building is susceptible were not overlooked by the architects of a later date, and the castellated outline, especially in the gateways, was retained in our baronial residences long after every essential point belonging to a fortress was given up. Strength, however, was still an object in the majestic structures of the fourteenth century, among which it may be sufficient to cite the castles of Alnwick, Raby, Bolton, and Warwick. In the last, Guy's Tower, the work of Thomas Beau-



Guy's Tower, Warwick Castle.

champ, Earl of Warwick, in the reign of Richard II., is perhaps one of the latest constructed with Norman solidity and for the real purposes of defence. The magnificent hall and other buildings constituting the upper ward of Kenilworth were begun by John of Gaunt in the same reign. Windsor is also of this period. It had always been a royal residence, but was rebuilt and enlarged by Edward III. to the extent of at least the whole upper ward as it now exists, though its original features have long been obliterated. It must not be omitted that the architect of this proud pile was William of Wykeham, afterwards the munificent Bishop of Winchester.

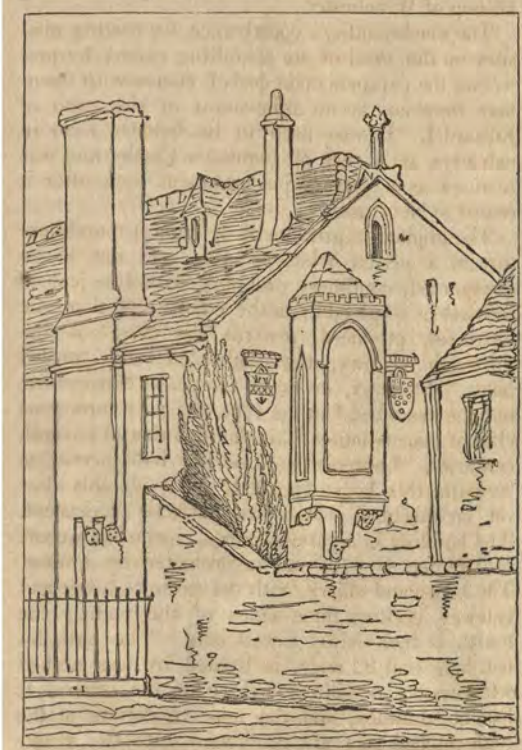
The machecoulis, a contrivance for casting missiles on the head of an assaulting enemy by projecting the parapets upon corbel stones with openings between, is an innovation of the time of Edward I. It was used in its boldest form in gateways, as in that of Lancaster Castle, and was retained as a picturesque ornament long after it ceased to be of use.

The gradual improvement of domestic architecture at a period when security was not to be disregarded, combined probably with the jealous restrictions imposed upon the erection of domestic fortresses, produced, towards the close of the thirteenth century, the embattled and moated house. Stokesay, or Stoke Castle, in Shropshire, may be described * as the type of a very numerous class of manor-houses in the fourteenth and fifteenth centuries. Laurence de Lodelow had license to embattle this house in 1291, and with this date the architectural details are perfectly consistent. The building is a parallelogram, inclosing a court of 130 feet by 70, and is protected by a moat. The house and offices, with the entrance tower and gateway, occupy three sides of the court; the fourth is inclosed by a wall only. The hall, 54 feet long and 32 wide, is lighted by four arched windows on one side, and three on the other. It has no chimney, and the massive rafters of the high-pitched roof are blackened with the smoke from the hearth in the centre. The hall communicates at one end with the *great chamber*, and at the other with the offices. A large polygonal tower, rising at one of the angles, and surmounted by an embattled parapet with loop-holes, gives a castellated appearance to the edifice. This tower contains three large rooms, in as many stories, communicating by a spiral stair. A similar tower at the opposite angle appears to have been left incomplete: it is planned in smaller divisions belonging to the offices. Markenfield Hall, in Yorkshire, is a building of the same class, and of nearly the same date; embattled, but not, properly speaking, fortified, and without any towers except a staircase turret.

The mere domestic style of this period is very simple, consisting of plain gabled outlines, combined, when the extent of the building renders combination necessary, without much attempt at general effect. Northborough Hall, in Northamptonshire, is a quadrangular house of this description; it is nevertheless executed with much architectural luxury. The decorations are elegant and

* See Britton's Architectural Antiquities, vol. iv.

highly finished; and the free use of the ball-flower places it in the first half of the fourteenth century. Another example of later date remains near the cathedral at Lincoln, and is remarkable for a very early pendant oriel, a form which figures so conspicuously in the architecture of the next century. It was soon carried to perfection, and a highly enriched specimen survives in the palace erected in the same city by John of Gaunt about 1390.



HOUSE OF THE FOURTEENTH CENTURY, AT LINCOLN.
The Roof, Chimney Shafts, and Square Windows, are Modern.

Little change took place in the principles of domestic architecture in the north;* but the fortalices of this period, both in Scotland and on the border, are marked by the introduction of overhanging turrets at the angles, seldom seen in the castellated buildings of England.

Great alterations took place during the Early English period in the style of sepulchral monuments, which must thenceforward be considered under the head of Architecture. The first change was the general adoption of the altar-tomb, a flat, raised table, on which the recumbent effigy is placed. This form soon became general even when there was no effigy. The altar-tomb of William Longspee, Earl of Salisbury, in the cathedral at that place, is one of the earliest: he died in 1226.† Both the tomb and effigy are of wood, painted and gilt. The effigy of William de Valence, Earl of Pembroke, at Westminster, who died in 1296, is also of wood, but plated with copper, and enamelled in colours; an art supposed to have been introduced about this time from Constantinople. The sides of these tombs are pannelled and filled up with shields of arms, a mode of decoration never afterwards laid aside; but niches, containing effigies of the family of the deceased, were added before the end of the thirteenth century, and afterwards carried to a high pitch of decoration.

The flat grave-stone, with the inscription deeply cut and filled with metal, was also introduced very early in the thirteenth century, so that the coffin *en dos d'âne* became generally superseded.

The next great feature in monumental architecture is the canopy, probably suggested by the *catafalque*, still used in funeral ceremonies abroad, and sometimes on extraordinary occasions in our own country. This being united with the altar-tomb, in which the body was deposited above ground, the mode of sepulture (as King observes) became a sort of perpetual lying in state. The most magnificent of these canopied tombs are detached; many more are engaged in the walls. They continued in vogue long enough to survive the style which gave them birth, and were executed with all the luxury of art until the seventeenth century, varying in their details with the march of architecture. The monument of Walter Grey,

TOMB OF ARCHBISHOP GREY—York Cathedral.

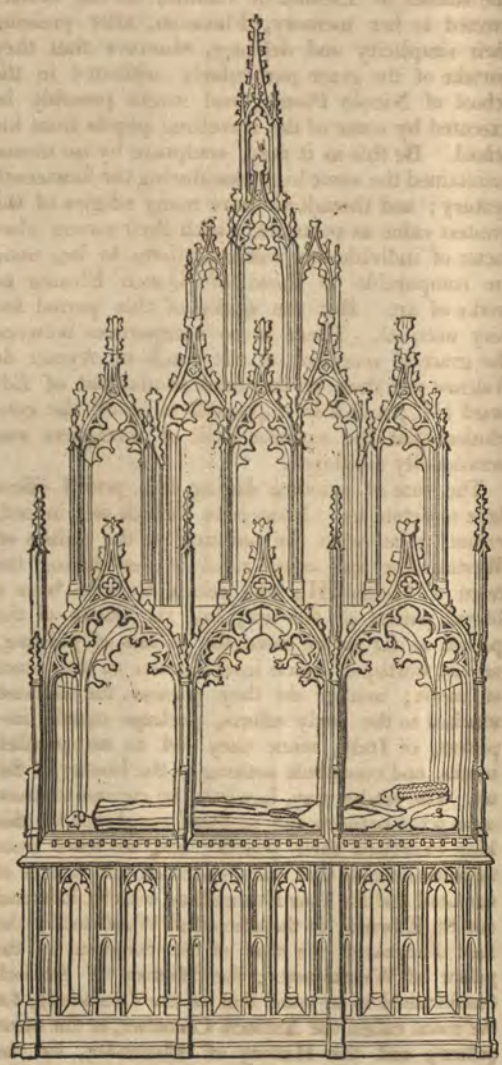
† The altar-tomb of King John is much later than the effigy.—See p. 515.

Archbishop of York, who died in 1225, and those of Aymer de Valence, Earl of Pembroke, at Westminster (1334), and Hugh le Despenser, Earl of Gloucester, in Tewkesbury Abbey (1359), may be cited as progressive examples of this species of architecture in the thirteenth and fourteenth centuries.

The higher branch of sculpture advanced greatly during the thirteenth century. Monumental effigies of this period are numerous and interesting.

Tomb of Aymer de Valence—Westminster Abbey.



Monument of Hugh Le Despenser, Earl of Gloucester, and his Countess—Tewkesbury Cathedral.

Among the earliest works of this class the figure of Lord de Ros, in the Temple church, displays both grace and spirit. Basso-relievo was also cultivated. It is often introduced upon flat surfaces, as in the spandrils of the arches at Worcester and the Chapter House of Salisbury, and before the middle of the century the sculptures on the front of Wells Cathedral, representing the history of the Old and New Testament, were executed. These sculptures possess sufficient merit to have excited the admiration of Flaxman, who pronounces especially upon the relievo representing the creation of Eve, that among many compositions on this subject by Giotto, Buonamico, Buffalmacco, Ghiberti, and Michel Angelo, this is certainly the oldest, and not inferior to many others. He further observes of these sculptures in general, that though, owing to the disadvantages under which such works were produced in that age, they are necessarily ill-drawn and deficient in principle, "yet in parts there is a beautiful simplicity, an irresistible sentiment, and sometimes a grace excelling more modern productions." He argues, from the contemporary state of the arts in Italy, that these sculptures are

entirely due to native artists.* There is certainly no reason to suppose that foreigners were employed upon any work of importance in England until a later period, when the tomb of Henry III. and the shrine of Edward the Confessor are known to have been executed by Italian hands. With regard to the statues of Eleanor of Castile, on the crosses erected to her memory, Flaxman, after praising their simplicity and delicacy, observes that they partake of the grace particularly cultivated in the school of Nicolo Pisano, and might possibly be executed by some of the travelling pupils from his school. Be this as it may, sculpture by no means maintained the same high tone during the fourteenth century; and though we have many effigies of the greatest value as portraits, which their strong character of individuality warrants them to be, none are comparable to those of Queen Eleanor as works of art. But the works of this period are very unequal. There is no comparison between the graceful *weepers* on the tomb of Aymer de Valence and those on the later monument of Edward III.; and it is impossible to avoid the conclusion that the superior skill of foreigners was occasionally employed.

The state of painting during this period offers little to detain us. Numerous records are, indeed, extant† relative to the painting of the palace of Westminster and other royal houses during the reign of Henry III., who seems to have been a liberal patron of the art; but the works of the period, as far as we have the means of judging, are not worthy of much investigation on the score of merit; neither do they possess the interest attached to the early efforts, perhaps equally imperfect, of Italy, since they led to no parallel results, and contribute nothing to the history of the art. The reader may, however, be curious to know upon what subjects the painters employed by this king exercised their pencils; and we learn from these documents that they executed the figures of our Lord and the Four Evangelists, with St. Edmund and St. Edward, in the chapel at Woodstock; the Last Judgment, for that of St. Stephen, in the palace of Westminster; the History of Antioch (conjectured to be some feat of the Crusades), for the room called the Antioch Chamber, in the same palace; and the History of Alexander, for the queen's chamber in Nottingham Castle. The paintings executed in St. Stephen's Chapel, after its restoration by Edward III., survived till the final destruction of that building by fire. The ornamental parts of this work (for the details of which the reader is referred to the publication by the Society of Antiquaries) furnished the most complete example which Time had spared of the extent to which polychromatic decoration was carried at this period; but those portions appertaining to the higher branches displayed no proficiency in any of the principles of art, though the school of Giotto was already flourishing in Italy under his successors. We must not, however, pass without notice the curious portrait of Richard II., preserved in the Jerusalem Chamber at Westminster. In its style it is merely an enlargement of the miniature painting which was cultivated at this period with great success. Numerous manuscripts are extant, illustrated by compositions displaying the most brilliant colours and the utmost delicacy of execution, whatever their deficiencies may be in other respects. Several specimens from a metrical history of Richard II. have been given in the foregoing pages of this work, and will convey the best idea that mere lines can afford of this branch of the fine arts at the end of the fourteenth century.

In the above-mentioned records we have the first notice of painting on glass, in the form of precepts for glazing three windows in St. John's Chapel, in the Tower of London, with a little Virgin Mary holding the Child, a Trinity, and a St. John the Apostle, and for executing the history of Dives and Lazarus in glass at Nottingham Castle. The style of executing such works at this period was in small medallions of different forms, inlaid upon a sort of mosaic ground in various patterns and the most brilliant colours. Windows of this date were sometimes surrounded by elaborate borders, and may be further distinguished by the predominance of a rich deep blue. This style was continued to the end of the thirteenth century. In that which succeeded the compartments are still small, but of more simple forms, among which a pointed egg shape is common, and they are often filled by a single figure. The ground is no longer disposed in mosaic, but drawn with beautiful scroll or arabesque work.

In the middle of the fourteenth century, and during the period of the zenith of the Decorated English style, figures of larger size were represented, occupying the whole breadth of the light, standing in a niche, decorated with canopies, columns, and buttresses. These figures generally relate to benefactors of the church, and their names and deeds are recorded by inscriptions, and illustrated by their armorial bearings. The west window of York Cathedral is glazed in this style, and the indenture entered into with the artist, of which the particulars are preserved,* fixes the date of its execution to the year 1338.—Robert, a glazier, contracted to glaze and paint the said window at the rate of sixpence per foot for plain, and twelve pence for coloured glass.

The history of English Music, so far as it can be traced by any ancient musical compositions extant, does not commence within the period at which we are now arrived. The art, indeed, as has been already shown, appears to have been generally cultivated in this country from a very early date; but we are strongly inclined to suspect that for many

* See Walpole's Anecdotes of Painting.
† Flaxman's Lectures.

* See Britton's Hist. of York Cathedral, Appendix.

ages it was practised almost invariably as a mere accessary to poetry, or in union with the church service. And here we may, in passing, express our belief that, with the ancients, Music was rarely separated from her sister art,—a fact which, if admitted, will render more probable some of the otherwise incredible stories of the power of harmony handed down to us from remote ages.

From a passage in Bede, referred to in the last Book, and indeed from other statements, it appears, that among the Anglo-Saxons an essential qualification for admission into the upper classes of society was a certain degree of skill on the harp; that is, we suppose, a power of accompanying on that instrument the musical delivery of the popular poems of the day. By the laws of Wales, a harp—or, as we presume, a practical knowledge of the instrument—was one of the three qualifications necessary to constitute a gentleman:* none but the king, his musicians, and freemen, was allowed to possess a harp; and he who played on it was legally a gentleman. According to Giraldus Cambrensis, the people of York, and those beyond the Humber, sang in two parts, treble and base. He also tells us that the Welsh practised vocal harmony in many parts; but perhaps he mistook some such rude chorus as we now occasionally meet with at numerously-attended festive entertainments, for singing harmoniously in several parts.

The ancient national habits that have been described continued to be kept up in later ages. "In the statutes of New College, Oxford, given about the year 1380, the founder orders his scholars, for their recreation on festival days in the hall after dinner and supper, to entertain themselves with songs, and other diversions consistent with decency."* A manuscript roll of the officers of Edward III.'s household contains a list of performers on the trumpet, oboe, clarion, dulcimer, tabret, violin, flute, &c. To these may be added several instruments mentioned by Chaucer in his 'Canterbury Tales' and 'House of Fame.' The same poet, too, in 'The Romaunt of the Rose,' speaks of a lady's singing, in language which implies much vocal ability and great practical knowledge:—

"Well coud she sing, and lustily,
None halfe so well and semily,†
And cothe make in song such refraining,‡
It sate§ her wondir well to sing.
Her voice full clear was, and full swete;
She was not rude, ne yet unmete,
But couthe* inoughe for soche doing
As longith unto karolling."

† Seemingly.
‡ Refrain, the burden of a song, or return to the first part.
§ Became.

Hand-Organ or Dulcimer, and Violin. Royal MS. 14 E. iii.

Yet no remains are to be found, up to the fifteenth century, of what can properly be called a British musical composition; not so much as a simple melody; for the intonations of the church at that period exhibit nothing that comes under the denomination of air, at least in the modern sense of the term: and after much research, we are satisfied of the correctness of what is asserted by one of the most eminent of our musical antiquaries, that, prevalent as dancing was in this country from the earliest times, no appearance can be discovered of the notation, or the name, of even an English dance-tune before the year 1400.† 'Sellinger's (or St. Leger's) Round' may be traced back to nearly the reign of Henry VIII.; nothing beyond.

This is the more remarkable because there were some good English writers on music during the thirteenth and fourteenth centuries, whose works

* Leges Wallicæ, p. 301.

* Knew. † Sir J. Hawkins, Hist. of Music.

HAND-BELLS. Royal MS. 15 D. iii.

are to be found in manuscript in the British Museum, the Bodleian, and other libraries. Of these works we shall only notice one, entitled 'De Speculatione Musices,' by Walter Odington, preserved in Corpus College, Cambridge. This excellent but almost unknown author, was a monk of Evesham during the early part of the thirteenth century, and is mentioned by Stephens, the translator and continuator of Dugdale's Monasticon, as "a man of facetious wit, who used at spare hours to divert himself with the decent and commendable diversion of music, to render himself the more cheerful for other duties." Odington was the author of other learned productions besides this.* Of his present Treatise it has been said, and justly, that if all other musical tracts, from the time of Boethius to that of Franco, were destroyed, we should sustain little loss were the MS. of Odington saved. Not one specimen, however, of the invention of his countrymen, either in melody or harmony, is given by this Benedictine monk; and we must patiently wait till we advance into the fifteenth century ere we shall be enabled to name a single composition, even of the most trivial kind, from the pen of a British musician.

CHAPTER VI.

THE HISTORY OF MANNERS AND CUSTOMS.

FROM the account that has been given of the interior decorations and furniture of English palaces and houses during the eleventh and twelfth centuries, it appears that the practice of painting the walls and ceilings of chambers existed previously to the reign of Henry III. During the reign of that monarch and his immediate successors, the fashion seems, from the frequency of the royal orders concerning it, to have obtained considerably, and almost if not entirely to have superseded the more costly and laboriously-executed hangings of needle-work, of which in several instances the paintings are directed to be made in imitation. The principal subjects were selected from the Holy Scriptures, or from the numerous lays and fabliaux of the thirteenth century, and the incidents were surmounted by scrolls inscribed with the text or the legend as it might be. The well-known "Painted Chamber" at Westminster obtained its name from this style of decoration. The remaining part of its curious pictures executed during the reign of Edward I. was destroyed on the enlargement of the old House of Commons; but, fortunately, not before accurate drawings had been made of them by the late Mr. Charles Stothard. In the romance of 'Arthur of Little Britain,' written in the reign of Edward II., we read of a chamber in which there was no manner of history nor battle "since God first made mankind," but in that chamber it was portrayed with gold azure and other fresh colours, as quickly (to the life) adorned that it was wonder to behold."

As early as the reign of Henry III. we read of the painted glass windows in domestic buildings; and from the above-mentioned romance we learn that, in the fourteenth century, they were made with lattices to open and shut. Strutt has engraved a beautiful specimen of the chairs of the time of Henry III., from a MS. copy of Matthew Paris.* He has also given one of the latest specimens of the square-backed chairs of the thirteenth century,† at the close of which they began to be fashioned after the pointed style of architecture then just introduced. One of the most interesting specimens now existing is the coronation chair, called *St. Edward's*,

Chair. Royal MS. 14 E. iii.

preserved in Westminster Abbey, and in which all our sovereigns from Edward II. inclusive (with the exception perhaps of Mary) have been crowned.

The use of tressels for tables appears to have been introduced during the fourteenth century. In the beautiful French work on furniture, &c., by

Library Chair, Reading Table, and Reading Desk. Royal MS. 15 D. iii.

BED. Royal MS. 14 E. iii.

BED. Royal MS. 15 D. iii.

M. Willemin, there is an ornamental specimen from a MS. copy of the 'Roman de Lancelot du Lac,' in the Royal Library at Paris.

An elegant bedstead, chair, and reading-desk of the fourteenth century are also given in that work, which deserves to be better known in England. We have a splendid description of a bedstead in the romance of 'Arthur' before mentioned. One which stood in the midst of the chamber surmounted in beauty all others; for the "utter-brases" thereof were of green jasper, with great bars of gold set full of precious stones, and the crampons of fine silver bordered with gold; the posts were of ivory with pomels of coral, and the staves closed in buckram covered with crimson satin. The sheets were of silk, with a rich covering of ermine and other cloths of gold, and four square pillows wrought amongst the Saracens. The curtains were of green sendal (silk), ornamented with gold and azure; and round about the bed there lay on the floor *carpets* of silk "poynted and embroidered with images of gold" (one of the earlest notices of carpets);* and at the head of the bed stood an image of fine gold, having a bow of ivory in his left hand, and an arrow of fine silver in his right.

Another bed in the same romance is described as being furnished with a rich quilt wrought with cotton, covered with crimson sendal, stitched with threads of gold, and sheets of white silk, and over all a rich fur of ermines. In front of this bed there stood a bench with great "brases' (arms) of ivory. Our readers must take into consideration that this is from a romance, but it nevertheless is a description founded upon facts, and exaggerated only with regard to the materials. We learn from it, in conjunction with the pictorial representations of the period, that the bedsteads of that day resembled the modern crib used for children in England, and for every body in Germany, being a sort of long box, the sides or railing of which was called the outer bras. The posts at the corners sometimes only rose a little above this railing, and were surmounted with panels, at others they supported a tester.* But the wills of our sovereigns and chief nobility prove that, during the fourteenth century, the beds of personages of distinction were magnificent enough almost to relieve the romancer of the suspicion of exaggeration. Agnes, Countess of Pembroke, in 1367, gives to her daughter a bed, "with the furniture of her father's arms." William Lord Ferrers of Groby, in 1368, leaves to his son his green bed, with his arms thereon, and to his daughter his "white bed and all the furniture, with the arms of Ferrers and Ufford thereon." Edward the Black Prince, in 1376, bequeaths to his confessor, Sir Robert de Walsham, a large bed of red camora, with his arms embroidered at each corner, also embroidered with the arms of Hereford; and to M. Alayne Cheyne "our bed of camora, powdered with blue eagles." His widow, in 1385, gives "to my dear son the king (Richard II.) my new bed of red velvet, embroidered with ostrich feathers of silver, and heads of leopards of gold, with boughs and leaves issuing out of their mouths." Beds of black satin, of blue, red, and white silk, and of black velvet, all more or less richly embroidered with gold, silver, and colours, are mentioned in the wills of Edmond Earl of March, 1380; Richard Earl of Arundel, 1392; and John Duke of Lancaster, 1397.

Chaucer, in his Dream (v. 255), says—

> Of downe of pure dove's white
> I wol give him a feather bed,
> Rayed with gold and right wel clad
> In fine black sattin d'outremere,
> And many a pillow, and every bere
> Of cloth of Raynes, to slepe on soft.

Cloth of Raynes (Rennes in Britanny) was much

* Matthew Paris tells us that Eleanor of Castile, wife of Edward I., followed the example of Sinchius, Bishop of Toledo, who, in 1255, covered his floor with *tapestry*, at which there was much sneering.

* In the will of Lady Neville, 1385, we find mention of a coverlet or counterpane ("couvrelits"), and a tester of double worsted; also of a white couvrelit and tester, powdered with popinjays.

esteemed during the middle ages, and is mentioned as early as the twelfth century. It was used for sheets, and seems to have been linen of very fine manufacture.

Clocks that struck and chimed the hour are mentioned as early as the close of the thirteenth century, as part of the furniture of a mansion, by the authors of the 'Roman de la Rose':—

" Et puis fait sonner ses orloges
Par ses salles et par ses loges
A roes trop subtillements
De pardurable mouvements."

The word clock, however, was used to signify the bell only till the time of Henry VIII., the French word *horloge* being used for the entire machine before that period.

A cupboard of plate in the thirteenth century is described as consisting of a cup of gold covered, six quart standing pots of silver, twenty-four silver bowls with covers, a bason, ewer, and chasoir of silver.*

The wills of Sir John Devereux, 1385, of Sir William de Walworth (the celebrated lord mayor of London, who also died in 1385), and of Alice de Nerford, Baroness Neville, of Essex, 1394, contain repeated notices of silver and silver-gilt plate, consisting of dishes, chargers, basons, ewers, salt-cellars, and spoons. Sir William leaves a dozen silver spoons to his brother Thomas Walworth, twelve dishes and twelve salt-cellars, two chargers, two basons, with a silver lavatory, and six pieces of plate with two covers. In Lady Neville's will mention is made of silver spice-plates and hanaps (hanapes), with covers or lids to them. Hanaps are also mentioned amongst the articles of plate in the inventory of Charles V., of France.† Some of these hanaps were splendidly chased, and ornamented with eagles, herons, &c.; and one is described as "a hanap with a leopard;" the figure of one being probably upon the "couvercle." In the same will, napkins and towels ("towailles"), manufactured at Paris and Dinant, are mentioned amongst the household linen.

A pair of knives, with sheaths of silver, enamelled, and a fork of crystal, are mentioned in the wardrobe accounts of Edward I.; and forks are said to have been used in Italy as early as 1330, but they were not introduced at tables here till the seventeenth century. The one above mentioned, from the very material of which it was made, must evidently have been an object of curiosity rather than an article for use. Fire-screens, with feet and stands, occur in 1383; and fire-dogs, or andirons, are mentioned in the wardrobe accounts of Edward I.

The civil costume in England in the reign of Henry III. does not appear to have differed essentially from that worn during the reign of Richard and John. The tunic, with sleeves tight to the wrist, the *chausses*, or tight pantaloons, with shoes or short boots, the toes being long and pointed, form the ordinary dress of the middle classes. Caps of singular and varied shapes are more frequently met with, but the cowl or the coif is the general head-gear of the traveller. A large cloak with sleeves, and a capuchon or cowl attached to it is mentioned as a garment for foul weather, under the name of "super-totus," or over-all, and a similar, if not the same, habit, called a balandrana, is amongst others forbidden to be worn by the monks of St. Benedict at this period. Robes and mantles continued to distinguish the higher orders, and the materials of which they were composed appear to have been of the most costly description. Velvet is mentioned by Matthew Paris under its Latin name of *villosa* (from whence the French *villuse* and *velours*), and two very splendid sorts of gold and silk stuff manufactured at Baldeck and in the Cyclades were introduced here about this period. The first, called cloth of Baldekins, was used to form the vestments in which William de Valence was arrayed when knighted by Henry in 1247, and the second gave its name to a supertunic, or surcoat, which opened up the front to the waist, and was called, after it, Cyclas, or Ciclaton. The whimsical fashion of indenting, escalopping, and otherwise cutting the edges of garments, which had provoked a legislative prohibition as early as the reign of Henry II., appears to have raged more than ever towards the close of Henry III.'s reign. William de Loris, who died in 1260, describes the dress of Mirth in his 'Roman de la Rose,' as being—

" En maint lieu incissée
Et decoppée par *cointisse*;"*

and robes so "slyttered," as Chaucer describes them, were thence called cointises. The nobles who attended at the marriage of Henry's daughter with Alexander, king of Scotland, in 1251, "were attired," says Matthew Paris, "in vestments of silk, commonly called cointises."

Mantles lined with *ermine* are first mentioned during this reign: two are ordered for Henry and his queen; and Matthew Paris mentions the doubled or lined winter garments of the king and his courtiers. As an exterior ornament, however, furs do not make their appearance till the reign of Edward I. In the Harleian MS., 926, is an initial letter in which is represented the coronation of that monarch, and his mantle of state is not only lined with ermine but has the broad cape or collar of the same fur which has ever since been worn by sovereign princes.

* Matt. Paris, 269.

† The word *hanaper* has generally been explained as meaning a *basket* with handles, and derived from hand-hamper. It is evident, from the document now quoted, that in the fourteenth century the term was applied to vessels of silver; and we think the true derivation of the word to be from the Saxon and German word *hand* and *napf*,—the latter signifying a bowl, bason, or poringer (*nap* in Dutch, and *nappo* in Italian); and that having a lid (*couvercle*) to it as well as handles, its appearance would be that of a soup-bason.

* That is, tastefully, or with fanciful elegance. The old French verb *se cointiser* is rendered *se parer comme une coquette*, and the substantives feminine, *cointise, cointerie,—gentillesse, manieres elegantes, polies.* Landais, Dictionnaire General, &c. Paris, 1834. *Quinteux* and *quinteuse* signifies *whimsical* or *fantastical*, and Chaucer translates the line thus—

" All to slyttered for *queintise*,"—

cut all to slits or pieces for whim's sake, or in a fantastical manner.

LADIES' HEAD-DRESSES. Royal MS. 15 D. ii.

The principal change in the female dress of this period took place in the fashion of wearing the hair, which, instead of being plaited as previously, was turned up behind, and entirely enclosed in a caul of net-work composed of gold, silver, or silk thread, over which was worn the peplum or veil; and sometimes, in addition, a round hat or cap. Garlands, or chaplets of goldsmith's work, were also worn by the nobility over or without the caul; and wreaths of natural flowers formed a still more elegant summer head-dress, attainable by all classes. The wimple or headkerchief continued to cover the grey hairs of age, and give a conventual appearance to the costume of the matron and the widow. This piece of attire was increased in size and rendered still more unbecoming, towards the close of Henry's reign, by the introduction of a neckcloth called the gorget. Jean de Meun, the continuator of Lorris's 'Roman de la Rose,' describes it in the reign of Edward I., as being wrapped two or three times round the neck, and

LADIES' COSTUME, TIME OF EDWARD I. Sloane MS., 3983.

then fastened with a great quantity of pins, on either side of the face, higher than the ears. "Par Dieu!" he exclaims, "I have often thought in my heart, when I have seen a lady so closely tied up, that her neckcloth was nailed to her chin, or that she had the pins hooked into her flesh." In the Sloane MS., 3983, are some figures perfectly illustrating this tirade of the poet.

The extravagance and foppery which disgusted Matthew Paris during the reign of Henry III., was partially checked by the personal example of Edward I., who despised "the foreign aid of ornament," and answered those who inquired his reason for not wearing richer apparel, that "it was absurd to suppose he could be more estimable in fine than in simple clothing." He never wore his crown after the day of his coronation, "saying, merrily, that crowns do rather onerate than honour princes."* Buttons, very closely set from the wrist almost to the elbow of the sleeve of the under tunic, form the most remarkable distinction of the civil dress of Edward's reign. The fashion is particularly alluded to in a MS. poem written before 1300†:—

"Botones azard (azure) everilke ane
From his elboth to his hande."

and it is represented in the illuminations and effigies of the time. Gloves were more generally worn; and the hair appears to hang in waved locks lower than the ears, and to have been curled with great precision.

The ladies are cruelly attacked by the poets of the day on account of their whimsical head-tires and extravagantly long trains. By one writer they are compared to peacocks and pies, having "long tails that trail in the dirt," a thousand times longer than those of such birds. The authors of the 'Roman de la Rose' indulge also in invectives against certain head-dresses, which, however, are not very clearly described, and have been improperly considered to mean the horned head-dress of a much later date. The figures already alluded to in the Sloane MS., 3983, and the heads in a royal MS., marked 15 D. ii., will better illustrate the female costume of this period than pages of description. The pernicious system of tight lacing already alluded to under the reign of Henry I., is continually mentioned in works of this date. The damsels in 'The Lay of Sir Launfal,' are described as being

"Lacies moult estreitment."

Their kirtles were of light blue silk; their mantles of green velvet, richly embroidered with gold, and furred with "gris and gros" (*i. e.* the finest grey fur and vair distinguished from the *minevair*), their heads attired with kerchiefs well cut, and rich gold wire, and surmounted by coronets, each adorned with more than sixty precious gems. A girdle of beaten gold, embellished with emeralds and rubies, is mentioned in another poem as worn by a lady "about her middle small."

* Camden, Remains, p. 259. The original authority is John of London, who wrote a 'Commemoratio,' addressed to Edward's widow, Queen Margaret, and now in the Cotton collection, marked Nero, D. ii.

† Cotton MS. Julius V.

Male Costume, time of Edward II. Royal MS. E. iii. Sloane, MS. 346.

The reign of Edward II. presents us with the party-coloured habits so fashionable during the two following centuries, and the sleeves of the surcoat, or super-tunic, terminating at the elbow in tippets or lappets, which became long narrow streamers reaching to the ground in the reign of Edward III. They are visible in the effigy of

Effigy of Edward II.—Gloucester Cathedral.

Edward II. in Gloucester Cathedral. An approach is made also to the picturesque chaperon or hood of the close of the fourteenth century, by the curious fashion, apparently, of twisting or folding the capuchon or cowl into fanciful shapes, and bearing it, little more than balanced, seemingly, on the head,

Head-Dresses, time of Edward II. Royal MS. 14 E. iii.

as the women of the Pays de Basque wear their scarlet hoods in summer, to this day. The ladies wore it so as well as the men, and, we may presume, secured it by pins to the hair; but the mode of fastening is not apparent in the illuminations. In one of the accompanying examples a female is seen with an apron, which Chaucer afterwards calls a *barme*, or *lap-cloth*.

Female Dress, time of Edward II. Sloane MS. 346.

The close of the thirteenth century is chiefly remarkable in the history of costume, as presenting us with some particular distinctions in the attire of the legal classes. Lawyers were originally priests, and consequently wore the tonsure; but, on the clergy being forbidden to meddle with secular affairs, the lay lawyers discontinued the practice of shaving the head, and wore the coif for distinction's sake. It was first made of linen, and afterwards of white silk: its shape is the same as that of the coif worn by travellers and huntsmen in the reign of Henry III., and has a very undignified and unbecoming appearance, resembling an exceedingly scanty child's nightcap tied under the chin. Some judicial personages wear caps and capes of fur,

and have a peculiarly shaped collar of the latter, or of some white stuff round the neck of their long priest-like robes. The fur lining of the robe is generally either white lambskin or vair.

The ecclesiastical costume in England was at this time so sumptuous as to excite the admiration and avarice of Innocent IV. Some of the sacerdotal habits were nearly covered with gold and precious stones, and others elaborately embroidered with figures of animals and flowers: their shape will be best undestood from our engravings. The mitre

CARDINAL'S HAT. Royal MS. 16 G. vi.

had assumed its modern form by the reign of Edward I. The red hat is said to have been given to the cardinals by Pope Innocent VI. at the council of Lyons, in 1245; and De Curbio says they first wore it in 1246, at the interview between the pope and Louis IX. of France. Its shape at the commencement of the fourteenth century may be seen in the subjoined cut.

The reign of Edward III. presents us with an entire change of costume. The long robes and tunics, the cyclases and cointises of the preceding reigns vanished altogether. A close-fitting garment called a cote hardie, buttoned down the front, and confined over the hips (which it barely covered) by a splendid girdle, was the general habit of the male nobility. It was composed of the richest materials, magnificently embroidered, sometimes party-coloured, the sleeves occasionally terminating at the elbow, from which depended the

MALE COSTUME, TIME OF EDWARD III. Royal MS. 19 D. ii., and Strutt.

long white tippets or streamers before mentioned. In such cases the sleeve of an under garment is visible, ornamented with a close row of buttons from the wrist upwards, as in Edward I.'s time. A mantle exceedingly long, lined with silk or furs, and fastened upon the right shoulder by four or five large buttons, was worn over this cote upon state occasions, the edges indented, or cut in the form of leaves in the most elaborate and sometimes a very elegant manner. A monk of Glastonbury named Dowglas, in a work of which there is a MS. in the Harleian collection, informs us, that the Englishmen in this reign "haunted so much unto the folly of strangers, that every year they changed them in diverse shapes and disguisings of clothing —now long, now large,—now wide, now strait,— and every day clothings new and destitute and divest of all honesty of old array or good usages; and another time to short clothes, and so strait waisted, with full sleeves and tippets of surcoats and of hoods over long and large, all so nagged and knib on every side, and all so shattered and also buttoned, that they seemed more like to tormentors in their clothing and also in their shoeing and other array than they seemed to be like men." The extravagance of these fashions induced the commons to present a complaint on the subject in parliament, A.D. 1363; and various restrictions were promulgated in a sumptuary law passed on that occasion. Long hose frequently of two colours, and pointed shoes of cloth of gold richly embroidered, with a capuchon or cowl attached to a cape, having a long tail behind, and being closely buttoned up to the chin in front, completed the strange habiliment.

Long beards came again into fashion during this reign; and on the door of St. Peter's church at Stangate were fastened one day the following lines, which had been made by the Scots in ridicule of their southern enemies:—

"Longbeirds hertiless,
Peynted hoods witless,
Gay cotes graceless,
Maketh Englonde thriftless."

Beaver hats are spoken of about this time, probably manufactured in Flanders, as in the next reign we find Chaucer mentioning "a Flaundrish beaver hat." They are sometimes worn over the capuchon. The knight's chapeau, as still borne on coats of arms, is seen in some illuminations, and various other caps, some of which are for the first time decorated with a single feather worn straight up in front; but its occurrence is so rare, and in such particular instances, that we are inclined to believe it worn, not as a fashion, but as a royal badge— Edward III. and all his sons bearing an ostrich feather differenced in the blazoning for distinction's sake; the quill of the king's feather being gold, that of the prince's argent, and the Duke of Lancaster's ermine. The Duke of Somerset, son of the Duke of Lancaster, wore the feather with the quill blazoned compony argent and azure.*

* This unfortunate fact puts the interesting legend of the Bohemian plume (the supposed origin of the "Prince of Wales,

Female Costume, time of Edward III. Royal MS. 19 D. ii.

The ladies in this reign are said to have surpassed "the men in all manner of arraies and curious clothing." Like them, they wore the cote hardie,

Tomb of William of Windsor and Blanch de la Tour, Westminster Abbey.

with the long white tippets streaming from the elbows;* but the most characteristic dress of this period is a sort of sideless gown with very full skirts, worn over the kirtle in such a manner as to give the appearance of a jacket to that portion of it which is visible. This gown is generally bordered with fur or velvet, and sometimes has a kind of stomacher of the same materials, ornamented with jewels, thereby increasing the illusion; but it is almost impossible to give the reader an idea of this garment by description, and we must therefore refer him to the annexed engraving, from the effigy of Blanch de la Tour, daughter of Edward III., in Westminster Abbey, and others from illuminations of the period. We have not been able to ascertain the name allotted to this most peculiar habit.

Knighton tells us, that at tournaments the ladies rode in party-coloured tunics, with short hoods and *liripipes* (that is, the tippets, or long tails of the hoods,) wrapped about their heads like cords. Their girdles were richly decorated with gold and silver, and they wore small swords, "commonly called daggers," stuck through pouches before them—a fashion observable amongst the beaux of the opposite sex at this time.

Mourning habits are first distinguished on the monuments and in the illuminations of this reign. Sometimes the mourners are clothed entirely in black. On the tomb of Sir Roger de Kerdeston, who died A.D. 1337, his relations are seen wearing the mourning-cloak over their ordinary coloured clothes.

Mourning Habits. From the Tomb of Sir Roger de Kerdeston.

Richard II. set his subjects an example of foppery which they required very little inducement to imitate. Knighton assures us that all distinction of ranks and classes was soon lost in the general extravagance and rage for magnificent clothing that now prevailed. Chaucer, in his 'Parsons's Tale,' and the author of the 'Eulogium,' cited by Camden, both inveigh loudly and in the same strain against the inordinate waste and excessive cost of the apparel of all classes down to the menial servants, whom Harding describes as arrayed in silk, satin, damask, and green and scarlet cloth. The old fashion of cutting the edges of garments into the

feathers") into extreme peril, even without the additional evidence of the seal of John to prove that the crest of Bohemia was an entire wing or pinion, or as it is represented on the tombs of the Bohemian monarchs at Prague, two wings endorsed.

* Vide Royal MS. 19 D. ii.

shape of leaves and other devices was carried now to the greatest extreme. Letters and mottoes were embroidered upon the gowns or mantles; and the sleeves of the former were so long and wide, that they trailed upon the ground, and are scarcely distinguished in some instances from the ample folds of the main portion of the garment. Jackets indecently short were also worn by many, as though rejoicing only in extremes; and Chaucer's Parson bitterly reprobates the party-coloured hose which

MALE COSTUME, TIME OF RICHARD II.
Royal MS. 20 B. vi, and Harleian MS. 1319.

were generally attached to them. The short jacket when itself of two colours is, we presume, the habit alluded to by the name of courtepie—an appellation it retained even when composed of one colour only. The shoes had enormously long-piked toes, sometimes crooking upward in the Polish fashion, and called "Crackowes," probably from the city of Cracow, in Poland, whence the fashion may have been imported by the followers of Richard's queen, Anne, whose grandfather had incorporated the kingdom of Poland with that of Bohemia. The author of the 'Eulogium,' beforementioned, says they fastened the toes to their knees with chains of silver; but this curious custom has not been illustrated by any pictorial representation that we have yet met with.

FEMALE COSTUME, TIME OF RICHARD II.
Royal MS. 16 G. v., and Harleian MS. 4379.

Hats and caps of various singular shapes are worn. One cap, a tall muff-looking affair, is seen frequently in illuminations of this date. It is worn by the Duke of Lancaster in the illuminations of the Harleian manuscript history of Richard II., in French verse, of which an account has been given in a former page,* and is painted black, but of what material does not appear. The hoods, of which many specimens are portrayed in the same manuscript, are still of a most inexplicable shape. They appear more like a bundle of cloth upon the head than a regular article of apparel: some are decorated by a single feather. The gowns, in the same miniatures, exactly answer to the description of the author of the 'Eulogium'—"a garment reaching to the heels, close before, and strutting out at the sides; so that at the back they make men seem like women." Beards seem to have come again into fashion, and were worn forked as in the old Anglo-Saxon time. The hair was worn long, and carefully curled.

The ecclesiastical costume preserved its sumptuous character to the end of this period. From a record in the Lord Treasurer's Remembrancer's Office, in the Exchequer, we find that the mitre of Alexander de Neville, Archbishop of York, in the time of Richard II., was pledged to Sir W. Walworth, Lord Mayor of London, for the sum of 193*l.* 6*s.* 8*d.*, and was valued at ten marks more than that sum "*at least*;"—a tolerable proof of its magnificence.

The armour of the reign of Henry III. is generally to be recognised by the admixture of plate with the various sorts of mail worn from the time of the Conquest. It is confined, however, to caps for the knees and protections for the shoulders and elbows. In some instances, but rarely as yet, greaves are seen, but the hands and feet are still covered by mail. The quilted or padded armour of silk, buckram, &c., which we have before spoken of, came still more into use, and, from its style of ornament, was called *pourpoint* or *counterpoint*. Chain-mail, properly so called, is supposed to have been introduced during this reign from Asia, where it is worn to this day; but it is not clear to us that it had not been known to the Anglo-Saxons and Danes, as we have already remarked under that period. From the commencement of the thirteenth century, however, there is no doubt of its use in Europe; and the interlacing of the rings themselves, in lieu of stitching them either flat, or in layers one over the other, upon leather or cloth, was a decided improvement on the clumsy hauberk of the early Norman era. Over the shirt of chain was worn the surcoat, bliaus, or cyclas, of silk or rich stuffs, and occasionally perhaps emblazoned.† It descended to the

* See ante, p. 798.

† The fashion of emblazoning the surcoat did not however become general till the reign of Edward I.

middle of the leg, and the edges were frequently indented or escalloped, like the cointise and other civil garments we have previously described. Of this period are some military figures on the exterior of Wells Cathedral, and also the drawings in Matthew Paris's 'Lives of the Two Offas.'

A very heavy and ugly-shaped helmet, of a barrel form, with an aperture for sight cut in the transverse bar of a cross, covered the head entirely and rested on the shoulders. Skull-caps of various forms, with and without nasals, were worn by men-at-arms, esquires, &c. In Matthew Paris's 'Lives of the Two Offas,' written and illuminated about this period, the archers are seen in mail-jackets or haubergeons, with sleeves reaching to the elbow, over which are vests of leather, defended by four circular iron plates. Round targets and iron mauls, or *martels de fer*, appear to have been used by knights even in this reign (the effigy of one is to be seen in Great Malvern church, Worcestershire); but the emblazoned shield, the sword, and the lance, were the most general appointments of knighthood. The rowelled spur is first met with during this reign, but it is not common till that of Edward I., who, simple and unostentatious as he was in his private or civil attire, and regardless of personal finery upon most occasions, nevertheless seems to have encouraged a taste for splendour and display amongst his companions in his favourite pursuit of arms.

Armour of the period, exhibited in the Effigy of John of Eltham, from his Tomb in Westminster Abbey.

The armorial bearings of the knight were now fully emblazoned on his banner, shield, surcoat, and the housings of his horse. His war-helmet, improved in shape, was surmounted by the heraldic crest, and additionally adorned by a kerchief or scarf, cut and slashed like the fashionable tunics of the previous reign, and like them, and for the same reason, called a *cointise*. To the offensive weapons we find added the *falchion*, a peculiarly-shaped broad-bladed sword; the *estoc*, a small stabbing-sword; the *anelas* or *anelace*, a broad dagger tapering to a fine point; the *coutel* or *coutelas* (whence cutlas); the *mace*, and perhaps the *cimetar;* both the latter being of Oriental origin.

The mail-gloves are about this time first divided into fingers; and in instances where the sleeves of the hauberk terminate at the wrist, leather gauntlets are worn, but not yet defended by plate. Flat shields of the triangular or heater form now appear. The banner is oblong; and the *pennon*, a triangular standard, is mentioned. It was generally charged with the crest, badge, or war-cry of the knight; the banner being distinguished by the arms only.

The general military costume of this period, with the shape of the banner, may be seen in the drawing of the Conqueror on making a grant of land to his nephew, the Duke of Brittany, copied in a preceding page.* The original document from which Mr. Kerrich copied this drawing is preserved in the College of Arms; although representing William the Conqueror and his great officers, it is the work of some illuminator of the thirteenth century.

Towards the close of the reign of Edward I. a curious ornament of the military dress appears in the form of a pair of plates fastened to the shoulders, sometimes square, sometimes oblong, and occasionally, but more rarely, round; emblazoned like the shield and the surcoat with the arms of the wearer, or with a plain St. George's cross. They were called, from their situation and appearance, *ailettes*, or little wings. They came generally into fashion, and afterwards disappeared altogether during the reign of Edward II.; the principal alterations in which consisted of the increase of plate-armour, not only greaves for the front of the legs, but brassarts and *vanbraces*, or *avant bras*, being worn on the arms. Two round plates also, called, from their position, *mamalieres*, were fastened on the breast over the surcoat or cyclas, and from them depended chains to which the helmet and the sword of the knight were attached; the helmet being now worn rarely except during the actual shock of battle, when it was placed over the usual head-piece called a *bascinet*, the successor of the old *chapel de fer*, which, with its nasal, disappears in this reign.

The surcoat was sometimes much shorter in front than behind; and the hauberk, instead of having a hood of mail attached to it, now termi-

* See ante, p. 566.

nated at the collar, a neck-guard of chain, called the *camail*, being fastened to the edge of the bascinet, and falling down upon the shoulders over the surcoat, leaving a shield-shaped opening for the face. A vizor was occasionally attached to the bascinet, in which case the helmet was dispensed with. The pole-axe was wielded by leaders, and several scythe-bladed weapons, varieties of the bill and the guisarm, are seen in illuminations of the period.

During the reign of Edward III. plate-armour began to supersede the chain-mail on almost every part of the body. The legs and arms were soon entirely defended by plate, gussets of mail being only worn under the arm and at the bend of it. The feet were guarded by pointed shoes of overlapping steel plates called *sollerets*, and the leathern gauntlets were similarly cased with steel and provided with steel tops. On the knuckles were placed small spikes, knobs, or other ornaments, called *gads* or *gadlings*. Those on the gauntlets of Edward the Black Prince, preserved at Canterbury, are made in the form of lions. A breast-plate, called a plastron, kept the chain-shirt, divested of its sleeves, from pressing on the chest, or a pair of plates for back and breast rendered the shirt of mail altogether unnecessary, and a short apron of chain hung merely from the waist over the hips. The surcoat was gradually discarded for an upper garment called a jupon or guipon (a name sometimes given to the under one of leather, which supported either the breast-plate or the hauberk), made of velvet, and richly embroidered with the arms of the wearer. It fitted the body tightly, and was confined over the hips by a magnificent belt, to which on the right side was attached a dagger, and on the left a sword.

In the reign of Richard II., little alteration, if any, was made to the military costume of the close of that of Edward III. The most remarkable feature is the moveable vizor which was attached to the bascinet, now always worn in war, the more ponderous helmet, with its crest and wreath, being used only for the joust and the tournament. The shape of this said vizor may be best understood from an engraving; an orignal vizored bascinet of this time is in the Tower of London, and another at Goodrich Court (the only two known in England).* In the Musée d'Artillerie, at Paris, two more are preserved; a fifth is said to be in the Hotel de Ville at Chartres. There is one in the Chateau d'Ambras in the Tyrol; and a vizor only, without the bascinet, in the collection at the Lowenburg, Hesse Cassel.

In many effigies and illuminations of the reigns of Edward III. and Richard II., the cuisses or thigh-pieces of the knights are covered with pourpointed work; and Chaucer's Sir Thopas wore jambeaux or jambs of "cuir-bouly," a preparation of leather much used in the fourteenth century, not only for armour, but for effigies and various works of art. The shield, which was triangular throughout the reign of Edward III., began, about the close of Richard II., to be rounded off at the

ST. GEORGE AT DIJON.

bottom; and a niche was made in it on one side or at top, called the bouche, or mouth, which served as a rest for the lance.* The shield of John of Gaunt, which was suspended over his tomb in old St. Paul's, and burnt at the conflagration of that building, is engraved in Dugdale's 'History' and Bolton's 'Elements of Armories.' It is of the form afterwards used in the reign of Henry IV., and the bouche is at the top. By the latter writer it is described thus:—"It is very convex towards the bearer, whether by warping through age or as made of purpose. It hath in dimension more than three quarters of a yard of length, and above half a yard in breadth; next to the body is a canvass glewed to a board, upon that board are broad thin axicles, slices or plates of horn nailed fast, and again over them twenty and six pieces of

* See an interesting specimen of the military costume of this reign in the carved figure of St. George at Dijon, an engraving from a beautiful cast of which is in the Archæologia, vol. xxv. The jupon is very peculiar, being full and plaited, and buttoned at the wrists and in front.

* Vide figure of St. George before mentioned.

the like, all meeting or centring about a round plate of the same in the navel of the shield; and over all is a leather closed fast to them with glue or other holding stuff, upon which his armories

Shield of John of Gaunt.

were painted, but now they, with the leather itself, have very lately and very lewdly been utterly spoiled." The engraving represents the leather as torn up and curling away from the shield, so as to show the nature of its fabrication.

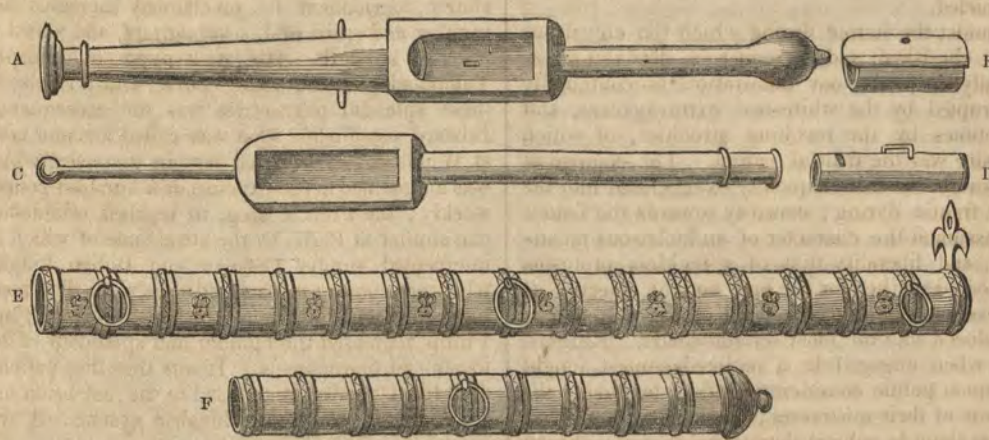
We have already had occasion to notice the probability that the use of fire-arms in war was introduced as early as the reign of Edward III.* The lines in which the Scottish poet Barbour speaks of the "novelties" first seen by his countrymen in one of their encounters with the English, in 1327, are as follow:—

Twa noweltyes that day they saw,
That forwith Scotland had been nane,
Tymmeris (timbres, *i.e.* crests) for helmetys war the tane,†
The tothyr crakys were of war.

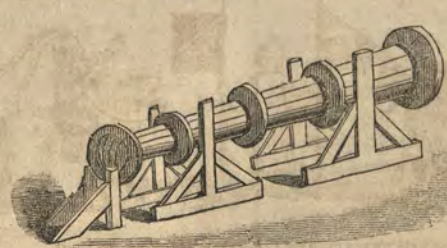
We have also mentioned the story told by the Italian writer Giovanni Villani, about the employment of cannons by Edward at the battle of Crecy. In the fifth volume of the Archæologia is an engraving of an ancient cannon raised from the Goodwin Sands, and supposed, from a coat of arms on it, to have been made about 1370. If so, it is only necessary to compare it with the ancient English cannon preserved in the Tower, and said to have been used at Crecy, to be assured of the falsity of the assertion respecting the latter. In a copy of Froissart of the fifteenth century, Bib. Reg. Plut. X. H. 294, although nearly a hundred years later than the battle, we have a representation of the mode in which cannon were mounted previously to the invention of the modern gun-carriage.

* See ante, p. 768.

† By this we also perceive that crests upon helmets were till then unknown in Scotland, though worn for thirty or forty years previously in England.



A, Ancient Cannon raised from the Godwin Sands, and supposed, from a coat of arms which it bears, to have been made about the year 1370. See Archæologia, Vol. 5. B, Chamber for loading. C, Spanish Cannon of the same date. D, Chamber for loading. E, F, Earliest forms of English Cannon, from examples in the Tower of London.



Mounting of a Cannon. From Froissart. Royal MS. Plut. X. H. 294.

Social life in England during this period assumed, in some respects, a refinement and splendour to which it had been hitherto a stranger. Chivalry, which had been partially introduced into the country by the Norman invasion, and carried to a considerable height under the lion-hearted Richard, appears to have experienced a check during the troubled and disastrous reigns of John and Henry III. It is said, indeed, that the latter established a round table, in imitation of the fabulous King Arthur, the knights belonging to which exercised themselves in joustings, and dined at a circular board, on a footing of equality and good fellowship; and that the citizens of London, emulating the knights and nobles, were wont to display their skill in horsemanship by running at the quintain, while a peacock was the reward of the victor. But it was under the energetic rule of Edward I., and more especially under that of Edward III., that the chivalrous spirit attained its highest exaltation, and the singular system of institutions and manners that arose out of it, its most complete and brilliant development. The reign of this last monarch, indeed, may be termed the noon of English chivalry, although it may be questioned whether it is most indebted for the strong light of knightly renown, in which it stands out from the ages before and after it, to Edward himself, and his high-minded queen, and his gallant son,—the very mirror of knighthood,—or to the pen of Froissart, by which its gallant exploits and gorgeous solemnities have been so faithfully and so eloquently chronicled.

Amidst the heroic daring which the chivalrous spirit cherished, and the generous deeds it occasionally inspired, our admiration is continually interrupted by the whimsical extravagances, and sometimes by the revolting atrocities, of which chivalry was the fruitful parent. The courage of the knight became frequently exaggerated into the most frantic daring; courtesy towards the female sex assumed the character of an idolatrous fanaticism, and liberality that of a reckless profusion that cared neither for the end nor the object of its largesses. The fantastic spirit of the system was introduced into the most serious affairs. Knights, even when engaged in a national contest, fought less upon public considerations than to uphold the renown of their mistresses; and it was the fashion among them to subject themselves to some absurd penance, until a specified deed of arms was achieved. Thus, in one of Edward III.'s expeditions against France, the knights who joined the army, we are told by Froissart, wore a patch on one eye, under a vow that it should not be removed until they had performed exploits worthy of their mistresses. Of the mad heedlessness with which, on other occasions, the boasted knightly virtue of liberality was displayed, a single instance may serve for an illustration. When Alexander III. of Scotland, accompanied by a hundred knights, repaired to London, to attend the coronation of Edward I., he and his knights, as soon as they alighted, let loose their richly-caparisoned steeds, to be scrambled for by the multitude: and five of the great English nobles, not to be outdone in generosity by the strangers, immediately followed the example.*

We are not to suppose that the sovereigns who during this period were the most distinguished protectors and ornaments of chivalry, were wholly under the control of the spirit which they thus fostered. They were not, of course, exempted from the influence of the spirit of their age, and therefore they were most anxious to be accounted true knights, as well as wise rulers; but they had sagacity and dexterity to seize upon the ruling feeling, and turn it to the support of their schemes of policy and ambition. Such especially was the case with Edward III. He saw in chivalry the instrument most suited to the temper and circumstances of the age, and that, therefore, by which his vast designs could be best accomplished. Every showy tournament he proclaimed increased the number and spirit of his supporters, and added to his real strength. His great opponent, Philip of Valois, adopted the same course, and a rivalry in these splendid pageantries was the consequence. Edward established what was called a round table at Windsor, two hundred feet in diameter, which was maintained at the expense of a hundred pounds weekly; the French king, in reprisal, established one similar at Paris, by the attractions of which he intercepted sundry German and Italian knights who were coming to England. Edward then instituted the since illustrious Order of the Garter; and Philip increased the number and splendour of his jousts and tournaments. It was thus that national and royal rivalry contributed to the extension and aggrandizement of the chivalric system: it was

* H. Knyghton.

KNIGHTS PREPARING TO COMBAT. Royal MS. 14 E. iii.

now the arbiter of kingdoms, and therefore all its forms, however puerile, became objects of the highest public importance.*

The "passages of arms," as the sportive encounters of chivalry were termed, were of various descriptions. Sometimes a baron proclaimed a joust or tournament to be held before his castle, which was furnished with permanent lists for the purpose. Sometimes a certain number of knights leagued together to answer all comers; and sometimes a single knight, especially venturous and hardy, would enter the lists with a general challenge, and encounter every foe in succession, until he conquered all, or was himself overcome. Frequently a simple joust was tried by two knights, who challenged each other to a trial of skill in all love and courtesy, with headless or sharpened lances; in this case one, three, or more courses were run, till one party yielded, or was disabled. And sometimes, when surpassing skill was to be displayed, or when additional danger was sought to give a zest to the conflict, a place was selected for the combat where a career of the lance was the least part of the hazard,—a rough plot of ground, or a narrow bridge, with a river or fosse beneath, into which a false step would plunge the unwary combatant. A singular course of this nature was run on the bridge of London, during the reign of Richard II., between a Scottish and an English knight, in consequence of a formal challenge after the battle of Otterburne.*

Little remains to be added to the description

* M. Westminster.—Froissart.

* Froissart.

Knights Jousting. Royal MS. 14 E. iii.

given in the last Book of the nature and general forms of the tournament. The display, however, both of expense and of taste, was greater now than in the preceding period. The lists were now magnificently decorated; they were surrounded by gay pavilions belonging to the knights who intended to take part in the combat, which were distinguished by the rich armour and honoured banners of their respective owners; and the scaffolds erected for the accommodation of the ladies and nobles were hung with tapestry, and embroidery of gold and silver. The spectacle regularly commenced with the jousts, which were performed, on those occasions, with headless lances, and each knight endeavoured, in his rapid career, to strike his adversary full on the vizor or crest. This was a difficult mark to hit, but when accomplished, it seldom failed to unseat the firmest rider. To avoid such defeat, some knights adopted the practice of fastening the helmet to the cuirass by a single lace so that it might give way at the slightest touch of the spear; but this, Froissart states, was condemned by John of Gaunt as an unfair expedient. To lose a stirrup in the shock of encounter was equal to a defeat; to be unhorsed, whether in joust or tournay, was an additional ignominy. In the furious melée of the general combat, those who threw their antagonists to the earth, or mastered their weapons, were also sometimes obliged to drag them to the extremity of the lists; and when this

Knights Combating. Royal MS. 14 E. iii.

Knights Jousting. Royal MS. 14 E. iii.

was accomplished, the discomfited knights had to remain prisoners, and take no further share in the battle. In this way, both parties fought until so many on one side were disabled or captured as to make further contention hopeless. As might be expected, these sports, even in their gentlest forms, were plentifully accompanied with wounds and bruises; a death-wound was sometimes unwarily dealt, and a dismounted knight was occasionally smothered in his armour; but when the excitement of conflict rose to its height, aggravated, too, as it was in many cases by party or national enmities, then the two-handed sword or heavy battle-axe descended with the same fury as on the plains of France or Syria, and the lists assumed the character of a battle-field on which deadly enemies were contending. The king, or the person presiding, however, had always the power to still the confusion at the wildest. He threw down his warder, and cried "Ho!"—and in an instant the fiercest strife was suspended; the mailed combatants stood as motionless as statues of bronze.

Froissart gives us the description of a tournament held at London, in 1389, during the reign of Richard II. Heralds were sent to every country in Europe where chivalry was honoured, to proclaim the time and the occasion; and brave knights were invited to splinter a lance, or wield a sword, in honour of their mistresses. Knights and nobles from far and near assembled at the inspiring summons; so that London was thronged with warriors of every climate and language. Smithfield (at that time without the city walls), in which the lists were erected, was surrounded with temporary chambers and pavilions, constructed for the accommodation of the king and the princes, the queen and the maidens of her court: and when the solemnity was about to commence, sixty horses richly accoutred were led to the lists by squires, accompanied by heralds and minstrels; after which sixty ladies followed on palfreys, each lady leading an armed knight by a chain of silver. The first day, the games commenced, as usual, with encounters of the lance; and at evening, when the trials had closed, the two combatants who had most highly signalized their skill, received, as prizes, a golden crown, and a rich girdle adorned with precious stones; after which, the night was spent in feasting and dancing. On the next morning, and for five successive days, the more serious competitions of the tournament followed; and still, as evening came, the same joyous festivities succeeded—the actors thus realizing all that their pagan ancestors had hoped for from the fighting and feasting paradise of Odin. But the appetites of the noble assembly for blows and beeves had not yet been satiated. The immense cavalcade now rose, and passed on to Windsor, where the same jousts, combats, and banquets were renewed for several days more; after which, the foreign knights departed to their own homes.

The ordeal-combats, which were so closely connected with chivalry, appear, during the reign of Richard II., to have increased in frequency. Regulations for these judicial duels were settled by the king's uncles. By these regulations, the king was to find the field upon which the combat was

ORDEAL COMBAT OR DUEL. Royal MS. 14 E. iii.

to be fought; the lists were to be erected on ground sixty paces in length, and forty in breadth, hard, firm, and level, with one gate to the east, and another to the west; and the whole was to be inclosed by a paling so high, that a horse could not leap over it. The nature of these duels, as well as the spirit of the age, will be best illustrated by the account of a singular combat of this nature, which is detailed by Holinshed. A knight accused a squire of treason, which the latter denied, and craved the purgation of combat; and accordingly the trial was held in presence of the king, the Duke of Lancaster, and the nobles. The appellant first entered the field of battle, and waited for the accused, who, after being thrice summoned by the herald-at-arms, entered the lists at the third call. The sealed indenture containing the knight's charge was then opened, and read, and a denial formally returned; after which, nothing remained but an immediate appeal to arms. The oaths of battle were therefore administered, and the accuser and accused solemnly swore that "they dealt with no witchcraft, nor art magic, whereby they might obtain the victory of their adversary; nor had about them any herb, or stone, or other kind of experiment, with which magicians use to triumph over their enemies." The combatants then betook themselves to prayer, after which they rose, and joined battle at the given signal, first with spears, then with swords, and finally with daggers. After a long and cruel fight, the knight managed to beat down and disarm his enemy; but just when he was about to throw himself upon the body of the vanquished, to deprive him of life, the sweat within his barred helmet flowed into his eyes, and so completely blinded him, that he fell wide of the mark. The squire, finding what had happened, contrived to raise his battered limbs from the ground, and threw himself upon his enemy, when,

at this perilous juncture, the king ordered the pair to be plucked asunder, which was immediately done by the attendants of the lists. The knight, as soon as he got upon his legs, prayed earnestly to be replaced in his former position, with the squire above him; for "he thanked God he was well, and mistrusted not to obtain the victory;" but this request was refused by the king, although pleaded repeatedly, and with vehemence, and backed by the offer of goodly sums of money. In the meantime, the squire, exhausted with wounds and toil, swooned away, and fell from his chair; his harness was speedily doffed, and means were used for his recovery; but as soon as he had opened his eyes, and began to breathe, the pertinacious knight advanced, and, after calling him traitor and perjured, summoned him to commence the battle anew. But the squire's last combat had been fought. He was unable to answer, perhaps even to understand, the reproach of his antagonist; and he died the same night. No better proof could be required of his guilt by the most scrupulous judges of that age; and thus was the affair terminated "to the great rejoicing of the common people," says the old chronicler, "and discouragement of traitors."

The ostentatious splendour and recklessness of expense which the chivalrous spirit tended to encourage, was not confined to mere courtly parades, and tournaments, and solemn festivals. On the contrary, it seems to have pervaded every department of domestic as well as public and out-door life. We still find in fashion during the present period the same unwieldy retinues that encumbered the march of Henry II. and his nobles; and if these trains of attendants were now somewhat superior in point of elegance and splendour to those of preceding ages, they were still productive of many evils. Each man strove to outdo his neighbour; and a writer of the time, the Monk of Malmsbury, bitterly complains of the unhappy rivalry in prodigality which such a spirit had produced, when he tells us that the squire endeavoured to outshine the knight, the knight the baron, the baron the earl, and the earl the king. All this was nothing more than the natural result of such an excited and artificial state of life. Unfortunately, too, the semblance of an excuse was still afforded for large and well-armed trains in the journeyings of the rich and powerful, from the fact that England was still traversed by strong bands of robbers, that plundered not only peaceful bishops and cardinals, but well-accompanied earls, and even powerful princes.* But still stronger motives for these throngs of followers were to be found in the restlessness and ambition of the nobility, constantly seeking to supplant each other when not engaged in a common contest with the crown. Such regiments and armies of retainers, of course, demanded plentiful supplies and an unbounded hospitality; and instances are furnished of the household expenditure of these periods that almost stagger belief. Richard II., we are told, entertained ten thousand persons daily at his tables. The rich and powerful Thomas Earl of Lancaster, grandson of Henry III., in the beginning of the fourteenth century, expended in one year about twenty-two thousand pounds of silver in this open style of housekeeping; of wine alone there were consumed, during the course of that year by his household, three hundred and seventy-one pipes.

In the article of meats and drinks, the common people seem to have still adhered to the plain fashions of their ancestors: the old dishes, whatever they were, as yet sufficed them, with copious draughts of ale, cider, and mead; and quantity, not quality, was the main essential of a banquet. Very different, however, was the case with the nobles. The solemn feastings of chivalry seem gradually to have crept into the every-day life of the great, so that the comparative abstinence for which their Norman ancestors were distinguished had given place to inordinate extravagance. Attempts to restrain this extravagance were repeatedly made in the reigns of Edward II. and III., by sumptuary laws; the very repetition of which, however, proves that they were generally disregarded. The records of some of the great feasts of this period exhibit astounding bills of fare. At the marriage banquet of Richard Earl of Cornwall, in 1243, thirty thousand dishes were served up;* and in the following century, at the installation feast of the abbot of St. Augustine, no less than three thousand dishes honoured the promotion of the fortunate ecclesiastic.† The meals were still nominally only two a day; but this limitation mattered little, when the greater part of the day was devoted to these two meals. Intermeats also appear to have been introduced during this period. These were delicate and light dishes, served up at the intervals of the meal, intended probably as provocatives to the more substantial courses that followed.‡ Wines also, as they were technically called, formed a sort of connecting link between the two daily meals. These wines were light refections of fine cakes and different kinds of wine, that were taken at any hour of the day, or upon the arrival of a visitor, but more especially at bed-time.§ Cookery had now also increased into a most complicated and artificial system, though we are not sufficiently acquainted with the details to speak of them with certainty. Many dishes are now mentioned for the first time, composed of materials sufficiently heterogeneous according to the present taste,‖ and so excessively seasoned that they were said to be "burning with wildfire;" while others, that were required to please the eye as well as the palate, were gaily painted, and turreted with paper. In seasoning these inflammable dainties, the cooks made abundant use of ginger, grein de Paris, cloves, and liquorice. We also find that jellies, tarts, and rich cakes, formed a copious accompa-

niment of every banquet. The wines used at this period were either compounded or pure: of the former were hippocras, pigment, and claret; the latter were chiefly the imported wines of France, Spain, Greece, and Syria.*

A style of life such as this required vigorous digestion, and out-door sports, accordingly, were still eagerly followed by all classes. Fleet steeds, high-soaring hawks, good hounds, and bright armour, still occupied the cares of the great and wealthy; and as so many of the restrictions in hunting had been abolished, that seductive sport was also largely followed by the commons. The priesthood also continued to be so strongly attached to "venerie," that, in the reign of Richard II., every clergyman was prohibited from keeping a dog for hunting who had not a benefice of the annual amount of ten pounds; and, in the reign of Edward III., the Bishop of Ely actually excommunicated certain persons who had stolen one of his hawks during the period of divine service.

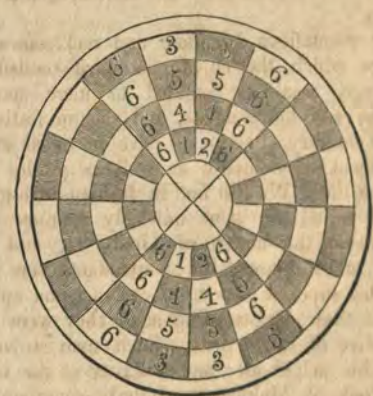
We find, from the illuminated manuscripts of this period, that even ladies both hunted in company with gentlemen, and formed hunting parties of their own, in which they pursued the deer, mounted astride on fleet horses, and brought down the game with their arrows. Sometimes, indeed, ladies went much further than this, riding, we are told, from castle to castle, and from town to town, with poniards at their girdles and javelins in their hands, in quest of adventures.† Falconry still continued to be the most cherished sport; and the prices at which hawks were purchased, as well as the penalties enacted against those who should steal them, show the estimation in which they were held. Edward III. himself appears to have been an enthusiastic hawker. In one of his expeditions to France he carried with him thirty falconers; and, during the campaign,

* Strutt's Angel Cynnan. † H. Knyghton.

PLAYING AT DRAUGHTS. Harleian MS. 4431.

he appears to have hawked and fought alternately with equal ardour. The wolf, it may be observed, was still to be found in England, as appears by various evidences.

When we pass from these active exercises to the in-door amusements of the nobility and gentry of this period, we find that most of the games of the former period were still in use; and some games are also mentioned of which we do not read in earlier times. That of cross and pile is said to have been introduced at court by Edward II.* Persons playing at draughts are represented in some of the illuminations. We have already mentioned the game of chess as forming a common amusement among the higher classes. The game, as far as we can judge from the figures in the ancient paintings, appears to have been played nearly in the same manner as at present. Besides a square chess-board, however, like that commonly in use, we sometimes see one of a circular form. The chess-men were somewhat different in form, and also in name; the queen being called the fevee; the rook, or castle, the rock; and the bishop, the alfin.



CIRCULAR CHESS-BOARD. Cotton MS. and Strutt.

The Figures show the places of the pieces:—1. The King.—2. The Queen, or Fevee.—3. The Castle, Rook, or Rock.—4. The Knight.—5. The Bishop, or Alfin.—6. The Pawns.

The jester was now a regular appendage of a princely or noble household: his office was to divert the jaded spirit of his lord by jests either intellectual or practical, and to keep the banquet in a roar by his wit, as well as by the jingling of his bells and the grotesque display of his cap and bauble. The castles also continued to be visited by crowds of jugglers, whose wonderful feats were still attributed, even by the wisest and most learned, to infernal agency,—by tumblers who exhibited their agility and skill,—by rope-dancers and buffoons,—and by minstrels and glee-singers. The inferior animals, as before, were pressed into the service of these strolling exhibitors; and the high-born spectators were still delighted with such exhibitions as horses dancing on tight-ropes, or

* Antiquit. Repert., tom. ii.

oxen riding upon horses and holding trumpets to their mouths.

Mummings also formed a particular amusement of this period.* These seem to have been a coarse and primitive kind of masquerade, where the actors, if we may judge from the old illuminations, more frequently applied themselves to mimic certain of the brute creation, than to support fictitious human characters. At the intermeats between the courses of great public banquets we also find that pageants were sometimes introduced for the amusement of the guests. In these exhibitions ships were brought forward filled with mariners, or towers garrisoned by armed men, while the actors proceeded, with the help of this scenery, to represent some allegorical lesson or historical incident. Theatrical amusements were still frequented; but the age that produced such a genius as Chaucer could offer nothing better to the stage than such miracles and mysteries as have been noticed in a former Chapter. These strange representations, as far as their fragments have survived, are calculated to give us no favourable idea either of the taste or the piety of our ancestors. Although founded upon scriptural or religious history, they yet appear to have been stuffed with such egregious buffoonery that they

* M. Paris.—Froissart.—Sainte Palaye.

Mummers. Bodleian MS.

can only be likened to the sayings and doings of Punch and his associates. Dancing constituted an indispensable accomplishment of a gallant knight, and generally followed the banquet and the tournament.

The great popular exercise of this period was that of archery, the cultivation of which, to the exclusion even of all other sports, was enjoined by various legislative enactments or royal ordinances. By a law of the thirteenth century, every person having an annual income of more than one hundred pence, was obliged to furnish himself with a serviceable bow and arrows. In the reign of Edward III. proclamation was made that all persons should practise archery on the holidays during the hours not occupied by divine service; and the games of quoits, hand-ball, foot-ball, stick-ball, canibuca, and cock-fighting, were at the same time strictly prohibited. The villages were furnished with pricks, butts, and rovers, for the competition of the people in archery; and at these trials of skill, in later times at least, as appears from a statute of Henry VIII., no man was allowed to shoot at a mark less distant than eleven score feet.* But it would seem, notwithstanding the surpassing dexterity of the English bowmen, that they did not like to play with bows and arrows upon compulsion,—there was something too grave and formal in the sport of shooting according to the statute,—and, when it could be safely done, they escaped from the village butts, to more spontaneous and stirring amusements. As archery required such long practice, the young were furnished with bows according to their age and strength. Those of the yeomen for real service were required to be of the height of the bearer. The arrows were generally a yard in length, notched at the extremity to fit the string, and fleched with the feathers of the goose, the eagle, and sometimes the peacock. The cross-bow does not appear to have been much encouraged in England.

The mummings and masqueradings, which were in such high favour with the great, appear to have also been attractive to the common people. Edward III., in the sixth year of his reign, is said to have issued an ordinance against vagrants who exhibited scandalous masquerades in low alehouses, and to have directed that such persons should be whipped out of London. But the Feast of Fools, which was enacted by the populace at large, and which was the most singular of all these exhibitions, requires a more particular notice. Its celebration, which took place at Christmas, somewhat resembled the Saturnalia of Ancient Rome. It was a season of universal license among the commonalty, in which all orders and authorities were reversed; the churl became a pope, the buffoon a cardinal, and the lowest of the mob were converted into priests and right reverend abbots. In this wild merriment they took possession of the

* Stat. 33 Hen. VIII. c. 9.

churches, and parodied every part of the sacred service, singing masses composed of obscene songs, and preaching sermons full of all manner of lewdness and buffoonery. Such, especially upon the continent, was the manner in which this sacred festival was commemorated; while the church, in the pride of its power and security, felt no alarm whatever at these popular ebullitions, and therefore seldom took steps to prevent them. In England the Festival of Fools does not appear to have been attended with such wild excesses as prevailed in the continental observance of it, and it was soon put down, either by the authority of the church or the good sense of the people. A part of it, however, long survived, under the designation of the Dance of Fools. This exhibition, which was also held at Christmas, consisted of a set of drolleries sufficiently profane, the actors who figured in the pageant being dressed, in all respects, like the court-fool, a personage who, as he occupied the highest place of his order, became naturally the model to all the fools of England.

From this root also sprang the Abbots of Unreason and Lords of Misrule—a class of personages that will fall to be mentioned under a later period. We shall, however, at present notice very briefly the institution of the Boy-Bishop, another of these fooleries, which appears to have been peculiar to England, and to have been known, at least, so early as the fourteenth century. In this ridiculous farce, the boys belonging to the choirs of the collegiate churches, on the arrival of the feast of St. Nicholas or of the Holy Innocents (and often on both occasions), dressed themselves in full pontificals, and obtained possession of the sacred building, while one of their number for the time became their prelate, and was adorned with mitre and crozier. The urchins then proceeded to mimic the devotional services of their clerical superiors: they prayed, chanted, and performed mass; and the Boy-Bishop, from the altar or the pulpit, delivered a sermon to the crowd that assembled to witness the sport, and received from them contributions of money at the conclusion of the service. After this profane parody, the whole choir sallied into the streets headed by their juvenile prelate, dancing and singing from house to house, scattering clerical benedictions among the people, and receiving offerings in their progress. So far, indeed, was this mummery encouraged by the heads of the church, that proper dresses for the pageant were kept in most of those churches where the ceremony was performed; and it maintained its ground until it was suppressed by an edict of Henry VIII. Mary, his daughter, endeavoured to revive the festival; but, after her death, it was entirely annihilated. Even in the present day, the curious eye can trace certain modifications of these sports, in

TOMB OF THE BOY-BISHOP,— Salisbury.
Height about three feet and a half.

the Christmas festivities of children; and Warton supposes, with some probability, that the *ad montem* of the Eton scholars originated in the procession of the Boy-Bishop.

CHAPTER VII.

HISTORY OF THE CONDITION OF THE PEOPLE.

THE institutions and the social condition of England had both begun before the close of the present period distinctly to show the rude outline of the peculiar form and character into which they have since settled. The system impressed upon the country at the Conquest had in great part passed away, and a new order of things had taken its place.

The government was now no longer that either of the king alone, as it may be said to have been in the time of the Conqueror and his sons, or of the king and the barons merely, as it afterwards came to be. In profession and design at least, it was, from the accession of Edward I., a government of king, lords, and commons, as it still is.

Not the exact constitution, certainly, but yet what we may call the principle of the constitution, of each house of the legislature had also come to be nearly the same as it is at present. The House of Lords now consisted of the greater barons only. The custom of summoning to that assembly all the immediate tenants of the crown, if it ever existed, had certainly become obsolete before the end of the reign of Henry III. After the complete establishment of the House of Commons, the lesser barons were undoubtedly held to be commoners, as their representatives, the great body of the landed gentry, are at this day. If it could be clearly shown that it ever was otherwise,—that at any time the entire body of the tenants of the crown sat as lords of parliament,—the remarkable concurrence of the date from which it is on all hands admitted that they did so no longer with that usually assigned to the origin of the House of Commons, would go far to make it probable that that house really did take its beginning at the period in question. In any case, it seems likely enough that the lower house of the Norman parliament may have been originally the house of the lesser barons, whether they sat in it at first personally or by representation. All that we know is, that from the time at least when all the freeholders in each county were associated in this matter with the immediate tenants of the crown, the House of Commons was a representative body. From this time, also, as we have said, if not before, the House of Lords consisted of the greater barons only. From the reign also of Henry III. barons by tenure ceased to be the only description of barons. There is an instance on record of a barony being created by writ,—that is, simply by the king's summons to parliament,—in the year 1265, the 49th of that king, the same in which we have the first recorded writs to the sheriffs for the election of county and borough representatives. It is generally supposed, however, that this mode of creating baronies is of earlier introduction. Edward III. introduced another mode, namely, by creation in parliament, or, as it has been called, by statute, although it has been doubted whether the consent of the lords and commons was actually in such cases either given or asked. Finally, the usual modern form of creation by letters patent was introduced by Richard II., the first instance of a barony so conferred having been in 1387, the tenth year of that king, when Sir John de Beauchamp of Holt was made Baron Beauchamp of Kidderminster. All the existing ranks of the peerage, also, with the exception of that of viscount, had been now introduced. The first English duke was the Black Prince, who was created Duke of Cornwall, in 1337, the eleventh year of his father's reign; the first marquess was Robert de Vere Earl of Oxford, who was created Marquess of Dublin for life, by Richard II. in 1386. The most remarkable feature by which the composition of the upper house of parliament at this period was distinguished from its composition in modern times was the numerical preponderance of the spiritual over the temporal peers, and that it retained in some degree till the abolition of the old religion in the sixteenth century.

The constitution, on the whole, may now be shortly described as being an immature or imperfectly established system of liberty. It was a free constitution, to a great extent, in form and theory, but with much of the spirit and substance of the old despotism still remaining in its practice. To quote the words of a distinguished writer,—"Although the restraining hand of parliament was continually growing more effectual, and the notions of legal right acquiring more precision, from the time of Magna Charta to the civil wars under Henry VI., we may justly say that the general tone of administration was not a little arbitrary. The whole fabric of English liberty rose step by step, through much toil and many sacrifices, each generation adding some new security to the work,

and trusting that posterity would perfect the labour as well as enjoy the reward. A time, perhaps, was even then foreseen in the visions of generous hope, by the brave knights of parliament, and by the sober sages of justice, when the proudest ministers of the crown would recoil from those barriers which were then daily pushed aside with impunity."*

The state of the country during the present period, in regard to security and order, still betokened considerable barbarism, both of manners and of institutions. The most distinct and indisputable testimony to the great prevalence of rapine and violence is that which is borne by some of the acts passed by the legislature with the view of remedying the evil. Of these one of the most remarkable has been shortly noticed in a former chapter, the Statute of Winchester, passed in 1285, the 13th of Edward I. The preamble of this statute begins by averring that, "from day to day, robberies, murders, burnings, and theft be more often used than they have been heretofore," a statement which may at least be taken as evidence that these crimes were very frequent at the time when the statute was enacted. It goes on to recite that, owing to the partiality of jurors, who would rather suffer strangers to be robbed than have the offenders punished when they were of the same county with themselves, great difficulty was found in obtaining the conviction of felons. In consequence, it is ordered, among other regulations, that the hundred shall be answerable for robberies; that in all walled towns the gates shall be shut from sun-setting until the sun-rising; that no man shall lodge during the night in the suburbs of towns unless his host will answer for him; and that every stranger found in the streets from sunset to sunrise should immediately be apprehended by the watch. This is the picture of a state of society in which the general prevalence of crime destroyed at once all feeling of security and all freedom of movement. Every stranger who made his appearance in a town, we see, was treated as a suspected person; unless he could find an inhabitant to be his surety, he was to be at once either thrust forth or taken into custody. The next clause of the act is equally illustrative of the insecurity of the rural districts, and especially of the public roads. It directs that every highway leading from one market town to another shall be cleared for two hundred feet on each side of every ditch, tree, or bush, in which a man may lurk to do hurt; and if a park be near a highway, it is ordered to be removed to the same distance, or at least to be carefully defended by a wall or otherwise, so that it may not serve as a harbour from which malefactors may issue forth to attack the traveller. Finally, it is commanded that every man shall provide himself with armour according to his station, the richest with a hauberk, a breastplate of iron, a sword, a knife, and a horse; the poorest with bows and arrows at the least, that when offenders resist being arrested, all the town and the towns near may follow them with hue and cry, "and so hue and cry shall be made from town to town, until that they be taken and delivered to the sheriff." This last provision," as Mr. Hallam remarks, "indicates that the robbers plundered the country in formidable bands." The old Saxon law of frank-pledge, it may be observed, was kept up, in form at least, till a later date than this; there is a statute directing the mode of taking the view of frank-pledge, which is generally assigned to the seventeenth or eighteenth year of Edward II.;* but that ancient system had probably, long ere now, been found unsuitable to the changed circumstances of the country. Its spirit, also, which left the maintainance of order and the repression of crime in a great measure in the hands of the people themselves, was wholly opposed to the temper of the Norman institutions and government, which tended to concentrate all power and authority in the crown, and regarded any popular interference in the administration of the law with extreme jealousy and aversion. The contest of the two principles is to be discerned in various passages of the legislation of the present period on matters of police. It may be illustrated, for example, by the history of the county magistrates called justices of the peace. These were originally called conservators of the peace, and were elected by the votes of the freeholders till the accession of Edward III.; when, in the midst of the revolution that placed the new king upon the throne, a clause was introduced into an act of parliament,† giving the right of appointing them to the crown. Their authority was afterwards gradually enlarged by successive statutes, till at last, in 1360,‡ they were invested with the power of trying felonies; and then, instead of conservators, wardens, or keepers of the peace, "they acquired," says Blackstone, "the more honourable appellation of justices." It appears, however, from the rolls of parliament, that, ever since their appointment had been assumed by the crown, they had been the objects of popular odium, and every act or royal ordinance by which their powers were subsequently enlarged, seems to have excited much dissatisfaction and remonstrance. Meanwhile the state of the country did not improve under the new system. The preamble of an ordinance passed in 1378§ gives us the following remarkable description of the lawlessness and violence which prevailed:—"Our sovereign lord the king hath perceived, as well by many complaints made to him as by the perfect knowledge (that is, the notoriety) of the thing, that as well divers of his liege people in sundry parts of the realm, as also the people of Wales in the county of Hereford, and the people of the county of Chester, with the counties adjoining to Chestershire, some of them claiming to have right to divers lands, tenements, and other possessions, and some espying

* Middle Ages, iii. 218.

‡ By the statute 34 Edw. III. c. 1.
§ Called the 2 Rich. II. st. 1, c. 6.

women and damsels unmarried, and some desiring to make maintenance in their marches, do gather them together to a great number of men of arms and archers, to the manner of war, and confederate themselves by oath and other confederacy, not having consideration to God, nor to the laws of holy church, nor of the land, nor of right, nor justice, but, refusing and setting apart all process of the law, do ride in great routs in divers parts of England, and take possession and set them in divers manors, lands, and other possessions of their own authority, and hold the same long with force, doing many manner apparelments of war; and in some places do ravish women and damsels, and bring them into strange countries, where please them; and in some places lying in wait with such routs, do beat and maim, murder and slay the people for to have their wives and their goods, and the same women and goods retain to their own use; and some time take the king's liege people in their houses, and bring and hold them as prisoners, and at the last put them to fine and ransom, as it were in a land of war; and some time come before the justices in their sessions in such guise with great force, whereby the justices be afraid and not hardy to do the law; and do many other riots and horrible offences, whereby the realm in divers parts is put in great trouble, to the great mischief and grievance of the people, and the hurt of the king's majesty, and against the king's crown." To repress these daring outrages power was now given to the magistrates, as soon as they were credibly certified of any such "assemblies, routs, or ridings of offenders, baratours, and other such rioters," "to assert them incontinent, without tarrying for indictments, or other process of the law, by their body, and especially the chieftains and leaders of such routs, and send them to the next gaol, with the cause of their arrest clearly and distinctly put in writing, there to abide in prison in sure keeping, till the coming of the justices into the country, without being delivered in the mean time by mainprise, bail, or in other manner." The remedy here would seem to have scarcely gone beyond the necessity of the case; but the dislike that was entertained to the functionaries entrusted with the administration of the new law was too strong for even the sense of that necessity to overcome. Next year we find the Commons petitioning against it as "a horrible grievous ordinance, by which every freeman in the kingdom would be in bondage to these justices, contrary to the great charter, and to many statutes, which forbid any man to be taken without due course of law." "So sensitive," observes Mr. Hallam, "was their jealousy of arbitrary imprisonment, that they preferred enduring riot and robbery to chastising them by any means that might afford a precedent to oppression, or weaken men's reverence for Magna Charta."* The real feeling, however, probably was an aversion to the magistrates nominated by the crown. In consequence of this petition of the Commons, the ordinance was "utterly repealed and annulled."*

As yet, it is to be remembered, the government and the law had been little known or felt in their proper character of the great protecting powers of society; the notion of them that was by far most familiar to men's minds was that of mighty engines of oppression, which, indeed, they had principally been. Every attempt accordingly to arm them with additional force was naturally regarded with much apprehension and jealousy. It was not merely in the hands of the crown that the law was turned to purposes of tyranny and plunder. It is especially deserving of notice that at this time it was actually employed as one of their most common instruments by spoliators and disturbers of all classes, as if such had been its proper use. One of the offences against which statute after statute was passed, was that called maintenance; which was really nothing else than the confederating to do wrong, not by the defiance or evasion, but through the aid and under the direct authority, of the law. "Conspirators," says an ordinance of the 33rd of Edward I., "be they that do confeder, or bind themselves, by oath, covenant, or other alliance, that every of them shall aid and bear the other, falsely and maliciously to indict or cause to indict, or falsely to move or maintain pleas; and also such as cause children within age to appeal men of felony, whereby they are imprisoned and sore grieved; and such as retain men in the country with liveries or fees for to maintain their malicious enterprizes." That all these descriptions of conspiracy were pursued systematically and on a great scale, the language of other statutes sufficiently attests. Thus, in the 4 Edw. III. c. 2, it is affirmed, that "divers people of the realm, as well great men as other, have made alliances, confederacies, and conspiracies, to maintain parties, pleas, and quarrels, whereby divers have been wrongfully disinherited, and some ransomed and destroyed, and some, for fear to be maimed and beaten, durst not sue for their right nor complain, nor the jurors of inquests give their verdicts, to the great hurt of the people, and slander of the law and common right." In many cases, these confederated ruffians were openly protected by some powerful baron, whose livery they wore. "We be informed," says the 20 Edw. III. c. 5, "that many bearers and maintainers of quarrels and parties in the country be maintained and borne by lords, whereby they be more encouraged to offend, and by procurement, covine (covenant), and maintenance of such bearers in the country, many people be disinherited, and some delayed and disturbed of their right, and some not guilty convict and condemned, or otherwise oppressed, in the undoing of their estate, and in the notorious destruction of our people." Some of the modes in which this system of confederation was carried on are more precisely explained in the 1 Rich. II. c. 7, where it

* Mid. Ages, iii. 253.

* By the 2 Rich. II. st. 2. c. 2.

is asserted that "divers people of small revenue of land, rent, or other possessions, do make great retinue of people, as well of esquires as of other, in many parts of the realm, giving to them hats and other liveries, of one suit by year, taking of them the value of the same livery, or percase the double value, by such covenant and assurance, that every of them shall maintain other in all quarrels, be they reasonable or unreasonable, to the great mischief and oppression of the people;" and in c. 9, which records the complaints made to the king, "that many people, as well great as small, having right and true title, as well to lands, tenements, and rents, as in other personal actions, be wrongfully delayed of their right and actions, by means that the occupiers or defendants, to be maintained and sustained in their wrong, do commonly make gifts and feoffments of their lands and tenements which be in debate, and of their other goods and chattels, to lords and other great men of the realm, against whom the said pursuants, for great menace that is made to them, cannot nor dare not make their pursuits; and that, on the other part, oftentimes many people do disseise other of their tenements, and anon, after the disseisin done, they make divers alienations and feoffments, sometimes to lords and great men of the realm to have maintenance, and sometimes to many persons of whose names the disseisees can have no knowledge, to the intent to defer and delay by such frauds the said disseisees, and the other demandants and their heirs, of their recovery, to the great hindrance and oppression of the people." But many of these retainers of the great lords were accustomed to follow still more daring courses. In 1349 (the 22 of Edward III.), the Rolls of Parliament record the prayer of the commons, that, "whereas it is notorious how robbers and malefactors infest the country, the king would charge the great men of the land, that none such be maintained by them, privily or openly, but that they lend assistance to arrest and take such ill-doers." "Highway robbery," observes Mr. Hallam, "was, from the earliest times, a sort of national crime. Capital punishments, though very frequent, made little impression on a bold and licentious crew, who had, at least, the sympathy of those who had nothing to lose on their side, and flattering prospects of impunity. We know how long the outlaws of Sherwood lived in tradition;—men, who, like some of their betters, have been permitted to redeem, by a few acts of generosity, the just ignominy of extensive crimes. These, indeed, were the heroes of vulgar applause; but when such a judge as Sir John Fortescue could exult that more Englishmen were hanged for robbery in one year than French in seven, and that 'if an Englishman be poor, and see another having riches, which may be taken from him by might, he will not spare to do so,' it may be perceived how thoroughly these sentiments had pervaded the public mind."*

* Mid. Ages, iii. 249. The passage from Fortescue is in his 'Difference between an Absolute and Limited Monarchy,' p. 99.

It is the remark of another modern writer, that the number of old statutes against going armed and wearing liveries, are a proof that the people of this country were formerly much more irascible and vindictive than they are at present; and that the law-books also show that many crimes were then prevalent of which we now hardly ever hear. He particularly mentions maiming and mutilation, the obtaining of deeds by violence or duresse, and the various abuses of the powers of the law which have been already adverted to. "Notwithstanding the general inclination to decry everything modern, I cannot but imagine," he very sensibly concludes, "that the inhabitants of this country are, in the eighteenth century, infinitely more virtuous than they were in the thirteenth; and that the improvements of the mind and regard for social duties have gone hand in hand with the improvements by learning and commerce; nor have I any doubt but that, if anything like a regular government continues in this island, succeeding ages will not only be more refined and polished, but consist of still more deserving members of society."*

A great social revolution was gradually effected in England in the course of the present period by the general transformation of the villains into freemen. The subject is one, in some parts of it, of much obscurity, and the few facts upon which we have to proceed in considering it leave us to form most of our conclusions from theory and conjecture. Mr. Hallam has advanced the opinion that there was really no difference between the conditions of the villain in gross and the villain regardant, and that the distinction between them was merely formal or technical, affecting only the mode of pleading. He also adopts the notion that tenants in villenage have been inaccurately confounded with villains, and that these two classes were altogether distinct.† We confess we strongly doubt the correctness of both the one and the other of these positions. We conceive the distinction between the villain regardant and the villain in gross to have been of the most material character, and the tenant in villenage to have been merely the villain regardant under a new name. Notwithstanding some expressions in the law-books of dubious import, we cannot account otherwise than upon this supposition for the general course, as far as it is known, of the history of the ancient villenage, and more especially for the facts that are now to be mentioned.

The villain regardant appears to have been really a tenant of his lord, though holding both by base and uncertain services; and his lord, whatever other rights he might have over him, had no power, we apprehend, to dispossess him of his tenure so long as he performed the services required of him. If he was said by the law to be a tenant at the will of his lord, that expression, apparently, was conformable merely to the original theory of his condition. In one sense, a tenant bound to

† Middle Ages, iii. 256, 257.

uncertain services might really be considered as sitting at will; for his lord, in order to turn him out, had only to demand from him such services as he would rather resign his holding than render. But this purely arbitrary power, although it might remain unlimited in the legal expression, would soon come to be restrained in its actual exercise within certain well understood bounds; and in this, as in other respects, the will of the lord would, in point of fact, mean only his will exercised according to the custom of the manor. If it had ever been otherwise, the complete establishment of this understanding would be the first step taken in the improvement of the villain's condition. The next would be the confinement of his services, not only within certain customary limits in regard to their general description or character, but yet more strictly to a clearly defined amount, which would have nearly all the precision of a money payment, and would soon come to be exacted with as little either of excess or of abatement as is usual in the case of a modern rent. The practice of entering the amount of service upon the roll of the court-baron would naturally follow, which would at once give to tenure by villenage all the stability and independence of any other kind of tenure. Meanwhile the condition of the tenant was improving in another way with the rise in the value of land; and this change in his circumstances would gradually raise him, in many instances, above the personal performance of whatever there was degrading in the services he owed to his lord; he would perform his services by a hired substitute; until at length it would be found for the interest of both parties that they should be commuted for a fixed money-rent. It is hardly necessary to observe, that the same progressive movement of society which brought about this change would also naturally and inevitably elevate the villain in other respects above whatever was base or servile in his original condition,—above the practical operation, more especially, of every old figment of the law which made him in any sense the property of his lord, or gave the latter any rights over him inconsistent with the new position to which he had advanced. This was a result which no mere law could resist. The villain having thus acquired the free disposal of his person and property, would be a villain no longer in anything but in name; even that would be changed, and he would be called, not a villain, but a tenant in villenage. It does not appear that any other account can be given of the origin of tenure in villenage but this. It has been said that freemen might hold land by villain tenure; and we may be certain that after that mode of tenure began to outgrow its original servile character in the manner that has been explained, persons who had not been born villains would not be scared by its mere name from the acquisition of estates under it by purchase or otherwise. It is generally admitted that what are now called copyhold estates are the same estates that were formerly said to be held by villain tenure. In fact, according to the view that has been given, there is no difference between the present tenure by copyhold and the ancient tenure by villenage, excepting merely that in the former, as it now exists, we have the completion of the process of gradual change which, as we have shown, was in all probability going on from the earliest stage in the history of the latter. A copyhold estate is now, for all practical purposes, as much a property as a freehold estate; but its legal incidents, though reduced to mere formalities or fictions, are still very expressively significant of its true origin. The mode of alienating a copyhold, for instance, still is for the copyholder first to make a surrender of his land into the hands of his lord, who thereupon admits the purchaser as his tenant; and the new tenant, like his predecessor, is still affirmed to hold the land "at the will of the lord." The tenants in villenage appear to have been making progress in throwing off the original servile or nominally precarious character of their tenure, at least from the commencement of the present period, and in the course of it they no doubt effected a considerable advance in substantial stability and independence; but the decisions of the courts, as well as the letter of the law, probably continued to be adverse to their pretensions down to its close. It is said to have been not till the reign of Edward IV. that the judges expressly declared the right of the copyholder to bring his action of trespass against the lord for dispossession.

While the villain regardant was thus rising into the copyhold proprietor, the villain in gross was also undergoing a corresponding transformation, and becoming a free labourer. We have not much evidence of the manner in which this change was effected, but the most distinct intimations of its having to a large extent taken place in the course of the thirteenth, and more especially in that of the fourteenth century. Some of them were no doubt emancipated by their masters; the liberation of their slaves is said to have been an act of piety to which persons on their death-bed used to be strongly urged by the clergy; but the majority of the villains in gross appear to have shaken off the fetters of their thraldom by their own act,—in other words, by effecting their escape from the power of those who held them in bondage. The law, as we have already had occasion to notice, held a villain to be free after a residence in any walled town for a year and a day. This provision, there is reason to believe, was the means of enabling many villains to acquire their liberty. But many more seem to have merely fled to another part of the country, the distance of which placed them out of the reach of their masters. What is certain, at all events, is, that by the middle of the fourteenth century a large body of free labourers had grown up in England. The most distinct evidence to that fact is afforded by the famous ordinance, commonly called the Statute of Labourers, passed in 1349 (the 23rd of Edward III.), which proceeds upon the averment that

because a great part of the people, and especially of workmen and servants, had lately died of the pestilence, "many, seeing the necessity of masters, and great scarcity of servants, will not serve unless they may receive excessive wages, and some rather willing to beg in idleness than by labour to get their living." Those whom the statute binds to serve when required at certain specified rates of wages are afterwards thus described:—"Every man and woman of our realm of England, of what condition he be, free or bond, able in body, and within the age of three score years, not living in merchandise, nor exercising any craft, nor having of his own whereof he may live, nor proper land about whose tillage he may himself occupy, and not serving any other." From the rest of the ordinance and the statute by which it was followed up two years afterwards (the 25 Edw. III. st. 2), it appears that this class of labourers who were not bondsmen included carters, ploughmen, drivers of the plough, shepherds, swineherds, deyes, reapers, mowers, threshers, and other labourers in husbandry; carpenters, masons, tilers, "and other workmen of houses;" plasterers, "and other workers of mud-walls;" cordwainers and shoemakers; goldsmiths, sadlers, horsesmiths, spurriers, tanners, curriers, tawers of leather, tailors, and others. So that in every branch of industry, whether carried on in town or in country, there would appear by this time to have been numbers of working people who were not in a state of villenage.

A statute passed in 1377 (the 1st Rich. II. c. 6) affords us some information as to the courses taken both by villains in gross and villains regardant in the great struggle to effect their emancipation, in which they were now engaged. The act professes to be passed "at the grievous complaint of the lords and commons of the realm, as well men of holy church as other, made in the parliament, of that that in many seigniories and parts of the realm of England, the villains and land-tenants in villenage, who owe services and customs to their said lords, have now late withdrawn, and do daily withdraw their services and customs due to their said lords, by comfort and procurement of other their counsellors, maintainers, and abettors in the country, which hath taken hire and profit of the said villains and land-tenants, by colour of certain exemplifications made out of the book of Domesday, and, by their evil interpretations of the same, they affirm them to be quite and utterly discharged of all manner servage, due as well of their body as of their said tenures, and will not suffer any distress or other justice to be made upon them; but do menace the ministers of their lords of life and member, and, which more is, gather themselves together in great routs, and agree by such confederacy that every one shall aid other to resist their lords with strong hand; and much other harm they do, &c." Here we have apparently the villains in gross and the villains regardant (for such we take to be the meaning of the expression, "the villains and land-tenants in villenage,") associating together to resist partly by an appeal to the law, partly by force, the claims of their lords to the services due "of their bodies" by the former and "of their tenures" by the latter. Differently situated as they were in some respects, they wisely felt that their cause for the present was the same.

The abolition of slavery was one of the demands made by the insurgents in the rebellion of 1381, which proves that the class of villains in gross was by no means then extinct. This great popular outbreak was probably little favourable in its immediate consequences to the condition of these unhappy persons. As soon as it was suppressed the king is represented as addressing the villains of Essex in terms manifesting a sufficient determination that they should derive no benefit from their baffled attempt. "Rustics ye have been and are," he told them, according to Walsingham, "and in bondage shall ye remain, not such as ye have heretofore known, but in a condition incomparably more vile." Various severe laws affecting the poorer classes were also passed in the course of the following ten or twelve years. Among others, by the statute 12 Rich. II. c. 3, it was ordained that "no servant nor labourer, be he man or woman, shall depart at the end of his term out of the hundred where he is dwelling to serve or dwell elsewhere, or by colour to go from thence in pilgrimage, unless he bring a letter patent containing the cause of his going, and the time of his return, if he ought to return, under the king's seal;" and, by chap. 5, that all persons who had been employed in any labour or service of husbandry till the age of twelve, should from thenceforth abide at the same labour, and be incapable of being put to any mystery or handicraft. The commons a few years afterwards even went the length of petitioning (though their demands were negatived by the king) that the old law which protected villains after a residence of a year and a day, in towns, should be repealed; and that, "for the honour of all the freemen in the kingdom," villains might not be allowed to put their children to school, in order to advance them by the church. But these anxious endeavours to keep down the people testify how greatly their fears had been excited; and the salutary impression thus made upon them, of the formidable character of the popular strength, could not fail, ere long, to operate to the advantage of the portion of the community that had been hitherto so much despised and oppressed. From this time little mention is made of villenage; no efforts appear to have been interposed by the law to retard its decay; and it seems to have steadily and somewhat rapidly moved on towards its entire extinction.
